Description of Nature, Purpose and Beneficiaries of Project:

the Project will increase the floodplain footprint as well as the frequency of floodplain inundation. This will be achieved through a combination of terrace lowering and a series of hydraulic controls that increase water surface elevations to help promote overbank flooding during the winter wet season when flow is at its highest. The

Project also includes realignment of a baseflow channel and a network of floodplain swales, as well as invasive vegetation removal followed by native revegetation.
