Re: CITADEL Project No. 3067.1041.0
Phase I Environmental Site Assessment Report
924 and 940 San Rafael Avenue
Mountain View, California 94043

Dear Mr. Ducote:

Enclosed please find Citadel EHS's Phase I Environmental Site Assessment Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted for Prometheus Real Estate Group, in accordance with Citadel's Proposal 3067.1041.P, dated October 20, 2025, and a mutually agreed upon scope of work.

If after your review, you have any questions or require additional information, please do not hesitate to contact me at bmellin@citadelehs.com.

Sincerely,
CITADEL EHS

Brooke Mellin, P.G.
Senior Geologist, Engineering and Environmental Sciences

EXECUTIVE SUMMARY

Project Summary

Client Name/User:	Prometheus Real Estate Group	**Property Visit Date:**	October 24, 2025
Client Contact:	Michael Ducote	**Construction Date:**	1982
Phone Number:	(650) 504-8805	**No. Buildings/No. Units:**	Two buildings
Email Address:	mducote@prometheusreg.com	**No. of Stories:**	Both single-story
Property Name:	None	**Bldg. Square Footage:**	Approximately 2,900 and 2,000 ft²
Property Address:	924 and 940 San Rafael Avenue	**Property Acreage:**	1.79 acres
Property City, State, Zip:	Mountain View, CA 94043	**Property Use:**	Vacant
Property Identification:	153-17-045 and 153-17-044	**Property History:**	Residential and industrial
Other Improvements:	Asphalt-paved parking areas, and associated landscaping		

SUMMARY OF FINDINGS

Citadel EHS (Citadel) was contracted by Prometheus Real Estate Group (Client) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 924 and 940 San Rafael Avenue, in the City of Mountain View, Santa Clara County, California; hereinafter referred to as the "Site."

Current Site Conditions

The Site consists of a garage building and a single-story office building, asphalt-paved parking areas, and associated landscaping. Access to the Site parking areas is accessed by two gated entrances along the eastern boundary of the Site on San Rafael Avenue. At the time of the Site reconnaissance, the Site was vacant.

Stationary equipment at the Site includes a sump, an oil water separator (OWS), and an outdoor sink. In general, the Site appears to be moderately maintained due to its vacancy.

Site History

A review of historical sources showed that the Site was used as orchards and farmland as early as 1939. The Site was first developed with residential and/or auxiliary structures in 1948. In 1982, the southern portion of the Site was developed with the existing garage and office structures. The southern portion of the Site was occupied by Hackett Construction Company from 1982 to 1986, and then El Camino Paving from 1991 to at least 2014. By 1998, the northern portion of the Site appeared to be graded. The northern portion of the Site appeared to be a storage yard from 2010 until 2018, when it appeared to be a vacant parking lot.

Previous Environmental Reports

The previously prepared reports and documents listed below were reviewed as part of this Phase I. Pertinent issues identified in those reports are summarized in Section 5.8. One HREC and three *de minimis* conditions were identified, as described below.

- *Phase I and Limited Phase II Environmental Site Assessment, 918, 924, & 940 San Rafael Avenue, Mountain View, California,* prepared by Geosyntec Consultants (Geosyntec), dated May 8, 2017;
- *Environmental Review, 924 and 940 San Rafael Avenue, Mountain View, California*, prepared by Cornerstone Earth Group, Inc. (Cornerstone), dated July 30, 2025; and
- *Additional Sampling Investigation, 924 & 940 San Rafael Avenue, Mountain View, California*, prepared by Citadel, dated November 7, 2025.

Environmental Databases

The Site was identified as El Camino Paving on the HAZNET and HWTS databases for generating 0.0041 tons of empty containers of 30 gallons or more in 1988. The Site was also identified in RGA LUST, FINDS, UST FINDER RELEASE, LUST, HIST LUST, Cortese, HIST CORTESE, CERS, CUPA Listings, and AST databases for a closed leaking underground storage tank (LUST) case and the historical light industrial activities on the Site. Details are summarized in Sections 5.8, 6.1, and 6.4.

Vapor Encroachment Condition

Citadel reviewed information provided by Environmental Data Resources, Inc. (EDR) regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, no historical releases of petroleum products occurred within 0.25-mile and upgradient of the Site.

EDR did not identify historical gas stations or dry cleaners within 0.125-mile and upgradient, 365 feet and cross-gradient, or 100 feet and downgradient of the Site.

RECOGNIZED ENVIRONMENTAL CONDITIONS

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-21, recognized environmental conditions (RECs) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the (1) presence of any hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

A *de minimis* condition refers to a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. A condition determined to be a *de minimis* condition is not a REC nor a controlled recognized environmental condition.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

An historical recognized environmental condition, or HREC, is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to

the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

According to ASTM E2600-22, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on a review of historical and present records, and Site reconnaissance, Citadel believes that sufficient information was collected and evaluated for the Site to determine if a REC, HREC, CREC, or *de minimis* condition exists. Based on our review, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC was not identified. No evidence for designating the Site as a REC or CREC from reviews of historical documents and present Site conditions was found. Citadel identified the following HREC.

- HREC #1: Three former underground storage tanks (USTs) were removed from the Site in 1988. Investigation, monitoring, and remediation activities were conducted until Santa Clara Valley Water District (SCVWD) approved closure of the Site in 2001. Investigations of the former UST area conducted in 2017 and 2025 have confirmed low-level residual concentrations of petroleum hydrocarbon constituents are below current regulatory screening criteria and would not be drivers for further investigation or mitigation during property redevelopment.

- *De Minimis* Condition #1: Relatively low and isolated concentrations of total petroleum hydrocarbons as motor oil (TPHmo), naphthalene, and barium exceeding San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Tier 1 environmental screening levels (ESLs) were found in soil samples collected from the Site during an investigation conducted in 2025. Concentrations were generally within the same order of magnitude as the Tier 1 ESLs and below more applicable residential and construction worker ESLs.

NON-ASTM SCOPE CONSIDERATIONS

The current Site buildings were constructed prior to bans using asbestos-containing building materials (ACBMs), lead-based paint (LBP), and polychlorinated biphenyls (PCBs) in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been conducted to evaluate the presence of ACBMs, LBP, or PCBs at the Site.

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the USEPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the USEPA action level of 4.0 picoCuries per liter (pCi/L).

Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

ESA SHELF LIFE

Date of ESA Report: December 2, 2025

Date of Site Inspection: October 28, 2025

Date Records Review was conducted: October 24, 2025

Date Lien Search was conducted: October 24, 2025

1.0 INTRODUCTION

Citadel EHS (Citadel) was contracted by Prometheus Real Estate Group (Client) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 924 and 940 San Rafael Avenue, in the City of Mountain View, Santa Clara County, California; hereinafter referred to as the "Site."

1.1 PURPOSE

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by reviewing current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the Site. A Site visit was also conducted to observe existing Site conditions. This report provides the results of the Phase I ESA conducted.

1.2 INVOLVED PARTIES

The party involved in this study, to the best of our knowledge, is Prometheus Real Estate Group.

Citadel understands that this Phase I ESA is being requested in conjunction with due diligence activities by Prometheus Real Estate Group. Citadel recognizes that this report is to be used exclusively by Prometheus Real Estate Group and its successors, lenders, and assigns. It is a report upon which Prometheus Real Estate Group and its successors, lenders, and assigns, can rely.

This assessment and report were prepared on behalf of and for the exclusive use of Prometheus Real Estate Group, their lenders and assigns solely for its use and reliance, subject to the terms and conditions agreed upon between Citadel and the Client.

1.3 SCOPE OF SERVICES

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-21 and the standards of care and diligence normally practiced by recognized consulting firms in conducting services of a similar nature.

The scope of services for this assessment consisted of the following:

- Performed a Site inspection to verify current Site conditions and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.

- Conducted a visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the Site.

- Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Reviewed results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

- Consulted with appropriate governmental agencies having jurisdiction relative to past history of the property, complaints or incidents in the immediate area, and permits that may have been issued.

- Prepared a Phase I report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the Site based on the data search, reasonably ascertainable documents, and Site inspection.

2.0 GENERAL SITE CHARACTERISTICS

2.1 LOCATION

The irregular-shaped Site is located approximately 0.22 miles west of Stevens Creek. The Site is bounded by KCE America, Inc., a commercial property, to the north; San Rafael Avenue to the east, beyond which is an office, a vacant property, and a storage yard; residential properties to the south; and a vacant property and an industrial plant and research facility to the west. The general Site vicinity is occupied by commercial, residential, and light industrial properties.

According to the United States Geological Survey (USGS) Mountain View Quadrangle (7.5 Minute Series), dated 2021, the Site is at an elevation of approximately 40 feet above mean sea level (amsl) and appears to slope slightly to the north.

A Site Location Map identified as Figure 1 is included in Appendix A.

2.2 SITE DESCRIPTION

According to the County of Santa Clara Assessor's Parcel Maps, the Site is comprised of two parcels of land legally identified as Assessor's parcel numbers (APNs) 153-17-045 and 153-17-044. The Site encompasses approximately 1.79 acres of land.

The Site consists of a garage building (approximately 2,900 square feet (ft^2) and a single-story office building (approximately 2,000 ft^2), asphalt-paved parking areas, and associated landscaping. Access to the Site parking areas is accessed by two gated entrances along the eastern boundary of the Site on San Rafael Avenue. At the time of the Site reconnaissance, the Site was vacant.

Stationary equipment at the Site includes a sump, an oil water separator (OWS), and an outdoor sink. In general, the Site appeared to be moderately maintained due to its vacancy.

A Site Plan is included as Figure 2 in Appendix A. Select photographs of the Site and vicinity are included as Appendix B.

2.3 ADJACENT PROPERTIES

The properties immediately adjacent to the Site consist of the following:

Direction from Site	Address – Tenant/Use
North	954 San Rafael Avenue – commercial office building occupied by KCE America, Inc.
East	San Rafael Avenue beyond which is 909 San Rafael Avenue – Dusty Robotics, corporate office; 915 and 917 San Rafael Avenue – residential; 939 San Rafael Avenue – Samscaping Inc.
South	830, 840, 850 San Pablo Avenue – Residential; 918 San Rafael Avenue - Residential
West	963 Linda Vista Avenue – Vacant; 941 Linda Vista Avenue – industrial plant; 915 Linda Vista Avenue – CSBio, research and development

2.4 UTILITIES

Electrical and gas services are supplied to the Site by Pacific Gas and Electric (PG&E). The Site is currently vacant; therefore, general rubbish (non-hazardous) is not currently removed from the Site.

3.0 ENVIRONMENTAL SETTING

3.1 PHYSICAL SITE CHARACTERISTICS

Based upon the North American Datum (NAD) of 1983, the Site is at an elevation of approximately 40 feet amsl.

The Site is identified on the geologic map of the Palo Alto and Mountain View quadrangles, California (Dibblee and Minch, 2007) as underlain by Holocene aged surficial sediments (Qac). The surficial sediments are described as silty clay and organic clay, fossiliferous, and within an intra-fan area. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) National Cooperative Soil Survey identifies the Site soils as Urban land Hangerone complex. The Hangerone soils are described as very deep, poorly drained soils that formed in alluvium from mixed rock sources.

USGS Topographic Map	Mountain View Quadrangle
Groundwater Basin	Santa Clara Valley Groundwater Subbasin
Nearest Surface Water to Site	Stevens Creek approximately 0.22 miles east of the Site
Gradient Direction (Source)	Northwest (GeoTracker)
Estimated Depth to Groundwater (Source)	Between 7 to 11 feet below ground surface (bgs; GeoTracker)
Nearest Wetland to Site (Source)	0.22 miles east of the Site (National Wetlands Inventory)
Nearest 100 or 500-year Flood Zone	0.2 miles east of the Site (Federal Emergency Management Agency), the Site is an area with reduced flood risk due to levee.

4.0 SITE RECONNAISSANCE

Citadel representative Ms. Fanny Lopez conducted a Phase I ESA reconnaissance on October 24, 2025. The Site reconnaissance consisted of an inspection of the Site and a perimeter survey of the surrounding properties. Findings from the Site inspection, research and perimeter survey are presented below.

4.1 SITE RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)
X		Identified Hazardous Materials
	X	Polychlorinated Biphenyls (PCBs) – Electric or Mechanical Equipment Likely to Contain Fluids
	X	Radioactive Man-Made Materials
	X	Pits, Ponds, and Lagoons
	X	Septic Tanks and Cesspools
X		Wells, Cisterns, Sumps, and Drains
X		Wastewater or Grease Interceptors
	X	Interior Stains or Corrosion
	X	Strong, Pungent, or Noxious Odors
	X	Pools of Liquid
	X	Stained Soil or Pavement
	X	Stressed Vegetation
X		Other

The observed items are further discussed below.

IDENTIFIED HAZARDOUS MATERIALS

Hazardous Material (size/quantity)	Location	Secondary Containment	Staining/Leaks	SDS
Hydraulic Oil (one 2.5-gallon)	West of the garage	No	None identified	No
Motor Oil (one 2.5-gallon)	West of the garage	No	None identified	No

Two commercial sized containers of hydraulic and motor oil were observed on the asphalt west of the garage. No oil stains or leaking were observed. The presence of these hazardous materials observed do not represent an environmental concern.

WELLS, CISTERNS, SUMPS, AND DRAINS

Two floor drains were observed east of the garage structure, within the former storage shed footprint. No hazardous substances or petroleum products were noted in the vicinity of the drains. Given the floor drains were formerly located within the floor of a former hazardous materials storage shed, two borings were advanced in the vicinity of the drains during the 2025 additional investigation. See Section 5.8 for details of the investigation.

A sump was observed on the north side of the garage building. No staining was observed by the sump. Potential impacts of the sump were evaluated during the 2025 additional investigation. See Section 5.8 for details of the investigation.

WASTEWATER OR GREASE INTERCEPTORS

An OWS was observed along the western exterior of the garage building. No staining was observed by the OWS. Potential impacts of the OWS were evaluated during the 2025 additional investigation. See Section 5.8 for details of the investigation.

OTHER

Several patched soil borings and soil vapor probe locations were observed throughout the Site. In addition, there were two 50-gallon drums of soil investigative derived waste (IDW) on the western portion of the Site. These patched locations and IDW drums are associated with the 2025 additional investigation. See Section 5.8 for details of the investigation.

4.2 NON-ASTM SERVICES

ASBESTOS CONTAINING MATERIALS

The United States Environmental Protection Agency (USEPA) issued a final rule under Section 6 of Toxic Substances Control Act (TSCA) banning most asbestos-containing building materials (ACBMs) in 1989. The ban on ACBMs was vacated in 1991 allowing some building materials to continue to contain asbestos. The applicability of the USEPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities.

Building materials, coatings, and/or finishes containing asbestos may be present in any structure regardless of the date of construction. In accordance with NESHAPS and local air pollution control district regulations, all suspect materials, finishes, and coatings that will be impacted by renovation or demolition regardless of the date of construction are required to be surveyed for the presence of asbestos by State-licensed asbestos consultants.

A survey for asbestos-containing materials was not requested or conducted as part of this Phase I ESA; however, based on known or likely original construction date for structures on the Site, the presence of ACMs cannot be ruled out.

LEAD-BASED/LEAD-CONTAINING PAINTS

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has greater than or equal to one milligram per square centimeter (mg/cm^2; 5,000 microgram per gram (µg/g) or 5,000 parts per million (ppm) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. In 2009, the United States Consumer Product Safety Commission (16 Code of Federal Regulations [CFR] 1303) banned paint containing more than 0.009% (90 ppm) lead for residential use. Buildings built before 1978 are much more likely to have LBP; however, all commercial structures regardless of the date of construction likely contain lead-based or lead-

containing glazings, varnishes, stains, coatings, paints, and primers. Such materials that will be impacted by renovation, repair, or demolition should be tested beforehand and the results disclosed to trades or staff that will be doing such work. All associated waste streams should be accurately characterized for proper disposal requirements.

A survey for lead containing materials was not requested or conducted as part of this Phase I ESA; however, based on known or likely original construction date for structures on the Site, the presence of LBP cannot be ruled out.

MOLD

Mold poses serious health risks and can cause significant damage to building materials and indoor environments. Although the USEPA does not regulate mold as a hazardous substance under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), it acknowledges mold as an indoor air quality issue and recommends prompt cleanup of mold contaminated areas. Because mold can affect human health and cause economic loss, it remains a concern in property assessments.

A survey for mold is beyond the required scope of ASTM E1527-21 and was not specifically requested or conducted as part of this Phase I ESA.

POLYCHLORINATED BIPHENYLS

Polychlorinated biphenyls (PCBs) were an ingredient added to a variety of building materials during manufacture, most notably, but not limited to, caulking, putty, and glazing, particularly around windows, door frames, and building joints. Building materials containing PCBs were used in many buildings in the 1950s through the 1970s, and potentially before the 1950s. There are significant regulations regarding the removal of these materials during demolition and/or renovation, both from an environmental protection standpoint as well as an occupational health and safety standpoint. In addition, under the TSCA, building materials that contain PCBs at or above 50 ppm are considered an "unauthorized use" of PCBs, and removal can be compelled under TSCA. The presence of PCBs may have the potential to impact a property's future land use. Based on the construction date for the Site building, building materials containing PCBs may have been used in the construction of the Site building.

A survey for PCBs is beyond the required scope of ASTM E1527-21 and was not specifically requested or conducted as part of this Phase I ESA.

DRINKING WATER

The Site is supplied with municipal drinking water by the San Francisco Public Utilities Commission (SFPUC). An assessment of lead in drinking water was not requested or conducted as part of this Phase I ESA.

RADON

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the USEPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the USEPA action level of 4.0 picoCuries per liter (pCi/L).

Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

METHANE

The Site is not located within a known or designated methane zone.

5.0 SITE HISTORY

The purpose of the records review is to obtain and review reasonably ascertainable/standard sources that will help identify recognized environmental conditions in connection with the property. Reasonably ascertainable records from standard sources are (1) information that is publicly available, (2) information that is obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

Reasonable time and cost means that the information will be provided by the source within 20 calendar days of receiving a written, telephone, or in-person request at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 days of request.

To investigate the history of the Site, Citadel reviewed select historical aerial photographs, building permits, city directories, and Sanborn Fire Insurance Maps provided by Environmental Data Resources Inc. (EDR). In addition, Citadel reviewed client-supplied information, and oil and gas maps, and Citadel interviewed selected individuals regarding historical Site use. Citadel's reviews of these reports and interviews are discussed below.

5.1 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous material generation or storage. Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1939, 1943	The Site appears to be agricultural land with an orchard	**North:** Agricultural land **East:** An unimproved road beyond which is agricultural land with a residential structure and orchard **South:** Agricultural land **West:** Appears to be agricultural land with several structures
1948, 1950, 1956	The Site appears developed with structures in the northwest and east portions of the Site; the remaining areas of the Site appear relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Appears developed with a residence **West:** Appears developed with residential structures
1963	Relatively unchanged	**North:** Appears developed residentially and with various structures **East:** Appears further developed residentially across an improved road **South:** Appears further developed residentially **West:** Appears further developed with additional structures

Dates(s)	Site Description	Surrounding Area Descriptions
1968, 1974,	Relatively unchanged	**North:** Relatively unchanged **East:** Appears developed with an existing commercial building **South:** Relatively unchanged **West:** Appears redeveloped with commercial structures
1982, 1991	The southern portion of the Site appears developed with the existing garage and commercial structure	**North:** Relatively unchanged **East:** Appears developed with the existing commercial building configuration across San Rafael Avenue **South:** Relatively unchanged **West:** Appears developed with the existing commercial/light industrial building configuration
1998, 2006,	The north portion of the Site appears to have been graded	**North:** Appears developed with the existing commercial building **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
2010, 2014	The north portion of the Site appears to be a storage yard	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
2018	The north portion of the Site appears to be a parking lot	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged

Copies of the Aerial Photographs provided by EDR can be found in Appendix C.

5.2 HISTORICAL BUILDING PERMITS

EDR provides a listing of building permits for the Site and adjoining properties, if available. No permits were found for the Site addresses. Adjoining property permits for tenant upgrades and building maintenance were identified.

A copy of the EDR Building Permit Report is included as Appendix D.

5.3 HISTORICAL FIRE INSURANCE MAPS

Citadel requested that EDR review its collection of Sanborn Fire Insurance Maps for potential coverage of the Site and vicinity. Sanborn Map coverage was not available for the Site.

A copy of the EDR Sanborn Map Report is included as Appendix E.

5.5 HISTORICAL CITY DIRECTORIES

City directories were researched by EDR in order to identify previous Site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. EDR researched city directory listings from 1957 through 2022 (non-inclusive) and provided their search results to Citadel for review. The following table summarizes information provided by the city directory search.

Dates(s)	Occupant Listed
924 SAN RAFAEL AVENUE	
1982	Hlw Ketr Construction Co
1986	Hackett Construction Co
1991, 1992, 2000, 2005, 2014	El Camino Paving Inc
2022	Koi Pham, 1-800 Courier

5.6 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps were provided by EDR in order to identify natural features and changes in development over a long period of time. The topographic maps provide the user

with a regional view of changes to the Site and vicinity that other historical databases such as aerial photographs may not provide. Below are brief descriptions of observations made from the topographic maps of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1897, 1899, 1902	The Site appears to be undeveloped land	**North:** Undeveloped land **East:** Undeveloped land **South:** Undeveloped land **West:** Undeveloped land
1943, 1947	Relatively unchanged	**North:** Appears developed with two structures **East:** Undeveloped across an improved road **South:** Developed with a structure and improved road **West:** Developed with two structures
1948	Developed with a structure on the south portion	**North:** Relatively unchanged **East:** Developed with a structure across the improved road **South:** Relatively unchanged **West:** Relatively unchanged
1953, 1961, 1968, 1973, 1981	Developed with an additional structure to the north	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1995, 1997,	Shaded indicative of urban development	**North:** Shaded indicative of urban development **East:** Shaded indicative of urban development **South:** Shaded indicative of urban development **West:** Shaded indicative of urban development
2012, 2015, 2018, 2021	No structures depicted	**North:** No structures depicted **East:** No structures depicted **South:** No structures depicted **West:** No structures depicted

Copies of the historical topographic maps provided by EDR are included as Appendix G.

5.7 HISTORICAL OIL AND GAS MAPS

Citadel reviewed information available on-line through the California Department of Conservation's website. The Geological Energy Management Division (CalGEM) Online Mapping System (COMS) did not identify any oil or gas wells on or near the Site.

5.8 CLIENT-SUPPLIED ENVIRONMENTAL INFORMATION

The previously prepared reports and documents listed below were reviewed as part of this Phase I. Pertinent issues identified in those reports are summarized in the table below.

- *Phase I and Limited Phase II Environmental Site Assessment, 918, 924, & 940 San Rafael Avenue, Mountain View, California,* prepared by Geosyntec Consultants (Geosyntec), dated May 8, 2017;
- *Environmental Review, 924 and 940 San Rafael Avenue, Mountain View, California*, prepared by Cornerstone Earth Group, Inc. (Cornerstone), dated July 30, 2025; and
- *Additional Sampling Investigation, 924 & 940 San Rafael Avenue, Mountain View, California*, prepared by Citadel, dated November 7, 2025.

Pertinent Issue Identified	Further Investigation/Information	Issue Addressed?
Closed LUST Case Three leaking diesel USTs (two 4,000-gallon tanks and one 10,000-gallon tank) were removed in 1988, and several investigations occurred between 1988 and 1995. The remedy for the release included excavation and treatment (bioremediation) of 400 cubic yards of soil and groundwater extraction and treatment via oil/water separator to control the extent of the contaminant migration. After six years of intermittent groundwater monitoring, the SCVWD approved closure of the Site in 2001. In 2017, additional soil and groundwater sampling were conducted in the area around the former LUSTs as part of a Phase II investigation. Detected analytes in soil were below current SFBRWQCB ESLs for residential land use. Detected analytes in groundwater were below current SFBRWQCB ESLs for vapor intrusion (residential land use), with the exception of naphthalene in one groundwater sample (7.7 µg/L) located on the eastern side of the former UST area and TCE in one groundwater sample (5.8 µg/L) located along the northern property boundary. Given that at-grade residential structures were planned and VOCs were detected at concentrations exceeding current ESLs, Cornerstone recommended that additional sampling be conducted to evaluate if vapor intrusion mitigation measures were warranted for planned structures at the Site. Additionally, Cornerstone noted that no soil vapor samples were collected near the location of the former USTs, and additional evaluation should include soil vapor sampling at these locations.	In September 2025, Citadel conducted an additional sampling investigation to evaluate soil vapor conditions within the planned future building footprints near the former UST area, adjacent to the OWS and sump (discussed below) and upgradient of a previous groundwater sample location where TCE had been previously detected at a concentration slightly above the MCL. Detected concentrations of VOCs in soil vapor were below current SFBRWQCB residential ESLs with the exception of benzene in two soil vapor samples with concentrations slightly above the residential ESL. However, the ESLs do not account for bioattenuation and can be overly conservative at Sites where biodegradation is occurring. Resulting oxygen concentrations in soil vapor samples were between 18.1 and 20.2%, indicating a strong bioattenuation zone. Based on the presence of a strong bioattenuation zone at both soil vapor probe locations, the benzene concentrations in soil vapor will bioattenuate and were not considered to represent a vapor intrusion concern or drivers for further investigation or mitigation.	Yes. Citadel considers this an HREC.
Hazardous Materials and Petroleum Product Storage Area Hazardous materials and petroleum products related to previous onsite operations were kept in an onsite storage shed. These materials were stored in various containers ranging from 5-gallon buckets to a large motor oil AST. Most of the containers were stored with secondary containment, though staining was observed on and around the two floor drains within the storage shed during the 2017 Site reconnaissance. This storage area related to past operations at the Site was presented as a REC in the 2017 Phase I/II. In their 2025 review letter, Cornerstone recommended the hazardous materials be properly disposed of before redevelopment, the floor drains be removed, and the underlying soil be sampled and analyzed for contaminants of concern to evaluate potential impacts to the Site.	In September 2025, Citadel conducted an additional sampling investigation to evaluate soil conditions beneath the former storage shed, which had been demolished by the time of the investigation (and hazardous materials and petroleum products had been removed). Three shallow soil borings were advanced beneath the former storage shed, within the vicinity of the floor drains. TPH, VOCs, and SVOCs were not reported in soil above SFBRWQCB Tier 1 ESLs with the exception of TPHmo in one sample (4,320 mg/kg). This Tier 1 exceedance was isolated to a single location, and the detected concentration was relatively low, not indicative of a significant release or widespread	Yes. Given the isolated concentration of TPHmo in soil above the Tier 1 ESL but below residential and construction worker ESLs, Citadel considers this a *de minimis* condition.

Pertinent Issue Identified	Further Investigation/Information	Issue Addressed?
	impact. The reported TPHmo concentration was within the same order of magnitude as the Tier 1 ESL and well below the more applicable residential and construction worker ESLs. The floor drains will be removed during the planned redevelopment of the Site.	
Oil/Water Separator/Sump An oil/water separator (OWS) and sump were observed during the 2017 Phase I/II Site reconnaissance and were noted in City of Mountain View Environmental Protection – Industrial Waste Division records. These were used both during El Camino Paving operations and to remove petroleum products from extracted groundwater during the remediation activities for the former LUSTs. There was no documentation indicating these were closed following completion of the remediation activities. These items related to past operations at the Site were presented as a REC in the 2017 Phase I/II. In their 2025 review letter, Cornerstone recommended that the OWS and sump be removed Prior to residential development of the Site and the underlying soil be sampled and analyzed for contaminants of concern to evaluate potential impacts to the Site. Additionally, Cornerstone noted that no soil vapor samples were collected near the sump and recommended that an additional evaluation should include soil vapor sampling at this location.	In September 2025, Citadel conducted an additional sampling investigation to evaluate soil conditions beneath the OWS and sump, which were found to still be present at the Site. Three soil borings were advanced beneath the OWS and three soil borings were advanced beneath the sump. TPH, VOCs, and SVOCs were not reported in soil above SFBRWQCB Tier 1 ESLs with the exception of naphthalene in one sample collected beneath the OWS (0.0841 mg/kg). This Tier 1 exceedance was isolated to a single location, and the detected concentration was relatively low, not indicative of a significant release or widespread impact. The reported naphthalene concentration was within the same order of magnitude as the Tier 1 ESL and well below the more applicable residential and construction worker ESLs. Naphthalene was not detected above laboratory reporting limits in the nearest downgradient groundwater sample (SB-6) collected in 2017 or the nearest soil vapor sample (SVP-6) collected in 2025. The OWS and sump will be removed during the planned redevelopment of the Site.	Yes. Given the isolated concentration of naphthalene in soil above the Tier 1 ESL but below residential and construction worker ESLs, Citadel considers this a *de minimis* condition.
Historical Agricultural Use The Site historically was used for agricultural purposes. Pesticides may have been applied to crops in the normal course of farming operations. Residual pesticide concentrations may remain in on-Site soil. In their 2025 review letter, Cornerstone recommended that, prior to residential development of the Site, soil sampling should be performed to evaluate if agricultural chemicals are present.	In September 2025, Citadel conducted an additional sampling investigation to evaluate shallow soil conditions across the Site for the presence of pesticides, given historical Site use as an orchard. Nine shallow soil borings were advanced across the Site and analyzed for OCPs, which were not reported in soil above SFBRWQCB Tier 1 ESLs.	Yes. Citadel does not consider this a REC.

Pertinent Issue Identified	Further Investigation/Information	Issue Addressed?
Historical Buildings What appeared to have been two residences and associated outbuildings were previously present on-Site. Soil adjacent to structures that are painted with lead-containing paint can become impacted with lead as a result of the weathering and/or peeling of painted surfaces. Soil near wood framed structures also can be impacted by pesticides historically used to control termites. No information was reported that documented the use of lead-based paint or termite control pesticides on-Site; however, if used, residual pesticide and lead concentrations may remain in on-Site soil. Cornerstone recommended that, prior to residential development of the Site, shallow soil at the former structure locations be evaluated for the possible presence of lead and pesticides.	In September 2025, Citadel conducted an additional sampling investigation to evaluate shallow soil conditions across the Site, adjacent to former buildings and structures, for the presence of lead and pesticides. Nine shallow soil borings were advanced across the Site and analyzed for metals and OCPs. Metals were not reported above Tier 1 ESLs and background levels with the exception of barium in three shallow soil samples located in the central-eastern portion of the Site. The reported barium concentrations in these samples were below the more applicable residential ESL of 15,000 mg/kg and construction worker ESL of 2,200 mg/kg. Results of additional CA WET/STLC analysis for barium indicated the soil would not be characterized as California hazardous waste, if disposed of.	Yes. Given the concentrations of barium in soil above the Tier 1 ESL but below residential and construction worker ESLs, Citadel considers this a *de minimis* condition.
Vapor Intrusion Concerns Sampling by Geosyntec (2017) documented the presence of VOCs in soil vapor and groundwater at concentrations that exceed current ESLs. These VOCs were not identified as a significant concern in 2017 by Geosyntec; however, Cornerstone indicated that in recent years, regulatory screening levels associated with vapor intrusion concerns had been lowered (i.e., have become more health-protective). Because at-grade residential structures were planned, and VOCs were detected at concentrations exceeding current ESLs, Cornerstone recommended that additional sampling be conducted to evaluate if vapor intrusion mitigation measures are warranted for planned structures at the Site. Additionally, Cornerstone noted that no soil vapor samples were collected near the former USTs or near the sump located on the north side of the garage/shop building and recommended that an additional evaluation should include soil vapor sampling at these locations.	As discussed above, Citadel conducted an additional sampling investigation in September 2025 to evaluate soil vapor conditions within the planned future building footprints near the former UST area and upgradient of a previous groundwater sample location where TCE had been previously detected at a concentration slightly above the MCL. Detected concentrations of VOCs in soil vapor were not considered to represent a vapor intrusion concern or drivers for further investigation or mitigation.	Yes. Citadel does not consider detected soil vapor concentrations to constitute a REC.
Recommended Updated Phase I In their 2025 review letter, Cornerstone recommended that if the use of the Site significantly changes, an updated Phase I ESA should be prepared.	Site use has changed to vacant and is planned for residential redevelopment. Thus, this Phase I has been prepared.	Yes

Copies of the reviewed reports can be found in Appendix H.

5.9 INTERVIEWS

Citadel submitted a User Questionnaire to Mr. Michael Ducote, Prometheus Real Estate Group Director of Development. The completed User Questionnaire can be found in Appendix I.

5.10 ENVIRONMENTAL LIEN

Citadel contracted with EDR to conduct an environmental lien search for the Site. The Environmental Lien Search report reviewed did not identify any current environmental liens or other activity and use limitations (AUL) for the Site. A deed dated May 14, 2018, was included in the report. The deed granted the title from El Camino Paving, Inc. to San Rafael Ave Pavco, LP.

A copy of the environmental lien and AUL search can be found in Appendix J.

5.11 SUMMARY OF SITE HISTORY

A review of historical sources showed that the Site was used as orchards and farmland as early as 1939. The Site was first developed with residential and/or auxiliary structures in 1948. In 1982, the southern portion of the Site was developed with the existing garage and office structures. The southern portion of the Site was occupied by Hackett Construction Company from 1982 to 1986, and then El Camino Paving from 1991 to at least 2014. By 1998, the northern portion of the Site appeared to be graded. The northern portion of the Site appeared to be a storage yard from 2010 until 2018, when it appeared to be a vacant parking lot.

6.0 REGULATORY AGENCY REVIEW

6.1 DATABASE REVIEW

As part of the Phase I ESA, Citadel utilized EDR of Milford, Connecticut, as an information source for regulatory agency database records.

The following summary of the database information is divided into five columns. The first column identifies the environmental database researched; the second column indicates the distance from the Site that was used for the research; the third column indicates if the Site was identified in the specified database; the fourth column lists the number of listings identified on the database within the specified distance of the Site; and the fifth column indicates if the sites identified are potential environmental concerns to the Site.

Although locations of the orphan sites are frequently unknown, Citadel attempts to evaluate the potential adverse environmental impact that these facilities may have on the Site. This evaluation consists of reviewing street names in an effort to learn whether the street on which the Site is located lies within the search distance of the subject property, a drive-by view of surrounding properties during the Site visit and evaluating the Site type and information provided by government agencies. The orphan sites included in the following table are those Citadel identified as potentially located within the identified search distance.

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
National Priorities List	1 mile	No	6	No
RCRA Corrective Action Treatment/Storage/Disposal (TSD) Facilities	1 mile	No	3	No

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
(CORRACTS)				
Delisted National Priorities List	1 mile	No	1	No
CERCLIS Sites	½ mile	No	3	No
CERCLIS No Further Remedial Action Planned (NFRAP) Sites	½ mile	No	1	No
RCRA Non-Corrective Action TSD Facilities	½ mile	No	1	No
State/Tribal Voluntary Cleanup Sites	½ mile	No	1	No
State/Tribal Leaking Registered Storage Tank Sites	½ mile	Yes	25	No
State/Tribal Brownfield Sites/CERCLIS Equivalent	1 mile	No	0	No
Historical CORTESE List	½ mile	Yes	20	No
State/Tribal Solid Waste Landfill Sites/Facilities	½ mile	No	1	No
Federal/State/Tribal Engineering Controls Registries	½ mile	No	3	No
Federal/State/Tribal Institutional Controls Registries	½ mile	No	3	No
RCRA Large Quantity Generators	¼ mile	No	1	No
RCRA Small Quantity Generators	¼ mile	No	15	No
RCRA Non Generators	¼ mile	No	41	No
State/Tribal Registered Storage Tank Sites	¼ mile	Yes	4	No
HIST UST	¼ mile	No	9	No
CA FID UST	¼ mile	No	7	No
SWEEPS UST	¼ mile	No	8	No
Facility Index System (FINDS)	Site	Yes	1	No
HAZNET	Site	Yes	3	No
Orphan	N/A	No	0	No

A brief discussion of select facilities and their database listings are included following the table. The full report provided by EDR and reviewed by Citadel can be found in Appendix K.

Site Name	El Camino Paving
Database(s)	HWTS, HAZNET, RGA LUST, FINDS, UST FINDER RELEASE, LUST, HIST LUST, Cortese, HIST CORTESE, CERS, CUPA Listings, AST
Address	924 San Rafael Avenue
Distance/Direction	Target Property
Comments	El Camino Paving was identified in the HAZNET and HWTS databases for generating

	0.0041 tons of empty containers of 30 gallons or more in 1988. This waste stream is associated with the LUST database listings. See section 6.4 for information on the LUST case and Section 5.8 for further information about the historical light industrial activities.

Maps showing the location of these facilities and additional information are provided in the Government Records Report in Appendix K.

6.2 PER- AND POLYFLUOROALKYL SUBSTANCES (PFAS)

Per- and polyfluoroalkyl substances (PFAS) are a class of synthetic chemicals commonly characterized by strong carbon-fluorine bonds that resist degradation in the environment. PFAS have been widely used since the mid-20th century in industrial applications and consumer products due to their oil-, water-, and heat-resistant properties. Common uses include firefighting foams, non-stick cookware, water-repellent fabrics, grease-resistant food packaging, and various manufacturing processes.

PFAS are considered hazardous due to their environmental persistence, mobility, and potential health effects. The presence or likely presence of PFAS at a property may present a significant environmental concern and may warrant further evaluation under applicable federal, state, or local guidelines.

The USEPA has finalized a rule under the CERCLA designating perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as hazardous substances, enabling enforcement actions for releases and requiring reporting of spills above a specified reportable quantity. These designations carry implications for cleanup liability and potential identification of PFAS as a REC.

Based on historical operations, it is unlikely PFAS is present in environmental media at the Site.

6.3 VAPOR ENCROACHMENT CONDITION

According to ASTM E2600-22, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Tier 1 screening begins with the default area of concern (AOC) defined by the approximate minimum search distances adjusted as appropriate for local conditions, and then determining if known or suspected contaminated properties with contaminants of concern (COCs) exist within the established AOC. The default AOC is one third of a mile around the TP for COCs and one-tenth of a mile for petroleum hydrocarbon COCs. The AOC is measured from the TP boundary to a contaminated property with known or suspected COC contamination of soil or groundwater or both. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment, based on factors like groundwater flow direction, subsurface characteristics, surficial features and man-made features.

If groundwater flow direction is known or can be inferred from the Phase I ESA investigation of the TP, the default AOC in the down-gradient direction may be reduced to the area within the critical distance of 100 feet. The AOC in the cross-gradient direction may also be reduced, depending upon the critical distance and the width of the COC-contaminated plume associated with a known or likely COC-contaminated property located in a cross-gradient direction from the TP. The critical distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest TP boundary and is equal to 100 feet for COCs or 30 feet for dissolved petroleum hydrocarbon COCs.

For a COC-contaminated property identified in Tier 1 located down-gradient from the TP, it is not necessary to have information on migrating groundwater contaminated plume dimensions as the critical distance is measured from the nearest TP boundary to the source of contamination at the off-site down-gradient property. In this case, the AOC may be reduced to the area within the critical distance.

For a contaminated property identified in Tier 1 located crossgradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspected COC-contaminated property (that is, the COC-contaminated property where the groundwater contamination originated). The environmental professional's judgment and experience can be used to estimate the width of the COC-contaminated plume that might be associated with the nearby known or suspected COC-contaminated property. If it is not possible to estimate the contaminated plume width, then the AOC cannot be reduced in the cross-gradient direction.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, no historical releases of petroleum products occurred within 0.25-mile and upgradient of the Site.

EDR did not identify historical gas stations or dry cleaners within 0.125-mile and upgradient, 365 feet and cross-gradient, or 100 feet and downgradient of the Site.

A copy of the vapor encroachment screen provided by EDR is included as Appendix L.

6.4 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

BUILDING DEPARTMENT

Citadel contacted the City of Mountain View Building Department for information regarding the Site in order to identify historical permits and property use. Building permits for roofing, plumbing, and electrical between 1969 and 1992, and 2025 were available for the Site. A building permit to install a groundwater monitoring system was dated 1992, and a building permit to install a photovoltaic system was dated 2025. All building permits obtained from the City of Mountain View are included in Appendix M.

FIRE DEPARTMENT

Citadel contacted the Mountain View Fire Department for information regarding USTs, hazardous materials, inspections, and permits. At the time this report was published, the agency had not yet responded. This limitation is not expected to significantly alter the findings of this assessment.

DEPARTMENT OF ENVIRONMENTAL HEALTH

Citadel contacted the County of Santa Clara Department of Environmental Health (SCCDEH) for information regarding the Site in order to identify historical documents and property use. The SCCDEH provided historical documents regarding inspection reports, hazardous materials business plans, and UST monitoring and facility closure. All records are included in Appendix M.

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY

The CalEPA Regulated Site Portal combines data of environmentally regulated sites and facilities in California into a single, searchable database. The portal provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. Citadel reviewed the Site Portal Profile for the Site addresses 924 and 940 San Rafael Avenue. The Site was identified in the database as El Camino Paving, a LUST Cleanup Site in GeoTracker with a start date of June 1998 and an end date of March 2001. See the following sections for more information.

DEPARTMENT OF TOXIC SUBTANCES CONTROL

The EnviroStor database is the Department of Toxic Substances Control's (DTSC's) internet-accessible database system for tracking cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities. According to EnviroStor, the Site was identified in the database as El Camino Paving, addressed 924 San Rafael Avenue, a GeoTracker LUST Cleanup Site. See the following sections for more information.

AIR QUALITY MANAGEMENT DISTRICT

Citadel contacted the Bay Area Air Quality Management District (BAAQMD) for information regarding the Site in order to identify historical documents and property use. BAAQMD responded that no records for the Site were found.

REGIONAL WATER QUALITY CONTROL BOARD

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. According to GeoTracker, the Site is identified as El Camino Paving, addressed 924 San Rafael Avenue, and listed as a LUST Cleanup Site:

- In June 1988, approximately 400 gallons of gasoline was released from a hole in the piping system of a 4,000-gallon UST. In August 1998, the UST was removed from the Site, and in August 1998, two additional USTs (one 10,000-gallon diesel and one 4,000-gallon gasoline) were also removed from the Site. Six monitoring wells were installed to evaluate groundwater impacts. In May 1989, approximately 400 cubic yards of soil were over excavated from the former tank pit. In 1993, four additional monitoring wells were installed, and in May 1995, a groundwater extraction system was installed. Up to 1.3 million gallons of groundwater were extracted, remediated, and discharged into the

sewer. Groundwater extraction was halted in June 1996.

In 1993, TPHd, TPHg, ethylbenzene, and xylenes were detected in soil at maximum concentrations of 400 parts per million (ppm; i.e., mg/kg), 37 ppm, 0.014 ppm, and 0.016 ppm, respectively. TPHd and TPHg were detected in groundwater at maximum concentrations of 380,000 parts per billion (ppb; i.e., µg/L) and 14,000 ppb, respectively.

By September 2000, TPHd, TPHg, and TCE were detected in groundwater at maximum concentrations of 330 ppb, 62 ppb, and 25 ppb, respectively. The extent of dissolved contamination appeared to be localized in the area adjacent to the former tank pit and naturally attenuating. Santa Clara Valley Water District (SCVWD) concluded that a continuing threat to groundwater, human health, and the environment from residual petroleum hydrocarbons did not exist at the Site. Case closure was issued for the Site by the RWQCB and SCVWD on March 14, 2001.

No other GeoTracker listings were found for the Site or nearby properties.

7.0 DATA GAPS

A data gap is a lack of or inability to obtain information despite good faith efforts to gather such information. A data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

The following data gaps have been identified during the course of this investigation:

- Additional governmental agencies that are not included in the Government Records report may maintain information regarding environmental conditions at the Site and nearby facilities. Requests have been sent to the above-mentioned agencies (Section 6.4). At the time this report was published, the building and fire department, and SCCDEH have not yet responded.

With regard to these data gaps, Citadel believes that the most significant potential sources for on-Site contamination have been identified during the current investigation and the Phase I ESA was conducted in compliance with AAI, published in 40 CFR 312.

8.0 FINDINGS

Citadel was contracted by Prometheus to conduct a Phase I ESA of the property located at 924 and 940 San Rafael Avenue, in the City of Mountain View, Santa Clara County, California.

Current Site Conditions

The Site consists of a garage building and a single-story office building, asphalt-paved parking areas, and associated landscaping. Access to the Site parking areas is accessed by two gated entrances along the eastern boundary of the Site on San Rafael Avenue. At the time of the Site reconnaissance, the Site was vacant.

Stationary equipment at the Site includes a sump, an OWS, and an outdoor sink. In general, the Site appears to be moderately maintained due to its vacancy.

Site History

A review of historical sources showed that the Site was used as orchards and farmland as early as 1939. The Site was first developed with residential and/or auxiliary structures in 1948. In 1982, the southern portion of the Site was developed with the existing garage and office structures. The southern portion of the Site was occupied by Hackett Construction Company from 1982 to 1986, and then El Camino Paving from 1991 to at least 2014. By 1998, the northern portion of the Site appeared to be graded. The northern portion of the Site appeared to be a storage yard from 2010 until 2018, when it appeared to be a vacant parking lot.

Previous Environmental Reports

The previously prepared reports and documents listed below were reviewed as part of this Phase I. Pertinent issues identified in those reports are summarized in Section 5.8. One HREC and three *de minimis* conditions were identified, as described above in Section 5.8 and below in Section 9.0.

- *Phase I and Limited Phase II Environmental Site Assessment, 918, 924, & 940 San Rafael Avenue, Mountain View, California,* prepared by Geosyntec Consultants (Geosyntec), dated May 8, 2017;
- *Environmental Review, 924 and 940 San Rafael Avenue, Mountain View, California*, prepared by Cornerstone Earth Group, Inc. (Cornerstone), dated July 30, 2025; and
- *Additional Sampling Investigation, 924 & 940 San Rafael Avenue, Mountain View, California*, prepared by Citadel, dated November 7, 2025.

Environmental Databases

The Site was identified as El Camino Paving on the HAZNET and HWTS databases for generating 0.0041 tons of empty containers of 30 gallons or more in 1988. The Site was also identified in RGA LUST, FINDS, UST FINDER RELEASE, LUST, HIST LUST, Cortese, HIST CORTESE, CERS, CUPA Listings, and AST databases for the closed LUST case and the historical light industrial activities on the Site. See sections 6.4 and 5.8 for further information.

Vapor Encroachment Condition

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, no historical releases of petroleum products occurred within 0.25-mile and upgradient of the Site.

EDR did not identify historical gas stations or dry cleaners within 0.125-mile and upgradient, 365 feet and cross-gradient, or 100 feet and downgradient of the Site.

9.0 CONCLUSIONS AND RECOMMENDATIONS

According to ASTM Standard of Practice E1527-21, RECs fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the (1) presence of any hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of

hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

A *de minimis* condition refers to a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. A condition determined to be a *de minimis* condition is not a REC nor a controlled recognized environmental condition.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

An historical recognized environmental condition, or HREC, is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

According to ASTM E2600-22, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a VEC, which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether a VEC can be rules out. Tier 2 has two data collective components: non-invasive and invasive.

Based on a review of historical and present records, and Site reconnaissance, Citadel believes that sufficient information was collected and evaluated for the Site to determine if a REC, HREC, CREC, or *de minimis* condition exists. Based on our review, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC was not identified. No evidence for designating the Site as a REC or CREC from reviews of historical documents and present Site conditions was found. Citadel identified the following HREC and *de minimis* condition:

- HREC #1: Three former USTs were removed from the Site in 1988. Investigation, monitoring, and remediation activities were conducted until SCVWD approved closure of the Site in 2001. Investigations of the former UST area conducted in 2017 and 2025 have confirmed low-level residual concentrations of petroleum hydrocarbon constituents are below current regulatory screening criteria and would not be drivers for further investigation or mitigation during property redevelopment.

- *De Minimis* Condition #1: Relatively low and isolated concentrations of TPHmo, naphthalene, and barium exceeding Tier 1 ESLs were found in soil samples collected from the Site during an investigation conducted in 2025. Concentrations were generally within the same order of magnitude as the Tier 1 ESLs and below more applicable residential and construction worker ESLs.

- *De Minimis* Condition #2:
- *De Minimis* Condition #3:

10.0 LIMITATIONS

The information and opinions rendered in this report are exclusively for use by the Client. Citadel will not distribute this report without the Client's written consent, except as may be required by law or court order. The recommendations expressed in this report took into consideration the purpose and scope of this limited assignment. We accept responsibility for the competent performance of our duties in executing the assignment and preparing this report in accordance with the normal standards of our profession but disclaim any responsibility for consequential damages resulting from inaccuracies in information provided by the Client, federal, state, county, or local regulatory agencies.

11.0 DISCLAIMER

The services conducted by Citadel Environmental Services, Inc. ("Citadel"), d.b.a. Citadel EHS, in connection with this Report were conducted in accordance with generally and currently accepted engineering practices and principles; provided, however, Citadel completed such services as directed by the Client and the recommendations described in this Report are therefore limited in purpose and scope. The procedures and methodologies used by Citadel in its performance of services, and the recommendations contained herein, are not intended to meet the requirements under any specific laws or regulatory guidelines unless expressly set forth in the Proposal.

The recommendations and conclusions set forth in this Report are based on information and data available to Citadel during the course of its performance of the services. Citadel relied on the information and data provided by or on behalf of Client, including, if applicable, historical and present operations, conditions and test data, and Citadel assumed all such information and data was correct and complete. Citadel shall not be liable for any damages or losses resulting from inaccuracies of, or omissions from, information or data provided by or on behalf of the Client, any interested third-parties, or any federal, state, county, or local governmental authority, or otherwise available in the public domain.

The information contained in this Report and conclusions resulting therefrom are based solely on information available to Citadel at the time of its performance of services, and from observations and perceived conditions and materials existing on the date of Citadel's limited survey of the site, if applicable. Citadel disclaims any inaccuracy in the Report as a result of any part or parcel of property to which Citadel was not provided access, or which was concealed, including, but not limited to, wall cavities/chases, ceiling plenums, below floor finishes, crawlspaces, below grade, beneath existing structures, or behind electrical panels.

The findings and recommendations presented in this Report are based upon observations of present conditions and may not necessarily indicate future conditions. No conclusions should be construed or inferred other than those expressly stated in this Report. EXCEPT FOR ANY WARRANTIES EXPRESSLY SET FORTH IN THE PROPOSAL OR OTHER WRITTEN AGREEMENT BETWEEN CITADEL AND CLIENT, CITADEL MAKES NO WARRANTIES HEREUNDER WITH RESPECT TO ANY INFORMATION CONTAINED IN THIS REPORT, EXPRESS OR IMPLIED, AND CITADEL HEREBY DISCLAIMS ALL OTHER WARRANTIES.

All testing and remediation methods have reliability limitations and no method nor number of sampling locations can guarantee that a hazard will be discovered if contamination or other evidence of the hazard is not encountered within the performance of the services as authorized. Reliability of testing or remediation varies according to the sampling frequency and other service variables that were selected by Client. Citadel shall not be at fault or liable for any such limitations.

The information and opinions rendered in this report are exclusively for use and reliance by the Client. The information contained herein may not be used, disclosed, or copied without written permission of the Client and may not be relied upon without the written permission of Citadel.

13.0 PROFESSIONAL CERTIFICATION

Citadel has completed a Phase I ESA of the property located at 924 and 940 San Rafael Avenue, in the City of San Jose, Santa Clara County, California. The Phase I ESA was conducted at the Clients request in accordance with the ASTM Standard of Practice E1527-21 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Citadel EHS were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

1. INTRODUCTION

Geosyntec Consultants (Geosyntec) has completed this Phase I and limited Phase II Environmental Site Assessments (ESA) for the properties located at 918, 924, and 940 San Rafael Avenue in Mountain View, California (Site) (**Figure 1**). The Phase I/II ESA was performed for Prometheus Real Estate Group, Inc. (Prometheus) in accordance with the proposal dated 20 February 2017 and executed on 3 March 2017. This report documents the methods and findings of the Phase I/II ESA that were performed in general conformance with the scope and limitations of American Society of Testing and Materials (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the 2005 United States Environmental Protection Agency (USEPA) Final Rule on All Appropriate Inquiries (AAI Rule) (40 CFR Part 312).

The purpose of this Phase I ESA is to identify "recognized environmental conditions" (RECs), "historical recognized environmental conditions" (HRECs), and/or "controlled recognized environmental conditions" (CRECs) at the Site and potential impacts from nearby properties. For the purpose of this report, and as defined by ASTM Standard E1527-13, a REC is "… *the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.*"

A HREC is "… *a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*"

A CREC is a REC "… *resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*"

The purpose of the Phase II Assessment is to obtain current data regarding residual concentrations of total petroleum hydrocarbons (TPH) in soil from former leaking underground storage tanks (LUSTs) and the presence of volatile organic compounds (VOCs) in the groundwater near the former LUSTs.

Specific conditions that were not considered to be within the scope of this Phase I/II ESA, as well as limitations and exceptions, are identified in Section 1.2 of this report.

1.1 Scope of Services

The Phase I/II ESA activities included:

- Site reconnaissance – a survey of 924 and 940 San Rafael and adjacent areas was conducted on 1 March 2017 and a survey of 918 San Rafael was conducted on 22 March 2017. The purpose of these surveys was to identify, to the extent possible, current uses and improvements of the Site, past uses of the Site, current uses of adjacent properties, and evidence of existing and historical hazardous material use, disposal, storage, and releases on the Site and/or adjacent properties. Photographs were taken and are shown in the photographic log, included in **Appendix A**.
- A review of Federal, State, and local agency databases in accordance with ASTM E1527-13 requirements for known or potential hazardous waste facilities or landfills, and facilities currently permitted or under investigation for environmental violations. Geosyntec contracted with Environmental Data Resources (EDR), Inc. to provide a Radius Map™ Report with GeoCheck® for the Site. The EDR Radius Map Report is a compilation of facilities listed in government databases that are located within minimum search radii of the Site. The EDR report is provided in **Appendix B**.
- EDR was contracted to provide a Certified Sanborn® Map Report™ for the Site; however, no information was available for the Site (**Appendix C**).
- Review of historical aerial photographs of the Site and vicinity for evidence of previous activities such as underground storage tanks (USTs) and/or oil wells and development that would suggest the potential presence of hazardous substances or petroleum hydrocarbons. Geosyntec contracted with EDR to provide an EDR Aerial Photo Decade Package™ for the Site. The year and the approximate scale of each photograph reviewed are provided on each

photograph. The EDR historical aerial photographs are provided in **Appendix D**.

- Review of historical topographic maps of the Site and vicinity for information regarding historical land use potentially involving the manufacture, generation, use, storage, and/or disposal of hazardous substances. Geosyntec contracted with EDR to provide an EDR Historical Topographic Map Report™ for the Site. The EDR historical topographic maps are provided in **Appendix E**.
- Review of historical city directories for previous Site occupants and historical Site activities. Geosyntec contracted with EDR to provide an EDR-City Directory Abstract™ Report for the Site. The EDR summary of historical city directories is provided as **Appendix F**.
- Inquiries in person, by telephone, or in writing to various regulatory agencies for information regarding environmental permits, violations, or incidents, and/or the status of enforcement actions. Geosyntec contracted with Environmental Support Services (ESS) to conduct agency inquiries. The ESS report, including copies of agency files and correspondence, is provided in **Appendix G**. Copies of documents related to the closure of the former LUSTs are provided in **Appendix H**. The following regulatory agencies were contacted:
  - Santa Clara County Environmental Health Department;
  - Santa Clara Valley Water District;
  - Department of Toxic Substances Control (DTSC) – Region 2;
  - City of Mountain View Fire Department – Fire Prevention;
  - City of Mountain View Environmental Protection – Industrial Waste Division;
  - City of Mountain View Building Department;
  - Bay Area Air Quality Management District (BAAQMD); and
  - Regional Water Quality Control Board (RWQCB) – Bay Area Region.
- Facility personnel interview: 924 and 940 San Rafael Avenue - an interview of Ms. Stephanie Alva, the former office manager of El Camino Paving and owners' representative was conducted on 7 March 2017. 918 San Rafael Avenue - an interview of Mr. Matt Mountz, the owners' representative and son, was conducted on 22 March 2017. The purpose of the interviews was to

identify, to the extent possible, past uses of the Site and evidence of existing and historical hazardous material use, disposal, storage, and releases on the Site and/or adjacent properties.

- Soil and groundwater sampling to obtain current data regarding residual concentrations of total petroleum hydrocarbons (TPH) in soil from former LUSTs and the presence of volatile organic compounds (VOCs) in the groundwater in the area of the former LUSTs. The results of the sampling are summarized in **Tables 6 and 7** and the analytical reports are included in **Appendix I**.
- Preparation of this Phase I/II ESA report, which documents the above activities, our findings and opinions as they pertain to the identification of RECs, HRECs, CRECs, and data gaps.

This work was completed in accordance with ASTM Practice E 1527-13 with the limitations and exceptions described below in Section 1.2. For the purposes of this Phase I ESA report, Prometheus represents the "user," defined as "the party seeking to use Practice E 1527-13 to complete an *environmental site assessment* of the *property*…"

1.2 Limitations and Exceptions

This Phase I/II ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs to be present at the Site. Not every property warrants the same level of assessment. Consistent with good commercial or customary practice, the appropriate level of assessment was guided by the type of property subject to assessment and the information developed in the course of the inquiry.

The findings and conclusions presented in this Phase I/II ESA are the result of professional interpretation of the information collected at the time of this study. This Phase I/II ESA was not an exhaustive search of all available records, nor does it include detailed assessment of all findings. Geosyntec cannot "certify" or guarantee that any property is free of environmental impairment; no warranties regarding the environmental quality of the property are expressed or implied.

The findings of this report, to the best of our knowledge, are valid as of the date of this work. However, changes in the conditions of a property can occur with the passage of time, whether due to natural processes or the works of man on this or adjacent

properties. In addition, changes in applicable or appropriate regulations and standards may occur, whether they result from legislation, from the broadening of knowledge, or from other reasons. Furthermore, the findings of this report are based on the configuration of the Site as depicted in **Figure 2**.

Specified information contained in this report has been obtained from publicly available sources and other secondary sources of information. Although care has been taken in compiling this information, Geosyntec disclaims any and all liability for any errors, omissions, or inaccuracies of the third parties in such information and data.

The work was performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental consultants practicing in this or similar localities. No other warranty or guarantee, expressed or implied, is made as to the findings, opinions, conclusions, and recommendations included in this report.

1.3 Exclusions

This Phase I/II ESA did not include a property title search or identification of all previous tenants; collection and chemical analysis of air; or an evaluation of seismic characteristics. In addition, the following additional services considered optional by ASTM Standard E 1527-13 were not included in the scope of work:

- Asbestos-containing building materials
- Lead in drinking water
- Cultural and historic resources
- Ecological resources
- Biological agents
- Mold
- Wetlands
- Radon
- Industrial hygiene
- Endangered species
- Lead-based paint
- Regulatory compliance
- Health and safety
- Indoor air quality

1.4 User Reliance

This Phase I/II ESA report has been prepared solely for the benefit of Prometheus (User, as defined under ASTM Standard E1527-13). Geosyntec has issued the Phase I/II ESA report to its client and grants Prometheus the right to rely on the report contents.

Except as specifically set forth in Geosyntec's proposal to perform this work, no third party shall have the right to rely on Geosyntec's opinions rendered in connection with the Services without Prometheus' approval and Geosyntec's written consent which may be conditioned on the third party's agreement to be bound to acceptable conditions and limitations.

2. PROPERTY DESCRIPTION

The Site is located within the boundaries of the City of Mountain View in the County of Santa Clara, California (**Figure 1**). The Site is located on the south side of San Rafael Avenue, approximately 200 feet north of the intersection of San Pablo Drive and San Rafael Avenue (**Figure 2**). The surrounding land use is mixed-use residential and commercial/light industrial.

Topographic map coverage of the Site and vicinity is provided by the United States Geologic Survey (USGS) 7.5-Minute Series Topographic Map of the Mountain View, California Quadrangle dated 2012, which depicts the Site as relatively flat at an elevation of approximately 42 feet above mean sea level (MSL). The latitude and longitude coordinates for the Site are approximately 37.4069 N / - 122.0736 W. The Site is approximately 2.0 acres in size and contains three parcels (APN 153-17-044, 153-17-045 and 153-17-046) per the Santa Clara County Assessor's Office.

2.1 Past and Current Use of the Site

The Site was first developed in the early 1950s, with the building of a residence on 918 San Rafael Avenue, prior to which the land was undeveloped. Based on aerial images the land was further developed in the 1970's with construction of the two structures at 924 San Rafael Avenue and 940 San Rafael Avenue (EDR, 2017e). The property at 918 San Rafael Avenue is still a residential property. Between the 1970's and 1982, 924 San Rafael Avenue became a commercial property for Hackett Construction Company (EDR, 2017e). 940 San Rafael Avenue was used as a commercial landscaping yard prior to being owned by El Camino Paving per the Owner's representative, Ms. Stephanie Alva. Between 1986 and 1991, 924 and 940 San Rafael Avenue were acquired by El Camino Paving, and operated as a paving company until the business became non-operational in 2015 (EDR, 2017e). According to the Owner's representative, equipment associated with the former asphalt paving and repair services by El Camino Paving is currently stored at the Site.

2.2 Description of Adjacent Properties

The Site is located in a mixed-use commercial/residential area of Mountain View, California. The following sections describe the adjacent properties surrounding the Site. Note that according to ASTM Standard E1527-13, "*an adjoining property is*

defined as a property that is contiguous or partially contiguous with that of the property [site], or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them."

2.2.1 North

To the north, the Site is bordered by a two-story building at 954 San Rafael Avenue.

2.2.2 East

To the east, the property is bordered by San Rafael Avenue, followed by residential housing and commercial office space.

2.2.3 South

To the south, the Site is bordered by residential housing.

2.2.4 West

To the west, the property is bordered by commercial/light industrial buildings.

2.3 Environmental Setting

A brief description of the onsite environmental setting is provided in **Table 1** below. A more detailed discussion of general geology and hydrogeology is provided following this table.

Table 1: Onsite Environmental Setting Summary

Conditions	Source	Description
Topography		
Elevation	USGS topographic map; EDR GeoCheck® Report	Elevation at the property is approximately 42 feet above mean sea level.
Topographic Gradient	USGS topographic map; Visual observations	Site is generally flat with gentle sloping grade to the north towards Terra Bella Avenue.
Hydrology		
Surface Water Runoff	Geosyntec visual observations	Storm drainage is over impervious surface toward the boundary between 924 and 940 San Rafael Avenue and to the east toward the municipal storm drain on San Rafael Avenue.
Nearest Surface Water Body	USGS topographic map	Steven's Creek, which is located approximately 0.23 miles to the east of the Site at its nearest point.
Flood Plain	EDR Summary Radius Map™ Report	The EDR report indicates that a 100-year flood zone is present approximately 0.2 miles south of the Site.
Wetlands	EDR GeoCheck® Report	Federally-designated wetlands not present at the Site.
Geology and Hydrogeology		
Geology/Lithology	EDR GeoCheck® Report	Shallow soils beneath the Site include fine-grained clays and silts and coarser sands.

Conditions	Source	Description
Presumed Direction of Shallow Groundwater Flow	EDR Radius Map™ Report with GeoCheck®	The regional groundwater flow in the area is to the north based on nearby monitoring well water levels and other groundwater flow directions reported for other sites in the area (EDR, 2017a).
Depth to Groundwater	EDR Radius Map™ Report with GeoCheck®	Depth to groundwater measured approximately one mile from the Site appears be less than or equal to 10 feet below ground surface (ft bgs).
Onsite Wells	Visual Observations	No groundwater monitoring wells or soil gas probes were observed onsite.
Nearest Groundwater Wells	EDR Radius Map™ Report with GeoCheck®	The EDR report indicates that the nearest water supply well is approximately 0.5 miles to the southeast.

2.3.1 Geological and Hydrogeologic Summary

The Site is located in the Santa Clara Valley Groundwater Subbasin, the northernmost of two interconnected groundwater basins within Santa Clara Valley (SCVWD, 2012). The subbasin occupies a structural depression that is bounded on the east by the Diablo Range and on the west by the Santa Cruz Mountains. The Department of Water Resources Bulletin 118 (updated in 2003) indicates that main groundwater bearing unit in the basin is the upper Pleistocene to Holocene age alluvium. The alluvium in the basin is deposited as a series of convergent alluvial fans and is comprised of unconsolidated gravel, sand silt and clay. All the large water production wells derive their water from the deeper, permeable units of the alluvium (RWQCB, 2007). Groundwater flow in the area is generally to the north toward San Francisco Bay.

Alluvium directly underlies the Site. The alluvial material beneath the Site includes fine-grained silts and clays and more permeable sands. First groundwater is encountered at less than 10 ft bgs. The shallow groundwater occurs in silty sand, gravelly sand, and gravel (EDR, 2017a). The regional groundwater flow in the area is to

the north based on nearby monitoring well water levels and other groundwater flow directions reported for other sites in the area (EDR, 2017a).

2.3.2 Surface Water/Groundwater

There are no known permanent surface water bodies on or contiguous to the Site. The nearest known surface water is Steven's Creek, located 0.2 miles to the east of the Site. The depth to groundwater at the Site is less than or equal to 10 ft bgs (EDR, 2017a). The nearest groundwater supply well is approximately 0.5 miles to the southeast of the Site (EDR, 2017a). Current beneficial uses of groundwater in the Santa Clara Valley include agriculture, municipal and domestic, industrial processes, and industrial supply (RWQCB, 2007). Shallow groundwater at the Site is not used for domestic supply.

3. USER-PROVIDED INFORMATION

In accordance with ASTM Standard E 1527-13, Geosyntec requested that the User of the Phase I ESA provide information that would assist in identifying the possibility of RECs in connection with the Site. The User provided additional documentation as described in this section.

3.1 Title Records

The User did not provide Geosyntec a Chain-of-Title report for the Site.

3.2 Environmental Liens or Activity and Use Limitations

The User did not provide Geosyntec with information regarding environmental liens or activity and use limitations associated with Site.

3.3 Land Use Restrictions

The User did not report any information regarding land use restrictions in place for the Site.

3.4 Specialized Knowledge

The User is aware of the former LUST cleanup activities associated with a diesel release at the Site. Additional information is provided in Section 5 of this report. In addition to this, the User provided a previous Phase I Environmental Assessment conducted by Professional Service Industries, Inc. in 2016 (PSI, 2016).

3.5 Valuation Reduction for Environmental Issues

The User did not provide Site property value information.

3.6 Commonly Known or Reasonably Ascertainable Information

The User did not provide any specific information.

3.7 Owner, and Occupant Information

924 and 940 San Rafael Avenue - The former Office Manager, Ms. Stephanie Alva, was involved with activities and record keeping at the Site. Ms. Alva also acts as a

representative for the Site owner, Marie Alva (Ms. Alva's mother). Information obtained from Ms. Alva is provided in Section 8.

918 San Rafael Avenue – The son of the owners, Mr. Matt Mountz, grew up in the residence and has historical knowledge of the property. Mr. Mountz acted as a representative for his parents and owners, Mr. Dalton L. and Ms. Mary M. Mountz. Information obtained from Mr. Matt Mountz is also provided in Section 8.

3.8 Reason for Performing Phase I ESA

The purpose of the Phase I ESA is to evaluate the Site for the RECs, HRECs, and/or CRECs and potential impacts from nearby properties in anticipation of a property purchase/acquisition.

4. RECORDS REVIEW

A regulatory agency records review was conducted to identify potential RECs associated with the Site and surrounding properties. Documents obtained for review included a database search of federal, state, county, and municipal records. In addition, local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments were contacted to identify current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

4.1 Regulatory Database Review

The following information was obtained through a search of electronically compiled federal, state, county, and city databases provided by EDR. The database search includes regulatory agency lists of known or potential hazardous waste sites, landfills, hazardous waste generators, and disposal facilities in addition to properties under investigation.

The searches of the various databases were limited to "approximate minimum search distances" (i.e., 0.25 to 1.0 miles) depending on the regulatory database as specified in ASTM Standard E 1527-13. A complete description of the databases that were searched is provided in the EDR Radius Map™ Report (**Appendix B**). The locations of the properties listed in this report are plotted with a geographic information system utilizing geo-coding of property addresses. Refer to the radius map (**Appendix B**) for the locations of these properties in relation to the Site.

The Site is identified in the California Leaking Underground Storage Tank (CA LUST) database as a site with historical release of petroleum hydrocarbons from underground storage tanks. The Site was identified in this database on 29 June 1988 and the case was closed by the Santa Clara Valley Water District Leaking Underground Fuel Tank Storage Program on 14 March 2001 (EDR, 2017a). In 1988, a 4,000-gallon and 10,000-gallon tank were removed from the Site and 400 cubic yards of impacted soil was excavated. The Site is also identified in the DTSC's Facility and Manifest Database (HAZNET) for storage, bulking and/or transfer off site of unspecified oil-containing waste materials in 2007 (EDR, 2017a). The Site is also identified in the California Unified Program Agencies Listings database as a hazardous waste generator (EDR, 2017a). The Site is also identified in the California Recovered Government Archive (RGA) LUST and California Aboveground Storage Tank databases (EDR, 2017a).

A summary of properties within 0.25 miles of the Site is provided in **Table 2** below.

Table 2: Summary of Properties within 0.25 Miles of the Site

Site Name and Address	EDR Map ID/Page No	Distance and Direction	Databases	Summary
Less than 1/8 mile from the Site				
Gibson Studio, Inc. 954 San Rafael Avenue Mountain View, CA 94043	A7/178	26ft. northeast	RCRA-SQG FINDS CA HAZNET ECHO	Listed as a small quantity generator in 1993 and in HAZNET in 1995 with waste production between 0.0030 tons and 3.0228 tons of metal sludge (alkaline solution with metals) and photochemicals/photoprocessing waste. No information provided on FINDS. No violations reported. Based on this information the property is not considered a REC.
Jeda Publications 909 San Rafael Avenue, A Mountain View, CA 94043	8/181	77ft. east-southeast	RCRA-SQG FINDS CA EMI CA HAZNET ECHO	Listed as a small quantity generator in 1992 and in HAZNET in 1996 with waste production between 0.0028 tons and 0.7506 tons of photochemicals or photoprocessing waste. Initially listed in EMI in 1995, gas emissions range from 2-4 tons/year. No information provided on FINDS. No violations were reported on any database. Based on this information the property is not considered a REC.

Site Name and Address	EDR Map ID/Page No	Distance and Direction	Databases	Summary
BD Bioscience Clontech Wako Life Sciences Inc. Macromolecular, LLC 1025 Terra Bella Avenue Mountain View, CA 94043	B9/184 B10/188 B11/189 B12/190	200ft. north-northeast	RCRA-SQG FINDS CA HAZNET ECHO CA CUPA Listings	Listed as a small quantity generator in 2001 and 2016. In 2001, waste streams include benzene, chloroform, pyridine and a range of spent halogenated and, nonhalogenated solvents. In 2016, waste streams included ignitable waste, silver, and spent nonhalogenated solvents. Initially listed in HAZNET in 2002 with waste production between 0.03 tons and 6.88 tons of halogenated solvent and other organic solids waste. This facility was described in the CA CUPA listings as a generator of between 100 kilograms and <5 tons per year. No information provided on FINDS. No violations were reported in the databases. Based on this information and the downgradient location of the property, this property is not considered a REC.
Mark Merrill 941 Linda Vista Avenue B Mountain View, CA 94043	C13/191	310ft. west	CA CUPA Listings	Described as generating <10 gallons per year. No further information. Based on this information the property is not considered a REC.
Google, Inc. 1061 Terra Bella Avenue Mountain View, CA 94043	D14/191	322ft. north-northwest	CA CUPA Listings CA HAZNET	Listed in CUPA as generating 10 gallons per year. Listed in HAZNET in 2015, waste categories include other organic solids, aqueous solution with total organic residues less than 10 percent, laboratory waste chemicals and off-specification, aged or surplus organics. Waste production is reported as ranging from 0.0225 and 0.2 tons. No violations reported. Based on this information and the downgradient location this property is not considered a REC.

Spectra Physics Inc. 1250 W. Middlefield Rd. Mountain View, CA 94042	146/115	1179ft. west-northwest	NPL SEMS CORRATS RCRA-SQG US ENG CONTROLS ROD NY MANIFEST	The facility was used to manufacture electronic equipment and gas lasers, using a variety of cleansers, degreasers and lubricants in the process. A CRWQCB site inspection in 1981 which found improper storage of hazardous wastes. A groundwater investigation was begun in 1984 after investigations at Teledyne Semiconductor, a property adjacent and downgradient, indicated possible up gradient contamination sources. The property is listed on the NPL (EPA ID: CAD009138488) with a final date of 02/11/1991 with substances including PCE, TCE, TCA, chloroform, trans-1,2-DCE with ground water as the pathway. Listed as a large quantity generator in 1980, 1990 and 1992 and later listed as a small quantity generator 1996. The facility violation was determined 02/25/1987. The US ENG CONTROLS database lists multiple records of decisions for the mandated engineering controls. The facility was assigned a high corrective action priority in CORRATS. Based on documents available on GeoTracker, the groundwater extraction and treatment system was shut down with RWQCB approval in July 2015. Based on the distant cross gradient location of this facility, and the status of the remedial actions, this facility is not considered a REC.

The property is listed in the SWEEPS UST database with six tanks, five used for motor vehicle fuel storage and one for waste oil storage. Per the CA CUPA Listings, this facility generates between 100 kilograms and less than five tons per year. Listed as a small quantity generator in 1990 and listed in HAZNET in 1999, 2003, 2006 and 2008 with waste streams of aqueous solution with total organic residues less than 10 percent, hydrocarbon solvents, off-specification, aged or surplus organics, waste oil/mixed oil and other organic solids. Waste volumes of organic solids ranged from 0.05 tons to 0.95 tons. The site is listed in the LUST database as a closed LUST Cleanup site as of 07/26/2004 with gasoline the potential contaminant of concern and the potential media affected was groundwater not used as drinking water. No violations reported on ECHO. No further information provided by the FINDS, FID UST, NOTIFY 65, or HIST CORTESE databases. Based on the closed case status pertaining to the USTs, and no other recorded violations related to the handling and storage of hazardous materials, this property is not considered a REC.

Several addresses with reported releases of VOCs to groundwater were identified within ¼ to 1-mile of the Site (**Appendix B**). The Middlefield Ellis Whisman (MEW) superfund site is located approximately 1-mile east of the Site. This site is listed on the national priority list for chlorinated solvents (predominantly trichloroethene (TCE) and

the related degradation products) in multiple aquifer zones. Groundwater is monitored annually through a network of over 1,000 monitoring wells to gauge the groundwater flow direction and delineate extent of groundwater contamination. Based on the extent of TCE in groundwater presented in the 2015 Annual Report, the Site is located approximately ½ mile west of the 5 ug/L (i.e., maximum contaminant level [MCL]) boundary and groundwater nearest to the Site appears to be moving toward the MEW extraction well network and not toward the Site (Geosyntec, 2016).

Nine addresses were identified in the database search as orphan properties. Orphan properties are facilities that were not mapped in the EDR Radius Map™ Report due to poor or inadequate address information. The orphan properties were evaluated to determine its proximity and importance to site conditions and were eliminated as being a potential concern.

4.2 Additional Record Sources

Additional record sources were requested for the Site from agencies and/or from agency databases. Geosyntec contracted with ESS to conduct several of these agency inquiries, and additional inquiries were conducted by Geosyntec directly as noted. The ESS and Geosyntec agency inquiry information is summarized below, and the ESS report including copies of agency files and correspondence are included in **Appendix G**. As noted below, agency responses have not been received in some cases; in the event that any information concerning the Site is received following submittal of this report, Geosyntec will forward to Prometheus.

4.2.1 Santa Clara County Environmental Health Department

On 23 February 2016, ESS submitted a request for a records search concerning the Site to the Public Records Section, with the Santa Clara County Environmental Health Department. ESS requested information concerning the utilization, manufacture, storage and/or discharge of hazardous materials/waste, and any information concerning previous or on-going site investigations/remediation pertaining to hazardous materials/waste. Ms. Melissa Belloso, with that department, informed ESS on 7 October 2016 that her department only had records for 924 San Rafael Avenue, Mountain View, California. The records provided are included in **Appendix G** and include the following:

- Inspection documentation;

- Environmental compliance plan documentation;
- California Environmental Reporting System (CERS) submittal summary; and
- Hazardous materials inventory matrix.

These records show that materials stored on the Site were consistent with what was observed in the Site Reconnaissance described in **Section 6**, including motor oil, gear oil, transmission fluid, antifreeze, grease, use oil filters, hydraulic oil, waste antifreeze, waste oils, asphalt crack filler, oxygen, propane, and acetylene.

Additionally, it was noted in the compliance plan that sumps are installed under the steam cleaning area.

4.2.2 Santa Clara Valley Water District

On 23 February 2017, ESS submitted a request for a records search concerning the Site to Ms. Stewart, with the Santa Clara Valley Water District. ESS requested information concerning the storage of hazardous materials/waste, underground storage tanks and industrial waste discharge permits or violations for the Site. Mark Bilski, with that department, informed ESS on 27 February 2017 that his department is no longer the lead agency for solvent and underground storage tank contamination files. She recommended that ESS contact the Santa Clara County Environmental Health Department (Section 4.2.1), City of Mountain View Fire Department (Section 4.2.4) and RWQCB (Section 4.2.8) for further information.

4.2.3 DTSC – Region 2

On 23 February 2017, ESS requested that the Public Records Section, with the DTSC, check the file room records for any files/information concerning the Site. Previous contacts with the DTSC have disclosed that this office only collects and stores information (such as treatment, storage and disposal of hazardous waste) concerning sites which have existing businesses, industries, etc. present. On 7 March 2017, DTSC responded that they had no records pertaining to the Site.

4.2.4 City of Mountain View Fire Department – Fire Prevention

On 23 February 2017, ESS requested that the Public Records Section, with the City of Mountain View Fire Department, check their records concerning the storage of hazardous materials/waste and underground storage tanks with regards to the Site. As of 14 March 2017, the Public Records Section had not completed ESS' request. Should

any information concerning the Site become available, Geosyntec will forward it to Prometheus.

4.2.5 Office of the State Fire Marshall – CalFire

On 23 February 2017, ESS requested that the Public Record Section of the Office of the State Fire Marshall, check their records concerning the storage of hazardous materials/waste and underground storage tanks with regards to the Site. Ashley Kephart, with that department, informed ESS that her department only had records for 924 San Rafael Avenue, Mountain View, California. The records provided are included in **Appendix G** and include two listings for El Camino Paving, Inc. as both an above ground storage act facility (greater than 10,000 gallons petroleum storage capacity) and a hazardous waste generator. Inspection dates were listed for 31 March 1999 and 16 May 2009. No additional information was provided.

4.2.6 City of Mountain View Environmental Protection – Industrial Waste Division

On 23 February 2017, ESS requested that the Public Records Section, with the City of Mountain View Environmental Protection – Industrial Waste Division, check their records for any information concerning industrial waste discharge permits or violations for the Site. Margarita Herrera, with the City of Mountain View City Clerk's Office, informed ESS that her department only had records for 924 San Rafael Avenue, Mountain View, California. The records provided are included in **Appendix G** and include the following:

- Wastewater discharge permits for the sump in the steam area;
- Periodic reports of continued compliance;
- Hazardous material and waste storage permits;
- Fire and life safety permits for motor vehicle repair and welding work;
- CUPA fee logs;
- Environmental compliance plans, including documentation of an oil/water separator in the steam cleaning area west of the garage;

- Email regarding inspection violations related to non-active stockpiles, spill absorbent left in place, and general property housekeeping;
- Letter from the City Attorney regarding underground tank violations related to a lack of monitoring;
- Payment log and removal permit for the USTs; and
- UST removal documentation (details included in **Section 5**)

4.2.7 City of Mountain View Building Department

On 23 February 2017, ESS requested that the Public Records Section, with the City of Mountain View Building Department, provide the building records (all building permits and certificates of occupancy) for the Site, (**Appendix G**). On 28 February 2017, Margarita Herrera, with that department provided ESS with all the available records for the address.

4.2.8 Bay Area Air Quality Management District

On 23 February 2017, ESS submitted a search request concerning active, inactive and sold files for the Site to Ms. Reed at the BAAQMD. She informed ESS on 27 February 2017 that her department had no records for the Site.

4.2.9 RWQCB – Bay Area Region

On 23 February 2017, ESS requested that Ms. Wong, with the RWQCB, provide the files for the Site. On 3 March 2017, Ms. Wong directed ESS to the Geotracker database for RWQCB records. Records available on Geotracker are summarized in Section 5.2.

4.2.10 State Water Quality Control Board Geotracker Database

On 27 February 2017, Geosyntec accessed the on-line Geotracker Database of the State Water Quality Control Board to review files regarding the Site and previous known addresses for the Site. A summary of these documents and the relevant Site information is included in Section 5.2

4.2.11 DTSC EnviroStor Database

On 27 February 2017, Geosyntec accessed the DTSC on-line EnviroStor database to review files on the subject Site. The review found no records available for the Site.

4.3 Historical Review

A records review was conducted to identify potential RECs in connection with the Site and surrounding properties. Documents obtained for review included:

- Available historical aerial photographs;
- Available historical topographic maps;
- Available historical city directory records; and
- Available historical fire insurance maps.

4.3.1 Aerial Photograph Review

Geosyntec reviewed aerial photographs of the Site and surrounding area provided by EDR on 23 February 2017 (EDR, 2017d). Copies of the historical aerial photographs are included in **Appendix D**. All aerial photographs were of the scale 1"=500'; due to the production quality, some details in the aerial photographs were difficult to discern. Aerial photographs were reviewed for the years 1939, 1943, 1948, 1950, 1956, 1963, 1968, 1974, 1982, 1991, 1998, 2005, 2006, 2009, 2010, and 2012, and are described below.

1939 Aerial: The approximate location of the Site was identified. The Site and surrounding land use appears to be orchards and farm land. A road (now Highway 101) is observed to the north of the Site.

1943 Aerial: The Site and the surrounding land use are similar to the 1939 aerial. There appears to be a structure in the southeastern portion of the property.

1948 Aerial: The Site and the surrounding land use are beginning to be developed. Two structures are present on the northwest corner of the property.

1950 Aerial: The Site and the surrounding land use are similar to the 1948 aerial.

1956 Aerial: The Site and the surrounding land use are similar to the 1948 aerial.

1963 Aerial: The land use to the south of the Site has changed from farm land to residential. The structures in the northwest corner of the property are no longer present.

Highway 101 has been developed with two interchanges and the main roads to the east and west, now Shoreline Blvd. and Moffett Blvd. appear paved.

1968 Aerial: The Site appears similar to the 1963 aerial except a small structure near the center of the property is now present. The trend from agricultural use to commercial and residential land use surrounding the Site continues. The properties to the east and west each now have structures present.

1974 Aerial: The Site appears similar to the 1968 aerial. Two structures with green roofs are now present in the northeast portion of the Site. The property to the west now has a second structure present. The properties to the north and south of the Site appear similar to the land use in the 1968 photograph.

1982 Aerial: The property has been cleared of trees and paved. The garage can now be seen in the southwest corner of the Site. The structures with green roofs have been removed. The property to the north appears to have been developed with a commercial/industrial building. The remainder of the surrounding land use appears to be similar to the 1974 photograph.

1991 Aerial: The Site and surrounding land use are similar to the 1982 photograph.

1998 Aerial: The Site and the surrounding land use are similar to the 1982 photograph.

2005 Aerial: The Site and the surrounding land use are similar to the 1998 photograph, except a large commercial park has been built north of Highway 101 as well as Highway 101 expansion. Various vehicles and construction equipment are visible on the Site.

2006 Aerial: The Site and the surrounding land use are similar to the 2005 photograph.

2009 Aerial: The Site and the surrounding land use are similar to the 2005 photograph.

2010 Aerial: The Site and the surrounding land use are similar to the 2005 photograph.

2012 Aerial: The Site and the surrounding land use are similar to the 2005 photograph.

4.3.2 Sanborn Fire Insurance Map Review

On 23 February 2017, a Sanborn Fire Insurance map report was obtained from EDR for the Site and adjacent properties; this report stated that no Sanborn maps are available for the vicinity (EDR, 2017b). A copy of the Sanborn report is included in **Appendix C**.

4.3.3 Topographic Map Review

Geosyntec reviewed historical topographic maps of the Site and surrounding area obtained from EDR on 23 February 2017 (Appendix E). Topographic maps were reviewed for the years 1897, 1899, 1902, 1943, 1947, 1948, 1953, 1961, 1968, 1973, 1981, 1995, 1997, and 2012. The following presents a summary of the USGS topographic maps reviewed (EDR, 2017c):

1897: The approximate location of the Site was identified. The Southern Pacific Railroad (Monterey Line) is shown to the south of the Site and Stierlin Road is shown to the west. Stevens Creek is shown east of the Site. The topography of the Site and surrounding areas is relatively flat. No development of the Site is indicated.

1899: The approximate location of the Site was identified. The topography and features of the Site and surrounding areas appear similar to the 1897 topographic map with the addition of marsh land north of the Site. No development of the Site is indicated.

1902: The approximate location of the Site was identified. The topography and features of the Site and surrounding areas appear similar to the 1897 topographic map. No development of the Site is indicated.

1943: The approximate location of the Site was identified. The topography and features of the Site appear similar to the 1897 topographic map. The areas within the extent of the map and the City of Mountain View have been somewhat developed. The streets near the Site, particularly San Rafael Avenue, San Pablo Drive and Tera Bella Avenue are shown. A road identified as Bay Shore (now Highway 101) shown north of the Site. Permanente Creek is identified west of the Site. The first development of Moffett Field, northeast of the Site, is shown.

1947: The location of the Site was identified. The topography and features of the surrounding areas appear similar to the 1943 topographic map.

1948: The approximate location of the Site was identified. The topography of the Site appears similar to the 1943 topographic map. Moffett Field is further developed. The topography and features of the surrounding areas appear similar to the 1943 topographic map.

1953: The approximate location of the Site was identified. The topography and features of the Site and surrounding areas appear similar to the 1948 topographic map. Bay Shore is now identified as a 4-lane Highway/Bypass 101. San Pablo Drive does not appear on the map.

1961: The location of the Site was identified and appears to be undeveloped and structures are shown at the adjacent property to the west of the Site. Two clover interchanges are shown on Bypass 101. The topography of the Site and surrounding areas appear similar to the 1953 topographic map.

1968: The location of the Site was identified. The topography and features of the Site and surrounding areas to the east and west appear similar to the 1961 topographic map. The surroundings areas to the south appear to be under development based on the appearance of streets. South of the Site, Middlefield Road is extended west.

1973: The location of the Site was identified. The topography and features of the surrounding areas appear similar to the 1968 topographic map. The areas to the south and west of the Site continue to develop.

1981: The location of the Site was identified. The topography and features of the surrounding areas appear similar to the 1973 topographic map.

1995: The location of the Site was identified. The topography and features of the surrounding areas appear similar to the 1973 topographic map. The residential area south of the site is labeled San Veron Park.

1997: The location of the Site was identified. The topography and features of the surrounding areas appear similar to the 1995 topographic map.

2012: The location of the Site was identified. The topography and features of the surrounding areas appear similar to the 1995 topographic map.

4.3.4 City Directory Review

Historical City Directory listings were obtained from EDR on 23 February 2017 for the Site and adjoining properties (**Appendix F**). Listings for the Site were available and reviewed during select years from 1922 through 2013 (inclusive). The following table summarizes the results of the city directory search for the Site (EDR, 2017e).

Table 3: Historical City Directory Listings for the Site

Site Address (APN)	Listing
918 San Rafael Avenue (153-17-044)	1957 – Hruntley Alfred 1962 – Huntington Alonzo (Elsie) Slsmn RCA Communications (SF) 1968 – Huntley Alf S 1975-2001 – Mountz Dalton L, Mountz Mary
924 San Rafael Avenue (153-17-045)	1982 – Hlw KETr Construction Co 1986 – Hackett Construction Co Mountain View 1991 – El Camino Paving Inc 2001 – SALVAMane 2008-2013 – El Camino Paving Inc
940 San Rafael Avenue (153-17-046)	1957 – Fox R John 1962 – Lloyd Harold (Shettrell) Fornm Preformed Line Prod (PA) 1968 – Hinkle Elsie Mrs, Rear Roberge Max 1975 – Nelligan Robin, Oikawa Kenneth 1982-1986 – Simpson Ken 1991 – Baumgratz Landscaping Inc, Swanson Patty

Listings were also available and reviewed for properties immediately adjoining the Site during select years from 1922 through 2013 (inclusive). The following table summarizes the commercial listing results of the city directory search for the adjoining properties. A large number of residential listings were also available but were omitted from this report; see **Appendix F** for further detail. Two addresses adjacent to the property on the west side, 936 Linda Vista Avenue and 915 Linda Vista Avenue, were not included in the EDR City Directory and are not included in this table.

Table 4: Historical City Directory Listings for Properties Adjoining the Site

Adjoining Property Address	Listing
909 San Rafael Avenue	1968 – Baders Dutch Biscuit 1975 – Baders Cookies Inc 1991 – A Jeda Publications; B Printing Source 2001 – No listing 2008-2013 One Two Six Design

5. KEY DOCUMENTS

Limited environmental investigations (i.e., soil and groundwater sampling) have been conducted at the Site as part of the past release of diesel fuel from LUSTs in 1988. The UST leak report documents that alarms in the piping system alerted the operator to a leak attributed to a pea sized hole in the product line under the dispenser (**Appendix H**). This release was addressed in a LUST case under the direction of the Santa Clara Valley Water District which was closed in 2001. This section provides a summary of the available documents prepared as part of the environmental cleanup activities associated with LUST case and the relevant information regarding the Site. Documents referenced in this section are included in **Appendix H**.

Excavated Soil and Soil Sampling Report, El Camino Paving, Inc., 924 San Rafael Ave, Mountain View, California (Aqua Terra Technologies, 1989)

- Scope included the excavation of additional diesel contaminated soil based on soil samples previously collected by Aqua Terra Technologies in May 1989.
- Describes the leak being caused by an onsite accident which compromised the structural integrity of the piping between the USTs causing the removal of all three tanks.
- USTs and surrounding soil were removed in August and October 1988 and a sump collected 400 gallons of diesel fuel. Six monitoring wells were installed, three close to the excavation and three forty feet downgradient.
- Eight soil samples were collected in May 1989. Analytical results showed no detections of diesel along the west wall of the excavation. Vertical delineation of the diesel and waste oil showed no detections of diesel or waste oil at 10 feet below ground surface.
- At the request of El Camino Paving, the soil was excavated to a depth of 14 feet below ground surface. Soil was stockpiled on site and treated through bioremediation prior to being used as asphalt subgrade in off-Site road construction activities.

Groundwater Investigation and Remedial Action Plan, El Camino Paving, Inc., 924 San Rafael Ave, Mountain View, California (CET Environmental Services, 1994)

- Scope included sampling from the nine on-Site groundwater monitoring wells installed to a maximum depth of 21 feet below ground surface and an on-Site, off-Site cone penetration test (CPT) investigation to a maximum depth of 15 feet below ground surface, and three pumping tests to determine the feasibility of implementing a groundwater extraction program.
- Samples were analyzed for diesel (TPH-d), gasoline (TPH-g), benzene, toluene, ethylbenzene and xylene (BTEX), and volatile organic compounds (VOCs).
- Sample results from the groundwater monitoring wells showed that TPH-g and BTEX were below the laboratory detection limit with the exception of xylene, which was detected at the reporting limit of 0.05 micrograms per liter (ug/L). TPH-d was detected only within the property boundary, with the exception of one CPT sample northwest of the property (600ug/L). The maximum diesel concentration was 3,200 ug/L along the western boundary of the property. Groundwater samples were also collected from the CPT locations for analysis of VOCs. The results identified concentrations of several VOCs in groundwater (all below SCVWD maximum contaminant levels (MCLs)) with only one sample collected upgradient of the Site having a concentration above the MCL for trichloroethylene (TCE) with a concentration of 13 ug/L.
- Pumping tests concluded that groundwater could be extracted from MW-4 to provide hydraulic containment of the diesel impacted groundwater. Extraction from this well was proposed with planned discharge to the municipal sanitary sewer permitted by the City of Mountain View. At the time of closure, it was noted that 1.3 million gallons of groundwater had been removed from the Site (SCVWD, 2001).

<u>Meeting Summary, Remedial Action Items (Letter from CET Environmental Services to Santa Clara Valley Water District (SCVWD) dated 13 December 1995)</u>

- SCVWD required a workplan for additional sampling in the former UST area to characterize residual TPH contamination, if found.
- SCVWD agreed to a request to cease groundwater extraction based on contaminant concentrations for TPH-d not exceeding 1 milligram per liter (mg/L) at the property boundaries. SCVWD agreed to cease groundwater extraction provided quarterly groundwater sampling verify concentrations at the Site do not increase significantly.

Case Closure Summary, Leaking Underground Fuel Storage Tank Program (SCVWD, 2001)

- Case was closed on by SCVWD on 6 March 2001.
- SCVWD noted that of the 30 production wells in the ¼ mile radius, none were likely to present preferential pathways based on their distance from the plume and the attenuation of the plume.
- Before cleanup, the maximum concentrations of TPH-d in soil and groundwater were 22,000 milligrams per kilogram (mg/kg) and 920,000 ug/L respectively. After cleanup, the maximum concentrations of TPH-d in soil and groundwater were 400 milligrams per kilogram (mg/kg) and 330 ug/L respectively. SCVWD also noted TCE had been detected in groundwater at a concentration of 25 ug/L were noted, but no other information was provided.
- SCVWD staff concluded that a continuing threat to groundwater, human health, and environment from residual petroleum hydrocarbons does not exist at this site.

6. SITE RECONIASSANCE AND INTERVIEW

Following review of the database search report, historical aerial photographs, historical topographic maps, and other pertinent information, Geosyntec performed a Site reconnaissance of 924 and 940 San Rafael Avenue on 1 March 2017. The reconnaissance was performed by Ms. Sara Roy and Mr. Billy Linker of Geosyntec, with intermittent escort provided by Ms. Stephanie Alva, former Office Manager of El Camino Paving. Reconnaissance was performed by walking the Site perimeter and interior areas of 924 and 940 San Rafael Avenue.

Mr. Linker performed a subsequent reconnaissance of 918 San Rafael Avenue on 22 March 2017. Escort during the site reconnaissance was provided by Mr. Mountz, and Mr. Jeffrey Hare, attorney and real estate broker for the property. Reconnaissance was performed by walking the Site perimeter and interior areas of 918 San Rafael Avenue.

Following the reconnaissance, the owners' representatives Ms. Stephanie Alva and Mr. Mountz completed a questionnaire regarding current and historical Site details pertaining to 924 and 940 San Rafael Avenue and 918 San Rafael Avenue, respectively. Ms. Alva's mother, Ms. Marie Alva, is reportedly the owner of 924 and 940 San Rafael Avenue, and has been a continuous owner since the inception of the business. Mr. and Mrs. Mountz are reportedly the owners of 918 San Rafael Avenue and have been continuous occupants since 1968 and owners since 1973. A summary of the Site reconnaissance is provided in **Table 5** below, and locations of pertinent findings are depicted in **Figure 2**. Photographs of pertinent findings and Site features observed during the reconnaissance are provided in **Appendix A**.

Table 5: Summary of Site Reconnaissance

Feature or Condition	Description
General Site Setting	
Current and Former Property Usage	918 San Rafael Avenue is currently residential use, and has been since development in the mid-1940s. 924 San Rafael Avenue was a residential property prior to being used by Hackett Construction. 940 San Rafael Avenue was a residential property prior to being used by a landscaping company. Both 924 and 940 San Rafael Avenue are currently used by El Camino Paving to store equipment associated with its former paving operations

Feature or Condition	Description
	that began in the late 1980s.
Current and Former Adjoining Property Usage	The Site is bordered to the north by a commercial/light industrial facility. Residential homes are located to the south. West of the Site are multiple light industrial facilities. To the east of the Site is San Rafael Avenue and residential structures.
Current and Former Use of Surrounding Area	The Site vicinity is currently developed for mixed-use purposes. Several commercial/industrial buildings are present to the north and west. Residential areas are present to the east and south.
Topography of Site and Adjoining Properties	The topography of the Site and surrounding area is relatively flat. The Site is graded with a slight slope providing drainage to the north.
On-Site Structures	918 San Rafael Avenue has a single-family residence and an awning and three small storage sheds in the backyard. 924 and 940 San Rafael Avenue have one office building and one garage present on Site, plus one open sided material storage area.
Roads and Parking Areas	918 San Rafael Avenue is accessed through a driveway connected to San Rafael Avenue. The majority of the property is covered by various hardscape including brick, pavers and concrete. 924 and 940 San Rafael Avenue are accessed through one gated driveway facing San Rafael Avenue. All of 924 and 940 San Rafael Avenue are covered by pavement. The eastern portion of both properties was used for parking and office space, the western portion was used for equipment parking and maintenance.
Potable Water Supply	Potable water is supplied to the Site by the City of Mountain View.
Sewage Disposal or Septic Systems	Sewage disposal is to the municipal sanitary sewer at the Site. A sand filtration septic tank was present in the southwest corner of 918 San Rafael Avenue prior to occupancy by the current owners. At that time the property was already on municipal water and sewer. The septic tank was abandoned in or around the year 2000 by filling to grade with sand and covered with pavers.
Interior and Exterior Observations	
Underground Storage Tanks	There were three diesel USTs (2x4,000 and one 10,000 gallons) at 924 San Rafael Avenue until removal during the LUST cleanup activities in 1988.

Feature or Condition	Description
Aboveground Storage Tanks Aboveground Storage Tanks (continued)	One aboveground storage tank (AST) was observed, containing motor oil at 924 San Rafael Avenue. The tank appeared to be in good condition, and was inside a secondary containment structure (**Photograph Plate 8, Appendix A**).
Odors	No odors were observed at the Site.
Hazardous Substances or Petroleum Products	Several instances of hazardous substances and petroleum products were observed and reported onsite, as follows: <u>924 San Rafael Avenue - Material Storage Shed</u> See **Photograph Plate 8, Appendix A** In the L-Shaped, open sided storage shed, various volumes of used and fresh motor oil, waste anti-freeze, hydraulic oil, hydraulic fluid, slip oil, transmission fluid, pavement sealant and crack filler were observed. These materials are stored upright and in appropriate containers, however many are missing secondary containment and there was staining observed on the two floor drains in that area. <u>918 San Rafael Avenue – Backyard and Sheds</u> Various small quantities of chemicals were observed in the backyard, either stored in one of three storage sheds or in the open. Observed chemicals included herbicides (RoundUp®), fertilizers (Miracle-Gro®), automotive supplies (Valvoline® Starting Fluid, WD40®, gasoline cans, engine oil), insecticides (Bonide®), paint, spa maintenance products (chlorine granules, water softeners), lamp oil, and propane tanks. No other evidence of hazardous substances or petroleum products was noted at the Site during the reconnaissance.
Drums and Containers (>5-gallons)	Multiple drums containing smaller containers of used and fresh motor oil and engine/hydraulic lubricants were observed in the storage shed at 924 San Rafael Avenue. Three pallets of 5 gallon containers of pavement sealant were observed in the storage shed as well. Observed drums and containers were labelled and there were no signs of active leaking related to the stains observed near the floor drains of that structure. See **Photograph Plate 8, Appendix A**
Unidentified Substances/Containers	One unidentified 55-gallon drum was observed but appeared to be empty at 924 San Rafael Avenue.
Transformers	Two pole-mounted transformers were observed in the

Feature or Condition	Description
	immediate vicinity, mounted on a pole on the eastern boundary of the site, near the boundary between 924 and 940 San Rafael Avenue. See **Photograph Plate 9, Appendix A**.
Pools of Liquids	Only surface water collecting along the drainage pathway between 924 and 940 San Rafael Avenue was observed. No pools of liquid were observed at the Site. See **Photograph Plate 11, Appendix A**.
Pits, Ponds, or Lagoons (onsite and adjoining)	No pits, ponds or lagoons were observed at the Site or on adjoining properties.
Stained Soil or Pavement Stained Soil or Pavement (continued)	Multiple locations were observed with stained pavement in and around the storage shed, garage, and heavy equipment at 924 and 940 San Rafael Avenue. Many of the stains appear to be surficial staining caused by leaks from the heavy equipment stored on Site. Spill absorbent powder has been applied to many of the spills and stains, but has not been removed after absorbing the material. See **Photograph Plate 10, Appendix A**.
Stressed Vegetation	No stressed vegetation was observed at the Site.
Solid Waste	A large stockpile of pavement debris is located on the western portion of the 924 and 940 San Rafael Avenue. Sediment control measures are in place surrounding the stockpile. **(Photograph 11, Appendix A)** The owners' agent reports that weekly municipal waste removal was coordinated through the City of Mountain View during business operations.
Wastewater or Storm Water Discharge	No wastewater was observed at the Site; however, Geosyntec observed what appeared to be the oil/water separator (based on files provided by the City of Mountain View Section 4.2.6) outside the west facing garage door and large sump outside the north facing garage door at 924 San Rafael Avenue. Each of these areas were covered with plates. This area appeared to be a spray cleaning area. See **Photograph Plate 13, Appendix A**. The hardscape at 924 and 940 San Rafael Avenue is graded to drain stormwater into municipal storm drains, which reportedly direct stormwater to the municipal stormwater collection system. Additionally, two small floor drains were observed in the storage shed containing the AST and other drums of used motor oil and other lubricants, and one drain was observed west of the garage outside in what appears to be

Feature or Condition	Description
	a spray cleaning area; it is unknown if these also drain to the street storm water collection system. The storm drains in the storage shed had dark staining on and around the drains (**Photograph 7, Appendix A)**.
Wells	A concrete lined well is present in the backyard of 918 San Rafael Avenue. The well was present prior to purchase by the current owners and was used as a water source for the garden. The well is now unused and covered with a metal plate and barrel. No wells were observed at 924 and 940 San Rafael Avenue. During the LUST cleanup activities, nine groundwater monitoring wells were installed at the 924 and 940 San Rafael Avenue and have since been destroyed.

Notes:
Refer to **Figure 2** for Site Layout
Refer to **Appendix A** for Site Photographs taken during reconnaissance

The office space on 924 San Rafael Avenue was not accessed. The only indoor spaces at 924 and 940 San Rafael Avenue observed were the garage and hazardous material storage area.

Other than described above, there were no limiting conditions observed during the Site reconnaissance. Exterior areas of the Site were accessible by walking.

7. INTERVIEWS

7.1 Interview with Owner

Ms. Stephanie Alva, the former Office Manager and owners' representative, was interviewed regarding 924 and 940 San Rafael Avenue and Mr. Matt Mountz, son and owners' representative, was interviewed regarding 918 San Rafael Avenue as part of this Phase I ESA. Information obtained from Ms. Alva and Mr. Mountz is summarized in **Section 6**; see **Table 5** (Summary of Site Reconnaissance).

7.2 Interview with Local Government Officials

Information obtained from local government officials is summarized in Section 4.2.

7.3 Interview with Others

Geosyntec did not interview any additional persons other than the Owner/Occupant.

8. LIMITED ENVIRONMENTAL INVESTIGATION

8.1 Objective

The objectives of the Phase II Assessment were to obtain current data regarding residual concentrations of TPH in soil from former LUSTs and the presence of VOCs in the groundwater in the vicinity of the former LUSTs and to assess the presence of the VOCs in soil gas and groundwater at the upgradient and downgradient property boundaries, respectively.

8.2 Pre-Field Activities

The following activities were conducted prior to soil boring and sampling activities:

- On 27 February 2016, Geosyntec marked the proposed boring locations with white paint. Underground Service Alert (USA North) was notified a minimum of 48 hours in advance of subsurface activities. The USA ticket number was X705800772-00X.
- Geosyntec prepared a Site-specific Health and Safety Plan (HASP). The HASP was reviewed by field personnel prior to commencing field operations.
- On 2 March and 14 April 2017, Subtronic Locating Service (of Martinez, California) and Cruz Brothers Locators (of Scotts Valley, California) performed geophysical surveys in the vicinity of each proposed boring location in order to identify the presence of potential utilities, pipelines, or other subsurface obstructions. No subsurface utilities, pipelines, or obstructions were identified.

8.3 Sampling and Analytical Procedures

8.3.1 Soil Sampling

Soil borings were advanced on 2 March 2017 at the four locations shown in **Figure 2**. Gregg Drilling of Martinez, California (Gregg), a licensed C-57 driller, performed the soil boring activities under the direct supervision of Geosyntec personnel. Direct Push technology was utilized to advance the soil borings, using a truck-mounted Geoprobe 6620 rig. The boring locations were advanced to a maximum depth of 10 feet bgs. Soil samples were collected from each of the boring locations at depths of 5 and 10 feet bgs.

Borings were advanced using two-inch diameter, hollow steel, direct push rods fitted with vinyl acetate sleeve liners. The push-rods were advanced in 4-foot intervals and, upon advancing each successive interval, the inner sleeve liner was extracted to collect the soil samples, leaving the outer casing in place. To advance to the next deeper interval, a new length of sleeve liner was inserted into the outer casing, and attached to a length of drive pipe This was repeated until the target sampling depth was reached.

For each sample, the acetate sleeve was cut, the sample removed from the pre-determined depth interval and placed in laboratory provided sample containers. Samples were labeled, placed on ice, and delivered under standard chain of custody protocol to Curtis and Tompkins Laboratories of Berkeley, California (Curtis and Tompkins). Each soil sample was analyzed for the following:

- BTEX by EPA Method 8020; and
- TPH-gasoline and TPH-diesel, by EPA Method 8015M.

Upon completion of sampling, the borings were grouted using bentonite slurry to ground surface. All down-hole equipment was decontaminated before use at each boring location.

8.3.2 Soil Gas Sampling

Temporary soil gas probes were installed on 14 April 2017 at the four locations shown in **Figure 2**. Penecore Drilling of Woodland, California (Penecore), a licensed C-57 driller, performed the installation activities under the direct supervision of Geosyntec personnel. Direct Push technology was utilized to advance the soil borings and install the probes. The boring locations were advanced to a maximum depth of 5 feet bgs.

Borings were advanced using two-inch diameter, hollow steel, direct push rods to the target depth of 5 feet bgs. At the target depth, a 6-inch long by ½-inch diameter stainless steel screened vapor probe was installed with ¼-inch tubing attached with a compression fitting. Once in place, the borehole surrounding the probe was filled with sand to approximately 6 inches above the top of the screen. Granular bentonite and water were added above the sand to seal the remainder of the borehole annulus to ground surface. The top of the probe was fitted with a compression-fit brass ball valve to maintain an air-tight seal between installation and sampling.

Following installation, soil gas samples were collected from each of the probes in general accordance with the 2015 Department of Toxic Substances Control (DTSC)

Advisory for Active Soil Gas Investigations. Samples were labeled and delivered under standard chain of custody protocol to Eurofins Air Toxics, Inc. of Folsom, California (Eurofins) for analysis of VOCs by EPA Method TO-15.

Following sample collection, the probes were removed and the surface was completed to match the surrounding surface. All down-hole equipment was decontaminated before use at each boring location.

8.3.3 Groundwater Sampling

Soil borings were advanced on 2 March and 14 April 2017 at the six locations shown in **Figure 2**. Gregg and Penecore performed the soil boring activities under the direct supervision of Geosyntec personnel. Direct Push technology was utilized to advance the soil borings. Five of the six boring locations were advanced to a maximum depth of 10 feet bgs and one boring location advanced to a maximum depth of 14 feet bgs.

At each location, grab groundwater samples were collected from first encountered (between 10 and 14 feet bgs) groundwater with a disposable plastic bailer. The grab groundwater samples were then retrieved from the borehole and placed into appropriate containers for analysis. Samples were labeled, placed on ice, and delivered under standard chain of custody protocol to Curtis and Tompkins for analysis of VOCs by EPA Method 8260B.

8.3.4 Investigation Derived Waste

The soil cuttings from the borings that were not used for sample material were placed in a 55-gallon drum, labeled with the appropriate markings and staged toward the western fence for later disposal.

8.4 Summary of Results

8.4.1 Soil Analytical Results

The results of the soil sampling are summarized in **Table 6** and the laboratory analytical report is included in **Appendix I**. As shown in **Table 6**, no TPH or BTEX were detected in any of the samples, except TPH-mo and TPH-d. TPH-mo (C24-36) was detected in all samples ranging from 6.7 mg/kg to 120 mg/kg. TPH-d (C10-C24) was detected in five of the seven soil samples, ranging from 1.6 mg/kg to 19 mg/kg. All

detections of TPH-d were flagged with a "Y", indicating the sample exhibited a chromatographic pattern which did not resemble the standard.

To evaluate the significance of the results, the detections of TPH-d and TPH-mo were compared to the Regional Water Quality Control Board (RWQCB) environmental screening levels (ELS) (RWQCB, 2016). The ESLs used for comparison included those for groundwater protection (i.e., drinking water) and for direct exposure under residential and commercial land use scenarios. Although these screening levels do not represent formal cleanup levels, they are inherently conservative values for site screening and are generally considered to be below thresholds of concern for risks to human health. The presence of a constituent at concentrations in excess of a screening level does not indicate that adverse impacts to human health are occurring or will occur, but suggests that further evaluation may be warranted. As shown in **Table 6**, none of the analytes detected exceeded the ELS for groundwater protection or direct exposure.

8.4.2 Soil Gas Analytical Results

The results of the soil gas samples are summarized in **Table 7** and the laboratory analytical report is included in **Appendix I**. As shown in **Table 7**, no chlorinated compounds (i.e., PCE, TCE) were detected in any of the samples. The only detections were petroleum related compounds including benzene, toluene, ethylbenzene, xylenes, hexane, cyclohexane and heptane.

Similar to the results for the soil samples, these detections were compared to ESLs to evaluate their significance. The ESLs used for comparison included those for vapor intrusion under residential land uses for current and future buildings. None of the detected concentrations exceeded the screening levels for residential use, except one detection of ethylbenzene in the sample collected from SG-3. The detected concentration (610 ug/m3) was just above the screening level of 560 ug/m3. Assuming an attenuation factor of 0.001, the resulting indoor air concentration based on this concentration in soil gas would be 0.61 ug/m3, which is below the indoor air screening level of 1.1 ug/m3. Based on the results, it does not appear that residual concentrations in soil gas at the southern property boundary would pose a vapor intrusion risk.

8.4.3 Groundwater Analytical Results

The results of the groundwater samples are summarized in **Table 8** and the laboratory analytical report is included in **Appendix I**. As shown in **Table 8**, no VOCs were

detected in the samples collected near the former USTs, except acetone and toluene in sample ECP-SB-7 at 18 µg/L and 0.6 µg/L, respectively and naphthalene in sample ECP-SB-5 at 7.7 µg/L. In the samples collected near the northern property boundary, low concentrations of TCE, 1,1-dichloroethane (DCA), 1,1-dichloroethene (DCE), cis-1,2-dichloroethene (cDCE), and methyl-tert butyl ether (MTBE) were detected in groundwater at the northern property boundary.

Similar to the results for the soil and soil gas samples, these detections were compared to ESLs to evaluate their significance. The ESLs used for comparison included those for protection of groundwater resources and those for vapor intrusion under residential and commercial land uses. Based on the comparison, the naphthalene detection in ECP-SB-5 (7.7 ug/L) and the TCE detection in GW-2 (5.8 ug/L) exceeded their respective ESLs of 0.12 and 5 ug/L) for groundwater protection. The sample from ECP-SB-5 was collected upgradient of the former LUSTs (**Figure 2**). TCE was not detected in the soil and groundwater samples collected near the former USTs or in the soil gas samples collected along the southern property boundary. This suggests that the TCE detection in GW-2 is most likely related to off-site regional impacts and not an on-site source. Given that shallow groundwater at the Site is not used as a drinking water source and the nearest municipal supply well is approximately 0.5 miles southeast of the Site and likely screened hundreds of feet below ground surface, the detections of naphthalene and TCE above the ESLs do not appear to pose a potential threat to groundwater resources.

9. SUMMARY OF FINDINGS

We have performed a Phase I/II ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of the Site located at 918, 924, and 940 San Rafael Avenue in Mountain View, California. Any exceptions to, or deletions from, this practice are described in Section 9.5, Data Gaps, of this report.

9.1 Recognized Environmental Concerns (RECs)

This assessment has identified the following REC in connection with the Site:

- Hazardous Materials and Petroleum Product Storage Area. Hazardous materials and petroleum products related to El Camino Paving operations are still on-Site and presently kept in the storage shed. These materials are stored in various containers ranging from 5-gallon buckets to a large motor oil AST. Currently, most of the containers are stored with secondary containment, though staining was observed on and around the two floor drains within the storage shed during Site reconnaissance. This storage area related to past operations at the Site presents a REC.

- Oil/Water Separator/Sump. An oil/water separator and sump were observed during the Site reconnaissance and were noted in the City of Mountain View Environmental Protection – Industrial Waste Division records (**Section 4.2.6)**. These were used both during El Camino Paving operations and also to remove petroleum products from extracted groundwater during the remediation activities for the former LUTs. There is no documentation indicating these were closed following completion of the remediation activities. These items related to past operations at the Site present a REC.

9.2 Historical Recognized Environmental Concerns (HRECs)

This assessment has identified the following HREC in connection with the Site:

Former LUSTs on the Property. Three diesel USTs (2x4,000 gallons, 10,000 gallons) were removed in 1988 after an on-Site accident resulted in a break in the piping between the tanks. The tanks were removed in 1988, and several investigations occurred between 1988 and 1995. The remedy for the release included excavation and treatment (bioremediation) of 400 cubic yards of soil

and groundwater extraction and treatment via oil/water separator to control the extent of the contaminant migration. In 1995, SCVWD approved the shutdown of groundwater extraction provided continued quarterly monitoring was conducted for a period of one year. Groundwater monitoring was re-initiated for three quarters in 2000 at the request of SCVWD to analyze for any potential fuel oxygenates. After six years of intermittent groundwater monitoring, the SCVWD approved closure of the Site in 2001.

Additional soil and groundwater sampling was conducted in the area around the former LUSTs by Geosyntec as part of the Phase II ESA. As shown in **Table 6**, no TPH or BTEX were detected in any of the samples, except for low concentrations of TPH-mo and TPH-d. None of the analytes detected exceeded the ELS for groundwater protection or direct exposure for residential and commercial land use scenarios. As shown in **Table 8**, no VOCs were detected in any of the samples, except low concentrations of acetone, toluene, and naphthalene. None of the analytes exceeded the ESLs, except for one detection of naphthalene, which exceeded the ESL for groundwater protection. Given that shallow groundwater at the Site is not used as a drinking water source and the nearest municipal supply well is approximately 0.5 miles southeast of the Site and likely screened hundreds of feet below ground surface, the detection of naphthalene does not appear to pose a potential threat to groundwater resources. Based on the results of the limited Phase II ESA, the residual concentrations in the vicinity of the former LUSTs do not appear to pose a risk to human health.

9.3 Controlled Recognized Environmental Concerns (CRECs)

No CRECs were identified in connection with the Site.

9.4 *De Minimis* Conditions

De minimis conditions are environmental conditions which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs. This assessment has identified the following *de minimis* conditions in connection with the Site:

- Two pole-mounted transformers were observed on one pole along Site boundary with San Rafael Avenue, but it is not clear whether they are onsite or offsite.

Because no leaks, spills or releases were observed or reported, this represents a *de minimis* condition for the Site.

- Heavy equipment associated with El Camino Paving operations have been on the site since operations ceased over a year ago and much of the heavy equipment has since fallen into disrepair on the Site and leaks onto the ground surface were observed in several places. The leaks have caused surficial staining on the pavement, but do not appear to have reached the subsurface, therefore this represents a *de minimis* condition for the Site.

- There is a large stockpile of what appears to be asphalt debris located at the center of the Site. This material is partially covered with tarps and has erosion control measures around the perimeter (straw wattles). Because this material was described by the Owner as construction debris, and no signs of contamination were observed, this represents a *de minimis* condition for the Site.

- A sand filtration septic tank was present in the southwest corner of 918 San Rafael Avenue prior to occupancy by the current owners. At that time the property was already on municipal water and sewer. The septic tank was abandoned in or around the year 2000 by filling to grade with sand and covered with pavers. Because no leaks, spills or releases were observed or reported, this represents a *de minimis* condition for the Site.

- A concrete lined well is present in the backyard of 918 San Rafael Avenue. The well was present prior to purchase by the current owners and was used as a water source for the garden. The well is now unused and covered with a metal plate and barrel. If the property is redeveloped this well will need to be decommissioned in accordance with the requirements of the County of Santa Clara. Because the property has been residential since development in the 1940's and the well was historically used for irrigation, this represents a *de minimis* condition for the Site.

9.5 Data Gaps

In accordance with ASTM E1527-13, this section documents data gaps in the information obtained and reviewed as part of this Phase I/II ESA and discusses the associated significance. A data gap is defined in ASTM E1527-13 as being "… *a lack of or inability to obtain information required by this practice despite good faith efforts by*

the environmental professional to gather such information". The following data gaps were identified during the course of this investigation:

- Files were requested for the Site from several agencies. As discussed in **Section 4.2**, as of 14 March 2017, no response has been provided to Geosyntec by the City of Mountain View Fire Department.

The lack of information as described could alter the overall conclusions of this investigation. However, considering other records reviewed, this missing information will unlikely have significant impacts to the conclusions drawn in this report.

10. CERTIFICATION

This ESA was prepared in accordance with the scope of work, terms, and conditions described in Geosyntec's proposal. This proposal incorporated by reference the ASTM Standard E 1527-13, Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process.

Lisa Van Tassell, P.E. C67531
Senior Principal

We declare, that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulation (CFR).

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Site Photographs

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH 1:
Location: 924 San Rafael Avenue.

View: Looking southeast from parking lot.

Example: Photo shows building used as office.

PHOTOGRAPH 2:

Location: 940 San Rafael Avenue.

View: Looking southwest from parking lot on 940 San Rafael property.

Photo shows trailer and overhead power lines.

Note evidence of minor pavement staining in foreground, presumably from minor leaks from vehicle traffic.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH 3:

Location: 924 San Rafael Avenue.

View: Looking east from west side of office building.

Photo shows exposed wiring running along fence west to back of property.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH 4:

Location: 924 San Rafael Avenue.

View: Looking northwest from south side of office building.

Photo shows power box and exposed electrical wiring.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH 5:

Location: 924 San Rafael Avenue.
View: Looking southwest from outside fence toward storage yard.

Photo shows vehicles storage in the yard and condition of asphalt.

PHOTOGRAPH 6:
Location: 924 San Rafael Avenue.

View: Looking southeast from inside the storage area.

Photo shows disabled vehicle, rusted equipment and stained asphalt.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH 7:

Location: 924 San Rafael Avenue.

View: Looking south into chemical storage area.

Photo shows storage of equipment and supplies, including significant storage of chemicals including vehicle/machinery lubricants and solvents, fuel, herbicides, and tires.

Inset: hazardous waste label on 55-gallon drum.

Note stained concrete floor in foreground. Concrete stained throughout storage area.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 8:

Location: 924 San Rafael Avenue.

View: Assorted

Photo plate shows four images, examples of chemicals and tires observed in chemical storage area. See report text for further detail on specific chemicals present.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 9:

Location: 924 San Rafael Avenue.

View: Looking north from on eastern property line.

Photo shows pole-mounted transformer along sidewalk.

Geosyntec consultants

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 10:

Location: 924 San Rafael Avenue.

View: Assorted

Photo plate shows four images, examples of stained pavement beneath vehicles stored in the fenced area of the property. See report text for further detail on specific chemicals present.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 11:

Location: 924 San Rafael Avenue.

View: Looking west from the east side of the stockpile.

Photo shows drainage from underneath stockpile running east.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 12:

Location: 924 San Rafael Avenue.

View: Looking west from the northeast corner of the garage.

Photo shows rusted 55-gallon drum and stained pavement drainage near pit opening.

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 13:

Location: 924 San Rafael Avenue.

View: Looking west from the west side of the garage.

Photo shows stained pavement in the shape of a 55-gallon drum with stain marks flowing west toward drain (boxed).

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 14:

Location: 918 San Rafael Avenue.

View: Looking northeast from the backyard on the west side of the house.

Photo shows the location of a water well now used as a garden feature.

Geosyntec consultants

APPENDIX A - SITE PHOTOGRAPHS

SITE: El Camino Paving, 918, 924, 940 San Rafael Ave, Mountain View, California
SUBJECT: Phase I Environmental Site Assessment – Site Reconnaissance Walk
DATE: 01 March 2017

PHOTOGRAPH PLATE 15:

Location: 918 San Rafael Avenue.

View: Assorted

Photo plate shows four images, examples of storage sheds and various chemicals stored in the backyard. Observed chemicals included: herbicides, fertilizers, automotive supplies (degreasers, lubricants, gasoline cans), insecticides, paint, spa maintenance products, and propane tanks.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

EXECUTIVE SUMMARY

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/05/2016 has revealed that there are 7 NPL sites within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/10/2016 has revealed that there are 5 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for

listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/10/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
JASCO CHEMICAL CO	1090 TERRA BELLA	NW 0 - 1/8 (0.102 mi.)	D26	201

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 11/15/2016 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/31/2016 has revealed that there are 20 CA ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

CA SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA SLIC list, as provided by EDR, has revealed that there are 15 CA SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 3 CA UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Hazardous waste / Contaminated Sites

CA HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the CA HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 5 CA HIST Cal-Sites sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 15 CA CUPA Listings sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground.As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station.The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II.Moffett is revising the quality assurance project plan and sample plan for the characteri ation step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Site Description: Moffett Field was continuously operated by the U.S. military after it was commissioned in 1933 to support the West Coast Dirigibles of the lighter than air (LTA) program until 1994. In 1939, a permit was granted to Ames Aeronautical Laboratory to use part of the station. In 1942, the station was returned to Navy control and was named Naval Air Station Moffett Field. In late 1942, the heavier than air (HTA) program was initiated and began to take precedence over the LTA program. In 1945, the HTA program was moved and Moffett Field was used as a major overhaul and repair base. In 1949, the station became home to the Military Air Transport Service Squadron. By 1950, Moffett Field was the largest naval air transport base on the West Coast, and in 1953 it became home to all Navy fixed-wing land-based antisubmarine efforts. A weapons department was formed on the base in 1954, and in February 1966 the base activated its high speed refueling facilities. During the station reorganization in 1973, it became the headquarters of the Commander Patrol Wings, US Pacific Fleet. During the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons, and it became the largest P-3 Orion patrol aircraft base in the world with nearly 100 aircraft. No heavy manufacturing or major aircraft maintenance was conducted, but a significant amount of unit and intermediate level maintenance occurred. In April 1991, Moffett Field was designated for closure, and on July 1, 1994, control of the base was transferred to National Aeronautics and Space Administration (NASA). Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and PCBs. Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks (USTs) and sumps were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984. The Navy began conducting these environmental restoration activities as part of the Department of Defense Installation Restoration Program (IRP). The Navy conducted an initial assessment study (IAS) in 1984 to gather data on the past use and disposal of hazardous materials at the base. Nineteen sites were identified as potential sources of wastes, including nine sites identified in the IAS and 10 sites added during subsequent investigations. Five additional sites were identified during field investigation in the early 1990s. The Environmental Protection Agency (EPA) proposed placing Moffett Field on the National Priorities List (NPL) in June 1986, and it was placed on the NPL in 1987. The Remedial Investigation and Feasibility Study (RI/FS) is coordinated through the August 1990 Federal Facility Agreement (FFA) with EPA and the State of California. The RI was implemented in two phases. The Phase I characterization was complete in August 1990. The Phase II investigations were initiated in 1990 to provide more detailed, site specific data. In October, 1992 EPA determined that the aquifers on the western side of Moffett Field were co-mingled with a regional volatile organic compound (VOC) plume emanating from the

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

Middlefield-Ellis-Whisman (MEW) Superfund site south of Moffett Field. EPA determined that these aquifers were subject to the 1989 EPA Record of Decision (ROD) already written for the MEW site and would be remediated per the MEW ROD. Consequently, OU4 (West-side Aquifers) was deleted and OU5 (East-side aquifers) was modified to include all aquifers not part of the regional plume. In May 1989, the Navy developed a community relations plan (CRP). The OU5 RI report was released in August 1993. The OU5 FS report was released in August 1995 Moffett Field. The proposed plan for remediation of OU5 was released to the public in October, 1995. A public comment period was held from October 27, 1995 through November 30, 1995 with a public meeting on November 16, 1995. Moffett Field has been continuously operated by the U.S. military since it was commissioned in 1933. In 1945, Moffett Field was used as a major overhaul and repair base. In 1954, a weapons department was formed at the base, and then during the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons. No heavy manufacturing or major aircraft maintenance was conducted at Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred. In April 1991, Moffett Field was designated for closure as an active military base under the Department of Defense Base Realignment and Closure (BRAC) program. After closure, control of the base was transferred to the National Aeronautics and Space Administration (NASA), however, the Navy will continue with environmental restoration activities and remain responsible for remediating Navy contaminant sources. Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks and sumps (many of them now removed) were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984 with an initial assessment of past use and disposal of hazardous materials. Nineteen sites were identified as potential waste sources. Remedial Investigation/Feasibility Study (RI/FS) work was coordinated through the August 1990 Federal Facility Agreement with EPA and the State. The Phase I RI characterization was completed in August 1990. The more detailed Phase II investigations identified the need to separate the site into six Operable Units (OUs). NAS Moffett Field is located in California, 35 miles south of San Francisco, 10 miles north of San Jose, and about 1 mile south of the southwestern edge of San Francisco Bay, in Santa Clara County, California. The facility encompasses 2,200 acres in Santa Clara County; the facility address is Moffett Field, California 94035. NAS Moffett Field is bounded by saltwater evaporation ponds to the north, Stevens Creek to the west, U.S. Highway 101 (Bayshore Freeway) to the south, and the Lockheed Martin Aerospace Center to the east. Several industrial facilities are located south of the Bayshore Freeway. In particular, a group of companies is located in a 0.5-square-mile area, bounded by U.S. Highway 101. Middlefield Road, Ellis Street, and Whisman Road (MEW). This area is known as the MEW Superfund study area and contains three Superfund sites. Moffett Field also borders the cities of Mountain View and Sunnyvale, California. The City of Sunnyvale is located south and east; the City of Mountain View borders Moffett Field on the south and west. The NASA Ames Research Center is located west and north of the runways. The U.S. military continuously operated NAS Moffett Fiefld as Naval Air NAS Sunnyvale from its date of commission in April 1933 until it was transferred to NASA on July 1, 1994. The Navy used the station as an air base until October 1935, when

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

it was transferred to the Army Air Corps for use as a training base. During the Army's tenure, the National Advisory Committee for Aeronautics (NACA) established Ames Research Center in December 1939 on land adjacent to MFA. The base returned to Navy control and was renamed NAS Moffett Field in April 1942. By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather air station. In 1958, NACA became NASA and Ames Research Center became the NASA Ames Research Center. Between 1973 and 1994, the mission of NAS Moffett Field involved support of antisubmarine warfare training and patrol squadrons. At one point, MFA was the largest P-3 base in the world, with nearly 100 P-3C Orion patrol aircraft. These aircraft were assigned to nine squadrons, supported by 5,500 military, 1,500 civilian, and 1,000 reservist personnel. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field during the last mission; instead, mostly unit- and intermediate-level maintenance occurred. In April 1991, the station was designated for closure as an active military base under the U.S. Department of Defense (DoD) Base Realignment and Closure (BRAC) program. NASA assumed control of the base beginning in July 1994. Military housing units and associated facilities were transferred to Onizuka Air Force Base at the same time. Since the early 1980s, DoD has been identifying, evaluating, and controlling the spread of contaminants from historical hazardous waste sites as part of the Installation Restoration Program (IRP) at MFA. This work is coordinated through a Federal Facility Agreement with the U.S. Environmental Protection Agency (EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB). The Navy is the lead agency for this work. The Navy and NASA signed a memorandum of understanding (MOU) on December 22, 1992, concerning environmental activities at the station. Under the MOU, the Navy will continue with environmental restoration and will remain responsible for remediating Navy contaminant sources. NASA is responsible for non-environmental operations and ongoing environmental compliance. NASA is planning to develop a world-class, shared-use educational and research and development campus at Moffett Field, California, in association with government entities, academia, industry, and nonprofit organizations. The NASA Ames Development Plan includes proposed development of four areas: -NASA Research Park: A 213-acre parcel located between Ames Research Center facilities, MFA, U.S. Highway 101, and the military housing area -Eastside/Airfield District: A 952-acre parcel that includes MFA and property located east of the airfield -Bay View District: A 95-acre parcel located north of the Ames Research Center facilities -Ames Research Center Facilities: A 240-acre parcel comprising the existing NASA Ames Research Center campus Surface water channels and ditches will be maintained for drainage purposes. Groundwater is not currently used at MFA. The only exception is water from a single well screened in the deep C aquifer (deeper than 155 feet below ground surface) used by NASA for fire fighting, composting, and agricultural purposes. This well is located in the northwestern corner of the Ames Research Center area. Public water is supplied to MFA from the Hetch Hetchy aqueduct owned by the City of San Francisco. Groundwater is unlikely to be used as a water supply source in the future because of poor ambient quality and low formation yield to a well. NASA's draft Programmatic Environmental Impact Statement does not consider development of groundwater as a future water supply source. EPA proposed MFA as a National Priorities List (NPL) site in June 1986, and MFA was included on the NPL in July 1987. Inclusion on the NPL initiated the Remedial Investigation (RI) and Feasibility Study (FS) process, as required by the CERCLA. The Navy began environmental studies at MFA in 1984. Twenty sites were originally identified as IRP sites at MFA. Investigations during the station-wide RI identified six additional, potentially contaminated sites. Only three sites were assigned numbers (Sites 21 through 23), and none of the additional sites was designated as an operable

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

unit (OU). The six additional sites, which were investigated under the CERCLA program, are: Site 21, Site 22, Site 23, the Weapons Storage Bunkers, the former Industrial Wastewater Flux Ponds, and an ephemeral wetland located at an improperly abandoned agricultural well. Later, the Navy defined four additional sites (Sites 25 through 28), originally included as parts of other sites under previously established OUs. These sites include Site 25, the Eastern Diked Marsh and stormwater retention pond (included in OU6); Site 26, the east side aquifers (included in OU5); Site 27, the Northern Channel (included in OU6); and Site 28, the west side aquifers. All of the sites identified were investigated under the CERCLA program. The current OU definitions and study areas are: OU1: Soils and groundwater at Sites 1 and 2 landfills OU2-East: Soils at Sites 3, 4, 6, 7, 10 (runways), 11, and 13 OU2-West: Soils at Sites 8, 10 (Chase Park), 14-North, 16, 17, and 18 OU5: Aquifers on the eastern side of MFA that are not part of the regional plume or OU1 (Site 26) OU6: Wetland areas, Sites 25 and 27 Petroleum Sites: Sites 5, 9, 12, 14-South, 15, 19, 20, and 24 Additional Sites: Sites 21, 22, 23, Weapons Storage Bunkers, upland soil areas, Human Health Risk Assessment (HHRA) Exposure Area 4158, former Industrial Wastewater Flux Ponds, and the abandoned former agricultural well. Human health and ecological risk assessments were conducted as part of the station-wide RI. As agreed upon by the Navy, EPA, and RWQCB, six sites were recommended for No Action (formally referred to as No Further Action) in the 2001 Final Addendum to the Revised Final Station-wide Feasibility Study Report and have been addressed separately from the IR program. These sites are: Site 23, Golf Course Fill Area 3; Weapons Storage Bunkers; Former Industrial Wastewater Flux Ponds; Former Abandoned Agricultural Well; Upland Soils (areas that support upland plant communities); Station-wide Remedial Investigation HHRA Exposure Areas 3782, 3785, 3974, 4090, and 4158. The addendum to the report provides additional documentation to support the No Action recommendations for these sites. Two of the sites, Industrial Wastewater Flux Ponds and Former Abandoned Agricultural Well, were closed with concurrences from EPA or Santa Clara Valley Water District; therefore, they were not considered further in the CERCLA process. Three of the HHRA exposure areas, 3782, 3785, and 3974, are being addressed as part of other remedial actions or maintenance programs. The remaining No Action Sites (Site 23-Golf Course Fill Area 3, Weapons Storage Bunkers, Upland Soils, HHRA Exposure Area 4090, and HHRA Exposure Area 4158) were included in the Proposed Plan. The Proposed Plan was made available to the public during a formal comment period from December 15, 2001 through January 28, 2002. A public meeting was held on January 10, 2002 and a responsiveness summary was issued on May 28, 2002. As the proposed plan and earlier versions of the ROD suggest, HHRA Exposure Area 4090 was listed as a No Action Site even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate action (Site 27). Because there are potential risk issues associated with this site, the HHRA Exposure Area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing Site 27 investigation. Site 23 Golf Course Fill Area: Site 23 is located on 2 acres, just south of the Northern Weapons Bunker area, in the western portion of the golf course. Golf Course Fill Area 3 is shown in aerial photographs taken in 1977 as one of several ponds on the golf course. Three of the ponds on the golf course were dry, and some debris was visible in the area of Golf Course Fill Area 3 in an aerial photograph taken in 1987. No information on the source of the material discarded in this area could be found. However, numerous small piles of soil, concrete, disaggregated asphalt, grass clippings, and mulch were identified during a site walk conducted in March 1994. In addition, some airplane parts, consisting of several pieces of aluminum (brought to Site 23 for disposal after a plane crashed at MFA), and some electronics equipment were found in the area. A magnetometer survey of

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

this area was conducted in 1995. The results of the survey do not indicate that significant quantities of metallic materials were buried at the site. This evidence instead suggests that the area was never trenched and was used primarily for incidental disposal of excess soil and debris from the golf course. A No Further Action ROD was completed for Site 23 on August 19, 2002. Weapons Storage Bunkers: There are two groups of weapons storage bunkers: the Northern Weapons Storage Bunkers and the Southern Weapons Storage Bunkers. The weapons storage bunkers are located in two fenced areas in the northeastern portion of MFA, near the golf course. The Northern Weapons Storage Bunkers cover about 5 acres and include seven high-explosive magazines. The Southern Weapons Storage Bunkers cover about 10 acres and include nine high-explosive magazines. Each magazine consists of a heavy-gauge, corrugated steel arch that forms its roof and sides. The floors of the magazines are concrete, without drains. Each magazine is about 30 feet long, 20 feet wide, and 20 feet high. The magazines are covered with soil, forming long, earth-covered bunkers. Only one magazine in the Northern Weapons Storage Bunkers is still used and stores ammunition for the California Air National Guard. The Northern Weapons Storage Bunkers contained two diesel storage tanks. One of the tanks was removed in 1992, and the other tank was removed in 1994. No source for or evidence of contamination was identified in the Southern Weapons Storage Bunkers. A site inspection at the Northern Weapons Storage Bunkers in May 1994 found that the cement apron on the southern side was free of staining or significant cracking, and the buildings were released for unrestricted use. The high-explosive magazines at the Northern Weapons Storage Bunkers also were investigated for radioactive contamination; however, no radioactivity was found. An inventory revealed two diesel storage tanks in this area. Tank 22 was a 600-gallon underground storage tank that held diesel fuel and was removed in 1992; Tank 102, a 55-gallon aboveground storage tank that contained diesel fuel, was removed in April 1994. Tanks 22 and 102 are evaluated and closed separately from CERCLA sites under the policy and guidance of RWQCB. Closure of Tank 22 is documented in the Phase I petroleum sites closure report. Tank 102 is being investigated during the Phase III tank investigation. The Phase III investigation involves tanks that require further assessment for closure. This work may include document research, sampling, and geophysical surveys. The results of this work will be included in the Phase III petroleum sites closure report. No soil samples were collected at the Southern Weapons Storage Bunkers, because no source for, or evidence of, soil contamination was identified. Based on the Navy's stated historical use of the bunkers, the Southern Weapons Storage Bunkers were not tested for radioactive contamination before they were transferred to the California Air National Guard in 1994. There is no reason to suspect that these facilities were used for storage of radioactive materials. Groundwater in the area of the weapons storage bunkers is addressed separately as part of OU5. OU5 includes all aquifers that are not affected by the regional plume in groundwater. As part of the RI for OU5, data for groundwater samples from all wells on the eastern side of the base, including monitoring wells near the weapons storage bunkers, were evaluated and are addressed in the OU5 ROD. A No Further Action ROD was completed for the Weapons Storage Bunkers August 19, 2002. Upland Soils: Upland soils are areas of MFA that support upland plant communities and include virtually all areas at the airfield that are not covered by ditches, marshes, or wetlands. Human activity has been significant in these areas. Certain areas of upland soils, such as open grassy areas and the edges of golf courses and recreational fields, are actively managed as burrowing owl habitat, but the majority of upland soils areas are either paved, landscaped, or have been altered substantially by land use during the last 100 years. A No Further Action ROD was completed for the Upland Soils area on August 19, 2002. Area 4158: HHRA Exposure Area 4158 is located slightly south, but

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

almost adjacent to IRP Site 11 - Engine Test Stand Area. A No Further Action ROD was completed for the Human Health Risk Assessment Area 4158 on August 19, 2002. OU04 The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU04 of the Moffett Naval Air Station was completed in June 1989. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air,

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 04 of Naval Air Station Moffett Field was completed in August 2010. OU 6 - Site 25: Moffett Field is located in Santa Clara County, 1 mile south of San Francisco Bay, California's largest estuary, in the Santa Clara Valley Basin. Tidal wetlands in the southern portion of San Francisco Bay provide habitat to support a wide variety of birds, fish, and invertebrates, including several threatened and endangered species. Historically, tidal salt marshes and mud flats covered extensive areas of the southern portion of the bay, including the northern portion of Moffett Field. Most of these wetlands, however, have been eliminated or greatly altered. Site 25 is approximately 230 acres in size and is located in the northern portion of Moffett Field, adjacent to the southern arm of the bay. Levees constructed in the late 19th and early 20th centuries for commercial salt production currently prevent bay water from reaching Site 25. Site 25 is comprised of the eastern diked marsh, including the stormwater settling basin, and the stormwater retention pond. The stormwater retention pond is divided into the western portion (owned by Midpeninsula Regional Open Space District) and the central and northeastern basins (both managed by the National Aeronautics and Space Administration [NASA]). The eastern diked marsh and all portions of the stormwater retention pond are hydraulically connected. Site 25 has been part of the stormwater management system at Moffett Field since 1953. Stormwater previously flowed through the former Lindbergh Avenue ditch then discharged into the northeastern corner of the eastern diked marsh. The eastern diked marsh is a brackish marsh that is seasonally saturated, but rarely filled to capacity with standing water. Currently, stormwater in the western portion of Moffett Field is carried via underground conduits then drains to a settling basin at Site 25. Sediment suspended in the stormwater settles in the basin, where it is subsequently excavated. From the settling basin, the water flows overland northward through the eastern diked marsh to the stormwater retention pond. The eastern diked marsh is connected to the central basin of the stormwater retention pond by a culvert under North Perimeter Road. The central basin is, in turn, connected to the western and northeastern portions of the stormwater retention pond by breaches in the levees. The stormwater retention pond is seasonally flooded with 1 to 5 feet of standing water, but is mostly dry in the summer. A portion of the stormwater retention pond contains water year round because it receives treated groundwater from the West-Side Aquifers Treatment System. Stormwater from the western portion of Moffett Field previously flowed through the Lindbergh Avenue ditch and then discharged into the northeastern corner of the eastern diked marsh. This stormwater management system is no longer in use. In 1991, NASA redesigned the stormwater management system to carry stormwater in underground conduits to a settling basin; after the sediment settles, the water discharges to the eastern diked marsh. Previous investigations determined that most of the contaminated sediment is located near the former outfall of the Lindbergh Avenue ditch and near the settling basin discharge in the eastern diked marsh. Sources of contamination identified for Site 25 included: the runway landfill (Site 1 - remedy selected in the Record of Decision [ROD] dated August 1997); the engine test stand area (Site 11 - remedy selected in ROD dated December 1994); a sump and oil and water separator (Site 15 - petroleum site); Hangar 1 (Site 29 - currently under investigation by Navy); horizontal

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

conduits, including stormwater discharge lines that may have carried chemically contaminated groundwater; historical use of pesticides; and various soil areas contaminated with polychlorinated biphenyls (PCBs) (referred to as upland source areas to be addressed separately, not as part of this ROD). The eastern diked marsh and the stormwater retention pond are currently part of NASA's stormwater management system. Both are covered with surface water only part of the year, except for a small portion of the stormwater retention pond that holds water year round because treated groundwater from the West-Side Aquifers Treatment System (WATS) is discharged to this portion of the pond. The eastern diked marsh currently provides seasonal wetland habitat for a variety of wildlife, including threatened and endangered species. The potential future reuse could be somewhat different than the current use. The Midpeninsula Regional Open Space District is interested in restoring its portion of Site 25 to tidal marsh. NASA favors a plan to create a managed pond with its portion of Site 25. Under a managed pond scenario, one portion of the site would be a tidal marsh (providing salt marsh habitat); the central and northeastern basins would function as stormwater retention ponds that would be managed to contain water throughout the year (open water habitat); and the eastern diked marsh would continue to provide seasonal wetland habitat. Regardless of the selected future use, Site 25 will be remediated such that it will be available for unlimited use and unrestricted exposure, including use as a tidal marsh and managed pond, when the remedy selected in this ROD has been completed. A ROD for Operable Unit 06 (Site 25) was completed in December 2009. OU 7 The Site 22 Landfill is located in the northeastern corner of MFA. The Site 22 Landfill covers approximately 9.4 acres and contains an estimated total refuse (waste) volume of 92,000 cubic yards. The site was used as an active landfill from 1950 through 1967. The refuse is believed to consist primarily of domestic waste, as confirmed through exploratory trenching. Results of environmental investigations indicate that in some places, the waste is located beneath the groundwater table, while in others, waste is located near the surface (above the groundwater table). The Site 22 Landfill now underlies holes 6 and 7 of a golf course, which is operated by the United States Air Force. The fairway and putting greens for these holes are located on top of the landfill. The rough for holes 6 and 7, which contains trees, is on the sloped part of the landfill. Soil borings and trenching indicate that most of the landfill is covered with approximately 1.5 feet of soil; however, soil thickness in a few areas is less than 1 foot. The Site 22 Landfill was characterized in the Final Station-wide RI Report and the Additional Sites Investigation Phase II Draft Final Report. Because operating records do not exist for the Site 22 Landfill, the history of the landfill was researched by studying aerial photographs and historical maps of the area and interviewing base personnel. This review indicated that the landfill was active from 1950 to 1967. Base personnel reported that Site 22 was used as a municipal landfill after the landfill at Site 2 was closed. Visual characterization of waste excavated at Site 2 confirmed that Site 2 contained primarily domestic waste; therefore, it was expected (and later confirmed) that the Site 22 Landfill also contained domestic waste. In 1973, the Site 22 Landfill was converted into holes 6 and 7 of the MFA golf course. In April 1998, an additional investigation was initiated to provide supplemental information about the Site 22 Landfill and its surrounding area. As part of this additional investigation, exploratory trenches were dug to further evaluate the vertical and horizontal extent of refuse within the landfill. The exploratory trenching uncovered municipal waste such as old tires, newspapers, vacuum tubes, and shampoo bottles. Based on the results of the trenching, the extent of the landfill was estimated to be approximately 9.4 acres, and the volume of refuse was estimated at approximately 92,000 cubic yards. The Air Force operates and maintains the golf course located in the northeast corner of the facility, which

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

encompasses the Site 22 Landfill. The golf course has been maintained and operated for over 30 years, and there are no plans to change the land use of this area. It is therefore, likely that the Site 22 Landfill will remain part of the golf course. The selection and screening of remedial alternatives was thus conducted based on the premise that continued use as a golf course is the most likely future land use scenario, which has been confirmed with NASA personnel. A ROD addressing OU 7 was completed in June 2002. OU 8: Site 27 includes the Northern Channel, related ditches that drain into the Northern Channel, the berms along either side of the Northern Channel, and the debris pile near the Building 191 lift station. The Northern Channel is located near the northeastern boundary of the former NAS Moffett Field. Historically, the Northern Channel has received stormwater runoff from the former NAS Moffett Field and NASA Ames Research Center. Portions of the Northern Channel that are owned by Lockheed, Cargill Salt, and the Santa Clara Valley Water District extend eastward, approximately 5,500 feet beyond the boundary of the former NAS Moffett Field. The areas that make up Site 27 are summarized below: -Northern Channel and Berms: Nearly 2 miles long, the Northern Channel receives stormwater from the eastern portion of the former NAS Moffett Field. Water in the channel flows east, approximately 1 mile beyond the boundary of the former NAS Moffett Field into Lockheed Channel. The Northern Channel flows by gravity at this termination point through a pipe to the terminus of the Lockheed Channel, which runs parallel to the eastern end of the Northern Channel. The two channels are separated by a levee. Water from the terminus of Lockheed Channel is pumped into the Moffett Channel, which drains into Guadalupe Slough and eventually into San Francisco Bay. The Northern Channel provides brackish surface water habitat of moderate value to wildlife. The surface area of the channel is about 9 acres; its bottom substrate is sediment, and the banks are fill material. The width of the channel is 40 to 50 feet, but increases to 70 feet at the western end; the channel is about 10,000 feet long, and the bottom of the channel lies approximately 2.8 feet below mean sea level. The north levee is made of compacted hard clay and is approximately 5 feet high (above the water level in the channel), with flat surfaces and steep side slopes. The slopes of the bank are moderately eroded with loose surface material that supports a moderate amount of plants. The south levee is also made of compacted clays and supports a greater diversity of vegetation. Wildlife surveys have detected the presence of the western pond turtle, various plants, and a wide variety of shore birds and waterfowl in the area. -Marriage Road Ditch: Located east of the runways, Marriage Road Ditch divides the golf course at the former NAS Moffett Field. The ditch extends about 2,300 feet, and the bottom of the ditch is 5 to 6 feet below mean sea level. Water flowing in Marriage Road Ditch is perennial and portions of the ditch are lined with concrete. Surface water from the east apron area and from the storm drains in and around Hangars 2 and 3 discharges into the ditch. Marriage Road Ditch receives additional runoff from the southern two-thirds of the runways and the golf course east and west of the ditch. Surface water from Marriage Road Ditch drains into North Patrol Road Ditch. During the rainy season, surface water from Marriage Road Ditch is occasionally pumped directly into the Northern Channel to prevent flooding during storms. The probable source of contamination in Marriage Road Ditch is historical surface water runoff from storm drains. These storm drains collected runoff from the paved and unpaved areas around Hangars 2 and 3 and conveyed it to Marriage Road Ditch. The ditch provides habitat for insects, worms, snails, and the western pond turtle. Several species of plants grow in and along the sides of the ditch. -Patrol Road Ditch: Patrol Road Ditch (also known as the East Patrol Road Ditch) is a surface drainage feature that runs 2,100 feet along the eastern boundary of the former NAS Moffett Field; the bottom of the ditch is about 5 to 6 feet below mean sea level. The ditch is part of the storm drain

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

system at the former NAS Moffett Field. Its flow in the southern end is intermittent and depends on rainfall. The northern end of the ditch receives regular runoff from irrigation of the golf course and contains water year round. Surface water from Patrol Road Ditch flows into North Patrol Road Ditch through a culvert during periods of high water; water from the ditch is occasionally pumped directly to the Northern Channel during winter rainstorms. The probable source of contamination is surface water runoff into the storm drains that feed into Patrol Road Ditch. During the wet season, the northern end of the ditch provides open water and emergent vegetation. During the dry season, the southern end consists of habitat similar to upland areas. Several species of birds have been identified in Patrol Road Ditch. -North Patrol Road Ditch: This ditch runs 4,300 feet along the North Patrol Road, parallel to and south of the Northern Channel. The western portion of the ditch is lined with concrete, lies about 5 to 6 feet below mean sea level, and generally contains water year-round. The North Patrol Road Ditch carries surface water from east to west toward the Building 191 lift station. The North Patrol Road Ditch is an integral part of the storm drain system at Moffett. North Patrol Road Ditch receives stormwater from Marriage Road Ditch, Patrol Road Ditch, and the golf course. Surface water flow through the North Patrol Road Ditch is intermittent and depends on rainfall. The banks of the ditch are defined and are made of fill material and emergent vegetation but represent poor wetland habitat. Species observed here include ducks, doves, burrowing owls, and squirrels. -Debris Pile: The debris pile is located north of the Building 191 lift station at the western end of the Northern Channel, between the north bank of the channel and south bank of the U.S. Fish and Wildlife Service Diked Ponds. The pile consists of about 10,000 cubic yards of dredged sediment from the Northern Channel and construction debris from the 1950s to 1990s.

Ownership of the Northern Channel and related areas within Site 27 is divided among NASA, Lockheed, U.S. Fish and Wildlife Service, Santa Clara Valley Water District, Cargill Salt, and the City of Sunnyvale. NASA owns the southern berm along the northern boundary of the former NAS Moffett Field and a portion of the property where the debris pile is located. In addition, NASA owns the Marriage Road Ditch, the Patrol Road Ditch, and the North Patrol Ditch. Lockheed owns the southern berm along the northern boundary of its property and a small portion of the Northern Channel. Cargill Salt owns the remainder of the berm, the Northern Channel, and the remainder of the area where the debris pile is located. U.S. Fish and Wildlife Service purchased the saltwater evaporation ponds adjacent to Site 27 from Cargill Salt in 2003. The City of Sunnyvale owns ponds and a publicly owned treatment works located near the eastern end of the Northern Channel. In addition, Sunnyvale leases a portion of the berms for hiking and biking trails. In April 1991, the Base Realignment and Closure Commission voted to (1) decommission the former NAS Moffett Field, (2) transfer naval operations from the former NAS Moffett Field to other naval facilities, and (3) transfer most of the former NAS Moffett Field property to the NASA Ames Research Center. The areas south and west of Site 27 are part of the former NAS Moffett Field. Current tenants include the U.S. Army, the U.S. Air Force, and the California Air National Guard. Current uses include airfield operations, military facilities, and NASA research facilities. The former NAS Moffett Field has a fully functional federal airport and maintains facilities for military personnel and their families, including housing, commissary, clinic, service station, tennis courts, and a golf course. The tidal salt marsh and mud flats north and northeast of the former NAS Moffett Field were diked more than 50 years ago and were formerly used as commercial saltwater evaporation ponds. Cargill Salt, the former owner, sold the ponds to the U.S. Fish and Wildlife Service in 2003.

Stormwater drainage is expected to be the future use of the Northern Channel and associated ditches, as it has been for the last 50 years. Remedial

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

alternatives were selected and screened based on the premise that continued use for stormwater drainage is the most likely future land use scenario. Existing beneficial uses of groundwater, including municipal and domestic, industrial process, and industrial and agricultural water supply, are listed in the Basin Plan. Concentrations of total dissolved solids in groundwater in the area of Site 27 do not meet criteria in U.S. Environmental Protection Agency classification guidelines for a potential source of drinking water. According to the Basin Plan, the beneficial uses for surface water near the site are freshwater/estuarine habitat and wildlife habitat. A Record of Decision (ROD) addressing Operable Unit 08 at the NAS Moffett Field site was completed in July 2005.

Summary Details:

Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel hasbeen pumping ground water and treating it by carbon adsorption. The company intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the contamination. This is one of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp. s Mountain View Plant, as well as to Fairchild Camera s and Raytheon Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibilitystudy of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosigners of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU01 of the Intel Corp. Site was completed in June 1989. EPA is now changing the June 9, 1989 ROD by specifying final cleanup standards rather than just goals. EPA is making this change because it has determined that there is insufficient information at this time to invoke a waiver to ARARs. However, EPA continues to recognize that it is always possible that the chosen remedy will be demonstrated to be unattainable. Therefore, EPA recognizes that if data are generated that demonstrate that the selected remedy cannot be achieved, EPA may need to reconsider its decision embodied in the ROD. An Explanation of Significant Differences addressing Operable Unit 01 of the Intel Corporation Site was completed in September, 1990. An Explanation of Significant Differences addressing Operable Unit 1 at the Intel Corp. (Mountain View Plant) site was completed in April 1996. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Intel Corp. (Mountain View Plant) Site was completed in August 2010.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal October 15, 1984): Teledyne Semiconductor has manufactured semiconductors on a 1-acre site in Mountain View, Santa Clara County, California, since 1962. In December l982, Teledyne reported to the California Regional Water Quality Control Board CRWQCB) that soil and ground water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the northand affected approximately 50 private domestic wells. Local agencies and the company have provided alternative

MICROCHIP TECHNOLOGY INC (Continued) **1000201854**

sources of drinking water for the affected residences. About 116,000 people depend on wells within 3 miles of the site as a source of drinking water. The company is working with CRWQCB to determine the extent of the contamination and to develop interim hydraulic controls to prevent further migration of the contaminants. The facility received Interim Status underSubtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxicchemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. This site remains in proposed status until EPA implements the appropriate elements of its final policy for placing RCRA-related sites on the NPL and then applies the policy to this site. Status July 22, 1987): Subsequent investigation revealed that this site is not subject to the Subtitle C permitting requirements of RCRA. Its score on the Ha ard Ranking System, which EPA uses to evaluate sites for the NPL, is above the cutoff point of 28.50, and EPA received no information that prevents placing the site on the NPL. Therefore, it is being placed on the NPL. Teledyne is planning on pumping the contaminated ground water in the upper aquifer to the surface for subsequent treatment.

Site Status Details:

NPL Status:	Final
Proposed Date:	10/15/1984
Final Date:	07/22/1987
Deleted Date:	Not reported

CERCLIS Site Alias Name(s):

Alias ID:	101
Alias Name:	TELEDYNE SEMICONDUCTOR
Alias Address:	1300 TERRA BELLA AVE MOUNTAIN VIEW, CA 94043
Alias Comments:	Not reported
Site Description:	The Study Area has been divided into the following three areas based on the sources of contamination, the extent of contamination in the ground water and geographic location: Teledyne Semiconductor, Inc. 1300 Terra Bella Avenue, Mountain View, California: Teledyne Semiconductor, Inc. (Teledyne) has owned and operated a semiconductor manufacturing facilit at 1300 Terra Bella Avenue

MICROCHIP TECHNOLOGY INC (Continued) **1000201854**

since 1962, (Figure 2). The southern half of the facility was built in 1962 and the northern half of the building was added in 1966. Spectra-Physics, Inc., 1250 West Middlefield Road, Mountain View, California: Spectra-Physics is an active manufacturer of lasers and associated components which as operated two of its divisions, Laser Products and Optics, in the City of Mountain View since 1961. Seven of the nine buildings in Spectra-Physics' Mountain View facility are bounded by West Middlefield Road, Terra Bella Ave, and Shoreline Boulevard (formerly Stierlin Road) (Figure 2). The other two buildings are on the north side of Terra Bella Avenue. Teledyne/Spectra-Physics Combined Study Area: The Teledyne/Spectra-Physics Combined Study Area (the "Study Area") encompasses the full extent of the groundwater plume and is generally bounded by Permanente Creek to the west, the Cith of Mountain View dewatering trench to the north, Armand Avenue to the east, and Teledyne and Spectra-Physics facilities to thesouth (Figure 1). The Study Area is located in the Santa Clara Valley which is a gently-sloping alluvial plain, flanked by the Diablo Range to the east-southeast and the Santa Cruz Mountes to the west-southwest. The Study Area is located twoard the center of the valley. The Santa Cruz Mountains are located several miles southwest of the Study Area. The San Francisco Bay is located approximately 3 miles north of the Study Area. The Study Area consists of a mixture of commercial/industrial buildings (about 57 percent), residential land use (about 8 percent), and public buildings and land uses (about 35 percent). The Study Area contains a network of paved streets with sidewalks and landscaping. There are two open spaces within the Study Area: one is the play ground and softball field associated with the Crittenden Middle School immediately west of the on-site areas, and the other is the open space adjacent to the present City of Mountain View landfill and Shoreline Amphitheater. Ground water zones at the Study Area are divided into an Upper Aquifer Zone and a Deep Aquifer Zone (Figure 3). The Upper Aquifer Zone is divided into the Shallow Zone and the Intermediate Zone. The Shallow Zone is about 10 feet thick, and generally occurs between the depths of 10 to about 30 feet below ground surface. The Intermediate Zone is about 10 to 15 feet thick, generally occurring between the depths of 35 to 70 feet below ground surface. The Upper Aquifer Zone and the Deep Aquifer Zone are separated by a Confining Zone composed primarily of silt which varies in thickness from about 50 to 150 feet. The Deep Aquifer Zone is generally more than 150 feet below ground surface. Groundwater elevations in the Study Area indicate a northerly flow direction in the Upper Aquifer Zone. Elevations in the Shallow and Intermediate Zone sediments demonstrate an upward hydraulic gradient between the two zones. Groundwater elevations within the Study Area also show an upward hydraulic gradient from the Deep Aquifer to the Upper Aquifer. History of Site Activities Teledyne has operated a semiconductor manufacturing facility at its Mountain View facility since approximately 1963. Teledyne installed two 1400 gallon below-grade sumps at their site in 1962 and 1966, respectively. Prior to 1980, the sumps were used for acid neutralization and waste Trichloroethene (TCE) collection. Neither sump has contained TCE since 1980 and the two sumps are no longer in service. A 2,000 gallon underground waste flammable solvent tank (Tank A) was installed in 1975 and removed in 1982. It was used to store waste isopropyl alcohol, xylene and acetone. Teledyne also used Trichloroethane (TCA) and other Volatile Organic Compounds (VOCs) at the facility. All underground solvent handling activities were discontinued in 1980 and all chemicals are currently stored above-ground. Since approximately 1963, Spectra-Physics has manufactured lasers and associated components at its Mountain View facility. Spectra-Physics previously used five underground sumps as part of its industrial wastewater disposal system. One 50 gallon and four 1000 gallon underground sumps were installed between 1968 and 1977. Rinsewaters were discharged through these sumps to the sanitary sewer for the primary purpose of pH and flow

MICROCHIP TECHNOLOGY INC (Continued) **1000201854**

equalization. All but one of the sumps were removed in 1987. The remaining sump is primarily used for settlement of solids. Spectra-Physics used TCE, TCA, Freon-113 and other volatile organic compounds (VOCs) in its manufacturing processes. History of Site Investigations In 1982, Teledyne and Spectra-Physics submitted Facility Questionnaires to the California Regional Water Quality Control Board (RWQCB) staff describing their underground neutralization systems, sumps, and tanks. Based on these submittals, staff required the initiation of a remedial investigation (RI) at Teledyne in 1982 and Spectra-Physics in 1984. The RI has been ongoing for the last eight years. Teledyne and Spectra-Physics have jointly and separately implemented interim remedial actions since remedial investigations were initiated. History of Enforcement Actions Teledyne and Spectra-Physics are on the National Priorities List (NPL). The sites have been regulated by the RWQCB Orders since. 1986. The summary of enforcement history for each of the sites is as follows: Teledyne - February 1986 - Order No. 86-9, Waste Discharge Requirements - June 1986 - Teledyne Semiconductor site is added to the NPL - September 1986 - Cleanup and Abatement Order No. 86-011 - January 1987 - Cleanup and Abatement Order No. 87-002 - January 1989 - Order No. 89-019, Site Cleanup Requirements Spectra-Physics - February 1986 -Order No. 86-10, Waste Discharge Requirements - September 1986 - Cleanup and Abatement Order No. 86-012 - January 1987 - Cleanup and Abatement Order No. 87-003 - June 1988 - Spectra-Physics site proposed for NPL - January 1989 - Order No. 89-020, Site Cleanup Requirements A Record of Decision addressing OU1 of the Teledyne Semiconductor Site was completed in March, 1991.

Corrective Action Summary:
Event date: 07/01/1984
Event: CA074HI

Event date: 07/01/1984
Event: CA029SF

Event date: 07/01/1984
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 07/01/1984
Event: CA049PA

Event date: 08/01/1984
Event: RFA Completed

Event date: 08/01/1984
Event: CA049SI

Event date: 02/19/1986
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 02/19/1986
Event: RFI Imposition

Event date: 02/19/1986
Event: Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).

Event date: 02/19/1986
Event: CMS Imposition

Event:	CA550RC
Event date:	04/01/1991
Event:	Certification Of Remedy Completion Or Construction Completion
Event date:	10/07/1994
Event:	CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.
Event date:	10/07/1994
Event:	CA Prioritization, Facility or area was assigned a medium corrective action priority.
Event date:	09/26/1997
Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event date:	09/26/1997
Event:	CA Responsibility Referred To A Non-RCRA Federal Authority
Event date:	09/26/1997
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of

MICROCHIP TECHNOLOGY INC (Continued) **1000201854**

significant changes at the facility.

Event date: 09/26/1997
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 12/28/2000
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Summary Details:

Conditions at proposal June 24, 1988): Spectra-Physics, Inc. SP) has manufactured electronic equipment and gas lasers on Terra Bella Boulevard and Middlefield Roads in Mountain View, Santa Clara County, California, since 1961. The 11.5-acre site consists of nine buildings in a light industrial complex. SP uses a variety of cleansers, degreasers, and lubricants in its manufacturing processes, including isopropyl alcohol, acetone, methyl alcohol,

SPECTRA-PHYSICS INC (Continued) **1000181197**

trichloroethylene TCE), Freon, 1,1,1-trichloroethane TCA), and Solvasol Solvent 360. In an inspection conducted in 1981, the California Regional Water Quality Control Board CRWQCB) found that areas where ha ardous wastes were stored had no dikes or systems to collect leachate; rusty barrels were also found on-site. Ground water investigations began at the SP facility in September 1984 after tests at Teledyne Semiconductor adjacent and downgradient of SP) indicated possible upgradient sources of contamination. The Teledyne site was placed on the NPL in July 1987.) Soil and ground water collected at SP contained TCE, TCA, and 1,2-dichloroethylene. SP s plume of contaminated ground water has merged with Teledyne s and migrated off-site. More than 200 private drinking water wells had been drilled into the 1-square-mile plume. Most wells have been closed; 47 were found contaminated above State Action Levels. The owners now obtain water from municipal water supplies. An estimated 189,000 people obtain drinking water from public and private wells within 3 miles of the site. Teledyne is operating two extraction wells on-site -- one in the shallow one and one in the intermediate one. The wells pump the water to the surface and discharge it to the sanitary sewer; the ground water is not treated before discharge. SP will evaluate the effectiveness of this system in preventing its on-site plume from migrating off-site. Both companies are jointly designing an off-site extraction system. San Francisco Bay 2.5 miles downstream of the site) is used for recreational activities. Permanente Creek is tidally influenced within 1 mile of the site. Several species of birds designated as endangered species by the U.S. Fish and Wildlife Service are found within the area of tidal influence. Status February 11, 1991):
In February 1990, SP installed a vapor extraction system to reduce concentrations of contaminants in soil. Underan order issued by CRWQCB, SP conducted a remedial investigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. The RI/FS was completed in December 1990. In February 1991, CRWQCB will adopt a final cleanup and abatement order requiring SP to implement the best remedial alternative evaluated in the RI/FS. This alternative will include expanding the existing soil vapor extraction system and the ground water extraction system. In April 1991, EPA will complete a Record of Decision describing the selected remedy.

Site Description: The Study Area has been divided into the following three areas based on the sources of contamination, the extent of contamination in the ground water and geographic location: Teledyne Semiconductor, Inc. 1300 Terra Bella Avenue, Mountain View, California: Teledyne Semiconductor, Inc. (Teledyne) has owned and operated a semiconductor manufacturing facility at 1300 Terra Bella Avenue since 1962. The southern half of the facility was built in 1962 and the northern half of the building was added in 1966. Spectra-Physics, Inc., 1250 West Middlefield Road, Mountain View, California: Spectra-Physics is an active manufacturer of lasers and associated components which as operated two of its divisions, Laser Products and Optics, in the City of Mountain View since 1961. Seven of the nine buildings in Spectra-Physics' Mountain View facility are bounded by West Middlefield Road, Terra Bella Ave, and Shoreline Boulevard (formerly Stierlin Road). The other two buildings are on the north side of Terra Bella Avenue. Teledyne/Spectra-Physics Combined Study Area: The Teledyne/Spectra-Physics Combined Study Area (the "Study Area") encompasses the full extent of the groundwater plume and is generally bounded by Permanente Creek to the west, the City of Mountain View dewatering trench to the north, Armand Avenue to the east, and Teledyne and Spectra-Physics facilities to the south. The Study Area is located in the Santa Clara Valley which is a gently-sloping alluvial plain, flanked by the Diablo Range to the east-southeast and the Santa Cruz Mountains to the west-southwest. The Study Area is located toward the center of the valley. The Santa Cruz Mountains are located several miles southwest of the Study Area. The San Francisco Bay is located approximately 3 miles north of the Study Area. The Study Area consists of a mixture of commercial/industrial buildings (about 57 percent), residential land use (about 8 percent), and public buildings and land uses (about 35 percent). The Study Area contains a network of paved streets with sidewalks and landscaping. There are two open spaces within the Study Area: one is the play ground and softball field associated with the Crittenden Middle School immediately west of the on-site areas, and the other is the open space adjacent to the present City of Mountain View landfill and Shoreline Amphitheater. Ground water zones at the Study Area are divided into an Upper Aquifer Zone and a Deep Aquifer Zone (Figure 3). The Upper Aquifer Zone is divided into the Shallow Zone and the Intermediate Zone. The Shallow Zone is about 10 feet thick, and generally occurs between the depths of 10 to about 30 feet below ground surface. The Intermediate Zone is about 10 to 15 feet thick, generally occurring between the depths of 35 to 70 feet below ground surface. The Upper Aquifer Zone and the Deep Aquifer Zone are separated by a Confining Zone composed primarily of silt which varies in thickness from about 50 to 150 feet. The Deep Aquifer Zone is generally more than 150 feet below ground surface. Groundwater elevations in the Study Area indicate a northerly flow direction in the Upper Aquifer Zone. Elevations in the Shallow and Intermediate Zone sediments demonstrate an upward hydraulic gradient between the two zones. Groundwater elevations within the Study Area also show an upward hydraulic gradient from the Deep Aquifer to the Upper Aquifer. History of Site Activities Teledyne has operated a semiconductor manufacturing facility at its Mountain View facility since approximately 1963.

SPECTRA-PHYSICS INC (Continued) **1000181197**

Teledyne installed two 1400 gallon below-grade sumps at their site in 1962 and 1966, respectively. Prior to 1980, the sumps were used for acid neutralization and waste Trichloroethene (TCE) collection. Neither sump has contained TCE since 1980 and the two sumps are no longer in service. A 2,000 gallon underground waste flammable solvent tank (Tank A) was installed in 1975 and removed in 1982. It was used to store waste isopropyl alcohol, xylene and acetone. Teledyne also used Trichloroethane (TCA) and other Volatile Organic Compounds (VOCs) at the facility. All underground solvent handling activities were discontinued in 1980 and all chemicals are currently stored above-ground. Since approximately 1963, Spectra-Physics has manufactured lasers and associated components at its Mountain View facility. Spectra-Physics previously used five underground sumps as part of its industrial wastewater disposal system. One 50 gallon and four 1000 gallon underground sumps were installed between 1968 and 1977. Rinse waters were discharged through these sumps to the sanitary sewer for the primary purpose of pH and flow equalization. All but one of the sumps were removed in 1987. The remaining sump is primarily used for settlement of solids. Spectra-Physics used TCE, TCA, Freon-113 and other volatile organic compounds (VOCs) in its manufacturing processes. History of Site Investigations In 1982, Teledyne and Spectra-Physics submitted Facility Questionnaires to the California Regional Water Quality Control Board (RWQCB) staff describing their underground neutralization systems, sumps, and tanks. Based on these submittals, staff required the initiation of a remedial investigation (RI) at Teledyne in 1982 and Spectra-Physics in 1984. The RI has been ongoing for the last eight years. Teledyne and Spectra-Physics have jointly and separately implemented interim remedial actions since remedial investigations were initiated. History of Enforcement Actions Teledyne and Spectra-Physics are on the National Priorities List (NPL). The sites have been regulated by the RWQCB Orders since. 1986. The summary of enforcement history for each of the sites is as follows: Teledyne - February 1986 - Order No. 86-9, Waste Discharge Requirements - June 1986 - Teledyne Semiconductor site is added to the NPL - September 1986 - Cleanup and Abatement Order No. 86-011 - January 1987 - Cleanup and Abatement Order No. 87-002 - January 1989 - Order No. 89-019, Site Cleanup Requirements Spectra-Physics - February 1986 -Order No. 86-10, Waste Discharge Requirements - September 1986 - Cleanup and Abatement Order No. 86-012 - January 1987 - Cleanup and Abatement Order No. 87-003 - June 1988 - Spectra-Physics site proposed for NPL - January 1989 - Order No. 89-020, Site Cleanup Requirements A Record of Decision addressing the Spectra-Physics, Inc. Site OU01 was completed in March, 1991.

Summary Details:

Conditions at proposal June 24, 1988): Jasco Chemical Corp. has formulated chemical products on a 2.05-acre site in Mountain View, Santa Clara County, California, since 1976. The site is bordered on the northeast by the Central Expressway and the Southern Pacific Railroad, and on the remaining sides by residential neighborhoods. In January 1983, a citi en complained to the California Regional Water Quality Control Board CRWQCB) that the facility was dumping solvents at therear of the site on a daily basis. CRWQCB requested Jasco to install a monitoring well at the site to determine if ground water was contaminated. Both ground water and soil are contaminated at the site, according to analyses conducted byconsultants to Jasco. Methylene chloride concentrations are as high as 142,000 parts per million in ground water, and soil is highly contaminated with pentachlorophenol to depths of 20 feet. Contamination is believed to have resulted from anyof the following sources: an underground tank farm, two dry wells used for disposal of storm water run-off from the roof and paved portion of the site, and a drain that discharges surface run-off at the rear of the site. The company is working with CRWQCB to determine the extent of the contamination and to prevent further migration of the contaminants. In addition, the City of Mountain View closed nearby Municipal Well 17 in 1987, until the lateral and vertical extent of the pollution has been defined. About 333,000 people obtain drinking water from wells within 3 miles of the site. Status October 4, 1989): Jasco is pumping and treating ground water to remove contamination. In July 1988, Municipal Well 17was returned to service. In November 1988, Jasco excavated 550 cubic feet of contaminated soil and

JASCO CHEMICAL CORP. (Continued) **1000175646**

transported it to a ha ardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act.

Site Description: The Jasco Chemical Company, (JASCO) repackaged and formulated chemical products on the 2.05 acre Villa Street site, located in the City of Mountain View (City), California, from 1976 until December 1995. The facility handled and stored numerous chemicals on site in underground storage tanks, 55-gallon drums, and other containers. Chemicals stored on site include methylene chloride, paint thinner, denatured alcohol, methanol, kerosene, lacquer thinner, and acetone. The City of Mountain View lies in a relatively flat portion of the Santa Clara Valley approximately 40 miles south of San Francisco. There are approximately 67,000 people within the city of Mountain View, with the closest residence located .about 50 feet west of the site. There are 4 elementary schools and 3 playgrounds within the 3 miles surrounding the site. The closest school is located within one mile of the site. This is a residential setting, dominated by single family homes to the south, and the Villa Mariposa apartment complex to the east. Single and multifamily dwellings located along Higdon Avenue border the Jasco site to the west. Villa Street is located south of the site and the Southern Pacific Railroad main line right-of-way borders the site to the north. The Jasco site is at an

JASCO CHEMICAL CORP. (Continued) **1000175646**

approximate elevation of 60 feet above mean sea level. The surrounding topography slopes gently toward the north -northeast. Surface water on the developed portion of the site drains generally toward the north-northeast. The only surface water near the site is Permanente Creek, which is about 600 feet northwest of the site. Permanente Creek is a perennial stream that flows north-northeast a distance of 3.5 miles before reaching the Mountain View Slough which drains into the San Francisco Bay. The creek itself is channelized, concrete- lined, and is primarily used for drainage and flood control. In the past, surface water from the Jasco site collected in the drainage swale area located in the rear of the facility. In addition, surface water was discharged to three on-site dry wells. The on-site dry wells were destroyed in April 1988. Surface water runoff is currently being collected in a 4,000 gallon tank before being discharged to the City of Mountain View sanitary sewer system. Historically, the 2.05 acre Jasco site has been zoned for industrial purposes. The Villa-Mariposa Area Precise Plan establishes land use within this portion of the city. The Jasco site is part of the Villa-Mariposa Area which includes a moderate-density residential neighborhood. This 23-acre area is bounded by the Southern Pacific Railroad, Shoreline Boulevard, Villa Street and the rear lot lines of residential properties fronting Higdon Avenue. Prior to 1970, the property was zoned MM (General Industrial) District. Eighty-five percent of the property was previously occupied by the Pacific Press Publishing Association, an industrial printing/publishing house for the Seventh Day Adventist Church. In 1983, the Press announced that it was going to close its Mountain View facility and sell its property. With the anticipated move of the Pacific Press operation, the city reconsidered basic land use provisions within this area. The Villa-Mariposa Area Precise plan provides for transition of this older industrial complex into a residential area. The Plan provided for the amortization of existing industrial uses and buildings. The property is currently zoned P (Planned Community). The plan sets other industrial/office uses as nonconforming if they do not follow the Master Development Plan. The Jasco facility was designated as "high-hazard occupancy", and as such its use at 1710 Villa Street was to be terminated by December 1993. All of the Precise Plan properties have been redeveloped, except for the Jasco property. In an Environmental Planning Commission meeting on July 15, 1992, Jasco applied for a two-year extension to their amortization. The commission approved the extension, which allows the facility to remain operating on the current site until December 1995. Several aquifer systems occur in the upper aquifer zone separated by aquitards which may be leaky or very tight. Groundwater contamination at the site occurs within the upper aquifer zone. The lower aquifer zone occurs beneath the practically impermeable regional aquitard. The deep aquifer is of drinking water quality in areas of Mountain View and beneath the site. The following groundwater wells are located within a three mile radius of the site: - View Municipal Well numbers 8, 9, 10, and 17 - City of Sunnyvale Losse Well - City of Palo Alto Emergency Wells: Fernando, Matadero, and Meadows The City of Palo Alto supplies all of its drinking water needs by using the Hetch Hetchy Reservoir. The Hetch Hetchy Aqueduct carries surface water from the Sierra Nevada Mountains about 120 miles to the east. There is no apparent route through which existing domestic water supply wells could be impacted by site contaminants because the groundwater flows to the north and Well #17 is west and Well #18 is east of the site. The total population served by groundwater within this 3 mile radius is as follows: Mountain View 67,000 people; Sunnyvale 212,000 people; Palo Alto Emergency Wells 56,000 people. In 1987 Mountain View identified Well MV-10 as an active well producing 800 gallons/minute from between 450 to 800 feet bgs. Well water supplied 10% of the drinking water for the City of Mountain View with Hetch Hetchy supplying 90% of the drinking water supply. The Jasco site appears to be within the zone of influence of Well #17 which connects directly

JASCO CHEMICAL CORP. (Continued) **1000175646**

into City transmission mains. Mountain View well #17 is located within 2,000 feet northwest of the Jasco site and is screened from the 236 to 560 feet bgs in the C aquifer producing 1/2 million gallons/day. The drilling logs for well #17 showed an aquitard that is significantly thinner than those seen in other areas of the city. Mountain View Well #17 was shut off on December 14, 1986. This action occurred so that city officials could determine whether or not contamination from the Jasco site was impacting this well. The well resumed pumping in 1988 after it was determined that the site was not impacting Well #17. The existing and potential beneficial uses of the groundwater underlying the site include industrial process water supply, industrial service water supply, municipal and domestic water supply, and agricultural water supply. On December 4, 1951 the property was acquired by Tom N. Tibbs Corporation. The property was leased to West Coast Door Corporation from 1954 through June 1974. West Coast Door Corporation manufactured and painted commercial and residential doors on the site. The site was vacant from June 1974 through November 1976. Harry M. Anthony, president and owner of Jasco, purchased the property during; September 1976. The deed was recorded on November 5, 1976, and Jasco started operations at the site during December 1976. Jasco's production process involves repackaging of bulk chemicals into small containers and blending of chemicals to produce proprietary products such as degreasers and paint thinners. Bulk solvents are received in tankers and stored in the eight underground tanks. Filling of the tanks is done by gravity. Powdered solids are received in 55-lb bags and other solvents are received in 55 gallon drums. In October 1984 a putty mixer was added for a new line of products. The putty consists of 85% filler - pigment and small quantities of linseed or soy bean oil. The JASCO site came to the attention of regulators in 1983 after a private citizen complained about the dumping of materials at the site. In 1984, the San Francisco Bay Region, Regional Water Quality Control Board (RWQCB) ordered JASCO to install a monitoring well at the site to determine if the groundwater had been contaminated. Volatile organic compounds (VOCs) were found to be present in the groundwater. Since February 20, 1987, the company has been extracting contaminated groundwater from Well V-4. The extracted groundwater is discharged to the Mountain View sewer system under a permit from the city. On October 2, 1987, Jasco removed an underground diesel tank from the site. The tank was corroded with numerous small holes. Samples taken from directly beneath the tank contained diesel at concentrations of 360 parts per million (ppm), benzene at 3.0 ppm, toluene at 550 parts per billion (ppb), and xylenes at 9.6 ppm. During March of 1988 a tracer leak detection system was installed on the underground storage tank system. Tracer chemicals are periodically added to the tank contents. Soil gas samples are collected monthly from multiple probes located to a depth of 12 feet within and surrounding the tank farm. Each sample is analyzed for the tracer chemical to verify whether or not a release has occurred. In January 1990 the system detected tracer chemical coming from the paint thinner tank. This tank was decommissioned for a year even though the amount of the leak was below action levels. It was subsequently put back into service when testing showed that it was not leaking at action levels. The primary source of chemicals detected within the vadose zone can be found in the rear of the facility. The drainage swale receives surface water runoff from both the south side of the facility and points to the east. In the past surface runoff flowed into a drain on the south side of the facility and then entered an underground pipe. This pipe ran north under the building and then connected with an east-west underground pipe on the north side of the facility. The east-west underground pipe emptied into the drainage swale which is adjacent to the northwest corner of the site. The discharged water ponded, evaporated and/or percolated into the soil in this drainage swale area. During August 1988 Jasco submitted to the RWQCB a soils characterization report and runoff

JASCO CHEMICAL CORP. (Continued) **1000175646**

management plan. Soil contamination in the drainage swale included methylene chloride at 3,400,000 parts per billion (ppb); trichloroethylene at 490,000 ppb; toluene at 1,700,000 ppb; and acetone at 270,000 ppb. During October 1988, Jasco responded to the soil characterization report by excavating 572 cubic feet of soil from the drainage swale area. The excavation depth extended to the groundwater table (22-28 feet). The area was excavated by drilling with overlapping large diameter augers. The soil was disposed of at the Casmalia Resources Facility in Casmalia, California. A Surface Runoff Collection System was installed to prevent further surface water infiltration across the drainage swale area in early 1989. This system consists of a 10 millimeter thick polyethylene liner that prevents surface water percolation. The area is also graded such that surface runoff is angled toward a sump located in the drainage swale area. Water is pumped out of this area into the sanitary sewer line. Surface water in the front yard area is collected in a large dumpster for timed release into the sanitary sewer line. EPA evaluated the JASCO site under the Hazard Ranking System and proposed the site for inclusion on the National Priorities List (NPL) in June 1988. In December 1988, EPA ordered JASCO to complete a remedial investigation and feasibility study for the site. In 1989, the JASCO site was placed on the NPL. The Remedial Investigation (RI) was completed in 1991 and the Feasibility Study (FS) was completed in 1992. In 1995, the City approved JASCO's Facility Closure Plan and notified JASCO that its POTW discharge permit would not be renewed after May of 1997. JASCO subsequently negotiated extensions to the permit to allow discharge to the POTW until March of 1998. Due to the City's removal of the POTW discharge permit, wastewater is now discharged to surface waters (Permanente Creek) under a general National Pollution Discharge Elimination System (NPDES) permit administered by the RWQCB which requires treatment to achieve discharge concentrations consistent with State maximum contaminant levels (MCLs). Because these levels are more stringent than those required under the City permit for POTW discharge, the method of treatment for extracted groundwater had to be changed in order to lower effluent concentrations. OU 1: A Record of Decision was completed on September 30, 1992 that addressed contaminated soil and groundwater on the JASCO property. This ROD proscribed the following: groundwater extraction, treatment, and discharge to a POTW; groundwater monitoring; on-site ex-situ biological treatment of contaminated soils with a contingency for off-site disposal of highly contaminated soils; and institutional controls to prevent future use of groundwater as a drinking water source or exposures of future on-site workers to VOC vapors. On September 13, 2002, an Explanation of Significant Differences (ESD) was completed to reflect changes in treatment strategies. The ESD included provisions for using soil vapor extraction (SVE) to remove VOCs from soils in the drainage swale, the use of an air stripper with vapor-phase carbon adsorption to treat groundwater, modified institutional controls, and the discharge of treated groundwater to surface water under a NPDES permit.

Summary Details:

Conditions at proposal June 24, 1988): CTS Printex, Inc., manufactured printed circuit boards on 5.6 acres in Mountain View, Santa Clara County, California, during 1966-85. Printex was incorporated in 1966 and acquired by CTS Corp. in 1981.In the wet-floor building at 1911 Plymouth Street, acid waste water containing copper, lead, and organic wastes containing trichloroethylene TCE) and other solvents drained to the floor, collected in a sump where they were neutrali ed withammonia, and discharged to the Mountain View sanitary sewer. Early in 1985, a consultant to CTS Corp. found high levels of copper and lead in soil near the wet-floor building and high levels of TCE, 1,1,1-trichloroethane, and 1,1-dichloroethylene in monitoring wells downgradient of the site. An estimated 189,000 people obtain drinking water from municipal wells within 3 miles of the site. Permanente Creek borders the site. Surface water drainage eventually discharges to San Francisco Bay 2.5 miles to the north. Late in 1985, the company excavated the sump area and filled it in, decontaminated the building, and transported waste materials to a ha ardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act RCRA). In October 1986, the California Department of Health Services certified closure of the facility. In an attempt to stop migration of contaminated ground water off-site, the company is pumping the water and discharging it to Mountain View s sanitary sewer system under a city permit. The company continues to monitor to define the plume of contaminated ground water. In March 1987, the California Regional Water Quality Control BoardCRWQCB) issued a Cleanup and Abatement Order requiring the company to be more expeditious and thorough in its cleanup and set a schedule for various on- and off-site tasks. Status February 21, 1990): CTS Printex is conducting a remedialinvestigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. In November 1989, CRWQCB received the first draft of the RI/FS for review. The final draft isscheduled to be submitted in late 1990.

Site Description: CTS Printex Corporation (CTS) manufactured printed circuit boards at its former facility in Mountain View from 1970 to 1985. The facility was located on Plymouth and Colony Streets east of Sierra Vista Avenue at 1904, 1940, and 1950 Colony Street and at 1905, 1911, 1921, and 1931 Plymouth Street. CTS leased this property from the owner, ADN Corporation. The Site is located on the northwest corner of the Santa Clara Valley between the south end of the San Francisco Bay and the Santa Cruz Mountains in the County of Santa Clara. The site is located 2.5 miles south of San Francisco Bay. The terrain at the Site is relatively flat except for surface drainage. The land surrounding the Site is zoned for light industrial/manufacturing, commercial, residential, and agricultural use. In general, the industrial land use is south and north-northwest of the facility, the commercial land use is north extending across from U.S. Highway 101, and the residential land use is west of the facility. In recent years, the surrounding area, especially north of U.S. Highway 101, has been progressively converted from a residential and agricultural area to a light industrial commercial area. Approximately 20 acres of land, north of the facility, is used for a commercial farming operation. Prior to the construction of the buildings at 1904, 1940, and 1950 Colony Street and at 1905, 1911, 1921, and 1931 Plymouth Street, the Site consisted of an open field. The existing buildings are the original structures constructed on the Site in 1970. The only industrial activity known to occur on this property was the manufacturing of circuit boards. Historical aerial photographs for adjacent Superfund sites show that historical land use near the Site was agricultural, dating back to 1937 and possibly further. The

PRINTEX CORPORATION (Continued) **1000128432**

surrounding area was developed as an industrial area during the period from 1961 to 1973. Companies historically located in the vicinity of the CTS site were involved in a wide range of manufacturing activities, including the manufacturing of amusement park equipment, laser devices, printed circuit boards, electrical test equipment, and semiconductors. Historical groundwater use in the area surrounding the Site includes private water-supply wells for homes and agriculture prior to the construction of public water connections and sewer connections in 1984. A review of data on active, abandoned and closed wells within the study area identified 72 wells in the area bounded by Permanente Creek, Rengstorff Avenue, Colony Street, and Charleston Road. Of the 72 wells, 48 were registered wells and 24 were unregistered wells. Of the 48 wells, 8 of the wells are active and only one well was considered to be a potential conduit. Of the 24 unregistered wells, documentation was obtained for only one well. Existing or potential beneficial uses of the South Bay and/or Permanente Creek are wildlife and estuarine habitat; fish spawning and migration; shellfish harvesting; ocean, commercial, sport fishing; and industrial service supply. Described in this section are the surface and subsurface structures at the Site. Surface and subsurface structures at the Site are as follows: -Flammable Materials Storage Area: This storage area consisted of a small shed constructed of metal on a concrete base. No drains or berms were associated with this structure. Materials stored in this structure included lubricating oil, hydraulic oil, fluxes, and isopropanol. -1940 and 1950 Colony Street: This building housed the Printex administrative offices as well as sales, engineering, accounting, and purchasing offices. In addition, some manufacturing operations occurred in this building. -1904 Colony Street: This building was used for data processing and laminate storage. No hazardous materials are believed to have been stored in this building or on the surrounding grounds. The floors in this building were concrete with no berms or trenches. -1911 Plymouth Street: This building was referred to as the "wet floor building," and was the main site of both wet and dry manufacturing processes employed by CTS. Chemicals used in this building included phosphoric acid, hydrofluoric acid, methyl ethyl ketone, tin, and lead. -1921/1931 Plymouth Street: This building was used for manufacturing processes which included etching and solder leveling. This building was predominantly a dry process area and no chemicals were stored at this location. -1905 Plymouth Street: This warehouse was the main material and waste storage area for CTS. All materials used at the CTS facility were stored in this warehouse. The floor of the warehouse was concrete. The tilt-up concrete walls were sealed to the floor with mastic, and a small trench existed across the doorway. -Industrial Wastewater Sump: This neutralization sump collected and neutralized all wastewater from the CTS facility before discharging to the sanitary sewer. The sump was installed in 1970 and was constructed of steel-reinforced concrete. The sump consisted of three discrete chambers with a total capacity of about 1,500 gallons. Printex was incorporated in 1966 and operated a printed circuit board manufacturing facility at their former facility in Mountain View from 1970 to 1981. In 1981, Printex was acquired by CTS Corporation and was renamed CTS Printex, Inc. CTS Printex manufactured printed circuit boards at its manufacturing facility located at 1904, 1940, and 1950 Colony Street and at 1905, 1911, and 1931 Plymouth Street from 1981 to 1985. Printed circuit board manufacturing processes which generated waste were primarily located within the buildings at 1911, 1921, and 1931 Plymouth Street. Site investigations were initiated by CTS in January 1985 prior to closing the facility. These investigations detected contamination, primarily metals and volatile organic compounds (VOC), in soil and groundwater. In 1987, the Regional Water Quality Control Board (RWQCB) ordered CTS Printex to conduct a remedial investigation at the facility. Following investigations initiated at the CTS site, CTS implemented

PRINTEX CORPORATION (Continued) **1000128432**

interim remedial actions. In December 1984, CTS Printex conducted a meeting with representatives from the Department of Health Services (DHS), the RWQCB, and the Mountain View Fire Department (MVFD) to plan their voluntary site assessment in anticipation of closing the facility. Enforcement actions to date are as follows: -October 1986: DHS Certified Closure of former CTS Facility -March 1987: RWQCB Issued Clean-up Abatement Order No. 87-05 -April 1989: RWQCB Issued Clean-up Abatement Order No. 89-63 -February 1990: EPA Placed CTS on the National Priorities List -November 1990: RWQCB Issued Clean-up Abatement Order No. 90-14 In November, 1986, CTS submitted an "Interim Remedial Plan" to the RWQCB proposing an immediate response action for mitigating downgradient, off-site migration of groundwater containing volatile organic compounds VOCs. The interim remedial response action included groundwater extraction and discharge under permit to the City of Mountain View sanitary sewer system. The remedy selected for the Site is to continue operation of the seven extraction wells until the cleanup levels are achieved. The capture zone created by the existing extraction wells is effectively containing and remediating the groundwater plume emanating from the CTS site. Extracted groundwater will continue to be discharged under permit to the City of Mountain View wastewater treatment plant. A ROD addressing Operable Unit 01, contaminated groundwater at the CTS Printex, Inc. site was completed in June 1991. OU01 ROD Amendment: This document is an amendment to the 1991 Record of Decision (1991 ROD) for the Site, located in Mountain View, California. The EPA Site Identification Number is CAD009212838. The former CTS Printex facility was located on property bounded by Colony Street on the South, Plymouth Street on the north, Sierra Vista Avenue on the west, and U.S. Highway 101 (Bayshore Freeway) on the east. The Site boundaries are defined by the extent of the underlying groundwater contamination. The land use includes commercial/light industrial and residential. EPA is the lead agency for this Site, having assumed that role from the California Regional Water Quality Control Board, San Francisco Bay Region (Water Board) in 2006. The Water Board is currently the State support agency. CTS Printex, and its corporate predecessor, operated a printed circuit board manufacturing facility on a portion of the Site between 1970 and 1985. Those operations involved use of various Volatile Organic Contaminants (VOCs), including trichloroethene (TCE), which impacted soils and groundwater on and off the property. In 1985, prior to shutting down operations at the facility, CTS Printex initiated a site investigation, in cooperation with the Water Board and other state and local agencies. When the investigation revealed soil and groundwater contamination, the Water Board pursued enforcement actions, requiring the potentially responsible parties to address the contamination. Over the next several years, the Water Board issued a number of Cleanup and Abatement Orders (CAOs) regarding the Site, culminating in 1990 with CAO 90-14, which required continued operation and maintenance of the already-operational groundwater extraction system. EPA placed the Site on the National Priorities List (NPL) in 1990, and then issued the 1991 ROD selecting the groundwater remedy, which included continued operation of groundwater extraction and sewer discharge until achievement of cleanup levels. Pursuant to a cooperative agreement with EPA, the Water Board continued the role of lead agency for enforcement of Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended, 42 U.S.C. Section 9601-9675 (CERCLA). After nearly a decade of operation, the groundwater extraction system was shut down in 1996, based on the Water Board’s determination that the system was no longer effective. Between 1987 and 1996, the system successfully removed approximately 100 pounds of TCE from 106 million gallons of groundwater and reduced the lateral extent of the TCE groundwater plume in the two shallowest groundwater aquifer zones, referred to as the "A and B zones." By 1996, however, the rate of TCE removal had dropped significantly. No CERCLA decision document was prepared at that

PRINTEX CORPORATION (Continued) **1000128432**

time. The second five-year review report for the Site was issued in 2005 and recommended that a ROD Amendment be prepared to include institutional controls prohibiting the use of contaminated shallow groundwater and to evaluate the potential vapor intrusion pathway. In 2006, EPA assumed the role of lead regulatory, and the Water Board is now the support agency. Annual groundwater monitoring continues at the Site. This Record of Decision (ROD) Amendment selects two remedies: a revised groundwater remedy and a new vapor intrusion remedy. The purpose of the selected groundwater response action is to address the remaining groundwater contamination and to achieve groundwater cleanup levels, i.e., drinking water standards. The purpose of the selected response actions for the vapor intrusion pathway is to minimize or eliminate human exposure to vapor intrusion associated with the remaining groundwater contamination. A ROD Amendment for Operable Unit 01 of the CTS Printex Site was completed in September 2011.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

FOOTHILL DISPOSAL CO (Continued) **1000857641**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

SHELL SERVICE STATION (Continued) **1004677933**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status: Completed - Case Closed
Status Date: 07/01/2011
Lead Agency: SANTA CLARA COUNTY LOP
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: 20-017
LOC Case Number: 06S2W15M02f
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: The Site is a former Texaco-branded service station located at the intersection of North Shoreline Boulevard and Terra Bella Avenue in Mountain View, California. Former station features include one 6,000-gallon gasoline underground storage tank (UST), four 4,000-gallon gasoline USTs, and one waste oil UST. In 1992, the six USTs, associated product piping, and dispensers were removed, and the Site was redeveloped as a restaurant. Twelve groundwater monitoring wells have been installed on or near the Site to-date. Eight groundwater monitoring wells (MW-22A, MW-22B, MW-22D, and MW-22L through MW-22P) were installed on-site, and four groundwater monitoring wells (MW-22E through MW-22H) were installed at off-site locations to assess the lateral extent of petroleum hydrocarbons in groundwater. Groundwater monitoring has been performed at the Site since 1988. Historically, groundwater flow at the Site has been towards the north.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	Not reported
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Dichloroethene (DCE), Trichloroethylene (TCE)
Site History:	The site formerly was used as the Santa Clara County vector control maintenance yard. Soil, soil vapor, and groundwater sampling showed contamination by petroleum hydrocarbons and/or VOCs. Under DTSC oversight, the County conducted several investigations and a soil removal. The City purchased the property and conducted additional investigation (soil, soil vapor, and groundwater) to evaluate on-site sources and extent of VOCs in 2013. Following completion of this work, the City installed site monitoring wells. The U.S. Environmental Protection Agency (EPA) determined groundwater contamination at this site is part of the MEW Superfund Study Area; lead regulatory agency oversight transitioned to EPA in February 2015.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	01/06/1984
Comments:	In February of 1983, DHS directed LGM to remove the contaminated soil from on and off its property. Several months later, LGM declared bankruptcy and went out of business. In the latter part of 1983 and early 1984, chemicals and contaminated soil were removed from the LGM storage area and an adjacent condominium complex. Post-excavation confirmation samples were taken for fluoride and copper. Detected levels were below health-based risk goals considered safe for residential use.

Background Info:	LGM Manufacturing (LGM) manufactured printed circuit boards from 1969 to 1983. Chemicals used at the Site included ammonia, etch acids, brighteners, fusing oil, trichloroethylene, copper with formaldehyde, and methylene chloride. Chemical wastes were stored in drums and containers in a yard behind the LGM warehouse.

Completed Date:	12/28/2007
Comments:	Site characterization completed. VOC groundwater contamination was determined to be form an offsite source. Remediation of the groundwater contamination will not be included as part of the Removal Action Workplan (RAW). The RAW will focus on the mitigation of residual soil VOC and TPH contamination associated with the Catch Basin. The results of the Site groundwater investigation indicates that the source(s) of the VOC groundwater contamination is from off-site and conveyed through the utility corridor.

File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Trichloroethylene (TCE)
Site History:	The former Spectraphysics property is a Federal Superfund site along

SPECTRA-PHYSICS LASERS (Continued) **S103980880**

with the adjacent Teledyne property. Within the last fives years, a more recent re-evaluation of former case management concluded that the 2004 IA VI evaluation was inadequate because it was not conducted at the source property at 1250 W Middlefield Road. The Regionial Water Board and USEPA who conducted IA testing and deteceted IA-TCE levels below USEPA's commercial RSL but above their residential RSL. So we directed the owner of the1250 W Middlefield Road to record a deed restrition on sensitive land uses. In cooperation with the RP for the former Teledyne property, the RPs also assertiively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street areas to conclude that IA VI is occurring iwith one of the commercial area buildings and in several homes in the residential area. The RPs are in the process of installing a sub-slab depressurization system in the commercial building and offered the affected residents crawl space fans to address the issue.

File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Under Investigation
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Trichloroethylene (TCE)
Site History:	Site was developed in the 1970s with a motel, which currently occupies the site. Prior to that the land was used for agricultural purposes. Grab groundwater samples have been collected from the site by current property owner and EPA. Additional source investigation conducted by EPA, including grab groundwater and soil vapor samples. Results indicated elevated concentrations of VOCs (TCE and DCE) in groundwater to at least 60 feet bgs. EPA collected indoor air samples for VOCs; results below indoor air screening levels. The U.S. Environmental Protection Agency (EPA) determined groundwater contamination at this site is part of the MEW Superfund Study Area; lead regulatory agency oversight transitioned to EPA in February 2015.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

SLIC:
Region: STATE
Facility Status: **Open - Remediation**
Status Date: 10/01/1986
Global Id: SL721281224
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.4106132140258
Longitude: -122.080657482147
Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0128
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
Site History: The Teledyne property is a co-Superfund site property along with the adjacent Spectra-Physics property. Within the last ten years, Responsible Parties (RPs) for the Teledyne/Spectra-Physics site completed an Monitored Natural Attenuation (MNA) study in the off-property area north of and downgradient of the site. The MNA study concluded that natural breakdown of trichloroethene (TCE) and other chlorinated volatile organic compounds of concern is occurring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property downgradient extraction wells are operating mainly to maintain hydraulic control of the plume. The RPs completed an extended pilot study to test the feasibility of enhanced reductive dechlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone. An on-property indoor air vapor intrusion evaluation indicated no vapor intrusion contamination above the Regional Water Board's 2008 ESLs. Within the last five years, the RPs detected elevated source areas of CVOCs at

MICROCHIP TECHNOLOGY INC. (Continued) **S100833421**

the Teledyne property using high resolution technology and continuously logged and screened ERD injection well boreholes. Implementing a full-scale ERD treatability study, they have been and are currently remediating the property and decreasing elevated levels to low multiples of State and Federal Maximum Contaminant Levels for drinking water. The RPs also assertively evaluated potential indoor air vapor intrusion in the off-property commercial North Bayshore and residential Spring Street areas to conclude that vapor intrusion is not occurring in the commercial area and is occurring in several homes in the residential area. The RPs offered the affected residents crawl space fans to address the issue.

Background Info:	Teledyne Semiconductor has operated a semiconductor manufac-

MICROCHIP TECHNOLOGY INC. (Continued) **S100833421**

turing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by the process are handled and stored onsite.
In 1982, Teledyne notified the RWQCB that soil and groundwater near underground solvent storage tanks was contaminated. Further study revealed that a groundwater contaminant plume had migrated northward and contaminated forty private domestic wells. The contaminants identified in soil and groundwater include trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE), and xylene.
About 270,000 people residing within three miles of the site depend on groundwater as a source of drinking water. The groundwater contamination represents a potential threat to municipal and other wells.

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: Teledyne, the responsible party, has been conducting remedial activities under and order issued by the RWQCB. DHS has budgeted $50,000 for development, review and approval of a RAP and will seek to recover all actual costs from the responsible parties.
Site Description: Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite.
Hazardous Waste Desc: In 1982, Teledyne notified the RWQCB that soil and ground water near underground solvent storage tanks was contaminated. Further study revealed that a ground water contaminant plume and migrated northward and contaminated 40 private domestic wells. The contaminants identified in soil and ground water are trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE) and xylene.
Threat To Public Health & Env: About 270,000 people residing within 3 miles of the site depend on ground water as a source of drinking water. The ground water contamination represents a potential threat to municipal and other wells.
Site Activity Status: An investigation conducted in June, 1984, revealed that solvents had contaminated private wells to the north of the site. Contaminated wells were closed and an alternate drinking water supply was provided to affected residents. A ground water extraction system was installed onsite and began operating in October, 1986. Characterization of soil and ground water contamination is continuing.

Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency Case Number:	Not reported
Latitude:	37.406145
Longitude:	-122.065601
Case Type:	Cleanup Program Site
Case Worker:	Not reported
Local Agency:	Not reported
RB Case Number:	Not reported
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Under Investigation
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Trichloroethylene (TCE)
Site History:	The site was undeveloped until a Denny's restaurant was constructed in the 1970s. Denny's ceased operation in the early 2000s and has remained vacant since that time. Groundwater beneath the site is contaminated with chlorinated volatile organic compounds. Ownership of the property changed in early late 2012/early 2013; the site is proposed for redevelopment as a hotel. Several site investigations have been performed to date. The U.S. Environmental Protection Agency (EPA) determined groundwater contamination at this site is part of the MEW Superfund Study Area; lead regulatory agency oversight transitioned to EPA in February 2015.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 18449

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

NASA AMES RESEACH CENTER (Continued) **1015730574**

Amount (Lbs):	5418
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code:	P030
Waste name:	CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
Amount (Lbs):	2650
Waste code:	P042
Waste name:	1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-
Amount (Lbs):	2650
Waste code:	P075
Waste name:	NICOTINE, & SALTS
Amount (Lbs):	2650
Waste code:	P076
Waste name:	NITRIC OXIDE
Amount (Lbs):	3
Waste code:	P087
Waste name:	OSMIUM OXIDE OSO4, (T-4)-
Amount (Lbs):	2650
Waste code:	P098
Waste name:	POTASSIUM CYANIDE
Amount (Lbs):	2650
Waste code:	P105
Waste name:	SODIUM AZIDE
Amount (Lbs):	2650
Waste code:	U002
Waste name:	ACETONE (I)
Amount (Lbs):	1607

NASA AMES RESEACH CENTER (Continued) **1015730574**

Waste code: U003
Waste name: ACETONITRILE (I,T)
Amount (Lbs): 1607

Waste code: U012
Waste name: ANILINE (I,T)
Amount (Lbs): 2650

Waste code: U019
Waste name: BENZENE (I,T)
Amount (Lbs): 4257

Waste code: U036
Waste name: CHLORDANE, ALPHA & GAMMA ISOMERS
Amount (Lbs): 2650

Waste code: U044
Waste name: CHLOROFORM
Amount (Lbs): 2650

Waste code: U075
Waste name: DICHLORODIFLUOROMETHANE
Amount (Lbs): 35

Waste code: U080
Waste name: METHANE, DICHLORO-
Amount (Lbs): 2650

Waste code: U108
Waste name: 1,4-DIETHYLENEOXIDE
Amount (Lbs): 1607

Waste code: U112
Waste name: ACETIC ACID ETHYL ESTER (I)
Amount (Lbs): 1607

Waste code: U122
Waste name: FORMALDEHYDE
Amount (Lbs): 2650

Waste code: U133
Waste name: HYDRAZINE (R,T)
Amount (Lbs): 2650

Waste code: U134
Waste name: HYDROFLUORIC ACID (C,T)
Amount (Lbs): 2650

Waste code: U154
Waste name: METHANOL (I)
Amount (Lbs): 1607

Waste code: U159
Waste name: 2-BUTANONE (I,T)
Amount (Lbs): 1607

Waste code: U161

NASA AMES RESEACH CENTER (Continued) **1015730574**

Waste name: METHYL ISOBUTYL KETONE (I)
Amount (Lbs): 1607

Waste code: U196
Waste name: PYRIDINE
Amount (Lbs): 1607

Waste code: U211
Waste name: CARBON TETRACHLORIDE
Amount (Lbs): 2650

Waste code: U213
Waste name: FURAN, TETRAHYDRO-(I)
Amount (Lbs): 1607

Waste code: U219
Waste name: THIOUREA
Amount (Lbs): 2650

Waste code: U239
Waste name: BENZENE, DIMETHYL- (I,T)
Amount (Lbs): 1607

Waste code: U240
Waste name: ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS
Amount (Lbs): 2650

Waste code: U328
Waste name: BENZENAMINE, 2-METHYL-
Amount (Lbs): 2650

Facility Has Received Notices of Violations:
Regulation violated: Not reported
Area of violation: Generators - Pre-transport
Date violation determined: 10/16/2014
Date achieved compliance: 03/02/2015

INNERCONN TECH & UNION BK (Continued) **S101542366**

Trichloroethylene (TCE)

Site History: In 1983, Union Bank of California took over ownership of the site when Innerconn Technologies, the owner and operator of the site at the time, went bankrupt and defaulted on their loan. Trichloroethylene (or TCE) was discovered in the groundwater at about this time. TCE was a common solvent used and stored by the electronics manufacturing industry. Union Bank conducted a site investigation shortly after inheriting the site. The Board issued Site Cleanup Requirements in 1989 naming Union Bank and Innerconn Technologies as responsible parties. In 1989, the former manufacturing building was razed and a strip mall was built in approximately the same footprint. The strip mall continues to operate today. In 1992, Union Bank installed a pump and treat system to reduce TCE levels and to control off-site migration. In 2001, we allowed Union Bank to turn off the pump and treat system because TCE concentrations had declined and operating the system was no longer necessary. We expect that TCE concentrations will continue to decline over time due to natural degradation processes. While TCE concentrations are still above the drinking water cleanup goals, the residual contamination does not present an immediate threat to human health or the environment because the concentrations are relatively low, the groundwater plume is not migrating, and the shallow groundwater aquifer in this area is not currently used for any purpose.

Completed Document Type: Phase 1
Completed Date: 04/15/2016
Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require DTSC to pursue corrective actions. Arrowhead Development Company operated an amusement park equipment manufacturing facility from 1960 through 1980 on and 8-acre project that included the site. TCE was reportedly used at the facility for vapor degreasing. There were subsequent changes in the site ownership. Sanmina purchased the property in 1999 and operated four hazardous waste treatment units under permit-by-rule, including two Memtek wastewater treatment units, a batch treatment unit, and ion-exchange unit. The site is part of the Plymouth Street Site where the Regional Water Quality Control Board has been overseeing the investigation and remediation.

Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0217
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The Montwood plume is within a much larger plume extending from the Teledyne/Spectra-Physics Superfund site. Groundwater extraction reduced on-site chlorinated VOCs (CVOCs) in groundwater to asymptotic

ELEXSYS INTERNATIONAL INC (Continued) **S104574296**

levels. However, the CVOC plume extends off-site through and beyond the downgradient site at 1600 Plymouth Street,- presently owned by Peery/Arrillaga (P/A). The off-property charcacterizaion of the groundwater-CVOC plume has been completed with grab groundwater samples and additional wells. Off-property groundwater-CVOC extent has attenuated with natural attenuation. Responding to persistent Water Board suggestions to re-characterize the site with high-resolution technology, the Responsible Party (UP) contracted a new consultant. and used MIP data plus three other data layers to successfully locate on-site CVOC source areas. Baased on the data, the consultant selected enhanced reductive dechlorination (ERD) as the final remedy that is now in process at the on-property area. ERD has significantly decreased the on-property groundwater-CVOC levels.

Completed Document Type: 5 Year Review Reports
Completed Date: 04/28/2014
Comments: The Department of Toxic Substances Control (DTSC) performed a Five-Year Review to assure that the implemented remedy continues to be protective of public health, safety, and the environment. DTSC conducted as site visit as part of the Five-Year Review and observed the capped area to be in good condition and did not observe evidence of any activities prohibited by the Land Use Covenant. DTSC concluded that the remedy remains protective of human health and the environment.

Completed Document Type: Removal Action Completion Report
Completed Date: 10/28/2002
Comments: Approved Removal Action. Implementation of the RAW began in June 2001 and was completed in July 2002.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 09/30/1998
Comments: RAW to address pesticide-impacted soil approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/07/1997
Comments: Completed Site Screening. Investigations found primarily DDT and chlordane. Between 1985 and 1986, the on-site structures were demolished and cleared from the site. The Site was regraded and construction of residential townhouses began. The construction was discontinued due to the discovery of pesticide impacted soils.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 04/28/2014
Comments: The Department of Toxic Substances Control (DTSC) performed a Five-Year Review to assure that the implemented remedy continues to be protective of public health, safety, and the environment. DTSC conducted as site visit as part of the Five-Year Review and observed the capped area to be in good condition and did not observe evidence of any activities prohibited by the Land Use Covenant. DTSC concluded that the remedy remains protective of human health and the environment.

Background Info:	Facility size is approx. 7.06 acres. Sites include a grease rack and vehicle wash rack. A draft PA was completed in February 1999 and a final SI work plan was prepared in August 2000. The greas e rack was constructed in the early 1950s and is no longer used. The Army considers the wash rack to be a compliance (RCRA) issue for funding purposes. Minimal shallow soil sampling was conducte d in 1997 around the grease rack. Contaminants of concern are pr imarily grease oil, fuels, and solvents. Groundwater is shallow, approx 15 ft below ground furfact. Impacts to groundwater are u nknown, but will be determine by the August 2000 SI field work.

Completed Date: 06/11/2015
Comments: The Results of Sub-Slab Soil Vapor Assessment report presents the findings of a sub-slab soil vapor assessment that was performed by the Site owner to determine whether former operations by Austin's Fremont Laundry impacted the Site. Sub-slab sampling of soil vapor was performed at six locations in the building that occupies the Site. Elevated concentrations of tetrachloroethene (PCE) were detected in the soil vapor samples. The highest PCE concentrations were detected on the eastern side of the building and were about an order of magnitude lower on the western side of the building.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: PA/SI Site Screening
Completed Date: 06/30/2011
Comments: The Site Screening concludes the site is a potential source of PCE impacts to groundwater and a Preliminary Endangerment Assessment should be performed.

Comments: Owner email to DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: PA/SI Reassessment
Completed Date: 01/26/2015
Comments: Reassessment conducted by DTSC on EPA's behalf to determine if the site should be considered for the National Priorities List. DTSC concluded that DTSC is the primary cleanup agency but EPA will periodically review the progress towards cleanup as DTSC and the property owner are negotiating an agreement to oversee environmental investigation and cleanup.

Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

FAIRCHILD LINEAR PRODS DIV (Continued) **1000354469**

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

CA BOND EXP. PLAN:

Reponsible Party:	RWQCB REFERRAL SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	This site is proposed for the National Priority List. The RWQCB will continue to have lead responsibility for monitoring the RP's remedial activities. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from the fund for this site.
Site Description:	CTS Printex Corporation (Printex) is located on 5.6 acres of land at 1950 Colony Street in Mountain View, California. Currently, the site is inactive. From 1966 to 1985 Printex operated a printed circuit board manufacturing facility onsite.
Hazardous Waste Desc:	Soil under the site contains elevated levels of copper, lead, trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA). Contaminants in the ground water include TCA, TCE and 1,1-dichloroethylene (DCE).
Threat To Public Health & Env:	Roughly 188,000 people in Mountain View depend on ground water drawn from the aquifer of concern for their drinking water. The nearest municipal well drawing from the aquifer, Mountain View #10, is 1.1 mile from the site. The alternative surface drinking water sources appear to be inadequate to supply the large population currently relying on local ground water.
Site Activity Status:	Site investigation and remediation activities at the Printex facility were started in December, 1984. Organic chemical contamination appears to have resulted from the wet floor operation. Approximately 255 cubic yards of soil from the wet floor areawere excavated for offsite disposal. A quarterly monitoring program has been in implementation for all existing wells. The down gradient spread of chemicals has tentatively been established at approximately 600 feet beyond the property boundary. Ground water extraction facilities have been designed and wells constructed in order to contain the spread of contaminants in ground water. The Regional Water Quality Control Board issued a cleanup and abatement order in March, 1987.

Summary Details:

Conditions at proposal October 15, 1984): Fairchild Semiconductor Corp. manufactures semiconductors in Mountain View, Santa Clara County, California. The facility occupies approximately 56 acres and is surrounded by residential and industrial areas. This site was originally proposed under the name Fairchild Camera Instrument Corp. Mountain View Plant). The company took the new name in 1986. Monitoring wells on the site are contaminated with trichloroethylene,1,1,1-trichloroethane, 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Fairchild. Contamination is believed to have resulted from leaking underground tanks. About 270,000 people depend on wells within 3miles of the site for drinking water. Since early 1982, Fairchild has been investigating the site geology and hydrogeology and attempting to define the lateral and vertical extent of solvents underlying the site. Fairchild has installedtwo wells to pump and treat the contaminated ground water plume. The company is working with the California Regional Water Quality Control Board to further define the extent of contamination and outline various cleanup strategies. The plant received Interim Status under Subtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well astake specific action as necessary. Status February 1986): Continuing to determine the extent of ground water contamination, Fairchild has installed more than 100 monitoring wells. On August 15, 1985, EPA issued an AdministrativeOrder on Consent under CERCLA Section 106 a) to Fairchild s Mountain View Plant, as well as to Intel Corp. s and Raytheon Corp. s Mountain View Plants. The order calls for the companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action. Status June 1988): EPA is proposing to drop Fairchild Semiconductor Corp. s Mountain View Plant from the proposed NPL. Because the site is a treatment and storage facility, it is subject to the corrective action authorities of Subtitle C RCRA. Fairchild now has 25 wells in operation that pump and treat contaminated ground water; has installed three undergroundslurry walls to control migration of contaminated ground water. EPA has sealed two abandoned agricultural wells that were carrying contamination to the deeper aquifers. EPA may also pursue cleanup under RCRA authorities and will ensure that the cleanup protects public health and the environment. EPA can later repropose the site for the NPL if it determines that the owner or operator is unable or unwilling to clean up the site effectively.
Status February 11, 1991): EPAis adding this site to the NPL because, although it is subject to RCRA Subtitle C, the transfer of primary responsibility from CERCLA to RCRA would delay and complicate the overall cleanup of the site. The RI was concluded in July 1988. Adraft FS and

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

EPA s Proposed Plan were presented to the community for a 60-day public comment period in November 1988. EPA signed the Record of Decision ROD) identifying the selected remedy on June 9, 1989. On September 21, 1990, EPA issued an Explanation of Significant Differences clarifying the ROD. In May 1989, EPA sent Special Notice Letters calling for a remedial design/remedial action RD/RA) Consent Decree to Fairchild and 16 other parties potentially responsible for wastes associated with the site. Fairchild failed to conclude a settlement Consent Decree) with EPA. On November 29, 1990, EPA issued Fairchild and eight other parties a Unilateral Administrative Order for RD/RA.

Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU01 of the Fairchild Semiconductor Corp. Site was completed in June 1989. EPA is now changing the June 9, 1989 ROD by specifying final cleanup standards rather than just goals. EPA is making

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

this change because it has determined that there is insufficient information at this time to invoke a waiver to ARARs. However, EPA continues to recognize that it is always possible that the chosen remedy will be demonstrated to be unattainable. Therefore, EPA recognizes that if data are generated that demonstrate that the selected remedy cannot be achieved, EPA may need to reconsider its decision embodied in the ROD. An Explanation of Significant Differences addressing Operable Unit 01 of the Fairchild Semiconductor Corporation Site was completed in September, 1990. An Explanation of Significant Differences addressing Operable Unit 1 at the Fairchild Semiconductor Corp. (Mountain View Plant) site was completed in April 1996. OU 01 ROD Amendment (2010): The Fairchild Semiconductor (Mountain View) Site is one of the sites comprising the Middlefield-Ellis-Whisman (MEW) study area. The MEW Area is a heavily populated, light-industrial, commercial, and residential area that currently hosts semiconductor, computer software, electronics businesses, and other commercial offices and light manufacturing facilities. The western boundary of the Vapor Intrusion Study Area is primarily residential. The Moffett Field Area is primarily used for military housing, air operations, storage, educational facilities, research and development, office, and retail space. NASA's redevelopment plans in the Moffett Field Area include demolition of all non-historic structures. Plans are underway to redevelop unimproved land at Moffett Field into sustainable research facilities including office, educational, recreational, and residential uses. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1

FAIRCHILD SEMICONDUCTOR CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000260555**

ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Fairchild Semiconductor (Mountain View) Site was completed in August 2010.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 12/02/2011
Comments: The documents reviewed by DTSC in making a no further action determination included an environmental sampling results report, Phase I environmental site assessment report, soil management plan, and sub-slab pressurization startup testing and air sampling report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: No Further Action Letter
Completed Date: 12/07/2011
Comments: DTSC issued a letter concluding no further action is required at the

AIR PRODS & CHEMS INC (Continued) **1000128799**

site. DTSC's determination was based on its review of a U.S. December 7, 2005 EPA letter and four site-specific technical documents that are identified in the no further action letter and are available on EnviroStor.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

AIR PRODS & CHEMS INC (Continued) **1000128799**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/05/2016
Date Data Arrived at EDR: 01/05/2017
Date Made Active in Reports: 02/03/2017

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/05/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/05/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

EL CAMINO PAVING INC
924 SAN RAFAEL AVE
MOUNTAIN VIEW, CA 94043

TARGET PROPERTY COORDINATES

Latitude (North):	37.40696 - 37° 24' 25.06''
Longitude (West):	122.073684 - 122° 4' 25.26''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	581981.6
UTM Y (Meters):	4140217.8
Elevation:	42 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5641106 MOUNTAIN VIEW, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

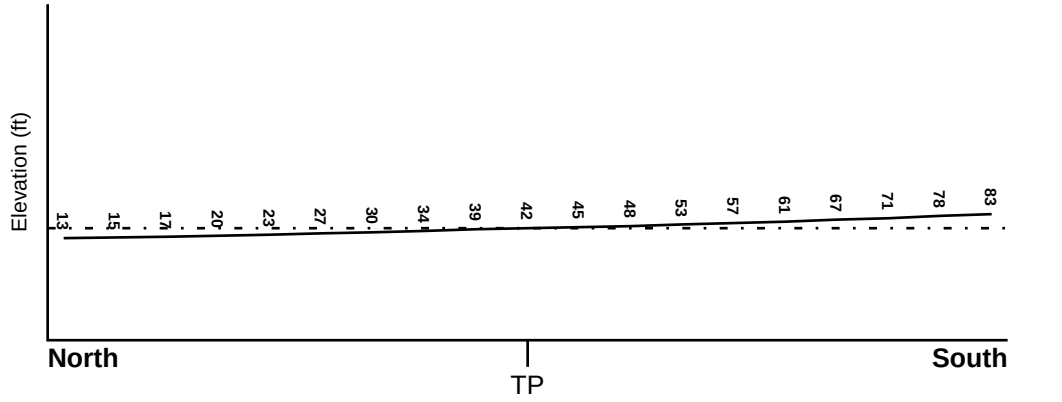
TOPOGRAPHIC INFORMATION

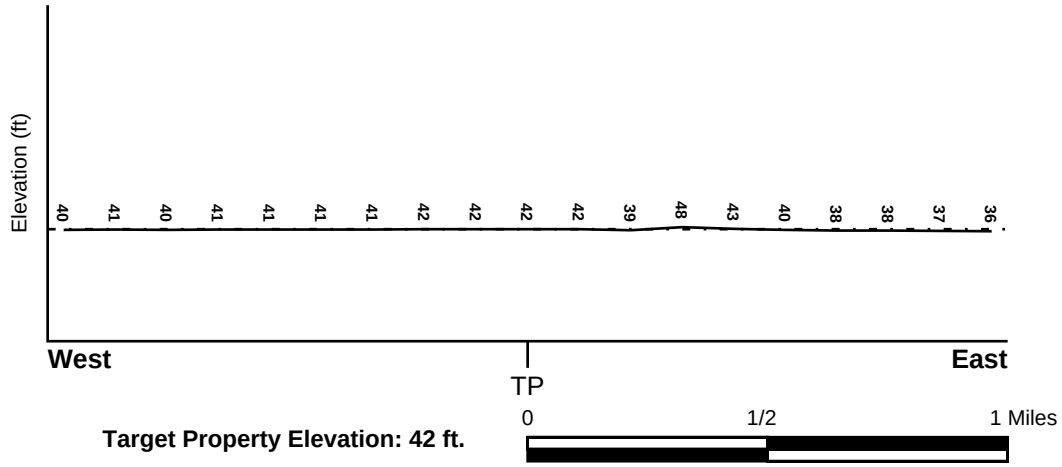
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 42 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06085C0037H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06085C0045H	FEMA FIRM Flood data
06085C0039H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNTAIN VIEW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile NW
Site Name:	JASCO CHEMICAL CO
Site EPA ID Number:	CAD981677107
Groundwater Flow Direction:	North-Northeast
Measured Depth to Water:	13.5 to 15 feet, 20 to 23.5 feet, and 26 to 29 feet in three discrete perched zones at the site.
Hydraulic Connection:	The upper perched aquifers and lower aquifer at the site are separated by a dense blue clay aquitard, although aquifer interconnections exist in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Geosyntec Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Oakland, CA 94607-0000
Contact: Sara Roy

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Geosyntec Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA

Project: 918 924 940 San Rafael Ave

Coordinates:

Latitude:	37.40696 37° 24' 25" North
Longitude:	-122.073684 -122° 4' 25" West
UTM Zone:	Zone 10 North
UTM X Meters:	581979.57
UTM Y Meters:	4140421.91
Elevation:	42.00' above sea level

Maps Provided:

2012	1948
1997	1947
1995	1943
1981	1902
1973	1899
1968	1897
1961
