**MIRANT DELTA PITTSBURG POWER PLANT (FORMERLY SOUTHERN ENERGY (Continued)** **S106398754**

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)
Site History: Mirant Delta, LLC (hereinafter called Discharger) presently owns and operates the Pittsburg Power Plant (hereinafter called the Facility). Southern Energy Delta, LLC purchased the Facility from Pacific Gas and Electric (PG&E) on April 16th, 1999. On January 19, 2001, Southern Energy Delta, LLC changed its corporate name to Mirant Delta, LLC. The Facility is located adjacent to the south shore of Suisun Bay. The Pittsburg Marina is located on the eastern side of the Facility, and undeveloped land is located on the southern and western borders of the Facility. The plant has three natural gas-fired generating units with a combined capacity of approximately 1357 megawatts. The Discharger formerly operated four Class I hazardous surface impoundments at the Facility. The former Class I impoundments are identified as follows: a. Boiler Chemical Cleaning Solution Pond (BCCSP) b. Boiler Chemical Cleaning Rinse Pond (BCCRP) c. Air Preheater Wash Pond (APWP) d. Demineralizer Neutralization Pond (DNP) Three of the Class I surface impoundments (BCCSP, BCCRP, and APWP) were formerly used for the temporary storage and non-continuous batch treatment of restricted hazardous waste (as defined in the Toxic Pits Cleanup Act) resulting from the cleaning operations of the boilers. The DNP was used for the temporary storage and continuous treatment of wastewater from the regeneration of demineralizers. The current and former Class II surface impoundments at the Facility are as follows: a. Oily Water Effluent Pond (OWEP) (Closed 1993)) b. Clarifier Sludge Pond (CSP) (Closed 1995) c. Oily Water Collection Pond (OWCP) (Currently in operation) The Oily Water Collection Pond (OWCP) is the only remaining active Class II impoundment at the Facility. Waste Discharge Requirements were issued in 2006 that cover operation of the OWCP. The OWCP is used for the temporary storage of non-hazardous wastewater received from building drains, fuel oil tank containment areas, and certain stormwater runoff from the Facility. The wastewater then flows into an API separator and dissolved air flotation tank for treatment.

| Description: | ***THIS IS A DRILL***Per the NRC report, the oil line ruptured due to pipe fatigue, which released into the Willow Creek. It is an above ground storage tank. There is a dark black sheen, 10-feet by 4-feet. The line is secured and they dammed Willow CCreek. Clean up crews are on the way. AT 09:34 hrs, Dennis Johnson of Mirant advised THIS IS ONLY A DRILL. |

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Violation Description: Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003.
Violation Notes: Returned to compliance on 03/29/2023. OBSERVATION: Liquid was observed in the 87 fill sump. If water could enter into the secondary containment by precipitation or infiltration, it must be removed and disposed of properly. CORRECTIVE ACTION: Immediately remove this liquid, make a hazardous waste determination per Title 22 hazardous waste regulations, and manage it accordingly. Ensure that the 87 fill sump is maintained free of liquid. Technician on site removed liquid. No further action needed, violation corrected.

Violation Description: Failure to maintain the interstitial space such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment, i.e., vapor, pressure, hydrostatic (VPH) monitoring.
Violation Notes: Returned to compliance on 06/07/2023. OBSERVATION: The S-4 87 Vapor smart sensor (464) was found not working and in communication alarm, and the S-7 91-Vent smart sensor (464) failed to alarm for "High Liquid" when tested. The interstitial space of the UST shall be maintained, as designed, under constant vacuum such that a breach in the primary or secondary containment is detected before the hazardous substance is released into the environment. CORRECTIVE ACTION: Correct immediately by having a properly licensed, trained, and certified contractor replace the failed components with a functional component. Provide CCHS-HMP with documentation outlining the work conducted, and documentation of the functional testing/re-testing of both S-4 and S-7 smart sensors.

Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes: Returned to compliance on 07/15/2019. OBSERVATION: Overfill prevention system method reported in CERS is Audible/visual alarm. The Veeder Root detects the overfill when tested, but the Audible/Visual portion is not activating. No external audible or visual indication observed. The annunciator does work, as the technician tested it and the sound is audible. The underground storage tank system shall be operated to prevent unauthorized releases. CORRECTIVE ACTION: Certify overfill prevention at this site. Recommendation is to troubleshoot the audible/visual communication between the overfill tested on the probe and the audible/visual indicators going off. Retest and submit passing results on the Overfill Prevention form within 30 days. The facility does have mechanical overfill that has not been tested that can also be tested and used as overfill prevention. If that is the method to be used, it needs to be tested, determined to pass with test results submitted within 30 days and, CERS updated to reflect that [Truncated]

Completed Document Type: Removal Action Workplan
Completed Date: 10/23/2007
Comments: Minor modification to Removal Action Workplan approved to allow tipping soil from truck containers into specialty railcars at a transfer facility at Pier 96 in San Francisco. DTSC had required

revision of the draft RAW prior to issuance of the RAW for public comment to remove this option. A concurrent investigation by the Hazardous Waste Management Program and the Office of Legal Affairs to clarify whether the operations at the facility required a transfer facility permit. This investigation determined that the facility was already subject to federal hazardous waste management regulations as a federally certified railroad operation. Therefore, under the doctrine of federal preemption of state law, the facility did not require a transfer facility permit from DTSC to tip soil from truck containers into railcars.

Completed Document Type: Removal Action Workplan
Completed Date: 10/23/2007
Comments: Minor modification to Removal Action Workplan approved to allow tipping soil from truck containers into specialty railcars at a transfer facility at Pier 96 in San Francisco. DTSC had required revision of the draft RAW prior to issuance of the RAW for public comment to remove this option. A concurrent investigation by the Hazardous Waste Management Program and the Office of Legal Affairs to clarify whether the operations at the facility required a transfer facility permit. This investigation determined that the facility was already subject to federal hazardous waste management regulations as a federally certified railroad operation. Therefore, under the doctrine of federal preemption of state law, the facility did not require a transfer facility permit from DTSC to tip soil from truck containers into railcars.

Completed Date: 01/18/2013
Comments: This report documents where cracks, breaks, erosion, or other conditions in the cap may warrant repair (or replacement) to restrict contaminated soil from becoming exposed at the surface. All surfaces were in good condition. DTSC supports the recommendation to patch areas A3 and A4 to prevent further depressions.

|---|---|
| | 1, Section(s) 265.174 |
| Violation Description: | Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers. |
| Violation Notes: | Returned to compliance on 07/18/2019. OBSERVATION: As evidenced by the fact that the 55 gallon drum north of the paint and waste shed was threatening to release its contents without the facility's knowledge and in an advanced state of deterioration, the facility is not inspecting hazardous waste storage weekly. CORRECTIVE ACTION: Submit a copy of the inspection log to the CUPA demonstrating that the hazardous waste storage area is being inspected weekly. |

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 06/10/2024. OBSERVATION: The 20 x 55 gallon drums located in the yard were observed being accumulated without any proper labels and storage. A proper waste determination has not been made. CORRECTIVE ACTION: Facility needs to determine whether these drums are to be used as materials or waste. Facility needs to contact their hazardous waste hauler to make this determination. If they are waste, submit documentation to the CUPA demonstrating that the sticky bottom tack oil (asphalt oil) has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to adequately describe in the SPCC Plan, overfill prevention methods, including a description of the systems or procedures used to prevent overfills for each container.
Violation Notes: Returned to compliance on 05/27/2022. OBSERVATION: Failure to adequately describe in the SPCC Plan, overfill prevention methods, including a description of the systems or procedures used to prevent overfills for each container. CORRECTIVE ACTION: Update SPCC plan to properly address overfill prevention methods, including a description of the systems or procedures used to prevent overfills for each container.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to prepare an SPCC Plan that meets all applicable requirements.
Violation Notes: OBSERVATION: SPCC plan does not correctly identify /address all bulk storage containers. Facility SPCC plan created on 5/23/2023 by Midstream Compliance and Response appears to have been written with the belief that the contents of tanks L-1 and L-2 was indeed asphalt rather than the true contents which is lube oil. CORRECTIVE ACTION: Amend the SPCC Plan to address all aspects of the true contents of these tanks in all relevant sections of the plan. provide copy of new spcc plan to verify.

Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes: Returned to compliance on 03/22/2024. OBSERVATION: The business failed to establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material. While reviewing documentation for training, which was a drill, it was determined that the site did not know how to get in contact with the CUPA. because their Drill notes said that they called CUPA to notify and left a voice mail. The correct number was provided and was incorporated into several documents during the inspection. CORRECTIVE ACTION: Establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material within 30 days. This was corrected while on site.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to prepare an SPCC Plan that meets all applicable requirements.
Violation Notes: OBSERVATION: SPCC plan does not correctly identify /address all bulk storage containers. Facility SPCC plan created on 5/23/2023 by Midstream Compliance and Response appears to have been written with the belief that the contents of tanks L-1 and L-2 was indeed asphalt rather than the true contents which is lube oil. CORRECTIVE ACTION: Amend the SPCC Plan to address all aspects of the true contents of these tanks in all relevant sections of the plan. provide copy of new spcc plan to verify.

level of authority to commit the necessary resources to fully implement the SPCC Plan. 3. Prepare the SPCC Plan in writing. 4. Follow the sequence of the SPCC rule or include a cross-reference. 5. If the SPCC Plan calls for additional procedures, methods, or equipment not yet fully operational, discuss the items in separate paragraphs."

Violation Notes: Returned to compliance on 05/27/2022. OBSERVATION: Failure to prepare SPCC Plan that meets the following requirements: 1. Follows the sequence of SPCC rule and/or includes cross-reference. CORRECTIVE ACTION: Prepare a SPCC plan that: 1. Follows a sequence of rule and/or includes a cross-reference and provide to CCHS HMP.

Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes: Returned to compliance on 03/22/2024. OBSERVATION: The business failed to establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material. While reviewing documentation for training, which was a drill, it was determined that the site did not know how to get in contact with the CUPA. because their Drill notes said that they called CUPA to notify and left a voice mail. The correct number was provided and was incorporated into several documents during the inspection. CORRECTIVE ACTION: Establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material within 30 days. This was corrected while on site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 08/24/1998
Comments: This report was uploaded in May of 2015. In 1998, soil samples were taken from sediments at the inlet and outlet of the pipeline and from the surface soil down stream of SW-1 (Figure 1). Lead concentrations were 960 mg/kg at the inlet, 3,300 mg/kg at the outlet and 3,900 mg/kg in surface soil down stream of SW-1. Additional samples were collected in the discharge path from SW-1 with highest lead concentration of 4,300 mg/kg. Other selected areas suspected to have elevated concentrations of lead. The highest lead concentrations were within 0 -3 from the surface. The highest lead concentration was 3,800 mg/kg. The CCCHD Inspection Report of 2/8/2000 reported an ongoing remedial activity associated with past lead pot and exhaust stack having been removed September 1998. No remediation report was found in county records.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| Quarterly Update: | Interlake, Inc (Interlake) developed the property and began operations as a steel melting company in March 1969. In June 1986, Acme Steel Company became a separate steel-processing company but essentially maintained the same operations. Acme, which was a division of Illinois Tools Works (ITW), permanently ceased its manufacturing operations at this facility on October 31, 2003. The facility was sold to ITW Angleboard (also a division of Illinois |

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/25/2002
Comments: Completed Site Screening. In August 1980, DHS (predecessor to DTSC) collected soil samples on-site. Sampling results from a composite sample of the gypsum waste piles reported concentrations of iron (1,690 ppm), arsenic (87 ppm), and zinc (218 ppm). In August 1981, DHS identified the site as part of the Abandoned Site Project (ASP). Closure plan activities for the site began in 1981, when Union Collier agreed to sell the property to the US Navy. Site closure plan activities were overseen by the SF Regional Water Quality Control Board (SFRWQCB) and completed by 1982. Following plant closure, the SFRWQCB monitored runoff from the property. A site review conducted in March 1987 by the DHS recommended no further action. However, DTSC's Office of Military Facilities (OMF) became aware of the property in the late 1990s when the Contra Costa Water District collected environmental samples that also indicated high levels of lead, mercury and other metals remain onsite. A DTSC site screening was completed in April 2002 and referred the site to OMF for further investigation.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Violation Description: Business Plan Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 05/23/2017. OBSERVATION: BP06 was cited 1/10/17 for not including the CUPA facility number and the hospital number. On 2/9/17 facility faxed an updated version of the emergency response plan which no longer addressed earthquake vulnerability and was not submitted via CERS. CCHSHMP informed the facility of this via email on 2/24/17. On 3/30/2017 the facility faxed the Emergency Response Plan to CCHSHMP again. On 5/3/2017 CCHSHMP notified facility that the emergency response plan needed to be submitted via CERS. On 5/4/2017 the facility submitted the emergency response and training plan as "Provided to Regulator 9/18/14" which refers to the older plan. CORRECTIVE ACTION: CERS must be updated to include or minimally reference the updated plan. Current plan faxed to CCHSHMP is missing in Section A, pg 1 that the plan covers "2. Hazardous Wastes" and does not address Earthquake Vulnerability which is required.

OBSERVATION: BP05 was cited 1/10/17 for lack of online submittal and not including North Orientation, Adjacent streets, emergency response equipment. On 2/24/217 & 5/4/17 facility submitted via CERS but has not updated the submitted element - Inventory Site Map to a valid option. It is still marked as "stored at facility" which is not adequate since the site map must be provided to the regulator via CERS. On 2/9/17 the facility faxed in a site map which updated the chemical locations & suggested where the road is, but was still missing north orientation, emergency response equipment, and how to access the facility from the road. CCHSHMP gave the facility this feedback on 2/24/17. On 4/21/17 the facility faxed an updated site map that included north orientation, emergency response equipment but still did not make it clear how to access the facility from Willow Pass Rd. CORRECTIVE ACTION: Add a map/aerial view showing how to access the facility from Willow Pass Rd. & submit [Truncated]

Violation Description: Failure to prepare a Spill Prevention, Control, and Countermeasures (SPCC) Plan.
Violation Notes: Returned to compliance on 01/19/2021. OBSERVATION: Failure to prepare SPCC. CCHS-HMP observed a total of 1,510 gallons of liquid petroleum storage in containers 55-gallons or larger in size at time of inspection. A facility with 1,320 gallons or more of storage capacity must peprae and implement an SPCC Plan. CORRECTIVE ACTION: Prepare and implement an SPCC Plan. The facility may use a Tier 1 template plan and may self-certify the plan. Alternatively, the facility has discussed with CCHS-HMP reducing the shell capacity petroleum storage on site below 1,320 gallons. If a reduction in petroleum storage occurs, a re-inspection must be scheduled with CCHS-HMP, and all containers must be properly managed.

| Site History: | The subject property (Site) was operated by JM Enterprises, a former automotive recycling facility. Vehicles processed at the facility were either repaired or disassembled for the sale of used parts. Unusable components were crushed and sold as scrap metal. Vehicle fluids such as engine oil, transmission fluid, brake fluid, differential fluid, antifreeze, gasoline and diesel fuel, were drained from the vehicles and recycled. The Site is now an empty, undeveloped commercial / industrial lot with residential directly to the east and Willow Pass Road running along the northern and western borders. Southern Pacific's rail line (former Atchison Topeka and Santa Fe Line) now runs directly along the southern edge of the Site. In 1991, surface soil samples were collected from areas with visible hydrocarbon stains. These samples yielded long-chain hydrocarbons ( lubricating oil ) at concentrations up to 140,000 milligrams per kilogram (mg/kg) and total lead up to 1,200 mg/kg. On March 13, 1997, the County collected one surface soil sample from a stained area that yielded total petroleum hydrocarbons at 130,000 mg/kg. In 1997, more samples were taken on Site. Lab results for soils yielded TPH-mo at concentrations up to 930 mg/kg, TPH-d at concentrations up to 290 mg/kg, TPH-g concentrations up to 18 mg/kg. Benzene and VOCs were not detected. Laboratory results for groundwater yielded TPH-d at concentrations up to 260 micrograms per liter (ug/l) and TPH-g up to 58 ug/l. Benzene and VOCs were not detected. In 2008, the County collected soil samples from nine (9) locations on Site. A sludge sample yielded TPH-mo at 390,000 mg/kg. One soil sample collected from inside a battery storage trailer had a pH of 1.23, which is extremely acidic. Lead was detected in this same sample at 55,000 mg/kg. Water from the oily puddle yielded TPH-mo at 380,000 ug/l. |

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The Resource Conservation and Recovery Act Information System

**TRIANGLE PWC INC (Continued)** **1000152525**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
California's Department of Toxic Substances Control's (DTSC's)-EnviroStor database is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| Violation Description: | Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment. |
| Violation Notes: | Returned to compliance on 01/26/2023. OBSERVATION: The secondary containment trough to the used motor oil storage was observed with several inches of standing used motor oil at time of inspection. Secondary containment must be kept free of standing liquid and any spills to the containment cleaned up as soon as possible. CORRECTIVE ACTION: The used motor oil must be removed from the secondary containment trough. The facility is planning on scheduling a used motor oil waste pickup. Have the hazardous waste hauler vacuum out the secondary containment trough at the time of the use motor oil pickup. Provide CCHS-HMP of documentation of cleanup. |

| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 12/27/2019. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days. The facility last had a documented pickup of used motor oil on 12/12/18. Inspector observed two partially filled used motor oil drums on site at time of inspection. CORRECTIVE ACTION: Have an appropriate waste hauler pick up the used motor oil, and provide CCHS-HMP with a copy of the waste manifest. Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/27/2020. OBSERVATION: The business failed to report all chemicals stored on site above reporting thresholds in CERS. The facility reports 55-gallons of hydraulic oil. The maximum daily quantity and largest storage container does not include the oil reservoirs of the on site operational equipment. Operational equipment on site also includes a 200-gallon reservoir of antifreeze. CORRECTIVE ACTION: In CERS, update the chemical inventory to include all hydraulic oil stored on site (including largest container, and maximum daily amount), and add the 200-gallon Ethylene Glycol reservoir to the inventory. Completed Document Type: Remedial Action Completion Report
Completed Date: 09/30/1993
Comments: Completed Final Remedial Action. Soil contaminated with zinc and minor amounts of lead and chromium was excavated from the site. Approximately 8000 tons were transported by rail to an out-of-state Class I land disposal. Area was backfilled with clean material. Cleanup to health based limit of 5000 ppm for zinc. The excavated area was graded to maintain the overall drainage pattern and was hydroseeded. No deed restriction have been placed on the property and there are no long term operation and maintenance activities as part of the remedial actions. The Regional Water Quality Control Board (RWQCB) adopted waste discharge requirements for the site in 1985 requiring groundwater monitoring. The RWQCB is overseeing the groundwater monitoring.

| Project Revenue Source Desc: | DHS will be issuing a remedial action order or entering into an enforceable agreement with the responsible parties. DHS has budgeted $30,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with remedial investigations and cleanup activities. |
| Site Description: | Triangle PWC has manufactured electrical conduit at this site since 1967. Soil contamination by zinc and lead exists where metallic sludge from electro-galvanizing waste water treatment was stored or buried. |
| Hazardous Waste Desc: | Elevated levels of zinc and lead are present in the soil. Concentrations of greater than 10,000 parts per million (ppm) of zinc have been detected in soils. |
| Threat To Public Health & Env: | Runoff from the site has flowed into a nearby drainage ditch which discharges into Suisun Bay (approximately one mile away). Ground water contamination is unlikley since lead and zinc are relatively immobile in soil. |
| Site Activity Status: | In October of 1985, a report on soil and ground water investigation was received by the RWQCB. In December of 1985, a supplemental report on soil investigation was received by the RWQCB. A monitoring plan was devised as a result of information developed in the previous reports. This monitoring plan was submitted to the RWQCB as a Correction Plan Report in February of 1986. Four monitoring wells have been installed at the Triangle facility. Quarterly monitoring reports are currently being provided to the RWQCB. DHS proposes to take the lead for remediating the soil contamination. |
