

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Atascadero Creek Lake Fill Pipeline Repair Project

Lead Agency: City of Atascadero

Contact Name: Erick Gomez

Email: egomez@atascadero.org Phone Number: 8054703436

Project Location: Atascadero, CA

City

County

Project Description (Proposed actions, location, and/or consequences).

The City of Atascadero owns a pipeline that carries water from Atascadero Creek to Atascadero Lake during high-flow events. Approximately 350 linear feet of that pipeline (beginning at the inlet) have degraded, become impacted with sediment, and require repair for the pipeline to function. The project involves a pipeline replacement and repair of the approximately 350-foot segment of the degraded pipeline and associated concrete hold-downs, and maintenance of existing intake structures and diversion boxes. The replacement pipeline will be of equivalent capacity in the same alignment as the existing pipe to restore functionality to the pipeline. The project will require approximately 96 cubic yards of excavation to remove the existing pipe and removal of riparian vegetation adjacent to and above the existing pipeline.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The project will have potentially significant impacts to Air Quality, Biological Resources, and Culturally resources that will be mitigated to a less than significant level.

Air Quality impacts will be mitigated by incorporating standard mitigation measures for fugitive dust emissions and diesel idling restrictions. Cultural resources impacts are limited to unexpected discovery of artifacts or resources during construction and will be mitigated by the presence of a monitor during construction. Impacts to biological resources will be mitigated through the incorporation of several project-specific, biologist recommended avoidance and minimization measures.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
