# 1.0 INTRODUCTION AND PURPOSE

This Initial Study of environmental impacts is being prepared to conform to the requirements of the California Environmental Quality Act (CEQA), the CEQA Guidelines (California Code of Regulations 15000 et. seq.), and the regulations and policies of Delta Diablo (District). This Initial Study/Proposed Mitigated Negative Declaration (IS/MND) evaluates the potential environmental impacts which might reasonably be anticipated to result from implementation of the *Manhole, Gravity Interceptor, and Easement Road Improvements Phase 2 Project* (proposed Project, Project).

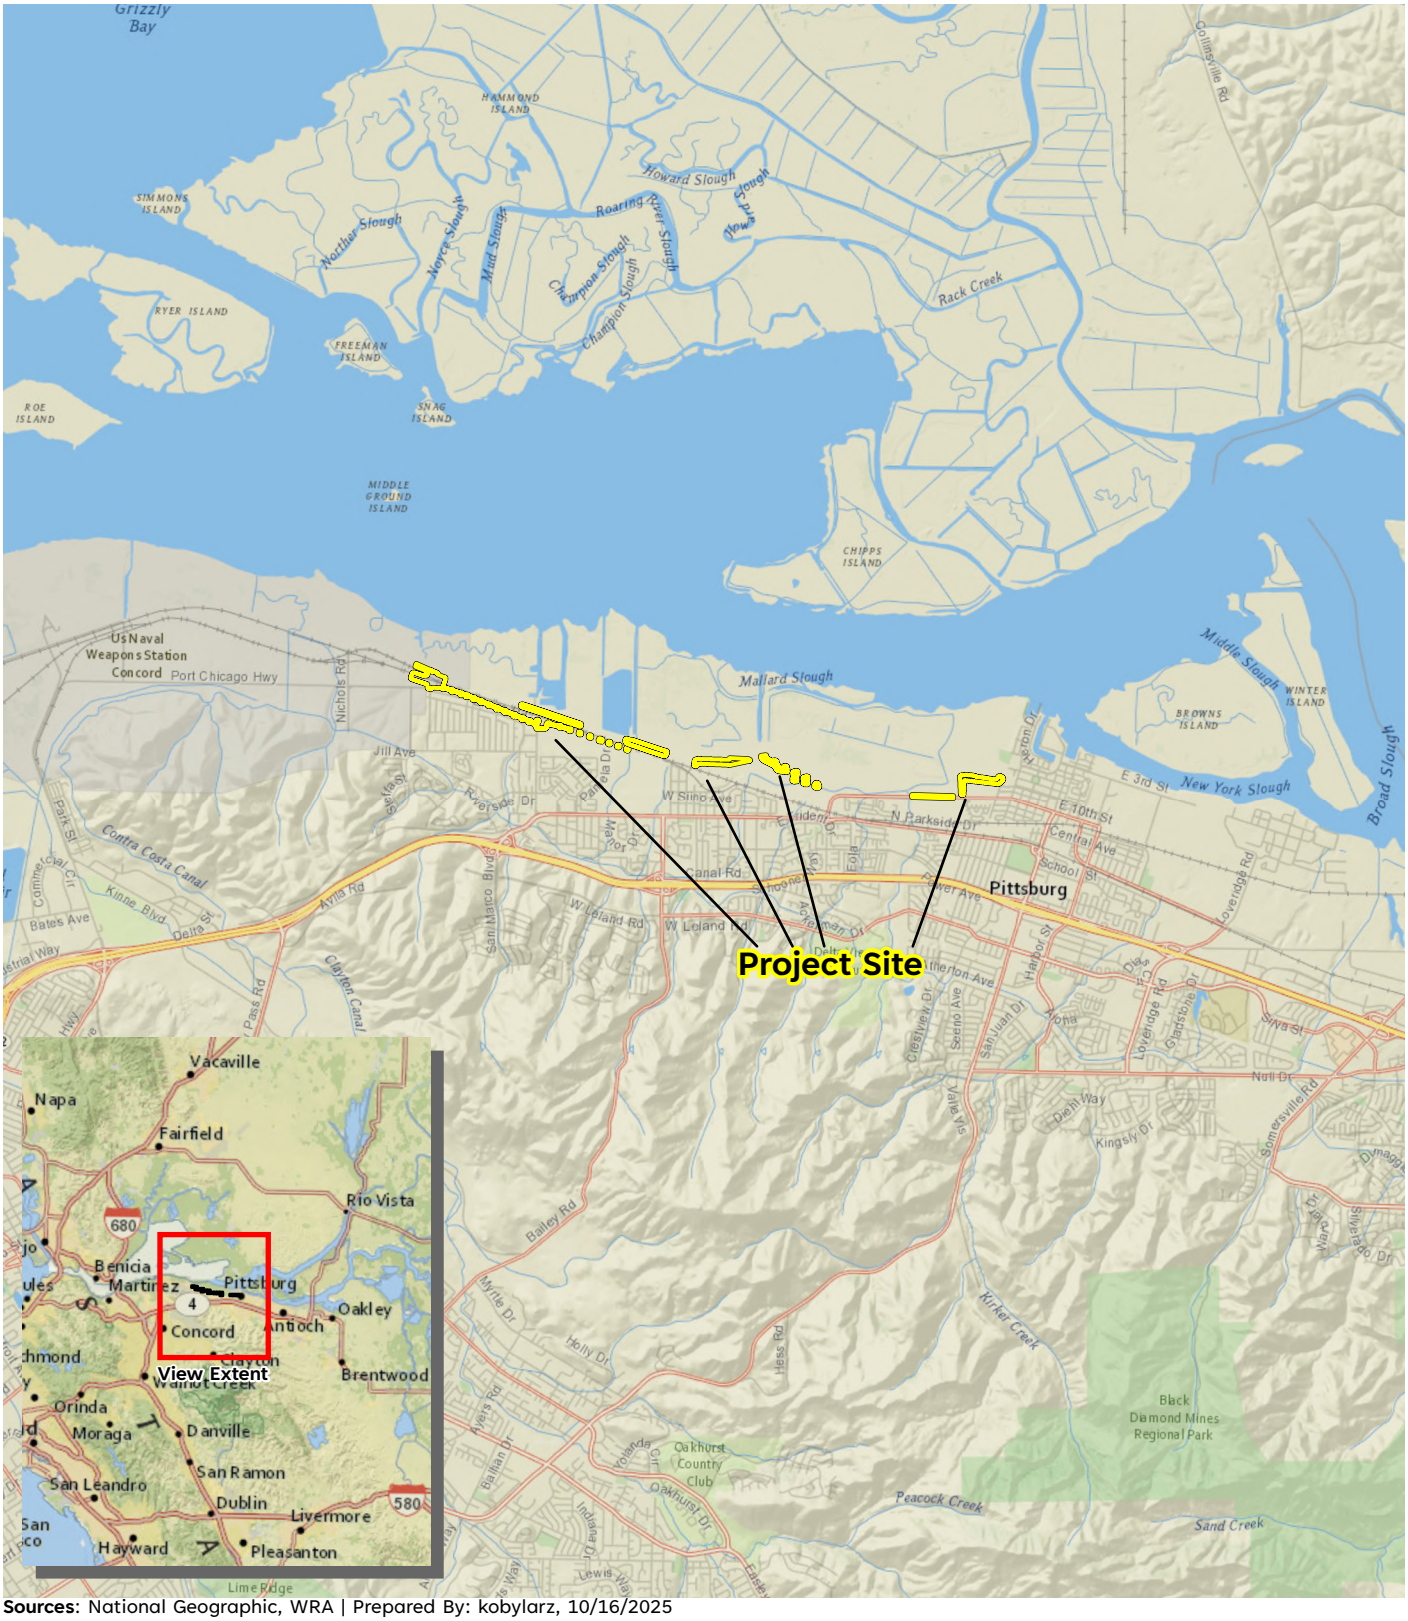
The District is the Lead Agency under CEQA and has prepared this IS/MND to address the impacts of implementing the proposed Project. The purpose of the Project is to rehabilitate aging wastewater infrastructure in the District's service area.

# 2.0 PROJECT INFORMATION

## 2.1 Project Title

Manhole, Gravity Interceptor, and Easement Road Improvements Phase 2 Project

## 2.2 Lead Agency Name and Address



Delta Diablo
2500 Pittsburg-Antioch Highway
Antioch, CA 94509

## 2.3 Contact Person and Phone Number

Thanh Vo, Senior Engineer
thanhv@deltadiablo.org
(925) 756-1949

## 2.4 Project Location

The Project site is located in northern Contra Costa County (County) (Figure 1). Assessor's Parcel Numbers (APNs) within the Project site include 851-300-43, 961-000-20, 961-000-31, 961-000-34, 980-100-06, 980-100-07, 980-100-10, 980-200-23, 980-200-25, 982-400-62, 982-500-13, 982-500-21, 982-500-22, and 980-600-03. Some portions of the Project site are within the City of Pittsburg, and some are within the unincorporated communities of Bay Point and Shore Acres. The overall topography of the Project site is flat and includes a variety of habitats and land cover, including paved areas, gravel access routes, ruderal roadsides, vacant lots, seasonal wetlands, and tidal and non-tidal marsh. The Project site is generally surrounded by open space areas, industrial uses (including the railroad), undeveloped vacant fields and marshes, and residential neighborhoods.

## 2.5 Existing General Plan Designation and Zoning District

### 2.5.1 General Plan Designation

**City of Pittsburg:** Industrial

**County of Contra Costa:** Public and Semi-Public (PS), Residential Medium Density (RM), Resource Conservation (RC), Parks and Recreation (PR), Commercial Recreation (CR), Residential Medium-High Density (RMH), Commercial and Office (CO), Light Industry (LI)

### 2.5.2 Zoning District

**City of Pittsburg:** General Industrial (IG), General Industrial-Limited Overlay (IG-O)

**County of Contra Costa:** General Agricultural (A-2, A-2 X), Planned Unit (P-1, P-1 X)

# 3.0 PROJECT DESCRIPTION

## 3.1 Background Information and Project Purpose

The District is a California special district that provides wastewater resource recovery services for over 218,000 customers in the cities of Antioch and Pittsburg and the unincorporated Bay Point community in east Contra Costa County. These services include wastewater collection, conveyance, and treatment; recycled water production and distribution; renewable energy production; beneficial biosolids reuse; pretreatment and pollution prevention; street sweeping; and household hazardous waste collection. The District owns and operates 43 miles of gravity sewers in the Bay Point community, 18.5 miles of pressurized sewer force mains and 14 miles of gravity sewer interceptors, five wastewater pump stations with four million gallons of flow equalization storage facilities, a wastewater treatment plant with 16 million gallons of on-site storage basin volume, 16 miles of recycled water distribution pipelines, and a Recycled Water Facility. The District's Wastewater Treatment Plant treats approximately 13 million gallons of wastewater per day.

The District is implementing the proposed Project to address critical infrastructure improvements in their wastewater collection system. The Project includes rehabilitating or replacing approximately 53 manholes along the Shore Acres Interceptor (SAI) and Willow Pass Interceptor (WPI), rehabilitating approximately 8,882 linear feet of sewer pipes along the SAI and WPI, constructing a permanent underground bypass system, and improving access roads to access five of the District's manholes along the SAI.

## 3.2 Work Areas

### 3.2.1 Willow Pass Interceptor

Project work along the WPI would include the rehabilitation of approximately 7,034 linear feet of 21-inch, 30-inch, and 33-inch diameter reinforced concrete pipe (RCP) gravity sewer and rehabilitation or replacement of 30 manholes. The methods used to rehabilitate the manholes are described in further detail in *Section 3.3. Project Elements.*

### 3.2.2 Shore Acres Interceptor

Project work along the SAI would include the rehabilitation of approximately 1,848 linear feet of 30-inch diameter vitrified clay pipe (VCP) gravity sewer, rehabilitation or replacement of 23 manholes, and construction of all-weather raised access roads to access five of the District's manholes.

## 3.3 Project Components and Construction Methods

### 3.3.1 Project Components

#### MANHOLE REHABILITATION

Three different manhole rehabilitation methods may be used along the SAI and WPI, which are described below in further detail. Each manhole would be evaluated on-site at the time of construction to determine which method is appropriate for each manhole. One of the three following rehabilitation methods would be applied to each manhole.

1. **Concrete repair and epoxy coating:** This method is recommended at manholes that are in adequate structural condition and can be restored. The goal of this method is to repair minor damage and defects and protect against further deterioration. This method includes the following steps:
    - Clean and prepare the existing interior manhole surfaces by degreasing and abrasive blasting. Remove damaged and deteriorated concrete and any existing coating materials to provide a sound substrate suitable for concrete repair material and coating.
    - If existing reinforcing steel is encountered, evaluate for loss of section. If more than 20 percent of section loss is found, reinforcing steel either will be supplemented by placement of additional rebar or the manhole must be replaced, depending on the severity of reinforcement loss.
    - Use polymer-modified cement mortar to perform repairs on existing concrete surfaces.
    - If there is evidence of filtration into the manhole at joints, voids, and cracks, grout will be injected around the manhole through drilled holes in the manhole interior to prevent further infiltration.
    - Following grout injection, apply epoxy coating to the manhole and allow time to cure.
2. **Remove and replace:** This method is recommended for severely deteriorated manholes and depending on the depth and location of the manhole, removing and replacing may by the quickest and cheapest option. Demolition of the existing manhole would be facilitated by excavating the area immediately outside of the manhole to remove the existing manhole down to, and potentially including the base. If the local water table is above the excavation bottom, the excavation would be continuously dewatered until the completion of work at that manhole site. The manhole would then be reconstructed in the same location as the existing. Excavated areas would be backfilled with native material once the rehabilitation work is complete.
3. **Structural polymer concrete manhole insert:** This method uses a structural polymer concrete insert that involves polymer concrete precast sections that are inserted into the existing manhole. The new inserts support the manhole structurally, provides corrosion protection, and prevents infiltration.

Manhole preparation would include removing the existing manhole cone and grade ring, cleaning, grouting any leaks, removing loose material, and making repairs to the existing manhole bench and insert. A polymer concrete coating would be applied, and riser sections would be installed, grouted and sealed together. Once the sections are installed, a structural backfill would be used to fill the annular space between the old manhole and new insert. This method is suitable for rehabilitating severely deteriorated manholes in environmentally sensitive areas, or where access is generally limited.

### UNDERGROUND PIPE REHABILITATION

Project work would employ cured-in-place pipe (CIPP) lining as a means to rehabilitate deteriorated pipelines across approximately 8,882 linear feet of sewer pipes within the system. CIPP lining is a trenchless pipe rehabilitation method that involves installing and curing a resin-

saturated flexible tube liner into the existing pipe, which is referred to as the "host pipe." The CIPP process includes the following steps:

1. Block or divert flow around the section of pipe to be worked on.
2. Clean the pipe to create a dry, clean surface.
3. Insert and expand the liner either by inversion or pull-in-place methods.
    a. Inversion uses air or water pressure to inflate liner and need one access point.
    b. Pull-in-place requires two access points and uses an air-filled bladder to inflate.
4. Cure the liner using heat or ultraviolet light to form a new hardened pipe.

A description of where the pipe sections to be rehabilitated are located is provided in Table 1.

**Table 1. Underground Pipe Rehabilitation Summary**

| | UPSTREAM MANHOLE | DOWNSTREAM MANHOLE | LOCATION |
|---|---|---|---|
| **Shore Acres Interceptor** | SA13T04 | SSA12T04 | Undeveloped area along north side of Willow Pass Road |

Note: The location of manholes and CIPP pipe rehabilitation is shown in Appendix A. Project Plans

Depending on the construction contractor's means and methods, it may be feasible to perform CIPP lining through the existing manholes without modification. However, if additional access space is needed, the existing manhole frame, cover, and cone may be temporarily removed and replaced following construction.

Flow diversion will be necessary to maintain system operations during construction. A portion of the pipe rehabilitation between manholes CW03100 to CW02100, which crosses under both Union Pacific Railroad (UPRR) and BNSF Railway (BNSF) rights-of-way would be diverted via a new permanent underground bypass. The permanent bypass would serve construction as well as future operations and maintenance needs as a means to divert flow beneath the operating railroads. Bypass flow for the remainder of the CIPP rehabilitation segments would occur via a temporary above ground bypasses.

### TEMPORARY ABOVEGROUND BYPASS SYSTEM

Temporary bypasses would be required to maintain uninterrupted wastewater flows through the WPI and SAI systems while sections of the system are taken out of service to be rehabilitated. This type of bypass would be necessary for all manholes that require the "remove and replace" rehabilitation method and would also be required for all CIPP rehabilitation. The temporary bypass system would consist of pumps (diesel or electric with a diesel generator[1]), piping and hoses, and ancillary equipment such as valves, fittings, flow meters and other control equipment.

[1] Diesel tanks would be provided with a secondary containment system

Piping and hoses would be laid down on the ground surface, with anchorage provided as needed to provide security on sloping terrain.

The temporary aboveground bypass system would remain in place for up to approximately five days at each location. The bypass system would be monitored 24/7 for security purposes and to ensure that no system failures have occurred. Bypass lines will be prioritized for placement in upland areas wherever possible, to minimize impacts to aquatic resources. The construction contractor would be required to test and maintain the bypass systems to ensure that wastewater is not leaking outside of the bypass system. At night when the bypass system is running, workers with flashlights would monitor the system to ensure that no leaks are occurring.

#### PERMANENT UNDERGROUND BYPASS SYSTEM

As part of the Project, a permanent bypass pipeline, including approximately 530 linear feet of new HDPE pipe and approximately 33 linear feet of new 12-inch HDPE pipe, would be installed under the railroad rights-of-way. The pipes would be installed by means of the jack and bore trenchless method, which involves creating a horizontal bore path by pushing a casing pipe through the earth using a jacking machine, while simultaneously removing excavated material with an auger, to a maximum depth of 20 feet. Once the casing pipe is in place, a carrier pipe (i.e., the actual pipe that will carry the sewer flows) is inserted into the casing, and the space between the carrier pipe and casing pipe may be filled with grout or sand to provide stability. Four new manholes would be constructed for access and maintenance of the permanent bypass. The permanent bypass alignment is shown in Appendix A. Project Plans.

#### ACCESS ROADS

The Project would include the installation of permanent access roads to facilitate the District's maintenance of its existing facilities. Specifically, permanent access roads would be installed to provide access to five manholes within the District's SAI system. Currently, the District accesses these manholes by driving along informal paths, and access is limited seasonally dependent on groundwater levels and precipitation, putting the system at risk should a maintenance need be identified during the rainy season. Four new 12-foot-wide gravel access roads would be constructed approximately one-foot to 2.5-feet above existing grade to ensure year-round access. Additional information on the construction of access roads is presented in *Section 3.3.4, Site Work*.

### 3.3.2 Construction Phasing and Schedule

Construction is anticipated to start in spring 2027 and is expected to last approximately 12 months. Construction of the underground bypass would begin in spring or summer 2027 and would take approximately two to three months. This work would occur simultaneously with the manhole and pipeline rehabilitation work along the WPI and SAI.

### 3.3.3 Staging, Access, and Equipment

Staging for construction materials and equipment would be within the upland area on the southern side of the railroad, at the District-owned facilities, and at off-site equipment yards determined by the construction contractor. The following equipment would be required for project construction:

- Excavators – For demolishing, excavating around, and installing replacement manhole structures.

- Dump trucks – To transport excavated materials off-site and deliver aggregate or backfill materials.
- Graders – To construct gravel access road surfacing.
- De-watering Equipment (Pumps and Hoses) – For dewatering manhole work areas if groundwater intrusion is encountered during trenching operations.
- Temporary Bypass System (Pumps and Hoses) – before bypassing sanitary sewer flows around the work sites.
- Vibratory equipment - For areas where compaction is required such as under new manhole bases, or for gravel access roads
- CIPP Truck/Trailer –To bring CIPP liner out to site and to prepare and install the liner.

It is anticipated that temporary site access for construction can generally be via existing public and private roads, or otherwise disturbed areas, with minimal additional disturbance needed to facilitate access.

### 3.3.4 Site Work

A majority of the proposed site work would consist of the installation of new permanent access road surfacing to provide all-weather access to five manholes along the SAI system. For these access roads, the roadway footprint would be cleared and grubbed to remove organics down to suitable subgrade material. This material would be hauled off-site and disposed of at an appropriate facility. The existing subgrade would be compacted, then the aggregate roadway material would be imported, then placed and compacted in lifts until final grade is achieved. The final gravel surface would not be impervious surface. No asphalt pavement would be constructed as part of the Project; therefore, the Project would not change the total impervious surface area on the Project site.

Other site work aside from construction of the access roads is limited to minor excavation and surface restoration around manholes following replacement of the manhole or upper parts of the manhole. The maximum depth of excavation needed for the removal and replacement of manholes would be 15 feet. The maximum depth of excavation needed for installation of the underground bypass pipeline would be 20 feet.

Construction would be performed by qualified contractors and contract documents, plans, and specifications would incorporate stipulations regarding standard District requirements and acceptable construction practices, including but not limited to safety measures, vehicle operation and maintenance, excavation stability, erosion control, drainage alteration, groundwater disposal, traffic circulation, public safety, dust control, and noise generation. Also, the project would be designed in accordance with State of California Building Code and applicable jurisdictional Municipal Code requirements.

## 3.4 Project-Related Approvals, Agreements, and Permits

Permits and approvals that may be required for the Project include, but may not be limited to, the following:

### 3.4.1 United States Army Corps of Engineers (USACE)

- Section 404 Clean Water Act Permit

### 3.4.2 San Francisco Bay Regional Water Quality Control Board (RWQCB)

- Section 401 Water Quality Certification and/or
- Waste Discharge Requirement

### 3.4.3 United States Fish and Wildlife Service (USFWS)

- Endangered Species Act Section 7 Consultation

### 3.4.4 Bay Conservation and Development Commission (BCDC)

- Minor Permit

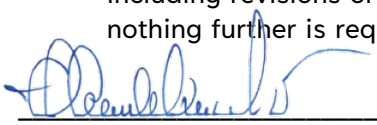
## 4.0 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is potentially significant unless mitigation is incorporated, as indicated by the checklist on the following pages.

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Greenhouse Gas Emissions | ☐ Public Services |
| ☐ Agricultural Resources | ☒ Hazards and Hazardous Materials | ☐ Recreation |
| ☒ Air Quality | ☒ Hydrology and Water Quality | ☐ Transportation |
| ☒ Biological Resources | ☐ Land Use/Planning | ☐ Tribal Cultural Resources |
| ☒ Cultural Resources | ☐ Mineral Resources | ☒ Utilities / Service Systems |
| ☐ Energy | ☐ Noise | ☐ Wildfire |
| ☒ Geology and Soils | ☐ Population and Housing | ☒ Mandatory Findings of Significance |

### 4.1 Determination

On the basis of this initial evaluation:



☐ I find that the Project COULD NOT have a significant effect on the environment and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to by the Project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed Project, nothing further is required.

**Name and Title:** Thanh Vo, Senior Engineer

## 4.2 Initial Study Checklist

This section describes the existing environmental conditions in and near the Project site and evaluates environmental impacts associated with the proposed Project. The environmental checklist, as recommended in the CEQA Guidelines (Appendix G), was used to identify environmental impacts that could occur if the proposed Project is implemented.

Each of the environmental categories was fully evaluated, and one of the following four determinations was made for each checklist question:

**"No Impact"** means that no impact to the resource would occur as a result of implementing the Project.

**"Less-than-Significant Impact"** means that implementation of the Project would not result in a substantial and/or adverse change to the resource, and no mitigation measures are required.

**"Less-than-Significant Impact with Mitigation Incorporated"** means that the incorporation of one or more mitigation measures is necessary to reduce the impact from potentially significant to less-than-significant.

**"Potentially Significant Impact"** means that there is either substantial evidence that a Project-related effect may be significant, or, due to a lack of existing information, could have the potential to be significant.

### 4.2.1 Aesthetics

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☒ | ☐ |
| b) | Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☒ |
| c) | In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the Project is in an urbanized area, would the Project conflict with applicable zoning and other regulations governing scenic quality? | ☐ | ☐ | ☒ | ☐ |
| d) | Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? | ☐ | ☐ | ☒ | ☐ |

#### ENVIRONMENTAL SETTING

The Project site is located in northern Contra Costa County with some areas of the site within the City of Pittsburg and some portions of the site within the unincorporated communities of Bay Point and Shore Acres. The Project site is generally surrounded by open spaces, undeveloped fields and marshes, and residential neighborhoods.

#### REGULATORY SETTING

##### *Contra Costa County 2045 General Plan*

The Conservation, Open Space, and Working Lands Element of the County of Contra Costa General Plan includes goals and policies to protect scenic resources within the County. The County recognizes two types of scenic resources:

- **Scenic routes** are public roadways that pass through picturesque natural landscapes. These roads typically offer views of beautiful areas or prominent features, such as valleys and mountain ranges.
- **Scenic ridges** are ridges that contribute to the scenic quality and character of a community or locale. In many areas of the county, visually prominent ridges offer a striking and welcome contrast to the built environment.

The General Plan contains the following relevant policies related to scenic resources:

- **Policy COS-P12.2:** Require redesign of project components that negatively impact viewsheds or the visual quality of the area.
- **Policy COS-P12.3:** Prohibit development within 100 vertical feet of the top of designated scenic ridges and within 50 vertical feet of other visually prominent ridgelines. Exceptions may be considered on existing legal lots where no other feasible building sites exist, and for infrastructure that requires high-elevation siting, such as wind turbines, communications towers, and water tanks. When siting buildings or infrastructure on or near ridges is unavoidable, require appropriate measures, such as screening, undergrounding, or camouflaging to mitigate visual impacts.
- **Policy COS-P12.5:** Require restoration of natural contours and vegetation after grading and other land disturbances.

### DISCUSSION OF IMPACTS

***a) Have a substantial adverse effect on a scenic vista?***

*Less-than-Significant Impact*

The Project site is surrounded by open spaces, undeveloped marshes and fields, residential areas, and some industrial areas, including the railroad. The Project site does not sit within a scenic vista and is not within 100 feet of a scenic ridgeline (County of Contra Costa 2024a). As described below in Threshold b), the Project site is not within a scenic route. Therefore, the Project would not conflict with Policy COS-P12.3 of the General Plan.

Project work would include rehabilitating underground pipelines, constructing a permanent underground bypass pipeline, rehabilitating manholes, and constructing gravel access roads. This work would not result in any new permanent aboveground structures that would negatively impact viewsheds or the visual quality of the Project site area. Aside from the access roads, all proposed improvements would be located underground. Furthermore, the access roads to be improved are already informal paths, so improving these roads would not constitute a significant visual impact to the area. Therefore, the Project would not conflict with Policy COS-P12.2 of the General Plan.

The Project would require minimal grading of natural contours. The Project would use CIPP methods to rehabilitate existing pipes, meaning that open trenching is not required. All pipelines would be accessed via existing manholes within the WPI and SAI alignments. The permanent underground bypass pipeline would be constructed using a jack and bore method, which does not require trenching or extensive excavation. Therefore, the Project would not conflict with Policy COS-P12.5 of the General Plan. The Project would have a less-than-significant impact on scenic vistas.

***b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?***

*No Impact*

The Project site is not located within an officially designated or eligible state scenic highway (Caltrans 2018). The nearest officially designated state scenic highway is California State Route 24/Interstate 680, which is located approximately 23 miles southwest of the Project site

(Caltrans 2018). Therefore, the Project would not substantially damage scenic resources within a state scenic highway. No impact would occur.

***c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?***

*Less-than-Significant Impact*

The Project site is within an urbanized area in northern Contra Costa County. As described in *Section 2.0, Project Information*, the Project site is zoned for General Industrial in the City of Pittsburg and General Agricultural and Planned Unit in Contra Costa County. As described in Threshold a), the proposed improvements would all be located underground, aside from the improvement of existing informal access roads. These improvements would not conflict with any applicable zoning or other regulations governing scenic quality, such as policies of the General Plan. Therefore, the Project would not conflict with applicable zoning and other regulations governing scenic quality. The impact would be less than significant.

***d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?***

*Less-than-Significant Impact*

All new infrastructure constructed as part of the Project would be located underground; therefore, the Project would not introduce any permanent sources of light or glare in the area. During construction, the presence of construction equipment and materials on the Project site may cause temporary sources of glare which may be observed by people within the immediate site vicinity. In addition, workers using flashlights to monitor the temporary aboveground bypass system would result in some nighttime lighting during Project construction. The effects of glare and nighttime lighting would be temporary and intermittent throughout Project construction. As stated in *Section 3.0, Project Description*, the longest that any portion of the temporary bypass system would remain in place would be five days. Therefore, the effect of nighttime lighting would be temporary even during the construction phase, and would only require the use of handheld flashlights, which would not be a substantial nighttime lighting impact. After work is completed, all construction-related equipment and supplies would be removed from the site, eliminating the potential for ongoing glare. Therefore, the Project would not create a new substantial source of light or glare which would adversely affect day or nighttime views in the area. The impact would be less than significant.

### 4.2.2 Agricultural and Forestry Resources

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | ☐ | ☐ | ☐ | ☒ |
| b) | Conflict with existing zoning for agricultural use, or a Williamson Act contract? | ☐ | ☐ | ☒ | ☐ |
| c) | Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | ☐ | ☐ | ☐ | ☒ |
| d) | Result in the loss of forest land or conversion of forest land to non-forest use? | ☐ | ☐ | ☒ | ☐ |
| e) | Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? | ☐ | ☐ | ☒ | ☐ |

#### ENVIRONMENTAL SETTING

The California Department of Conservation (CDOC) classifies Prime Farmland, Unique Farmland, and Farmland of Statewide Importance within the State. According to the CDOC's Important Farmland Finder online mapping tool, the Project site is classified as Urban and Built-Up Land and Other Land (vacant and non-agricultural land), with nearby Grazing Land located slightly west of the Project site (CDOC 2022a). Portions of the Project site are within the General Agricultural and Extraordinary Agricultural Preserve zoning districts (A-2, A-2 X) for Contra Costa County (County of Contra Costa 2024a).

#### DISCUSSION OF IMPACTS

***a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?***

*No Impact*

The Project site is classified as Urban and Built-Up Land and Other Land by the CDOC. An area mapped as Grazing Land is located directly west of the Project site; however, no Project work would impact these lands. The Project would not alter any existing land uses within the Project site; therefore, the Project would not convert any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to nonagricultural use. No impact would occur.

***b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?***

*Less-than-Significant Impact*

Portions of the Project site are zoned for General Agricultural. The Project would not create any new structures on-site that would conflict with the agricultural zoning or rezone any portion of the Project site. According to the Williamson Act Enrollment Finder published by the CDOC, no portion of the Project site is enrolled in a Williamson Act contract (CDOC 2022b). Therefore, the Project would not conflict with an existing zoning for agricultural use, or a Williamson Act Contract. The impact would be less than significant.

***c, d) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland(as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))? Result in a loss of forest land or conversion of forest land to non-forest use?***

*No Impact*

The Project site is mapped within the General Industrial, General Agricultural, and Planned Unit zoning districts. The Project site does not include any forest land or timberland. Therefore, the Project would not conflict with any existing zoning of forest land or timberland or convert forest land to non-forest use. No impact would occur.

***e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?***

*Less-than-Significant Impact*

The Project would not involve any other changes in the existing environment which could result in the conversion of Farmland to non-agricultural use. The Project would rehabilitate existing sewer infrastructure and construct a new underground bypass and access roads for maintenance needs. These improvements would not induce growth or encourage other activities which could result in the conversion of Farmland to non-agricultural use. The impact would be less than significant.

### 4.2.3 Air Quality

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Conflict with or obstruct implementation of the applicable air quality plan? | ☐ | ☐ | ☒ | ☐ |
| b) | Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard? | ☐ | ☒ | ☐ | ☐ |
| c) | Expose sensitive receptors to substantial pollutant concentrations? | ☐ | ☐ | ☒ | ☐ |
| d) | Result in other emissions (such as those leading to odors) affecting a substantial number of people? | ☐ | ☒ | ☐ | ☐ |

#### ENVIRONMENTAL SETTING

The Project site is located in Contra Costa County, which is in the San Francisco Bay Area Air Basin (SFBAAB). The Bay Area Air Quality Management District (BAAQMD) is the regional agency tasked with managing air quality in the region. The California Air Resources Board (CARB), a part of the California Environmental Protection Agency (EPA), oversees regional air district activities and regulates air quality at the State level. BAAQMD has published the CEQA Air Quality Guidelines that are used in this assessment to evaluate air quality impacts of the Project (BAAQMD 2022). The 2017 Clean Air Plan (CAP) is the most current air quality management plan developed and adopted by BAAQMD.

#### *Ambient Air Quality and Climate*

The San Francisco Bay Area has a Mediterranean climate characterized by wet winters and dry summers. During most summers, a high-pressure cell centered over the northeastern Pacific Ocean results in stable meteorological conditions and a steady northwesterly wind flow that generally keeps storms from affecting the California coast. During the winter, the Pacific high-pressure cell weakens, resulting in increased precipitation and the occurrence of storms. The highest air pollutant concentrations in the Bay Area generally occur during inversions, when a surface layer of cooler air becomes trapped beneath a layer of warmer air. An inversion reduces the amount of vertical mixing and dilution of air pollutants in the cooler air near the surface.

#### *Air Pollutants of Concern*

The CARB and U.S. EPA focus on the following air pollutants as regional indicators of ambient air quality:

- Ozone
- Coarse particulate matter ($PM_{10}$)

- Fine particulate matter ($PM_{2.5}$)
- Nitrogen dioxide
- Carbon monoxide
- Sulfur dioxide
- Lead

Because these are the most prevalent air pollutants known to be harmful to human health based on extensive criteria documents, they are referred to as "criteria air pollutants." In the SFBAAB, the primary criteria air pollutants of concern are ground-level ozone formed through reactions of oxides of nitrogen oxides ($NO_x$) and reactive organic gases (ROG), $PM_{10}$, and $PM_{2.5}$. Regional air pollutants, such as ozone, $PM_{10}$, and $PM_{2.5}$, can be formed and/or transported over long distances and affect ambient air quality far from the emissions source. The magnitude and location of specific health effects from exposure to increased ozone, $PM_{10}$, and $PM_{2.5}$ concentrations are the result of emissions generated by numerous sources throughout the SFBAAB, as opposed to a single project.

Localized air pollutants generally dissipate with distance from the emission source and can pose a health risk to nearby populations. Toxic air contaminants (TACs), such as diesel particulate matter (DPM), are considered localized pollutants. $PM_{2.5}$ is also considered a localized air pollutant, in addition to being considered a regional air pollutant. Air dispersion models can be used to reliably quantify the health risks to nearby receptors associated with emissions of localized air pollutants from an individual project.

### *Sensitive Receptors*

Sensitive receptors are areas where individuals are more susceptible to the adverse effects of poor air quality. Sensitive receptors include, but are not limited to, hospitals, schools, daycare facilities, elderly housing, and convalescent facilities. Residential areas are also considered sensitive receptors because people are often at home for extended periods, thereby increasing the duration of exposure to potential air contaminants. Existing sensitive receptors near the Project site include:

- Single-family residences south of Port Chicago Highway between Wharf Drive and McAvoy Road (adjacent to the work area, as close as 30 feet from the roadway)
- Single-family residences along Pamela Drive and Gregory Drive between Sharon Drive and Steele Drive (as close as about 560 feet south of the proposed manhole rehabilitation locations)
- Single-family residences along and south of Alfaro Avenue between North Broadway Avenue and Poinsettia Avenue (as close as 690 feet south of the proposed work area northeast of the UPRR and BNSF)
- Single-family residences south of West 10$^{th}$ Street, along Beacon Street, West 8$^{th}$ Street, Herb White Way, and Halsey Way, surrounding the portion of SAI work area north of West 10$^{th}$ Street (as close as 50 feet to SAI)
- Saint Peter Martyr School about 750 feet northeast of the portion of SAI work area north of West 10$^{th}$ Street

BAAQMD also recommends evaluating health risks to offsite worker receptors, which are not considered sensitive receptors. Since nearby offsite workers are located further away than the sensitive land uses surrounding the Project site, and residential receptors have a longer exposure duration, larger age sensitivity factor, and/or higher exposure frequency than workers, the offsite worker receptors are not evaluated in this analysis presented below.

Similarly, since the residential receptors are located much closer to the work area than the student receptors (30 feet versus 750 feet), and have a longer exposure duration, larger age sensitivity factor, and higher exposure frequency than students, the student receptors are not evaluated in the analysis presented below.

## REGULATORY SETTING

### *Federal and State Regulations*

The U.S. EPA is responsible for implementing the programs established under the Federal Clean Air Act, such as establishing and reviewing the National Ambient Air Quality Standards (NAAQS) and judging the adequacy of State Implementation Plans to attain the NAAQS. A State Implementation Plan must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. If a state fails to enforce its implementation of approved regulations, or if the EPA determines that a State Implementation Plan is inadequate, the EPA is required to prepare and enforce a Federal Implementation Plan to promulgate comprehensive control measures for a given State Implementation Plan.

CARB is responsible for establishing and reviewing the California Ambient Air Quality Standards (CAAQS), developing and managing the California State Implementation Plans, identifying TACs, and overseeing the activities of regional air quality management districts. In California, mobile emissions sources (e.g., construction equipment, trucks, and automobiles) are regulated by CARB and stationary emissions sources (e.g., industrial facilities) are regulated by the regional air quality management districts.

In accordance with the Federal Clean Air Act and California Clean Air Act, areas in California are classified as either in attainment, maintenance (i.e., former nonattainment), or nonattainment of the NAAQS and CAAQS for each criteria air pollutant, where attainment means the area is meeting state or federal standards for a specific pollutant. To assess the regional attainment status, BAAQMD collects ambient air quality data from over 30 monitoring sites within the SFBAAB (BAAQMD 2017a). Based on current monitoring data, the SFBAAB is designated as a nonattainment area for ozone, $PM_{10}$ (CAAQS only), and $PM_{2.5}$, and is designated an attainment or unclassified area for all other pollutants. BAAQMD is primarily responsible for ensuring that the NAAQS and CAAQS are attained and maintained in the SFBAAB. BAAQMD fulfills this responsibility by adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits, inspecting stationary sources of air pollutants, responding to citizen complaints, and monitoring ambient air quality and meteorological conditions.

### *BAAQMD Screening Criteria*

BAAQMD has established screening criteria to determine whether individual projects could result in potentially significant criteria air pollutant and precursor emissions, which are described in Section 4 of the BAAQMD 2022 CEQA Guidelines (BAAQMD 2022). Preliminary screening for

construction and operational criteria provides lead agencies with a conservative indication of whether a project would result in the generation of criteria air pollutants or precursors that exceed BAAQMD thresholds of significance. If all screening criteria for criteria air pollutants and precursors are met by a proposed project, then the lead agency need not perform a detailed assessment of the project's criteria air pollutant and precursor emissions.

Table 4-1 of the BAAQMD CEQA Guidelines contains single land use construction and operational criteria air pollutant and precursor screening levels for various land use categories. For operational emissions, it is assumed that projects would result in a less-than-significant impact related to criteria air pollutants and precursor emissions if: 1) the project size is at or below the operational screening level size for the applicable land use category (contained in Table 4-1 of the BAAQMD CEQA Guidelines); 2) operational activities would not include stationary engines and industrial sources subject to BAAQMD rules and regulations; and 3) operational activities would not overlap with construction activities. For construction emissions, it is assumed that projects would result in a less-than-significant impact related to criteria air pollutants and precursors if: 1) the project size is below the applicable screening level shown in Table 4-1; 2) all BAAQMD-recommended BMPs are included in the project design and implemented during construction; 3) construction-related activities would not overlap with operational activities; and 4) construction-related activities would not include demolition, simultaneous occurrence of two or more construction phases, extensive site preparation, extensive material transport, or stationary sources subject to BAAQMD rules and regulations.

### DISCUSSION OF IMPACTS

***a) Conflict with or obstruct implementation of the applicable air quality plan?***

*Less-than-Significant Impact*

BAAQMD's 2017 CAP is the applicable air quality plan for projects located in the SFBAAB (BAAQMD 2017b). Consistency may be determined by evaluating whether the Project supports the primary goals of the 2017 CAP, including applicable control measures contained within the plan, and would not conflict with or obstruct implementation of any of the control measures.

The primary goals of the 2017 CAP are the attainment of ambient air quality standards and reduction of population exposure to air pollutants for the protection of public health in the Bay Area. Because the Project would not result in any significant and unavoidable air quality impacts related to emissions, ambient concentrations, or public exposures (see discussions below), the Project would support the primary goals of the 2017 CAP.

The control measures from the 2017 CAP, which aim to reduce air pollution and greenhouse gases (GHGs) from stationary, area, and mobile sources, are organized into nine categories. As described in Table 2, the Project would be consistent with the applicable control measures from the 2017 CAP. Therefore, the Project would not conflict with or obstruct implementation of the applicable air quality plan, and the impact would be less than significant.

**Table 2. Project Consistency with BAAQMD 2017 Clean Air Plan**

| CONTROL MEASURES | PROJECT CONSISTENCY |
|---|---|
| **Stationary Sources** | **Not applicable**. The stationary source measures, which are designed to reduce emissions from stationary sources, are incorporated into rules adopted by the BAAQMD and then enforced by the BAAQMD's Permit and Inspection programs. Because the Project would not include new stationary sources, the stationary source control measures are not applicable to the Project. |
| **Transportation** | **Not applicable**. The transportation control measures are designed to reduce vehicle trips, use, miles traveled, idling, or traffic congestion for the purpose of reducing vehicle emissions. Operation of the Project would not generate any additional vehicle trips compared to the existing conditions. The Project is anticipated to reduce vehicle trips in the long-term by reducing the need for maintenance of wastewater infrastructure. Therefore, the transportation control measures of the 2017 CAP are not applicable to the Project. |
| **Energy** | **Not applicable**. The energy control measures are designed to reduce emissions of criteria air pollutants, TACs, and GHGs by decreasing the amount of electricity consumed in the Bay Area, as well as decreasing the carbon intensity of the electricity used by switching to less GHG-intensive fuel sources for electricity generation. Since these measures apply to electrical utility providers and local government agencies (and not individual projects), the energy control measures of the 2017 CAP are not applicable to the Project. |
| **Buildings** | **Not applicable**. BAAQMD has authority to regulate emissions from certain sources in buildings such as boilers and water heaters but has limited authority to regulate buildings themselves. Therefore, the building control measures focus on working with local governments that have authority over local building codes to facilitate adoption of best GHG control practices and policies. Since the Project does not include any building construction, the building control measures of the 2017 CAP are not applicable to the Project. |
| **Agriculture** | **Not applicable**. The agriculture control measures are designed primarily to reduce emissions of methane. Since the Project does not include any agricultural activities, the agriculture control measures of the 2017 CAP are not applicable to the Project. |
| **Natural and Working Lands** | **Consistent**. The control measures for the natural and working lands sector focus on increasing carbon sequestration on rangelands and wetlands, as well as encouraging local governments to adopt ordinances that promote urban tree plantings. The Project does not include the disturbance of any rangelands. The Project would result in permanent impacts to on-site wetlands; however, as described in Section 4.2.5, Biological Resources, Mitigation Measure BIO-9 would be implemented which requires the District to mitigate for permanent wetland impacts by either purchasing wetland creation mitigation credits or conducting a wetland restoration project in a nearby area. Therefore, the Project would not result in a significant loss of wetlands. The Project would be consistent with the natural and working lands control measures of the 2017 CAP. |

| CONTROL MEASURES | PROJECT CONSISTENCY |
|---|---|
| **Waste Management** | **Consistent.** The waste management measures focus on reducing or capturing methane emissions from landfills and composting facilities, diverting organic materials away from landfills, and increasing waste diversion rates through efforts to reduce, reuse, and recycle. The Project would comply with local requirements for waste management. Therefore, the Project would be consistent with the waste management control measures of the 2017 CAP. |
| **Water** | **Not applicable**. Water control measures to reduce emissions from the water sector will reduce emissions of criteria pollutants, TACs, and GHGs by encouraging water conservation, limiting GHG emissions from publicly owned treatment works, and promoting the use of biogas recovery systems. The Project does not include any modifications to water supply infrastructure and would not increase demand for water. Therefore, the water control measures are not applicable to the Project. |
| **Super GHGs** | **Not applicable**. The super-GHG control measures are designed to facilitate the adoption of best GHG control practices and policies through BAAQMD and local government agencies. Since these measures do not apply to individual projects, the super-GHG control measures of the 2017 CAP are not applicable to the Project. |

*Source: BAAQMD 2017b.*

***b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?***

*Less-than-Significant Impact with Mitigation Incorporated*

Project construction activities would generate criteria air pollutant emissions that could potentially affect regional air quality. During construction, the primary pollutant emissions of concern would be ROG, NOx, $PM_{10}$, and $PM_{2.5}$ from the exhaust of off-road construction equipment and on-road construction vehicles related to worker vehicles, vendor trucks, and haul trucks. In addition, fugitive dust emissions of $PM_{10}$ and $PM_{2.5}$ would be generated by soil disturbance and demolition activities. The Project's emissions of fugitive dust during construction are analyzed separately, further below.

The BAAQMD recommends using the most current version of the California Emissions Estimator Model (CalEEMod), Version 2022.1, to estimate construction and operational emissions of pollutants from a project. CalEEMod uses widely accepted models for emission estimates combined with appropriate default data for a variety of land-use projects that can be used if site-specific information is not available. CalEEMod Version 2022.1 was used to estimate construction and operational emissions of pollutants from the proposed Project. The primary input data used to estimate emissions associated with construction of the Project were provided by the Project applicant and contain information on construction duration, construction-related vehicle trips, trip lengths, and off-road construction equipment inventory and usage. Construction information provided by the applicant and a copy of the CalEEMod report, which summarizes the input parameters, assumptions, and findings, are included in Appendix B.

As described in *Section 3.0, Project Description*, construction would begin in spring of 2026 and would last for approximately 12 months. To analyze daily emission rates, the total emissions estimated during construction were averaged over the total length of construction. Underground

pipe and manhole rehabilitation was assumed to last 174 working days, and access road construction and construction of the permanent underground bypass system would each last for 66 working days. The average daily emissions were then compared to the BAAQMD's thresholds of significance, as shown in Table 3.

**Table 3. Criteria Air Pollutant Emissions during Construction (Pounds per Day)**

| EMISSIONS SCENARIO | ROG | NOX | EXHAUST PM10 | EXHAUST PM2.5 |
|---|---|---|---|---|
| **Construction Emissions** | 0.08 | 0.78 | 0.03 | 0.02 |
| **Thresholds of Significance** | 54 | 54 | 82 | 54 |
| **Exceed Threshold?** | No | No | No | No |

*Source: CalEEMod Report, Appendix B.*

As shown above in Table 3, construction emissions from ROG, NOx, and $PM_{10}$ and $PM_{2.5}$ from vehicle exhaust, would not exceed the BAAQMD's thresholds of significance.

The generation of fugitive dust $PM_{10}$ and $PM_{2.5}$ emissions from soil disturbance activities during construction could result in a cumulatively considerable net increase in regional $PM_{10}$ and $PM_{2.5}$ concentrations. The BAAQMD does not have a quantitative threshold of significance for fugitive dust PM10 and PM2.5 emissions; however, the BAAQMD considers implementation of dust control measures during construction sufficient to reduce air quality impacts from fugitive dust to a less-than-significant level. The Project would implement Mitigation Measure AIR-1, which contains BMPs from the BAAQMD's CEQA Guidelines. Implementation of Mitigation Measure AIR-1 would ensure that Project construction activities would not result in a cumulatively considerable net increase in criteria air pollutants for which the region is in nonattainment.

With the implementation of Mitigation Measure AIR-1, construction of the Project would not result in a cumulatively considerable net increase in ROG, NOx, $PM_{2.5}$, or $PM_{10}$ emissions. Operation of the Project would not create any new, permanent sources of emissions. Therefore, the Project would not result in a cumulatively considerable net increase in criteria air pollutants for which the region is in nonattainment. The impact would be less than significant with mitigation incorporated.

***c) Expose sensitive receptors to substantial pollutant concentrations?***

*Less-than-Significant Impact*

Project construction would generate DPM and $PM_{2.5}$ emissions from the exhaust of off-road diesel construction equipment, and fugitive $PM_{2.5}$ emissions from construction activities. Following BAAQMD guidance, the most recent version of CalEEMod was used to estimate air pollutant emissions from construction of the Project. The primary input data used to estimate emissions associated with construction of the Project were provided by the District and include construction duration, import and export volumes, construction-related vehicle trips, trip lengths, and off-road construction equipment inventory and usage. Construction information provided by the District and a copy of the CalEEMod report which summarizes the input parameters, assumptions, and findings, are included in Appendix B.

***Exposure to DPM and $PM_{2.5}$ Emissions from Construction***

In accordance with guidance from the BAAQMD and OEHHA, an assessment was conducted to evaluate potential health risks to sensitive receptors exposed to DPM and $PM_{2.5}$ emissions during

Project construction. The annual average concentrations of DPM and $PM_{2.5}$ during construction were estimated within 1,000 feet of the Project site using the U.S. EPA's AERMOD air dispersion model. For modeling purposes, daily emissions from construction were assumed to occur between 7 a.m. and 6 p.m., Monday through Friday.

To conservatively model a worst-case exposure scenario, the exhaust and fugitive dust emissions from all off-road equipment activities were represented in the AERMOD model as area sources encompassing the Western Area shown in Figure 1 of Appendix C, which includes a portion of the proposed Project alignment for manhole and pipeline rehabilitation, as well as the proposed permanent underground bypass system. This is conservative because not all off-road equipment activities would occur within the Western Area and the closest sensitive receptors to the Project alignment are within the Western Area. The project's total DPM and fugitive dust emissions were assumed to occur within the Western Area for the full 12-month construction period. Under this assumption, the maximally exposed individual resident (MEIR) identified in the Western Area represents the worst-case scenario for all sensitive receptors near the Project site.

Based on the results of the air dispersion model, potential health risks were evaluated for the MEIR on the ground floor of a single-family residence located at 572 Levee Road, as shown in Figure 2 in Appendix C. For the MEIR, the incremental increase in cancer risk was conservatively assessed for an infant starting from birth that would be exposed to the annual average DPM concentration over the entire duration of Project construction (12 months). This exposure scenario represents the most sensitive individual who could be exposed to adverse air quality conditions in the vicinity of the Project site.

Estimates of the health risks at the MEIR from exposure to DPM and $PM_{2.5}$ concentrations during Project construction are summarized and compared to BAAQMD's thresholds of significance in Table 4. At the MEIR, the estimated excess cancer risk and chronic Hazard Index for DPM and annual average $PM_{2.5}$ concentration from uncontrolled construction emissions were below the thresholds of significance.

**Table 4. Health Risks during Project Construction**

| EMISSIONS SCENARIO | RECEPTOR | DIESEL PARTICULATE MATTER | | $PM_{2.5}$ ANNUAL AVERAGE CONCENTRATION ($\mu G/M^3$) |
|---|---|---|---|---|
| | | CANCER RISK (PER MILLION) | CHRONIC HAZARD INDEX | |
| **Off-Road Construction Equipment** | MEIR | 2.6 | <0.01 | 0.17 |
| **Thresholds of Significance** | | 10 | 1.0 | 0.3 |
| **Exceed Threshold?** | | No | No | No |

Notes: $\mu g/m^3$ = micrograms per cubic meter
Source: Appendix C

### *Cumulative Exposure to TACs and $PM_{2.5}$ Emissions*

In addition to a project's individual DPM and $PM_{2.5}$ emissions during construction, the potential cumulative health risks to sensitive receptors from existing TACs and $PM_{2.5}$ were evaluated. Cumulative health risks were estimated at the MEIR to represent the worst-case-exposure scenario for sensitive receptors in the Project vicinity.

Based on BAAQMD's permitted stationary source risk map, there is no existing stationary source within 1,000 feet of the MEIR (Figure 2 of Appendix C) (BAAQMD 2025). At the time of preparation of this analysis, there were no reasonably foreseeable future projects identified within 1,000 feet of the Project that would introduce a new source of TACs and/or $PM_{2.5}$ emissions.

Preliminary health risk screening values at the MEIR from exposure to mobile sources of TACs and $PM_{2.5}$ were estimated based on BAAQMD's Mobile Source Screening Map, which provides health risk estimates reflective of 2022 conditions for residents living near major roadways, and reflective of 2024 conditions for residents living near rail lines and rail yards (BAAQMD 2024).

Estimates of the cumulative health risks at the MEIR for the Project are summarized and compared to BAAQMD's cumulative thresholds of significance in Table 5. As shown in Table 5, the cumulative cancer risk, chronic Hazard Index, and annual average $PM_{2.5}$ concentration at the MEIR were below BAAQMD's cumulative thresholds. Therefore, implementation of the Project would not expose existing sensitive receptors to substantial concentrations of TACs and $PM_{2.5}$ that would be considered cumulatively considerable.

**Table 5. Cumulative Health Risks**

| SOURCE | SOURCE TYPE | TOXIC AIR CONTAMINANTS | | $PM_{2.5}$ ANNUAL AVERAGE CONCENTRATION (µG/M³) |
|---|---|---|---|---|
| | | Cancer Risk (per million) | Chronic Hazard Index | |
| **PROJECT** | | | | |
| **Off-Road Construction Equipment** | Diesel Exhaust | 2.6 | <0.01 | 0.17 |
| **EXISTING MOBILE SOURCES** | | | | |
| **Major Roadway** | Mobile | 1.4 | 0.01 | 0.07 |
| **Railway** | Railway | 1.2 | <0.01 | <0.01 |
| Cumulative Health Risks | | 5.2 | <0.1 | 0.24 |
| **Thresholds of Significance** | | **100** | **10.0** | **0.8** |
| **Exceed Threshold?** | | **No** | **No** | **No** |

Notes: µg/m³=micrograms per cubic meter
Source: Attachment B

Based on the analysis of potential health risk impacts related to emissions from off-road construction equipment, the Project would not result in a substantial increase in the exposure of sensitive receptors to DPM and $PM_{2.5}$. Operation of the Project would not introduce any new permanent sources of emissions that would expose sensitive receptors to substantial pollutant concentrations. The impact of Project construction and operation would be less than significant.

***d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?***

*Less-than-Significant Impact with Mitigation Incorporated*

Project construction could generate unpleasant odors due to the need for a temporary sewer bypass pipeline. Sewer gas is a mixture of gases created by anaerobic bacteria that break down sewage and sludge. The gas can contain hydrogen sulfide, which smells like rotten eggs, even in low concentrations. Odors would also be generated during Project construction due to the use of gasoline- and/or diesel-powered construction equipment that emit exhaust fumes. The bypass pipeline would be constructed along the outskirts of residential areas along Port Chicago Highway and in open space areas adjacent to the railroad tracks. The bypass would not be situated directly adjacent to residences or other occupiable structures. Odors caused by the bypass pipeline are not anticipated to affect a substantial number of people due to the Project site's location on the outskirts of a residential area adjacent to open space and industrial land uses. However, a leak or break in the bypass pipeline may exacerbate the level of odors being emitted from the Project site. Removal of the bypass pipeline after construction is complete may also generate objectionable odors. The pipeline would be monitored 24/7 throughout Project construction to ensure that any leaks or breaks are discovered and addressed immediately. Nevertheless, in the case that a leak or break were to go undiscovered, odors generated by such leakage may be objectionable to neighbors and cause complaints. The Project would implement Mitigation Measure AIR-2, which would require that the phone number of the construction site manager be posted at the Project site as the number to call regarding odor complaints. The construction site manager would be responsible for addressing and resolving any complaints that arise from issues with the bypass pipeline.

With implementation of Mitigation Measure AIR-2, construction of the Project would not generate odors which would adversely impact substantial numbers of people. The impact would be less than significant with mitigation incorporated.

After construction and site cleanup activities have been completed, the Project would not generate any objectionable odors. The rehabilitated sewer line and new permanent bypass pipeline would be underground, and there would be no new aboveground infrastructure which would create odors. Project operation would not result in other emissions, such as those leading to odors. No impact would occur.

### MITIGATION MEASURES

#### *Mitigation Measure AIR-1: Fugitive Dust Control Measures*

The Project shall implement BMPs as recommended by the BAAQMD 2022 CEQA Air Quality Guidelines, which include the following measures:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 mph.

- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.

***Mitigation Measure AIR-2: Odor Complaints***

The construction site manager's phone number shall be posted in at least three locations spaced throughout the Project site. Each sign shall state that the construction site manager should be contacted with any odor concerns or complaints. The construction site manager shall be responsible for investigating any odor complaints and resolving issues related to leaks or breaks in the bypass pipeline.

### 4.2.4 Biological Resources

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☒ | ☐ | ☐ |
| b) | Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☒ | ☐ | ☐ |
| c) | Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | ☐ | ☒ | ☐ | ☐ |
| d) | Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | ☐ | ☐ | ☐ | ☒ |
| e) | Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | ☐ | ☒ | ☐ | ☐ |
| f) | Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | ☐ | ☐ | ☐ | ☒ |

A Biological Resources Technical Report (Biological Report) was prepared for the Project by WRA, Inc. (WRA) in August 2025 (Appendix D). The findings and recommendations included in the Biological Report were based on database searches, a literature review and a field survey of the

Project site. The information in this section of the IS/MND is based on and adapted from the Biological Report.

## REGULATORY SETTING – FEDERAL AND STATE

### *Endangered and Threatened Plants, Fish, and Wildlife*

Specific species of plants, fish, and wildlife species may be designated as threatened or endangered by the Federal Endangered Species Act (ESA), or the California Endangered Species Act (CESA). Specific protections and permitting mechanisms for these species differ under each of these acts, and a species' designation under one law does not automatically provide protection under the other.

The ESA (16 USC 1531 et seq.) is implemented by USFWS and the National Marine Fisheries Service (NMFS). USFWS and NMFS maintain lists of endangered and threatened plant and animal species (referred to as "listed species"). "Proposed" and "candidate" species are those that are being considered for listing and are not protected until they are formally listed as threatened or endangered. Under the ESA, authorization must be obtained from USFWS or NMFS prior to take of any listed species. "Take" under the ESA is defined as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Take under the ESA includes direct injury or mortality to individuals, disruptions in normal behavioral patterns resulting from factors such as noise and visual disturbance and impacts to habitat for listed species. Actions that may result in take of an ESA-listed species may obtain a permit under ESA Section 10, or via the interagency consultation described in ESA Section 7. Federal-listed plant species are only protected when removal or destruction occurs on federal land; however, if a federal agency authorizes, funds, or carries out an action, that agency must ensure through Section 7 consultation that the action is not likely to jeopardize the continued existence of the species.

The ESA also provides for designation of critical habitat, which are specific geographic areas containing physical or biological features "essential to the conservation of the species." Protections afforded to designated critical habitat apply only to actions that are funded, permitted, or carried out by federal agencies. Critical habitat designations do not affect activities by private landowners if there is no other federal agency involvement.

The CESA (California Fish and Game Code [CFGC] 2050 et seq.) prohibits the take of any plant and animal species that the CFGC determines to be an endangered or threatened species in California. CESA regulations include take protection for threatened and endangered plants and animals on private lands, as well as extending this protection to candidate species during consideration for listing as threatened or endangered under CESA. The definition of a "take" under CESA ("hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") only applies to direct impact to individuals, and does not extend to habitat impacts or harassment. CDFW may issue an Incidental Take Permit under CESA to authorize take if it is incidental to otherwise lawful activity and if specific criteria are met. Take of these species is also authorized if the geographic area is covered by a Natural Community Conservation Plan, as long as the plan covers that activity. CDFW may also authorize take for voluntary restoration projects through the Restoration Management Permit.

### *Fully Protected Species and Designated Rare Plant Species*

This category includes specific plant and wildlife species that are designated in the CFGC as protected even if not listed under CESA or ESA. Fully Protected Species includes specific lists of birds, mammals, reptiles, amphibians, and fish designated in CFGC. Fully Protected Species may not be taken or possessed at any time. No licenses or permits may be issued by CDFW for take of fully protected species, except for necessary scientific research and conservation purposes. The definition of "take" is the same under CFGC and the CESA. By law, CDFW may not issue an Incidental Take Permit for Fully Protected Species. Under the California Native Plant Protection Act, CDFW has listed 64 “rare” or “endangered” plant species, and prevents “take,” with few exceptions, of these species.

### *Special Protections for Nesting Birds and Bats*

The Federal Bald and Golden Eagle Protection Act provides relatively broad protections to both of North America’s eagle species (bald eagle [*Haliaeetus leucocephalus*] and golden eagle [*Aquila chrysaetos*]) that in some regards are similar to those provided by the ESA. In addition to regulations for special-status species, most native birds in the United States, including non-status species, have baseline legal protections under the Migratory Bird Treaty Act (MBTA) of 1918 and CFGC sections 3503, 3503.5 and 3513. Under these laws/codes, the intentional harm or collection of adult birds as well as the intentional collection or destruction of active nests, eggs, and young is illegal. For bat species, the Western Bat Working Group (WBWG) designates conservation status for species of bats, and those with a high or medium-high priority are typically given special consideration under CEQA.

### *Essential Fish Habitat*

The Magnuson-Stevens Fishery Conservation and Management Act provides for conservation and management of fishery resources in the U.S., administered by NMFS. This Act establishes a national program intended to prevent overfishing, rebuild overfished stocks, ensure conservation, and facilitate long-term protection through the establishment of Essential Fish Habitat (EFH). EFH consists of aquatic areas that contain habitat essential to the long-term survival and health of fisheries, which may include the water column, certain bottom types, vegetation (e.g., eelgrass [*Zostera* spp.]), or complex structures such as oyster beds. Any federal agency that authorizes, funds, or undertakes action that may adversely affect EFH is required to consult with NMFS.

### *Species of Special Concern, Movement Corridors, and Other Special-status Species under CEQA*

A Species of Special Concern (SSC) is a species formally designated by the CDFW which meets one or more criteria related to a Federal ESA status (if it is not listed under CESA), including extirpation from California, documented population declines, or small population size within California and risk of declines. In addition, CDFW has developed a special animals list as “a general term that refers to all of the taxa the CNDDB is interested in tracking, regardless of their legal or protection status.” This list includes lists developed by other organizations, including for example, the Audubon Watch List Species, the Bureau of Land Management Sensitive Species, and USFWS Birds of Conservation Concern. Plant species on the California Native Plant Society (CNPS) Rare Plant Inventory (Inventory; CNPS 2025a) with California Rare Plant Ranks (Rank) of 1 and 2, as well as some with a Rank of 3 or 4, are also considered special-status plant species and must be considered under CEQA. Some Rank 3 and Rank 4 species are typically only afforded protection under CEQA when such species are particularly unique to the locale (e.g.,

range limit, low abundance/low frequency, limited habitat) or are otherwise considered locally rare. Additionally, any species listed as sensitive within local plans, policies and ordinances are likewise considered sensitive. Movement and migratory corridors for native wildlife (including aquatic corridors) as well as wildlife nursery sites are given special consideration under CEQA.

## REGULATORY SETTING – LOCAL

### *Contra Costa County General Plan*

The Contra Costa County General Plan contains the following relevant policies related to biological resources:

> **COS-P4.1:** Maintain ecologically significant resource areas in their natural state to the greatest extent possible. Limit development in and near these areas to compatible low intensity uses with adequate provisions to protect sensitive resources, including setbacks around resource areas. Prohibit projects that would lead to fragmentation of ecologically significant resource areas.
>
> **COS-P4.3:** Require a biological resources assessment prepared according to State and federal protocols for projects with the potential to impact rare, threatened, endangered, or special-status species or their habitat, and implement appropriate mitigation for identified impacts, preferably near the impact and within the county.
>
> **COS-P4.4:** Protect wildlife migration corridors, including natural and channelized creeks providing habitat in urban settings, and support projects that enhance these areas.
>
> **COS-P4.7:** Require projects near sensitive habitat areas to minimize lighting in general and mitigate light pollution by incorporating best practices for wildlife-friendly lighting.
>
> **COS-P4.8:** Require appropriately-timed, comprehensive floristic and vegetation surveys prepared according to State and federal protocols when development is proposed on land with potentially suitable habitat for special-status plant species, sensitive natural plant communities, or locally rare plants, including areas mapped by the California Native Plant Society as Botanical Priority Protection Areas.
>
> **COS-P4.9:** Require avoidance and protection of sensitive ecological resources not approved for disturbance or removal during project entitlement, and require restitution in exceedance of standard mitigation ratios for deliberate or inadvertent damage to these resources.
>
> **COS-P4.10:** Require majority use of California native plant species in large landscaped areas in new developments, and require construction practices that avoid spread of invasive plant species by minimizing surface disturbance; seeding and mulching disturbed areas with certified weed-free native mixes; disinfecting/decontaminating equipment; and using native, noninvasive, drought-resistant species in erosion control plantings.*
>
> **COS-P5.2:** Require public infrastructure and private development projects to preserve, and whenever possible restore and enhance, natural watercourses, floodplains, and riparian habitat.
>
> **COS-P5.3:** Require avoidance, minimization, and/or compensatory mitigation for development that would impact a wetland, wetland species, or adjacent upland habitat areas. Where feasible, compensation shall be in-kind (i.e., the same type of habitat), provided on-site, and based on a ratio that provides a margin of safety reflecting the

expected degree of success and accounting for the relative functions and values of the lost and created wetlands.

**COS-P6.1:** Preserve natural woodlands and significant trees, particularly mature native species, intact coastal scrub and chaparral, and grasslands, especially those with native grass and wildflower populations.

### *Contra Costa County Habitat Conservation Plan*

The Conta Costa County General Plan contains policies pertaining to the support of land conservation and restoration consistent with the Contra Costa Habitat Conservation Plan (HCP)/Natural Community Conservation Plan (NCCP) and discourages development in areas where such conservation is planned (COS-P4.2).

## ASSESSMENT METHODOLOGY

WRA biologists visited the Project site on January 2-3 and 10, 2025, to map vegetation, aquatic features, and other land cover types; document plant and wildlife species present; and evaluate on-site habitat for the potential to support special-status species as defined by CEQA. Prior to the site visit, WRA biologists reviewed literature resources and performed database searches to assess the potential for sensitive land cover types and special-status species, including
:

- Web Soil Survey (USDA 2025)
- Honker Bay 7.5-minute U.S. Geological Survey (USGS) quadrangle (USGS 2022)
- Contemporary aerial photographs (Google Earth 2025)
- Historical aerial photographs (NETR 2025)
- National Wetlands Inventory (USFWS 2025a)
- California Aquatic Resources Inventory (SFEI 2025)
- California Natural Diversity Database (CNDDB) (CDFW 2025a)
- CNPS Inventory (CNPS 2025a)
- Consortium of California Herbaria (CCH1 2025, CCH2 2025)
- USFWS Information for Planning and Consultation (USFWS 2025b)
- eBird Online Database (eBird 2018)
- California Bird Species of Special Concern in California (Shuford and Gardali 2008)
- California Amphibian and Reptile Species of Special Concern (Thomson et al. 2016)
- A Field Guide to Western Reptiles and Amphibians (Stebbins 2003)
- A Manual of California Vegetation, Online Edition (CNPS 2025b)
- Preliminary Descriptions of the Terrestrial Natural Communities (Holland 1986)
- California Natural Community List (CDFW 2025b)
- Database searches (i.e., CNDDB, CNPS) for special-status species focused on the Honker Bay, Vine Hil, Clayton, Walnut Creek, Antioch North, Antioch South, Denverton, and Fairfield South USGS 7.5-minute quadrangles.

Following the remote assessment, WRA biologists completed a field review over the course of two days to document: (1) land cover types (e.g., vegetation communities, aquatic resources), (2) existing conditions and to determine suitable habitat for any special-status plant or wildlife species is present, (3) if and what type of aquatic land cover types (e.g., wetlands) are present, and (4) if special-status species are present.

## ENVIRONMENTAL SETTING

### *Vegetation and Land Cover Types*

WRA observed eleven land cover types within the BSA, nine of which are considered sensitive land cover types under CEQA. Sensitive aquatic land cover types include non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetland, intermittent stream, alkali seasonal wetland depression, and seasonal drainage. Other sensitive land cover types include saltgrass meadow and riparian woodland. Non-sensitive land cover types include developed, ruderal, and non-native annual grassland. Descriptions of land cover types are included below.

**Developed (no vegetation alliance). CDFW Rank: None.** A little under half of the BSA is developed as roads with gravel shoulders, as well as unpaved roads and old, unused railroad tracks. In these developed areas, the vegetation is minimal and composed of ornamental trees in some areas and common weeds on the fringes similar to the ruderal land cover. This community is not considered sensitive by Contra Costa County, CDFW, or any other regulatory entity.

**Ruderal (no vegetation alliance). CDFW Rank: None.** This land cover type is dominated by non-native annual grasses and forbs such as vetch (*Vicia* sp.), artichoke thistle (*Cynara cardunculus*), Italian thistle (*Carduus pycnocephalus*), and black mustard (*Brassica nigra*).

**Non-native Annual Grassland (no vegetation alliance). CDFW Rank: None.** Portions of the BSA are open fields of non-native annual grasslands used for grazing at the time of the site visit. Most grasses were still vegetative and not identifiable during the site visit. However, species that were identified as present in this land cover type include perennial mustard (*Hirschfeldia incana*).

**Saltgrass Meadow (no vegetation alliance). CDFW Rank: Sensitive.** Vegetation in the saltgrass meadow was dominated by saltgrass (*Distichlis spicatata*). This community occurs in the central portion of the BSA and is classified as sensitive by CDFW.

**Riparian Woodland (no vegetation alliance). CDFW Rank: Sensitive.** Riparian woodland habitat occurs along an intermittent stream in the easternmost portion of the BSA. Dominant tree species include arroyo willow (*Salix lasiolepis*).

**Non-tidal Marsh (*Schoenoplectus [acutus, californicus]* Herbaceous Alliance). CDFW Rank: Sensitive.** Non-tidal marsh features within the BSA are dominated by California bulrush (*Schoenoplectus californica)* and tall whitetop (*Lepidium latifolium*). Non-tidal marshes are characterized as sensitive biological communities by CDFW.

**Tidal Marsh (*Salicornia pacifica* [*Salicornia depressa*] Herbaceous Alliance). CDFW Rank: S3, G4.** Vegetation in the tidal marsh was dominated by pickleweed and is tidally influenced. Tidal marshes are characterized as sensitive biological communities by CDFW.

**Brackish Tidal Marsh (no vegetation alliance). CDFW Rank: Sensitive.** Vegetation in the brackish tidal marsh was dominated by saltgrass (*Distichlis spicatata*), California bulrush (*Schoenoplectus californicus*), pickleweed (*Salicornia pacifica*), and bristly oxtongue (*Helminthotheca echioides*). Brackish tidal marshes are characterized as sensitive biological communities by CDFW.

**Seasonal Wetlands (no vegetation alliance). CDFW Rank: Sensitive.** Seasonal wetlands include areas which hold water for part of the year, typically during the rainy season and which are dominated by hydrophytic vegetative cover. Vegetation in the seasonal wetlands was dominated by salt grass, curly dock (*Rumex crispus*), iris leafed rush (*Juncus xiphoides*), and Italian rye grass. These areas are not tidally influenced and occur in low areas within the BSA that are seasonally ponded or saturated. Seasonal wetlands are characterized as sensitive biological communities as CDFW.

**Intermittent Stream (no vegetation alliance). CDFW Rank: Sensitive.** The intermittent stream in the BSA occupies 0.04 acres of the BSA, and is wetted most of the year, but may dry in the late summer and early fall.

**Alkali Seasonal Wetland Depressions (no vegetation alliance). CDFW Rank: Sensitive.** Low depressional areas in the easternmost portion of the BSA contain alkali seasonal wetland depressions. These areas are dominated by bassia (*Bassia hyssopfolia*) and rabbit's foot grass (*Polypogon monspeliensis*).

**Seasonal Drainage (no vegetation alliance). CDFW Rank: Sensitive.** The seasonal drainage in the BSA occupies 0.09 acres of the BSA, and is wetted part of the year, but mostly dry in the summer and fall.

### *Special-Status Plant Species*

Based upon a review of the resources databases listed under *Assessment Methodology* above, 96 special-status plant species have been documented in the vicinity of the BSA. Of these species, eight have the potential to occur in the BSA, including:

- Delta tule pea (*Lathyrus jepsonii* var. *jepsonii*), CNPS Rank 1B.2
- San Joaquin spearscale (*Extriplex joaquinana*), CNPS Rank 1B.2
- Suisun Marsh aster (*Symphyotricum lentum*), CNPS Rank 1B.2
- Brittlescale (*Atriplex depressa*), CNPS Rank 1B.2
- Bolander's water-hemlock (*Cicuta maculata* var. *bolanderi*), CNPS Rank 2B.1
- Delta mudwort (*Limosella australis*), CNPS Rank 2B.1
- Crownscale (*Atriplex coronata* var. *coronata*), CNPS Rank 4.2
- Parry's rough tarplant (*Centromadia parryi* ssp. *rudis*), CNPS Rank 4.2

### *Special-status Wildlife Species*

Based on a review of literature and resource databases, 27 special-status wildlife species have been documented in the vicinity of the BSA. Most of these species have no potential to occur on-site due to a lack of suitable habitat features. Eight special-status species have potential to occur in the immediate vicinity of or in portions of the BSA, including the following:

- Northern harrier (*Circus hudsonius*), California Species of Special Concern
- Salt marsh common yellowthroat (*Geothlypis trichas sinuosa*), California Species of Special Concern
- Suisun song sparrow (*Melospiza melodia maxillaris*), California Species of Special Concern
- Salt marsh harvest mouse (SMHM, *Reithrodontomys raviventris halicotes*), Federal Endangered, State Endangered

- California red-legged frog (CRLF, *Rana draytonii*), Federal Threatened
- California Ridgway's rail (CRR, *Rallus obsoletus obsoletus*), Federal Endangered, State Endangered
- California black rail (CBR, *Laterallus jamaicensis coturniculus*), State Threatened
- Burrowing owl (BUOW, *Athene cunicularia*), State Candidate, California Species of Special Concern

**DISCUSSION OF IMPACTS**

***a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or United States Fish and Wildlife Service (USFWS)?***

*Less-than-Significant Impact with Mitigation Incorporated*

### *Special-status Plants*

Special-status plants including Delta tule pea, San Joaquin spearscale, Suisun Marsh aster, brittlescale, Bolander's water hemlock, Delta mudwort, Parry's rough tarplant, and crownscale have moderate to high potential to occur within the Project site. Suisun thistle, soft salty bird's beak, pappose tarplant, alkali milk vetch, broadleaf pondweed, California alkali grass, Congdon's tarplant, Carquinez goldenbush, saline clover, small spikerush, and hispid salty bird's beak have unlikely potential to occur. Construction activities, including ground disturbance or vegetation removal, could result in destruction of individual special-status plants, which is a potentially significant impact. Mitigation Measure BIO-1 would be implemented, which requires that an environmental awareness training be given to all construction crew members working on Project construction. The training program shall include education on sensitive resources such as special-status plant and wildlife species with potential to occur within the Project site, and on water quality and environmental protection measures. In addition, Mitigation Measures BIO-2a and BIO-2b would be implemented. Measure BIO-2a requires that surveys for special-status plants be conducted within the BSA to determine the presence of special-status plant species. If species are found, they shall be flagged and avoided via activity exclusion zones established by a qualified biologist. If plants cannot be avoided by Project work, Mitigation Measure BIO-2b shall be implemented, which requires the lead agency to mitigate for impacts to special-status plants via development to of a plant mitigation plan. The plan shall be developed based on the biological factors specific to each species and shall be prepared by a qualified biologist. Implementation of these measures would reduce potential impacts to special-status plants to a less-than-significant level.

### *Special-Status Wildlife*

**Special-Status and Nesting Birds**

Special-status birds including California black rail, California Ridgway's rail, burrowing owl, Suisun song sparrow, salt marsh common yellowthroat, and Northern harrier, may nest in trees in the Project site or in the immediate vicinity. In addition, non-special-status native birds (e.g., passerines, raptors) may nest on the ground, in trees, and in vegetation within and immediately surrounding the Project site. The active nests of such birds are protected under the Federal MBTA as well as by the CFGC. If construction begins during the avian nesting season, generally February 1 to August 31, nesting birds may be impacted through the removal of nest structures

or through localized disturbance sufficient to cause nest abandonment. Due to the protected status of these species under both the MBTA and CDFW, impacts to special-status and common native nesting birds is a potentially significant impact under CEQA.

Mitigation Measure BIO-3 would be implemented, which requires that Project construction activities be avoided during the nesting bird season, to the extent feasible. If Project work must occur during the nesting season, a pre-construction nesting bird survey shall be conducted within seven days of ground disturbance or tree or vegetation removal. If an active nest is located, a no disturbance buffer shall be established around the nest, and no Project-related activities or personnel may enter the buffer until the nest becomes inactive. Implementation of this measure would reduce potential impacts to special-status and nesting birds, aside from burrowing owl, California Ridgway's rail, and California black rail to a less-than-significant level. These three species are subject to additional mitigation measures described in the following sections.

***Burrowing Owl***

No permanent loss of BUOW habitat is anticipated as a result of the Project; however, temporary impacts to suitable habitat are anticipated. There is limited potential for direct impacts to occur to BUOW individuals within the Project site; however, direct impacts are possible due to interactions with construction traffic or entrapment in open trenches/holes, equipment, or materials. These impacts would be considered potentially significant under CEQA.

To reduce potential impacts to BUOW, Mitigation Measure BIO-4 would be implemented, which requires that pre-construction surveys be conducted by a qualified biologist prior to initiation of ground disturbance within suitable habitat areas. If unoccupied burrows are detected, they shall be covered to prevent owl re-entry. If occupied burrows are detected, they shall be avoided via establishment of buffer zones as recommended by CDFW guidance. If nests or burrows cannot be avoided, the District shall consult with CDFW to develop an appropriate mitigation strategy and obtain an incidental take permit, if necessary. Implementation of Mitigation Measure BIO-4, along with Mitigation Measure BIO-1 and BIO-3, would reduce potential impacts to BUOW to a less-than-significant level.

***California Ridgway's Rail and California Black Rail***

CRR and CBR may be present in tidal marsh and muted tidal marsh habitats in the vicinity of the Project site. The Project would generally fully avoid these areas, though some vegetation removal may be required at some sites. If needed, such removal would occur only from September 1 to January 31, outside of the rail breeding season. As such, impacts to rail habitat (if required) are anticipated to be both temporary, and minor in terms of the area impacted. Additionally, any injury or mortality to rails of either species is extremely unlikely given the methods of vegetation removal (see Mitigation Measure BIO-6). However, activities that generate noise and/or vibration, if they occur in proximity to CRR and CBR habitat, have the potential to disrupt the breeding activities of these species, which would be a potentially significant impact.

To reduce potential impacts to CRR and CBR, Mitigation Measure BIO-5 would be implemented for work areas within 700 feet of suitable habitat that would involve work during the breeding season. This measure requires that, prior to initiation of construction work in 2027, surveys for CRR and CBR be conducted in accordance with USFWS CRR protocol. If CRR or CBR is observed (aurally or visually) within 700 feet (CRR) or 300 feet (CBR) of the Project site, work in that portion of the site shall be restricted to outside of the nesting season (i.e., September 1, –

January 31). Work will commence on or after September 1 in these areas, unless engineering testing indicates that work must absolutely proceed ahead of this date due to certain site conditions. Otherwise, no work or staging shall occur during the nesting season less than 700 feet or 300 feet from suitable nesting habitat, for CRR and CBR respectively. In addition to Mitigation Measure BIO-6, implementation of Mitigation Measures BIO-6 and BIO-1 would reduce potential impacts to CRR and CBR to a less-than-significant level.

**Salt Marsh Harvest Mouse**

No permanent loss of SMHM habitat would occur as a result of the Project. The Project would result in temporary, indirect impacts to SMHM due to temporary impacts to suitable habitat. Direct impacts could also occur if SMHM individuals enter into the Project site during construction from adjacent tidal marsh and managed marsh areas. Direct impacts may occur due to interactions with construction traffic or entrapment in open trenches/holes, equipment, or materials. In addition, individual mice may seek refuge in equipment or materials overnight and use of equipment or materials with these species inside may cause mortality. If no impact avoidance or minimization measures are implemented, direct mortality or harassment could occur to individual SMHM present in these areas during construction, which is a potentially significant impact under CEQA.

To reduce potential impacts to SMHM, Mitigation Measure BIO-6 would be implemented This measure requires that a USFWS-Approved Biologist identify SMHM habitat prior to initiating construction, and that a qualified biologist be on-site during all construction activities occurring within or immediately adjacent to SMHM habitat, including vegetation removal. Vegetation shall be cleared under the direction of a USFWS-Approved Biologist in a manner that minimizes potential to injure or kill SMHM. Further, if SMHM species are encountered during construction, work shall be halted until the individual has left the area on its own or the qualified biologist clears the mouse out via vegetation disturbance. Implementation of Mitigation Measure BIO-6, along with Mitigation Measure BIO-1, would reduce potential impacts to SMHM to a less-than-significant level.

**California Red-legged Frog**

Adult and sub-adult CRLF may be found dispersing, foraging or aestivating within suitable habitat in the Project site. The Project may adversely impact CRLF adults through noise from construction activities, access, staging and stockpiling of materials, equipment spills, and harassment or injury during relocation, which is a potentially significant impact under CEQA.

To reduce potential impacts to CRLF, Mitigation Measure BIO-7 would be implemented. This measure requires that a Covered Species Relocation Plan be prepared by the District in consultation with relevant agencies and implemented during Project construction. The plan shall describe requirements for monitoring, surveying, capture, care, relocation, and reporting for CRLF encountered during Project activities. The plan shall be approved by USFWS prior to the start of construction activities.

Further, Mitigation Measure BIO-7 requires that a USFWS-approved biologist conduct a pre-construction survey for CRLF where suitable habitat occurs in and adjacent to the Project site within 48 hours of commencement of initial construction activities. If CRLF is found, the Approved Biologist shall relocate the animal at least 200 feet outside of the Project site using methods described in BIO-7. During initial stages of ground disturbance, a qualified biologist shall be present to observe for CRLF. The qualified biologist shall also observe removal of all

vegetation that is too dense to be surveyed until a presence/absence determination can be made by the biologist. If CRLF are encountered within the work area, biological monitoring shall continue. In addition, this measure requires that erosion control structures and materials shall not include monofilament or otherwise contain components that could entrap and kill CRLF. All construction activities shall cease one half hour before sunset and shall not begin prior to one half hour before sunrise. Implementation of Mitigation Measure BIO-7, along with Mitigation Measure BIO-1 would reduce potential impacts to CRLF to a less-than-significant level.

With implementation of Mitigation Measures BIO-1, BIO-2a, BIO-2b, BIO-3, BIO-4, BIO-5, BIO-6, and BIO-7, the Project would not result in a substantial adverse impact on any special-status plant or wildlife species. The impact would be less than significant with mitigation incorporated.

***b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS?***

*Less-than-Significant Impact with Mitigation Incorporated*

Sensitive natural communities within the Project site include saltgrass meadow, riparian woodland, non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetlands, an intermittent stream, alkali seasonal wetland depressions, and seasonal drainage. Permanent impacts are anticipated to the alkali seasonal wetland depressions where the access road construction is set in the central portion of the Project site. Other impacts include manhole work, staging areas, access road limits of disturbance, and the bypass alignments, which would temporarily impact the non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetlands, intermittent streams, alkali seasonal wetland depressions areas, and the seasonal drainage, all of which are considered sensitive communities. The access road areas are also located immediately adjacent to other sensitive communities and could result in indirect impacts due to incidental discharges to adjacent aquatic habitats. All indirect and direct impacts to these sensitive habitats are potentially significant under CEQA.

To reduce potential indirect and temporary impacts to sensitive natural communities, including non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetlands, intermittent streams, seasonal drainage, and alkali seasonal wetland areas, Mitigation Measure BIO-8 would be implemented. This measure requires that BMPs for sensitive natural communities and aquatic resources be implemented throughout Project construction, including, but not limited to the following:

- Erosion control measures shall be utilized throughout all phases of Project where sediment runoff from construction could enter waters.
- No fueling, cleaning, or maintenance of vehicles or equipment shall take place within any areas where an accidental discharge may cause hazardous materials to enter waterways.
- Equipment and vehicles shall be checked and maintained daily for leaks, and all equipment and vehicles shall be cleaned before arriving on site and before leaving the site to prevent spread of invasive plants.
- Staging and storage areas for equipment, materials, fuels, lubricants and solvents shall be located outside of the stream channel banks.

- Stationary equipment such as motors, pumps, and generators, located adjacent to aquatic features shall be positioned over secondary containment sufficient to arrest a catastrophic failure.
- Stockpiles of excavated soil or other shall be covered when not in active use (i.e., would not be used, or moved for 72 hours). All trucks hauling soil, sand, and other loose materials shall be covered.

Further, Mitigation Measure BIO-8 requires the District to seek permission and obtain approval for Project work from the USACE and RWQCB prior to Project construction. The District shall implement any additional avoidance, minimization, or other compensatory mitigation measures required by USACE and RWQCB as Project conditions of approval. Implementation of Mitigation Measure BIO-8 would reduce temporary impacts to sensitive natural communities to a less-than-significant level.

Construction of the access road in the central Project site would result in permanent loss of aquatic habitat which is considered a sensitive natural community. To mitigate for the permanent loss of aquatic habitats, Mitigation Measure BIO-9 would be implemented. This measure requires the District to mitigate for permanent impacts to aquatic habitat by either purchasing wetland mitigation credits, creating new aquatic habitat on site, or funding a local restoration project that enhances, protects, or restores wetlands with similar functions. Implementation of Mitigation Measure BIO-9 would reduce permanent impacts of the Project to sensitive natural communities to a less-than-significant level.

***c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?***

*Less-than-Significant Impact with Mitigation Incorporated*

All anticipated direct and potential indirect impacts and mitigation to potential jurisdictional areas are discussed above in Thresholds a) and b). Implementation of Mitigation Measures BIO-8 and BIO-9, as discussed above, would reduce potential impacts to aquatic resources to a less-than-significant level.

***d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?***

*No Impact*

No portions of the Project site provide connectivity between areas of suitable habitat. For terrestrial and avian species, all portions of the BSA are within a greater context of urban development, recreational and agricultural land and for aquatic species, there is no connectivity between the BSA and upstream freshwater habitats. Therefore, the Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species. No impact would occur.

***e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?***

*Less-than-Significant Impact with Mitigation Incorporated*

Local plans and policies that protect biological resources include the County of Contra Costa General Plan and City of Pittsburg General Plan. Both plans contain policies that require protection of biological resources such as special-status species, sensitive habitats, and wildlife migration corridors. As described throughout this section, Mitigation Measures BIO-1, BIO-2a, BIO-2b, BIO-3, BIO-4, BIO-5, BIO-6, BIO-7, BIO-8, and BIO-9 would reduce potential impacts of the Project on biological resources to a less-than-significant level. Therefore, with implementation of these measures, the Project would not conflict with any local plans or policies protecting biological resources. The impact would be less than significant with mitigation incorporated.

***f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?***

*No Impact*

The Project site does not fall within the East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan area. Thus, the proposed Project would not conflict with any provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other habitat conservation plan. No impact would occur.

## MITIGATION MEASURES

### *Mitigation Measure BIO-1: Worker Environmental Awareness Training*

The District shall retain a qualified biologist to conduct an environmental awareness training program, which shall be given to all crew members working on the Project. The training shall include education on sensitive resources such as special-status species with potential to occur within the Study Area, water quality, and environmental protection measures. The construction contractor shall ensure that any new workers who begin work after the initial training also receive the awareness training prior to participating in ground-disturbing activities.

### *Mitigation Measure BIO-2a: Special-Status Plants*

Prior to any vegetation removal or ground-disturbing activities, surveys shall be conducted within the Project site by a qualified biologist to determine the presence of Delta tule pea, San Joaquin spearscale, Suisun Marsh aster, brittlescale, Bolander's water hemlock, Delta mudwort, crownscale, Suisun thistle, soft salty bird's beak, pappose tarplant, Parry's rough tarplant, alkali milk vetch, broadleaf pondweed, California alkali grass, Congdon's tarplant, Carquinez goldenbush, saline clover, small spikerush, and hispid salty bird's. Surveys shall be conducted following regulatory agency and CNPS survey protocols (CDFW 2018) and will be floristic in nature. These guidelines require special-status plant surveys to be conducted at the proper time of year when species are both "evident" and identifiable. Field surveys shall be scheduled to coincide with known blooming periods, and/or during periods of physiological development that are necessary to identify the plant species of concern. If no special-status plant species are found, then no additional mitigation measures are necessary.

If the survey determines that special-status plant species are present within or adjacent to the Study Area, a qualified biologist shall establish activity exclusion zones around the individual plants. These zones will be areas where no ground-disturbing activities shall take place, including construction of new facilities, construction staging, or other temporary construction work. Activity exclusion zones for special-status plant species shall be established prior to

construction activities around each occupied habitat site, the boundaries of which shall be clearly marked with standard orange plastic construction exclusion fencing or its equivalent. The establishment of activity exclusion zones shall not be required if no construction-related disturbances would occur within 250 feet of the areas supporting special-status plant species populations

### *Mitigation Measure BIO-2b: Special-status Plants*

If special-status plants are observed and cannot be fully avoided, the District shall mitigate for impacts by developing a plant restoration plan. The plant restoration plan shall be developed by a qualified biologist and shall evaluate biological factors specific to each species to be impacted such as their habitat requirements to determine an appropriate mitigation approach and ratio. Mitigation approaches may include but may not be limited to replanting via seed collection and seed casting, translocating, habitat restoration or enhancements, or contribution of funds to a local restoration project or entity.

### *Mitigation Measure BIO-3: Nesting birds*

To the extent feasible, Project-related activities should be avoided during the nesting bird season, generally defined as February 1 – August 31. If Project work must occur during the nesting bird season, a pre-construction nesting bird survey shall be conducted by a qualified biologist within 7 days of ground disturbance or vegetation removal to avoid disturbance to active nests, eggs, and/or young of nesting birds. Surveys shall be conducted in all potential nesting habitat located at, and adjacent to, Project work sites and in staging and storage areas.

If an active nest is located, a no disturbance buffer shall be established around the nest. Active nest sites and protective buffer zones shall be designated as "Environmentally Sensitive Areas" where no Project-related activities or personnel may enter until a qualified biologist determines that the young have fully fledged, or the nest otherwise becomes inactive (e.g., due to predation), and will no longer be adversely affected by the Project. Suggested buffer zone distances differ depending on species, existing conditions, and nest placement and shall be determined and implemented in the field by a qualified biologist.

### *Mitigation Measure BIO-4: Burrowing Owl Surveys*

Prior to the initiation of ground disturbance within BUOW suitable habitat, a qualified biologist shall conduct pre-construction surveys for burrowing owl. Surveys shall be conducted regardless of the time of year, as burrowing owls may use burrows within the Project site during the non-nesting season. The survey effort shall be performed in accordance with the methods described in the CDFG 2012 Staff Report on Burrowing Owl Mitigation (CDFG 2012). Surveys shall encompass a sufficient buffer zone to detect owls nearby that may be impacted, which shall be a minimum of 50 meters during the non-breeding season and 200 meters during the breeding season. Surveys shall include at least four surveys spread evenly throughout the survey period, pursuant to the CDFW 2012 Staff Report guidelines. Time lapses of two weeks or greater between surveys or Project activities shall trigger subsequent surveys, as determined by a qualified biologist, including, but not limited to, a final survey within 24 hours prior to ground disturbance and before construction equipment mobilizes to the Project site.

Detected occupied burrows shall be avoided pursuant to the buffer zones recommended in the CDFW 2012 Staff Report, unless otherwise approved in writing by CDFW. If nest/burrow sites

cannot be avoided, the Project proponent shall consult with CDFW to develop an appropriate mitigation strategy and obtain an incidental take permit, if necessary. Any passive relocation plan and habitat compensation or other proposed mitigation alternatives shall be subject to CDFW approval.

### *Mitigation Measure BIO-5: California Ridgway's Rail and California Black Rail*

Prior to the initiation of construction work, presence/absence surveys for CRR and CBR as per the 2015 USFWS Protocol shall be conducted where work activities will occur within 700 feet of potential breeding habitat (tidal/brackish marsh). If CRR or CBR is observed (aurally or visually) within 700 feet of the Project site, work in that portion of the Project site shall be restricted to outside of the nesting season (i.e., September 1 – January 31). No work or staging shall occur less than 700 feet from suitable nesting habitat during the nesting season prior to the completion of surveys.

The survey shall be initiated between January 15 and February 1. Four surveys (two passive, and two active for CRR) shall be conducted at least two weeks apart and take place from one hour before sunrise to one hour after sunrise in the morning and from one hour before and after sunset in the evenings. For passive surveys an observer should be assigned to each survey station for the duration of two hours. For active surveys an observer should be assigned to each survey station for a duration of 45 minutes.

Nest avoidance measures will not be necessary for work occurring outside call center avoidance buffers and during the non-breeding season (September 1 – January 31) as the Project will not impact sensitive brackish marsh nesting habitat. If take authorization for CRR is granted by the USFWS as part of permitting for the Project, it may be possible to complete work outside of the construction period described in this mitigation measure.

However, in some instances, engineering methods and/or processes may require work during the nesting season in areas within 700 feet (CRR) and 300 feet (CBR) of potential breeding habitat. In these instances, work will be allowed to proceed to ensure work can be accomplished without putting personnel or adjacent infrastructure at risk. No removal of tidal/brackish marsh vegetation shall occur during the rail breeding season in association with such work.

### *Mitigation Measure BIO-6: Salt Marsh Harvest Mouse*

Potential adverse effects from Project-related noise shall be minimized to the maximum extent practicable by implementing sufficient disturbance buffers between noise-generating Project activities and SMHM habitat. Prior to initiating construction, a USFWS-Approved Biologist shall identify suitable SMHM habitat within and adjacent to the Project site. A Qualified Biologist will be on-site during all construction activities occurring within or immediately adjacent to SMHM habitat, including vegetation removal. Disturbance to suitable habitat and vegetation removal will be minimized to the maximum extent feasible to accommodate construction. Vegetation shall be removed from the work area and within a 25-foot buffer on both sides of the work area using handheld motorized equipment (e.g., string trimmers and fixed-blade weed trimmers). Vegetation shall be cleared under the direction of the USFWS-Approved Biologist in a manner that minimizes potential to injure or kill SMHM (e.g., vegetation cut in multiple passes, removed systematically from one area toward another to encourage retreat of any animals present).

If harvest mice species are encountered during vegetation clearing or other activities, work will be halted until the individual has left the area on its own or until the qualified Biologist disturbs

the vegetation ahead of the vegetation clearing (e.g., by carefully walking through it) in an attempt to haze the mice out. Due to the difficulty with field identification of SMHM, these procedures will apply to all harvest mice or any potential harvest mouse species.

Cut vegetation shall be immediately removed from the cleared area following cutting, so that no standing or cut vegetation remains in the cleared area. Construction will commence in cleared areas no less than 48 hours after vegetation clearing is completed at each given location. Construction activities will be limited to one half hour after sunrise to one half hour before sunset. If a work area(s) will be active for longer than one week, an exclusion fence shall be installed as indicated by the Qualified Biologist or USFWS-Approved Biologist. If no exclusion fence is installed, work areas in potential SMHM habitat shall be monitored full time by a qualified USFWS-approved biologist.

***Mitigation Measure BIO-7: California Red-legged Frog***

The District shall prepare a Covered Species Relocation Plan (Plan) in consultation with relevant agencies, including communications, monitoring, surveys, capture, care, relocation and reporting for CRLF encountered during Project activities. The District shall obtain Plan approval from USFWS prior to the start of construction activities.

Within 48 hours prior to commencement of initial construction activities, a USFWS-approved biologist shall conduct a pre-construction survey for CRLF in and adjacent to the Project site where suitable habitat occurs (areas with vegetative cover and/or standing water). During the initial stages of ground disturbance, a qualified biologist shall be present to observe for CRLF. If vegetation is too dense to be adequately surveyed (e.g. thick blackberry bushes, etc.), a qualified Biologist shall observe vegetation removal until vegetation is cleared sufficiently for the biologist to survey the area and verify the presence or absence of CRLF. If CRLF are not observed during the preconstruction survey and none are encountered during initial ground disturbance, no further biological monitoring will be required. However, if CRLF are encountered within the work area, or are observed within proximity to the work area such that they may be harmed by ongoing restoration, the qualified biologist shall perform site clearance at the beginning of each day and shall monitor construction activities throughout the day. In the event a CRLF is observed within the work area either during the preconstruction surveys or when monitoring, the USFWS-approved biologist shall capture and relocate the individual to suitable habitat at least 200 feet outside of the Project site following the approved Capture and Relocation Plan.

Erosion control structures and materials shall not include monofilament or otherwise have components that may entrap and kill wildlife. All construction activities shall cease one half hour before sunset and shall not begin prior to one half hour before sunrise. Construction activities will not occur within 24 hours after rain events projected to deliver > 0.25 inches or greater of precipitation without the presence of a qualified biologist during all work activities. Any open holes or trenches shall be covered or have escape ramps no steeper than 45 degrees installed at the end of each working day to prevent wildlife from becoming entrapped. Work shall be avoided within suitable habitat from October 15 (or the first measurable rainfall of 1 inch or greater) to May 1.

***Mitigation Measure BIO-8. Water Quality Protection***

The District shall seek permission and obtain approval from the USACE and RWQCB prior to Project construction. Any additional avoidance, minimization, and/or compensatory mitigation required by the regulatory agencies shall be implemented as Project conditions of approval. Additionally, the following best management practices (BMPs) would be implemented during Project construction to reduce impacts of construction work on biological resources and water quality:

- Erosion control measures shall be utilized throughout all phases of the project where sediment runoff from construction may potentially enter waters. Erosion control structures shall be monitored for effectiveness and will be repaired or replaced as needed. Appropriate erosion control measures shall be installed around any stockpiles of soil or other materials which could be mobilized by rainfall or runoff. All erosion control materials shall utilize natural biodegradable materials and shall not contain plastic monofilament that may entangle wildlife.
- No fueling, cleaning, or maintenance of vehicles or equipment shall take place within any areas where an accidental discharge may cause hazardous materials to enter waterways.
- Any equipment or vehicles used for the Project shall be checked and maintained daily to prevent leaks of fluids that could be deleterious to aquatic habitats.
- All equipment shall be cleaned before arriving on the site and before removal from the site to prevent spread of invasive plants.
- Construction disturbance or removal of vegetation shall be restricted to the minimum footprint necessary to complete the work. The work area will be delineated where necessary to minimize impacts to vegetated habitats beyond the work limit, or to protected vegetation within the work area.
- Staging and storage areas for equipment, materials, fuels, lubricants and solvents shall be located outside of the stream channel banks.
- Stationary equipment such as motors, pumps, and generators, located adjacent to aquatic features shall be positioned over secondary containment sufficient to arrest a catastrophic failure.
- All activities performed near aquatic features shall have absorbent materials designated for spill containment and cleanup activities on-site for use in an accidental spill.
- Stockpiles of excavated soil or other shall be covered when not in active use (i.e., would not be used, or moved for 72 hours). All trucks hauling soil, sand, and other loose materials shall be covered.
- No construction debris of any type shall be allowed to enter or be placed where they may be washed into any aquatic features.
- At the end of the Project, all temporary flagging, fencing, or other materials shall be removed from the Project site and vicinity of the channel.
- No equipment shall be washed down where runoff could enter aquatic habitats.
- No motorized equipment shall be left within the channel overnight.

***Mitigation Measure BIO-9: Aquatic Habitats***

Disturbance to aquatic habitats shall be permitted through the appropriate regulatory agencies (i.e., USACE or Regional Water Quality Control Board). The District shall ensure that temporary impacts are be restored to pre-construction conditions through preparation of a Habitat Restoration Plan that includes provisions for seeding and/or planting following construction and monitoring of the restored area to ensure restoration of habitat function. The District shall mitigate for permanent loss of aquatic habitats at a minimum of a 1:1 ratio by purchasing wetland mitigation credits, creating or enhancing onsite aquatic habitat, or funding a local restoration project(s) that restores wetlands with similar functions.

### 4.2.5 Cultural Resources

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| b) | Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? | ☐ | ☒ | ☐ | ☐ |
| c) | Disturb any human remains, including those interred outside of dedicated cemeteries? | ☐ | ☒ | ☐ | ☐ |

Tom Origer & Associates (Origer) prepared a Cultural Resources Study for the Project in September 2025 (Barrow & Karnowski 2025, Appendix D). The report was prepared to comply with both Section 106 of the National Historic Preservation Act (NHPA) and CEQA. The Area of Potential Effects (APE) for the study included approximately 78 acres and encompassed the Project site. The study included a records search, archival and literature review, a review of the Sacred Lands File, an archaeological site sensitivity assessment, and a field survey of the APE. The information presented in this section is based on and adapted from the Cultural Resources Study. See *Section 4.2.18, Tribal Cultural Resources,* for an analysis of impacts related to Tribal Cultural Resources and information regarding tribal consultation.

#### ENVIRONMENTAL SETTING

##### *Prehistory*

The concept of prehistory refers to the period of time before events were recorded in writing and varied worldwide. Because there is no written record, the understanding of California prehistory relies on archaeological materials and oral histories passed down through generations. In the 1930s, archaeologists from Sacramento Junior College and the University of California began piecing together a sequence of cultures primarily based on burial patterns and ornamental artifacts from sites in the lower Sacramento Valley (Heizer and Fenenga 1939). Their cultural sequence became known as the Central California Taxonomic System, which identified three culture periods termed the Early, Middle, and Late Horizons, but without offering date ranges. Refinement of the Central California Taxonomic System became a chief concern of archaeologists as the century progressed.

It is estimated that native peoples have occupied the region for over 11,000 years, and during that time, shifts took place in their social, political, and ideological regimes (Fredrickson 1973). Early occupants appear to have had an economy based largely on hunting, with limited exchange, and social structures based on the extended family unit. Later, milling technology and an inferred acorn economy were introduced. This diversification of economy appears to be

coeval with the development of sedentism and population growth and expansion. Sociopolitical complexity and status distinctions based on wealth are also observable in the archaeological record, as evidenced by an increased range and distribution of trade goods (e.g., shell beads, obsidian tool stone), which are possible indicators of both status and increasingly complex exchange systems.

These horizons or periods are marked by a transition from large projectile points and milling slabs, indicating a focus on hunting and gathering during the Early Period, to a marine focus during the Middle Period evidenced by the number of shellmounds in the Bay Area. The Middle Period also saw more reliance on acorns and the use of bowl-shaped mortars and pestles. Acorn exploitation increased during the Late Period and the bow and arrow were introduced.

Prehistoric archaeological site indicators expected to be found in the region include but are not limited to obsidian and chert flakes and chipped stone tools; grinding and mashing implements such as slabs and hand-stones, and mortars and pestles; and locally darkened midden soils containing some of the previously listed items plus fragments of bone, shellfish, and fire-affected stones.

### *History*

Contra Costa County was formed in 1850 when California became a part of the United States. At that time, the County included a portion of present-day Alameda County, and its present boundary was formed in 1853. The City of Pittsburg was founded by Colonel Jonathan D. Stevenson in 1849 after Stevenson purchased the Rancho Los Medanos from the original grantees. Originally known as Pittsburg Landing, it was primarily a shipping point for coal mined from Mount Diablo. Stevenson wanted it to become the "New York of the Pacific" and went to great lengths to create a large and prosperous seaport. He even attempted to have it become the state capital in 1850 but lost to the City of Vallejo (Hoover et al. 2002).

Pittsburg experienced several booms and busts over the years as the importance of mining fluctuated. Though the fishing industry helped stabilize the community, it wasn't until 1910 when the Columbia-Geneva Steel Company came to town and employed 60 people that a stable economy was established. Over the years, the factory grew, and additional factories came to Pittsburg (Emmanuels 1986). Pittsburg enjoyed a stable economy from these factories for over 60 years, but in the 1970s, many factories closed (Aeillo 2004).

In 1942, the War Department purchased nearly 3,000 acres to develop Camp Stoneman, the largest troop staging area on the west coast of the United States during World War II. In 1954, the camp was decommissioned, and the land was sold and donated to various entities (Johnson 2012).

Historic site indicators include fragments of glass, ceramic, and metal objects; milled and split lumber; and structure and feature remains such as building foundations and discrete trash deposits (e.g., wells, privy pits, dumps).

## REGULATORY SETTING

### *Cultural Resources*

As set forth in Section 5024.1(c) of the Public Resource Code (PRC), for a cultural resource to be deemed "important" under CEQA and thus eligible for listing on the California Register of Historical Resources (California Register), it must meet at least one of the following criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; or
2. Is associated with the lives of persons important in our past; or
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value; or
4. Has yielded or is likely to yield, information important to prehistory or history.

Historic-era structures older than 50 years are most commonly evaluated in reference to Criterion 1 (important events), Criterion 2 (important persons) or Criterion 3 (architectural value). To be considered eligible under these criteria, the property must retain sufficient integrity to convey its important qualities. Integrity is judged in relation to seven aspects including: location, design, setting, materials, workmanship, feeling, and association. Prehistoric and historic-era archaeological resources are commonly evaluated with regard to Criterion 4 (research potential).

Guidelines for the implementation of CEQA define procedures, types of activities, persons, and public agencies required to comply with CEQA. Section 15064.5(b) prescribes that project effects that would "cause a substantial adverse change in the significance of an historical resource" are significant effects on the environment. Substantial adverse changes include both physical changes to the historical resource, or to its immediate surroundings.

Historic properties are also protected under federal law under the NHPA. The working of the criteria for inclusion on the National Register of Historic Places (National Register) is similar to the working of the California Register criteria. Under PRC Section 5024.1(d)(1), a property that is listed on the National Register is automatically listed in the California Register as well.

### *Archaeological Resources*

Section 21083.2 of the CEQA guidelines also defines "unique archaeological resources" as "any archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and shows that there is a demonstrable public interest in that information.
- Has a special and particular quality, such as being the oldest of its type or the best available example of its type.
- Is directly associated with a scientifically recognized important prehistoric or historic event or person."

This definition is equally applicable to recognizing "a unique paleontological resource or site." CEQA Section 15064.5 (a)(3)(D), which indicates "generally, a resource shall be considered historically significant if it has yielded, or may be likely to yield, information important in prehistory or history," provides additional guidance.

### *Tribal Cultural Resources Assembly Bill 52*

Assembly Bill (AB) 52 (Chapter 532, Statutes 2014) required an update of the CEQA Guidelines to include questions related to impacts to tribal cultural resources. AB 52 establishes a consultation process with all California Native American Tribes on the NAHC List, Federal and Non-Federal Recognized Tribes. AB 52 also establishes a new class of resources: Tribal Cultural Resources. Key components of AB 52 include consideration of Tribal Cultural Values in determination of project impacts and mitigation and required Tribal notice and meaningful consultation.

PRC Section 21080.3.2(b) states that consultation ends when either 1) parties agree to mitigation measures or avoid a significant effect on a tribal cultural resource, or 2) a party, acting in good faith and after reasonable effort concludes that mutual agreement cannot be reached.

Tribal consultation conducted for this Project is described in detail in *Section 4.2.18, Tribal Cultural Resources*.

Human Remains Procedures for the treatment of discovered human remains are outlined in California Health and Safety Code §§ 7050.5 and 7052 and PRC § 5097. In the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery, the following steps shall be taken:

1) There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:
    a. The County coroner has been contacted and has determined that no investigation of the cause of death is required, and
    b. If the Coroner determines the remains to be Native American:
        i. The coroner shall contact the NAHC within 24 hours of discovery.
        ii. The NAHC shall identify the person or persons it believes to be the most likely descended from the deceased Native American.
        iii. The most likely descendant may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of the human remains and associated grave goods with appropriate dignity.

### *County of Contra Costa General Plan*

The County's General Plan contains the following relevant policies related to geology and soils and paleontological resources:

> **COS-P106:** Upon discovery of significant historic or prehistoric archaeological artifacts or fossils during project construction, require ground-disturbing activities to halt within a 50-foot radius of the find until its significance can be determined by a qualified historian,

archaeologist, or paleontologist and appropriate protection and preservation measures developed.

**COS-P10.7:** Require significant historic, archaeological, and paleontological resources to either be preserved onsite or adequately documented as a condition of removal. Any documentation of historic resources shall be conducted in accordance with Historic American Building Survey (HABS) Level III standards, as defined by the US Secretary of the Interior.

## CULTURAL RESOURCES STUDY FINDINGS

### *Archival Research*

Results of the records search indicated that the majority of the APE had been previously subjected to a cultural resources survey, and that 27 studies have been conducted within a half mile of the site.

Five cultural resources have been documented within the APE, including one archaeological site, one built environment resource, and three railroads. The archaeological site consists of a historical glass scatter and was recommended not eligible for inclusion on the National Register or California Register upon documentation.

The built environment resource consists of the Shell Pond complex, which comprises a discharge pond, a levee road, two outflow weirs, and a dredge machine sed for wastewater discharges from operations of the Shell chemical Company. Of this complex, only a small portion of the levee road extended into the APE. Upon documentation, this resource was recommended as not eligible for inclusion on the National Register or California Register.

The Project site crosses three railroads: the Sacramento Northern Railway, the Atchison Topeka and Santa Fe Railroad, and the Southern Pacific Railway. The portions of these railroads within the Project site were evaluated and found ineligible for inclusion on the National Register.

There are 25 cultural resources recorded within a half mile of the Project site. There are no known ethnographic sites within one mile of the Project site.

### *Sensitivity for Buried Sites*

The sensitivity of the Project site for buried archaeological sites was analyzed using a method which considers the age of the landform, slope, and proximity to water (Byrd et al. 2017). A location is considered to have highest sensitivity if the landform dates to the Holocene, has a slope of five percent or less, is within 150 meters of fresh water, and 150 meters of a confluence. Note, the Holocene Epoch is the current period of geologic time, which began about 11,700 years ago, and coincides with the emergence of human occupation of the area. A basic premise of the model is that archaeological deposits will not be buried within landforms that predate human colonization of the area. Calculating these factors using the buried site model, a location's sensitivity is scored on a scale of 1 to 10 and classed as follows: lowest (<1); low (1-3); moderate (3-5.5); high (5.5-7.5); highest (>7.5).

Based on landform age and the environmental setting, the buried site sensitivity model described above would indicate that all portions of the APE on Holocene landforms would

exhibit a high buried site sensitivity. However, some of these Holocene age deposits consist of Bay mud, which would have been subject to regular inundations being in marshland and therefore would not have been conducive to habitation. As such, there is a very low potential for there to be buried archaeological site indicators within the portions of the APE that lie Bay mud formations. The portions of the APE that lie on Holocene age alluvium would have been a stable land surface, above regular inundations, and so would have a potential for buried archaeological sites. However, a component of Byrd et al.'s model is that the landform also needs to be near a source of fresh water. While the Sacramento and San Joaquin Rivers lie to the north of the APE, the lower reaches of the rivers can mix with saline water from San Francisco Bay, making it too brackish to drink. Therefore, the most sensitive areas to buried sites would have been in places where stable sources of water flowed out of the hills. After analyzing Project elements and environmental factors, the portion of the APE that has a high potential for buried archaeological resources is in an area south of the railroad rights-of-way and east of McAvoy Road.

### *Field Survey*

An intensive field survey of the Project site was completed by Julia Karnowski and Nelson Thompson on July 3, 2025. Ground visibility ranged from excellent to poor, with vegetation (grasses and forbs) being the primary hindrance. Hoes were used, as needed, to clear patches of vegetation to expose the ground surface. Because the majority of the APE had been previously surveyed, survey efforts were focused on places that had not been previously surveyed, and where resources were in close proximity or potentially present.

No previously undocumented cultural resources were found within the APE. No evidence of the previously recorded archaeological site was noted. The portion of the levee road associated with the Shell Pont complex no longer exists within the APE. Portions of the three documented railroads were observed within the APE.

## DISCUSSION OF IMPACTS

***a) Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?***

*No Impact*

No historical resources, as defined by CEQA Guidelines Section 15064.5, were identified during the records search or field survey of the APE. The previously documented built environment resource (Shell Ponds complex) was determined to be ineligible for inclusion on the National Register and California Register. Furthermore, the portion of this resource that extended into the APE, the levee road, is no longer present. The portions of the three railroads within the APE were found ineligible for inclusion on the National or California Register. Therefore, the Project would not cause a substantial adverse change in the significance of a historical resource. No impact would occur.

***b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?***

*Less-than-Significant Impact with Mitigation Incorporated*

One archaeological resource has been previously documented within the Project site but was found ineligible for listing on the National and California Registers. Moreover, no evidence of this resource was observed during the field survey of the APE. Most areas of the APE have a low

sensitivity for buried archaeological resources, aside from two areas in the western extent of the APE south of the railroad rights-of-way. Although there are no known archaeological resources in this area, replacement of manholes could result in significant impacts to unknown archaeological resources that may be present in this area. Therefore, Mitigation Measure CUL-1 will be implemented, which describes procedures to be followed should accidental discovery of archaeological resources occur during construction. With implementation of these measures, the Project would not cause a substantial adverse change in the significance of an archaeological resource. The impact would be less than significant with mitigation incorporated.

***c) Disturb any human remains, including those interred outside of dedicated cemeteries?***

*Less-than-Significant Impact with Mitigation Incorporated*

There are no known human remains located within the APE. However, ground-disturbing activities during construction have the potential to impact unknown human remains which may be buried beneath the work areas. The Project would implement Mitigation Measure CUL-2, which contains proper procedures that must be followed in the event of discovery of human remains during construction. With implementation of mitigation Measure CUL-2, the Project would not disturb any human remains, including those interred outside of dedicated cemeteries. The impact would be less than significant with mitigation incorporated.

**MITIGATION MEASURES**

***Mitigation Measure CUL-1. Accidental Discovery***

If buried materials are encountered, all soil disturbing work shall be halted within 50 feet of the location of any discovery until a qualified archaeologist completes a significance evaluation of the find(s) pursuant to Section 106 of the National Historic Preservation Act (36CFR60.4). The local tribe shall also be contacted to evaluate the find and determined whether it is a tribal cultural resource. Prehistoric archaeological site indicators expected within the general area include chipped chert and obsidian tools and tool manufacture waste flakes; grinding and hammering implements that look like fist-size, river-tumbled stones; and for some rare sites, locally darkened soil that generally contains abundant archaeological specimens. Historical remains expected in the general area commonly include items of ceramic, glass, and metal. Features that might be present include structure remains (e.g., cabins or their foundations) and pits containing historical artifacts.

***Mitigation Measure CUL-2. Human Remains***

Per the requirements of the California Code of Regulations, Title 14, Chapter 3, Section 15064.5(e) if human remains are encountered during the course of the Project, excavation or disturbance of the location must be halted in the vicinity of the find, and the county coroner contacted. If the coroner determines the remains are Native American, the coroner will contact the NAHC. The NAHC will identify the person or persons believed to be most likely descended from the deceased Native American. The most likely descendent shall make recommendations regarding the treatment of the remains with appropriate dignity.

### 4.2.6 Energy

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? | ☐ | ☐ | ☒ | ☐ |
| b) | Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? | ☐ | ☐ | ☐ | ☒ |

#### ENVIRONMENTAL SETTING

Electricity and natural gas in the City are provided by Pacific Gas & Electric (PG&E). In the County, the main provider of energy is MCE Clean Energy (MCE), but PG&E continues to own and operate all electricity delivery and infrastructure in the area. PG&E is also the provider of natural gas in the County.

The County has a Climate Action Plan (detailed below), but the City is still in the process of developing a plan to address GHG emissions and other sustainability programs.

#### REGULATORY SETTING

##### *Contra Costa County 2024 Climate Action and Adaptation Plan*

The 2024 Contra Costa County Climate Action and Adaptation Plan (CAAP) is a strategic roadmap aiming to significantly reduce greenhouse gas emissions and build resilience to climate change impacts throughout the county's unincorporated areas. The plan establishes ambitious emissions reduction targets (40 percent below 1990 levels by 2030, 80 percent by 2050, and supporting net-zero by 2045) and outlines actions across renewable energy, efficient buildings, sustainable transportation, green infrastructure, waste reduction, and community adaptation. With a strong emphasis on climate equity, the CAAP integrates climate considerations into land use, housing, health, and emergency preparedness policies, fostering a safer, healthier, and more sustainable future for all residents.

#### DISCUSSION OF IMPACTS

***a) Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?***

*Less-than-Significant Impact*

The use of equipment and vehicles during Project construction would require the use of energy resources. The construction process would be designed to be efficient to avoid excess monetary costs. Specifically, equipment and fuel would not be used wastefully during construction due to

the added expense associated with renting, maintaining, and fueling equipment. As such, energy and fuel would not be wasted or used inefficiently by construction equipment and vehicles. Project operation would not result in wasteful, inefficient, or unnecessary consumption of energy resources. The proposed upgrades to the wastewater system would increase the energy efficiency of the system by replacing deteriorated infrastructure, thus requiring less continued maintenance. Therefore, operation of the Project would result in a beneficial long-term impact to energy resources. Therefore, the Project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during construction or operation. The impact would be less than significant.

***b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?***

*No Impact*

The County's CAAP aims to reduce emissions and adapt to changing climate conditions through sustainability and energy efficiency efforts. The Project would include upgrades to critical infrastructure which would improve the efficiency of the wastewater collection system. These improvements would support the goals of the CAAP and would not conflict with or obstruct any state or local plans for renewable energy. No impact would occur.

### 4.2.7 Geology and Soils

| Would the project: | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|
| a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: | | | | |
| *i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?* | ☐ | ☐ | ☐ | ☒ |
| *ii) Strong seismic ground shaking?* | ☐ | ☐ | ☒ | ☐ |
| *iii) Seismic-related ground failure, including liquefaction?* | ☐ | ☐ | ☒ | ☐ |
| *iv) Landslides?* | ☐ | ☐ | ☐ | ☒ |
| b) Result in substantial soil erosion or the loss of topsoil? | ☐ | ☒ | ☐ | ☐ |
| c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse? | ☐ | ☐ | ☒ | ☐ |
| d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial direct or indirect risks to life or property? | ☐ | ☐ | ☒ | ☐ |
| e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? | ☐ | ☐ | ☐ | ☒ |
| f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? | ☐ | ☒ | ☐ | ☐ |

## ENVIRONMENTAL SETTING

### *Regional Geology*

The Project site is located in Contra Costa County which lies in the central portion of the Coast Range geomorphic province, which extends along the western edge of the state. The Coast Range geomorphic province is bounded by the Transverse Ranges in the south, the Klamath Mountains in the north, and the Great Valley in the east. This geomorphic province roughly parallels the San Andreas Fault, which extends for over 600 miles from Point Arena in Mendocino County to the Gulf of California (California Geological Survey [CGS] 2002).

The primary bedrock in the County consists of sedimentary rocks, volcanic rock intrusions, and alluvial deposits. Coastal areas along the Suisun Bay, San Pablo Bay, and Carquinez Strait are underlain by unconsolidated alluvial deposits, artificial fill, and estuarine deposits (Contra Costa County 2024a.)

### *Soils*

Topography of the Project site is flat with elevations ranging from approximately 0 to 20 feet above sea level. The Project site is underlain by five soil mapping units, including:

- Antioch loam, 0 to 2 percent slopes,
- Antioch loam, 2 to 9 percent slopes,
- Joice muck,
- Omni silty clay, and
- Clear Lake clay, 0 to 15 percent slopes (Natural Resource Conservation Service [NRCS] 2019).

### *Paleontological Resources*

The Project site is underlain by Pleistocene-Holocene age alluvium and marine and nonmarine sedimentary rocks. These units generally have lower paleontological sensitivity than other units in the County due to their young age (County of Contra Costa 2024a). Other units in the County that have a higher paleontological sensitivity include Pleo-Pleistocene and Pliocene loosely consolidated deposits, Miocene marine rocks, and upper cretaceous marine rocks (County of Contra Costa 2024a).

## REGULATORY SETTING

### *County of Contra Costa General Plan*

The County's General Plan contains the following relevant policies related to geology and soils and paleontological resources:

> **COS-P106:** Upon discovery of significant historic or prehistoric archaeological artifacts or fossils during project construction, require ground-disturbing activities to halt within a 50-foot radius of the find until its significance can be determined by a qualified historian, archaeologist, or paleontologist and appropriate protection and preservation measures developed.

**COS-P10.7:** Require significant historic, archaeological, and paleontological resources to either be preserved onsite or adequately documented as a condition of removal. Any documentation of historic resources shall be conducted in accordance with Historic American Building Survey (HABS) Level III standards, as defined by the US Secretary of the Interior.

### DISCUSSION OF IMPACTS

***a-i) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?***

*No Impact*

The Project site is not within an Alquist-Priolo Earthquake Zone of Required Investigation (CDOC 2025). The closest Alquist-Priolo Fault Zone is the Concord Fault Zone, located roughly seven miles west of the Project site (CDOC 2025). Therefore, the Project would not cause substantial adverse effects related to rupture of a known earthquake fault. No impact would occur.

***a-ii) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Strong seismic ground shaking?***

*Less-than-Significant Impact*

The Project site is located in the seismically active Bay Area region and therefore could experience severe seismic ground shaking if an earthquake were to occur in the area. The Project construction contractor would be required to comply with all federal and state Occupational Safety and Health Administration (OSHA) guidelines to safeguard workers during Project work, which would reduce potential risks from severe seismic ground shaking during construction. As a wastewater infrastructure project, the Project would not create any new habitable structures which could result in the risk of loss, injury, or death involving strong seismic ground shaking. Therefore, the Project would not directly or indirectly cause potential substantial adverse effects associated with strong ground shaking. The impact would be less than significant.

***a-iii) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Seismic-related ground failure, including liquefaction?***

*Less-than-Significant Impact*

Liquefaction occurs when loosely packed, saturated soils temporarily lose their strength during earthquake shaking, making them unable to support overlying layers or structures. Some areas of the Project site fall within mapped liquefaction zones, where susceptibility can range from low to very high depending on location (County of Contra Costa 2024a). The soil profile at the Project site is predominantly Antioch loam, with some portions composed of Joice muck and Omni silt clay (USDA NRCS 2023). Because Joice muck and Omni silt clay are highly saturated, they may increase the likelihood of liquefaction within these areas. The proposed Project involves improvements to underground sewer infrastructure which would be completed using trenchless methods. The pipe rehabilitation work would be conducted using the CIPP method to form a new pipe inside the existing pipe, which would not impact any soils or construct new underground pipes in areas that were previously undisturbed. The only new infrastructure installed as part of the Project would be the permanent bypass pipe and access roads. These new structures are not habitable structures that would present risk of loss, injury, or death

should they be subject to liquefaction. Consequently, there would be no direct or indirect risk of loss, injury, or death related to liquefaction. The impact would be less than significant.

***a-iv) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Landslides?***

*No Impact*

The Project site is located in a flat area and is not mapped within a seismic hazard landslide zone (County of Contra Costa 2024a, CDOC 2025). There have been no documented landslides in the Project site (CDOC 2024). Given the flat topography of the site, the Project would not result in any substantial adverse effects related to landslide hazards. Thus, no impact would occur.

***b) Result in substantial soil erosion or the loss of topsoil?***

*Less-than-Significant Impact with Mitigation Incorporated*

The Project site is characterized by flat terrain underlain by Antioch loam, Joice muck, and Omni silt clay. These soil types generally exhibit low erosion risk because their slopes range from 0 to 2 percent (USDA NRCS 2023), but Antioch loam and Joice muck can become susceptible to soil erosion more easily (U.C. Davis SRL 2024). Typical construction activities such as excavation, stockpiling, and earth movement can temporarily loosen and disturb the soil surface, resulting in erosion. However, as described in *Section 4.2.4, Biological Resources,* Mitigation Measure BIO-8 would be implemented, which requires erosion control BMPs to protect water quality. Implementation of this measure would reduce erosion impacts associated with construction to a less-than-significant level.

Once the Project is operational, the majority of new infrastructure would be situated underground; therefore, no permanent increase in erosion would occur. The access road improvements would result in reduced erosion compared to pre-Project conditions because the existing dirt access roads would be surfaced with gravel, which would reduce erosion and loss of soil from use of the access roads. Therefore, the Project would not result in substantial erosion or loss of topsoil. The impact would be less than significant with mitigation incorporated.

***c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?***

*Less-than-Significant Impact*

As described above in Threshold a), portions of the Project site are within a mapped liquefaction zone (County of Contra Costa 2024a, CGS 2025). Project work would consist of rehabilitation of existing manholes and underground pipelines and construction of a permanent bypass pipeline using trenchless methods and laying gravel on existing dirt access roads. This work would not result in an increased risk of liquefaction on-site. The existing pipelines have not been damaged by liquefaction; therefore, rehabilitation of these pipes and installation of a new pipe are not anticipated to be at risk of hazards associated with liquefaction. The impact would be less than significant.

***d) Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?***

*Less-than-Significant Impact*

According to the County's General Plan EIR, much of the soil in Contra Costa County is considered expansive (County of Contra Costa 2024d). The Project site is mostly underlain with Antioch loam, but there are portions of the site that are underlain with Joice muck and Omni silt clay (USDA NRCS 2023). Antioch loam and Omni silt clay have a high shrink-swell potential (U.C. Davis SRL 2024). Rehabilitation of existing infrastructure as part of the Project would not increase risks associated with expansive soils, because existing infrastructure would be rehabilitated using methods that consider geological conditions and hazards. The Project would not create any new habitable structures that would be at risk of collapsing or being damaged by expansive soils in a way that would create substantial risks to life or property. The impact of the Project related to expansive soils would be less than significant.

***e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?***

*No Impact*

The Project would not include any septic tanks or alternative wastewater disposal systems. No impact would occur.

***f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?***

*Less-than-Significant Impact with Mitigation Incorporated*

The Project site is located on geologic units that have a low sensitivity for buried paleontological resources. Therefore, it is unlikely that paleontological resources would be encountered during construction. However, to comply with Policy COS-P10.6and COS-P10.7 of the County's General Plan, Mitigation Measure GEO-1 would be implemented. This measure requires that, if paleontological resources are encountered during construction, work at the location of the find would halt until the find can be evaluated by a qualified paleontologist. If the find is determined to be significant and cannot be preserved on-site, the find must be adequately documented in accordance with the standards identified in the General Plan. With implementation of this measure, the Project would not destroy a unique paleontological resource or site or unique geologic feature. The impact would be less than significant with mitigation incorporated.

## MITIGATION MEASURES

### *Mitigation Measure GEO-1: Paleontological Resources*

If buried materials are encountered, all soil disturbing work shall be halted within 50 feet of the location of any discovery until a qualified paleontologist completes a significance evaluation of the find. If the find is determined to be significant, the qualified paleontologist shall prepare a plan for protecting the resource in place or, if this is not feasible, documenting the removal of the find. Any documentation of historic resources shall be conducted in accordance with Historic American Building Survey (HABS) Level III standards, as defined by the U.S. Secretary of the Interior.

### 4.2.8 Greenhouse Gas Emissions

| Would the project: | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|
| a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | ☐ | ☐ | ☒ | ☐ |
| b) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases? | ☐ | ☐ | ☒ | ☐ |

#### ENVIRONMENTAL SETTING

GHGs are recognized by wide consensus among the scientific community to contribute to global warming/climate change and associated environmental impacts. The most common GHGs released from human activity are carbon dioxide, methane, and nitrous oxide (Governor's Office of Planning and Research 2008). The primary sources of GHGs are vehicles (including planes and trains), energy plants, and industrial and agricultural activities (e.g., dairies and hog farms).

In the United States, the major sources of GHG emissions are transportation, electricity generation, and industrial activities (U.S. EPA 2022). These three sources are also the top contributors of GHG emissions in California (CARB 2022).

#### REGULATORY SETTING

##### *Global Warming Solutions Act*

AB 32, adopted in 2006, established the Global Warming Solutions Act of 2006 which requires the State to reduce GHG emissions to 1990 levels by 2020. In 2016, Senate Bill (SB) 32 was signed into law, amending the California Global Warming Solution Action. SB 32 and Executive Order B-30-15 require CARB to ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by 2030. CARB updated its Climate Change Scoping Plan in December of 2017 to express the 2030 statewide target in terms of million metric tons of carbon dioxide equivalent (MMTCO2e). Based on the emissions reductions directed by SB 32, the annual 2030 statewide target emissions level for California is 260 MMTCO2e.

##### *CEQA Air Quality Guidelines*

The BAAQMD CEQA Air Quality Guidelines are intended to serve as a guide for those who prepare or evaluate air quality impact analyses for projects and plans in the San Francisco Bay Area. Marin County and other jurisdictions in the San Francisco Bay Area Air Basin utilize the thresholds and methodology for assessing GHG impacts developed by BAAQMD within the CEQA Air Quality Guidelines. The guidelines include information on legal requirements, BAAQMD rules, methods of analyzing impacts, and recommended mitigation measures.

### *Contra Costa County Climate Action and Adaptation Plan*

The County's CAAP 2024 Update aims to guide the County towards achieving net-zero emissions by 2045 (County of Contra Costa 2024c). The CAAP includes GHG emission reduction and climate adaptation strategies that apply to areas of the unincorporated County. Out of the 29 climate action strategies identified in the plan, 11 directly result in GHG emissions reductions. The 29 strategies are divided into the following categories: clean and efficient built environment, no waste contra costa, reduce water use and increase drought resilience, clean transportation network, resilient communities and natural infrastructure, climate equity, leadership, and implementation.

## DISCUSSION OF IMPACTS

***a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?***

*Less-than-Significant Impact*

The Project would result in GHG emissions from temporary construction-related activities, including operation of heavy equipment, use of trucks, and worker trips. Direct long-term operational emissions would be limited to vehicular trips and equipment emissions during occasional maintenance activities.

BAAQMD has adopted thresholds of significance that were designed to establish the level at which GHG emissions would cause significant environmental impacts under CEQA. The thresholds are included in the 2022 CEQA Air Quality Guidelines (BAAQMD 2022).

BAAQMD does not have an adopted threshold of significance for GHG emissions. BAAQMD's approach to developing thresholds of significance for GHG impacts is to use a "fair share" approach to determine whether an individual project's GHG emissions would be cumulatively considerable. If a project would contribute its "fair share" of what is needed to achieve Statewide long-term GHG reduction goals, the impact of the project's GHG emissions would be less than significant. BAAQMD has identified required design elements that development and transportation projects must incorporate into project plans in order for their impact to be considered less than significant. There are no design elements required for infrastructure projects; therefore, the Project must only be consistent with the local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b) (BAAQMD 2022). The County's CAAP is the local GHG reduction plan. As described below in Threshold b), the Project would be consistent with GHG reduction strategies identified in the CAAP and therefore would not constitute a significant impact regarding GHG emissions. The impact from GHG emissions would be less than significant

***b) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?***

*Less-than-Significant Impact*

The Project site falls within the planning jurisdiction of the BAAQMD CAP and the County's CAAP As discussed in *Section 4.2.3, Air Quality*, Project construction and operation would not conflict with the BAAQMD CAP. The County's CAAP contains 11 strategies that aim to reduce GHGs emissions, including the following:

- **BE-1:** Require and incentivize new buildings and additions built in unincorporated Contra Costa County to be low-carbon or carbon neutral.
- **BE-2:** Retrofit existing buildings and facilities in the unincorporated county, and County infrastructure, to reduce energy use and convert to low-carbon or carbon-free fuels.
- **BE-3:** Increase the amount of electricity used and generated from renewable sources in eth county.
- **NW-1:** Increase composting of organic waste.
- **NW-2:** Reduce waste from County operations.
- **NW-3:** Increase community-wide recycling and waste minimization programs.
- **NW-4:** Reduce emissions from landfill gas.
- **DR-1:** Reduce indoor and outdoor water use.
- **TR-1:** Improve the viability of walking, biking, zero-emission commuting, and using public transit for travel within, to, and from the county.
- **TR-2:** Increase the use of zero-emission vehicles. Transition to a zero-emission County fleet by 2035 and a community fleet that is at least 50 percent zero-emission by 2030.
- **NI-4:** Sequester carbon on natural and working lands in Contra Costa County.

None of these policies outlined in the CAAP are directly applicable to the Project. Many of the actions direct the County of Contra costa to implement certain strategies to promote low-carbon transportation, energy efficiency, and renewable energy and electrification. The Project would include rehabilitate existing wastewater infrastructure, which would reduce overall energy use and thus GHG emissions because the system would function more efficiently and would require less maintenance in the long-term. The Project would not include the construction or installation of any new source of GHG emissions. Therefore, the Project would not conflict with the CAAP or the BAAQMD CAP. The impact would be less than significant.

### 4.2.9 Hazards and Hazardous Materials

| Would the project: | | *Potentially Significant Impact* | *Less than Significant with Mitigation Incorporated* | *Less than Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? | ☐ | ☒ | ☐ | ☐ |
| b) | Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? | ☐ | ☒ | ☐ | ☐ |
| c) | Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? | ☐ | ☒ | ☐ | ☐ |
| d) | Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | ☐ | ☒ | ☐ | ☐ |
| e) | For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? | ☐ | ☐ | ☐ | ☒ |
| f) | Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| g) | Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires? | ☐ | ☐ | ☒ | ☐ |

#### ENVIRONMENTAL SETTING

A Phase I Environmental Site Assessment (ESA) was prepared for the Project by Baseline Environmental Consulting in January 2026 (Baseline Environmental Consulting 2026, Appendix F). The Purpose of the Phase I ESA was to identify environmental conditions that could adversely affect the chemical quality of soil or groundwater at the Project site. Potential environmental

concerns were evaluated based on review of the physical site setting, historical land uses, environmental records and previous environmental investigations, as well as a site reconnaissance. Due to the length of the Project site, it was delineated in four sections for descriptive purposes in the Phase I ESA, including the western area, west-central area, east-central area, and eastern area. These areas are shown on Figure 1 in Appendix F.

### *Historical Land Uses*

A review of historical land use records indicates the potential for soil contamination at the Project site associated with former railroad, agricultural, industrial, and boat storage uses. Railroad operations present a potential source of shallow soil contamination from ballast of unknown origin (which may contain elevated metals or naturally occurring asbestos), creosote-treated wooden ties (a source of polynuclear aromatic hydrocarbons [PAHs]), herbicide applications (including arsenic and chlorinated compounds), petroleum hydrocarbons, metals from train component wear, and possible historical use of waste oil containing metals or polychlorinated biphenyls (PCBs). These contaminants are generally not highly mobile in soil and, if present, would likely remain in shallow soils near former track alignments.

Former agricultural uses may have resulted in residual shallow soil contamination from arsenic and organochlorine pesticides. Areas of historically observed darkened ground may reflect past spills, releases, industrial activities, or placement of fill material of unknown quality. Disturbed ground observed in historical aerial imagery suggests that fill material may have been imported, which could contain contaminants.

The purpose and historical use of retention ponds in the east-central portion of the site are unknown, and they could potentially contain contaminants related to surrounding industrial activities. Additionally, a former boat storage area associated with McAvoy Boat Harbor may represent a potential source of metals (e.g., lead and tributyltin from marine paints), petroleum hydrocarbons, and volatile organic compounds (VOCs) related to boat repair and maintenance activities.

### *Site Reconnaissance*

A reconnaissance of the Project site was conducted to evaluate current land uses associated with hazardous materials that could have resulted in hazardous materials release or pose an obvious threat of a future release. Evidence of hazardous materials releases could include, but are not limited to, observations of surface staining, stressed vegetation, and/or odors. Current land uses observed at the site included undeveloped property, railroad tracks, access roads, public roadways, drainage channels, retention ponds, and District pump stations. Land uses surrounding the site also included a boat harbor, and commercial and industrial properties.

Land uses and observations of environmental concern were observed throughout the entire Project site. Concerns in the western area of the site included a significant amount of illegally dumped refuse, including car parts, used oil containers, paint buckets, and refrigerators; railroad tracks; a diesel AST and another large AST presumed to be related to storage/treatment of wastewater; and a petroleum pipeline marker. Concerns in the west-central area of the site included a truck repair facility; darkened soil surrounding a drainage channel; a diesel AST and another large AST presumed to be related to storage/treatment of wastewater. Concerns in the east-central area of the site included an abandoned railroad spur; shallow soil near a District manhole near a retention pond that showed an abnormal consistency and orange color; and an

industrial facility with several ASTs associated with the Pittsburg Power Plant located south of the site. Concerns in the eastern area of the site included an auto wrecking facility; areas of former ASTs associated with the Pittsburg Power Plant; an access road which was historically a railroad spur; the Pittsburg Pump Station; a diesel AST and another large AST presumed to be related to storage/treatment of wastewater; and heavy staining around a ferrous chloride AST at the Pittsburg Pump Station (Appendix F).

## REGULATORY SETTING

### *City of Pittsburg Adoption Draft General Plan Safety & Resiliency Element (2024)*

The City of Pittsburg Draft General Plan Safety & Resiliency Element was last updated in 2024 and establishes goals and policies to address climate resiliency and adaptation, and hazard risk and mitigation.

### *City of Pittsburg Hazard Mitigation Plan*

The City of Pittsburg Hazard Mitigation Plan (HMP) was last updated in April 2023 and details actions to reduce long-term risks from natural hazards such as earthquakes, severe weather, flooding, hazardous materials incidents, and health epidemics. The plan identifies threats specific to the City, assesses vulnerabilities, and establishes strategies to minimize future losses through improvements to infrastructure, emergency preparedness, and response coordination among city departments. This plan fulfills state and federal requirements, making the City eligible for mitigation funding and enabling coordination with regional agencies. It is designed to promote community resilience and safeguard people and property from known hazards.

### *Contra Costa County General Plan Health and Safety Element (2024)*

The Contra Costa County General Plan Safety Element establishes policies and goals pertaining to hazard mitigation, emergency preparedness, climate resilience, air quality, flood and wildfire hazards, hazardous material management, and noise.

### *Contra Costa County Hazardous Materials Area Plan (2009)*

The Contra Costa County Hazardous Materials Area Plan (HMAP) establishes procedures for the management of hazardous materials, identifies the roles and responsibilities of various agencies in addressing hazardous materials incidents, and outlines emergency response protocols in the event of a hazardous materials incident. The

### *Contra Costa County Local Hazard Mitigation Plan (2024)*

The 2024 Contra Costa County Local Hazard Mitigation Plan (LHMP) is a comprehensive strategy that identifies major natural and human-caused risks facing the county, such as earthquakes, floods, and wildfires. It outlines priorities and actions to reduce these risks, including plans for evacuation, public communication, and interagency coordination. The LHMP integrates city and district-specific annexes and ensures compliance with state and federal emergency planning requirements to enhance overall community resilience.

## DISCUSSION OF IMPACTS

***a-b) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? Create a significant hazard to the***

***public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?***

*Less-than-Significant Impact with Mitigation Incorporated*

Project construction would involve the use and transport of construction-related hazardous materials such as fuels, lubricants, oils, and solvents. Construction activities would be required to comply with relevant federal and state hazardous materials regulations to ensure that hazardous materials are properly handled and do not pose a threat to worker safety. Hazardous materials would be transported to and from the Project site in accordance with the Resource Conservation and Recovery Act (RCRA) and United States Department of Transportation regulations and disposed of in accordance with the RCRA at a facility that is permitted to accept the waste.

Based on the Phase I ESA prepared by Baseline in 2026 (Appendix F), there is a high potential for soil and groundwater underlying the Project site to be contaminated with hazardous materials due to:

- Evidence of illegal dumping along the access road in the western area of the Project site.
- Historic lead-burning smelting operation in the west-central area of the Project site.
- The presence of shallow soil with abnormal consistency and orange color near a manhole and the retention ponds in the east-central area of the Project site.
- Previously identified soil and groundwater contamination from the Pittsburg Power Plant in the eastern area of the Project site.
- Elevated concentrations of arsenic in soil along the abandoned railroad spur which interests a small portion of the east-central area of the Project site, and along the former railroad spur within the eastern area of the site. Other contaminants commonly associated with railroad tracks could also be present, including heavy metals, asbestos, petroleum hydrocarbons, PCBs, PAHs, pesticides, and herbicides.
- Presence of a drainage channel on and adjacent to the Project site which historically conveyed industrial wastewater from the former Shell facility south of the site to the Carbon Black Area and Shell Pond to the north of the site.

Due to potential contamination of soil and groundwater on-site identified by the Phase I ESA, ground-disturbing activities associated with Project construction, including excavation around manholes and grading of access roads, has the potential to encounter contaminated soil which could present a significant hazard to the public if not disposed of properly. As such, the District shall implement Mitigation Measure HAZ-1, which requires that a focused Phase II ESA be conducted in areas of the Project site where excavation could occur, and where potential contamination has been identified. The purpose of the Phase II ESA is to identify areas where concentrations of soil and groundwater contaminants may exceed applicable federal, state, or local screening levels, and to identify appropriate measures to either avoid disturbance to contaminated areas, or mitigate impacts associated with disturbance of contaminated areas to a less-than-significant level. In accordance with Mitigation Measure HAZ-1, if significantly contaminated areas cannot be avoided, the District shall implement remedial actions and engineering or institutional controls to ensure that risks to workers, surrounding residents, and the environment are reduced to a less-than-significant level.

In addition, to reduce potential impacts related to the transport and disposal of contaminated soils, Mitigation Measure HAZ-2 shall be implemented, which requires that a Soil Management Plan (SMP) be prepared prior to any ground-disturbing activities on site that identifies procedures for worker safety; stockpiling, transportation, and disposal of contaminated soils; and documentation. With implementation of these measures, construction of the Project would not result in a significant hazard to the public due to the routine use, handling, transport, or disposal of hazardous materials.

Operation of the Project would not introduce any new substantial risks associated with hazardous materials. The Project would replace and repair degraded wastewater infrastructure which would reduce potential for hazardous materials, such as untreated wastewater, to impact the public or environment. Therefore, the Project would not create a significant hazard to the public through routine use of hazardous materials, or through upset and accident conditions involving the release of hazardous materials into the environment. The impact would be less than significant with mitigation incorporated.

***c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?***

*Less-than-Significant Impact with Mitigation Incorporated*

One school, Shore Acres Elementary (0.24 miles south), is located within one-quarter mile of the Site. As described above in Thresholds a) and b), Project construction would include ground-disturbing activities which could potentially result in the upset and release of contaminated soil and groundwater present on-site. Mitigation Measures HAZ-1 and HAZ-2 would be implemented, which require preparation of a Phase II ESA to identify the extent of contaminated areas that would be impacted by the Project, and preparation of a SMP to ensure that all contaminated soils are properly handled and disposed of. Implementation of these measures would ensure that no schools would be impacted by the Project's disturbance of contaminated soil and groundwater.

During construction, the Project would involve the use and transport of construction-related hazardous materials such as fuels, lubricants, oils, and solvents. The contractor would be required to comply with all applicable OSHA, Cal/OSHA, and RCRA requirements related to the handling, storage, use, and transport of hazardous materials used during construction. With compliance with these requirements, the Project would not pose an acute risk related to hazardous materials within the vicinity of a school.

Once operational, the Project would not create any new permanent uses of hazardous materials. The District would continue to conduct maintenance activities that may involve the use of hazardous materials in accordance with applicable federal, state, and local requirements. Therefore, the impact of the Project related to hazardous materials within the vicinity of a school would be less than significant with mitigation incorporated.

***d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?***

*Less-than-Significant Impact with Mitigation Incorporated*

The Project site expands across an area that was historically used for industrial operations. Various sites adjacent to and encompassing the Project site are listed within databases that

have been compiled pursuant to Government Code Section 65962.5. As described above, a Phase I ESA was prepared for the Project that identified potential areas of soil and groundwater contamination. With implementation of Mitigation Measures HAZ-1 and HAZ-2, the Project would not result in a significant hazard to the public or environment due to its listing status. The impact would be less than significant with mitigation incorporated.

***e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?***

*No Impact*

The nearest private airstrip or airport is the Buchanan Field Airport, located approximately 5.5 miles southwest of the Project site. The Project site is not within any airport land use plan. Therefore, no impact would occur.

***f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?***

*No Impact*

The applicable emergency response plans for the Project site are the Contra Costa County General Plan Health and Safety Element, the Contra Costa County Hazard Mitigation Plan, and the City of Pittsburg Draft General Plan Safety and Resilience Element. The infrastructure improvements made along the WPI and SAI would not interfere with either the mitigation projects or goals identified in the plans. As discussed in *Section 4.2.17, Transportation*, work would occur within the County's right-of-way along Port Chicago Highway and McAvoy Raad, which could potentially cause delays for emergency vehicles accessing residences within the Project site. However, traffic control measures will be implemented to ensure adequate access for emergency vehicles at all times, and no road closures will be required during construction. Therefore, no impact would occur.

***g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?***

*Less-than-Significant Impact*

As discussed in Section *4.2.20, Wildfire*, the Project site is not in a fire hazard severity zone. The Project would not introduce any new land uses that would increase the risk of wildfire or the severity of wildfire spread. Therefore, a less-than-significant impact would occur.

## MITIGATION MEASURES

### *Mitigation Measure HAZ-1. Phase II Environmental Site Assessment*

Prior to initiation of ground-disturbing activities on the Project site, the District shall retain a qualified environmental professional to prepare and implement a Phase II ESA for focused areas of the Project site to evaluate the presence and extent of potential soil and/or groundwater contamination identified through the Phase I ESA. The Phase II ESA shall cover areas around manholes which may require ground disturbance and have the potential to encounter contaminated soil or groundwater.

The Phase II ESA shall include soil, soil vapor, and/or groundwater sampling and laboratory analysis, as appropriate, to assess potential contaminants of concern associated with historical

site uses. The investigation shall be conducted in accordance with applicable ASTM standards and regulatory agency guidance.

If contamination is identified at concentrations exceeding applicable federal, state, or local screening levels or regulatory thresholds, the District shall prepare and implement a Soil Management Plan as detailed in Mitigation Measure HAZ-2.

***Mitigation Measure HAZ-2. Soil and Groundwater Management Plan***

Prior to ground-disturbing activities on-site (e.g., excavation, grading), the District shall retain a qualified professional to prepare a Soil Management Plan (SMP) for implementation throughout Project construction in any areas found to contain contaminated soil or groundwater. The SMP shall address management of potentially contaminated soil encountered during ground-disturbing activities. The SMP shall include, but shall not be limited to, the following components:

- A site-specific worker Health and Safety Plan (HASP) that is consistent with Cal/OSHA requirements. The HASP shall describe elements of worker training, required personal protective equipment, dust control measures, methods for handling contaminated soil, and decontamination procedures.
- Procedures for soil handling and stockpiling, including:
    - Segregating contaminated and non-contaminated soils,
    - Covering stockpiles and implementing perimeter controls to prevent runoff,
    - Preventing track-out onto public roadways, and
    - Procedures for soil backfilling and/or transporting contaminated soil in covered trucks to appropriately permitted disposal or treatment facilities.
- Methods and thresholds for off-site disposal and documentation. Contaminated soils exceeding applicable screening levels shall be transported by a licensed hauler, disposed of a facility permitted to accept the material, and accompanied by appropriate waste manifests. The District shall retain documentation of soil disposal.

### 4.2.10 Hydrology and Water Quality

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality? | ☐ | ☒ | ☐ | ☐ |
| b) | Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? | ☐ | ☐ | ☐ | ☒ |
| c) | Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: | | | | |
| | *i) result in substantial erosion or siltation on- or off-site;* | ☐ | ☒ | ☐ | ☐ |
| | *ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;* | ☐ | ☐ | ☒ | ☐ |
| | *iii) create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff; or* | ☐ | ☐ | ☒ | ☐ |
| | *iv) impede or redirect flood flows?* | ☐ | ☐ | ☒ | ☐ |
| d) | In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation? | ☐ | ☒ | ☐ | ☐ |
| e) | Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? | ☐ | ☐ | ☒ | ☐ |

#### ENVIRONMENTAL SETTING

The Project site is situated in the Suisun Bay regional watershed between two local watersheds, Suisun Bay Estuaries and Kirker Creek-Frontal Suisun Bay Estuaries (WRA 2025 [Appendix D]). As described in *Section 4.2.4, Biological Resources*, there are various aquatic resources within the Project site, including non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetlands, and intermittent stream, and alkali seasonal wetland depressions. The nearest body of water is the Carquinez Strait, situated approximately 0.5 to 1 mile north of the Project site.

## REGULATORY SETTING

### *Contra Costa County General Plan*

The County's General Plan contains the following relevant policies related to hydrology and water quality:

> **COS-P5.11:** Prohibit direct runoff of pollutants and siltation into marsh, creek, and wetland areas from outfalls serving urban development.
>
> **COS-P8.2:** Coordinate with other agencies to control point and non-point sources of water pollution and maintain water quality standards.

### *Water Quality Control Plan (Basin Plan) for the San Francisco Bay Basin*

The Basin Plan sets narrative and numerical water quality objectives for the San Francisco Bay Region. Numerical objectives typically describe pollutant concentration, physical and chemical conditions of water, and the toxicity of water to aquatic organisms. The Basin Plan establishes beneficial uses for select water bodies within the planning area.

## DISCUSSION OF IMPACTS

***a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?***

*Less-than-Significant Impact with Mitigation Incorporated*

During construction, the Project would include limited ground-disturbing activities due to the construction of the permanent underground bypass pipeline and excavation around any manholes that require replacement. If not controlled properly, disturbed soils could cause excess sediment runoff that could enter nearby waterways. In addition, the Project would use hazardous materials such as fuels, oils, lubricants, and solvents, that could runoff into nearby waterways if not stored and handled properly. The RWQCB ensures compliance with water quality objectives established in the Basin Plan through the National Pollutant Discharge Elimination System (NPDES) Permit process. Construction projects that disturb over one acre of soil are required to apply for a Construction General Permit, which requires the preparation of a Stormwater Pollution Prevention Plan (SWPPP). The proposed Project would disturb less than one acre of soil; therefore, coverage under the Construction General Permit is not required.

To reduce potential effects of sediment runoff, Mitigation Measure HYDRO-1 would be implemented, which requires that appropriate BMPs pertaining to stormwater control be implemented during construction. In addition, Mitigation Measure HYDRO-2 would be implemented, which requires the preparation and implementation of a Spill Prevention and Response Plan (SPRP) during construction. In addition, as stated in *Section 4.2.4, Biological Resources,* the Project would implement Mitigation Measure BIO-8, which requires that sensitive habitats be flagged and silt fencing be installed around these areas to prevent siltation of any nearby waterways. With implementation of these measures, the Project would not violate any water quality standards or waste discharge requirements or otherwise degrade surface or groundwater quality. The impact would be less than significant with mitigation incorporated.

***b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?***

*No Impact*

The Project would not use groundwater during construction or operation. As described further in *Section 4.2.19, Utilities and Service Systems,* water in Contra Costa County is supplied by the Contra Costa Water District (CCWD), which does not use groundwater as part of its water supply. The Project would not result in any increase in impervious surface area; therefore, the Project would not impede infiltration and groundwater recharge. Furthermore, as discussed below in Threshold e), the Project site is not located within a high or medium priority groundwater basin. Therefore, the Project would not substantially decrease groundwater supplies or interfere with groundwater recharge. No impact would occur.

***c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:***

***(i) result in substantial erosion or siltation on- or off-site;***

*Less-than-Significant Impact with Mitigation Incorporated*

The Project would include ground disturbing activities within the Project site, which could result in minor erosion of soils. As stated in *Section 4.2.4, Biological Resources,* the Project would implement Mitigation Measure BIO-8 during construction, which requires that sensitive habitats to be flagged and silt fencing to be installed around these areas to prevent siltation of any nearby waterways. In addition, as described above in Threshold a), Mitigation Measure HYDRO-1 would be implemented, which contains BMPs for erosion and sediment control. With implementation of these measures, the Project would not result in substantial erosion or siltation on-or-off site. The impact would be less than significant with mitigation incorporated.

***(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; (iii) create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff; or (iv) impede or redirect flood flows?***

*Less-than-Significant Impact*

The Project would rehabilitate existing underground infrastructure and construct a new underground pipeline, which would not increase impervious surface area which could increase the rate or amount of surface runoff. Operation of existing and new underground infrastructure would not provide an additional source of polluted runoff or impede or redirect flood flows. Part of the Project includes improving existing dirt access roads to all-weather gravel access roads. The all-weather gravel roads would not be impermeable surfaces; therefore, these improvements would not substantially increase surface water runoff or impede or redirect flood flows. The impact would be less than significant.

***d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?***

*Less-than-Significant Impact with Mitigation Incorporated*

Portions of the Project site are within flood zones defined by the Federal Emergency Management Agency (FEMA). Areas of the site are within the Zone AE and Zone X flood zone,

which are areas subject to inundation by the one percent 0.2 percent annual chance flood event, respectively (FEMA 2025). Therefore, if no measures are taken, flooding of the Project site could risk release of sediment pollutants and hazardous material pollutants into nearby waterways. However, as described above in Threshold a), Mitigation Measures HYDRO-1 and HYDRO-2 would be implemented, which require the Project applicant to implement BMPs for erosion and pollutant control and implement an SPRP during construction. Implementation of these measures would reduce the potential impact of pollutant release due to flooding to a less-than-significant level. As such, the Project would not risk release of pollutants due to project inundation during construction. The Project would not change the land use of the site or install any new structures which would risk release of pollutants due to Project site inundation. The impact would be less than significant with mitigation incorporated.

***e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?***

*Less-than-Significant Impact*

The applicable water quality control plan for the Project site is the Basin Plan, which identifies specific beneficial uses and water quality objectives for each of the surface waters and groundwater management zones in the planning area. There are no surface waters within the Project site, although there are wetlands. As described above in Threshold a), the Project would implement Mitigation Measure HYDRO-1 and HYDRO-2, which would ensure that construction activities on the Project site would not violate any water quality objectives. Therefore, the Project would not obstruct implementation of the Basin Plan.

The Project site is located within the Pittsburg lain Groundwater Basin, which is a Very Low priority basin (California Department of Water Resources 2025). Only Medium and High priority basins are required to prepare Groundwater Sustainability Plans under the Sustainable Groundwater Management Act. Therefore, there is no Groundwater Sustainability Plan that applies to the Project site.

Therefore, the Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The impact would be less than significant.

**MITIGATION MEASURES**

***Mitigation Measure HYDRO-1: Construction Stormwater BMPs***

The Project shall implement the following BMPs to minimize erosion, control sediment, and prevent the discharge of pollutants to nearby surface waters or the storm drainage system:

- All disturbed soils and soil stockpiles shall be temporarily covered by straw mulch, rolled erosion control products, tarps, or other measures appropriate for site conditions.
- Hazardous materials (including fuels, oils, solvents, paints, adhesives) shall be stored in a designated, secure, and covered area protected from rain, runoff, and unauthorized access.
- Equipment fueling and maintenance shall only occur in designated staging areas located away from drainage pathways, storm drain inlets, watercourses, and sensitive habitats.
- Fueling areas shall include:

    - Impermeable surfaces or containment pads,
    - Drip pans or absorbent pads, and
    - Spill containment and cleanup materials.
- Equipment shall be inspected daily for leaks of oil, fuel, coolant, or hydraulic fluids, Leaking equipment shall be repaired immediately or removed form service.
- Equipment washing shall take place offsite or in a contained wash area that prevents wash water from entering the storm drain system or natural drainages.

***Mitigation Measure HYDRO-2: Spill Prevention and Response Plan***

A Spill Prevention and Response Plan (SPRP) shall be prepared and kept on the site during construction. The plan shall identify:

- All materials used onsite,
- Locations of storage and fueling areas,
- Spill response procedures,
- Cleanup materials, and
- Employee training requirements.

The construction contractor shall maintain readily accessible spill kits (absorbents, pads, containers) in all fueling locations and in mobile vehicles as appropriate. All spills, regardless of size, shall be cleaned immediately using dry methods (absorbents, sweeping). Water shall not be used for cleanup. Reportable spills shall be reported to applicable agencies (e.g., RWQCB, Certified Unified Program Agencies).

### 4.2.11 Land Use and Planning

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Physically divide an established community? | ☐ | ☐ | ☐ | ☒ |
| b) | Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? | ☐ | ☒ | ☐ | ☐ |

#### ENVIRONMENTAL SETTING

The Project site is within the General Industrial zoning district in the City of Pittsburg and the General Agricultural and Planned Unit zoning districts in Contra Costa County. The proposed Project is within the PS, RM, RMH, CR, CO, LI, RC, and PR land use designations within Contra Costa County, and within the Industrial land use designation for the City of Pittsburg. Within the City, the Project sits within the Northwest River, North Central River, and Bay Point planning subareas surrounded by industrial areas, open spaces, parks, some commercial areas, residential neighborhoods, and public/institutional areas (City of Pittsburg 2024).

#### DISCUSSION OF IMPACTS

***a) Physically divide an established community?***

*No Impact*

The Project would include rehabilitating manholes, sewer lines, and pipes along the SAI and the WPI work areas. The Project would also construct a permanent underground bypass beneath the railroad and would construct access roads along the WPI. Project work would be conducted north of all of the residential neighborhoods in the vicinity of the Project site. Construction work would mainly take place along existing roads and within industrial and undeveloped areas. No portion of Project work would physically divide an established community. New permanent infrastructure created by the Project (i.e., underground bypass, access roads) would not divide any established community. The new permanent bypass would be underground, and the access roads would be along informal roads already used by the District in undeveloped areas north of the railroad. Therefore, the Project would not physically divide an established community. No impact would occur.

Project activities would require the use of a temporary aboveground bypass system to maintain uninterrupted wastewater flow through the WPI and SAI systems while sections of the system are taken out of service for rehabilitation.

***b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?***

*Less-than-Significant Impact with Mitigation Incorporated*

The only land use plans applicable to the Project site are the County of Contra Costa General Plan and the City of Pittsburg General Plan, which contain policies to protect biological resources such as special-status species, sensitive habitats, and wetlands. As described in Section 4.2.4, Biological Resources, the Project would implement mitigation measures to ensure that no significant impacts to biological resources would occur. Therefore, the Project would not conflict with any plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. The impact would be less than significant.

### 4.2.12 Mineral Resources

| Would the project: | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|
| a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☒ |
| b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan? | ☐ | ☐ | ☐ | ☒ |

#### ENVIRONMENTAL SETTING

Contra Costa County has been known for mining rocks and sand for construction aggregate since the 1850s. The Project site is not in the vicinity of any mineral resource areas in Contra Costa County (County of Contra Costa 2024a). Additionally, the City of Pittsburg does not have any significant mineral resources (City of Pittsburg 2024).

#### DISCUSSION OF IMPACTS

***a, b) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?***

*No Impact*

The Project is not near any mineral resources that would result in the loss of availability of mineral resources that would be of value locally, regionally, or statewide in Contra Costa County. The nearest mineral resource area in the County is located approximately 11 miles south of the Project site (County of Contra Costa 2024a). Therefore, the Project would have no impacts on mineral resources.

### 4.2.13 Noise

| Would the project result in: | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|
| a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? | ☐ | ☐ | ☒ | ☐ |
| b) Generation of excessive groundborne vibration or groundborne noise levels? | ☐ | ☐ | ☒ | ☐ |
| c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☒ |

#### BACKGROUND INFORMATION ON NOISE

Noise is commonly defined as unwanted sound that annoys or disturbs people and can have an adverse psychological or physiological effect on human health. Sound is measured in decibels (dB), which is a logarithmic scale. Decibels describe the purely physical intensity of sound based on changes in air pressure but cannot accurately describe sound as perceived by the human ear since the human ear is only capable of hearing sound within a limited frequency range. For this reason, a frequency-dependent weighting system is used, and monitoring results are reported in A-weighted decibels (dBA). Decibels and other acoustical terms are defined in Table 6.

A typical method for determining a person's subjective reaction to a new noise is by comparing it to existing conditions. The following describes the general effects of noise on people:

- A 3-dBA increase is considered barely noticeable.
- A 5-dBA increase is considered clearly noticeable, but not dramatic.
- A 10-dBA increase is perceived as a doubling in loudness.

**Table 6. Definition of Acoustical Terms**

| TERM | DEFINITION |
|---|---|
| **Frequency (Hz)** | The number of complete pressure fluctuations per second above and below atmospheric pressure. |
| **Decibel (dB)** | A unit describing the amplitude of sound on a logarithmic scale. Sound described in decibels is usually referred to as sound or noise "level." This unit is not used in this analysis because it includes frequencies that the human ear cannot detect. |
| **A-Weighted Sound Level (dBA)** | The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound, in a manner similar to the frequency response of the human ear, and correlates well with subjective reactions to noise. All sound levels in this report are A-weighted. |
| **Maximum Sound Levels (Lmax)** | The maximum sound level measured during a given measurement period. |
| **Equivalent Noise Level (Leq)** | The average A-weighted noise level during the measurement period. For this CEQA evaluation, Leq refers to a 1-hour period unless otherwise stated. |
| **Community Noise Equivalent Level (CNEL)** | The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels to sound levels during the evening from 7:00 to 10:00 p.m. and after addition of 10 decibels to sound levels during the night between 10:00 p.m. and 7:00 a.m. |
| **Day/Night Noise Level (Ldn)** | The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to sound levels during the night between 10:00 p.m. and 7:00 a.m. |
| **Ambient Noise Level** | The existing level of environmental noise at a given location from all sources near and far. |
| **Vibration Decibel (VdB)** | A unit describing the amplitude of vibration on a logarithmic scale. |
| **Peak Particle Velocity (PPV)** | The maximum instantaneous peak of a vibration signal. |
| **Root Mean Square (RMS) Velocity** | The average of the squared amplitude of a vibration signal. |

Sources: Charles M. Salter Associates, Inc. 1998, Federal Transit Administration 2018.

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Typically, groundborne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Vibration amplitudes are usually expressed as either PPV or the RMS velocity. The PPV is defined as the maximum instantaneous peak of the vibration signal. PPV is appropriate for evaluating potential damage to buildings, but it is not suitable for evaluating human response to vibration because it takes the human body time to respond to vibration signals. The response of the human body to vibration is dependent on the average amplitude of a vibration. The RMS of a signal is the average of the squared amplitude of the signal and is more appropriate for evaluating human response to vibration. PPV is normally described in units of inches per second (in/sec) and RMS is often described in vibration decibels (VdB).

## ENVIRONMENTAL SETTING

### *Existing Ambient Noise Conditions*

The primary sources of noise in the vicinity of the Project site are roadway traffic along Port Chicago Highway and noise from the two railroads that border the site. The County of Contra Costa General Plan and City of Pittsburg General Plan do not have roadway contours for any roadways within 100 feet of the Project site. Two short term noise measurements taken at Lynbrook Park and California Seasons Park in 2019 indicate an Leq of 55 dB and an Lmax of 74 dB (City of Pittsburg 2019). Lynbrook Park is situated 2,060 feet south of the Project site and California Seasons Park is situated 1,400 feet south of the site.

## REGULATORY SETTING

### *County of Contra Costa General Plan*

Table HS-3 of the County's General Plan describes the maximum allowable noise exposure by land use type. For residential areas, noise levels up to 60 dB are normally acceptable, and noise levels up to 70 dB are conditionally acceptable. For residential areas in which the primary noise source is passing tarins, the standard for outdoor noise levels is a DNL of 70 dB.

The County's General Plan does not contain any applicable policies related to noise. The General Plan primarily addresses noise generated from new development and does not contain specific policies related to construction noise.

### *City of Pittsburg General Plan*

The City of Pittsburg General Plan includes the following relevant policies related to noise:

> **Policy 13-P-1.7:** Limit generation of loud noises on construction sites adjacent to existing development to normal business hours between 8:00 AM and 5:00 PM.
>
> **Policy 13-P-1.8:** Reduce the impact of truck traffic noise on residential areas by limiting traffic to appropriate truck routes. Consider methods to restrict truck travel times in sensitive areas.
>
> **Policy 13-P-1.11:** Require the preparation of ground-borne vibration studies by qualified professionals when construction activities include vibration-sensitive uses and significant site grading, foundation work, or underground work would occur within less than 100 feet of existing structures.
>
> **Policy 13-P-1.12:** Require development projects to reduce adverse construction vibration impacts to sensitive receptors, as feasible, when vibration-elated construction activities are to occur within 100 feet from existing sensitive receptors. Measures to reduce noise and vibration effect may include, but are not limited to:
>
> - Phase demolition, earth-moving and ground-impacting operations so as not to occur in the same time period.
> - The pre-existing condition of all buildings within a 100-foot radius will be recorded in order to evaluate damage from construction activities. Fixtures and finishes within a 100-foot radius of construction activities susceptible to damage will be documented (photographically and in writing) prior to construction. All damage will be repaired back to its pre-existing condition.

- Substituting vibration-generating equipment with equipment or procedures that would generate lower levels of vibration. For instance, in comparison to impact piles, drilled piles or the use of a sonic or vibratory pile driver are preferred alternatives where geological conditions would permit their use.
- Other specific measures as they are deemed appropriate by the implementing agency to maintain consistency with adopted policies and regulations regarding vibration.

**DISCUSSION OF IMPACTS**

***a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?***

*Less-than-Significant Impact*

Construction activities at the Project site are not expected to expose persons to, or generate, noise levels in excess of the DNL levels established by Table HS-3 of the County's General Plan or Table 13-1 of the City of Pittsburg's General Plan. Noise levels up to 60 dB in residential areas are normally acceptable, and levels up to 70 dB are conditionally acceptable. However, in areas where the primary noise source is passing trains, such as the Project site, noise levels up to 70 dB are normally acceptable. Operation of construction equipment at the Project site could result in temporary noise impacts in the immediate vicinity of the site. However, this noise would be temporary during construction and would not be substantially louder than other noise sources in the site vicinity, such as passing trains. The Project would not introduce any new permanent sources of noise in the vicinity; therefore, the Project would not conflict with any applicable policies of the County's General Plan.

The City of Pittsburg's General Plan contains four policies related to construction noise. Policy 13-P-1.7 requires that construction noise be limited to the hours of 8:00 a.m. to 5:00 p.m. As stated in Section 3.0, Project Description, Project construction would occur during daytime hours only between 8:00 a.m. and 5:00 p.m. Policy P-13-1.8 requires that all trucks use designated truck routes. Project areas in the City of Pittsburg would be accessed primarily via the District's access roads, and trucks would not be required to go through residential neighborhoods. Policy 13-P-1.11 and 13-P-1.12 require that a noise and vibration assessment be conducted when construction activities would occur less than 100 feet from sensitive receptors (i.e., residences, schools, hospitals, elderly care facilities, etc.). No Project work in the City of Pittsburg would take place within 100 feet of any sensitive receptors. Therefore, the Project would not conflict with applicable policies of the City's General Plan.

The Project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project site that is in excess of local standards. The impact would be less than significant.

***b) Generation of excessive groundborne vibration or groundborne noise levels?***

*Less-than-Significant Impact*

Construction of the Project would cause some groundborne vibration and noise due to the underground manhole replacement work, construction of the permanent bypass pipeline, and the use of a vibratory roller for the access road improvements. While this vibration may be

perceptible to people in the vicinity of the Project site, the primary impact that could result from groundborne vibration is impacts to older buildings. Areas where the vibratory roller would be used are over 500 feet from other buildings. The Federal Transit Administration (FTA) uses a threshold of 0.12 PPV for buildings extremely susceptible to vibration damage (i.e., historic buildings). Other modern buildings can withstand higher PPVs from 0.2 to 0.5 (FTA 2018). Although the typical safe distance depends on the building foundations and architecture and the soil conditions in the area, the FTA uses an to estimate the PPV based on distance from the vibration source. When calculating ground vibration for vibratory compactors, the results indicate that the PPV from 500 feet away would be well below the applicable threshold of 0.12 for the most sensitive buildings (Vibration and Distance 2025). Therefore, the Project would not generate excessive groundborne vibration or groundborne noise. The impact would be less than significant.

***c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?***

*No Impact*

The nearest private airstrip or airport is the Buchanan Field Airport, located approximately 5.5 miles southwest of the Project site. The Project site is not within any airport land use plan. Therefore, no impact would occur.

### 4.2.14 Population and Housing

| Would the project: | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|
| a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? | ☐ | ☐ | ☐ | ☒ |
| b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☒ |

#### ENVIRONMENTAL SETTING

The population of unincorporated Contra Costa County is approximately 175,917 (California Department of Finance [DOF] 2025). The City of Pittsburg, and the unincorporated areas of Bay Point and Shore Acres, specifically, have a current total population of approximately 75,895, 24,408, and 2,450, respectively (California DOF 2025). From 2000 to 2025, Contra Costa County had an average annual growth rate of approximately 0.83 percent, with a total increase of approximately 21.2 percent over the 25-year period (U.S. Census Bureau 2000). Portions of the Project site are within the RM and RMH zoning districts of Contra Costa County.

#### DISCUSSION OF IMPACTS

***a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?***

*No Impact*

The purpose of the Project is to improve the District's existing wastewater collection system by rehabilitating manholes and pipelines, constructing a permanent underground bypass pipeline, and constructing all-weather access roads. The proposed rehabilitation to the sewer infrastructure is not intended to induce an increase in population size, but rather to address critical degradation to the sewer infrastructure to prevent any spills or leaks in the area. The Project would not develop any residential or commercial areas that would induce substantial unplanned population growth. No impact would occur.

***b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?***

*No Impact*

The proposed Project would repair and rehabilitate existing wastewater collection infrastructure. The Project would not displace any people or housing that would necessitate the need for

construction of replacement housing elsewhere. There would be adequate access to existing properties throughout the construction period. No impact would occur.

### 4.2.15 Public Services

| Would the project: | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less than Significant Impact* | *No Impact* |
|---|---|---|---|---|
| a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: | | | | |
| *Fire protection?* | ☐ | ☐ | ☐ | ☒ |
| *Police protection?* | ☐ | ☐ | ☐ | ☒ |
| *Schools?* | ☐ | ☐ | ☐ | ☒ |
| *Parks?* | ☐ | ☐ | ☐ | ☒ |
| *Other public facilities?* | ☐ | ☐ | ☐ | ☒ |

**ENVIRONMENTAL SETTING**

#### *Fire Protection*

Fire protection services in the Project area are provided by the Contra Costa County Fire Protection District (CCCFPD). There are two stations south of the Project site: CCCFPD Station 87 located at 800 W Leland Road in Pittsburg and CCCFPD Station 85 located at 2331 Loveridge Road in Pittsburg.

#### *Police Protection*

Police protection services in the City are provided by the Pittsburg Police Department located at 65 Civic Avenue, approximately one mile south of the Project site. For the unincorporated communities of Shore Acres and Bay Point, police protection services are provided by Contra Costa County Sheriff's Office located at 1980 Muir Road in Martinez, approximately nine miles southwest of the Project site.

#### *Schools*

There are various schools within one mile of the Project site, including Shore Acres Elementary School, Rio Vista Elementary School, Bel Air Elementary School, Willow Cove Elementary School, Marina Vista Elementary School, Riverside High School, and Parkside Elementary School.

#### *Parks*

There are a handful of parks within one mile of the Project site, such as the Bay Point Regional Shoreline Park, Anuta Park, Riverview Park, Marina Walk Park, and City Park.

### *Other Public Facilities*

Public facilities within a mile of the Project site include the Ambrose Recreation and Park District Center, Marina Community Center, Pittsburg Public Works Department, Pittsburg Marina, McAvoy Yacht Harbor, Bay Point Library, and Pittsburg Library.

## DISCUSSION OF IMPACTS

***a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:***

- Fire Protection?
- Police Protection?
- Schools?
- Parks?
- Other Public Facilities?

*No Impact*

The Project would be served by existing police, fire, school, parks, and other public facilities. The Project would not construct any new governmental facilities or alter any existing governmental facilities. As described in *Section 4.2.14, Population and Housing*, the Project would not result in population growth which would result in the need for new or physically altered governmental facilities. No impact to fire protection, police protection, schools, parks, or other public facilities would occur.

### 4.2.16 Recreation

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☒ |
| b) | Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☒ |

#### ENVIRONMENTAL SETTING

The nearest park to the Project site is the Bay Point Regional Shoreline Park which is located directly north of the Project site.

#### DISCUSSION OF IMPACTS

***a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?***

*No Impact*

The Project would include improvements to an existing wastewater collection system and construction of access roads for maintenance purposes. As described in *Section 4.2.14, Population and Housing*, the Project would not result in population growth and would not construct any housing. Therefore, the Project would not increase the use of existing neighborhood or regional parks, or other recreational facilities. No impact would occur.

***b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?***

*No Impact*

The Project would not include any recreational facilities or require the construction or expansion of recreational facilities. No impact would occur.

### 4.2.17 Transportation

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities? | ☐ | ☐ | ☒ | ☐ |
| b) | Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)? | ☐ | ☐ | ☒ | ☐ |
| c) | Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? | ☐ | ☐ | ☒ | ☐ |
| d) | Result in inadequate emergency access? | ☐ | ☐ | ☒ | ☐ |

#### ENVIRONMENTAL SETTING

The Project site includes portions of Port Chicago Highway and Mc Avoy Road, which are two-lane roads in the County's right-of-way. The intersection of Mc Avoy Road and Port Chicago Highway is controlled by one stop sign on Mc Avoy Road.

#### REGULATORY SETTING

##### *County of Contra Costa General Plan*

The County's General Plan designates the Port Chicago Highway as an "arterial" roadway, which is a high-volume facility that connects the regional roadway network to the local roadway network. Arterial roadways can serve up to 40,000 vehicles per day, and there is usually limited access to abutting parcels. Mc Avoy Road is designated as a "collector" roadway, which connects residential and local-serving commercial areas to the arterial roadway system. Collector roadways can carry up to 10,000 vehicles per day and serve as principal traffic arteries within residential and commercial areas. Collector roads can also support segments of bikeway networks. Mc Avoy Road is also planned to become a Class IV bicycle network, which would include separated or protected bikeways from vehicle traffic.

The County's General Plan contains the following relevant policies related to transportation:

> **Policy TR-P2.1:** In addition to any required CEQA review, evaluate the traffic operations effects of proposed projects in accordance with the County's Transportation Analysis Guidelines and other appropriate policy supplements and transportation plans, and best practices. When operational deficiencies are identified, the treatments to address those deficiencies should first prioritize reducing the project's vehicular trips and collision risks, and may secondarily consider adding vehicular capacity so long as the safety and movement of active modes are not compromised. Exceptions to the level of service (LOS)

operational standards presented in the Transportation Analysis Guidelines may be granted if the treatments necessary to address operational deficiencies would conflict with other priorities in this General Plan and if the project is otherwise consistent with this Plan.

### *Pittsburg/Bay Point Community-Based Transportation Plan 2020*

The 2020 Pittsburg/Bay Point Community-Based Transportation Plan (CBTP) is a collaborative effort that identifies and prioritizes transportation needs for residents of Pittsburg and Bay Point, with a focus on improving mobility for low-income and underserved communities. The plan outlines strategies to enhance bus service, pedestrian and bicycle infrastructure, and access to transit, while engaging local stakeholders to ensure solutions reflect community priorities. Its recommendations aim to address barriers to transit, promote safer and more convenient travel options, and support equitable access to employment, education, and essential services.

## DISCUSSION OF IMPACTS

***a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?***

*Less-than-Significant Impact*

The County's General Plan is the only applicable plan addressing the circulation system along the roadways included in the Project site. The Pittsburg/Bay Point CBTP references areas in the vicinity of the Project site, but it does not state specific policies related to the roadways that are included in the Project site (CCTA 2020). Policy TR-P2.1 of the County's General Plan requires the County to evaluate traffic operations effects in accordance with the County's Transportation Analysis Guidelines and other appropriate policy supplements and transportation plans. The proposed Project would not result in a long-term impact to any transportation facilities. During construction, the Project would utilize traffic control measures to keep the flow of traffic moving through any lane closures. Therefore, the Project would not conflict with a program, plan, ordinance of policy addressing the circulation system. The impacts would be less than significant.

***b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?***

*Less-than-Significant Impact*

CEQA Guidelines section 15064.3(b) describes criteria for analyzing transportation impacts based on vehicle miles traveled (VMT). For land use projects, VMT exceeding an applicable threshold of significance may indicate a significant impact. In accordance with the *Technical Advisory on Evaluating Transportation Impacts in CEQA*, Section 21099 of the PRC states that the criteria for determining the significance of transportation impacts must promote: (1) reduction of GHG emissions; (2) development of multimodal transportation networks; and (3) a diversity of land uses. Section 21099 subdivision (b)(1) further directed the Office of Planning and Research (OPR) to prepare and develop criteria for determining significance. The OPR identifies a screening threshold for small, land use projects as a project that generates or attracts fewer than 110 trips per day. Projects that generate fewer than this threshold may be assumed to cause a less-than-significant transportation impact (OPR 2018).

During construction, the Project would generate some temporary vehicle trips from workers commuting to the Project site and construction vehicles bringing materials to and from the site. The number of vehicle trips would not exceed 110 trips per day, which is OPR's screening

threshold for conducting a VMT analysis. Project operation would not cause an increase in vehicle trips, aside from occasional vehicles needed for maintenance activities, such as maintenance of the PS and landscaping. As such, the Project would not conflict with CEQA Guidelines section 15064.3, subdivision (b). The impact would be less than significant.

***c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?***

*Less-than-Significant Impact*

During construction, some work would occur within the County's right-of-way along Port Chicago Highway and Mc Avoy Road, which could temporarily elevate hazards due to reduced visibility around intersections and curves. The Project would utilize signage and flaggers as necessary to direct traffic around work areas. Therefore, construction work within roadways would not substantially increase hazards within the Project site.

Operation of the Project would not introduce any hazards due to geometric design features or incompatible uses. The Project would rehabilitate existing on-site infrastructure, construct new underground infrastructure, and construct access roads along informal paths. This work would not create any new aboveground structures which could introduce a circulation hazard. Therefore, the Project would not increase hazards due to a geometric design feature or incompatible use. The impact would be less than significant.

***d) Result in inadequate emergency access?***

*Less-than-Significant Impact*

During construction, the Project would include work within the County's right-of-way along Port Chicago Highway and McAvoy Raad, which could potentially cause delays for emergency vehicles accessing residences within the Project area. As stated in *Section 3.0, Project Description,* no road closure would be required, and the Project would utilize traffic control to ensure that emergency vehicle access would be maintained at all times. As such, the Project would not result in inadequate emergency access The impact would be less than significant.

### 4.2.18 Tribal Cultural Resources

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: | | | | |
| *i)* | *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?* | ☐ | ☒ | ☐ | ☐ |
| *ii)* | *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.* | ☐ | ☒ | ☐ | ☐ |

#### ENVIRONMENTAL SETTING

A summary of the environmental setting as it related to tribal cultural resources can be found in *Section 4.2.5, Cultural Resources*.

#### REGULATORY SETTING

##### *State of California Public Resources Code*

Section 21074 of the PRC defines historical resources related to tribal cultural resources.

a) "Tribal cultural resources" are either of the following:
    a. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
        A. Included or determined to be eligible for inclusion in the California Register of Historical Resources.
        B. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.
    b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section

5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

b) A cultural landscape that meets the criteria of subdivision (a) is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape.

c) A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

### TRIBAL CONSULTATION

The District sent letters to appropriate representatives of each tribal group associated with the Project site area on November 18, 2025. The Confederated Villages of Lisjan Nation responded to the District's letter on December 18, 2025, requesting reports, resource records, and shapefiles in the vicinity of the Project site. The District sent the requested materials to the tribe and met with representatives of the Lisjan Nation on March 25, 2026. The tribe had no further requests regarding the Project at that point in time.

### DISCUSSION OF IMPACTS

***a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:***

***i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?***

***ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.***

*Less-than-Significant Impact with Mitigation Incorporated*

The District notified local tribes of the Project on November 18, 2025. One response was received from the Confederated Villages of Lisjan Nation. The District sent applicable Project reports and records to Lisjan Nation and held a consultation meeting on March 25, 2026. No tribal cultural resources within the Project site have been identified to date. As described in Mitigation Measure CUL-1 and CUL-2, standard measures for accidental discovery of archaeological materials or human remains will be implemented throughout Project construction, which would reduce potential impacts to unknown archaeological resources, which may be tribal cultural resources, to a less-than-significant level. With implementation of these measures, the impact of the Project on tribal cultural resources would be less than significant.

### 4.2.19 Utilities and Service Systems

| Would the project: | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? | ☐ | ☒ | ☐ | ☐ |
| b) | Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years? | ☐ | ☐ | ☒ | ☐ |
| c) | Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | ☐ | ☐ | ☒ | ☐ |
| d) | Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? | ☐ | ☐ | ☒ | ☐ |
| e) | Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? | ☐ | ☐ | ☒ | ☐ |

**ENVIRONMENTAL SETTING**

*Water Services*

In the unincorporated Contra Costa County, treated or untreated water is mostly supplied by the CCWD, and in some areas is distributed by the cities themselves through the Golden State Water Company, Diablo Water District, East Bay Municipal Utility District, or Castle Rock County Water District (Contra Costa LAFCO 2008). The CCWD sources its water primarily from the Sacramento-San Joaquin Delta, which originates from rivers within the Sierra Nevada (CCWD 2025).

Water in the City of Pittsburg is supplied by the City itself, but it is sourced from the CCWD. The City of Pittsburg Public Services Department, which owns and operates the Pittsburg Water Treatment Plant, distributes water to City residents and businesses. The City is responsible for account management and service requests for City residents and businesses. All day-to-day field

service, maintenance, upgrades, and expansion of water infrastructure are managed by the City's Public Services/Utilities Division (Contra Costa LAFCO 2007).

### *Wastewater Services*

Wastewater services in the Project area are provided by the District, who handles all wastewater conveyance, management, and treatment to its residents. The City of Pittsburg handles local sewer collection and billing, but all collected wastewater is treated regionally at the District's facilities.

### *Electricity and Natural Gas Services*

Electricity and natural gas services in the City of Pittsburg are provided by PG&E. In the County, the main provider of energy is MCE, but PG&E continues to own and operate all electricity delivery and infrastructure. PG&E is also the provider of natural gas in the County.

## DISCUSSION OF IMPACTS

***a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?***

*Less-than-Significant Impact with Mitigation Incorporated*

The purpose of the Project is to improve the existing wastewater collection system by rehabilitating pipes and manholes, constructing access roads, and constructing a permanent underground bypass pipeline. Potential environmental effects of constructing the proposed wastewater infrastructure facilities are discussed throughout this IS/MND. *Section 4.2.21, Mandatory Findings of Significance*, describes the cumulative impacts of the Project. As described throughout this IS/MND, the Project would not result in any significant environmental impacts; all impacts would be mitigated to a less-than-significant level with implementation of mitigation measures described throughout this document. Therefore, environmental effects of the proposed new and rehabilitated wastewater infrastructure included in the Project would be less than significant with mitigation incorporated.

***b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?***

*Less-than-Significant Impact*

During construction, the Project would require the use of water for construction activities such as watering soil stockpiles. The amount of water needed for Project construction would be comparable to the amount needed for similar types of construction projects. This temporary increase in water demand would be covered by the existing water supply and would not result in a permanent increase in water demand. Therefore, sufficient water supplies would be available to serve the needs of the Project. The impact of the Project related to water supply would be less than significant.

***c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?***

*Less-than-Significant Impact*

The Project is being undertaken by the District, who is the wastewater treatment provider for the Project area. The Project is being undertaken to improve the District's existing wastewater infrastructure and create infrastructure that allows for future maintenance needs. As outlined in *Section 4.2.14, Population and Housing*, the proposed Project would not involve building any new residential units or infrastructure that would create population growth. Therefore, operation of the Project would not result in a determination by the wastewater treatment provider that additional capacity is needed to serve the Project.

During construction, to prevent interruptions in wastewater service, temporary above-ground bypass lines or permanent underground alternatives would be set up to redirect flow as needed when manholes or pipelines are under repair. The temporary bypass system would ensure that wastewater continues to move through the WPI and SAI infrastructure even when parts of the network are shut down for repairs or upgrades to manholes and pipes. This approach keeps wastewater transmission continuous while specific segments are isolated for improvement work. The impact of Project construction would be less than significant.

***d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?***

*Less-than-Significant Impact*

The Project would generate limited construction and demolition (C&D) waste during construction, primarily including concrete from the removal of deteriorated manholes.

All C&D waste would be properly disposed of at an authorized facility that handles such materials. To construct the access roads, the existing roadway footprint of organics would be cleared down to suitable subgrade material, and this material would also be hauled off-site and disposed of at an appropriate facility. Project operation would not cause an increase in solid waste generation. Therefore, the Project would not generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure. The impact would be less than significant.

***e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?***

*Less-than-Significant Impact*

The Project would produce C&D waste such as old infrastructure debris, concrete and asphalt, removed linings and coatings, excavated materials, etc. All C&D waste would be managed in full compliance with applicable Federal, State, and local solid waste laws and reduction requirements. The impact would be less than significant.

### 4.2.20 Wildfire

| If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project: | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|
| a) Substantially impair an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☒ | ☐ |
| b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? | ☐ | ☐ | ☒ | ☐ |
| c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | ☐ | ☐ | ☒ | ☐ |
| d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? | ☐ | ☐ | ☒ | ☐ |

#### ENVIRONMENTAL SETTING

The Project site is located in a Local Responsibility Area (LRA) within the City of Pittsburg and Contra Costa County, meaning that local agencies, rather than State agencies, are responsible for wildfire protection. The Project site is not within a CAL FIRE-designated Fire Hazard Severity Zone (FHSZ) within the State Responsibility Area (SRA) or the LRA (CAL FIRE 2025). The Project site is surrounded by Moderate to High FHSZ within the SRA and LRA approximately one mile to the south (CAL FIRE 2025). The site is bordered by Moderate FHSZ in the LRA to the west, as well as lands within the Federal Responsibility Area (FRA) (CAL FIRE 2025). Wildfires are recognized as a potential hazard in the area due to the surrounding open spaces and grassland areas, which can become very dry during the summer and fall months due to heat and high winds (County of Contra Costa 2024a). The Project site is not within an area where housing is adjacent to wildland vegetation, also known as the Wildland Urban Interface (WUI). However, the County's General Plan Figure HS-11 shows that the Project site is within the WUI Influence Zone, meaning that it is adjacent to the WUI and may be influenced by wildland fire hazards within the WUI (County of Contra Costa 2024a).

There has been one documented occurrence of a wildfire, called the Black Diamond #2, within the eastern portion of the Project site that occurred in 1966 and burned approximately 488 acres (CAL FIRE 2020). The next most recent occurrence in the area was the Marsh Fire, which occurred in 2022, just slightly southeast of the Project site, in the City of Pittsburg and the unincorporated area of Bay Point (City of Pittsburg 2022). The Marsh Fire, which started at a

homeless encampment in the area and spread to the surrounding marsh areas eventually creating a peat fire, burning a total of approximately 500 acres (City of Pittsburg 2022).

## REGULATORY SETTING

### *Contra Costa County Local Hazard Mitigation Plan*

The 2024 Contra Costa County Local Hazard Mitigation Plan (LHMP) is a comprehensive strategy that identifies major natural and human-caused risks facing the county, such as earthquakes, floods, and wildfires. It outlines priorities and actions to reduce these risks, including plans for evacuation, public communication, and interagency coordination. The LHMP integrates city and district-specific annexes and ensures compliance with state and federal emergency planning requirements to enhance overall community resilience.

### *City of Pittsburg Hazard Mitigation Plan*

The City of Pittsburg Hazard Mitigation Plan (HMP) was last updated in April 2023 and details actions to reduce long-term risks from natural hazards such as earthquakes, severe weather, flooding, hazardous materials incidents, and health epidemics. The plan identifies threats specific to the City, assesses vulnerabilities, and establishes strategies to minimize future losses through improvements to infrastructure, emergency preparedness, and response coordination among city departments. This plan fulfills state and federal requirements, making the City eligible for mitigation funding and enabling coordination with regional agencies. It is designed to promote community resilience and safeguard people and property from known hazards.

### *Contra Costa Countywide Emergency Evacuation Plan*

The Contra Costa Countywide Emergency Evacuation Plan is a regional effort led by the Contra Costa Transportation Authority, funded by a Caltrans grant, to ensure safe, coordinated evacuations across all cities, towns, and unincorporated areas during disasters such as wildfires, floods, and earthquakes. It will identify high-risk and vulnerable communities, evaluate and improve evacuation routes, and promote multi-jurisdictional coordination among local, regional, and state agencies. The plan will focus on equitable, efficient evacuations, compliance with state laws, and strengthening transportation network resilience, with completion targeted for 2027.

### *City of Pittsburg Emergency Services Operations Plan*

The City of Pittsburg's Emergency Services Program oversees emergency preparedness and response through its own Emergency Operations Plan (EOP), which was last updated in 2018. The EOP sets out concise procedures for managing disasters ranging from earthquakes to wildfires, details roles for city departments, and directs the activation of the Emergency Operations Center. It ensures coordinated emergency response, clear communication, and effective evacuation strategies to protect residents and property during all hazard events.

## DISCUSSION OF IMPACTS

***a) Substantially impair an adopted emergency response plan or emergency evacuation plan?***

*Less-than-Significant Impact*

The Project would involve construction work along and within Port Chicago Highway and McAvoy Road. Temporary lane closures may be required for manhole rehabilitation; however, no full road

closures would be needed. As described in *Section 3.0, Project Description,* traffic control would be utilized as needed to ensure safe travel through the Project site. Therefore, the Project would not substantially impair an adopted emergency response or evacuation plan for the Contra Costa County or the City of Pittsburg. The Project would result in less-than-significant impacts.

***b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?***

*Less-than-Significant Impact*

The Project site is located in a flat area south of Carquinez Strait along the outskirts of residential neighborhoods and industrial areas. The Project would include construction and rehabilitation of underground infrastructure and would not introduce any new permanent structures or land uses that would exacerbate wildfire risk. Therefore, the impact would be less than significant**.**

***c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?***

*Less-than-Significant Impact*

The Project would include improvements to existing access roads that the District currently uses for infrastructure access needs. The purpose of raising the access roads and upgrading the roads from dirt to gravel is to allow the District to have year-round access for maintenance needs, as the existing informal paths are only usable seasonally due to fluctuation in groundwater levels. Construction of access roads would not exacerbate fire risk and would likely result in decreased fire risk as access roads can function as a fuel break. No other infrastructure such as fuel breaks, emergency water sources, power lines, or other utilities would be required for the Project. The impact would be less than significant.

***d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?***

*Less-than-Significant Impact*

As described in *Section 4.2.7, Geology and Soils*, the Project site is located in a flat area and is not within a landslide hazard area. As discussed in *Section 4.2.9, Hydrology and Water Quality*, the Project would not increase flooding or runoff. Therefore, the Project would not expose people or structures to significant risks associated with downslope or downstream flooding or landslides as a result of post-fire slope instability or drainage changes. The impact would be less than significant.

### 4.2.21 Mandatory Findings of Significance

| | | *Potentially Significant Impact* | *Less-than-Significant Impact with Mitigation Incorporated* | *Less-than-Significant Impact* | *No Impact* |
|---|---|---|---|---|---|
| a) | Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☒ | ☐ | ☐ |
| b) | Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? | ☐ | ☐ | ☒ | ☐ |
| c) | Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly? | ☐ | ☒ | ☐ | ☐ |

**DISCUSSION OF IMPACTS**

***a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?***

*Less-than-Significant Impact with Mitigation Incorporated*

Implementation of the Project would not substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or substantially reduce the number or restrict the range of a rare or endangered plant or animal. Implementation of mitigation measures presented in *Section 4.2.4, Biological Resources,* would mitigate potential impacts that could substantially degrade the quality of the environment or impact biological resources.

Implementation of the Project would not eliminate important examples of the major periods of California history or prehistory. Although there are no known archaeological resources, historical resources, or human remains in the Project area, replacement of manholes could result in significant impacts to unknown resources that may be present in the area. Therefore, Mitigation

Measures CUL-1 and CUL-2 will be implemented, which describe procedures to be followed should accidental discovery of archaeological resources or human remains occur during construction. Therefore, impacts related to important examples of the major periods of California history or prehistory would be less than significant with mitigation incorporated.

***b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?***

Cumulatively considerable means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other projects, and the effects of probable future projects. The Project is being implemented to rehabilitate 51 manholes along the SAI and WPI, rehabilitate approximately 8,882 linear feet of sewer lines and pipes along the WPI, and construct access roads to five manholes. Phase I of the Project was determined to be categorically exempt from CEQA (District 2024) and would not have any significant environmental impacts or operational effects that could contribute to a cumulative impact. One project, Shore Acres Foreman (SAFM) Repair, is within the vicinity of the Project site. However, construction of the projects would not occur concurrently. Therefore, a less-than-significant cumulative impact would occur with respect to all environmental impacts discussed in this IS/MND.

***c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?***

*Less-than-Significant Impact with Mitigation Incorporated*

Potential impacts to human beings have been addressed in this IS/MND, including impacts related to air quality, hazards and hazardous materials, noise, and transportation. Project construction activities have the potential to cause temporary impacts related to fugitive dust emissions and odor generation. However, implementation of mitigation measures AIR-1 and AIR-2 reduce these impacts to a less-than-significant level. In addition, the Project has potential to result in upset and release of contaminated soil and groundwater on the Project site. However, Mitigation Measures HAZ-1 and HAZ-2 would reduce this impact to a less-than-significant level.

Noise and transportation impacts resulting from the Project were found to be less than significant, with no mitigation measures required. As such, the Project would not have environmental impacts with adverse effects on human beings. The impact would be less than significant with mitigation incorporated.

## GENERAL NOTES

1. CONTRACTOR SHALL MAINTAIN ACCESS TO PRIVATE AND PUBLIC PROPERTIES AT ALL TIMES DURING CONSTRUCTION.
2. THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THE IMPROVEMENT PLANS ARE OBTAINED FROM SOURCES OF VARYING RELIABILITY. THE CONTRACTOR IS CAUTIONED THAT ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. THE PROJECT ENGINEER ASSUMED NO RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF THE DELINEATION OF SUCH UNDERGROUND UTILITIES NOR FOR THE EXISTENCE OF OTHER BURIED OBJECTS OR UTILITIES WHICH ARE NOT SHOWN ON THESE PLANS. THE CONTRACTOR IS HEREBY NOTIFIED THAT, PRIOR TO COMMENCING CONSTRUCTION, HE/SHE IS RESPONSIBLE FOR CONTACTING THE UTILITY COMPANIES INVOLVED AND REQUESTING VISUAL VERIFICATION OF THE LOCATIONS OF THEIR UNDERGROUND FACILITIES SHOWN ON THESE IMPROVEMENT PLANS. THE PROJECT ENGINEER SHALL BE NOTIFIED BY THE CONTRACTOR OF THE SCHEDULED TIME AND PLACE OF SUCH VISUAL VERIFICATION TO ENABLE SAID FIRM TO HAVE A REPRESENTATIVE PRESENT. SHOULD A CONFLICT BECOME APPARENT, THE PROJECT ENGINEER WILL CONTACT THE PARTIES RESPONSIBLE FOR RELOCATION OF THE CONFLICTING FACILITY.
3. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO FIELD VERIFY LOCATIONS, ELEVATIONS, DIMENSIONS, ETC. OF EXISTING FACILITIES PRIOR TO ORDERING MATERIALS AND TO IMMEDIATELY NOTIFY THE ENGINEER OF ANY FIELD CONFLICTS, REVISIONS OR OMISSIONS.
4. ALL STRUCTURES OR OTHER FIXTURES NOT SPECIFICALLY NOTED TO BE REMOVED SHALL BE PROTECTED IN PLACE. IF DAMAGED AS PART OF WORK, ALL DAMAGED ITEMS SHALL BE REPLACED IN AS KIND AT CONTRACTOR'S EXPENSE.
5. AERIAL PHOTOS SHOWN IN PLAN VIEW WERE TAKEN IN 2020. FEATURES SHOWN ON THE AERIAL PHOTO ARE FOR INFORMATIONAL PURPOSE ONLY AND MAY HAVE CHANGED SINCE THE PHOTOS WERE TAKEN. THE PHOTOS ARE NOT RECTIFIED AND MAY HAVE VARYING LEVELS OF DISTORTION. PHOTO SCALE IS APPROXIMATE.
6. THE CONTRACTOR SHALL OBTAIN THE NECESSARY ENCROACHMENT PERMITS FROM THE CITY OR ANY OTHER AGENCIES HAVING JURISDICTION PRIOR TO COMMENCING ANY WORK. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CALTRANS ENCROACHMENT PERMITS.
7. CONTRACTOR AGREES THAT THE CONTRACTOR SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY. THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL AND CITY WORKING HOURS. THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND THE PROJECT ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR PROJECT ENGINEER.
8. CONTRACTOR SHALL CONTINUOUSLY KEEP EXISTING STREETS FREE FROM DIRT AND DEBRIS DURING ALL PHASES OF CONSTRUCTION. CONTRACTOR SHALL CONTINUOUSLY REMOVE MUD TRACKS FROM STREETS AND ADJACENT PROPERTIES AND SWEEP STREETS.
9. CONTRACTOR SHALL PROVIDE DUST CONTROL AT ALL TIMES. PRIOR TO OBTAINING WATER FROM FIRE HYDRANTS, CONTRACTOR SHALL OBTAIN A HYDRANT METER FROM PROPER FIRE HYDRANT AUTHORITIES.
10. CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) 811, 2 WORKING DAYS PRIOR TO START OF ANY EXCAVATION OR DEMOLITION OF IMPROVEMENTS.
11. THE CONTRACTOR IS RESPONSIBLE TO NOTIFY ALL UTILITIES 2 WORKING DAYS PRIOR TO ANY EXCAVATION SO THAT LINES CAN BE MARKED.
12. ANY DAMAGE TO THE EXISTING FACILITIES INCLUDING TREES, LANDSCAPING, IRRIGATION, FENCES, WALLS, SIDEWALK AND OTHER PAVEMENT SURFACES SHALL BE REPAIRED AT CONTRACTOR'S EXPENSE. RESTORE ANY AND ALL PAVEMENT, INCLUDING STRIPING HEAVILY TRACKED WITH OIL, AND OTHER FACILITIES OUTSIDE LIMITS OF WORK AFFECTED BY THE CONSTRUCTION OPERATIONS AT NO ADDITIONAL COST.
13. TRAFFIC CONTROL DURING CONSTRUCTION SHALL BE THE CONTRACTOR'S RESPONSIBILITY AND IN ACCORDANCE WITH THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL PROVIDE ALL LIGHTS, SIGNS, BARRICADES, FLAGMEN AND OTHER DEVICES TO PROVIDE FOR SAFE PASSAGE OF PUBLIC VEHICULAR AND PEDESTRIAN TRAFFIC.
14. THE CONTRACTOR SHALL SUBMIT ANY NECESSARY TRAFFIC CONTROL & SIGNING PLAN (INCLUDING STREET CLOSURE DETAILS) TO THE ENGINEER AT THE PRE-CONSTRUCTION MEETING. THE NOTICE TO PROCEED SHALL NOT BE ISSUED UNTIL SAID TRAFFIC CONTROL PLAN HAS BEEN SUBMITTED AND APPROVED.
15. CONTRACTOR SHALL CONTACT THE _____ AT _____ IN THE EVENT OF EMERGENCY.
16. CONTRACTOR SHALL COORDINATE WITH ADJACENT PROPERTY OWNERS IF ANY ACTIVITIES ARE TO HAPPEN WITHIN THE VICINITY OF THEIR PROPERTY.
17. THE CONTRACTOR SHALL PROVIDE THE PROJECT ENGINEER WITH A RECORD OF ALL FIELD CHANGES FROM THESE PLANS AND THE PROJECT ENGINEER SHALL SUPPLY DELTA DIABLO WITH ELECTRONIC AS-BUILT" PLANS UPON COMPLETION OF THE PROJECT.
18. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL EXCAVATION AND SHORING PROCEDURES AND SHALL CONFORM TO THE LATEST OSHA REQUIREMENTS.
19. MANHOLE ENTRY AND/OR ENTRY TO ANY EXCAVATION GREATER THAN (4) FOUR FEET DEEP SHALL BE IN FULL COMPLIANCE WITH THE CONFINED SPACE ENTRY REQUIREMENT OF CALIFORNIA AND FEDERAL OSHA.
20. GROUND PROFILE IS SHOWN ALONG THE CENTERLINE OF THE EXISTING INTERCEPTOR UNLESS OTHERWISE NOTED.
21. LOCATION AND DEPTH OF EXISTING UTILITIES IS APPROXIMATE BASED ON RECORD DATA WHERE AVAILABLE. REFER TO PROJECT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
22. INVERTS SHOWN ARE APPROXIMATE. ACTUAL DEPTHS OF SEWER MAY VARY. CONTRACTOR TO VERIFY ALL DEPTHS AND UTILITY LOCATIONS PRIOR TO START OF CONSTRUCTION.
23. LOCATION AND DEPTH OF EXISTING UTILITIES IS APPROXIMATE BASED ON RECORD DATA WHERE AVAILABLE. REFER TO PROJECT SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.

## SEWER NOTES

1. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO CCTV PRIOR TO CONSTRUCTION AND VERIFY ALL SEWER LATERAL LOCATIONS.
2. ALL SEWER SERVICES SHALL BE RECONNECTED. ALL MANHOLE RISERS SHALL BE SEALED BETWEEN RINGS WITH PREFORMED FLEXIBLE PLASTIC SEALING GASKET OR SIMILAR SEALING MATERIAL. JOINTS SHALL BE GROUTED INSIDE AND OUT.
3. DURING INSTALLATION AND BACKFILLING, ALL TRENCHES SHALL BE FREE OF WATER. ALL DEWATERING SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
4. THE COMPLETE JOB SITE IS READY FOR TELEVISION INSPECTION WHEN THE FOLLOWING WORK IS COMPLETED:
   - 4.1. ALL SEWER PIPELINES ARE INSTALLED AND BACKFILLED.
   - 4.2. ALL STRUCTURES ARE IN PLACE, ALL CHANNELING IS COMPLETED AND PIPELINES ARE ACCESSIBLE FROM STRUCTURES.
   - 4.3. ALL OTHER UNDERGROUND FACILITIES, UTILITY PIPING AND CONDUITS ARE INSTALLED.
   - 4.4. FINAL STREET SUBGRADING IS COMPLETE AND READY FOR ASPHALT CONCRETE SURFACING.
   - 4.5. ALL LATERALS AND MAINS ARE TO BE VIDEO TAPED TO THE SERVICE CLEANOUT.

## GRADING NOTES

1. GRADING SHALL INCLUDE ALL LABOR, MATERIALS AND EQUIPMENT NECESSARY TO CONSTRUCT GRADES AS SHOWN ON THE GRADING PLAN. NO ADDITIONAL COMPENSATION WILL BE ALLOWED FOR THE DISPOSAL OF EXCESS EXCAVATION PLACED AT THE DIRECTION OF THE PROJECT ENGINEER IN ADVANCE OF ANY CHANGES DEEMED NECESSARY TO OBTAIN A BALANCED GRADING PROGRAM TO MEET MINIMUM STANDARDS.

## EROSION AND SEDIMENTATION CONTROL NOTES

1. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE EFFECTIVE FOR THE DURATION OF THE CONSTRUCTION ACTIVITY.
2. THE NAME, ADDRESS AND 24-HOUR TELEPHONE NUMBER OF THE RESPONSIBLE PERSON FOR IMPLEMENTATION OF EROSION AND SEDIMENTATION CONTROL PLAN SHALL BE PROVIDED.
3. A MINIMUM OF 50 LINEAR FEET BY 12 FEET WIDTH OF DRAIN ROCK, 1-1/2" DIAMETER OR LARGER AT A MINIMUM DEPTH OF 6", SHALL BE INSTALLED AT EACH SITE INGRESS/EGRESS. THIS DOES NOT NEED TO BE DONE AT INGRESS/EGRESS LOCATIONS WHICH WILL BE CLOSED BY IMMOVABLE BARRICADES DURING CONSTRUCTION.
4. DURING THE RAINY SEASON, ALL SIDEWALK AND PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE SHALL BE MAINTAINED SO AS TO MINIMIZE SEDIMENT LADEN RUNOFF FROM ENTERING ANY STORM DRAINAGE SYSTEM.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSPECTION AND CLEANING ALL EROSION CONTROL FACILITIES AT THE END OF EACH WORKDAY DURING THE RAINY SEASON.
6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CLEANING OUT SEDIMENT BASINS WHENEVER THE LEVEL OF SEDIMENT REACHES THE SEDIMENT CLEAN OUT LEVEL INDICATED ON THE PLANS.
7. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING BORROW AREAS AND/OR STOCKPILES WITH APPROPRIATE EROSION CONTROL MEASURES SATISFACTORY TO THE DISTRICT ENGINEER.
8. THE CLEANING OF PAVED STREETS, DURING AND AT THE COMPLETION OF CONSTRUCTION, SHALL BE PERFORMED WITH MECHANICAL SWEEPERS. THE USE OF WATER TRUCKS TO 'WASH DOWN' THE STREET IS PROHIBITED.

## CONSTRUCTION NOTES

1. REHABILITATE EXISTING SS PIPE BY INSTALLING CIPP LINER
2. REHABILITATE EXISTING MANHOLE WITH STRUCTURAL MANHOLE LINER PER DETAIL 4 ON SHEET C-01
3. REHABILITATE EXISTING MANHOLE BY REPAIRING CONCRETE AND APPLYING EPOXY LINER PER DETAIL 4 ON SHEET C-01
4. REMOVE AND REPLACE EXISTING MANHOLE FRAME AND COVER PER DETAIL 1 AND 2 ON SHEET C-01
5. CONSTRUCT GRAVEL ACCESS ROAD PER DETAIL 3 ON SHEET C-01
6. CONSTRUCT NEW PIPE OF SIZE NOTED PER DETAILS 1-4 ON SHEET C-02
7. CONSTRUCT NEW SANITARY SEWER MANHOLE PER DETAILS 1-4 ON SHEET C-02
8. INSTALL STEEL CASING USING EITHER PILOT TUBE GUIDED HORIZONTAL AUGER BORING OR MICROTUNNELING.
9. INSTALL NEW SEWER PIPE WITHIN NEW CASING WITH PIPE SPACERS PER PLANS.
10. AT ENDS OF CASING, PROVIDE NEOPRENE END SEALS AND STEEL VENT PIPES. VENT PIPES SHALL HAVE DOWN-TURNED ELBOW WITH SCREENED OPENING EXISTING

NOTES:

1. CONTRACTOR SHALL AVOID DISTURBING EXISTING GROUND SURFACE TO THE MAXIMUM EXTENT FEASIBLE. CONTRACTOR SHALL REMOVE SURFACE DEBRIS AS WELL AS THE ABOVEGROUND PORTION OF EXISTING SURFACE VEGETATION TO THE MAXIMUM EXTENT FEASIBLE WITHOUT DISTURBING EXISTING GROUND SURFACE.

3 — TYPICAL ACCESS ROAD SECTION
NOT TO SCALE

NOTES:

1. CONTRACTOR SHALL VERIFY DIMENSIONS OF EACH MANHOLE AND DEPTHS AND SIZES OF ALL PIPES PRIOR TO REHABILITATION OF EACH MANHOLE.
2. CONTRACTOR SHALL COORDINATE ALL WORK WITH DELTA DIABLO.
3. CONTRACTOR SHALL COMPLY WITH ALL STATE AND FEDERAL REGULATIONS FOR CONFINED SPACE ENTRY REQUIREMENTS.
4. BYPASS PUMPING SHALL BE IN ACCORDANCE WITH SPECIFICATIONS.
5. CONTRACTOR SHALL REPAIR MANHOLE SHELVES AND CHANNELS WHERE DIRECTED BY THE CITY OR ITS APPOINTED REPRESENTATIVE PRIOR TO INSTALLING THE COATINGS AND LINING MATERIAL.

FIBERGLASS PLASTIC (FRP) LINER INSERT NOTES:

1. PREPARE EXCAVATION IN A SAFE AND NORMAL MANNER AROUND THE TOP PORTION OF THE EXISTING MANHOLE. BE SURE EXCAVATION IS PROPERLY SHORED FOR SAFETY.
2. SET THE MANHOLE LINER INTO THE EXISTING MANHOLE. MARK THE CONTOUR OF THE EXISTING BENCH AREA AND JOINING PIPES ONTO THE FIBERGLASS LINER. REMOVE THE LINER AND CUT ALONG THE CONTOUR MARK TO FORM THE BOTTOM EDGE OF THE LINER. THE GAP BETWEEN THE BOTTOM EDGE OF THE LINER AND THE SURFACE OF THE BENCH SHALL NOT BE GREATER THAN 0.125 INCH AT ANY ONE LOCATION AROUND EACH LINER.
3. CUT LATERAL PIPE FLUSH WITH EXISTING MANHOLE WALL. CUT CIRCULAR OPENING IN LINER TO MATCH PIPE DIAMETER. USE 18" LONG PVC PIPE WITH SAME I.D AS LATERAL. PVC PIPE WILL BE USED AS A MOLD TO FORM I.D OF LATERAL ACROSS ANNULAR SPACE WHEN PLACING CONCRETE GROUT IN ANNULAR SPACE. CUT LONGITUDINAL SLOT IN PVC PIPE. SQUEEZE AND INSERT SLOTTED PVC FORM INTO THE I.D OF THE EXISTING LATERAL. PROVIDE A BOND BARRIER BETWEEN GROUT AND PVC FORM. REMOVE PVC FORM AFTER GROUT HAS CURED. APPLY EPOXY GROUT TO SEAL LINER AND END OF PIPE, AND THE GROUTED I.D OF THE LATERAL WHICH WAS FORMED DURING GROUTING.
4. THE CONTRACTOR SHALL PLACE A RING OF UNCURED GROUT ALONG THE CIRCUMFERENCE OF HOST MANHOLE BENCH TO PROVIDE A BULKHEAD SEAL ALONG THE BOTTOM OF THE MANHOLE LINER.
5. INSTALL THE FIBERGLASS MANHOLE LINER IN A CONCENTRIC MANNER. BOTTOM EDGE OF MANHOLE LINER SHALL BE CAREFULLY PRESSED DOWN INTO UNCURED GROUT RING ON BENCH. FILL THE ANNULAR SPACE BETWEEN THE FIBERGLASS LINER AND EXISTING MANHOLE WITH CONCRETE GROUT PLACED EVENLY IN ONE FOOT LIFTS. USE A FIBERGLASS LINER 6" I.D SMALLER THAN THE I.D OF THE EXISTING MANHOLE. ANNULAR SPACE BETWEEN OUTSIDE OF LINER AND EXISTING MANHOLE SHALL BE ONE INCH MINIMUM.
6. AFTER INSTALLATION OF LINER, THE CONTRACTOR SHALL PATCH AND EPOXY COAT THE EXPOSED CONCRETE SURFACE OF BENCH AND FLOW CHANNEL.

4 — SSMH REHABILITATION BY COATING/LINING
NOT TO SCALE

# APPENDIX B. CALEEMOD REPORT

# Manhole, Gravity Interceptor, and Easement Road Improvements Phase 2 Project  Custom Report

## Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Access Road Construction (2026) - Unmitigated

3.3. Underground Pipe and Manhole Rehabilitation  (2026) - Unmitigated

3.5. Permanent Underground Bypass System (2026) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

8. User Changes to Default Data

8.1. Justifications

# 1. Basic Project Information

## 1.1. Basic Project Information

| Data Field | Value |
|---|---|
| Project Name | Manhole, Gravity Interceptor, and Easement Road Improvements Phase 2 Project |
| Construction Start Date | 4/1/2026 |
| Lead Agency | — |
| Land Use Scale | Project/site |
| Analysis Level for Defaults | County |
| Windspeed (m/s) | 3.6 |
| Precipitation (days) | 14 |
| Location | Shore Acres, Bay Point, CA 94565, USA |
| County | Contra Costa |
| City | Unincorporated |
| Air District | Bay Area AQMD |
| Air Basin | San Francisco Bay Area |
| TAZ | 1342 |
| EDFZ | 1 |
| Electric Utility | Pacific Gas & Electric Company |
| Gas Utility | Pacific Gas & Electric |
| App Version | 2022.1.1.35 |

## 1.2. Land Use Types

| Land Use Subtype | Size | Unit | Lot Acreage | Building Area (sq ft) | Landscape Area (sq ft) | Special Landscape Area (sq ft) | Population | Description |
|---|---|---|---|---|---|---|---|---|
| User Defined Linear | 1.7 | Mile | 10.0 | 0.00 | — | — | — | — |

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

# 2. Emissions Summary

### 2.2. Construction Emissions by Year, Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Year | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Access Road Construction | Linear, Grading & Excavation | 6/1/2026 | 8/31/2026 | 5.0 | 66 | Access Road Construction |
| Underground Pipe and Manhole Rehabilitation | Linear, Trenching | 4/1/2026 | 11/30/2026 | 5.0 | 174 | Underground Pipe and Manhole Rehabilitation |
| Permanent Underground Bypass System | Linear, Trenching | 6/1/2026 | 8/31/2026 | 5.0 | 66 | Permanent Underground Bypass System |

## 5.2. Off-Road Equipment

### 5.2.1. Unmitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Access Road Construction | Rubber Tired Dozers | Diesel | Average | 1.00 | 7.3 | 200 | 0.40 |
| Access Road Construction | Rubber Tired Loaders | Diesel | Average | 1.00 | 3.6 | 150 | 0.36 |
| Access Road Construction | Rollers | Diesel | Average | 1.00 | 7.3 | 148 | 0.38 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Underground Pipe and Manhole Rehabilitation | Excavators | Diesel | Average | 1.00 | 1.4 | 158 | 0.38 |
| Underground Pipe and Manhole Rehabilitation | Pumps | Diesel | Average | 1.00 | 6.0 | 115 | 0.74 |
| Underground Pipe and Manhole Rehabilitation | Plate Compactors | Diesel | Average | 1.00 | 0.46 | 8.0 | 0.43 |
| Permanent Underground Bypass System | Excavators | Diesel | Average | 1.00 | 1.8 | 158 | 0.38 |
| Permanent Underground Bypass System | Pumps | Diesel | Average | 1.00 | 7.3 | 84 | 0.74 |
| Permanent Underground Bypass System | Bore/Drill Rigs | Diesel | Average | 1.00 | 3.0 | 200 | 0.50 |

## 5.3. Construction Vehicles

### 5.3.1. Unmitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Access Road Construction | Worker | 0.00 | 12 | LDA,LDT1,LDT2 |
| Access Road Construction | Vendor | 0.00 | 8.4 | HHDT,MHDT |
| Access Road Construction | Hauling | 3.8 | 12 | HHDT |
| Access Road Construction | Onsite truck | — | — | HHDT |
| Underground Pipe and Manhole Rehabilitation | Worker | 9.2 | 20 | LDA,LDT1,LDT2 |
| Underground Pipe and Manhole Rehabilitation | Vendor | 0.28 | 50 | HHDT,MHDT |
| Underground Pipe and Manhole Rehabilitation | Hauling | 0.00 | 20 | HHDT |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

## 5.5. Architectural Coatings

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (Cubic Yards) | Material Exported (Cubic Yards) | Acres Graded (acres) | Material Demolished (sq. ft.) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Access Road Construction | 319 | 0.00 | 79 | 0.00 | 0.00 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 2 | 61% | 61% |

## 5.7. Construction Paving

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2026 | 0.00 | 204 | 0.03 | < 0.005 |

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

| Vegetation Land Use Type | Vegetation Soil Type | Initial Acres | Final Acres |
|---|---|---|---|

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

| Biomass Cover Type | Initial Acres | Final Acres |
|---|---|---|

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

# 8. User Changes to Default Data

## 8.1. Justifications

| Screen | Justification |
|---|---|
| Construction: Construction Phases | Construction information provided by the District. |

| | |
|---|---|
| Construction: Dust From Material Movement | Provided by the District |
| Construction: Trips and VMT | Construction trips were provided by the District. Worker commute trips and vendor trips are included in the Underground Pipe and Manhole Rehabilitation phase. In addition, haul trips and concrete truck trips are included in the Access Road Construction phase. |

**EQUIPMENT HOURS**

## Construction Off-Road Equipment Activity (Total Hours per Month)

| Project components | Equipment Type | # of pieces | Fuel Type | Horsepower | Engine Tier | 2026 | | | | | | | | Duration (day) | Average Hours per day |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | April | May | Jun | Jul | Aug | Sept | Oct | Nov | | |
| Underground Pipe and Manhole Rehabilitation | Excavators | 1 | Diesel | 158 | Average | | 16 | 40 | 40 | 40 | 40 | 40 | 20 | 174 | 1.36 |
| | Pumps (Bypass) | 1 | Diesel | 115 | Average | | 160 | 160 | 160 | 160 | 160 | 160 | 80 | | 5.98 |
| | Plate Compactors | 1 | Diesel | 8 | Average | | | | 40 | 40 | | | | | 0.46 |
| Jack and Bore Installation of New Sewer Pipe Under Railroad | Excavators | 1 | Diesel | 158 | Average | | | 40 | 40 | 40 | | | | 66 | 1.82 |
| | Pumps (Dewatering) | 1 | Diesel | 84 | Average | | | 160 | 160 | 160 | | | | | 7.27 |
| | Auger Boring Rig | 1 | Diesel | 200 | Average | | | 20 | 160 | 20 | | | | | 3.03 |
| Access Road Construction | Bulldozer | 1 | Diesel | 200 | Average | | | 160 | 160 | 160 | | | | 66 | 7.27 |
| | Front End Loader | 1 | Diesel | 150 | Average | | | 80 | 80 | 80 | | | | | 3.64 |
| | Vibratory Roller | 1 | Diesel | 148 | Average | | | 160 | 160 | 160 | | | | | 7.27 |

Note: CalEEMod default values were used as project-specific hoursepower data were not available. Assumed diesel engine to be conservative when fuel type is unknown.

## Construction Vehicle Trip Activity (Total Round Trips per Month)

| Vehicle Trip Activity | Travel Distance (Round Trip Miles) | Fleet Mix (percentage) | | | | 2026 | | | | | | | | Duration (day) | Average One-Way Trips per day | Average VMT per day | Trip Type | Trip Type - Average One-Way Trips per day | Average One-Way Trip Length (miles) |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | LDA | LHD | MHD | HHD | Apr | May | Jun | Jul | Aug | Sept | Oct | Nov | | | | | | |
| Worker Commute Trips | 40.0 | 100% | | | | 100 | 100 | 100 | 100 | 100 | 100 | 100 | 100 | | 9.20 | 183.9 | Worker Commute | 9.20 | 20 |
| Vendor Trips | 100.0 | | | 50% | 50% | 6 | | 8 | 4 | 4 | 2 | | | 174 | 0.28 | 13.8 | Vendor | 0.28 | 50 |
| Demolition Haul Trips | 20.0 | | | | 100% | | | | | | | | 4 | | 0.12 | 1.2 | Hauling | 3.82 | 11.7 |
| Soil Haul Trips | 24.0 | | | | 100% | | | 30 | 50 | 30 | | | | | 3.33 | 40.0 | | | |
| Concrete Trucks Trips | 20.0 | | | | 100% | | | 4 | 4 | 4 | | | | 66 | 0.36 | 3.6 | | | |

Notes: Worker commute trips and vendor trips are included in the Underground Pipe and Manhole Rehabilitation phase. In addition, haul trips and concrete truck trips are included in the Access Road Construction phase. Materials will be brought to the project site at the beginning of construction.

# APPENDIX C. CONSTRUCTION HEALTH RISK ASSESSMENT

# MEMORANDUM

**Date:** December 19, 2025 **Job No.:** 21202-24

**To:** Liv Niederer, Environmental Planner, WRA

**From:** Yilin Tian, Project Environmental Engineer, Baseline Environmental Consulting

**Subject:** **Construction Health Risk Assessment for the Manhole, Gravity Interceptor, and Easement Road Improvements Phase 2 Project**

This Construction Health Risk Assessment was performed by Baseline Environmental Consulting (Baseline) on behalf of Delta Diablo (District), in support of the environmental review of the Manhole, Gravity Interceptor, and Easement Road Improvements Phase 2 Project (Project). The Project site is located in northern Contra Costa County. The Project site is within the City of Pittsburg and the unincorporated communities of Bay Point and Shore Acres (**Figure 1**). The Project includes rehabilitating approximately 51 manholes along the Shore Acres Interceptor (SAI) and Willow Pass Interceptor (WPI), rehabilitating 9,025 linear feet of sewer lines and pipes along the WPI, and installing a permanent bypass system, as well as constructing access roads to access five of the District's manholes along the WPI.

This technical memorandum evaluates the potential health risk impacts to nearby sensitive receptors exposed to diesel particulate matter (DPM) and fine particulate matter ($PM_{2.5}$) emissions from project construction. The health risks to nearby sensitive receptors were evaluated in accordance with guidance from the Office of Environmental Health Hazard Assessment (OEHHA)[1] and the Bay Area Air District (BAAD).[2]

## PROJECT ANALYSIS

During construction, the project would generate emissions of DPM and $PM_{2.5}$ from the exhaust of diesel-powered engines; these emissions are a complex mixture of soot, ash particulates, metallic abrasion particles, volatile organic compounds, and other components that can penetrate deeply into the lungs and contribute to a range of health problems. In 1998, the California Air Resources Board (CARB) identified DPM from diesel-powered engines as a toxic air contaminant (TAC) based on its potential to cause cancer and other adverse health effects.[3] BAAD also recommends that construction emissions of $PM_{2.5}$, in addition to TACs, be

[3] California Air Resources Board (CARB), 1998. Initial Statement of Reasons for Rulemaking; Proposed Identification of Diesel Exhaust as a Toxic Air Contaminant, June.

considered in health risk assessments of air pollution due to its correlation with diesel exhaust and strong evidence for adverse health effects.

## Health Risk Screening Thresholds

For risk assessment purposes, exposure to TACs may result in cancer and non-cancer health impacts. Cancer risk is expressed as the incremental probability that an individual will develop cancer over a lifetime as a direct result of exposures to potential carcinogens from anthropogenic sources. The estimated cancer risk is a unitless probability, often expressed as chances in a million. A hazard index (HI) is used to assess non-cancer health impacts for different exposure scenarios (chronic and acute). The HI is based on the ratio of the potential exposures to a chemical by the levels at which no adverse effects are expected.

The project site is located in the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of BAAD. BAAD has adopted thresholds of significance to assist lead agencies in the evaluation and mitigation of air quality impacts under CEQA.[4] BAAD's recommend health risk thresholds are summarized in **Table 1**.

**Table 1: BAAD Health Risk Screening Thresholds**

| Impact Analysis | Pollutant | Screening Thresholds |
|---|---|---|
| Local Community Risks and Hazards (Operation and/or Construction) | $PM_{2.5}$ (project) | 0.3 µg/$m^3$ (annual average) |
| | TACs (project) | Cancer risk increase > 10 in one million<br>Chronic hazard index > 1.0 |
| | $PM_{2.5}$ (cumulative) | 0.8 µg/$m^3$ (annual average) |
| | TACs (cumulative) | Cancer risk > 100 in one million<br>Chronic hazard index > 10.0 |

Notes: TACs = Toxic air contaminants; $PM_{2.5}$ = Fine particulate matter; µg/$m^3$ = micrograms per cubic meter.

## Sensitive Receptors

Sensitive receptors are areas where individuals are more susceptible to the adverse effects of poor air quality. Sensitive receptors include, but are not limited to, hospitals, schools, daycare facilities, parks, elderly housing, and convalescent facilities. Residential areas are also considered sensitive receptors because people are often at home for extended periods, thereby increasing the duration of exposure to potential air contaminants. Existing sensitive receptors near the project site include the following:

- Single-family residences south of Port Chicago Highway between Wharf Drive and Mc Avoy Road (adjacent to the work area, as close as 30 feet from roadway);

[4] Bay Area Air District (BAAD), 2023. CEQA Air Quality Guidelines. April.

- Single-family residences along Pamela Drive and Gregory Drive between Sharon Drive and Steele Drive (as close as about 560 feet south of the proposed manhole rehabilitation locations);
- Single-family residences along and south of Alfaro Avenue between North Broadway Avenue and Poinsettia Avenue (as close as 690 feet south of the proposed work area northeast of the Union Pacific Railroad [UPRR]) and BNSF Railway [BNSF]);
- Single-family residences south of West 10th Street, along Beacon Street, West 8th Street, Herb White Way, and Halsey Way, surrounding the portion of SAI work area north of West 10th Street (as close as 50 feet to SAI).
- Saint Peter Martyr School about 750 feet northeast of the portion of SAI work area north of West 10th Street.

BAAD also recommends evaluating health risks to offsite worker receptors, which are not considered sensitive receptors. Since the offsite workers are located further away than the sensitive land uses surrounding the project site, and residential receptors have a longer exposure duration, larger age sensitivity factor, and/or higher exposure frequency than workers, the offsite worker receptors are not evaluated in this analysis.

Similarly, since the residential receptors are located much closer to the work area than the student receptors (30 feet vs. 750 feet), and have a longer exposure duration, larger age sensitivity factor, and higher exposure frequency than students, the student receptors are not evaluated in this analysis.

## DPM and $PM_{2.5}$ Emissions from Construction

Project construction would generate DPM and $PM_{2.5}$ emissions from the exhaust of off-road diesel construction equipment, and fugitive $PM_{2.5}$ emissions from construction activities. BAAD recommends using the most recent version of the California Emissions Estimator Model (CalEEMod Version 2022.1) to estimate air pollutant emissions from construction of a project. CalEEMod uses widely accepted models for emission estimates combined with appropriate default data for a variety of land use projects that can be used if site-specific information is not available. The primary input data used to estimate emissions associated with construction of the project were provided by the District and includes construction duration, import and export volumes, construction-related vehicle trips, trip lengths, and off-road construction equipment inventory and usage. Construction for the manhole and pipeline rehabilitation work along the WPI and SAI is anticipated to start in spring 2026 and is expected to last approximately 12 months. Construction of the underground bypass would also begin in spring 2026 and would take approximately two to three months. Construction information provided by the District and a copy of the CalEEMod report which summarizes the input parameters, assumptions, and findings, are included in **Attachment A**.

## HEALTH RISK ASSESSMENT

### *Exposure to DPM and $PM_{2.5}$ Emissions during Construction*

In accordance with guidance from BAAD and OEHHA, an assessment was conducted to evaluate potential health risks to sensitive receptors exposed to DPM and $PM_{2.5}$ emissions during project construction. The acute HI for DPM was not calculated because an acute reference exposure level has not been approved by OEHHA and CARB, and BAAD does not recommend analysis of acute non-cancer health hazards from construction activity.

The annual average concentrations of DPM and $PM_{2.5}$ during construction were estimated within 1,000 feet of the project site using the U.S. Environmental Protection Agency's AERMOD air dispersion model. For this analysis, emissions of exhaust coarse particulate matter ($PM_{10}$) were used as a surrogate for DPM, which is a conservative assumption because more than 90 percent of DPM is less than 1 micron in diameter. For modeling purposes, daily emissions from construction were assumed to occur between 7 a.m. and 6 p.m. Monday through Friday.

To conservatively model a worst-case exposure scenario, the exhaust and fugitive dust emissions from all off-road equipment activities were represented in the AERMOD model as area sources encompassing the Western Area shown in **Figure 1**, which includes a portion of the proposed project alignment for manhole and pipeline rehabilitation, as well as the proposed permanent underground bypass system. This is conservative because not all off-road equipment activities would occur within the Western Area and the closest sensitive receptors to the project alignment are within the Western Area. The project's total DPM and fugitive dust emissions were assumed to occur within the Western Area for the full 12-month construction period. Under this assumption, the maximally exposed individual resident (MEIR) identified in the Western Area represents the worst-case scenario for all sensitive receptors near the project site.

The exhaust and fugitive dust emission rates for off-road equipment were modeled using a unit emission rate of 1 gram per second, and then the model concentrations were scaled by the actual emission rates based on the total mass of emissions averaged over the entire duration of construction. During non-work hours, the emission rates were assumed to be zero. The input parameters and assumptions used for estimating the dispersion of DPM and $PM_{2.5}$ from off-road diesel construction equipment are included in **Attachment B**.

A uniform grid of receptors spaced 50 meters apart was created for ground level receptors at a standard breathing height of 1.5 meters to develop isopleths (i.e., concentration contours) around the project site that illustrate the air dispersion pattern from the emissions sources. In addition, discrete receptors spaced 20 meters apart were created for ground level receptors at heights of 1.5 meters adjacent to the Port Chicago Highway to calculate concentrations at the MEIR. The AERMOD model input parameters included 1 year of BAAD meteorological data from

the Golden Eagle Refinery Met Site (2752) located about 5.4 miles to the west-southwest of the western boundary of the project site.

The air dispersion model was used to estimate annual average concentrations of DPM and $PM_{2.5}$ from project construction emissions at nearby receptors. Based on the results of the air dispersion model (**Attachment B**), potential health risks were evaluated for the MEIR on the ground floor of a single-family residence located at 572 Levee Road, as shown in **Figure 2**. For the MEIR, the incremental increase in cancer risk was conservatively assessed for an infant starting from birth that would be exposed to the annual average DPM concentration over the entire duration of project construction (12 months). This exposure scenario represents the most sensitive individual who could be exposed to adverse air quality conditions in the vicinity of the project site.

Estimates of the health risks at the MEIR from exposure to DPM and $PM_{2.5}$ concentrations during project construction are summarized and compared to BAAD's thresholds of significance in **Table 2**. At the MEIR, the estimated excess cancer risk and chronic HI for DPM and annual average $PM_{2.5}$ concentration from uncontrolled construction emissions were below the thresholds of significance.

**Table 2: Health Risks during Project Construction**

| Emissions Scenario | Receptor | Diesel Particulate Matter | | $PM_{2.5}$ Annual Average Concentration ($\mu g/m^3$) |
|---|---|---|---|---|
| | | Cancer Risk (per million) | Chronic Hazard Index | |
| Off-Road Construction Equipment | MEIR | 2.6 | <0.01 | 0.17 |
| **Thresholds of Significance** | | **10** | **1.0** | **0.3** |
| **Exceed Threshold?** | | **No** | **No** | **No** |

Notes: $\mu g/m^3$ = micrograms per cubic meter
Source: Attachment B

### *Cumulative Exposure to TACs and $PM_{2.5}$ Emissions*

In addition to a project's individual DPM and $PM_{2.5}$ emissions during construction, the potential cumulative health risks to sensitive receptors from existing TACs and $PM_{2.5}$ were evaluated. Cumulative health risks were estimated at the MEIR to represent the worst-case-exposure scenario for sensitive receptors in the project vicinity.

Based on BAAD's permitted stationary source risk map,[5] there is no existing stationary source within 1,000 feet of the MEIR (**Figure 2**). At the time of preparation of this analysis, there were

[5] Bay Area Air District (BAAD), 2025. Stationary Source Screening Map. Available at: https://baaqmd.maps.arcgis.com/apps/webappviewer/index.html?id=845658c19eae4594b9f4b805fb9d89a3.

no reasonably foreseeable future projects identified within 1,000 feet of the project that would introduce a new source of TACs and/or $PM_{2.5}$ emissions.

Preliminary health risk screening values at the MEIR from exposure to mobile sources of TACs and $PM_{2.5}$ were estimated based on BAAD's Mobile Source Screening Map,[6] which provides health risk estimates reflective of 2022 conditions for residents living near major roadways, and reflective of 2024 conditions for residents living near rail lines and rail yards.

Estimates of the cumulative health risks at the MEIR for the project are summarized and compared to BAAD's cumulative thresholds of significance in **Table 3**. As shown in **Table 3**, the cumulative cancer risk, chronic HI, and annual average $PM_{2.5}$ concentration at the MEIR were below BAAD's cumulative thresholds. Therefore, implementation of the project would not expose existing sensitive receptors to substantial concentrations of TACs and $PM_{2.5}$ that would be considered cumulatively considerable.

**Table 3: Cumulative Health Risks**

| Source | Source Type | Ref | Toxic Air Contaminants | | $PM_{2.5}$ Annual Average Concentration ($\mu g/m^3$) |
|---|---|---|---|---|---|
| | | | Cancer Risk (per million) | Chronic Hazard Index | |
| **Project** | | | | | |
| Off-Road Construction Equipment | Diesel Exhaust | | 2.6 | <0.01 | 0.17 |
| **Existing Mobile Sources** | | | | | |
| Major Roadway | Mobile | 1 | 1.4 | 0.01 | 0.07 |

Source: Attachment B

## CONCLUSION

Based on the analysis of potential health risk impacts related to emissions from off-road construction equipment, the project would not result in a substantial increase in the exposure of sensitive receptors to DPM and $PM_{2.5}$.

# 4. Operations Emissions Details

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | TOG | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Access Road Construction | Linear, Grading & Excavation | 6/1/2026 | 8/31/2026 | 5.0 | 66 | Access Road Construction |
| Underground Pipe and Manhole Rehabilitation | Linear, Trenching | 4/1/2026 | 11/30/2026 | 5.0 | 174 | Underground Pipe and Manhole Rehabilitation |
| Permanent Underground Bypass System | Linear, Trenching | 6/1/2026 | 8/31/2026 | 5.0 | 66 | Permanent Underground Bypass System |

## 5.2. Off-Road Equipment

### 5.2.1. Unmitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Access Road Construction | Rubber Tired Dozers | Diesel | Average | 1.00 | 7.3 | 200 | 0.40 |
| Access Road Construction | Rubber Tired Loaders | Diesel | Average | 1.00 | 3.6 | 150 | 0.36 |
| Access Road Construction | Rollers | Diesel | Average | 1.00 | 7.3 | 148 | 0.38 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Underground Pipe and Manhole Rehabilitation | Excavators | Diesel | Average | 1.00 | 1.4 | 158 | 0.38 |
| Underground Pipe and Manhole Rehabilitation | Pumps | Diesel | Average | 1.00 | 6.0 | 115 | 0.74 |
| Underground Pipe and Manhole Rehabilitation | Plate Compactors | Diesel | Average | 1.00 | 0.46 | 8.0 | 0.43 |
| Permanent Underground Bypass System | Excavators | Diesel | Average | 1.00 | 1.8 | 158 | 0.38 |
| Permanent Underground Bypass System | Pumps | Diesel | Average | 1.00 | 7.3 | 84 | 0.74 |
| Permanent Underground Bypass System | Bore/Drill Rigs | Diesel | Average | 1.00 | 3.0 | 200 | 0.50 |

## 5.3. Construction Vehicles

### 5.3.1. Unmitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Access Road Construction | Worker | 0.00 | 12 | LDA,LDT1,LDT2 |
| Access Road Construction | Vendor | 0.00 | 8.4 | HHDT,MHDT |
| Access Road Construction | Hauling | 3.8 | 12 | HHDT |
| Access Road Construction | Onsite truck | — | — | HHDT |
| Underground Pipe and Manhole Rehabilitation | Worker | 9.2 | 20 | LDA,LDT1,LDT2 |
| Underground Pipe and Manhole Rehabilitation | Vendor | 0.28 | 50 | HHDT,MHDT |
| Underground Pipe and Manhole Rehabilitation | Hauling | 0.00 | 20 | HHDT |

| | | | | |
|---|---|---|---|---|
| Underground Pipe and Manhole Rehabilitation | Onsite truck | — | — | HHDT |
| Permanent Underground Bypass System | Worker | 0.00 | 12 | LDA,LDT1,LDT2 |
| Permanent Underground Bypass System | Vendor | — | 8.4 | HHDT,MHDT |
| Permanent Underground Bypass System | Hauling | 0.00 | 20 | HHDT |
| Permanent Underground Bypass System | Onsite truck | — | — | HHDT |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

## 5.5. Architectural Coatings

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (Cubic Yards) | Material Exported (Cubic Yards) | Acres Graded (acres) | Material Demolished (sq. ft.) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Access Road Construction | 319 | 0.00 | 79 | 0.00 | 0.00 |

### 5.6.2. Construction Earthmoving Control Strategies

# 1.0 INTRODUCTION

This Biological Resources Technical Report evaluates existing biological resources, potential impacts, and mitigation measures (if required) for the Delta Diablo Willow Pass Concord Interceptor Improvements Project located in Bay Point, Contra Costa County, California (Appendix A – Figure 1). Delta Diablo (District) is proposing infrastructure maintenance and improvements along its alignment which include manhole repairs or full removal and replacement along with construction of permanent access roads and an underground bypass. This focal area of this assessment is the proposed limits of disturbance plus an 50-foot surrounding buffer (Study Area).

## 1.1 Overview and Purpose

This Biological Resources Technical Report provides an assessment of biological resources within the Study Area and immediate vicinity. The purpose of the assessment was to develop and gather information on sensitive land cover types and special-status plant and wildlife species to support an evaluation of the Project under the California Environmental Quality Act (CEQA). This report describes the results of the site visit, which assessed the Study Area for (1) the presence of sensitive land cover types, special-status plant species, and special-status wildlife species, (2) the potential for the site to support special-status plant and wildlife species. Based on the results of the site assessment, potential impacts to sensitive land cover types and special-status species resulting from the proposed project were evaluated. If the project has the potential to result in significant impacts to these biological resources, measures to avoid, minimize, or mitigate for those significant impacts are described.

A biological resources technical report (BRTR) provides general information on the presence, or potential presence, of sensitive species and habitats. Additional focused studies (such as protocol-level species surveys or a wetland delineation) may be required to support regulatory permit applications or to implement mitigation measures included in this report. This assessment is based on information available at the time of the study and on-site conditions that were observed on the dates the site was visited. Conclusions are based on currently available information used in combination with the professional judgement of the biologists completing this study.

## 1.2 Project Description

### 1.2.1 Background Information and Project Purpose

The District is a California special district that provides wastewater resource recovery services for over 218,000 customers in the cities of Antioch and Pittsburg and the unincorporated Bay Point community in east Contra Costa County. These services include wastewater collection, conveyance, and treatment; recycled water production and distribution; renewable energy production; beneficial biosolids reuse; pretreatment and pollution prevention; street sweeping; and household hazardous waste collection. The District owns and operates 43 miles of gravity sewers in the Bay Point community, 18.5 miles of pressurized sewer force mains and 14 miles of gravity sewer interceptors, five wastewater pump stations with four million gallons of flow equalization storage facilities, a wastewater treatment plant with 16 million gallons of on-site storage basin volume, 16 miles of recycled water distribution pipelines, and a Recycled Water Facility. The District's Wastewater Treatment Plant treats approximately 13 million gallons of wastewater per day.

The District is implementing a multi-phase approach to address critical infrastructure improvements in their wastewater collection system. The first phase has been constructed and included the rehabilitation of existing gravity sewer trunk main and manholes along the Shore Acres Interceptor (SAI). Phase 2, referred to herein as the Project, includes rehabilitating or replacing approximately 53 manholes along the SAI and Willow Pass Interceptor (WPI), rehabilitating approximately 8,882 linear feet of sewer pipes along the WPI, as well as constructing access roads to access five of the District's manholes along the SAI.

### 1.2.2 Work Areas

#### WILLOW PASS INTERCEPTOR

Project work along the WPI would include the rehabilitation of approximately 7,034 linear feet of 21-inch, 30-inch, and 33-inch diameter reinforced concrete pipe (RCP) gravity sewer and rehabilitation or replacement of 30 manholes. The methods used to rehabilitate the manholes are described in further detail in *Section 1.2.3*.

#### SHORE ACRES INTERCEPTOR

Project work along the SAI would include the rehabilitation of approximately 1,848 linear feet of 30-inch diameter vitrified clay pipe (VCP) gravity sewer, rehabilitation or replacement of 23 manholes, and construction of all-weather raised access roads to access five of the District's manholes.

### 1.2.3 Project Components and Construction Methods

#### PROJECT COMPONENTS

##### *Manhole Rehabilitation*

Three different manhole rehabilitation methods may be used along the SAI and WPI, which are described below in further detail. Each manhole would be evaluated on-site at the time of construction to determine which method is appropriate for each manhole. One of the three following rehabilitation methods would be applied to each manhole.

- **Concrete repair and epoxy coating:** This method is recommended at manholes that are in adequate structural condition and can be restored. The goal of this method is to repair minor damage and defects and protect against further deterioration. This method includes the following steps:
    1. Clean and prepare the existing interior manhole surfaces by degreasing and abrasive blasting. Remove damaged and deteriorated concrete and any existing coating materials to provide a sound substrate suitable for concrete repair material and coating.
    2. If existing reinforcing steel is encountered, evaluate for loss of section. If more than 20 percent of section loss is found, reinforcing steel either will be supplemented by placement of additional rebar or the manhole must be replaced, depending on the severity of reinforcement loss.
    3. Use polymer-modified cement mortar to perform repairs on existing concrete surfaces.

4. If there is evidence of filtration into the manhole at joints, voids, and cracks, grout will be injected around the manhole through drilled holes in the manhole interior to prevent further infiltration.
5. Following grout injection, apply epoxy coating to the manhole and allow time to cure.

- **Remove and replace:** This method is recommended for severely deteriorated manholes and depending on the depth and location of the manhole, removing and replacing may by the quickest and cheapest option. Demolition of the existing manhole would be facilitated by excavating the area immediately outside of the manhole to remove the existing manhole down to, and potentially including the base. If the local water table is above the excavation bottom, the excavation would be continuously dewatered until the completion of work at that manhole site. The manhole would then be reconstructed in the same location as the existing. Excavated areas would be backfilled with native material once the rehabilitation work is complete.
- **Structural polymer concrete manhole insert:** This method uses a structural polymer concrete insert that involves polymer concrete precast sections that are inserted into the existing manhole. The new inserts support the manhole structurally, provides corrosion protection, and prevents infiltration.

Manhole preparation would include removing the existing manhole cone and grade ring, cleaning, grouting any leaks, removing loose material, and making repairs to the existing manhole bench and insert. A polymer concrete coating would be applied, and riser sections would be installed, grouted and sealed together. Once the sections are installed, a structural backfill would be used to fill the annular space between the old manhole and new insert. This method is suitable for rehabilitating severely deteriorated manholes in environmentally sensitive areas, or where access is generally limited.

### *Underground Pipe Rehabilitation*

One component of the Project entails cured-in-place pipe (CIPP) lining as a means to rehabilitate deteriorated pipelines across approximately 8,882linear feet of sewer pipes within the system. CIPP lining is a trenchless pipe rehabilitation method that involves installing and curing a resin-saturated flexible tube liner into the existing pipe, which is referred to as the "host pipe." The CIPP process includes the following steps:

1. Block or divert flow around the section of pipe to be worked on.
2. Clean the pipe to create a dry, clean surface.
3. Insert and expand the liner either by inversion or pull-in-place methods.
    a. Inversions use air or water pressure to inflate liner and needs one access point.
    b. Pull-in-place requires two access points and uses an air-filled bladder to inflate.
4. Cure the liner using heat or ultraviolet light to form a new hardened pipe.

A description of where the pipe sections to be rehabilitated are located is provided in Table 1.

Table 1. Underground Pipe Rehabilitation Summary

| | UPSTREAM MANHOLE | DOWNSTREAM MANHOLE | LOCATION |
|---|---|---|---|
| **Shore Acres Interceptor** | SA13T04 | SSA12T04 | Undeveloped area along north side of Willow Pass Road |
| | SA32T04 | SA31T04 | Undeveloped area north of the railroad |
| | SA33T04 | SA32T04 | Undeveloped area north of the railroad |
| | SA34T04 | SA33T04 | Undeveloped area north of the railroad |
| **Willow Pass Interceptor** | CW01I00 | CW01I00IPS | Undeveloped area along River Sands Road |
| | CW02I00 | CW01I00 | Undeveloped area along River Sands Road |
| | CW03I00 | CW02I00 | Underneath railroad north of intersection of Port Chicago Highway and Wharf Drive |
| | CW04I00 | CW03I00 | Underneath railroad north of intersection of Port Chicago Highway and Wharf Drive |
| | CW05I00 | CW04I00 | Undeveloped area north of and within intersection of Port Chicago Highway and Wharf Drive |
| | CW06I00 | CW05I00 | Underneath Port Chicago Highway |
| | CW07I00 | CW06I00 | Underneath Port Chicago Highway |
| | CW08I00 | CW07I00 | Underneath Port Chicago Highway |
| | CW09I00 | CW08I00 | Underneath Port Chicago Highway |

| | UPSTREAM MANHOLE | DOWNSTREAM MANHOLE | LOCATION |
|---|---|---|---|
| | CW10I00 | CW09I00 | Underneath Port Chicago Highway |
| | CW11I00 | CW10I00 | Underneath Port Chicago Highway |
| | CW12I00 | CW11I00 | Underneath Port Chicago Highway |
| | CW13I00 | CW12I00 | Underneath Port Chicago Highway |
| | CW14I00 | CW13I00 | Underneath Port Chicago Highway |
| | CW15I00 | CW14I00 | Underneath Port Chicago Highway |
| | CW16I00 | CW15I00 | Underneath Port Chicago Highway |
| | CW17I00 | CW16I00 | Underneath Port Chicago Highway |
| | CW18I00 | CW17I00 | Underneath Port Chicago Highway |
| | CW19I00 | CW18I00 | Underneath McAvoy Road |
| | CW20I00 | CW19I00 | Underneath property east of McAvoy Road |
| | CW21I00 | CW20I00 | Undeveloped area south of the railroad |

Depending on the construction contractor's means and methods, it may be feasible to perform CIPP lining through the existing manholes without modification. However, if additional access space is needed, the existing manhole frame, cover, and cone may be temporarily removed and replaced following construction.

Flow diversion will be necessary to maintain system operations during construction. A portion of the pipe rehabilitation between manholes CW03100 to CW02100, which crosses under both Union Pacific Railroad (UPRR) and BNSF Railway (BNSF) rights-of-way would be diverted via a new permanent underground bypass. The permanent bypass would serve construction as well as future operations and maintenance needs as a means to divert flow beneath the operating railroads. Bypass flow for the remainder of the CIPP rehabilitation segments would occur via a temporary above ground bypasses.

#### TEMPORARY ABOVEGROUND BYPASS SYSTEM

Temporary bypasses would be required to maintain uninterrupted wastewater flows through the WPI and SAI systems while sections of the system are taken out of service to be rehabilitated. This type of bypass would be necessary for all manholes that require the "remove and replace" rehabilitation method and would also be required for all CIPP rehabilitation. The temporary bypass system would consist of pumps (diesel or electric with a diesel generator),[1] piping and hoses, and ancillary equipment such as valves, fittings, flow meters and other control equipment. Piping and hoses would be laid down on the ground surface, with anchorage provided as needed to provide security on sloping terrain.

The temporary aboveground bypass system would remain in place for up to approximately five days at each location. The bypass system would be monitored 24/7 for security purposes and to ensure that no system failures have occurred. Bypass lines will be prioritized for placement in upland areas wherever possible, to minimize impacts to aquatic resources. The construction contractor would be required to test and maintain the bypass systems to ensure that wastewater is not leaking outside of the bypass system. At night when the bypass system is running, workers with flashlights would monitor the system to ensure that no leaks are occurring.

#### PERMANENT UNDERGROUND BYPASS SYSTEM

As part of the Project, a permanent bypass pipeline would be installed under the railroad rights-of-way by means of the jack and bore trenchless method. The jack and bore method involves creating a horizontal bore path by pushing a casing pipe through the earth using a jacking machine, while simultaneously removing excavated material with an auger, to a maximum depth of 20 feet. Once the casing pipe is in place, a carrier pipe (i.e., the actual pipe that will carry the sewer flows) is inserted into the casing, and the space between the carrier pipe and casing pipe may be filled with grout or sand to provide stability.

#### ACCESS ROADS

The Project would include the installation of permanent access roads to facilitate the District's maintenance of its existing facilities. Specifically, permanent access roads would be installed to provide access to five manholes within the District's SAI system. Currently, the District accesses these manholes by driving along informal paths, and access is limited seasonally dependent on groundwater levels and precipitation, putting the system at risk should a maintenance need be identified during the rainy season. Four new 12-foot-wide gravel access roads would be constructed approximately one-foot to 2.5-feet above existing grade to ensure year-round access.

### 1.2.4 Construction Phasing and Schedule

Construction is anticipated to start in spring 2027 and is expected to last approximately 12 months. Construction of the underground bypass would begin in spring or summer 2027 and would take approximately two to three months. This work would occur simultaneously with the manhole and pipeline rehabilitation work along the WPI and SAI.

[1] Diesel tanks would be provided with a secondary containment system

### 1.2.5 Staging, Access, and Equipment

Staging for construction materials and equipment would be within the upland area on the southern side of the railroad, at District-owned facilities, and at off-site equipment yards determined by the construction contractor. The following equipment would be required for project construction:

- Excavators – For demolishing, excavating around, and installing replacement manhole structures.
- Dump trucks – To transport excavated materials off-site and deliver aggregate or backfill materials.
- Graders – To construct gravel access road surfacing.
- De-watering Equipment (Pumps and Hoses) – For dewatering manhole work areas if groundwater intrusion is encountered during trenching operations.
- Temporary Bypass System (Pumps and Hoses) – before bypassing sanitary sewer flows around the work sites.
- Vibratory equipment - For areas where compaction is required such as under new manhole bases, or for gravel access roads
- CIPP Truck/Trailer –To bring CIPP liner out to site and to prepare and install the liner.

It is anticipated that temporary site access for construction can generally be via existing public and private roads, or otherwise disturbed areas, with minimal additional disturbance needed to facilitate access.

### 1.2.6 Site Work

A majority of the proposed site work would consist of the installation of new permanent access road surfacing to provide all-weather access to five manholes along the SAI system. For these access roads, the roadway footprint would be cleared and grubbed to remove organics down to suitable subgrade material. This material would be hauled off-site and disposed of at an appropriate facility. The existing subgrade would be compacted, then the aggregate roadway material would be imported, then placed and compacted in lifts until final grade is achieved. The final gravel surface would not be impervious surface. No asphalt pavement would be constructed as part of the Project; therefore, the Project would not change the total impervious surface area on the Project site.

Other site work aside from construction of the access roads is limited to minor excavation and surface restoration around manholes following replacement of the manhole or upper parts of the manhole. The maximum depth of excavation needed for the removal and replacement of manholes would be 15 feet. The maximum depth of excavation needed for installation of the underground bypass pipeline would be 20 feet.

Construction would be performed by qualified contractors and contract documents, plans, and specifications would incorporate stipulations regarding standard District requirements and acceptable construction practices, including but not limited to safety measures, vehicle operation and maintenance, excavation stability, erosion control, drainage alteration, groundwater disposal, traffic circulation, public safety, dust control, and noise generation. Also, the project

would be designed in accordance with State of California Building Code and applicable jurisdictional Municipal Code requirements.

## 1.3 Summary of Results

The Project involves the maintenance of the Delta Diablo Sanitary District sewer alignment that includes underground pipe rehabilitation, a temporary above-ground, and a permanent below-ground bypass system, manhole rehabilitation, and the construction of bypass roads. The Project has been designed to avoid and minimize impacts to on-site aquatic resources and sensitive communities to the extent feasible. However, some construction activities would result in temporary or permanent impacts. These impacts will be permitted separately with the Corps and Regional Water Quality Control Board.

During a site visit, crownscale (*Atriplex coronata var. coronata*, State Rank 4.2) was observed at and in the vicinity of the Study Area in a seasonal wetland and adjacent upland areas on alkaline substrate. Six other special-status plants (see Table 5) have moderate potential to occur within the Study Area, and recommendations are provided herein to minimize these impacts.

Six special-status bird, one special-status mammal, and one special-status amphibian, as well as non-status birds with baseline legal protections, have the potential to occur in the Study Area. Mitigation measures and best management practices have been developed and provided herein to avoid impacts to these resources.

# 2.0 REGULATORY BACKGROUND

The following sections explain the regulatory context of the biological assessment, including applicable laws and regulations that were applied to the field investigations and analysis of potential project impacts. Table 1 shows the correlation between these regulations and each Biological Resources question in the Environmental Checklist Form (Appendix G) of the CEQA guidelines.

## 2.1 Federal and State Regulatory Setting

### 2.1.1 Vegetation and Aquatic Communities

CEQA provides protections for particular vegetation types defined as sensitive by the California Department of Fish and Wildlife (CDFW) and aquatic features protected by laws and regulations administered by the U.S. Army Corps of Engineers (Corps), State Water Resources Control Board (SWRCB), and Regional Water Quality Control Boards (RWQCB). The laws and regulations that provide protection for these resources are summarized below.

#### SENSITIVE NATURAL COMMUNITIES

Sensitive natural communities include habitats that fulfill special functions or have special values. Natural communities considered sensitive are those identified in local or regional plans, policies, regulations, or by the CDFW. CDFW ranks sensitive communities as "threatened" or "very threatened" (CDFW 2021a) and keeps records of their occurrences in its California Natural Diversity Database (CNDDB; CDFW 2026b). Natural communities are ranked 1 through 5 in the CNDDB based on NatureServe's (2020) methodology, with those communities ranked globally (G) or statewide (S) as 1 through 3 considered sensitive. Impacts to sensitive natural communities identified in local or regional plans, policies, or regulations or those identified by the CDFW or U.S. Fish and Wildlife Service (USFWS) must be considered and evaluated under CEQA (California Code of Regulations [CCR] Title 14, Div. 6, Chap. 3, Appendix G). In addition, this general class includes oak woodlands that are protected by local ordinances under the Oak Woodlands Protection Act and Section 21083.4 of California Public Resources Code (CPRC).

Waters of the United States, Including Wetlands: The Corps regulates “Waters of the United States” under Section 404 of the Clean Water Act (CWA). Waters of the United States are defined in the Code of Federal Regulations (CFR) as including the territorial seas, and waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, such as tributaries, lakes and ponds, impoundments of waters of the U.S., and wetlands that are hydrologically connected with these navigable features (33 CFR 328.3). Potential wetland areas, according to the three criteria used to delineate wetlands as defined in the *U.S. Army Corps of Engineers Wetlands Delineation Manual* (Corps Manual; Environmental Laboratory 1987), are identified by the presence of (1) hydrophytic vegetation, (2) hydric soils, and (3) wetland hydrology. Unvegetated waters including lakes, rivers, and streams may also be subject to Section 404 jurisdiction and are characterized by an ordinary high water mark (OHWM) identified based on field indicators such as the lack of vegetation, sorting of sediments, and other indicators of flowing or standing water. The placement of fill material into Waters of the United States generally requires a permit from the Corps under Section 404 of the CWA.

The Corps also regulates construction in navigable waterways of the U.S. through Section 10 of the Rivers and Harbors Act (RHA) of 1899 (33 U.S. Code [USC] 403). Section 10 of the RHA

requires Corps approval and a permit for excavation or fill, or alteration or modification of the course, location, condition, or capacity of, any port, roadstead, haven, harbor, canal, lake, harbor or refuge, or enclosure within the limits of any breakwater, or of the channel of any navigable water of the United States. Section 10 requirements apply only to navigable waters themselves, and are not applicable to tributaries, adjacent wetlands, and similar aquatic features not capable of supporting interstate commerce.

### WATERS OF THE STATE, INCLUDING WETLANDS

The term "Waters of the State" is defined by the Porter-Cologne Act as "any surface water or groundwater, including saline waters, within the boundaries of the state." The SWRCB and nine RWQCB protect waters within this broad regulatory scope through many different regulatory programs. Waters of the State in the context of a CEQA Biological Resources evaluation include wetlands and other surface waters protected by the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (SWRCB 2019). The SWRCB and RWQCB issue permits for the discharge of fill material into surface waters through the State Water Quality Certification Program, which fulfills requirements of Section 401 of the CWA and the Porter-Cologne Water Quality Control Act. Projects that require a Clean Water Act permit are also required to obtain a Water Quality Certification. If a project does not require a federal permit but does involve discharge of dredge or fill material into surface waters of the State, the SWRCB and RWQCB may issue a permit in the form of Waste Discharge Requirements.

### SECTIONS 1600–1616 OF CALIFORNIA FISH AND GAME CODE

Streams and lakes, as habitat for fish and wildlife species, are regulated by CDFW under Sections 1600-1616 of California Fish and Game Code (CFGC). Alterations to or work within or adjacent to streambeds or lakes generally require a 1602 Lake and Streambed Alteration Agreement. The term "stream," which includes creeks and rivers, is defined in the CCR as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life [including] watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (14 CCR 1.72). The term "stream" can include ephemeral streams, dry washes, watercourses with subsurface flows, canals, aqueducts, irrigation ditches, and other means of water conveyance if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife (CDFG 1994). Riparian vegetation has been defined as "vegetation which occurs in and/or adjacent to a stream and is dependent on, and occurs because of, the stream itself" (CDFG 1994). Removal of riparian vegetation also requires a Section 1602 Lake and Streambed Alteration Agreement from CDFW.

### SAN FRANCISCO BAY AND SHORELINE

Enacted in 1965, the McAteer-Petris Act (California Government Code Section 66600 *et seq*.) established the San Francisco Bay Conservation and Development Commission (BCDC) as a state agency charged with preparing a plan for the long-term use of the Bay. BCDC has several areas of jurisdiction, including San Francisco Bay (including sloughs and marshlands lying between mean high tide and five feet above mean sea level) and a shoreline band consisting of all territory located between the shoreline of the Bay and a line 100 feet landward of and parallel with the shoreline (California Government Code 66610). Any person or governmental agency wishing to place fill, to extract materials, or to make any substantial change in use of any water, land, or structure within BCDC jurisdiction must secure a permit from BCDC.

### 2.1.2 Special-status Species

#### ENDANGERED AND THREATENED PLANTS, FISH, AND WILDLIFE

Specific species of plants, fish, and wildlife species may be designated as threatened or endangered by the Federal Endangered Species Act (ESA), or the California Endangered Species Act (CESA). Specific protections and permitting mechanisms for these species differ under each of these acts, and a species' designation under one law does not automatically provide protection under the other.

The ESA (16 USC 1531 et seq.) is implemented by the USFWS and the National Marine Fisheries Service (NMFS). The USFWS and NMFS maintain lists of endangered and threatened plant and animal species (referred to as "listed species"). "Proposed" and "candidate" species are those that are being considered for listing and are not protected until they are formally listed as threatened or endangered. Under the ESA, authorization must be obtained from the USFWS or NMFS prior to take of any listed species. "Take" under the ESA is defined as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Take under the ESA includes direct injury or mortality to individuals, disruptions in normal behavioral patterns resulting from factors such as noise and visual disturbance and impacts to habitat for listed species. Actions that may result in take of an ESA-listed species may obtain a permit under ESA Section 10, or via the interagency consultation described in ESA Section 7. Federal-listed plant species are only protected when removal or destruction occurs on federal land; however, if a federal agency authorizes, funds, or carries out an action, that agency must insure through Section 7 consultation that the action is not likely to jeopardize the continued existence of the species.

The ESA also provides for designation of critical habitat, which are specific geographic areas containing physical or biological features "essential to the conservation of the species." Protections afforded to designated critical habitat apply only to actions that are funded, permitted, or carried out by federal agencies. Critical habitat designations do not affect activities by private landowners if there is no other federal agency involvement.

The CESA (CFGC 2050 et seq.) prohibits the take of any plant and animal species that the CFGC determines to be an endangered or threatened species in California. CESA regulations include take protection for threatened and endangered plants on private lands, as well as extending this protection to candidate species during consideration for listing as threatened or endangered under CESA. The definition of a "take" under CESA ("hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") only applies to direct impact to individuals, and does not extend to habitat impacts or harassment. CDFW may issue an Incidental Take Permit under CESA to authorize take if it is incidental to otherwise lawful activity and if specific criteria are met. Take of these species is also authorized if the geographic area is covered by a Natural Community Conservation Plan (NCCP), as long as the NCCP covers that activity. CDFW may also authorize take for voluntary restoration projects through the Restoration Management Permit (RMP).

#### FULLY PROTECTED SPECIES AND DESIGNATED RARE PLANT SPECIES

This category includes specific plant and wildlife species that are designated in the CFGC as protected even if not listed under CESA or ESA. Fully Protected Species includes specific lists of birds, mammals, reptiles, amphibians, and fish designated in CFGC. Fully protected species may

not be taken or possessed at any time. No licenses or permits may be issued for take of fully protected species, except for necessary scientific research and conservation purposes. The definition of "take" is the same under the California Fish and Game Code and the CESA. By law, CDFW may not issue an Incidental Take Permit for Fully Protected Species. Under the California Native Plant Protection Act (NPPA), CDFW has listed 64 “rare” or “endangered” plant species, and prevents “take,” with few exceptions, of these species. CDFW may authorize take of species protected by the NPPA through the Incidental Take Permit process, or under a NCCP. CDFW may also authorize take for voluntary restoration projects through the RMP.

### SPECIAL PROTECTIONS FOR NESTING BIRDS AND BATS

The Federal Bald and Golden Eagle Protection Act provides relatively broad protections to both of North America’s eagle species (bald eagle [*Haliaeetus leucocephalus*] and golden eagle [*Aquila chrysaetos*]) that in some regards are similar to those provided by the ESA. In addition to regulations for special-status species, most native birds in the United States, including non-status species, have baseline legal protections under the Migratory Bird Treaty Act of 1918 and CFGC, i.e., sections 3503, 3503.5 and 3513. Under these laws/codes, the intentional harm or collection of adult birds as well as the intentional collection or destruction of active nests, eggs, and young is illegal. For bat species, the Western Bat Working Group (WBWG) designates conservation status for species of bats, and those with a high or medium-high priority are typically given special consideration under CEQA.

### ESSENTIAL FISH HABITAT

The Magnuson-Stevens Fishery Conservation and Management Act provides for conservation and management of fishery resources in the U.S., administered by NMFS. This Act establishes a national program intended to prevent overfishing, rebuild overfished stocks, ensure conservation, and facilitate long-term protection through the establishment of Essential Fish Habitat (EFH). EFH consists of aquatic areas that contain habitat essential to the long-term survival and health of fisheries, which may include the water column, certain bottom types, vegetation (e.g., eelgrass [*Zostera* spp.]), or complex structures such as oyster beds. Any federal agency that authorizes, funds, or undertakes action that may adversely affect EFH is required to consult with NMFS.

### SPECIES OF SPECIAL CONCERN, MOVEMENT CORRIDORS, AND OTHER SPECIAL-STATUS SPECIES UNDER CEQA

A Species of Special Concern (SSC) is a species formally designated by the CDFW which meets one or more criteria related to a Federal ESA status (if it is not listed under CESA), including extirpation from California, documented population declines, or small population size within California and risk of declines. In addition, CDFW has developed a special animals list as “a general term that refers to all of the taxa the CNDDB is interested in tracking, regardless of their legal or protection status.” This list includes lists developed by other organizations, including for example, the Audubon Watch List Species, the Bureau of Land Management Sensitive Species, and USFWS Birds of Conservation Concern. Plant species on the California Native Plant Society (CNPS) Rare Plant Inventory (Inventory; CNPS 2026) with California Rare Plant Ranks (Rank) of 1 and 2, as well as some with a Rank of 3 or 4, are also considered special-status plant species and must be considered under CEQA. Some Rank 3 and Rank 4 species are typically only afforded protection under CEQA when such species are particularly unique to the locale (e.g., range limit, low abundance/low frequency, limited habitat) or are otherwise considered locally rare. Some species listed in the *Rare, Unusual and Significant Plants of Alameda and Contra*

*Costa Counties (web application)* (Lake 2025) are considered sensitive (see Section 2.2). Additionally, any species listed as sensitive within local plans, policies and ordinances are likewise considered sensitive. Movement and migratory corridors for native wildlife (including aquatic corridors) as well as wildlife nursery sites are given special consideration under CEQA.

## 2.2 Local Plans and Policies

### 2.2.1 Contra Costa County General Plan

The Conta Costa County General Plan contains policies pertaining to the following biological resources categories:

- Wetlands, streams, riparian, and aquatic areas (Policies COS-P5.4, COS-P9.1 ,COS-P5.3, COS-P5.2)
- Vegetation communities (COS-P4., COS-P4.10, COS-P4.9, COS-P4.8, COS-P4.2, COS-P4.1)
- Plant Species (COS-P6.1, COS-P4.3)
- Wildlife Species (COS-P4.3, COS-P4.7)
- Wildlife Corridors (COS-P4.4, COS-P4.6)

### 2.2.2 Contra Costa County Habitat Conservation Plan

The Conta Costa County General Plan contains policies pertaining to the support of land conservation and restoration consistent with the Contra Costa HCP/NCCP and discourages development in areas where such conservation is planned (COS-P4.2).

### 2.2.3 City of Pittsburg General Plan

The City of Pittsburg General Plan contains policies pertaining to the following biological resource categories (City of Pittsburg 2024):

- Habitat conservation (Policies 10-P-2.1, 10-P-2.2, 10-P-2.5, 10-P-2.8, 10-P-2.9, 10-P-2.15, 10-P-2.16)
- Wildlife corridors (10-P-2.11)
- Habitat restoration (10-P-2.6, 10-P-2.13, 10-P-2.14, 10-P-2.15)
- Water quality and urban runoff (10-P-2.6, 10-P-2.17)
- Implementation of the East Contra Costa County Habitat Conservation Plan (10-P-2.12)

### 2.2.4 Rare, Unusual, and Significant Plants of Alameda and Contra Costa Counties

*Rare, Unusual, and Significant Plants of Alameda and Contra Costa Counties (web application)* (Lake 2023) is a database produced by the East Bay Chapter of the CNPS that lists plant taxa which are considered locally rare, unusual, or significant in Alameda and Contra Costa counties. Taxa are assigned rankings of A, B, or C to indicate their degree of rarity or endangerment in the two counties. See Table 3 for a description of each of the rankings. A-ranked taxa receive consideration under sections 15380 and 15125(a) of CEQA and are considered “locally rare” for the purposes of this report. Any locally rare taxa observed in the Study Area are discussed in this report.

Table 3. Description of East Bay CNPS Locally Rare Plant Rankings

| RANK | DESCRIPTION |
|---|---|
| **A1** | Locally Rare Species. Species occurring in two or fewer regions in Alameda and Contra Costa counties |
| **A1x** | Locally Rare Species. Species presumed extirpated from Alameda and Contra Costa counties |
| **A1?** | Locally Rare Species. Species possibly occurring in Alameda and Contra Costa counties. Identification or location is uncertain |
| **A2** | Locally Rare Species. Plants occurring in three to five regions or are otherwise threatened in Alameda and Contra Costa counties. |
| **B** | High Priority Watch List. Plants occurring in six to nine regions in Alameda and Contra Costa counties. |
| **C** | Second Priority Watch List. Plants occurring in ten to fifteen regions in Alameda and Contra Costa counties. |

*Ranks preceded by an asterisk (e.g., "*A1") also have a statewide rarity ranking

## 3.0 ASSESSMENT METHODOLOGY

On January 2-3 and 10, 2025, WRA, Inc. (WRA) biologists visited the Study Area to map vegetation, aquatic features, and other land cover types; document plant and wildlife species present; and evaluate on-site habitat for the potential to support special-status species as defined by CEQA. Prior to the site visit, WRA biologists reviewed literature resources and performed database searches to assess the potential for sensitive land cover types and special-status species, including:

- Web Soil Survey (USDA 2025)
- Honker Bay 7.5-minute U.S. Geological Survey (USGS) quadrangle (USGS 2022)
- Contemporary aerial photographs (Google Earth 2025)
- Historical aerial photographs (NETR 2025)
- National Wetlands Inventory (USFWS 2025a)
- California Aquatic Resources Inventory (SFEI 2025)
- CNDDB (CDFW 2026b)
- CNPS Inventory (CNPS 2026a)
- Consortium of California Herbaria (CCH1 2025, CCH2 2025)
- USFWS Information for Planning and Consultation (USFWS 2025b)
- eBird Online Database (Cornell Lab of Ornithology 2018)
- California Bird Species of Special Concern in California (Shuford and Gardali 2008)
- California Amphibian and Reptile Species of Special Concern (Thomson et al. 2016)
- A Field Guide to Western Reptiles and Amphibians (Stebbins 2003)
- A Manual of California Vegetation, Online Edition (CNPS 2026b)
- Preliminary Descriptions of the Terrestrial Natural Communities (Holland 1986)

- California Natural Community List (CDFW 2026a)
- Database searches (i.e., CNDDB, CNPS) for special-status species focused on the Honker Bay, Vine Hill, Clayton, Walnut Creek, Antioch North, Antioch South, Denverton, Fairfield South, USGS 7.5-minute quadrangles.

Following the remote assessment, WRA biologists completed a field review over the course of the three day assessment to document: (1) land cover types (e.g., vegetation communities, aquatic resources), (2) existing conditions and to determine if such provide suitable habitat for any special-status plant or wildlife species, (3) if and what type of aquatic land cover types (e.g., wetlands) are present, and (4) if special-status species are present.

## 3.1 Vegetation Communities and Other Land Cover Types

During the site visit, WRA evaluated the species composition and area occupied by distinct vegetation communities, aquatic communities, and other land cover types. Mapping of these classifications utilized a combination of aerial imagery and ground surveys. In most instances, communities are characterized and mapped based on distinct shifts in plant assemblage (vegetation) and follow the California Natural Community List (CDFW 2026a) and A Manual of California Vegetation, Online Edition (CNPS 2026). These resources cannot anticipate every component of every potential vegetation assemblage in California, and so in some cases, it is necessary to identify other appropriate vegetative classifications based on best professional judgment of WRA biologists. When undescribed variants are used, it is noted in the description. Vegetation alliances (natural communities) with a CDFW Rank of 1 through 3 (globally critically imperiled [S1/G1], imperiled [S2/G2], or vulnerable [S3/G3]) (CDFW 2026a), were evaluated as sensitive as part of this evaluation.

A focused delineation was conducted during the January 2-3 and 10, 2025 survey dates for the presence of wetlands and other aquatic resources according to the methods described in the Corps Manual (Environmental Laboratory 1987), the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West/Western Mountains, Valleys, and Coast Region* (Corps 2008) and A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States (Lichvar and McColley 2008). Areas meeting these indicators were mapped as aquatic resources and categorized using the vegetation community classification methods described above. The presence of riparian habitat was evaluated based on woody plant species meeting the definition of riparian provided in *A Field Guide to Lake and Streambed Alteration Agreements, Section 1600-1607, California Fish and Game Code* (CDFG 1994) and based on best professional judgement of biologists completing the field surveys.

## 3.2 Special-status Species

### 3.2.1 General Assessment

Potential occurrence of special-status species in the Study Area was evaluated by first determining which special-status species occur in the vicinity of the Study Area through a literature and database review as described above. Presence of suitable habitat for special-status species was evaluated during the site visits based on physical and biological conditions of the site as well as the professional expertise of the investigating biologists. The potential for

each special-status species to occur in the Study Area was then determined according to the following criteria:

- **No Potential.** Habitat on and adjacent to the site is clearly unsuitable for the species requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).
- **Unlikely.** Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.
- **Moderate Potential.** Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
- **High Potential.** All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
- **Present.** Species is observed on the site or has been recorded (i.e., CNDDB, other reports) on the site in the recent past.

If a more thorough assessment was deemed necessary, a targeted or protocol-level assessment or survey was conducted or recommended as a future study. If a special-status species was observed during the site visit, its presence was recorded and discussed below in Section 5.2. If designated critical habitat is present for a species, the extent of critical habitat present and an evaluation of critical habitat elements is provided as part of the species discussions below.

## 3.3 Wildlife Corridors and Native Wildlife Nursery Sites

To account for potential impacts to wildlife movement/migratory corridors, biologists reviewed maps from the California Essential Connectivity Project (Spencer et. al 2010), and habitat connectivity data available through the CDFW Biogeographic Information and Observation System (CDFW 2026c). Additionally, aerial imagery (Google Earth 2025) for the local area was referenced to assess if local core habitat areas were present within, or connected to the Study Area. This assessment was refined based on observations of on-site physical and/or biological conditions, including topographic and vegetative factors that can facilitate wildlife movement, as well as on-site and off-site barriers to connectivity.

The potential presence of native wildlife nursery sites is evaluated as part of the site visit and discussion of individual wildlife species below. Examples of native wildlife nursery sites include nesting sites for native bird species (particularly colonial nesting sites), marine mammal pupping sites, and colonial roosting sites for other species (such as for monarch butterfly [*Danaus plexippus*]).

# 4.0 ECOLOGICAL SETTING

The approximately 80-acre Study Area is located in East Contra Costa County, within the cities of Bay Point and Pittsburg, inland from the southern shore of the Carquinez Strait and Suisun Bay. The Study Area includes all areas affected by the Project, as well as a 50-foot buffer. Additional details of the local setting are below.

## 4.1 Soils and Topography

The overall topography of the Study Area is flat with elevations ranging from approximately 0 to 20 feet above sea level. According to SoilWeb (CSRL 2025) and Web Soil Survey (USDA 2025), the Study Area is underlain by five soil mapping units: Antioch loam, 0 to 2 percent slopes; Antioch loam, 2 to 9 percent slopes; Joice muck; Omni silty clay; Clear Lake clay, 0 to 15 percent slopes. Soils within the Study Area are shown in Appendix A – Figure 3. The parent soil series of all the Study Area's mapping units are summarized below.

Antioch Series: The Antioch series consist of moderately well drained soils underlain by old mixed alluvium. These soils occur on low terraces; included with it in the mapping unit are small areas of Rincon clay loam and Pescadero clay loam in concave drainageways. In a representative profile, the surface layer is dark grayish brown (10YR 4/2) and dark brown (10YR 3/3), strongly acid or medium acid loam approximately 14 inches thick. The subsurface layer is mottled, gray (10YR6/1), medium acid heavy loam approximately three inches thick. The subsoil is mottled, brown (10YR 4/3) clay approximately 19 inches thick. It is slightly acid in the upper part and becomes moderately alkaline as depth increases. The substratum is yellowish brown (10YR 5/4), calcareous clay loam that extends to a depth of more than 60 inches (CSRL 2025). These soils are listed as hydric on the US national hydric soils list (USDA 2025).

Joice Series: The Joice series consists of very poorly drained nearly level soil made of muck mixed with silts and clays or black clayey muck that formed from hydrophytic plant remains and mixed alluvium. These soils are formed in saltwater marshes, found near sea level. Permeability and runoff are very slow. A representative profile for this series consists of a dark brown (10YR 3/3) muck surface layer five inches thick. This layer is underlain by black (10YR 2/1) grainy muck that extends to a depth of 22 inches. The Joice muck, MLRA 16 mapping unit is considered hydric (USDA 2025).

Omni Series: The Omni series consists of poorly drained soils on the lower flood plains of local area creeks. These soils formed in alluvium from sedimentary rock. Permeability is slow and water runoff is very slow; this soil is subject to occasional ponding. A representative profile for this series consists of very dark grayish-brown (2.5Y 3/2) silty clay to eight inches. This is underlain by very dark gray (10YR 5/1) clay with dark grayish brown (10YR 4/2) mottles to 19 inches. These soils are listed as hydric on the US national hydric soils list (USDA 2025).

Clear Lake Series: The Clear Lake series consists of clays that formed under poorly drained conditions. These soils are underlain by alluvium from basic and sedimentary rock. They are on plains and flat basin areas. In a typical profile, the surface layer is black (N 4/0) or very dark gray (10YR 3/1) clay, about 39 inches thick. This is underlain by a dark-gray moderately alkaline clay that has light gray mottles, black (10YR 2/1) when moist. At a depth of about 46 inches, it is gray and light brownish-gray, moderately alkaline clay. At a depth of about 60 inches, it is light gray to white, mildly alkaline sandy clay loam. These soils are listed as hydric on the US national hydric soils list (USDA 2025).

## 4.2 Climate and Hydrology

The Study Area is located in the coastal region of Contra Costa County across from Honker Bay. The average monthly maximum temperature in the area is 68.6 degrees Fahrenheit, while the average monthly minimum temperature is 49.3 degrees Fahrenheit. Predominantly, precipitation falls as rainfall between November and March with an annual average precipitation of 17.65 inches.

The proposed Project is situated between two local watersheds, Suisun Bay Estuaries (HUC 12: 180500010401) and Kirker Creek-Frontal Suisun Bay Estuaries (HUC 12: 180500010301) and the regional watershed is Suisun Bay (HUC 8: 18050001). There are no blue-line streams in the Study Area (USGS 2025). Several resources are mapped in the Study Area in the NWI and California Aquatic Resources Inventory (CARI), such as freshwater emergent wetland (PEM1Ch, PEM1Ah), freshwater pond (PUBHx), estuarine and marine wetland (E2USNh), (CARI; SFEI 2017). Detailed descriptions of aquatic resources in the Study Area are provided in Section 5.1 below.

## 4.3 Land Use

Much of the Study Area is developed. Undeveloped areas consist of tidal marshes, ruderal grasslands, wetlands, and streams. Many of these undeveloped areas were historically used for agriculture or are currently used as rangelands (NETR 2025). Developed areas include unpaved access roads, paved roads, and sidewalks. Detailed land cover type descriptions are included in Section 5.1 below, and all observed plant species are included in Appendix B. Surrounding land uses include residential, municipal, and open space (Google Earth 2025).

# 5.0 ASSESSMENT RESULTS

## 5.1 Vegetation Communities and Other Land Cover

WRA observed eleven land cover types within the Study Area: developed, ruderal, non-native annual grassland, saltgrass meadow, riparian woodland, non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetland, intermittent stream, and alkali seasonal wetland depression. Land cover types within the Study Area are illustrated in Appendix A – Figure 2. The sensitive communities in the Study Area include the riparian woodland, non-tidal and tidal marshes, seasonal wetland depression and swales, alkali seasonal wetland depressions, and intermittent and ephemeral streams.

**Table 4. Vegetation Communities and Other Land Cover Types**

| COMMUNITY / LAND COVERS | SENSITIVE STATUS | RARITY RANKING | ACRES WITHIN STUDY AREA |
|---|---|---|---|
| TERRESTRIAL / COMMUNITY LAND COVER | | | |
| **Developed** | None | None | 29.58 |
| **Ruderal** | None | None | 16.81 |
| **Non-native Annual Grassland** | None | None | 14.54 |
| **Saltgrass Meadow** | Sensitive | None | 0.20 |
| **Riparian Woodland** | Sensitive | None | 0.40 |

| COMMUNITY / LAND COVERS | SENSITIVE STATUS | RARITY RANKING | ACRES WITHIN STUDY AREA |
|---|---|---|---|
| AQUATIC RESOURCES | | | |
| **Non-tidal Marsh** | Sensitive | S5, G5 | 3.65 |
| **Tidal Marsh** | Sensitive | None | 2.52 |
| **Brackish Tidal Marsh** | Sensitive | None | 1.80 |
| **Seasonal Wetland** | Sensitive | None | 6.64 |
| **Intermittent Stream** | Sensitive | None | 0.04 |
| **Alkali Seasonal Wetland Depression** | Sensitive | S2, G2 | 2.09 |
| **Seasonal Drainage** | None | None | 0.09 |
| | | **TOTAL:** | **78.36** |

### 5.1.1 Terrestrial Land Cover

Developed Area (No vegetation alliance). CDFW Rank: None. A little under half of the Study Area is developed as roads with gravel shoulders, as well as unpaved roads and old, unused railroad tracks. In these developed areas, the vegetation is minimal and composed of ornamental trees in some areas and common weeds on the fringes similar to the ruderal land cover. This community is not considered sensitive by Contra Costa County, CDFW, or any other regulatory entity.

Ruderal (No vegetation alliance). CDFW Rank: None. Dominated by non-native annual grasses and forbs such as vetch (*Vicia* sp.), artichoke thistle (*Cynara cardunculus*), Italian thistle (*Carduus pycnocephalus*), and black mustard (*Brassica nigra*).

Non-native Annual Grassland (No vegetation alliance). CDFW Rank: None. Portions of the Study Area are open fields of non-native annual grasslands used for grazing at the time of the site visit. Most grasses were still vegetative and not identifiable during the site visit. However, species that were identified as present in this land cover type include perennial mustard (*Hirschfeldia incana*).

Saltgrass meadow (No vegetation alliance). CDFW Rank: Sensitive. Vegetation in the saltgrass meadow was dominated by saltgrass (*Distichlis spicatata,* FAC).

Riparian Woodland (No vegetation alliance). CDFW Rank: Sensitive. Riparian woodland habitat occurs along an intermittent stream in the easternmost portion of the Study Area. Dominant tree species include arroyo willow (*Salix lasiolepis*).

### 5.1.2 Aquatic Resources

Non-tidal Marsh (*Schoenoplectus (acutus, californicus)* Herbaceous Alliance). CDFW Rank: Sensitive. This land cover type meets the requirements for the Hardstem and California bulrush marshes Herbaceous Alliance according to the California Manual of Vegetation. Non-tidal marsh features within the Study Area are dominated by California bulrush (*Schoenoplectus californica*,

OBL) and tall whitetop (*Lepidium latifolium,* FAC). Non-tidal marshes are sensitive biological communities.

Tidal Marsh (*Salicornia pacifica* (*Salicornia depressa*) Herbaceous Alliance). CDFW Rank: S3, G4. Vegetation in the tidal marsh was dominated by pickleweed (OBL), and is tidally influenced. Tidal marshes are sensitive biological communities.

Brackish Tidal Marsh (No vegetation alliance). CDFW Rank: Sensitive. Vegetation in the brackish tidal marsh was dominated by saltgrass (*Distichlis spicatata,* FAC), California bulrush (*Schoenoplectus californicus,* OBL), pickleweed (*Salicornia pacifica,* OBL), and bristly oxtongue (*Helminthotheca echioides,* FAC). Brackish tidal marshes are sensitive biological communities.

Seasonal Wetlands (No vegetation alliance). CDFW Rank: Sensitive. Seasonal wetlands include areas which hold water for part of the year, typically during the rainy season and which are dominated by hydrophytic vegetative cover. Vegetation in the seasonal wetlands was dominated by salt grass (OBL), curly dock (*Rumex crispus*, FAC), iris leafed rush (*Juncus xiphoides*, OBL), and Italian rye grass (FAC). These areas are not tidally influenced and occur in low areas within the Study Area that are seasonally ponded or saturated. Seasonal wetlands are sensitive biological communities.

Intermittent Stream (No vegetation alliance). CDFW Rank: Sensitive. The intermittent stream in the Study Area occupies 0.04 acres of the Study Area, and is wetted most of the year, but may dry in the late summer and early fall.

Alkali Seasonal Wetland Depressions (No vegetation alliance). CDFW Rank: Sensitive. Low depressional areas in the easternmost portion of the Study Area contain alkali seasonal wetland depressions. These areas are dominated by bassia (*Bassia hyssopfolia,* FACU) and rabbit's foot grass (*Polypogon monspeliensis,* FACW).
Seasonal Drainage (No vegetation alliance). CDFW Rank: Sensitive. The seasonal drainage in the Study Area occupies 0.09 acres of the Study Area, and is wetted part of the year, but mostly dry in the summer and fall.

## 5.2 Special-status Species

### 5.2.1 Special-status Plants

Based upon a review of the resource databases listed in Section 3.0, 96 special-status plant species have been documented in the vicinity of the Study Area. Ten of these species have the potential to occur in the Study Area. The remaining species documented from the greater vicinity are unlikely or have no potential to occur for one or more of the following:

- Hydrologic conditions (e.g., tidal, riverine) necessary to support the special-status plant species are not present in the Study Area;
- Edaphic (soil) conditions (e.g., volcanic tuff, serpentine) necessary to support the special-status plant species are not present in the Study Area;
- Topographic conditions (e.g., north-facing slope, montane) necessary to support the special-status plant species are not present in the Study Area;
- Unique pH conditions (e.g., alkali scalds, acidic bogs) necessary to support the special-status plant species are not present in the Study Area;

- Associated natural communities (e.g., interior chaparral, tidal marsh) necessary to support the special-status plant species are not present in the Study Area;
- The Study Area is geographically isolated (e.g., below elevation, coastal environ) from the documented range of the special-status plant species;
- The historical landscape and/or habitat(s) of the Study Area were not suitable habitat prior to land/type conversion (e.g., reclaimed shoreline) to support the special-status plant species;
- Land use history and contemporary management (e.g., grading, intensive grazing) has degraded the localized habitat necessary to support the special-status plant species.

Species with potential habitat in the Study Area are summarized below.

**Table 5. Potential Special-status Plants**

| SCIENTIFIC NAME | COMMON NAME | CONSERVATION STATUS | POTENTIAL HABITAT IN THE STUDY AREA |
|---|---|---|---|
| **FORMALLY LISTED PLANTS (FESA, CESA, CNPPA)** | | | |
| ***Cirsium hydrophilum* var. *hydrophilum*** | Suisun thistle | FE, Rank 1B.1 | **Unlikely.** Potentially suitable salt marsh habitat exists within the Study Area. However, habitat is considered low quality due to ongoing disturbance including exposure to runoff, human encroachment, mowing, litter, and other vegetation management |
| ***Chloropyron molle* ssp. *molle*** | soft salty bird's-beak | FE, SR, Rank 1B.2 | **Unlikely.** Potentially suitable salt marsh habitat exists within the Study Area. However, habitat is considered low quality due to ongoing disturbance including exposure to runoff, human encroachment, mowing, litter, and other vegetation management |
| **OTHER SPECIAL-STATUS PLANTS (CEQA, OTHER)** | | | |
| ***Lathyrus jepsonii* var. *jepsonii*** | Delta tule pea | Rank 1B.2 | **Moderate Potential.** Potentially suitable habitat (brackish and freshwater marshes and swamps, riparian scrub) exists within the Study Area. |
| ***Extriplex joaquinana*** | San Joaquin spearscale | Rank 1B.2 | **Moderate Potential.** Potentially suitable habitat (seasonal alkali wetlands or alkali sink scrub with *Distichlis spicata*, *Frankenia*, etc.) exists within the Study Area. |
| ***Symphyotrichum lentum*** | Suisun Marsh aster | Rank 1B.2 | **Moderate Potential.** Potentially suitable habitat (brackish and freshwater marshes and swamps, riparian scrub) exists within the Study Area. |
| ***Atriplex depressa*** | brittlescale | Rank 1B.2 | **Moderate Potential.** Potentially suitable habitat (alkali seasonal depression) exists within the Study Area. |

| SCIENTIFIC NAME | COMMON NAME | CONSERVATION STATUS | POTENTIAL HABITAT IN THE STUDY AREA |
|---|---|---|---|
| ***Cicuta maculata* var. *bolanderi*** | Bolander's water-hemlock | Rank 2B.1 | **Moderate Potential.** Potentially suitable habitat (brackish and freshwater marshes and swamps, riparian scrub) exists within the Study Area. |
| ***Limosella australis*** | Delta mudwort | Rank 2B.1 | **Moderate Potential.** Potentially suitable habitat (brackish and freshwater marshes and swamps, riparian scrub) exists within the Study Area. |
| ***Atriplex coronata* var. *coronata*** | crownscale | Rank 4.2 | **Present.** Crownscale was observed at and in the vicinity of the Study Area in a seasonal wetland and adjacent upland areas on alkaline substrate. |
| ***Centromadia parryi* ssp. *parryi*** | Pappose tarplant | Rank 1B.2 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Marshes and swamps (coastal salt), meadows and seeps, valley and foothill grassland (vernally mesic) are found onsite, but are heavily disturbed. |
| ***Centromadia parryi* ssp. *rudis*** | Parry's rough tarplant | Rank 4.2 | **Moderate Potential.** Suitable habitat is low quality within the Project Area. Grasslands are found onsite, but heavily disturbed and colonized by non-native annual species |
| ***Astragalus tener* var. *tener*** | alkali milk-vetch | Rank 1B.2 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Grasslands are found onsite, but are heavily disturbed. |
| ***Stuckenia striata*** | broadleaf pondweed | Rank 2B.3 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Marshes and swamps on site are disturbed with non-native species. |
| ***Puccinellia simplex*** | California alkali grass | Rank 1B.2 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Marshes and swamps on site are disturbed with non-native species. |
| ***Centromadia parryi* ssp. *congdonii*** | Congdon's tarplant | Rank 1B.1 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Grasslands are found onsite, but are heavily disturbed. |
| ***Isocoma arguta*** | Carquinez goldenbush | Rank 1B.1 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Grasslands and alkali meadows are found onsite, but are heavily disturbed. |
| ***Trifolium hydrophilum*** | saline clover | Rank 1B.2 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Grasslands and alkali meadows are found onsite, but are heavily disturbed. |

| SCIENTIFIC NAME | COMMON NAME | CONSERVATION STATUS | POTENTIAL HABITAT IN THE STUDY AREA |
|---|---|---|---|
| ***Eleocharis parvula*** | small spikerush | Rank 4.3 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Marshes and swamps on site are disturbed with non-native species. |
| ***Chloropyron molle* ssp. *hispidum*** | hispid salty bird's-beak | Rank 1B.1 | **Unlikely.** Suitable habitat is very low quality within the Study Area. Marshes and swamps on site are disturbed with non-native species. |

The salt marsh areas present within the central portion of the Project Area provides suitable habitat for three federal-listed plant species, including soft salty bird's beak (*Chloropyron molle* ssp. *molle*, SSBB) and Suisun thistle (*Cirsium hydrophilum var. hydrophilum*), which have unlikely potential to be present. SSBB is associated with salt marshes and swamps along with associated species: salt grass (*Distichlis spicata*), pickleweed (*Salicornia pacifica*), and alkali heath (*Frankenia salina*). Suisun thistle is associated with *Scirpus* sp. and near small waterways within salt marshes at elevations of 0-1 meters. For these species, the habitat present within the Project Area is considered low quality due to ongoing disturbance including exposure to runoff, human encroachment, mowing, litter, and other vegetation management. Thus, both are unlikely to be present.

The brackish marshes and seasonal wetlands within and adjacent to the site were observed to have presence of crownscale (*Atriplex coronata* var. *coronata*) during site visits, and have the moderate potential to support other special-status plants (CEQA, other) listed in Table 5. The seasonal alkali wetland depressions central to the Project site feature saltgrass and bassia (*Bassia hyssopfolia*) and also have moderate potential to support brittlescale (*Atriplex depressa*) and San Joaquin spearscale (*Extriplex joaquinana*). These brackish marshes, seasonal wetlands, and alkali seasonal wetland depression areas are considered moderate to low quality due to ongoing disturbance and the presence of non-native species, but there is moderate potential for these special-status species to occurs.

The grasslands and meadows on site which could potentially support pappose tarplant (*Centromadia parryi ssp. parryi*), Parry's rough tarplant (*Centromadia parryi ssp. rudis*), Congdon's tarplant (*Centromadia parryi ssp. congdonii*), alkali milk-vetch (*Astragalus tener var. tener*), Carquinez godlenbush (*Isocoma arguta*), and saline clover (*Trifolium hydrophilum)* are heavily disturbed and very low quality. Thus, these species are unlikely to occur.

### 5.2.2 Special-status Wildlife

Of the 27 special-status wildlife species documented in the vicinity of the Study Area, most are excluded from the Study Area based on a lack of habitat features. Features not found within the Study Area that are required to support special-status wildlife species include:

- Vernal pools
- Perennial freshwater aquatic habitat (e.g., streams, rivers or ponds)
- Old growth redwood or fir forest
- Serpentine soils to support host plants

- Sandy beaches or alkaline flats
- Presence of specific host plants
- Caves, mine shafts, or abandoned buildings

The absence of such habitat features eliminates components critical to the survival or movement of most special-status species found in the vicinity. For instance, for the listed California tiger salamander (*Ambystoma californiense*) the Study Area is within historical range of the species but there is little connectivity for the species to travel from known breeding ponds to the Study Area.

Eight special-status species have potential to occur in the immediate vicinity of or in portions of the Study Area: Northern harrier (*Circus hudsonius*), Salt marsh common yellowthroat (*Geothlypis trichas sinuosa*), Suisun song sparrow (*Melospiza melodia maxillaris*), Salt marsh harvest mouse (*Reithrodontomys raviventris halicotes*), California red-legged frog (*Rana draytonii*), California Ridgway's rail (*Rallus obsoletus obsoletus*), California black rail (*Laterallus jamaicensis coturniculus*) and burrowing owl (*Athene cunicularia)*. These species are discussed in greater detail below.

**Table 6. Potential Special-status Wildlife**

| SCIENTIFIC NAME | COMMON NAME | CONSERVATION STATUS | POTENTIAL HABITAT IN THE STUDY AREA |
|---|---|---|---|
| **FORMALLY LISTED WILDLIFE (FESA, CESA)** | | | |
| ***Athene cunicularia*** | Burrowing owl | State Candidate | **Moderate Potential.** Foraging and roosting habitat is present in grassland and open areas with mammal burrows and analogous refugia. |
| ***Laterallus jamaicensis coturniculus*** | California black rail | State Threatened | **High Potential.** Suitable tidal/brackish marsh habitat is present in the vicinity of specific manholes. |
| ***Rallus obsoletus obsoletus*** | California Ridgway's rail | Federal Endangered<br>State Endangered | **Moderate Potential.** Suitable tidal/brackish marsh habitat is present in the vicinity of specific manholes. |
| ***Rana draytonii*** | California red-legged frog | Federal Threatened | **Moderate Potential.** The intermittent stream and seasonal drainage provide potential non-breeding aquatic habitat; no suitable aquatic breeding habitat is present. Upland and dispersal habitat is present in grassland areas and other adjacent uplands. |
| ***Reithrodontomys raviventris halicotes*** | salt marsh harvest mouse | Federal Endangered<br>State Endangered | **High Potential**. Tidal/brackish marsh within and adjacent to the Study Area is suitable for this species. Adjacent uplands with dense vegetation may also be occupied. |

| SCIENTIFIC NAME | COMMON NAME | CONSERVATION STATUS | POTENTIAL HABITAT IN THE STUDY AREA |
|---|---|---|---|
| OTHER SPECIAL-STATUS WILDLIFE (CEQA, OTHER) | | | |
| ***Circus hudsonius*** | northern harrier | SSC | **Moderate Potential.** The Study Area supports suitable open areas for foraging and nesting, predominantly within and adjacent to the access routes around specific manholes. |
| ***Geothlypis trichas sinuosa*** | salt marsh common yellowthroat | SSC | **Moderate Potential.** Tidal/brackish marsh and adjacent upland vegetation (shrubbery, taller herbaceous plants) are suitable, including for nesting. |
| ***Melospiza melodia maxillaris*** | Suisun song sparrow | SSC | **Moderate Potential.** Tidal/brackish marsh and adjacent upland vegetation (shrubbery, taller herbaceous plants) are suitable including for nesting. |

***Formally Listed Species***

**Burrowing owl (*Athene cunicularia*). CDFW Species of Special Concern.** The burrowing owl occurs as a year-round resident and winter visitor in much of California's lowlands, inhabiting open areas with sparse or non-existent tree or shrub canopies. Typical habitat is annual or perennial grassland, although human-modified areas such as agricultural lands and airports are also used (Poulin et al. 1993). This species is dependent on burrowing mammals to provide the burrows that are characteristically used for shelter and nesting, and in northern California is typically found in close association with California ground squirrels (*Otospermophilus beecheyi*). Manmade substrates such as pipes or debris piles may also be occupied in place of burrows. Prey consists of insects and small vertebrates. Breeding typically takes place from March to July.

Within the Study Area, open areas with sparse and/or low vegetation with ground squirrel burrows and/or analogous refugia may be occupied by this species, most likely by wintering and/or migrating individuals. The nearest documented occurrence is 2 miles southwest of the nearest Study Area (CDFW 2026b).

**California black rail (*Laterallus jamaicensis coturniculus)* State Threatened, CDFW Fully Protected Species.** The California black rail is the resident black rail subspecies that occurs in coastal salt and brackish marshes from Bodega Bay to Morro Bay, with additional populations known from freshwater marshes near or in the northern Sierra Nevada foothills (Eddleman et al. 1994, Richmond et al. 2008). According to an analysis by Spautz et al. (2005), important habitat elements for this species within the San Francisco Bay estuary are: 1) emergent marsh dominated by pickleweed (*Salicornia pacifica*), marsh gumplant (*Grindelia stricta*), bulrush (*Scirpus maritimus*), rushes (*Juncus* spp.), and/or cattails (*Typha* spp.); 2) high density of vegetation below four inches in height; 3) high marsh elevation with transitional upland vegetation; 4) large total area of contiguous marsh; 5) proximity to a major water source; and, 6) isolation from disturbance. This species feeds primarily on invertebrates. Black rails are extremely secretive and very difficult to glimpse or flush; identification typically relies on voice. Nests are placed on the ground in dense wetland vegetation.

Tidal and tidal brackish marsh in the vicinity of the Study Area supports nesting and foraging habitat for this species, specifically adjacent to manholes SA35T04, SA34T04, SA33T04, and CW01I00, CW02I00 and CW41I00. Multiple occurrences of this species are documented within 1 mile of the Study Area (CDFW 2026b).

**California Ridgway's rail (*Rallus obsoletus obsoletus*) Federal Endangered, State Endangered, CDFW Fully Protected Species.** The California Ridgway's rail (CRR), formerly known as California clapper rail (*R. longirostris obsoletus*), is the resident Ridgway's/clapper rail subspecies of northern and central California. Although more widespread in the past, it is currently restricted to the San Francisco Bay estuary. The CRR occurs only within salt and brackish marshes. According to Harvey (1988), Shuford (1993) and Eddleman and Conway (1998), important CRR habitat components are: 1) well-developed tidal sloughs and secondary channels; 2) beds of cordgrass (*Spartina* spp.) in the lower marsh zone; 3) dense salt marsh vegetation for cover, nest sites, and brooding areas; 4) intertidal mudflats, gradually sloping banks of tidal channels, and cordgrass beds for foraging; 5) abundant invertebrate food resources; and 6) transitional vegetation at the marsh edge to serve as a refuge during high tides. In south and central San Francisco Bay and along the perimeter of San Pablo Bay, CRR typically inhabits salt marshes dominated by pickleweed and cordgrass. Brackish marshes supporting CRR occur along major sloughs and rivers of San Pablo Bay and along tidal sloughs of Suisun Marsh. Nesting occurs from March through July, with peak activity in late April to late May (DeGroot 1927, Harvey 1980, Harvey 1988). CRR nests, constructed of wetland vegetation and platform-shaped, are placed near the ground in clumps of dense vegetation, usually in the lower marsh zone near small tidal channels (DeGroot 1927, Evens and Page 1983, Harvey 1988).

Tidal marsh in the vicinity of the Study Area supports nesting and foraging habitat for CRR, specifically adjacent to manholes SA35T04, SA34T04, SA33T04, and CW01I00, CW02I00 and CW41I00. Survey efforts in this region are limited due to access constraints; an average of only 19 percent of the acreage within this shoreline has been surveyed for CRR in the last decade, though all such surveys conducted had negative results (Olofson Environmental 2024). The closest documented occurrence lies approximately 1 mile to the west (CDFW 2026b). However, this species has a moderate potential to occur considering the presence of tidal marsh habitat and documented occurrences in the vicinity.

**California red-legged frog (*Rana draytonii*) Federal Threatened, CDFW Species of Special Concern**. The California red-legged frog (CRLF) is the only native "pond frog" found throughout much of California. Suitable aquatic breeding habitat is characterized by deep and still or slow-moving water associated with emergent marsh and/or riparian vegetation, typically with at least 20 weeks of continuous inundation (USFWS 2010). Suitable features include ponds (perennial and non-), streams/creeks, seasonal wetlands, springs, seeps, man-made features (e.g. stock ponds, roadside ditches), marshes, dune ponds, and lagoons. Dependent upon local conditions, CRLF may complete its entire life cycle in a particular habitat patch (e.g., a perennial pond suitable for all life stages), or utilize multiple habitat types. In aquatic features that dry down seasonally, CRLFs often undergo aestivation (a period of inactivity) during the dry months, retreating to small mammal burrows or other substrates that provide suitable refugia (Thomson et al. 2016). Adults and sub-adults (newly metamorphosed individuals) may disperse from breeding habitats to nearby riparian and/or aestivation areas in the summer. Conversely, during the rainy season CRLFs may migrate from aestivation sites to waters suitable for breeding. During such dispersals, frogs can travel over one mile over a variety of topographic and habitat types (Bulger et al. 2003). Upland dispersal habitats are variable and typically include riparian corridors, grasslands, and oak savannas.

The nearest documented occurrence of CRLF to the Study Area lies approximately 2 miles to the south (CDFW 2026b). Freshwater aquatic features within the Study Area lack the hydroperiod and

other characteristics required to support CRLF breeding. However, the intermittent stream and seasonal drainage may provide suitable non-breeding aquatic habitat (typically seasonal and dependent on rainfall), while upland areas may be used for dispersal and overland movement. The latter is most likely to occur during and after rain events.

**Salt marsh harvest mouse (*Reithrodontomys raviventris halicotes*) Federal Endangered, State Endangered and CDFW Fully Protected.** The salt marsh harvest mouse (SMHM) is a relatively small rodent found only in suitable salt- and brackish-marsh habitat in the greater San Francisco Bay, San Pablo Bay, and Suisun Bay areas. The habitat associated with SMHM has been described as pickleweed-dominated vegetation (Fisler 1965), though more recent studies have shown that SMHM is supported equally in pickleweed-dominated and mixed vegetation (including native and non-native salt- and brackish-marsh species) (Sustaita et al. 2005, Sustaita et al. 2011). SMHM prefers deep, dense vegetative cover between approximately 1 to 2 feet in height (USFWS 1984), though there are indications that shorter stands (t6 inches is the shortest commonly used) of pickleweed may also support an abundance of this species (Fisler 1965; Shellhammer et al. 1982; USFWS 2013). Another key habitat requirement for this species is upland or tidal refuge habitat, which is used to escape high tides and storm events. Persistent, low numbers of SMHM are also found in grasslands at least 330 feet (100 meters) from the edge of marsh habitat, though their presence in grasslands may be seasonal and opportunistic (USFWS 2013).

Tidal and tidal brackish marsh within and adjacent to the Study Area provides suitable habitat for SMHM. Upland areas adjacent to marsh may also be used as high tide refugia and for foraging. This species is documented to occur on Federal land within 0.25 mile of the Study Area, within the vicinity of manholes located off Radio Shores Road adjacent to the Bay Point Regional Shoreline, e.g., 14 adults were captured in two trap locations in 2004 (Unpublished CDFW data).

***Other Special-status Species***

**Northern harrier (*Circus hudsonius*) CDFW Species of Special Concern.** The northern harrier occurs as a resident and winter visitor in open habitats throughout most of California, including freshwater and brackish marshes, grasslands and fields, agricultural areas, and deserts. Harriers typically nest in treeless areas within patches of dense, relatively tall, vegetation, the composition of which is highly variable; nests are placed on the ground and often located near water or within wetlands (Shuford and Gardali 2008). Harriers are birds of prey and subsist on a variety of small mammals and other vertebrates.

Portions of the Study Area with open land covers, including grassland and marshes/wetlands, are suitable for foraging by this species. There is also the potential for nesting in areas where human disturbance is relatively minimal, e.g., near or at the interface between brackish marshes and open upland areas. The access routes around manholes SA23T04 to SA27T04 and adjacent areas have the highest likelihood of supporting northern harrier nesting.

**Salt marsh common yellowthroat (*Geothlypis trichas sinuosa*) CDFW Species of Special Concern.** This subspecies of the common yellowthroat is found in freshwater marshes, coastal swales, riparian thickets, brackish marshes, and saltwater marshes. Its breeding range extends from Tomales Bay in the north, Carquinez Strait to the east, and Santa Cruz County to the south. This species requires thick, continuous cover such as tall grasses, tule patches, or riparian vegetation down to the water surface for foraging and prefers willows for nesting (Shuford and Gardali 2008).

Tidal and tidal brackish marsh with dense and taller vegetation provides suitable year-round habitat within the Study Area for this species, including for nesting. Upland vegetation near marshes, e.g., dense and taller herbaceous plants, may also be used for nesting. Yellowthroats have been observed by WRA biologists during special-status rail surveys along the tidal sloughs near the Study Area.

**Suisun song sparrow (*Melospiza melodia maxillaris)* CDFW Species of Special Concern**. This subspecies of the widespread song sparrow is endemic to tidal and semi-tidal marshes of Suisun Bay. The essential habitat requirement is dense emergent vegetative cover and adjacent transitional vegetation (including woody shrubs), as well as sparsely vegetated ground nearby for foraging; nests are typically placed along tidal channels (Shuford and Gardali 2008). Invertebrates compose most of the diet.

Tidal and tidal brackish marsh within and adjacent to the Study Area provides suitable habitat for this species, including for nesting. Upland shrubbery adjacent to marsh areas may also be used for nesting. According to ESA (2002), Suisun song sparrows were observed at Point Edith in 1999 and 2000.

## 5.3 Wildlife Corridors and Native Wildlife Nursery Sites

Limited portions of the Study Area provide connectivity between areas of suitable habitat. For terrestrial species, all portions of the Study Area are within close proximity to development, infrastructure, or transportation corridors and for aquatic species there is sparse connectivity between the Study Area and downstream tidal marsh or freshwater habitats. The Study Area does not support any nursery sites. Because the Project will not alter or remove these habitat linkages nor does it contain any wildlife nursery sites, this will result in a **less than significant impact**.

# 6.0 ANALYTICAL METHODOLOGY AND SIGNIFICANCE THRESHOLD CRITERIA

Pursuant to Appendix G, Section IV of the State CEQA Guidelines, a project would have a significant impact on biological resources if it would:

1. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or U.S. Fish and Wildlife Service;
2. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or U.S. Fish and Wildlife Service;
3. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means
4. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;

5. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and/or,
6. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

These thresholds were utilized in completing the analysis of potential project impacts for CEQA purposes. For the purposes of this analysis, a "substantial adverse effect" is generally interpreted to mean that a potential impact could directly or indirectly affect the resiliency or presence of a local biological community or species population. Potential impacts to natural processes that support biological communities and special-status species populations that can produce similar effects are also considered potentially significant. Impacts to individuals of a species or small areas of existing biological communities may be considered less than significant if those impacts are speculative, beneficial, de minimis, and/or would not affect the resiliency of a local population.

# 7.0 IMPACTS AND MITIGATION EVALUATION

Using the CEQA analysis methodology outlined in Section 6.2 above, the following section describes potential significant impacts to sensitive resources within the Project Area as well as suggested mitigation measures which are expected to reduce impacts to less than significant.

## 7.1 Special-status Species

This section analyzes the Project's potential impacts and mitigation for special-status species in reference to the significance threshold outlined in CEQA Appendix G, Part IV (a):

> *Does the project have the potential to have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or U.S. Fish and Wildlife Service?*

Potential impacts and mitigation for potentially significant impacts are discussed below.

### 7.1.1 General Construction Impacts to Special-status Species

**Potential Impact BIO-1: Construction-related Direct Impacts to Special-status Species.**

The Proposed Project may induce mortality, injury or harassment to special-status species through construction activities related to ground disturbance, paving, excavation, trenching, backfilling, stockpiling, access and staging. Special-status species occupying the Study Area may be crushed, entombed, maimed, entrained, injured or otherwise harassed, which is a **potentially significant impact** under CEQA. To reduce potential impacts to special-status species, the following mitigation measures shall be implemented:

> **Mitigation Measure BIO-1: Worker Environmental Awareness Training.** The District shall retain a qualified biologist to conduct an environmental awareness training program, which shall be given to all crew members working on the Project. The training shall include education on sensitive resources such as special-status species with potential to occur within the Study Area, water quality, and environmental protection measures. The construction contractor shall ensure that any new workers who begin work after the initial

training also receive the awareness training prior to participating in ground-disturbing activities.

Implementation of Mitigation Measure BIO-01a, in combination with species-specific measures described below, would reduce potential impacts to special-status species to a **less-than-significant** level.

### 7.1.2 Special-status Plants

**Potential Impact BIO-2:** The proposed Project's construction activities could result in the direct removal of individuals of special-status plant species, including Delta tule pea, San Joaquin spearscale, Suisun Marsh aster, brittlescale, Bolander's water hemlock, Delta mudwort, crownscale, Suisun thistle, soft salty bird's beak, pappose tarplant, Parry's rough tarplant, alkali milk vetch, broadleaf pondweed, California alkali grass, Congdon's tarplant, Carquinez goldenbush, saline clover, small spikerush, and hispid salty bird's. Direct removal of individual special-status plant species is a **potentially significant impact** under CEQA.

To reduce potential impacts to special-status plants, the following mitigation measures shall be implemented:

> **Mitigation Measure BIO-2a: Special-Status Plants.** Prior to any vegetation removal or ground-disturbing activities, surveys shall be conducted within the Project Area by a qualified biologist to determine the presence of Delta tule pea, San Joaquin spearscale, Suisun Marsh aster, brittlescale, Bolander's water-hemlock, Delta mudwort, and crownscale. Surveys shall be conducted following regulatory agency and California Native Plant Society survey protocols (CDFW 2018). These guidelines require special-status plant surveys to be conducted at the proper time of year when rare or endangered species are both "evident" and identifiable. Field surveys shall be scheduled to coincide with known blooming periods, and/or during periods of physiological development that are necessary to identify the plant species of concern. If no special-status plant species are found, then no additional mitigation measures are necessary.
>
> If the survey determines that special-status plant species are present within or adjacent to the Study Area, a qualified biologist shall establish activity exclusion zones around the individual plants. These zones will be areas where no ground-disturbing activities shall take place, including construction of new facilities, construction staging, or other temporary construction work. Activity exclusion zones for special-status plant species shall be established prior to construction activities around each occupied habitat site, the boundaries of which shall be clearly marked with standard orange plastic construction exclusion fencing or its equivalent. The establishment of activity exclusion zones shall not be required if no construction-related disturbances would occur within 250 feet of the areas supporting special-status plant species populations.
>
> **Mitigation Measure BIO-2b: Special-status Plants.** If special-status plants are observed and cannot be fully avoided, the District will mitigate for impacts by developing a plant restoration plan. The plant restoration plan will evaluate biological factors specific to each species to be impacted, such as their habitat requirements, to determine an appropriate mitigation approach and ratio. Mitigation approaches may include but may not be limited to replanting via seed collection and seed casting, translocating, habitat

restoration or enhancements, or contribution of funds to a local restoration project or entity.

Implementation of Mitigation Measure BIO-02a and BIO-02b would reduce potential impacts to special-status plants to a **less-than-significant** level.

### 7.1.3 Special-status and Non-special Status Nesting Birds

This assessment determined that six special-status bird species, including California black rail, California Ridgway's rail, burrowing owl, Suisun song sparrow, salt marsh common yellowthroat, and northern harrier, may nest in trees within the Study Area or in the immediate vicinity. California black rail, California Ridgway's rail and burrowing owl are subject to additional mitigation measures (7.1.4 and 7.1.5, below). In addition to special-status nesting birds, common avian species may also nest within the Study Area and may be similarly affected by Project activities. Grading and vegetation removal proposed within the Project footprint may directly impact the nests of protected species or may impact these species through visual and auditory disturbance sufficient to cause nest abandonment. Due to the protected status of these species under both the MBTA and CDFW, impacts to special-status and common native nesting birds would also be considered a **potentially significant impact** under CEQA.

**Potential Impact BIO-3:** Grading activities and vegetation removal associated with the proposed Project could result in the destruction or abandonment of nests of special-status or non-special-status bird species protected under the MBTA and CDFW.

To reduce potential impacts to special-status birds and native nesting birds, the following mitigation measures shall be implemented:

> **Mitigation Measure BIO-3: Nesting Birds.** To the extent feasible, Project-related activities should be avoided during the nesting bird season, generally defined as February 1 – August 31. If Project work must occur during the nesting bird season, a pre-construction nesting bird survey shall be conducted by a qualified biologist within 7 days of ground disturbance or vegetation removal to avoid disturbance to active nests, eggs, and/or young of nesting birds. Surveys shall be conducted in all potential nesting habitat located at, and adjacent to, Project work sites and in staging and storage areas.
>
> If an active nest is located, a no disturbance buffer shall be established around the nest. Active nest sites and protective buffer zones shall be designated as "Environmentally Sensitive Areas" where no Project-related activities or personnel may enter until a qualified biologist determines that the young have fully fledged, or the nest otherwise becomes inactive (e.g., due to predation), and will no longer be adversely affected by the Project. Suggested buffer zone distances differ depending on species, existing conditions, and nest placement and shall be determined and implemented in the field by a qualified biologist.

Implementation of this mitigation measure will reduce potential impacts to Suisun song sparrow, salt marsh common yellowthroat, northern harrier and native nesting birds to a **less-than-significant** level.

### 7.1.4 Burrowing Owl (BUOW)

**Potential Impact BIO-4: Impacts to BUOW Burrows or Individuals.** No permanent loss of BUOW habitat is anticipated as a result of the Project; however, temporary impacts to

suitable habitat are anticipated. There is limited potential for direct impacts to occur to BUOW individuals within the Project Area; however, direct impacts are possible due to interactions with construction traffic or entrapment in open trenches/holes, equipment, or materials. These impacts would be considered **potentially significant** under CEQA.

To reduce potential impacts to burrowing owl, the following mitigation measure should be implemented:

> **Mitigation Measure BIO-4: BUOW Surveys.** Prior to the initiation of ground disturbance within BUOW suitable habitat, a qualified biologist shall conduct pre-construction surveys for burrowing owl. Surveys shall be conducted regardless of the time of year, as burrowing owls may use burrows within the Project Area during the non-nesting season. The survey effort shall be performed in accordance with the methods described in the CDFG 2012 Staff Report on Burrowing Owl Mitigation (CDFG 2012). Surveys shall encompass a sufficient buffer zone to detect owls nearby that may be impacted, which shall be a minimum of 50 meters during the non-breeding season and 200 meters during the breeding season. Surveys shall include at least four surveys spread evenly throughout the breeding or non-breeding season, pursuant to the CDFW 2012 Staff Report guidelines. Time lapses of two weeks or greater between surveys or Project activities shall trigger subsequent surveys, as determined by a qualified biologist, including, but not limited to, a final survey within 24 hours prior to ground disturbance and before construction equipment mobilizes to the project area. The qualified biologist shall have a minimum of two years of experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections.
>
> Detected occupied burrows shall be avoided pursuant to the buffer zones recommended in the CDFW 2012 Staff Report, unless otherwise approved in writing by CDFW. If nest/burrow sites cannot be avoided, the District shall consult with CDFW to develop an appropriate mitigation strategy and obtain an incidental take permit, if necessary. Any passive relocation plan and habitat compensation or other proposed mitigation alternatives shall be subject to CDFW approval.

Implementation of Mitigation Measure BIO-4, along with Mitigation Measure BIO-01, would reduce potential impacts to burrowing owl to a **less-than-significant** level.

### 7.1.5 Salt Marsh Harvest Mouse (SMHM)

**Potential Impact BIO-2: Salt Marsh Harvest Mouse.** No permanent loss of SMHM habitat would occur as a result of the Project. The Project would result in temporary, indirect impacts to SMHM due to temporary impacts to suitable habitat. Direct impacts could also occur if SMHM individuals enter into the Project footprint during construction from adjacent tidal marsh and managed marsh areas. Direct impacts may occur due to interactions with construction traffic or entrapment in open trenches/holes, equipment, or materials. In addition, individual mice may seek refuge in equipment or materials overnight and use of equipment or materials with these species inside may cause mortality. If no impact avoidance or minimization measures are implemented, direct mortality or harassment could occur to individual SMHM present in these areas during construction, which is a **potentially significant impact** under CEQA.

To reduce potential impacts to SMHM, the following mitigation measures shall be implemented:

**Mitigation Measure BIO-5**: **Salt Marsh Harvest Mouse.** Potential adverse effects from Project-related noise shall be minimized to the maximum extent practicable by implementing sufficient disturbance buffers between noise-generating Project activities and SMHM habitat. Prior to initiating construction, a USFWS-Approved Biologist shall identify suitable SMHM habitat within and adjacent to the Project Area. A Qualified Biologist will be on-site during all construction activities occurring within or immediately adjacent to SMHM habitat, including vegetation removal. Disturbance to suitable habitat and vegetation removal will be minimized to the maximum extent feasible to accommodate construction. Vegetation shall be removed from the work area and within a 25-foot buffer on both sides of the work area using handheld motorized equipment (e.g., string trimmers and fixed-blade weed trimmers). Vegetation shall be cleared under the direction of the USFWS-Approved Biologist in a manner that minimizes potential to injure or kill SMHM (e.g., vegetation cut in multiple passes, removed systematically from one area toward another to encourage retreat of any animals present).

If harvest mice species are encountered during vegetation clearing or other activities, work shall be halted until the individual has left the area on its own or until the qualified Biologist disturbs the vegetation ahead of the vegetation clearing (e.g., by carefully walking through it) in an attempt to haze the mice out. Due to the difficulty with field identification of SMHM, these procedures will apply to all harvest mice or any potential harvest mouse species.

Cut vegetation shall be immediately removed from the cleared area following cutting, so that no standing or cut vegetation remains in the cleared area. Construction will commence in cleared areas no less than 48 hours after vegetation clearing is completed at each given location. Construction activities will be limited to 1/2 hour after sunrise to 1/2 hour before sunset. If a work area(s) will be active for longer than one week, an exclusion fence shall be installed as indicated by the Qualified Biologist or USFWS-Approved Biologist.

Implementation of Mitigation Measure BIO-5, along with Mitigation Measure BIO-01, will reduce potential impacts to SMHM a **less-than-significant** level.

### 7.1.6 California Ridgway's Rail (CRR) and California Black Rail (CBR)

Due to the similarities for these two species, the assessment is conducted together.

**Potential Impact BIO-6: California Ridgway Rail and California Black Rail.** CRR and CBR may be present in tidal marsh and muted tidal marsh habitats in the vicinity of the Study Area. Noise-generating activities, if they occur in proximity to CRR and CBR habitat, have the potential to disrupt the breeding dynamics of these species. Impacts to CRR and CBR would be considered **potentially significant** under CEQA.

The following measures should be implemented to avoid and minimize impacts to CRR and CBR for work areas within 700 or 300 feet of suitable habitat where work will be required to occur during the breeding season:

**Mitigation Measure BIO-6: California Ridgway Rail and California Black Rail.** Prior to the initiation of construction work, presence/absence surveys for CRR and CBR as per the 2015 USFWS Protocol shall be conducted where work activities will occur within 700 feet of potential breeding habitat (tidal/brackish marsh). If CRR or CBR is observed (aurally or visually) within 700 feet of the Project site, work in that portion of the Project site shall be restricted to outside of the nesting season (i.e., September 1 – January 31). No work or staging shall occur less than 700 feet from suitable nesting habitat during the nesting season prior to the completion of surveys.

The survey shall be initiated between January 15 and February 1. Four surveys (two passive, and two active for CRR) shall be conducted at least two weeks apart and take place from one hour before sunrise to one hour after sunrise in the morning and from one hour before and after sunset in the evenings. For passive surveys an observer should be assigned to each survey station for the duration of two hours. For active surveys an observer should be assigned to each survey station for a duration of 45 minutes.

Nest avoidance measures will not be necessary for work occurring outside call center avoidance buffers and during the non-breeding season (September 1 – January 31) as the Project will not impact sensitive brackish marsh nesting habitat. If take authorization for CRR is granted by the USFWS as part of permitting for the Project, it may be possible to complete work outside of the construction period described in this mitigation measure. However, in some instances, engineering methods and/or processes may require work during the nesting season in areas within 700 feet (CRR) and 300 feet (CBR) of potential breeding habitat. In these instances, work will be allowed to proceed to ensure work can be accomplished without putting personnel or adjacent infrastructure at risk. No removal of tidal/brackish marsh vegetation shall occur during the rail breeding season in association with such work.

Implementation of Mitigation Measure BIO-6, along with Mitigation Measure BIO-01, will reduce potential impacts to CRR and CBR to a **less-than-significant** level.

### 7.1.7 California Reg-legged Frog

**Potential Impact BIO-7**: **California Red-legged Frog**. Adult and sub-adult CRLF may be found dispersing, foraging or aestivating within suitable habitat in the Project Area. The Project may adversely impact CRLF adults through noise from construction activities, access, staging and stockpiling of materials, equipment spills, and harassment or injury during relocation, which is a **potentially significant impact** under CEQA.

The following mitigation measure shall be implemented to reduce potential impacts to CRLF:

**Mitigation Measure BIO-7: California Red-legged Frog.** The District shall prepare a Covered Species Relocation Plan (Plan) in consultation with relevant agencies, including communications, monitoring, surveys, capture, care, relocation and reporting for CRLF encountered during Project activities. The District shall obtain Plan approval from USFWS prior to the start of construction activities.

Within 48 hours prior to commencement of initial construction activities, a USFWS-approved biologist shall conduct a pre-construction survey for CRLF in and adjacent to the Project Area where suitable habitat occurs (areas with vegetative cover and/or standing water). If CRLF is found in the Project Area during this survey, the Approved

Biologist shall relocate the animal at least 200 feet outside of the Project Area using the methods described below.

Prior to the commencement of work with wheeled or tracked equipment in vegetated areas, vegetation that could conceal CRLF will be surveyed by a qualified Biologist. If vegetation is too dense to be adequately surveyed (e.g. thick blackberry bushes, etc.), a qualified Biologist shall observe vegetation removal until vegetation is cleared sufficiently for the biologist to survey the area and verify the presence or absence of CRLF. If no CRLF are found, the vegetation will be fully removed. If a CRLF is observed, the USFWS-approved biologist shall relocate the animal at least 200 feet outside of the Project Area following the approved Capture and Relocation Plan as described above.

During the initial stages of ground disturbance, a qualified biologist shall be present to observe for CRLF. If CRLF are not observed during the preconstruction survey and none are encountered during initial ground disturbance, no further biological monitoring will be required. However, if CRLF are encountered within the work area, or are observed within proximity to the work area such that they may be harmed by ongoing restoration, biological monitoring shall continue. The qualified biologist shall perform site clearance at the beginning of each day and shall monitor construction activities throughout the day. In the event a CRLF is observed within the work area either during the preconstruction surveys or when monitoring, the USFWS-approved biologist shall capture and relocate the individual to suitable habitat at least 300 feet outside of the Project Area following the approved Capture and Relocation Plan as described above.

Erosion control structures and materials shall not include monofilament or otherwise have components that may entrap and kill wildlife. All construction activities shall cease one half hour before sunset and shall not begin prior to one half hour before sunrise. Construction activities will not occur within 24 hours after rain events projected to deliver > 0.25 inches or greater of precipitation without the presence of a qualified biologist during all work activities. Any open holes or trenches shall be covered or have escape ramps no steeper than 45 degrees installed at the end of each working day to prevent wildlife from becoming entrapped. Work shall be avoided within suitable habitat from October 15 (or the first measurable fall rain of 1 inch or greater) to May 1.

Implementation of Mitigation Measure BIO-7, along with Mitigation Measure BIO-01, will reduce potential impacts to CRLF to a **less-than-significant** level.

## 7.2 Sensitive Natural Communities and Land Cover Types

This section addresses the question:

> *b) Does the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or U.S. Fish and Wildlife Service;*

Sensitive natural communities within the Project Area include saltgrass meadow, riparian woodland, non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetlands, an intermittent stream, and alkali seasonal wetland depressions.

Permanent impacts are anticipated to the alkali seasonal wetland depressions where the access road construction is set in the central portion of the Project Area. Other impacts include manhole

work, staging areas, access road limits of disturbance, and the bypass alignments, which will temporarily impact non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetlands, intermittent streams, and the alkali seasonal wetland depressions areas, all of which are considered sensitive communities. The access road areas are also located immediately adjacent to other sensitive communities and could result in indirect impacts due to incidental discharges to adjacent aquatic habitats. Potential impacts and mitigation measures to avoid impacts to these sensitive natural communities are described below.

**Potential Impact BIO-8: Water Quality Protection.** Construction activities and Project elements may result in direct and indirect impacts to sensitive communities, which is a **potentially significant impact** under CEQA. To reduce potential impacts to sensitive natural communities, the following mitigation measures shall be implemented:

> **Mitigation Measure BIO-8:** The District shall seek permission and obtain approval from the Corps and RWQCB prior to Project construction. Any additional avoidance, minimization, and/or compensatory mitigation required by the regulatory agencies shall be implemented as Project conditions of approval.
>
> Additionally, the following best management practices (BMPs) would be implemented during Project construction to reduce impacts of construction work on biological resources and water quality:
>
> - Erosion control measures shall be utilized throughout all phases of the project where sediment runoff from construction may potentially enter waters. Erosion control structures shall be monitored for effectiveness and will be repaired or replaced as needed. Appropriate erosion control measures shall be installed around any stockpiles of soil or other materials which could be mobilized by rainfall or runoff. All erosion control materials shall utilize natural biodegradable materials and shall not contain plastic monofilament that may entangle wildlife. It should be noted that this fencing can be the same as the wildlife exclusion fencing described in **Mitigation Measure BIO-5** above.
> - No fueling, cleaning, or maintenance of vehicles or equipment shall take place within any areas where an accidental discharge may cause hazardous materials to enter waterways.
> - Any equipment or vehicles used for the Project shall be checked and maintained daily to prevent leaks of fluids that could be deleterious to aquatic habitats.
> - All equipment shall be cleaned before arriving on the site and before removal from the site to prevent spread of invasive plants.
> - Construction disturbance or removal of vegetation shall be restricted to the minimum footprint necessary to complete the work. The work area will be delineated where necessary to minimize impacts to vegetated habitats beyond the work limit, or to protected vegetation within the work area.
> - Staging and storage areas for equipment, materials, fuels, lubricants and solvents shall be located outside of the stream channel banks.
> - Stationary equipment such as motors, pumps, and generators, located adjacent to aquatic features shall be positioned over secondary containment sufficient to arrest a catastrophic failure.

- All activities performed near aquatic features shall have absorbent materials designated for spill containment and cleanup activities on-site for use in an accidental spill.
- Stockpiles of excavated soil or other shall be covered when not in active use (i.e., would not be used, or moved for 72 hours). All trucks hauling soil, sand, and other loose materials shall be covered.
- No construction debris of any type shall be allowed to enter or be placed where they may be washed into any aquatic features.
- At the end of the Project, all temporary flagging, fencing, or other materials shall be removed from the Project site and vicinity of the channel.
- No equipment shall be washed down where runoff could enter the creek.
- No motorized equipment shall be left within the channel overnight.

**Potential Impact BIO-9:** Various project elements will result in the temporary disturbance and permanent loss of aquatic habitat which are considered sensitive communities.

> **Mitigation Measure BIO-9: Aquatic Habitats.** Disturbance to aquatic habitats shall be permitted through the appropriate regulatory agencies (i.e., USACE or Regional Water Quality Control Board). The District shall ensure that temporary impacts are restored to pre-construction conditions through preparation of a Habitat Restoration Plan that includes provisions for seeding and/or planting following construction and monitoring of the restored area to ensure restoration of habitat function. The District shall mitigate for permanent loss of aquatic habitats at a minimum of a 1:1 ratio by purchasing wetland mitigation credits, creating or enhancing onsite aquatic habitat, or funding a local restoration project(s) that restores wetlands with similar functions.

Implementation of Mitigation Measures BIO-1, BIO-8 and BIO-9 will reduce potential temporary and permanent impacts to sensitive habitats to a **less-than-significant** level.

## 7.3 Aquatic Resources

This section analyzes the Project's potential impacts and mitigation for wetlands and other areas presumed or determined to be within the jurisdiction of the Corps or BCDC in reference to the significance threshold outlined in CEQA Appendix G, Part IV (c):

> *c) Does the Project have the potential to have a substantial adverse effect on state or federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;*

Temporary and permanent impacts to aquatic resources are anticipated as part of the Project. The Project Area includes non-tidal marsh, tidal marsh, brackish tidal marsh, seasonal wetlands, an intermittent stream, and alkali seasonal wetland depressions. Given that these habitats are considered sensitive communities, all potential impacts and mitigation are discussed above in Section 7.2. Potential impacts to aquatic resources are covered by **Potential Impact BIO-8 and BIO-9** and **Mitigation Measures BIO-1, BIO-8 and BIO-9.**

## 7.4 Wildlife Corridors and Native Wildlife Nursery Sites

This section analyzes the Project's potential impacts and mitigation for habitat corridors and linkages in reference to the significance threshold outlined in CEQA Appendix G, Part IV (d):

> *d) Does the Project have the potential to interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;*

As noted in Section 5.3, no portions of the Study Area provide connectivity between areas of suitable habitat. For terrestrial and avian species, all portions of the Project Area are within a greater context of urban development, recreational and agricultural land and for aquatic species, there is no connectivity between the Study Area and upstream freshwater habitats. **No impact** will occur to migratory corridors for terrestrial and aquatic species.

## 7.5 Local Policies and Ordinances

This section analyzes the Project's potential impacts and mitigation based on conflicts with local policies and ordinances in reference to the significance threshold outlined in CEQA Appendix G, Part IV (e):

> *e) Does the Project have the potential to conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance;*

Relevant local plans and policies related to biological resources examined in this analysis are:

#### CONTRA COSTA COUNTY GENERAL PLAN

- COS-P4.1 Maintain ecologically significant resource areas in their natural state to the greatest extent possible. Limit development in and near these areas to compatible low intensity uses with adequate provisions to protect sensitive resources, including setbacks around resource areas. Prohibit projects that would lead to fragmentation of ecologically significant resource areas.
- COS-P4.3 Require a biological resources assessment prepared according to State and federal protocols for projects with the potential to impact rare, threatened, endangered, or special-status species or their habitat, and implement appropriate mitigation for identified impacts, preferably near the impact and within the county.
- COS-P4.4 Protect wildlife migration corridors, including natural and channelized creeks providing habitat in urban settings, and support projects that enhance these areas
- COS-P4.7 Require projects near sensitive habitat areas to minimize lighting in general and mitigate light pollution by incorporating best practices for wildlife-friendly lighting.
- COS-P4.8 Require appropriately-timed, comprehensive floristic and vegetation surveys prepared according to State and federal protocols when development is proposed on land with potentially suitable habitat for special-status plant species, sensitive natural plant communities, or locally rare plants, including areas mapped by the California Native Plant Society as Botanical Priority Protection Areas.

- COS-P4.9 Require avoidance and protection of sensitive ecological resources not approved for disturbance or removal during project entitlement, and require restitution in exceedance of standard mitigation ratios for deliberate or inadvertent damage to these resources.
- COS-P4.10 Require majority use of California native plant species in large, landscaped areas in new developments, and require construction practices that avoid spread of invasive plant species by minimizing surface disturbance; seeding and mulching disturbed areas with certified weed-free native mixes; disinfecting/decontaminating equipment; and using native, noninvasive, drought-resistant species in erosion control plantings.*
- COS-P5.2 Require public infrastructure and private development projects to preserve, and whenever possible restore and enhance, natural watercourses, floodplains, and riparian habitat.
- COS-P5.3 Require avoidance, minimization, and/or compensatory mitigation for development that would impact a wetland, wetland species, or adjacent upland habitat areas. Where feasible, compensation shall be in-kind (i.e., the same type of habitat), provided on-site, and based on a ratio that provides a margin of safety reflecting the expected degree of success and accounting for the relative functions and values of the lost and created wetlands.
- COS-P6.1 Preserve natural woodlands and significant trees, particularly mature native species, intact coastal scrub and chaparral, and grasslands, especially those with native grass and wildflower populations.

The Project is consistent with the Contra Costa General Plan in its efforts to improve Delta water quality, compensate for temporary impacts to wetlands, and to avoid and protect sensitive habitats, species, and wildlife corridors to the extent possible. Therefore, there is **no impact** related to conflicts with the Contra Costa General Plan.

### CITY OF PITTSBURG GENERAL PLAN

The City of Pittsburg General Plan contains policies pertaining to the following biological resource categories (City of Pittsburg 2024).

- 10-P-2.1: Ensure that open space and natural landscapes remain a major component of lands near the Bay and the Delta.
- 10-P-2.2: Support the long-term viability and success of the natural Bay and Delta ecosystems and the continuation of Delta heritage, including encouraging preservation and restoration of contiguous portions of important wildlife habitats remnants of riparian and aquatic habitat.
- 10-P-2.5: Conserve natural terrain, native vegetation, and sensitive habitats and recognize the role of native vegetation, natural terrain and green infrastructure in natural resource and watershed management.
- 10-P-2.6: Support efforts to protect and enhance the Bay and Delta ecosystem and Pittsburg's creeks in perpetuity for their value in providing visual amenity, drainage capacity, and habitat value, through a variety of measures including local conservation efforts that improve adequate water supply and quality.
- 10-P-2.11: Encourage the preservation of wildlife corridors to ensure the integrity of habitat inkages.

- 10-P-2.12: Continue to support and implement the East Contra Costa County Habitat Conservation Plan (Eastern County HCP).
- 10-P-2.13: Support the reclamation of wetlands and marshlands along local industrial waterfronts.
- 10-P-2.14: Collaborate with developers to maintain, and where feasible establish enhancements to, creeks, marshes, wetlands, and riparian corridors in the design of new development.
- 10-P-2.15: Protect and restore threatened natural resources, such as wildlife, estuaries, tidal zones, marine life, wetlands, and waterfowl habitat.
- 10-P-2.16: Limit dredging and filling of wetlands and marshlands, particularly adjacent to Browns Islands Preserve.
- 10-P-2.17: Work with industrial property-owners along the waterfront to improve urban runoff and water quality levels within the Bay wetlands.
- 10-P-2.18: Recognize that climate change impacts may influence future guidance, and best available data, and continue to ensure that up-to-date information is consulted when reviewing projects for potential impacts to biological resources, including the Bay, Delta, and sensitive habitats.

The City of Pittsburg General Plan contains the following actions to implement the relevant policies:

- 10-A-2.a: Conduct site-specific biological resources assessment for development located in or adjacent to potential habitat or ecologically sensitive areas. If any special-status species or sensitive habitats are identified, contact the appropriate resource agencies and establish appropriate management strategies to reduce impacts on sensitive habitat and special status species.
- 10-A-2.b: Continue to require projects to comply with the requirements of the Eastern County HCP when reviewing proposed public and private land use changes.
- 10-A-2.f: Establish an on-going program to remove and prevent the re-establishment of invasive species and restore native species as part of development approval on sites that include ecologically sensitive habitat and require that revegetation of cut-and-fill slopes for new development includes native plant species.
- 10-A-2.j: Establish development standards for new construction adjacent to riparian zones to reduce sedimentation and flooding. Standards should include:
    - Requirements that low berms or other temporary structures such as protection fences be built between a construction site and riparian corridor to preclude sheet-flooding stormwater from entering the corridors during the construction period.
    - Requirements for installation of storm sewers before construction occurs to collect stormwater runoff during construction.

The Project is consistent with the City of Pittsburg General Plan in its efforts to improve Delta water quality, compensate for temporary impacts to wetlands, and to avoid and protect sensitive habitats, species, and wildlife corridors to the extent possible. Therefore, there is **no impact** related to conflicts with the City of Pittsburg General Plan.

## 7.6 Habitat Conservation Plans

This section analyzes the Project's potential impacts and mitigation based on conflicts with any adopted local, regional, and state habitat conservation plans in reference to the significance threshold outlined in CEQA Appendix G, Part IV (f):

> *f) Does the Project have the potential to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.*

The Project does not fall within the East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan area. Thus, the proposed project meets the ECCCHCP/NCCP requirements, and there is **no impact** to the function of the Habitat Plan.

*THIS PAGE INTENTIONALLY LEFT BLANK.*

# APPENDIX B. SPECIES OBSERVED IN AND AROUND THE STUDY AREA

*THIS PAGE INTENTIONALLY LEFT BLANK.*

## Appendix B. Plant Species Observed within the Study Area during the Wetland Delineations (2025).

| SCIENTIFIC NAME | COMMON NAME | ORIGIN | FORM | RARITY STATUS[1] | CAL-IPC STATUS[2] | WETLAND STATUS[3] |
|---|---|---|---|---|---|---|
| *Acacia* sp. | - | - | - | - | - | - |
| *Avena barbata* | Slim oat | non-native (invasive) | annual, perennial grass | - | Moderate | - |
| *Baccharis pilularis* | Coyote brush | native | shrub | - | - | - |
| *Bassia hyssopifolia* | Five horn bassia | non-native (invasive) | annual herb | - | Limited | FACU |
| *Bolboschoenus maritimus ssp. paludosus* | Saltmarsh bulrush | native | perennial grasslike herb | - | - | OBL |
| *Brassica nigra* | Black mustard | non-native (invasive) | annual herb | - | Moderate | - |
| *Bromus diandrus* | Ripgut brome | non-native (invasive) | annual grass | - | Moderate | - |
| *Carduus pycnocephalus ssp. pycnocephalus* | Italian thistle | non-native (invasive) | annual herb | - | Moderate | - |
| *Centaurea calcitrapa* | Purple star thistle | non-native (invasive) | annual, perennial herb | - | Moderate | - |
| *Cirsium vulgare* | Bullthistle | non-native (invasive) | perennial herb | - | Moderate | FACU |
| Cortaderia sp. | - | - | - | - | - | - |
| *Crassula ovata*# | Jade plant | non-native | annual herb | - | - | - |
| *Cressa truxillensis* | Alkali weed | native | perennial herb | - | - | FACW |
| *Cynara cardunculus* | Cardoon | non-native (invasive) | perennial herb | - | Moderate | - |
| *Cynodon dactylon* | Bermuda grass | non-native (invasive) | perennial grass | - | Moderate | FACU |
| *Cyperus eragrostis* | Tall cyperus | native | perennial grasslike herb | - | - | FACW |
| *Distichlis spicata* | Salt grass | native | perennial grass | - | - | FAC |
| *Dittrichia graveolens* | Stinkwort | non-native (invasive) | annual herb | - | Moderate | - |
| *Elymus triticoides* | Beardless wild rye | native | perennial grass | - | - | FAC |
| *Epilobium ciliatum* | Slender willow herb | native | perennial herb | - | - | FACW |
| Epilobium sp. | - | - | - | - | - | - |
| *Euthamia occidentalis* | Western goldenrod | native | perennial herb | - | - | FACW |
| *Foeniculum vulgare* | Fennel | non-native (invasive) | perennial herb | - | High | - |
| *Frankenia salina* | Alkali heath | native | perennial herb | - | - | FACW |

| SCIENTIFIC NAME | COMMON NAME | ORIGIN | FORM | RARITY STATUS[1] | CAL-IPC STATUS[2] | WETLAND STATUS[3] |
|---|---|---|---|---|---|---|
| Galium sp. | - | - | - | - | - | - |
| Geranium sp. | - | - | - | - | - | - |
| *Hirschfeldia incana* | Short-podded mustard | non-native (invasive) | perennial herb | - | Moderate | - |
| *Juglans hindsii* | Northern California black walnut | native | tree | - | - | FAC |
| *Juncus balticus ssp. ater* | Baltic rush | native | perennial grasslike herb | - | - | FACW |
| Juncus sp. | - | - | - | - | - | - |
| *Lactuca serriola* | Prickly lettuce | non-native | annual herb | - | - | FACU |
| *Lepidium latifolium* | Perennial pepperweed | non-native (invasive) | perennial herb | - | High | FAC |
| Lemna sp. | - | - | - | - | - | - |
| *Olea europaea*[#] | Olive | non-native (invasive) | tree, shrub | - | Limited | - |
| Malva sp. | - | - | - | - | - | - |
| Nerium sp. | - | - | - | - | - | - |
| *Phoenix canariensis*[#] | Canary Island date palm | non-native (invasive) | tree | - | Limited | - |
| *Phragmites australis* | Common reed | native | perennial grass | - | - | FACW |
| *Poa annua* | Annual blue grass | non-native | annual grass | - | - | FAC |
| *Polypogon monspeliensis* | Annual beard grass | non-native (invasive) | annual grass | - | Limited | FACW |
| Populus sp. | - | - | - | - | - | - |
| Privet sp. | - | - | - | - | - | - |
| *Rumex crispus* | Curly dock | non-native (invasive) | perennial herb | - | Limited | FAC |
| Rosa sp. | - | - | - | - | - | - |
| *Salix laevigata* | Red willow | native | tree | - | - | FACW |
| *Salix lasiolepis* | Arroyo willow | native | tree, shrub | - | - | FACW |
| *Schinus molle*[#] | Peruvian pepper tree | non-native (invasive) | tree | - | Limited | FACU |
| *Schoenoplectus californicus* | California bulrush | native | perennial grasslike herb | - | - | OBL |
| *Sesuvium verrucosum* | Western sea purslane | native | perennial herb | - | - | FACW |
| *Silybum marianum* | Milk thistle | non-native (invasive) | annual, perennial herb | - | Limited | - |
| *Sonchus oleraceus* | Common sow thistle | non-native | annual herb | - | - | UPL |
| *Stipa pulchra* | Purple needle grass | native | perennial grass | - | - | - |

| SCIENTIFIC NAME | COMMON NAME | ORIGIN | FORM | RARITY STATUS[1] | CAL-IPC STATUS[2] | WETLAND STATUS[3] |
|---|---|---|---|---|---|---|
| *Torilis arvensis* | Field hedge parsley | non-native (invasive) | annual herb | - | Moderate | - |
| *Tsuga heterophylla* | Western hemlock | native | tree | - | - | FACU |
| Typha sp. | - | - | - | - | - | - |
| Vicia sp. | - | - | - | - | - | - |
| *Washingtonia robusta*# | Mexican fan palm | non-native (invasive) | tree | - | Moderate | FACW |

**Note:** All species identified using the *Jepson eFlora* [Jepson Flora Project (eds.) 2025]; nomenclature follows *Jepson eFlora* [Jepson Flora Project (eds.) 2025] or Rare Plant Inventory (CNPS 2026). Sp.: "species," intended to indicate that the observer was confident in the identity of the genus but uncertain which species.

*Special status only at native occurrences. The Study/Project Area does not contain a native occurrence of this species.

| | |
|---|---|
| FE: | Federal Endangered |
| FT: | Federal Threatened |
| SE: | State Endangered |
| ST: | State Threatened |
| SR: | State Rare |
| Rank 1A: | Plants presumed extinct in California |
| Rank 1B: | Plants rare, threatened, or endangered in California and elsewhere |
| Rank 2: | Plants rare, threatened, or endangered in California, but more common elsewhere |
| Rank 3: | Plants about which we need more information – a review list |
| Rank 4: | Plants of limited distribution – a watch list |

[2] **California Invasive Plant Council. 2025. California Invasive Plant Inventory Database. California Invasive Plant Council, Berkeley, CA. Online at: http://www.cal-ipc.org/paf/; most recently accessed: JUNE 2025.**

| | |
|---|---|
| High: | Severe ecological impacts; high rates of dispersal and establishment; most are widely distributed ecologically. |
| Moderate: | Substantial and apparent ecological impacts; moderate-high rates of dispersal, establishment dependent on disturbance; limited-moderate distribution ecologically |
| Limited: | Minor or not well documented ecological impacts; low-moderate rate of invasiveness; limited distribution ecologically |
| Assessed: | Assessed by Cal-IPC and determined to not be an existing current threat |

[3] **U.S. Army Corps of Engineers. 2022. National Wetland Plant List, version 3.6. Online at: http://wetland-plants.sec.usace.army.mil/**

| | |
|---|---|
| OBL: | Almost always found in wetlands |
| FACW: | Usually found in wetlands |
| FAC: | Equally found in wetlands and uplands |
| FACU: | Usually not found in wetlands |
| UPL: | Almost never found in wetlands |

| | |
|---|---|
| NL: | Not listed, assumed almost never found in wetlands |
| NI: | No information; not factored during wetland delineation |

| | |
|---|---|
| A1: | Locally Rare Species. Species occurring in two or fewer regions in Alameda and Contra Costa counties |
| A1x: | Locally Rare Species. Species presumed extirpated from Alameda and Contra Costa counties |
| A1?: | Locally Rare Species. Species possibly occurring in Alameda and Contra Costa counties. Identification or location is uncertain |
| A2: | Locally Rare Species. Plants occurring in three to five regions or are otherwise threatened in Alameda and Contra Costa counties. |
| B: | High Priority Watch List. Plants occurring in six to nine regions in Alameda and Contra Costa counties. |
| C: | Second Priority Watch List. Plants occurring in ten to fifteen regions in Alameda and Contra Costa counties. |
| *: | Ranks preceded by an asterisk (e.g. "*A1") also have a statewide rarity ranking |
| #: | Ornamental plantings are not considered locally rare. The individuals in the Project Area are ornamental plantings |

# APPENDIX C. SPECIAL-STATUS SPECIES POTENTIAL TABLE

*THIS PAGE INTENTIONALLY LEFT BLANK.*

## Appendix C. Potential for Special Status Plant and Wildlife Species to Occur within the Study Area.

List Compiled from the California Department of Fish and Wildlife Natural Diversity Database (CDFW 2026), U.S. Fish and Wildlife Service Information for Planning and Consultation Species Lists (USFWS 2026), and California Native Plant Society Rare Plant Inventory (CNPS 2026) search of the Honker Bay and surrounding eight U.S. Geological Survey 7.5' quadrangles.

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| | | **PLANTS** | | |
| Abrams' lupine<br>*Lupinus albifrons var. abramsii* | Rank 3.2 | Broadleafed upland forest, chaparral, coastal scrub, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 410 to 6560 feet (125 to 2000 meters). Blooms Apr-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| alkali milk-vetch<br>*Astragalus tener var. tener* | Rank 1B.2 | Playas, valley and foothill grassland (adobe clay), vernal pools. Elevation ranges from 5 to 195 feet (1 to 60 meters). Blooms Mar-Jun. | **Unlikely to occur.** Poor, but potentially suitable habitat does exist within the Study Area. | No further recommendations. |
| Antioch Dunes buckwheat<br>*Eriogonum nudum var. psychicola* | Rank 1B.1 | Inland dunes. Elevation ranges from 0 to 65 feet (0 to 20 meters). Blooms Jul-Oct. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Antioch Dunes evening-primrose<br>*Oenothera deltoides ssp. howellii* | FE, SE, Rank 1B.1 | Remnant river bluffs and sand dunes east of Antioch. Elevation ranges from 0 to 100 feet (0 to 30 meters). Blooms Mar-Sep. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Baker's navarretia<br>*Navarretia leucocephala ssp. bakeri* | Rank 1B.1 | Cismontane woodland, lower montane coniferous forest, meadows and seeps, valley and foothill grassland, vernal pools. Elevation ranges from 15 to 5710 feet (5 to 1740 meters). Blooms Apr-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| bay buckwheat<br>*Eriogonum umbellatum var. bahiiforme* | Rank 4.2 | Cismontane woodland, lower montane coniferous forest. Elevation ranges from 2295 to 7220 feet (700 to 2200 meters). Blooms Jul-Sep. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| bearded popcornflower<br>*Plagiobothrys hystriculus* | Rank 1B.1 | Valley and foothill grassland (mesic), vernal pools (margins). Elevation ranges from 0 to 900 feet (0 to 274 meters). Blooms Apr-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| big tarplant<br>*Blepharizonia plumosa* | Rank 1B.1 | Valley and foothill grassland. Elevation ranges from 100 to 1655 feet (30 to 505 meters). Blooms Jul-Oct. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Bolander's water-hemlock<br>*Cicuta maculata var. bolanderi* | Rank 2B.1 | Marshes and swamps (brackish, coastal, freshwater). Elevation ranges from 0 to 655 feet (0 to 200 meters). Blooms Jul-Sep. | **Moderate potential to occur.** Potentially suitable habitat exists within the Study Area. | See Section 7.1 for further recommendations. |
| Brewer's calandrinia<br>*Calandrinia breweri* | Rank 4.2 | Chaparral, coastal scrub. Elevation ranges from 35 to 4005 feet (10 to 1220 meters). Blooms (Jan)Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Brewer's western flax<br>*Hesperolinon breweri* | Rank 1B.2 | Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 100 to 3100 feet (30 to 945 meters). Blooms May-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| brittlescale<br>*Atriplex depressa* | Rank 1B.2 | Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pools. Elevation ranges from 5 to 1050 feet (1 to 320 meters). Blooms Apr-Oct. | **Moderate potential to occur.** Suitable habitat exists within the Study Area. | See Section 7.1 for further recommendations. |
| broadleaf pondweed<br>*Stuckenia striata* | Rank 2B.3 | Marshes and swamps. Elevation ranges from -230 to 7005 feet (-70 to 2135 meters). Blooms (Jun)Jul-Aug. | **Unlikely to occur.** Poor, but potentially suitable habitat does exist within the Study Area. | No further recommendations. |
| California alkali grass<br>*Puccinellia simplex* | Rank 1B.2 | Chenopod scrub, meadows and seeps, valley and foothill grassland, vernal pools. Elevation ranges from 5 to 3050 feet (2 to 930 meters). Blooms Mar-May. | **Unlikely to occur.** Poor, but potentially suitable habitat does exist within the Study Area. | No further recommendations. |
| California androsace<br>*Androsace elongata ssp. acuta* | Rank 4.2 | Chaparral, cismontane woodland, coastal scrub, meadows and seeps, pinyon and juniper woodland, valley and foothill grassland. Elevation ranges from 490 to 4280 feet (150 to 1305 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| caper-fruited tropidocarpum<br>*Tropidocarpum capparideum* | Rank 1B.1 | Valley and foothill grassland (alkaline hills). Elevation ranges from 5 to 1495 feet (1 to 455 meters). Blooms Mar-Apr. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Carquinez goldenbush *Isocoma arguta* | Rank 1B.1 | Valley and foothill grassland (alkaline). Elevation ranges from 5 to 65 feet (1 to 20 meters). Blooms Aug-Dec. | **Unlikely to occur.** Poor, but potentially suitable habitat does exist within the Study Area. | No further recommendations. |
| chaparral harebell *Ravenella exigua* | Rank 1B.2 | Chaparral (rocky, usually serpentine). Elevation ranges from 900 to 4100 feet (275 to 1250 meters). Blooms May-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| chaparral ragwort *Senecio aphanactis* | Rank 2B.2 | Chaparral, cismontane woodland, coastal scrub. Elevation ranges from 50 to 2625 feet (15 to 800 meters). Blooms Jan-Apr(May). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| coast iris *Iris longipetala* | Rank 4.2 | Coastal prairie, lower montane coniferous forest, meadows and seeps. Elevation ranges from 0 to 1970 feet (0 to 600 meters). Blooms Mar-May(Jun). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| coast rockcress *Arabis blepharophylla* | Rank 4.3 | Broadleafed upland forest, coastal bluff scrub, coastal prairie, coastal scrub. Elevation ranges from 10 to 3610 feet (3 to 1100 meters). Blooms Feb-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| coastal triquetrella *Triquetrella californica* | Rank 1B.2 | Coastal bluff scrub, coastal scrub. Elevation ranges from 35 to 330 feet (10 to 100 meters). Blooms . | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Congdon's tarplant *Centromadia parryi ssp. congdonii* | Rank 1B.1 | Valley and foothill grassland (alkaline). Elevation ranges from 0 to 755 feet (0 to 230 meters). Blooms (Apr)May-Oct(Nov). | **Unlikely to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Contra Costa goldfields *Lasthenia conjugens* | FE, Rank 1B.1 | Cismontane woodland, playas (alkaline), valley and foothill grassland, low depressions, swales, and vernal pools. Elevation ranges from 0 to 1540 feet (0 to 470 meters). Blooms Mar-Jun. | **No potential.** No suitable habitat does exist within the Study Area. | No further recommendations. |
| Contra Costa manzanita *Arctostaphylos manzanita ssp. laevigata* | Rank 1B.2 | Chaparral (rocky). Elevation ranges from 1410 to 3610 feet (430 to 1100 meters). Blooms Jan-Mar(Apr). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Contra Costa wallflower *Erysimum capitatum var. angustatum* | FE, SE, Rank 1B.1 | Found in stabilized dunes of sand and clay near Antioch along the San Joaquin River. Elevation ranges from 10 to 65 feet (3 to 20 meters). Blooms Mar-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Coulter's goldfields *Lasthenia glabrata ssp. coulteri* | Rank 1B.1 | Marshes and swamps (coastal salt), playas, vernal pools. Elevation ranges from 5 to 4005 feet (1 to 1220 meters). Blooms Feb-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| crownscale *Atriplex coronata var. coronata* | Rank 4.2 | Chenopod scrub, valley and foothill grassland, vernal pools. Elevation ranges from 5 to 1935 feet (1 to 590 meters). Blooms Mar-Oct. | **Present.** Crownscale was observed at and in the vicinity of the Study Area in a seasonal wetland and adjacent upland areas on alkaline substrate | See Section 7.1 for further recommendations. |
| Delta mudwort *Limosella australis* | Rank 2B.1 | Marshes and swamps (brackish, freshwater), riparian scrub. Elevation ranges from 0 to 10 feet (0 to 3 meters). Blooms May-Aug. | **Moderate potential to occur.** Crownscale was observed at and in the vicinity of the Study Area in a seasonal wetland and adjacent upland areas on alkaline substrate | See Section 7.1 for further recommendations. |
| Delta tule pea *Lathyrus jepsonii var. jepsonii* | Rank 1B.2 | Marshes and swamps (brackish, freshwater). Elevation ranges from 0 to 15 feet (0 to 5 meters). Blooms May-Jul(Aug-Sep). | **Moderate potential to occur.** Potentially suitable habitat exists within the Study Area. | See Section 7.1 for further recommendations. |
| Diablo helianthella *Helianthella castanea* | Rank 1B.2 | Broadleafed upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland. Elevation ranges from 195 to 4265 feet (60 to 1300 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| diamond-petaled California poppy *Eschscholzia rhombipetala* | Rank 1B.1 | Valley and foothill grassland (alkaline, clay). Elevation ranges from 0 to 3200 feet (0 to 975 meters). Blooms Mar-Apr. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| dwarf downingia *Downingia pusilla* | Rank 2B.2 | Valley and foothill grassland (mesic), vernal pools. Elevation ranges from 5 to 1460 feet (1 to 445 meters). Blooms Mar-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Ferris' goldfields *Lasthenia ferrisiae* | Rank 4.2 | Vernal pools (alkaline, clay). Elevation ranges from 65 to 2295 feet (20 to 700 meters). Blooms Feb-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| fragrant fritillary *Fritillaria liliacea* | Rank 1B.2 | Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland. Elevation ranges from 10 to 1345 feet (3 to 410 meters). Blooms Feb-Apr. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Hall's bushmallow *Malacothamnus hallii* | Rank 1B.2 | Chaparral, coastal scrub. Elevation ranges from 35 to 2495 feet (10 to 760 meters). Blooms (Apr)May-Sep(Oct). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| heartscale *Atriplex cordulata var. cordulata* | Rank 1B.2 | Chenopod scrub, meadows and seeps, valley and foothill grassland (sandy). Elevation ranges from 0 to 1835 feet (0 to 560 meters). Blooms Apr-Oct. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| hispid salty bird's-beak *Chloropyron molle ssp. hispidum* | Rank 1B.1 | Meadows and seeps, playas, valley and foothill grassland. Elevation ranges from 5 to 510 feet (1 to 155 meters). Blooms Jun-Sep. | **Unlikely to occur.** Poor, but potentially suitable habitat does exist within the Study Area. | No further recommendations. |
| hogwallow starfish *Hesperevax caulescens* | Rank 4.2 | Valley and foothill grassland (mesic clay), vernal pools (shallow). Elevation ranges from 0 to 1655 feet (0 to 505 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Hoover's cryptantha *Cryptantha hooveri* | Rank 1A | Inland dunes, valley and foothill grassland (sandy). Elevation ranges from 30 to 490 feet (9 to 150 meters). Blooms Apr-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Hospital Canyon larkspur *Delphinium californicum ssp. interius* | Rank 1B.2 | Chaparral (openings), cismontane woodland (mesic), coastal scrub. Elevation ranges from 640 to 3595 feet (195 to 1095 meters). Blooms Apr-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Jepson's coyote-thistle *Eryngium jepsonii* | Rank 1B.2 | Valley and foothill grassland, vernal pools. Elevation ranges from 10 to 985 feet (3 to 300 meters). Blooms Apr-Aug. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Jepson's woolly sunflower *Eriophyllum jepsonii* | Rank 4.3 | Chaparral, cismontane woodland, coastal scrub. Elevation ranges from 655 to 3365 feet (200 to 1025 meters). Blooms Apr-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| johnny-nip *Castilleja ambigua var. ambigua* | Rank 4.2 | Coastal bluff scrub, coastal prairie, coastal scrub, marshes and swamps, valley and foothill grassland, vernal pools (margins). Elevation ranges from 0 to 1425 feet (0 to 435 meters). Blooms Mar-Aug. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Keck's checkerbloom *Sidalcea keckii* | FE, Rank 1B.1 | Grassy slopes in blue oak woodland and serpentine-derived or clay soils. Elevation ranges from 278 to 1656 feet (85 to 505 meters). Blooms Apr-May(Jun). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| large-flowered fiddleneck *Amsinckia grandiflora* | FE, SE, Rank 1B.1 | Cismontane woodland, valley and foothill grassland. Elevation ranges from 885 to 1805 feet (275 to 550 meters). Blooms (Mar)Apr-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| large-flowered leptosiphon *Leptosiphon grandiflorus* | Rank 4.2 | Cismontane woodland, closed-cone coniferous forest, coastal bluff scrub, coastal dunes, coastal prairie, coastal scrub, valley and foothill grassland. Elevation ranges from 15 to 4005 feet (5 to 1220 meters). Blooms Apr-Aug. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| legenere *Legenere limosa* | Rank 1B.1 | Vernal pools. Elevation ranges from 5 to 2885 feet (1 to 880 meters). Blooms Apr-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Lime Ridge eriastrum *Eriastrum ertterae* | SE, Rank 1B.1 | Chaparral (edges, openings). Elevation ranges from 655 to 950 feet (200 to 290 meters). Blooms Jun-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Lime Ridge navarretia *Navarretia gowenii* | Rank 1B.1 | Chaparral. Elevation ranges from 590 to 1000 feet (180 to 305 meters). Blooms May-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| little mousetail *Myosurus minimus ssp. apus* | Rank 3.1 | Valley and foothill grassland, vernal pools (alkaline). Elevation ranges from 65 to 2100 feet (20 to 640 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Lobb's aquatic buttercup *Ranunculus lobbii* | Rank 4.2 | Cismontane woodland, north coast coniferous forest, valley and foothill grassland, vernal pools. Elevation ranges from 50 to 1540 feet (15 to 470 meters). Blooms Feb-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| long-styled sand-spurrey *Spergularia macrotheca var. longistyla* | Rank 1B.2 | Marshes and swamps, meadows and seeps. Elevation ranges from 0 to 835 feet (0 to 255 meters). Blooms Feb-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Lyngbye's sedge *Carex lyngbyei* | Rank 2B.2 | Marshes and swamps (brackish, freshwater). Elevation ranges from 0 to 35 feet (0 to 10 meters). Blooms Apr-Aug. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| marsh microseris *Microseris paludosa* | Rank 1B.2 | Cismontane woodland, closed-cone coniferous forest, coastal scrub, valley and foothill grassland. Elevation ranges from 15 to 1165 feet (5 to 355 meters). Blooms Apr-Jun(Jul). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Mason's lilaeopsis *Lilaeopsis masonii* | SR, Rank 1B.1 | Marshes and swamps (brackish, freshwater), riparian scrub. Elevation ranges from 0 to 35 feet (0 to 10 meters). Blooms Apr-Nov. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Michael's rein orchid *Piperia michaelii* | Rank 4.2 | Chaparral, cismontane woodland, closed-cone coniferous forest, coastal bluff scrub, coastal scrub, lower montane coniferous forest. Elevation ranges from 10 to 3000 feet (3 to 915 meters). Blooms Apr-Aug. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| most beautiful jewelflower *Streptanthus albidus ssp. peramoenus* | Rank 1B.2 | Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 310 to 3280 feet (95 to 1000 meters). Blooms (Mar)Apr-Sep(Oct). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Mt. Diablo bird's-beak *Cordylanthus nidularius* | SR, Rank 1B.1 | Chaparral (serpentine). Elevation ranges from 1970 to 2625 feet (600 to 800 meters). Blooms Jun-Aug. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Mt. Diablo buckwheat *Eriogonum truncatum* | Rank 1B.1 | Chaparral, coastal scrub, valley and foothill grassland. Elevation ranges from 10 to 1150 feet (3 to 350 meters). Blooms Apr-Sep(Nov-Dec). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Mt. Diablo fairy-lantern *Calochortus pulchellus* | Rank 1B.2 | Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland. Elevation ranges from 100 to 2755 feet (30 to 840 meters). Blooms Apr-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Mt. Diablo jewelflower *Streptanthus hispidus* | Rank 1B.3 | Chaparral, valley and foothill grassland. Elevation ranges from 1200 to 3935 feet (365 to 1200 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Mt. Diablo manzanita *Arctostaphylos auriculata* | Rank 1B.3 | Chaparral (sandstone), cismontane woodland. Elevation ranges from 445 to 2135 feet (135 to 650 meters). Blooms Jan-Mar. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Mt. Diablo phacelia *Phacelia phacelioides* | Rank 1B.2 | Chaparral, cismontane woodland. Elevation ranges from 1640 to 4495 feet (500 to 1370 meters). Blooms Apr-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| northern slender pondweed *Stuckenia filiformis ssp. alpina* | Rank 2B.2 | Marshes and swamps (shallow freshwater). Elevation ranges from 985 to 7055 feet (300 to 2150 meters). Blooms May-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Oakland star-tulip *Calochortus umbellatus* | Rank 4.2 | Broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 330 to 2295 feet (100 to 700 meters). Blooms Mar-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| oval-leaved viburnum *Viburnum ellipticum* | Rank 2B.3 | Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 705 to 4595 feet (215 to 1400 meters). Blooms May-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| pappose tarplant<br>*Centromadia parryi ssp. parryi* | Rank 1B.2 | Chaparral, coastal prairie, marshes and swamps (coastal salt), meadows and seeps, valley and foothill grassland (vernally mesic). Elevation ranges from 0 to 1380 feet (0 to 420 meters). Blooms May-Nov. | **Unlikely to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Parry's rough tarplant<br>*Centromadia parryi ssp. rudis* | Rank 4.2 | Valley and foothill grassland, vernal pools. Elevation ranges from 0 to 330 feet (0 to 100 meters). Blooms May-Oct. | **Unlikely to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| phlox-leaf serpentine bedstraw<br>*Galium andrewsii ssp. gatense* | Rank 4.2 | Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 490 to 4755 feet (150 to 1450 meters). Blooms Apr-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| redwood lily<br>*Lilium rubescens* | Rank 4.2 | Broadleafed upland forest, chaparral, lower montane coniferous forest, north coast coniferous forest, upper montane coniferous forest. Elevation ranges from 100 to 6265 feet (30 to 1910 meters). Blooms (Mar)Apr-Aug(Sep). | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| rock sanicle<br>*Sanicula saxatilis* | SR, Rank 1B.2 | Broadleafed upland forest, chaparral, valley and foothill grassland. Elevation ranges from 2035 to 3855 feet (620 to 1175 meters). Blooms Apr-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| saline clover<br>*Trifolium hydrophilum* | Rank 1B.2 | Marshes and swamps, valley and foothill grassland (mesic, alkaline), vernal pools. Elevation ranges from 0 to 985 feet (0 to 300 meters). Blooms Apr-Jun. | **Unlikely to occur.** Poor, but potentially suitable habitat does exist within the Study Area. | No further recommendations. |
| San Joaquin spearscale<br>*Extriplex joaquinana* | Rank 1B.2 | Chenopod scrub, meadows and seeps, playas, valley and foothill grassland. Elevation ranges from 5 to 2740 feet (1 to 835 meters). Blooms Apr-Oct. | **Moderate potential to occur.** Potentially suitable habitat exists within the Study Area. | See Section 7.1 for further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| serpentine collomia *Collomia diversifolia* | Rank 4.3 | Chaparral, cismontane woodland. Elevation ranges from 655 to 1970 feet (200 to 600 meters). Blooms May-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| serpentine leptosiphon *Leptosiphon ambiguus* | Rank 4.2 | Cismontane woodland, coastal scrub, valley and foothill grassland. Elevation ranges from 395 to 3710 feet (120 to 1130 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| shining navarretia *Navarretia nigelliformis ssp. radians* | Rank 1B.2 | Cismontane woodland, valley and foothill grassland, vernal pools. Elevation ranges from 215 to 3280 feet (65 to 1000 meters). Blooms (Mar)Apr-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| showy golden madia *Madia radiata* | Rank 1B.1 | Cismontane woodland, valley and foothill grassland. Elevation ranges from 80 to 3985 feet (25 to 1215 meters). Blooms Mar-May. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| slender silver moss *Anomobryum julaceum* | Rank 4.2 | Broadleafed upland forest, lower montane coniferous forest, north coast coniferous forest. Elevation ranges from 330 to 3280 feet (100 to 1000 meters). Blooms . | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| small spikerush *Eleocharis parvula* | Rank 4.3 | Marshes and swamps. Elevation ranges from 5 to 9910 feet (1 to 3020 meters). Blooms (Apr)Jun-Aug(Sep). | **Unlikely to occur.** Poor, but potentially suitable habitat does exist within the Study Area. | No further recommendations. |
| small-flowered monkeyflower *Erythranthe inconspicua* | Rank 4.3 | Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 900 to 2495 feet (274 to 760 meters). Blooms May-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| small-flowered morning-glory *Convolvulus simulans* | Rank 4.2 | Chaparral (openings), coastal scrub, valley and foothill grassland. Elevation ranges from 100 to 2430 feet (30 to 740 meters). Blooms Mar-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| soft salty bird's-beak *Chloropyron molle ssp. molle* | FE, SR, Rank 1B.2 | Coastal marshes and swamps along with associated species: *Distichlis, Salicornia, and Frankenia*. Elevation ranges from 0 to 10 feet (0 to 3 meters). Blooms Jun-Nov. | **Unlikely to occur.** Potentially suitable habitat exists within the Study Area, but is heavily disturbed. | No further recommendations. |
| stinkbells *Fritillaria agrestis* | Rank 4.2 | Chaparral, cismontane woodland, pinyon and juniper woodland, valley and foothill grassland. Elevation ranges from 35 to 5100 feet (10 to 1555 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| streamside daisy *Erigeron biolettii* | Rank 3 | Broadleafed upland forest, cismontane woodland, north coast coniferous forest. Elevation ranges from 100 to 3610 feet (30 to 1100 meters). Blooms Jun-Oct. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Suisun Marsh aster *Symphyotrichum lentum* | Rank 1B.2 | Grows with *Scripus, Distichlis* near small waterways within salt marshes. Elevation ranges from 0 to 10 feet (0 to 3 meters). Blooms June to September. | **Moderate potential to occur.** Potentially suitable habitat exists within the Study Area. | See Section 7.1 for further recommendations. |
| Suisun thistle *Cirsium hydrophilum var. hydrophilum* | FE, Rank 1B.1 | Marshes and swamps (salt). Elevation ranges from 0 to 5 feet (0 to 1 meters). Blooms Jun-Sep. | **Unlikely potential to occur.** Potentially suitable habitat exists within the Study Area. | No further recommendations. |
| sweet marsh ragwort *Senecio hydrophiloides* | Rank 4.2 | Lower montane coniferous forest, meadows and seeps. Elevation ranges from 0 to 9185 feet (0 to 2800 meters). Blooms May-Aug. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| sylvan microseris *Microseris sylvatica* | Rank 4.2 | Chaparral, cismontane woodland, great basin scrub, pinyon and juniper woodland, valley and foothill grassland. Elevation ranges from 150 to 4920 feet (45 to 1500 meters). Blooms Mar-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Tehama navarretia *Navarretia heterandra* | Rank 4.3 | Valley and foothill grassland (mesic), vernal pools. Elevation ranges from 100 to 3315 feet (30 to 1010 meters). Blooms Apr-Jun. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| three-ranked hump moss<br>*Meesia triquetra* | Rank 4.2 | Bogs and fens, meadows and seeps, subalpine coniferous forest, upper montane coniferous forest (mesic). Elevation ranges from 4265 to 9690 feet (1300 to 2953 meters). Blooms Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Toren's grimmia<br>*Grimmia torenii* | Rank 1B.3 | Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 1065 to 3805 feet (325 to 1160 meters). Blooms . | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| vernal pool smallscale<br>*Atriplex persistens* | Rank 1B.2 | Vernal pools (alkaline). Elevation ranges from 35 to 375 feet (10 to 115 meters). Blooms Jun-Oct. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| woodland woollythreads<br>*Monolopia gracilens* | Rank 1B.2 | Broadleafed upland forest (openings), chaparral (openings), cismontane woodland, north coast coniferous forest (openings), valley and foothill grassland. Elevation ranges from 330 to 3935 feet (100 to 1200 meters). Blooms (Feb)Mar-Jul. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| woolly-headed lessingia<br>*Lessingia hololeuca* | Rank 3 | Broadleafed upland forest, coastal scrub, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 50 to 1000 feet (15 to 305 meters). Blooms Jun-Oct. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| **WILDLIFE** | | | | |
| MAMMALS | | | | |
| Salt marsh harvest mouse<br>*Reithrodontomys raviventris halicotes* | FE, FP, SE | Brackish and salt marshes with diverse vegetation, however dominant in pickleweed, salt grass, alkali heath, bulrush, and marsh jaumea provide the habitat for the mouse. | **Moderate potential to occur.** 14 adults captured in two trap locations in 2004. | See Section 7.1 for further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Pallid bat<br>*Antrozous pallidus* | SSC | Found in a variety of habitats ranging from grasslands to mixed forests, favoring open and dry, rocky areas. Roost sites include crevices in rock outcrops and cliffs, caves, mines, and also hollow trees and various manmade structures such as bridges, barns, and buildings (including occupied buildings). Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Townsend's big eared bat<br>*Corynorhinus townsendii* | SSC | Associated with a wide variety of habitats from deserts to higher-elevation mixed and coniferous forests. Females form maternity colonies in buildings, caves and mines, and males roost singly or in small groups. Foraging typically occurs at edge habitats near wooded areas, e.g. along streams. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Western red bat<br>*Lasiurus frantzii* | SSC | Highly migratory and typically solitary, roosting primarily in the foliage of trees or shrubs. Roosts are usually in broad-leaved trees including cottonwoods, sycamores, alders, and maples. Day roosts are commonly in edge habitats adjacent to streams or open fields, in orchards, and sometimes in urban areas. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| San Francisco dusky-footed woodrat<br>*Neotoma fuscipes annectens* | SSC | Forest habitats of moderate canopy and moderate to dense understory. Also, in chaparral habitats. Constructs nests of shredded grass, leaves, and other material. May be limited by availability of nest-building materials. | **No potential to occur.** Suitable habitat is not found within the Study Area. Study Area is outside of known species range. | No further recommendations. |
| Big free-tailed bat<br>*Nyctinomops macrotis* | SSC | Occurs rarely in low-lying arid areas. Requires high cliffs or rocky outcrops for roosting sites. | **No potential to occur.** Suitable habitat is not found within the Study Area. | No further recommendations. |
| Suisun shrew<br>*Sorex ornatus sinuosus* | SSC | Tidal marshes of the northern shores of San Pablo and Suisun Bays. Require dense low-lying cover and driftweed and other litter above the mean hightide line for nesting and foraging. | **Unlikely potential to occur.** There is suitable habitat in portions of the Study Area. However, the species is not documented near or within the Study Area. | No further recommendations. |
| American badger<br>*Taxidea taxus* | SSC | Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Requires friable soils and open, uncultivated ground. Preys on burrowing rodents. | **No potential to occur.** Suitable habitat is not found within the Study Area. No documentation is present of the species within or adjacent to the Study Area and there is not sufficient range for the species. | No further recommendations. |
| San Joaquin kit fox<br>*Vulpes macrotis mutica* | FE, ST | Annual grasslands or grassy open stages with scattered shrubby vegetation. Need loose-textured sandy soils for burrowing, and suitable prey base. | **No potential to occur.** Suitable habitat is not found within the Study Area. Study Area is outside of known species range. | No further recommendations. |
| REPTILES & AMPHIBIANS | | | | |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| California tiger salamander<br>*Ambystoma californiense* | FE/FT, ST, RP | Populations in Santa Barbara and Sonoma counties currently listed as endangered; threatened in remainder of range. Inhabits grassland, oak woodland, ruderal, and seasonal pool habitats. Adults are fossorial and utilize mammal burrows and other subterranean refugia. Breeding occurs primarily in vernal pools and other seasonal water features. | **No potential.** Aquatic habitat in the vicinity of the Action Area does not provide sufficient hydroperiod for CTS breeding. The Action Area does not support suitable breeding habitat or upland aestivation habitat for this species. This species is known from historical occurrences within 3 miles of the Action Area, which are separated by dispersal barriers such as urban development and impervious surfaces. | No further recommendations. |
| California red-legged frog<br>*Rana draytonii* | FT, SSC, RP | Lowlands and foothills in or near permanent sources of deep water with dense, shrubby, or emergent riparian vegetation. Requires 11 to 20 weeks of permanent water for larval development. Associated with quiet perennial to intermittent ponds, stream pools and wetlands. Prefers shorelines with extensive vegetation. Disperses through upland habitats after rains. | **Moderate potential.** The Project Area lacks suitable breeding habitat, but supports suitable non-breeding aquatic, upland and dispersal habitat for this species. The closest documented occurrence lies approximately 2 miles to the south (CDFW 2026b). | See Section 7.1 for further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| northwestern pond turtle *Actinemys marmorata marmorata* | SSC, FPT, RP | A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying. | **Unlikely.** The Action Area does not support suitable aquatic breeding habitat or upland nesting habitat for this species. This species is known from historical and contemporary occurrences in tidal wetlands and sloughs within 3 miles of the Action Area. Given the lack of suitable habitat, NPT is unlikely to occur as a full-time resident of the Action Area, and would only occur as a rare individual dispersing overland between breeding sites. | No further recommendations. |
| Northern California legless lizard *Anniella pulchra* | SSC | Sandy or loose loamy soils under sparse vegetation. Soil moisture is essential. They prefer soils with a high moisture content. | **No Potential.** No suitable habitat for breeding or foraging is present within the Study Area. | No further recommendations. |
| California glossy snake *Arizona elegans occidentalis* | SSC | Ranges from Contra Costa to San Diego Counties along the western foothills of the Central Valley and from the coast to inland areas in Ventura to San Diego Counties. Found in a variety of habitat types including grasslands, fields, chaparral, and coastal sage scrub. | **No Potential.** No suitable habitat for breeding or foraging is present within the Study Area. | No further recommendations. |
| Alameda whipsnake *Masticophis lateralis euryxanthus* | FT, ST | Inhabits chaparral and foothill-hardwood habitats in the eastern Bay Area. Prefers south-facing slopes and ravines with rock outcroppings where shrubs form a vegetative mosaic with oak trees and grasses and small mammal burrows provide basking and refuge. | **No Potential.** No suitable habitat for breeding or foraging is present within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Coast horned lizard *Phrynosoma blainvilli* | SSC | Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes. Prefers friable, rocky, or shallow sandy soils for burial; open areas for sunning; bushes for cover; and an abundant supply of ants and other insects. | **No Potential.** No suitable habitat for breeding or foraging is present within the Study Area. Study Area are outside of the known range of the species (BIOS 2025). | No further recommendations. |
| Foothill yellow-legged frog *Rana boylii* pop.4 | FT, SSC | Found in or adjacent to rocky streams in a variety of habitats. Prefers partly-shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis. Feeds on both aquatic and terrestrial invertebrates. | **No Potential.** No suitable habitat for breeding or foraging is present within the Study Area. Study Area are outside of the known range of the species (BIOS 2025). | No further recommendations. |
| Western spadefoot *Spea hammondii* | FPT | Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands. Shallow temporary pools formed by winter rains are essential for breeding and egg-laying. | **No Potential.** Study Area has no suitable habitat for the species. Ponds created on site are not inundated for sufficient duration to provide breeding habitat. | No further recommendations. |
| Giant garter snake *Thamnophis gigas* | FT, ST | Prefers freshwater marsh and low gradient streams. Has adapted to drainage canals and irrigation ditches. This is the most aquatic of the garter snakes in California. | **No Potential.** No suitable habitat for breeding or foraging is present within the Study Area. | No further recommendations. |
| BIRDS | | | | |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| burrowing owl<br>*Athene cunicularia* | SSC, BCC, SCE | Year-round resident and winter visitor. Occurs in open, dry grasslands and scrub habitats with low-growing vegetation, perches and abundant mammal burrows. Preys upon insects and small vertebrates. Nests and roosts in old mammal burrows, most commonly those of ground squirrels. | **Moderate Potential.** The Study Area supports foraging and roosting habitat in grassland and open areas with small mammal burrows. The nearest documented occurrence lies 2-miles southwest of the nearest Study Area (CDFW 2026b**).** | See Section 7.1 for further recommendations. |
| Suisun song sparrow<br>*Melospiza melodia maxillaris* | SSC | Year-round resident of brackish-water marshes along Suisun Bay. Inhabits cattails, tules, bulrushes and other emergent vegetation, including pickleweed. Nests typically placed in shrubs. | **Moderate Potential.** The Study Area supports suitable freshwater emergent or salt marsh habitat. The closest documented occurrence lies approximately 2 miles northeast at Browns Island (CDFW 2026b). | See Section 7.1 for further recommendations. |
| California black rail<br>*Laterallus jamaicensis coturniculus* | ST, FP | Habitat consist of tidal salt marsh, dominated *by Typha latifola* and *Scirpus acutus*, indicating a strong freshwater influence. High marsh areas have scattered *Salicornia pacifica* with dominant cover of *Juncus mexicana*. | **High Potential.** Suitable tidal marsh habitat occurs in the vicinity of the Study Area (adjacent manholes CW1I00 and CW2I00). Thus, auditory disturbances generated by the Project may affect individuals in the vicinity. Multiple occurrences are documented in tidal marsh within 1 mile of the Study Area (CDFW 2026b) | See Section 7.1 for further recommendations. |
| California least tern<br>*Sternula antillarum browni* | FE, SE, FP | Foraging habitat consist of open coastal waters. Nests in sandy beaches and gravel bars. | **No Potential.** The Study Area does not support suitable Documented occurrences were previously located within 3 miles of Study Area. Historical monitoring sites listed observations in 2016. No suitable habitat is present within the Study Area to support foraging, nesting pairs, and colonies. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| California Ridgway's rail<br>*Rallus obsoletus obsoletus* | FE, SE, FP | Channels in tidal marsh along brackish water and saltwater marshes. There is tall vegetation for suitable breeding and foraging such as bulrush and phragmites along the channels. | **Moderate Potential.** Suitable tidal marsh habitat occurs in the vicinity of the Study Area (adjacent manholes CW1I00 and CW2I00). The closest documented occurrence lies approximately 1 mile to the west (CDFW 2026b). Thus, auditory disturbances generated by the Project may affect individuals in the vicinity. | See Section 7.1 for further recommendations. |
| Salt marsh common yellowthroat<br>*Geothlypis trichas sinuosa* | SSC, BCC | Tall tidal marsh vegetation provides nesting habitat and foraging. Willow thickets within or in the vicinity of freshwater marshes allow for better foraging. | **Moderate Potential.** The Study Area supports suitable tidal marsh foraging and nesting habitat for this species. The closest nearby occurrence was recorded about 2 miles northeast of the Study Area in Browns Island. | See Section 7.1 for further recommendations. |
| Tricolored blackbird<br>*Agelaius tricolor* | ST, SSC | Nearly endemic to California, where it is most numerous in the Central Valley and vicinity. Highly colonial, nesting in dense aggregations over or near freshwater in emergent growth or riparian thickets. Also uses flooded agricultural fields. Abundant insect prey near breeding areas essential. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |
| Golden eagle<br>*Aquila chrysaetos* | FP | Occurs year-round in rolling foothills, mountain areas, sage-juniper flats, and deserts. Cliff-walled canyons provide nesting habitat in most parts of range; also nests in large trees, usually within otherwise open areas. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Short-eared owl<br>*Asio flammeus* | | Occurs year-round, but primarily as a winter visitor; breeding very restricted in most of California. Found in open, treeless areas (e.g., marshes, grasslands) with elevated sites for foraging perches and dense herbaceous vegetation for roosting and nesting. Preys mostly on small mammals, particularly voles. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |
| Ferruginous hawk<br>*Buteo regalis* | | Winter visitor to open habitats, including grasslands, sagebrush flats, scrub, and low foothills surrounding valleys. Preys on mammals. Does not breed in California. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |
| Swainson's hawk<br>*Buteo swainsoni* | ST | Summer resident in California's Central Valley and limited portions of the southern California interior. Nests in tree groves and isolated trees in riparian and agricultural areas, including near buildings. Forages in grasslands and scrub habitats as well as agricultural fields, especially alfalfa. Preys on arthropods year-round as well as smaller vertebrates during the breeding season. | **Unlikely.** The Study Area is outside of the documented range of this Species. The Study Area does not support suitable nest trees or large tracts of open foraging habitat. May occur only as an occasional visitor to the Study Area. | No further recommendations. |
| Mountain plover<br>*Charadrius montanus* | SSC | Winter visitor to the Central Valley and some interior portions of southern California. Wintering habitats consist of areas with very short vegetation and/or bare ground, and flat topography; agricultural fields are used most frequently. Does not breed in California. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Western snowy plover<br>*Charadrius nivosus nivosus* | FT, SSC | Federal listing applies only to the Pacific coastal population. Year-round resident and winter visitor. Occurs on sandy beaches, salt pond levees, and the shores of large alkali lakes. Nests on the ground, requiring sandy, gravelly or friable soils. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |
| Yellow rail<br>*Coturnicops noveboracensis* | SSC | Summer resident in eastern Sierra Nevada in Mono County, breeding in shallow freshwater marshes and wet meadows with dense vegetation. Also, a rare winter visitor along the coast and other portions of the state. Extremely cryptic. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |
| Northern harrier<br>*Circus hudsonius* | SSC | Coastal salt and freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas. Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas. | **Moderate Potential.** The Study Area supports suitable open areas for foraging and nesting, predominantly within the access routes around manholes SA23T04 to SA27T04. | See Section 7.1 for further recommendations. |
| White-tailed kite<br>*Elanus leucurus* | FP | Year-round resident in coastal and valley lowlands with scattered trees and large shrubs, including grasslands, marshes and agricultural areas. Nests in trees, of which the type and setting are highly variable. Preys on small mammals and other vertebrates. | **Unlikely.** The Study Area does not support suitable nest trees for this species. May transit through the Study Area as an occasional forager. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| American peregrine falcon<br>*Falco peregrinus anatum* | FP | Year-round resident and winter visitor. Occurs in a wide variety of habitats, though often associated with coasts, bays, marshes and other bodies of water. Nests on protected cliffs and also on man-made structures including buildings and bridges. Preys on birds, especially waterbirds. Forages widely. | **No Potential.** There is no foraging or breeding habitat in the Study Area. | No further recommendations. |
| | | FISH | | |
| Longfin smelt<br>*Spirinchus thaleichthys* | FC, ST | The San Francisco Bay freshwater streams and estuary waters provide the suitable habitat for this fish species. | **No potential.** No critical habitat for the species or tidally influenced streams are located within the Study Area. | No further recommendations. |
| Delta smelt<br>*Hypomesus transpacificus* | FT | Lives in the Sacramento-San Joaquin estuary in areas where salt and freshwater systems meet. Occurs seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt; most often at salinities < 2 ppt. | **No potential.** No suitable habitat is present within the Study Area for the species. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Steelhead – Central Valley DSP<br>*Oncorhynchus mykiss irideus pop. 11* | FT | Occurs from the Russian River south to Soquel Creek and Pajaro River. Also, in San Francisco and San Pablo Bay Basins. Adults migrate upstream to spawn in cool, clear, well-oxygenated streams. Juveniles remain in fresh water for 1 or more years before migrating downstream to the ocean. | **No potential.** There are no tidally influenced streams located within the Study Area. | No further recommendations. |
| Green sturgeon – southern DSP<br>*Acipenser medirostris pop. 1* | FT | Anadromous; spawns in the Sacramento and Feather Rivers. Preferred spawning substrate is large cobble but ranges from clean sand to bedrock. Adults occur throughout the San Francisco Bay estuary and coastal marine waters. | **No potential.** There are no tidally influenced streams located within the Study Area. | No further recommendations. |
| Sacramento splittail<br>*Pogonichthys macrolepidotus* | SSC | Formerly endemic to the lakes and rivers of the Central Valley, but now confined to the Sacramento Delta, Suisun Bay and associated marshes. Occurs in slow-moving river sections and dead-end sloughs. Requires flooded vegetation for spawning and foraging for young. A freshwater species, but tolerant of moderate salinity (10-18 parts per thousand). | **No Potential.** There is no suitable habitat in the Study Area. | No further recommendations. |
| Sacramento perch<br>*Archoplites interruptus* | SSC | (Only within native range) Historically found in the sloughs, slow-moving rivers, and lakes of the Central Valley. Prefer warm water. Aquatic vegetation is essential for young. Tolerate wide range of physio-chemical water conditions. | **No Potential.** There is no suitable habitat in the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| **INVERTEBRATES** | | | | |
| Western bumble bee<br>*Bombus occidentalis* | FS | Once common and widespread, species has declined precipitously from central CA to southern B.C., perhaps from disease. | **No Potential.** No suitable habitat for nectaring plants is present within the Study Area. | No further recommendations. |
| Crotch's bumble bee<br>*Bombus crotchii* | SC | Obscure bumble inhabits coastal meadows and open grassy prairies. Nests may be located underground or above ground in old bird or rodent nests, rock piles, tree cavities, and tufts of grass. | **Unlikely Potential.** The Study Area does not contain habitat that supports pollinator species to a sufficient level that would support this species. As such, its potential to occur is unlikely. | No further recommendations. |
| Monarch butterfly<br>*Danaus Plexippus plexippus* pop.1 | FP | Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico. Roosts located in wind-protected tree groves (eucalyptus, Monterey pine, Monterey cypress), with nectar and water sources nearby. Milkweed needs to be present along the coast to provide the host plant for larval development. | **No Potential.** No suitable wintering or breeding habitat is present within the Study Area and there are no known overwintering sites within the Study Area. | No further recommendations. |
| Conservancy fairy shrimp<br>*Branchinecta conservation* | FE | Endemic to the grasslands of the northern two-thirds of the Central Valley; found in large, turbid pools. Inhabit astatic pools located in swales formed by old, braided alluvium; filled by winter/spring rains, last until June. | **No Potential.** No vernal pools are present within the Study Area. The inundation period of seasonal wetlands are not sufficient to allow for the species to develop. The critical habitat for the species is not within the Study Area. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Vernal pool fairy shrimp *Branchinecta lynchi* | FT | Endemic to the grasslands of the northern two-thirds of the Central Valley, central coast mountains, and south coast mountains; in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools. | **No Potential.** No vernal pools are present within the Study Area. The inundation period of seasonal wetlands are not sufficient to allow for the species to develop. The critical habitat for the species is not within the Study Area. | No further recommendations. |
| Valley elderberry longhorn beetle *Desmocerus californiacus dimorphus* | FT | Occurs only in the central valley of California, in association with blue elderberry (Sambucus spp.). Prefers to lay eggs in elderberrry 2 to 8 inches in diameter; some preference shown for "stressed" elderberry. | **No Potential.** The Study Area are not within the known current range of the species. There is also no foraging or breeding habitat in the Study Area. | No further recommendations. |
| Lange's metalmark butterfly *Apodemia mormo langei* | FE | Endemic to Antioch Dunes, Contra Costa County, inhabiting stabilized dunes along the San Joaquin River. Primary host plant is Eriogonum nudum var. auriculatum; feeds on nectar of other wildflowers, as well as host plant. | **No Potential.** The Study Area are not within the known current range of the species. There are no dunes or the foraging plants for the species in the Study Area. | No further recommendations. |
| Delta green ground beetle *Elaphrus viridis* | FT | Restricted to the margins of vernal pools in the grassland area between Jepson Prairie and Travis Air Force Base. Prefers the sandy mud substrate where it slopes gently into the water, with low-growing vegetation, 25 to100% cover. | **No Potential.** The Study Area are not within the known current range of the species. | No further recommendations. |

| SCIENTIFIC NAME | STATUS | HABITAT | POTENTIAL FOR OCCURRENCE | RECOMMENDATIONS |
|---|---|---|---|---|
| Vernal tadpole fairy shrimp<br>*Lepidurus packardi* | FE | Inhabits vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass bottomed swales of unplowed grasslands. Some pools are mud-bottomed and highly turbid. | **No Potential.** No vernal pools are present within the Study Area. The inundation period of seasonal wetlands are not sufficient to allow for the species to develop. The critical habitat for the species is not within the Study Area. | No further recommendations. |
| Callippe silverspot butterfly<br>*Speyeria callippe callippe* | FE | Restricted range in California: Santa Clara north to San Mateo County; east to north Los Angeles County and Kern County. Larval host plant is Viola quercetorum. Adults utilize openings in redwood and coniferous forests, oak woodlands, and chaparral habitats. | **No Potential.** The Study Area are not within the known current range of the species. There is also no foraging or breeding habitat in the Study Area. | No further recommendations. |

| Rank 4: | Plants of limited distribution – a watch list |

**Potential for Occurrence:**

**No Potential.** Habitat on and adjacent to the site is clearly unsuitable for the species requirements (cover, substrate, elevation, hydrology, plant

community, site history, disturbance regime).
**Unlikely.** Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.
**Moderate Potential**. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
**High Potential.** All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
**Present.** Species was observed on the site or has been recorded (i.e. CNDDB, other reports) on the site recently.

# PHASE I ENVIRONMENTAL SITE ASSESSMENT

## Delta Diablo Manhole Project
## Fairfield, California

## 1. INTRODUCTION

This Phase I Environmental Site Assessment (ESA) was performed by Baseline Environmental Consulting (Baseline) on behalf of Delta Diablo (the District), in support of the environmental review of the Manhole, Gravity Interceptor, and Easement Road Improvements Phase 2 Project (Project). The Project Site includes rehabilitating approximately 51 manholes along the Shore Acres Interceptor and Willow Pass Interceptor (WPI), and rehabilitating 9,025 linear feet of sewer lines and pipes along the WPI, as well as constructing access roads to access five of the District's Manholes along the WPI (**Figure 1**).

The purpose of this Phase I ESA was to identify environmental conditions that could adversely affect the chemical quality of soil or groundwater at the Site, including Recognized Environmental Conditions (RECs), as defined by ASTM E1527-21, and other environmental concerns (e.g., undocumented fill, petroleum pipelines, and naturally-occurring asbestos). In accordance with ASTM E1527-21 and Baseline's previous experience working on similar projects, these environmental conditions were evaluated based on review of the physical setting, historical land uses, environmental records, and previous environmental investigations, as well as a Site reconnaissance. An overview of the key terminology related to ASTM E1527-21 that was used or considered during the preparation of this Phase I ESA is provided in **Appendix A**.

## 2. PHYSICAL SETTING

The Site is located in northern Contra Costa County (County) with some portions of the Site within the City of Pittsburg and some portions of the Site within the unincorporated communities of Bay Point and Shores Acre (**Figure 1**). The Site includes undeveloped property, drainage channels, retention ponds, railroad tracks, public roadways (e.g., Port Chicago Highway, Mc Avoy Road, and Willow Pass Road), access roads, and District pump stations.

Land uses surrounding the Site include train tracks, undeveloped land, drainage channels, public roadways, residential properties, a boat harbor, and commercial and industrial properties.

The Site is relatively flat and the regional topography generally slopes down towards Suisun Bay to the north. The average elevation of the Site is approximately 10 feet relative to the North American Vertical Datum of 1998 (NAVD88).[1]

The depth to groundwater near the northwest corner of the Site was reported to be approximately 3 to 6 feet below ground surface (bgs), with a groundwater flow direction towards the northeast.[2] The depth to groundwater near the eastern area of the Site was reported to be approximately 9 to 10 feet bgs, with a groundwater flow direction towards the north.[3] Based on this information, the groundwater flow direction in the area of the Site is presumed to follow the topography in the area of the Site and generally flow towards the north.

There are multiple seasonal creeks/drainage channels that cross through the Site which generally flow north into Suisun Bay. There are also tidal marshes, non-tidal wetlands, and seasonal wetlands within or adjacent to the Site.

# 3. HISTORICAL LAND USES

Due to the size of the Site, it is delineated into four sections for descriptive purposes; the western area, west-central area, east-central area, and eastern area as shown in **Figure 1**.

Historical land uses at the Site and surrounding properties were evaluated to assess potential hazardous materials uses that have potentially affected soil or groundwater quality at the Site. Historical land uses at and adjacent to the Site were determined through review of readily available historical records including topographic maps and aerial photographs. Sanborn Fire Insurance Maps, which are a common data source for reviewing historical land uses, were not available for the Site. All the historical records reviewed for this Phase I ESA are included in **Appendix B**. Historical Land Uses of environmental concern are shown in **Figures 2A through 2D**.

## 3.1 The Site

Historical land uses for the Site were identified based on review of aerial photographs and topographic maps (**Appendix B**), as summarized in the table below.

| Year | Land Use | Source |
|---|---|---|
| 1907-1918 | The Site appeared to be undeveloped land with the exception that railroad tracks were mapped through much of the western and west-central areas of the Site, a short segment of the east-central area of the Site, and the eastern-most area of the Site. Willow Creek crossed through the eastern area of the Site, and various seasonal creeks/drainage channels crossed through other areas of the Site. | TM |

[3] ERM-West, Inc., 2022. 2021 Biennial Monitoring Report, Pittsburg, California. January 3. .

| Year | Land Use | Source |
|---|---|---|
| 1937-1939 | Roadways were present in the current locations of Port Chicago Highway, Mc Avoy Road, and Willow Pass Road in the western, west-central, and eastern areas of the Site, respectively. Darkened ground (possible soil staining) was present within the west end of the Site to the south of the railroad tracks. A small structure was present on the west side of Mc Avoy Road within the west-central area of the Site. Agricultural land that appears to be row crops/dry farming was present in some of the western, west-central, and east-central areas of the Site. A drainage channel with darkened ground was present crossing through the west-central area of the Site which originated at an industrial facility (later identified as an oil refinery and chemical manufacturing facility) to the south of the Site and discharged to a large area of darkened ground north of the Site. | AP |
| 1952 | An area of darkened ground was present in the east-central area of the Site to the west of the abandoned railroad spur. | AP |
| 1963 | The area of darkened ground in the western area of the Site appears to have been disturbed and expanded. The drainage channel with darkened ground was re-routed through the west-central area of the Site (or along its northern boundary) and connected to an area of darkened ground in the west-central area of the Site and large ponds to the north of the Site which were darker than other surface waters (e.g., the water at Mc Avoy Boat Harbor). The section of Willow Creek that crossed through the eastern area of the Site was filled and a new drainage channel was present within the easternmost area of the Site. | AP |
| 1968 | The area of darkened ground in the western area of the Site appears to have been disturbed and had an access road leading to the area from Port Chicago Highway. Residential development along Port Chicago Highway extended into the western area of the Site. | AP |
| 1972 | Large retention ponds and a drainage channel were constructed in the area surrounding and intersecting the east-central area of the Site. | AP |
| 1979 | Darkened ground was present within the retention ponds in the east-central area of the Site, and disturbed ground (which may be indicative of fill placement) was present within the Site to the southwest of the retention ponds. This area of disturbed soil was later identified as a landfill area associated with the Pittsburg Power Plant. A possible structure was present in the easternmost area of the Site. An area of darkened ground was present within the eastern area of the Site. | AP |
| 1984 | The northwest corner of the Site was developed as part of a facility with an aboveground storage tank (AST) and small structures later identified as the District's Shore Acres Pump Station. Facilities of the Mc Avoy Boat Harbor (including a parking lot, possible small structure, and what may be a storage area with undiscernible features) were present in the west-central area of the Site. Facilities with ASTs and small structures later identified as the District's Broadway Pump Station and Pittsburg Pump Station were present in the west-central and eastern-most areas of the Site, respectively. | AP |
| 1993-1998 | A boat storage area of the Mc Avoy Boat Harbor was present in the west-central area of the Site. An area of darkened ground surrounding a drainage outlet was present in the east-central area of the Site. | AP |
| 2005-2022 | No significant changes to the Site were observed. | AP |

Notes: AP = aerial photograph; TM = topographic map

Based on the review of historical land use records, the presence of railroad tracks on the Site from as early as 1907 could have resulted in soil contamination. The ballast (i.e., crushed stone and gravel) placed beneath railroad tracks are of unknown origin and could potentially contain

elevated levels of metals (as slag was sometimes used as ballast) or naturally occurring asbestos that could affect underlying and surrounding soil quality. Wooden railroad ties were historically treated with creosote, which contains polynuclear aromatic hydrocarbons (PAHs) that can leach into underlying and surrounding soil. Railroad corridors were often treated with herbicides for weed control, which could include arsenic and chlorinated organic compounds. Combustion emissions, wearing of metals from train components, leakage of petroleum hydrocarbons, and historical application of waste oil (which could contain metals and polychlorinated biphenyls [PCBs]) for dust control are also potential sources of soil contamination along railroad tracks. All of these hazardous materials can persist in the environment. These contaminants are not very mobile in soil; therefore, if present these contaminants would be expected to remain in shallow soil near the railroad tracks.

Former agricultural land uses at the Site and adjacent areas may have resulted in contamination of shallow soil with agricultural contaminants including arsenic and organochlorine pesticides (OCPs).

Darkened ground was observed in various areas of the Site throughout the Site's history (**Figures 2A through 2D**). These areas of darkened ground could be associated with spills/releases from industrial activities or dumping of hazardous waste. Darkened ground could also be associated with placement of fill material, burned vegetation, wet soil, or ponding of water.

The disturbed ground surface seen in the 1979 aerial photograph in the east-central area of the Site (**Figure 2C**) suggests that fill material of unknown quality may have been placed in that area. Fill material of an unknown quality could contain various contaminants.

The purpose of the retention ponds in the east-central area of the Site is unknown. The retention ponds could potentially contain contamination due to the industrial land uses of the surrounding area.

A former boat storage area of the Mc Avoy Boat Harbor in the west-central area of the Site (**Figure 2B**) could be a source of contamination as boat repair/maintenance activities may have occurred in this area. Contaminants associated with boat repair/maintenance can include metals (e.g., lead and tributyltin from paint), petroleum hydrocarbons, and volatile organic compounds (VOCs) associated with fuels and solvents.

## 3.2 Surrounding Properties

Historical land uses for properties surrounding the Site were identified based on review of topographic maps and aerial photographs (**Appendix B**) as summarized in the table below.

| Year | Land Use | Source |
|---|---|---|
| 1907-1918 | The areas surrounding the Site appeared to be largely undeveloped land with the exception that railroads were mapped adjacent to/near much of the Site. A few buildings were mapped along the railroad tracks near the west-central area of the Site (around Mc Avoy Road). | TM |

| Year | Land Use | Source |
|---|---|---|
| 1937-39 | Agricultural land (what appears to be row crops/dry farming) was present near much of the Site. Darkened ground (possible soil staining) was present adjacent to the south of the west end of the Site. An industrial facility with ASTs (later identified as an oil refinery and chemical manufacturing facility) was present to the south of the west-central area of the Site. An area of darkened ground (possible stained soil) was present in the northern portion of the oil refinery. Drainage channels from the oil refinery connect to areas of darkened ground within and near the Site. Residential properties were present to the southeast of the east end of the Site. | AP |
| 1952-1953 | A filtration plant was mapped adjacent to the northwest of the west end of the Site. Residential properties were being developed to the south of the western and west-central areas of the Site. Mc Avoy Boat Harbor was present to the north of the west-central area of the Site. An area of darkened ground was present adjacent to the east-central area of the Site. A junkyard/auto wrecking facility was present to the southwest of the east-central area of the Site. | AP & TM |
| 1963 | Development of residential properties continued to the south of the western and west-central areas of the Site. Two large retention ponds which appear to be connected to the drainage channel from the oil refinery were present to the north of the west-central portion of the Site. These retention ponds were later identified as the Shell Pond Area (western pond) and Carbon Black Area (eastern pond) associated with the Shell oil refinery and chemical facility south of the Site. Several commercial/industrial facilities were present to the south of the eastern area of the Site. A drainage channel with darkened ground was present to the south of the eastern portion of the Site which appears to have drained towards the Site from an industrial facility. | AP |
| 1968 | One of the retention ponds (Carbon Black Area) to the north of the west-central portion of the Site was filled with a dark material (presumed to be carbon black). ASTs were present at an industrial facility to the south of the east-central area of the Site. An area of darkened ground was present near the ASTs and the Site. Areas of darkened ground were present to the south of the eastern area of the Site. | AP |
| 1972 | An industrial facility with railroad spurs was present to the south of the west-central area of the Site near Mc Avoy Road. Buildings and ASTs of the oil refinery facility were removed. An area of darkened ground was present in the eastern portion of the former oil refinery. Areas surrounding the east-central area of the Site were developed into retention ponds. A large AST was present adjacent to the north of the eastern area of the Site. | AP |
| 1979 | Areas of disturbed ground (later identified as a landfill area associated with the Pittsburg Power Plant) and darkened ground were present adjacent to the east-central area of the Site. Additional large ASTs were present adjacent to the north of the eastern area of the Site. An area of darkened ground was present near the east end of the Site. | AP |
| 1984 | The filtration plant adjacent to the west end of the Site was replaced by a new facility with an AST. An AST was present adjacent to the east end of the Site. | AP |
| 1993 | An area of darkened ground was present adjacent to the north of the east-central area of the Site. | AP |
| 1998 | An area of darkened ground was present to the south of the eastern area of the Site. | AP |
| 2005 | A parking lot was present in the area of the former oil refinery. An additional AST was present at the industrial facility to the south of the east-central area of the Site. | AP |
| 2010 | Some of the commercial properties south of the eastern area of the Site were replaced with a facility with large-scale electrical infrastructure. | AP |

| Year | Land Use | Source |
|---|---|---|
| 2014 | A lined holding area (later identified as the Material Handling Area for remediation of the Shell Pond Area and Carbon Black Area) which appeared to contain soil and standing water was present to the north of the western central area. | AP |
| 2018 | The lined holding area described above was removed or covered with soil. | AP |
| 2022 | A facility with large-scale electrical infrastructure was present south of the eastern area of the Site along Willow Pass Road. | AP |

Notes: AP = aerial photograph; TM = topographic map

Based on review of historical land use records, the long history of industrial land uses in areas surrounding the Site could have resulted in soil and groundwater contamination at the Site. Areas of darkened ground observed near the Site (**Figures 2A through 2D**) may be indicative of stained soil from hazardous materials releases, and drainage channels and retention ponds associated with industrial facilities may have conveyed contaminants into soil and groundwater at the Site.

# 4. SITE RECONNAISSANCE

A reconnaissance of the Site and adjacent properties was conducted to evaluate current land uses associated with hazardous materials that could have potentially resulted in a hazards materials release or pose an obvious threat of a release in the future. Evidence of a hazardous materials releases could include, but is not limited to, observations of surface staining, stressed vegetation, and/or odors. The reconnaissance was conducted by Mr. Bill Scott, a Senior Field Geologist from Baseline, on 16 October and 7 November 2025. Photographs from the Site reconnaissance are included in **Appendix C**.

The current land uses observed at the Site included undeveloped property, railroad tracks, access roads, public roadways, drainage channels, retention ponds, and District pump stations. The current land uses observed surrounding the Site included railroad tracks, undeveloped land, drainage channels, public roadways, residential properties, a boat harbor, and commercial and industrial properties. Land uses and observations of environmental concern are discussed in further detail below and presented in **Figures 2A through 2D**.

## 4.1 Western Area of Site

Land uses and observations of environmental concern in the western area of the Site are presented in **Figure 2A.** The northwest corner of the Site is occupied by the Shore Acres Pump Station. A diesel AST was observed on the east side of the pump station building. A large AST which is assumed to be related to the storage/treatment of wastewater was also observed at the pump station. A significant amount of illegally dumped refuse was observed along the access road to the pump station. The refuse was observed to include car parts, used oil containers, paint buckets, and refrigerators. Leakage of oil was observed from one container. Multiple railroad tracks were observed in the westernmost portion of the Site. A petroleum pipeline marker was observed near a District manhole on the south side of Port Chicago Highway.

## 4.2 West-Central Area of Site

Land uses and observations of environmental concern in the west-central area of the Site are presented in **Figure 2B**. A truck repair facility was observed on the north side of Port Chicago Highway to the west of Mc Avoy Road. Darkened soil was observed in areas surrounding a drainage channel to the west of the Broadway Pump Station. A diesel AST was observed on the west side of the pump station building. A large AST which is assumed to be related to the storage/treatment of wastewater was also observed at the pump station.

## 4.3 East-Central Area of Site

Land uses and observations of environmental concern in the east-central area of the Site are presented in **Figure 2C**. An abandoned railroad spur was observed crossing through the Site adjacent to the east of the access road that connects to Poinsettia Avenue. Shallow soil near a District manhole by a retention pond was observed to have an abnormal consistency (very light weight) and orange color. An industrial facility with several ASTs which is associated with the Pittsburg Power Plant was observed to the south of the Site and retention ponds.

## 4.4 Eastern Area of Site

Land uses and observations of environmental concern in the eastern area of the Site are presented in **Figure 2D**. An auto wrecking facility was observed adjacent to the east and south of the Site. Areas of former ASTs associated with the Pittsburg Power Plant were observed adjacent to the west and north of the Site. An access road which was historically a railroad spur was observed on the Site adjacent to the south of the former ASTs area of the Pittsburg Power Plant. The Pittsburg Pump Station was observed within the easternmost portion of the Site. A diesel AST was observed on the west side of the pump station building. A large AST which is assumed to be related to the storage/treatment of wastewater was also observed at the pump station. Heavy staining was observed around a ferrous chloride AST at the Pittsburg Pump Station. The staining was observed to be contained within a concrete secondary containment area surrounding the AST.

## 4.5 Summary of Environmental Concerns from Site Reconnaissance

Environmental concerns identified during the Site reconnaissance are listed below:

- Based on the amount and nature of illegally dumped refuse observed along the access road in the western area of the Site (**Figure 2A**), there is the potential that illegal dumping activities in this area have resulted in soil and groundwater contamination.

- The presence of existing and former railroad tracks on the Site (**Figures 2A through 2D**) is an environmental concern as it is common for soil along railroad tracks to be contaminated with heavy metals, PAHs, PCBs, herbicides, and petroleum hydrocarbons.

- There is the potential that releases of hazardous materials have occurred from petroleum pipelines within and near the Site (**Figures 2A through 2D**) which could affect soil and groundwater quality at the Site.

- The truck repair facility on the north side of Port Chicago Highway and west of Mc Avoy Road in the west-central area of the Site (**Figure 2B**) likely handles significant quantities of hazardous materials. If releases of hazardous materials occurred at this property, they could impact the environmental condition of the Site.

- The presence of darkened soil near a drainage channel to the west of the Broadway Pump Station in the west-central area of the Site (**Figure 2B**) suggests that soil and groundwater in this area may be contaminated due to the discharge of contaminants into the drainage channel. This drainage channel was historically connected to drainage channels at the former oil refinery and chemical manufacturing facility located south of this portion of the Site.

- The abnormal consistency and orange color of shallow soil near a District manhole and the retention ponds in the east-central area of the Site (**Figure 2C**) is an environmental concern, as the soil conditions could be related to hazardous materials contamination.

- The Pittsburg Power Plant (**Figure 2D**) likely handles (and historically handled) significant quantities of hazardous materials, and if releases of hazardous materials occurred in areas of the Pittsburg Power Plant near the Site, they could impact the environmental condition of the Site.

- The auto wrecking facility adjacent to the Site (**Figure 2D**) likely handles significant quantities of hazardous materials. If releases of hazardous materials occurred at this property, they could impact the environmental condition of the Site.

- The heavy staining observed around a ferrous chloride AST at the Pittsburg Pump Station (**Figure 2D**) suggests that a release of ferrous chloride occurred from the AST. It appears that the release was contained within the secondary containment area; however, there is the potential that ferrous chloride could have been released into the subsurface from cracks/joints/utility penetrations in the secondary containment area.

## 5. ENVIRONMENTAL RECORDS

Baseline retained EDR, a third-party vendor specializing in retrieval of environmental records, to conduct a search of environmental records from federal, state, and local databases pertaining to past and present hazardous materials use and/or releases at the Site and at properties within up to one mile of the Site based on the minimum search distances specified in the ASTM Standard (**Appendix D**). In addition to the ASTM requirements, EDR identified properties within one-eighth mile of the Site on that are listed on their Historic Auto and Historic Cleaners databases, which include potential gas stations/auto repair facilities and dry cleaners EDR has identified based on historical business directories. Information obtained from EDR was

supplemented with information obtained from the State Water Resources Control Board's (State Water Board) GeoTracker database[4] and the Department of Toxic Substances Control's (DTSC) EnviroStor database.[5]

In accordance with ASTM E1527-21, EDR also identified records related to hazardous materials storage or hazardous waste generation/disposal at properties located on or adjacent to the Site. If a hazardous materials release has not been reported at such properties, then these properties would only pose a threat of adversely affecting the Site if there is evidence of a potentially undocumented release or an imminent threat of a release. The Site reconnaissance (see Section 4) did not identify evidence of potentially undocumented hazardous materials releases or future threats of hazardous materials releases. Therefore, only records related to hazardous materials storage or hazardous waste generation/disposal on the Site and at adjacent properties that have documented hazardous materials releases are discussed below.

To evaluate properties of potential environmental concern that could adversely affect the chemical quality of soil or groundwater at the Site, the following factors were considered: distance from the Site, direction of groundwater flow, and type and magnitude of release. For this assessment only records of hazardous materials use and/or releases on the Site, adjacent to the Site, or in the inferred upgradient direction (south) from the Site were evaluated. Approximately 90 percent of petroleum hydrocarbon plumes in California have been estimated not to extend more than 250 feet from the source area;[6] therefore, to be conservative, only those petroleum hydrocarbon releases within one-eighth mile (660 feet) of the inferred upgradient direction from the Site are discussed below.

## 5.1 Environmental Records for the Site

### *5.1.1 Military Ocean Terminal Concord (MOTCO) and Concord Naval Weapons Station (CNWS)*

The west end of the Site (including the Shore Acres Pumps Station, pump station access road, railroad tracks, and areas between and south of the railroad tracks) is located within a military facility (**Figure 2A**). This military facility is identified as the Military Ocean Terminal Concord (MOTCO) on the Department of Defense (DOD) database, and is a large sub-area of the Concord Naval Weapons Station (CNWS) which is listed on several databases including the National Priority List (NPL, also known as Superfund), Per- and Polyfluoroalkyl Substances (PFAS) NPL, Superfund Enterprise Management System (SEMS), and United States (US) Institutional Controls. The DOD listing for MOTCO indicates that the military facility is active, with an on-going operational/support mission(s). The information presented in the database listings for the

[4] GeoTracker is the State Water Board's environmental database of hazardous materials release sites and permitted hazardous materials facilities. Access to GeoTracker is available on-line at: http://geotracker.waterboards.ca.gov/

[5] EnviroStor is the DTSC's environmental database of hazardous materials release sites and permitted hazardous materials facilities. Access to EnviroStor is available on-line at: https://www.envirostor.dtsc.ca.gov/public/

[6] Lawrence Livermore National Laboratory, 1995. *Recommendations to Improve the Cleanup process for California's Leaking Underground Fuel Tanks (LUFTs)*. October 16.

CNWS is not tied to specific locations within this very large military facility; therefore, it is not clear whether the information in the database listings could be relevant to the Site.

A Military Cleanup Site is mapped on GeoTracker near the west end of the Site which is identified as MOTCO Site 6. According to information available on GeoTracker, Site 6 is part of the Litigation Area which consists primarily of tidal marshes, with surrounding upland grassland and riparian areas. The Navy completed a remedial investigation and feasibility study of the Litigation Area and identified seven sites (including Site 6) that required cleanup to address metals contamination in soil. The Navy removed contaminated soils from the Litigation Area between 1992 and 1995, and in 1996 a long-term monitoring plan was implemented.[7]

According to a 2025 Technical Memorandum (Tech Memo)[8] for the Litigation Area which is available on GeoTracker, the western portion of the Site intersects remedial action subsite (RASS) 4 of the Litigation Area, as shown in **Figure 2A**. RASS 4 consists of 13 acres of upland and non-tidal wetland areas and was contaminated by non-Army property owners. The Tech Memo indicates that Site 6 (Coke Pile Site) is in RASS 4; however, no further information was provided regarding the location of Site 6 or contaminants that were identified in RASS 4. According to a figure presented in the Tech Memo, remediation of soil occurred in RASS 4 near the Site. It is presumed that this remediation was related to Site 6 (Coke Pile Site). The Tech Memo indicated that soil sampling was performed in RASS 4 as part of a 2004 data gap investigation, and no further action was recommended for RASS 4 based on the results. The Tech Memo indicates that the details of the 2004 data gap investigation were presented in a 2005 report; however, the 2005 report does not appear to be available on GeoTracker. Based on the information presented above, there is the potential for soil and groundwater contamination to be present in and near the RASS 4 area that is intersected by the Site.

Because this property is a military facility under the oversight of the San Francisco Bay Regional Water Quality Control Board (Regional Water Board), review and approval of planned construction activities on this property may be required by the military and Regional Water Board.

### *5.1.2 Delta Diablo Sanitation District/Shore Acres Pump Station*

The Delta Diablo Sanitation District/Shore Acres Pump Station is located partially within the northwest corner of the Site (**Figure 2A**), and is listed on the Facility Index System (FINDS) database due to being a source of air pollutant emissions. Additionally, it is listed in the EPA's PFAS Enforcement and Compliance History Online (ECHO) database, which is a listing of facilities that have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS. The PFAS ECHO listing indicates that this facility is in

[7] State Water Board, 2026. GeoTracker Web Page for Site 6, Port Chicago Hwy, Concord, CA, Available at: https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000007764, Accessed January 7, 2026.

[8] Ahtna Environmental, Inc., 2025. Litigation Area Year 18 Revised Post-Remediation Monitoring Program Technical Memorandum Military Ocean Terminal Concord, Concord, California. July.

the Waste Management industry. Baseline notes that being listed on the PFAS ECHO database does not indicate that a release of PFAS has occurred at this facility.

This facility is also listed on the Leaking Underground Storage Tank (LUST), California Hazardous Waste and Substances Site List (Cortese), Historic Cortese, and California Environmental Reporting System (CERS) databases due to a LUST case at this facility. According to information on these listings, a release of diesel from a UST was reported in 1997, and the LUST case was closed by the San Francisco Bay Regional Water Quality Control Board (Regional Water Board) in 1999. This facility is also listed on GeoTracker as a closed LUST case, although it was mapped incorrectly on GeoTracker to be south of the Site on Driftwood Lane. According to the Closure Letter,[9] a 500-gallon diesel UST was removed from the north side of the pump station building (just north of the Site) in 1997, and diesel contamination was identified in a groundwater sample from the UST pit. In 1998, soil and groundwater samples were collected from 4 borings surrounding the former UST location. The laboratory analytical results identified no detectable contaminants in the soil samples, and relatively low levels of contaminants in groundwater. The depth to groundwater was reported to be approximately 3 to 6 feet bgs, with a groundwater flow direction towards the northeast. Based on the location of the former UST being north of the Site, the groundwater flow direction being away from the Site, and the limited contamination identified by the 1998 investigation, this LUST case would not be expected to impact the environmental condition of the Site.

### *5.1.3 Broadway Pump Station*

The Broadway Pump Station is located at 263 North Broadway Avenue in the west-central portion of the Site (**Figure 2B**) and is listed on various databases including the California Hazardous Material Incident Report System (CHMIRS), Contra Costa Sites, and CERS databases. According to the CHMIRS listing, this facility was the location of a reported release of an unknown quantity of sewage with possible impacts to storm drains after a severe weather event on December 31, 2022. The release was said to be contained but largely unrecoverable at the time of the report. This facility is listed on the Contra Costa Sites and CERS databases based on the storage of chemicals. Violations were noted on the CERS listing including, but not limited to, the failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years. No violations that were indicative of a hazardous materials release were noted. The Contra Costa Sites listing indicates that this facility contained at least one UST; however, no further information regarding USTs was available on the listing. According to the District, the UST at this facility was removed when the diesel AST was installed; however, the District could not provide documentation for the UST removal. It is presumed that a release from the UST was not identified during the UST removal considering that a LUST case was not opened for this facility. Based on the information discussed above, this facility would not be expected to impact the environmental condition of the Site.

[9] Regional Water Board, 1999. Case Closure – Underground Storage Tank, Shore Acres Pump Sation, Pittsburg, California. January 26.

### *5.1.4 Pittsburg Power Plant*

The east-central and eastern areas of the Site (**Figures 2C and 2D**) intersect the Pittsburg Power Plant which is listed in several databases including GeoTracker, EnviroStor, SEMS, Federal Resource Conservation and Recovery Act (RCRA) Small-Quantity Generators, RCRA Transportation, Storage, and Disposal, Facility (TSDF) Corrective Actions Program under RCRA (CORRACTS), Electronic Manifest (E MANIFEST), US Institutional Controls, 2020 Corrective Actions, CERS, CERS HAZ WASTE, Historic UST, AST, CERS TANKS, CHMIRS, Inventory of Carbon and Energy (ICE), Healthy Watersheds Program (HWP), Facility and Manifest Data (HAZNET), and the California Integrated Water Quality System (CIWQS).

A 1998 Phase II ESA[10] which is available on EnviroStor identified significant impacts to soil and groundwater within and adjacent to the eastern area of the Site. Groundwater samples collected from this area contained elevated concentration of metals, VOCs, and total petroleum hydrocarbon (TPH) compounds. Soil samples from the area also contained elevated concentrations of metals and TPH compounds. Baseline did not identify records of remediation activities in this area; therefore, it is assumed that contaminated soil and groundwater still exist within the eastern area of the Site. Approximate areas of previously identified soil and groundwater contamination within and adjacent to the eastern area of the Site (as mapped in the 1998 Phase II ESA) are presented in **Figure 2D**.

The 1998 Phase II ESA also indicated that an area adjacent to and intersected by the east-central area of the Site was a landfill area. This landfill area corresponds with the area of disturbed ground observed in the 1979 aerial photograph as discussed in Section 3 above (**Figure 2C**). Soil samples were collected from several borings in the landfill area, with samples generally collected from near the ground surface and from approximately 10 to 15 feet bgs. Composite soil samples were also collected from a large stockpile containing construction debris in the landfill area. The analytical results for metals from the landfill area boring samples and analytical results for metals, PAHs, and TPH from the stockpile samples were presented in the 1998 Phase II ESA; however, analytical results were not presented for individual samples for other compounds that were reportedly analyzed in the landfill area samples, as only maximum and average concentrations across the entire property were presented for other compounds. Elevated concentrations of contaminants were not identified in the landfill area results that were presented in the 1998 Phase II ESA, and remediation of the landfill area was not recommended. Based on the available information, it appears that significant contamination was not identified in the landfill area; however, Baseline cannot rule out the potential for contamination to be present in the areas of the Site within and adjacent to the landfill area based on the limited information available regarding soil and groundwater quality in this area.

Elevated concentrations of arsenic have been identified in soil along the abandoned railroad spur which intersects a small segment of east-central area of the Site (**Figure 2C**), and along the former railroad spur within the eastern area of the Site (**Figure 2D**). Arsenic concentrations above the site-specific background level were generally detected within the soil from 0 to 2 feet

[10] Fluor Daniel GTI, 1998. Final Phase II Environmental Site Assessment Report for Pacific Gas and Electric Company's Pittsburg Power Plant. 696 West 10th Street Pittsburg, California. June 17.

bgs and within approximately 40 feet of the railroad centerline, and not directly adjacent to wetlands.[11]

A Declaration of Covenants, Conditions, and Environmental Restrictions[12] which is available on EnviroStor indicates that much of the property may be subject to land-use restrictions prohibiting residential or other sensitive uses. These restrictions do not appear to affect the Project; however, because this property is under DTSC oversight, DTSC review and approval of planned construction activities on this property may be required.

### *5.1.5 Pittsburg Pumping Station*

The Pittsburg Pump Station is located at 7th Street and Montezuma Street and is partially within the east end of the Site (**Figure 2D**). This facility is listed on the FINDS database due to being a source of air emissions. This facility is listed on the Historic UST, and Statewide Environmental Evaluation and Planning System (SWEEPS) UST databases for the operation of a UST. The facility is also listed on the PFAS ECHO database. The PFAS ECHO listing indicates that this facility is in the Waste Management industry. Baseline notes that being listed on the PFAS ECHO database does not indicate that a release of PFAS has occurred at this facility.

According to the Historic UST and SWEEPS UST listings, a 550-gallon diesel UST was installed at the facility in 1979 and was active in 1991. According to the District, the UST at this facility was removed when the diesel AST was installed; however, the District could not provide documentation for the UST removal. It is presumed that a release from the UST was not identified during the UST removal considering that a LUST case was not opened for this facility. Based on the information discussed above, this facility would not be expected to impact the environmental condition of the Site.

## 5.2 Environmental Records for Off-Site Properties

Properties located adjacent to or immediately upgradient from the Site which are listed on databases related to hazardous materials releases are discussed below and identified in **Figures 2A through 2D**.

### *5.2.1 100 Trojan Road, PG&E Harris Yacht Harbor*

The property at 100 Trojan Road is located adjacent to the north of the west-central area of the Site (**Figure 2B**) and is identified on various databases as PG&E Harris Yacht Harbor, Harris Yacht Harbor, Inc., Shell Pond, Herrenkohl Robert, McAvoy Yacht Harbor, and Harris Yacht HRBR. The property is listed on the Cleanup Program Site – Spills, Leaks, Investigation, and Cleanup (CPS-SLIC) r, EnviroStor, Hazardous Waste Tracking System (HWTS), Contra Costa Sites, CERS, FINDS, RCRA Large-Quantity Generators, HAZNET, ECHO, CERS HAZ WASTE, and RCRA Non-Generator databases.

[11] ERM, 2025. Arsenic Leachability and ISS Treatability Study Workplan, Abandoned Railroad Corridor in OU-A and OU-B1 – Former Pittsburg Power Plant, 696 West 10th Street Pittsburg, California. April 14.

[12] PG&E, 1999. Declaration of Covenants, Conditions, and Environmental Restrictions. Recorded April 16.

This property is listed on GeoTracker as a closed CPS site. According to a No Further Action (NFA) letter available on GeoTracker, the property operated as a small vessel marina from 1947 to 2001 with onshore sandblasting and boat maintenance. Stormwater runoff carrying metals discharged from the onshore area to the marina through a storm drain; PG&E plugged that drain in 2004. Environmental investigations were later conducted in 2004 and 2005 to categorize impacts to soil and the nearby surface waters; upland areas were granted NFA by the Regional Water Board in April 2009 and the property was granted case closure in March of 2017.[13]Based on the recorded prior subsurface investigation, down-gradient location relative to the Site, and regulatory case closure, the documented hazardous materials release at this property is not considered an environmental concern for the Site; however, limited information is available on GeoTracker for this property, and it is not known whether investigation or remediation of soil occurred in the southern portion of the property that overlaps the Site, including a boat storage area identified in aerials photos from 1984 to 1998 (**Figure 2B**). Therefore, Baseline cannot rule out the potential for contamination to be present at the Site due to historical boat storage and maintenance activities at this property.

### *5.2.2 805 Port Chicago Highway, Western Lead Burning*

The property located at 805 Port Chicago Highway is located adjacent to the west-central area of the Site (it is surrounded by the Site on 3 sides) near the intersection of McAvoy Road and Port Chicago Highway (**Figure 2B**). This property is identified as Western Lead Burning on the SEMS – Archive database, Merle Ferre' on the Historic UST database, and 805 Port Chicago Highway Site on the EnviroStor, CPS-SLIC, SWEEPS UST, Historic UST, and Contra Costa Sites databases. According to information available on EnviroStor, the main operation on this property was the Western Lead Burning Company, which operated between 1966 and 1979. The company produced liners for the inside of tanks, made with lead and plastic. The company also sold lead to x-ray offices and hospitals. Contra Costa County indicated concern about lead and chromium contamination at the property. Since the lead smelting operation, the primary operation at the property has been various repair shops servicing automobiles, boats, recreational vehicles, and swimming pools. This property contained a 10,000-gallon gasoline UST on the north section of the property, a gasoline pump, and a water well. The UST was removed in 1986 under the oversight of Contra Costa County. Documentation regarding the UST removal was not available on EnviroStor and the property is not listed as a LUST case on GeoTracker, which suggests that a release from the UST was not identified during the UST removal; however, the potential for the Site to have been impacted by a release from this UST cannot be ruled out. There is a significant potential for contamination (including from lead and other heavy metals) to be present at the Site near this property based on the historic lead smelting operation. Repair services performed at this property after the lead smelting operation may have also resulted in releases of hazardous materials which could impact the Site.

[13] Regional Water Board, 2017. No Further Action for the PG&E Harris Yacht Harbor at 100 Trojan Road, Bay Point, Contra Costa County. March 28.

### *5.2.3 PG&E Shell Pond/Carbon Black Area*

The PG&E Shell Pond and Carbon Black Area are located adjacent to the north of the west-central portion of the Site (**Figure 2B**). This property is being evaluated and remediated under DTSC oversight as part of the EnviroStor case for the Pittsburg Power Plant. The following information was obtained from a 2017 Initial Study[14] for proposed remediation activities which is available on EnviroStor.

This property was purchased by PG&E from the Shell Oil Products Company (Shell) in 1973. The Carbon Black Area and Shell Pond were originally constructed, owned, and operated by Shell in support of its adjacent operations to the south of the Site. The 22-acre Carbon Black Area was used by Shell to dispose of carbon slurry waste. By the early 1950s, the Carbon Black Area was full and was subsequently used for the management of carbon black, a material produced by the incomplete combustion of hydrocarbons, which was stored for anticipated recovery and sale. The consists primarily of carbon black waste, TPH compounds, and PAHs generally ranging in depth from 2 to 7.5 feet bgs, but is exposed at the surface in some locations

Shell built the 73-acre Shell Pond in 1953 when the Carbon Black Area reached capacity. Shell operated the pond for settling and evaporating liquid wastes and discharging wastewater to the Delta from its adjacent chemical plant. Shell and Dexter/Hysol discharged wastes to this unit until 1980, although after 1973 the discharge was primarily untreated cooling water.

PG&E has conducted investigations, monitoring, and remedial activities at the property since 1980. Between 2000 and 2008, remediation was implemented at the property that included revegetation, installation of a circulation system, groundwater monitoring, and a deed restriction to prohibit residential development. In 2009, PG&E initiated a modified proposed remedy that included the excavation of contaminated material through dredging and application of a soil cover to unvegetated areas; however, waste removal actions were suspended in 2012 due to community complaints regarding odors. The Initial Study evaluated additional planned and contingency remedial options including dewatering, fill placement, establishing vegetation, and managed natural recovery.

Based on the proximity of the Shell Pond and Carbon Black Area to the Site, there is the potential for contamination to be present at the Site due to the historical disposal of industrial waste on this property and the historical conveyance of industrial wastewater through drainage channels that pass through and adjacent to the Site which discharged to this property.

### *5.2.4 2840/2850 Willow Pass Road, LP Catalyst Holding*

The property at 2840/2850 Willow Pass Road is located adjacent to the south of the western central portion of the Site (**Figure 2B**) and is identified as Criterion Catalysts & Technologies LP and Shell Catalysts & Technologies. This property is the former Shell facility which discharged industrial waste to the Shell Pond and Carbon Black Area, as discussed above. This property is

[14] DTSC, 2017. California Environmental Quality Act Initial Study, Proposed RCRA Corrective Action Remedy Selection for PG&E Solid Waste Management Units 4.12 (Carbon Black Area) and 4.18 (Shell Pond). April 13.

listed on various databases related to the storage and disposal of hazardous materials including the RCRA Large-Quantity Generators, RCRA TSDF, RCRA Listings, HWTS, Contra Costa Sites, E MANIFEST, HAZNET, AST, CERS hazardous waste, and CERS tanks. This property is listed on the National Pollutant Discharge Elimination System (NPDES), and the CIWQS databases based on stormwater/wastewater discharge requirements. This property is also listed on the CHMIRS, Enforcement Action Listing (ENF), CPS-SLIC, EnviroStor, CORRACTS, and SEMS Archive databases based on releases of hazardous materials at this property.

The following information was obtained from a 2025 Site Investigation Report[15] for this property which is available on GeoTracker. The property was formerly part of a larger industrial facility that manufactured ammonia fertilizer (1930 to 1967) and metal catalysts (1945 to present). As part of these operations, a laboratory, benzol plant, styrene pilot manufacturing plant, and ASTs have historically operated on the property. Facility operations were shut down at the end of 2024 and facility decommissioning is currently underway.

Groundwater monitoring indicates the depth to groundwater in wells closest to the Site to be approximately 11 feet bgs. Groundwater samples from a monitoring well near the former ASTs found elevated concentrations of TPH as gasoline (TPH-g) and VOCs. Grab groundwater samples collected to the northeast of the ASTs detected only trace concentrations of contaminants, while insufficient water was present at the single sampling location to the northwest of the ASTs to allow for sample collection.

A former fire-fighting training area was identified in the northwestern corner of the property; however, it appears that no environmental sampling has been conducted in this area to date.

Based on our review of the information for this property, there is the potential for groundwater contamination from this property to have migrated beneath the Site. Fire-fighting foams which may have contained PFAS may have been stored, used, and disposed of at this property, and PFAS can migrate long distances through groundwater. Review of historical aerial photographs identified the presence of drainage channels with darkened ground surrounding them which extended from the area of the ASTs at this property and passed through and adjacent to the Site. Given the operational timeframe, it is suspected that these drainage channels functioned as pathways for wastewater discharge, and may have also acted as preferential pathways for hazardous materials releases that may have occurred at the property, potentially facilitating contaminant migration onto the Site. Overall, previous investigations have not adequately characterized the northern portion of the property, limiting the ability to assess the potential for contaminant migration to the west-central area of the Site.

### *5.2.5 701 Willow Pass Road, Grief Brothers Corporation (SX)*

The property at 701 Willow Pass Road is located adjacent to the south of the eastern area of the Site (**Figure 2D**) and is identified as Grief Fibre Drum Inc. and Grief Brothers Corporation.

[15] AECOM, 2025. Site Investigation Report, Shell Catalysts & Technologies. 2840 Willow Pass Road, Bay Point, California. May 12.

The property is listed on various databases related to the storage and disposal of hazardous materials including RCRA Non-Generators, RCRA Small-Quantity Generators, Contra Costa Sites, FINDS, ECHO, HAZNET, HWTS, E Manifest. AST, UST, Historic UST, and CERS databases. This property is also listed on the LUST, Cortese, Historic Cortese, EnviroStor, Voluntary Cleanup Program (VCP), CORRACTS, CERS, and SEMS Archive databases based on releases of hazardous materials at this property.

This property is listed on GeoTracker as a LUST case which was closed in 1997. According to the Case Closure Letter,[16] a 2,000-gallon bunker oil UST had leaked and was closed in place in 1987. Soil and groundwater sampling identified impacts from bunker oil; however, the case was closed because the impacts were considered likely to be very localized and would not impact beneficial uses of groundwater. Any residual contamination from this LUST case would not be expected to impact the Site due to the low mobility of bunker oil.

According to a 2021 Workplan[17] available on EnviroStor, historical operations at this property included metal degreasing using chlorinated solvents which contaminated soil and groundwater. Two sources of solvent releases were identified; each located roughly 600 feet from the Site. Groundwater monitoring wells located immediately south of the Site identified groundwater depths between 9 and 10 feet bgs and a groundwater flow direction towards the north. Based on the most recent sampling of groundwater monitoring wells located in the northern portion of this property in 2017, trichloroethylene was identified at concentrations up to 430 micrograms per liter in monitoring wells located directly south and up-gradient of the Site.[18] Therefore, groundwater contamination from chlorinated solvents originating at this property may have migrated beneath the eastern area of the Site along Willow Pass Road.

### *5.2.6 640 10th Street West, Union Beverage Inc.*

The property at 640 10th Street West is located adjacent to the east of the eastern area of the Site (**Figure 2D**) and is identified as Union Beverage Inc. The property is listed on the LUST, Cortese, and CERS databases for activities related to a leaking 1,000-gallon gasoline UST on the property.

According to a case closure letter available on GeoTracker, two USTs were removed in 1987, and one was found to have holes in it. Excavated soil contained high concentrations of TPH-g. The soil was over-excavated to groundwater at 12 feet bgs and grab groundwater samples identified VOCs at concentrations exceeding current regulatory screening criteria. Regulatory case closure was awarded to the property by the Regional Water Board in July of 1998.[19] The

[16] Regional Water Board, 1997. Case Closure, Underground Storage Tank (UST), Continental Fibre Drum Inc, 701 Willow Pass Rd, Pittsburg, CA. July 7.

[17] ERM-West, Inc., 2021. Revised Indoor Air Sampling Work Plan. Angelica Laundry Service, 701 Willow Pass Road, Pittsburg, California.

[18] ERM-West, Inc., 2022. 2021 Biennial Monitoring Report, Pittsburg, California. January 3.

[19] Regional Water Board, 1998. Case Closure, Underground Storage Tank. 640 10th Street West, Pittsburg, Contra Costa County, CA.

hazardous materials release at this property may have impacted soil and groundwater quality in the eastern area of the Site.

### *5.2.1 630 10th Street West, Performance Mechanical*

The property at 630 10th Street West is located to the south and east of the eastern area of the Site (**Figure 2D**) and is identified as Performance Mechanical. The property is listed on the LUST, CORTESE, UST Finder Release, and CERS databases due to a LUST case on the property.

According to the Case Closure Letter[20] which is available on GeoTracker, two USTs were removed in 1990 including a 1,000-gallon gasoline UST and a UST of unidentified size and contents. Soil excavated during removal contained elevated concentrations of TPH-g and no information was available regarding groundwater quality. An unknown amount of soil was over-excavated and post-excavation soil samples were collected from one area, however analytical results were not discussed in the Case Closure Letter. The property received regulatory case closure from the Regional Water Board in July of 1999. Due to the absence of groundwater data and confirmatory soil data, the potential for groundwater impacts from these former USTs to have migrated beneath the Site cannot be ruled out.

### *5.2.2 570 10th Street West, Trans Bay Cable LLC.*

The property at 570 10th Street West is located adjacent to the south of the eastern area of the Site (**Figure 2D**) and is identified as Trans Bay Cable LLC., Trans Bay Cable Converter Station, and Trans Bay Cable. The property is listed on the HWTS, E MANIFEST, CERS, CERS TANKS, CERS HAZ WASTE, Contra Costa Sites, AST, CIWQS and EMI databases for the storage and disposal of hazardous materials. This property is also listed on the EnviroStor, VCP, and Deed Restriction databases based on releases of hazardous materials at this property.

According to a Removal Action Workplan[21] available on EnviroStor, historical operations at this property included auto repair, vehicle towing and wrecking services, auto junk/scrap yard, and industrial painting. A Phase II ESA performed on the property found elevated concentrations of TPH compounds, PAHs, and metals in soil. It appears that groundwater quality has not been evaluated at this property. Remediation of soil was completed at this property in 2008 as documented in a Completion Report[22] which is available on EnviroStor. Due to the proximity of this property to the Site and absence of groundwater data, the potential for groundwater contamination to have migrated from this property to the Site cannot be ruled out.

[20] Regional Water Board, 1999. Transmittal of Closure Letter and Site Closure Summary, 630 10th Street West, Pittsburg, Contra Costa County. July 15.

[21] URS, 2007. Removal Action Workplan, Proposed Converter Station Site at 570, 580, 582, 584, 586, 588, 590, and 610 West Tenth Street, Pittsburg, California. June.

[22] URS, 2008. Completion Report, Trans Bay Cable Converter Station Site at 590 West Tenth Street, Pittsburg, California. August.

### *522 10th Street West, Trench Plate 2*

The property at 522 10th Street West is located adjacent to the south of the eastern area of the Site (**Figure 2D**) and is identified as Trench Plate 2 and Trench Plate Rental Co. The property is listed on the CERS, CERS HAZ WASTE, Contra Costa Sites, SWEEPS UST, ENF, LUST, Cortese, and EMI databases for the storage and disposal of hazardous materials and a LUST case on the property.

According to the Case Closure Letter[23] which is available on GeoTracker, the property previously had two USTs containing diesel and gasoline. Upon removal of the USTs in 1988, soil and groundwater samples were collected and trace VOCs were discovered in groundwater. The property was granted case closure by the Regional Water Board in 2008. Based on the information discussed above, this LUST case would not be expected to impact the environmental condition of the Site.

## 6. USER QUESTIONNAIRE AND OWNER INTERVIEW

An ASTM Phase I User Questionnaire and written interview questions for the Site were completed by Nayeli Basulto, Assistant Engineer, as a representative of the District, as presented in **Appendix E**.

Based on the completed User Questionnaire, the District is not aware of any past uses of the Site, cleanup liens, activity and use limitations (AULs), or obvious indicators of contamination. The District is aware of a ferrous chloride release that occurred at the Pittsburg Pump Station in February 2018, and subsequent cleanup of that release, as discussed further below. The District has no specialized knowledge or experience related to the Site or nearby properties.

Based on the completed written interview, the District is not aware of any pending, threatened or past litigation, administrative proceedings, or notices from any governmental entity regarding any possible violation of environmental laws or possible liability relevant to hazardous substances or petroleum products associated with the Site with the exception that a District force main failed and caused spillage in November to December of 2025 outside the Shore Acres pump station. The District is aware of features of environmental concern at the Site including ASTs, sumps, and hazardous materials storage at the District's pump stations. The District indicated that they have various documents for the Site that could assist in the evaluation of environmental concerns or RECs. Baseline requested to review documentation regarding the removal of USTs from the District Pump Stations; however, the District could not provide such documentation. Baseline requested to review documentation regarding the ferrous chloride release, and the District provided a chronology of that release event and subsequent cleanup, which is summarized below.

On 28 February 2018, ferrous chloride leaked out of the containment structure at the Pittsburg Pump Station (**Figure 2D**) and flowed north of the structure and then west, ponding in a low

[23] Regional Water Board, 2008. Transmittal of Case Closure Letter and Site Closure Summary for Trench Plate 2, 522 10th Street W, Pittsburg, Contra Costa County. December 29.

spot on the western adjacent property. The leakage was stopped, and the ponded ferrous chloride was recovered using a sump pump. In March 2018, excavation of impacted soil was performed on the western adjacent property and more limited excavation was performed near the containment structure at the Pittsburg Pump Station with oversight provide by Contra Costa County Environmental Health. Based on the description of the ferrous chloride release, it appears to have affected areas outside of the Site and was promptly cleaned up. Therefore, the ferrous chloride release would not be expected to impact the Site.

# 7. OTHER ENVIRONMENTAL CONCERNS

## 7.1 Undocumented Fill

Fill material has been placed in various areas of the Site including along railroad tracks, access roads, and in former creek channels and marshy areas. The sources and quality of the fill materials are unknown, therefore, the fill materials could potentially be contaminated with hazardous materials.

## 7.2 Petroleum Pipelines

There are multiple active and abandoned petroleum pipelines located within and adjacent to/near the Site.[24] The approximate locations of active and abandoned petroleum pipelines are depicted in **Figures 2A through 2D**.

The active petroleum pipelines are subject to pipeline safety and maintenance regulations, including the Federal Hazardous Liquid Pipeline Safety Act (Title 49, Code of Federal Regulations, Part 195.412) and state regulations (California Government Code Section 51010-51019.1). These regulations require that hazardous liquids pipelines be designed with equipment, such as low-pressure alarms and safety shut-down devices, to minimize spill volume in the event of a leak. While pipeline safety regulations minimize potential impacts associated with future releases of hazardous materials (if any), they do not remove the risk of undocumented releases that may have occurred in the past. Therefore, there could be undocumented soil and groundwater contamination at the Site due to historical petroleum pipeline operations.

# 8. ASTM E1527-21 DEVIATIONS AND DATA GAPS

The ASTM E1527-21 requires the identification of deviations and data gaps, along with actions taken to address these gaps, and an opinion as to whether these deviations and data gaps are significant. A data gap may result from a lack of or inability to obtain information during any of the activities required by ASTM E1527-21. Particularly, review of reasonably ascertainable historical land use information from the first developed land use to the present that does not provide sufficient detail to assess potential land use changes at 5-year intervals or less may be

[24] Pipeline and Hazardous Materials Safety Administration, 2025. National Pipeline Mapping System: Public Viewer. National Pipeline Mapping System. https://www.npms.phmsa.dot.gov/

considered a data gap. Data gaps identified during the preparation of this Phase I ESA are described, below.

### 8.1 Historical Land Use Records Review

The time intervals between some of the historical land uses records exceeded 5 years in some cases. These data gaps are not considered significant because the land uses were relatively consistent between the extended time intervals.

### 8.2 Interviews with Government Regulatory Officials

ASTM E1527-21 requires interviews with state or local government regulatory agency officials regarding the potential for contamination on a site. These interviews were not conducted because any information obtained would likely duplicate information already reviewed from other standard sources, including the EDR report and online regulatory agency records. Because the Site consists largely of public right-of-way areas and undeveloped land along storm drain channel, no interviews with property owners were conducted.

## 9. FINDINGS AND CONCLUSIONS

We have performed this Phase I ESA in conformance with the scope and limitations of ASTM E1527-21 for the Site. Any exceptions to, or deletions from, this practice are described in Section 8 of this report.

Much of the Site and adjacent areas were historically occupied by railroad tracks, roadways, undeveloped land, and agricultural land from the early 1900s through the 1930s. Industrial land uses have been present in areas surrounding the Site since at least the 1930s, beginning with an oil refinery/chemical facility near the west-central area of the Site. Residential, commercial, and industrial land uses in areas surrounding the Site increased from the 1950s through 1970s, and have included boat harbors, various truck/automotive repair facilities, junkyards/auto wrecking facilities, chemical storage facilities, manufacturing facilities, and the Pittsburg Power Plant.

This assessment has revealed the following environmental concerns in connection with the Site, which are not considered RECs:

- Residual contamination from agricultural contaminants including arsenic and OCPs could be present in shallow soil in areas where the Site or adjacent properties were historically used for agriculture.

- Various properties located near the Site have historically been occupied by industrial facilities, truck/auto repair facilities, junkyards/auto wrecking facilities, and a boat storage facility where boat maintenance/repair may have occurred (**Figures 2B through 2D**). Such facilities are common sources of subsurface contamination. Areas of darkened ground observed near and within the Site may be indicative of stained soil from hazardous materials releases, and drainage channels and retention ponds associated with industrial facilities may have conveyed contaminants into soil and groundwater at

the Site(**Figures 2A through 2D**). There is a low to moderate potential for undocumented releases of hazardous materials to have occurred which could have impacted the environmental condition of the Site.

- Fill materials of an unknown quality are present in various areas of the Site that could contain contaminants that were not apparent (i.e., could not be seen) during the Site reconnaissance.

- There is a low to moderate potential that residual contamination associated with the RASS 4 Coke Pile Site within the MOTCO property that intersects the western area of the Site (**Figure 2A**) has resulted in soil and groundwater contamination. Because this property is a military facility under the oversight of the Regional Water Board, review and approval of planned construction activities on this property may be required by the military and Regional Water Board.

- There is a low to moderate potential that historical petroleum pipeline operations on and near the Site have likely resulted in undocumented soil and groundwater contamination at the Site (**Figures 2A through 2D**).

This assessment has revealed the following RECs in connection with the Site:

- Based on the amount and nature of illegally dumped refuse observed along the access road in the western area of the Site (**Figure 2A**), there is a high potential that illegal dumping activities in this area have likely resulted in soil and groundwater contamination.

- There is a high potential for contamination (including lead and other heavy metals) to be present in the west-central area of the Site near this Western Lead Burning property (**Figure 2B**) based on the historic lead smelting operation. A former UST and repair services performed at this property after the lead smelting operation may have also resulted in releases of hazardous materials which could affect environmental conditions on the Site.

- The presence of shallow soil with abnormal consistency and orange color observed near a District manhole and the retention ponds in the east-central area of the Site (**Figure 2C**) indicates that contamination is likely present.

- There is a moderate to high potential that areas of previously identified soil and groundwater contamination associated with the Pittsburg Power Plant are still present beneath the eastern area of the Site (**Figure 2D**). Because the Pittsburg Power Plant property is under DTSC oversight, DTSC review and approval of planned construction activities on the Site that intersect this property may be required (**Figures 2C and 2D**).

- There is a moderate to high potential that documented and/or undocumented releases from industrial properties south of the Pittsburg Power Plant may have resulted in soil and groundwater contamination in the eastern area of the Site (**Figure 2D**).

- Elevated concentrations of arsenic have been identified in soil along the abandoned railroad spur which intersects a small segment of east-central area of the Site (**Figure 2C**), and along the former railroad spur within the eastern area of the Site (**Figure 2D**). Based on the confirmed presence of arsenic contamination along one segment of railroad tracks near the Site, there is moderate to high potential of arsenic contamination being present along other railroad tracks within and adjacent to the Site. Other contaminants commonly associated with railroad tracks which could be present in Site soil include heavy metals, asbestos, petroleum hydrocarbons, PCBs, PAHs, pesticides, and herbicides.

- There is a high potential that the presence of a drainage channel on and adjacent to the Site which historically conveyed industrial wastewater from the former Shell facility south of the Site to the Carbon Black Area and Shell Pond to the north of the Site has resulted in soil and groundwater contamination in the west-central area of the Site (**Figure 2B**).

## 10. LIMITATIONS

This Phase I Limited ESA was performed to provide an understanding of the current environmental conditions at the Site. Baseline's interpretations and conclusions regarding this information, presented in this report, are based on the expertise and experience of Baseline in conducting similar assessments and current local, state, and federal regulations and standards.

Baseline's objective is to perform our work with care, exercising the customary thoroughness and competence of earth science, environmental, and engineering consulting professionals, in accordance with the standard for professional services for a consulting firm at the time these services were provided. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental conditions and potential liability at a particular site. Therefore, Baseline cannot act as insurers and cannot "certify or underwrite" that a site is free of environmental contamination, and no expressed or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed with the customary thoroughness and competence of our profession.

The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the project site, analysis of the data, and re-evaluation of the findings, observations, conclusions, and recommendations expressed in this report.

The findings, observations, conclusions, and recommendations expressed by Baseline in this report are limited by the scope of services and should not be considered an opinion concerning the compliance of any past or current owner or operator of the project site with any federal, state, or local law or regulation. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported or findings, observations, conclusions, and recommendations expressed in this report.

## 11. ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Qualifications of the preparers of this document are included in **Appendix F**.

# OVERVIEW OF ASTM E1527-21 TERMINOLOGY

## Overview of ASTM E1527-21 Terminology

This is a general overview of the key terminology related to ASTM E1527-21 that was used or considered during the preparation of the Phase I Environmental Site Assessment. A complete and detailed description of all terms is provided in Section 3 of ASTM E1527-21. In the Phase I Environmental Site Assessment, the term “hazardous materials” is used interchangeably with the ASTM E1527-21 definitions for “hazardous substances” and “petroleum products”.

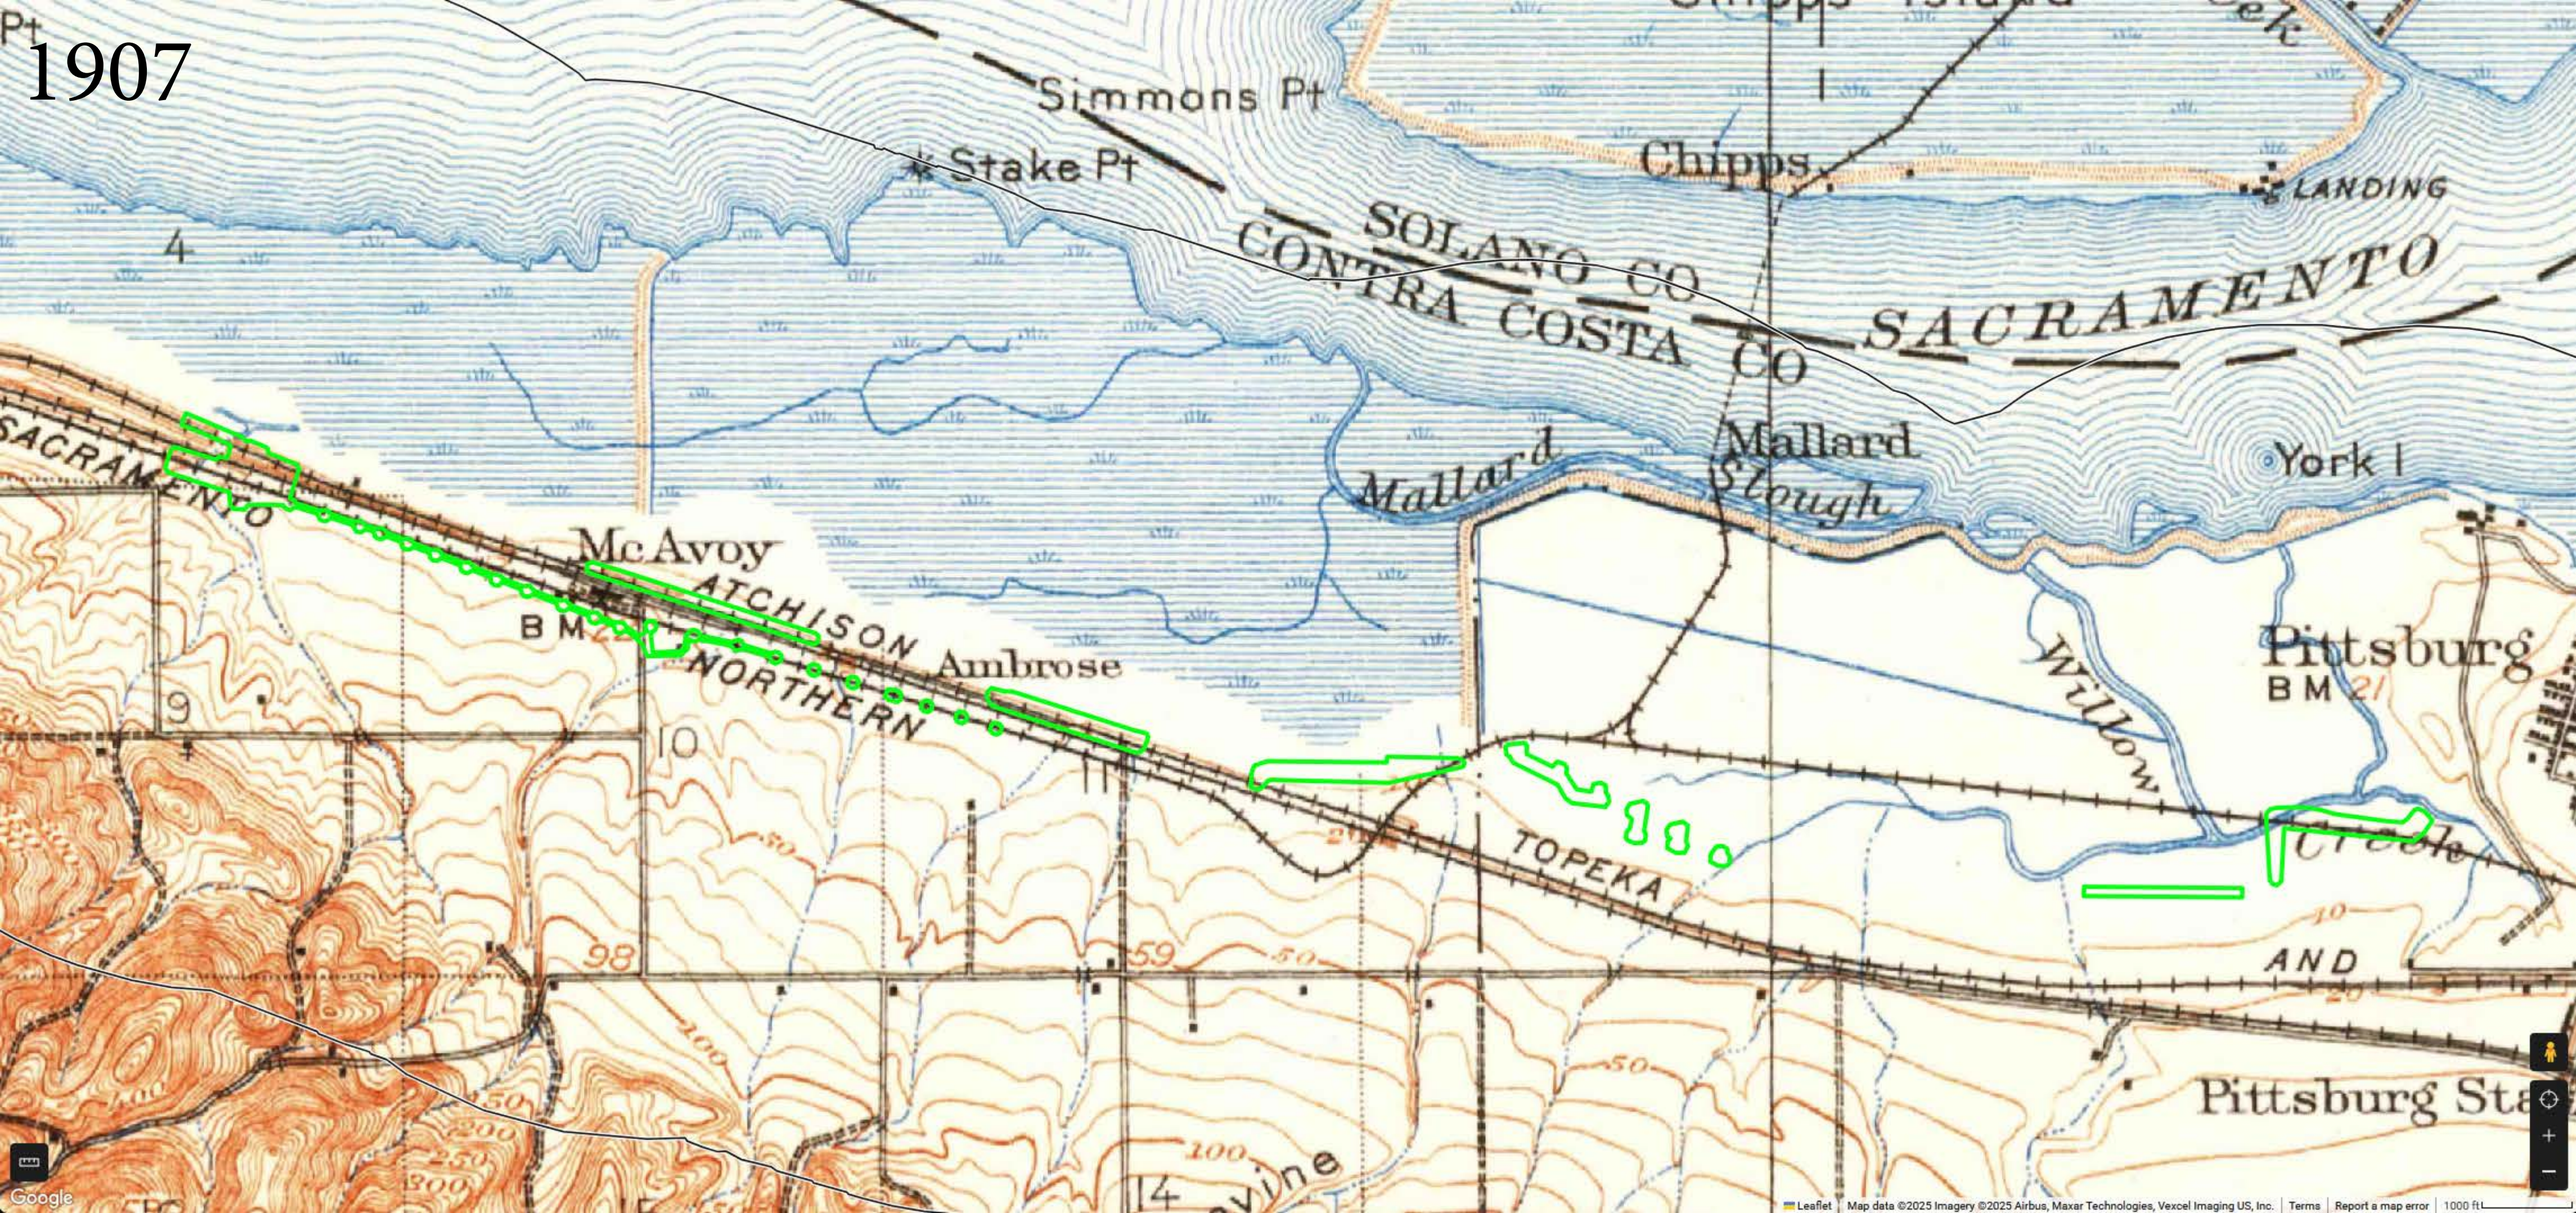
**Recognized Environmental Condition (REC)**

The presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

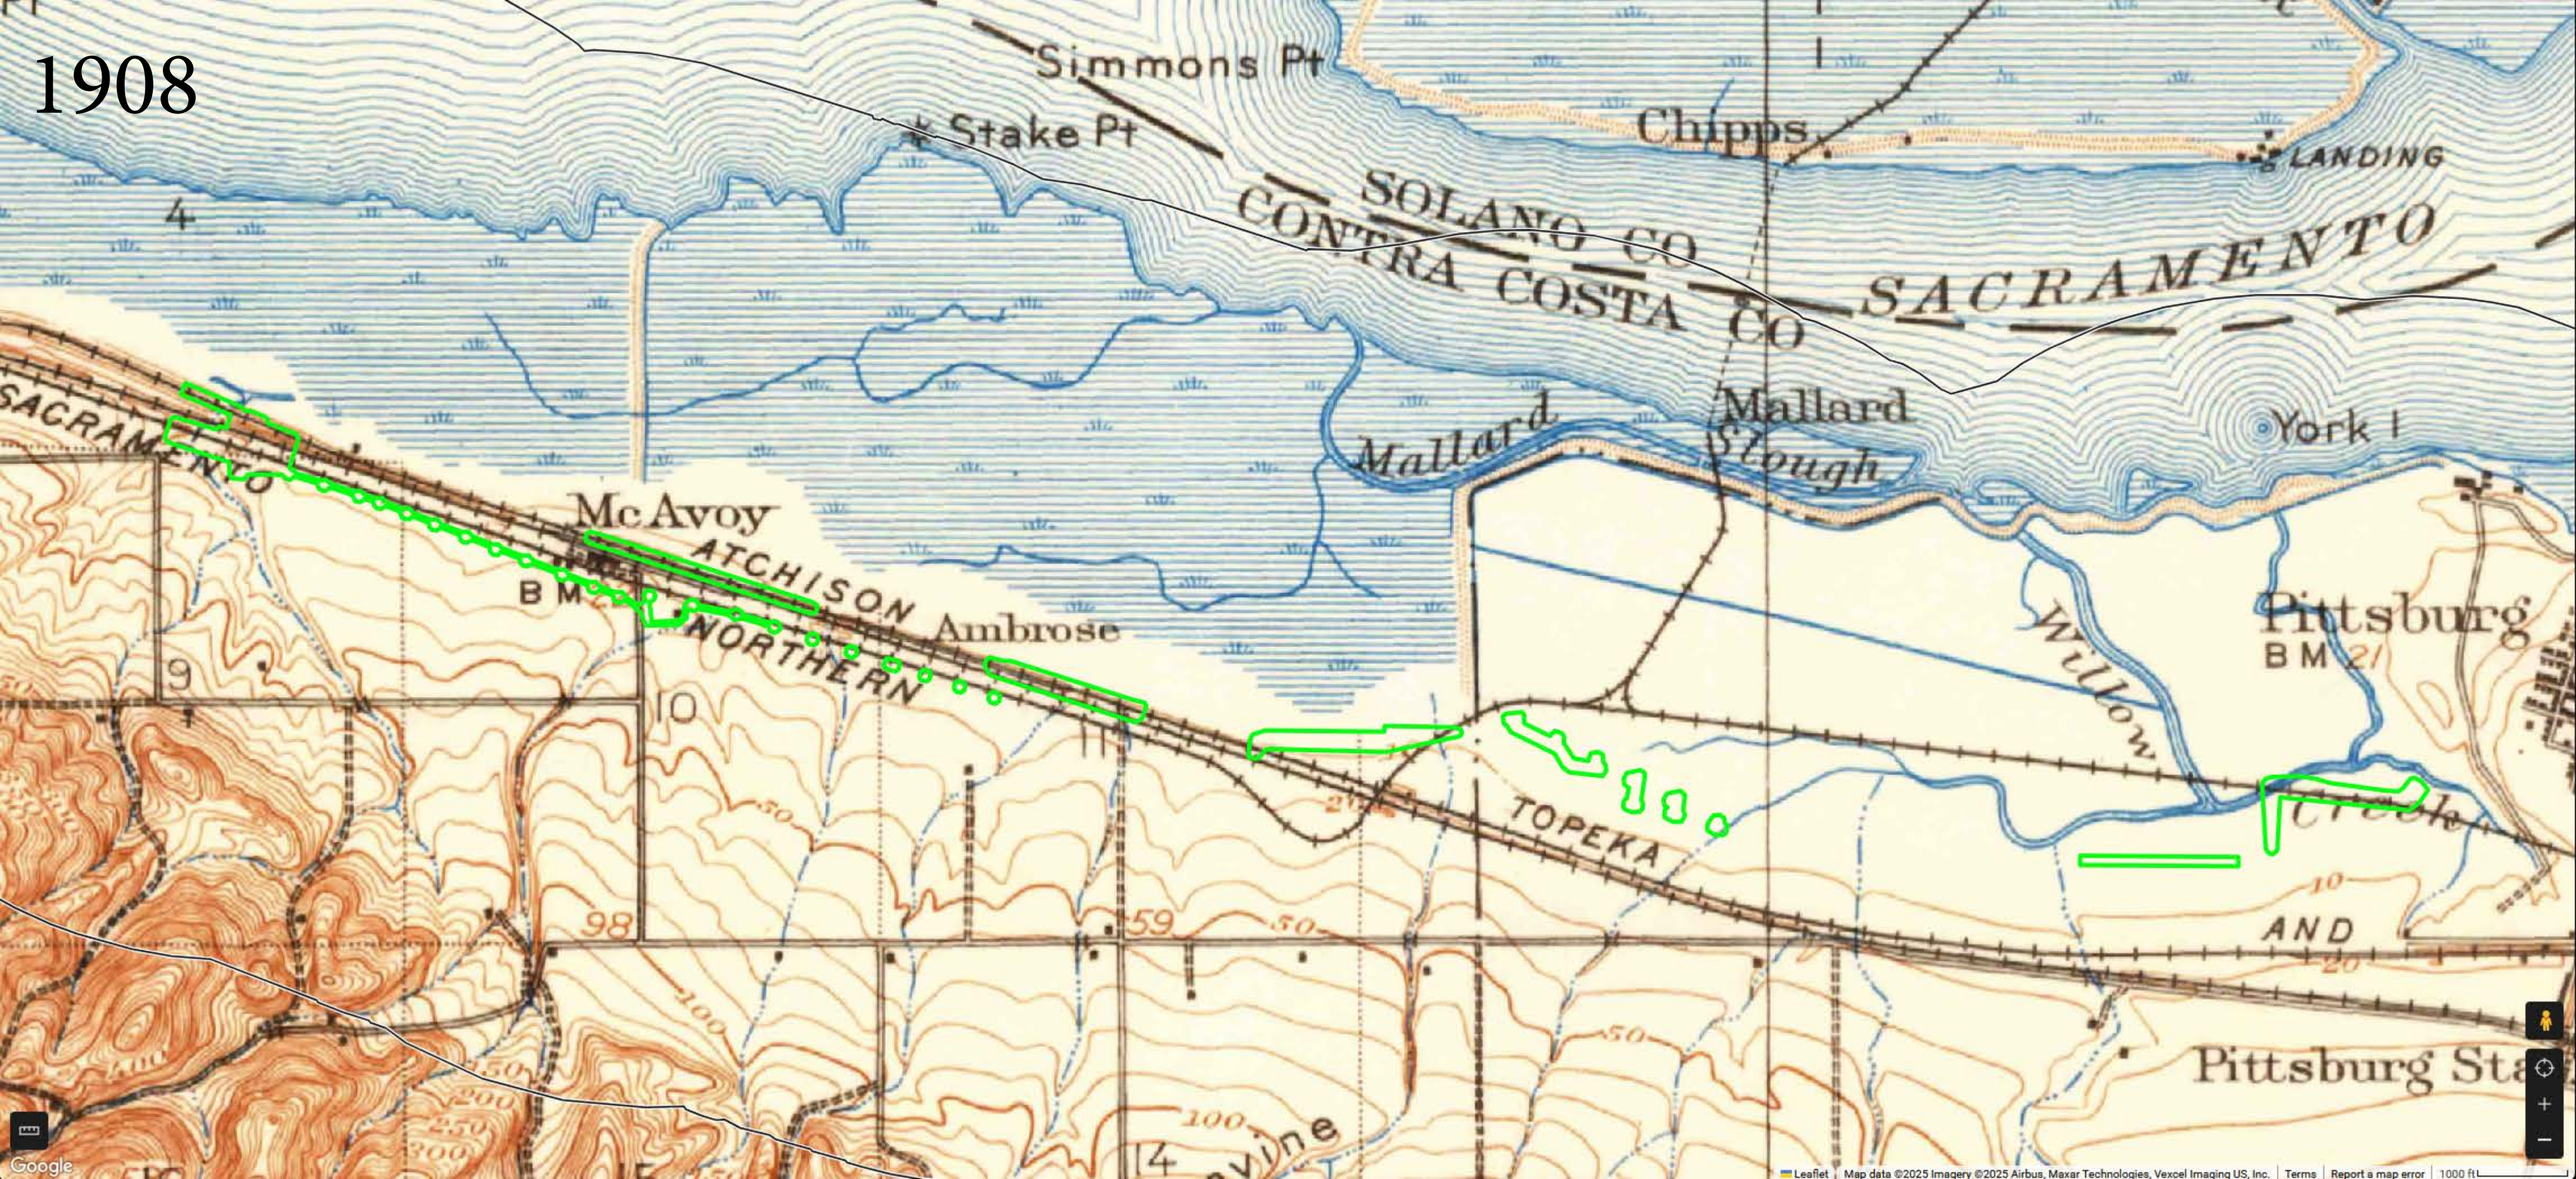
According to ASTM E1527-21, an REC does not include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

**Controlled Recognized Environmental Condition (CREC)**

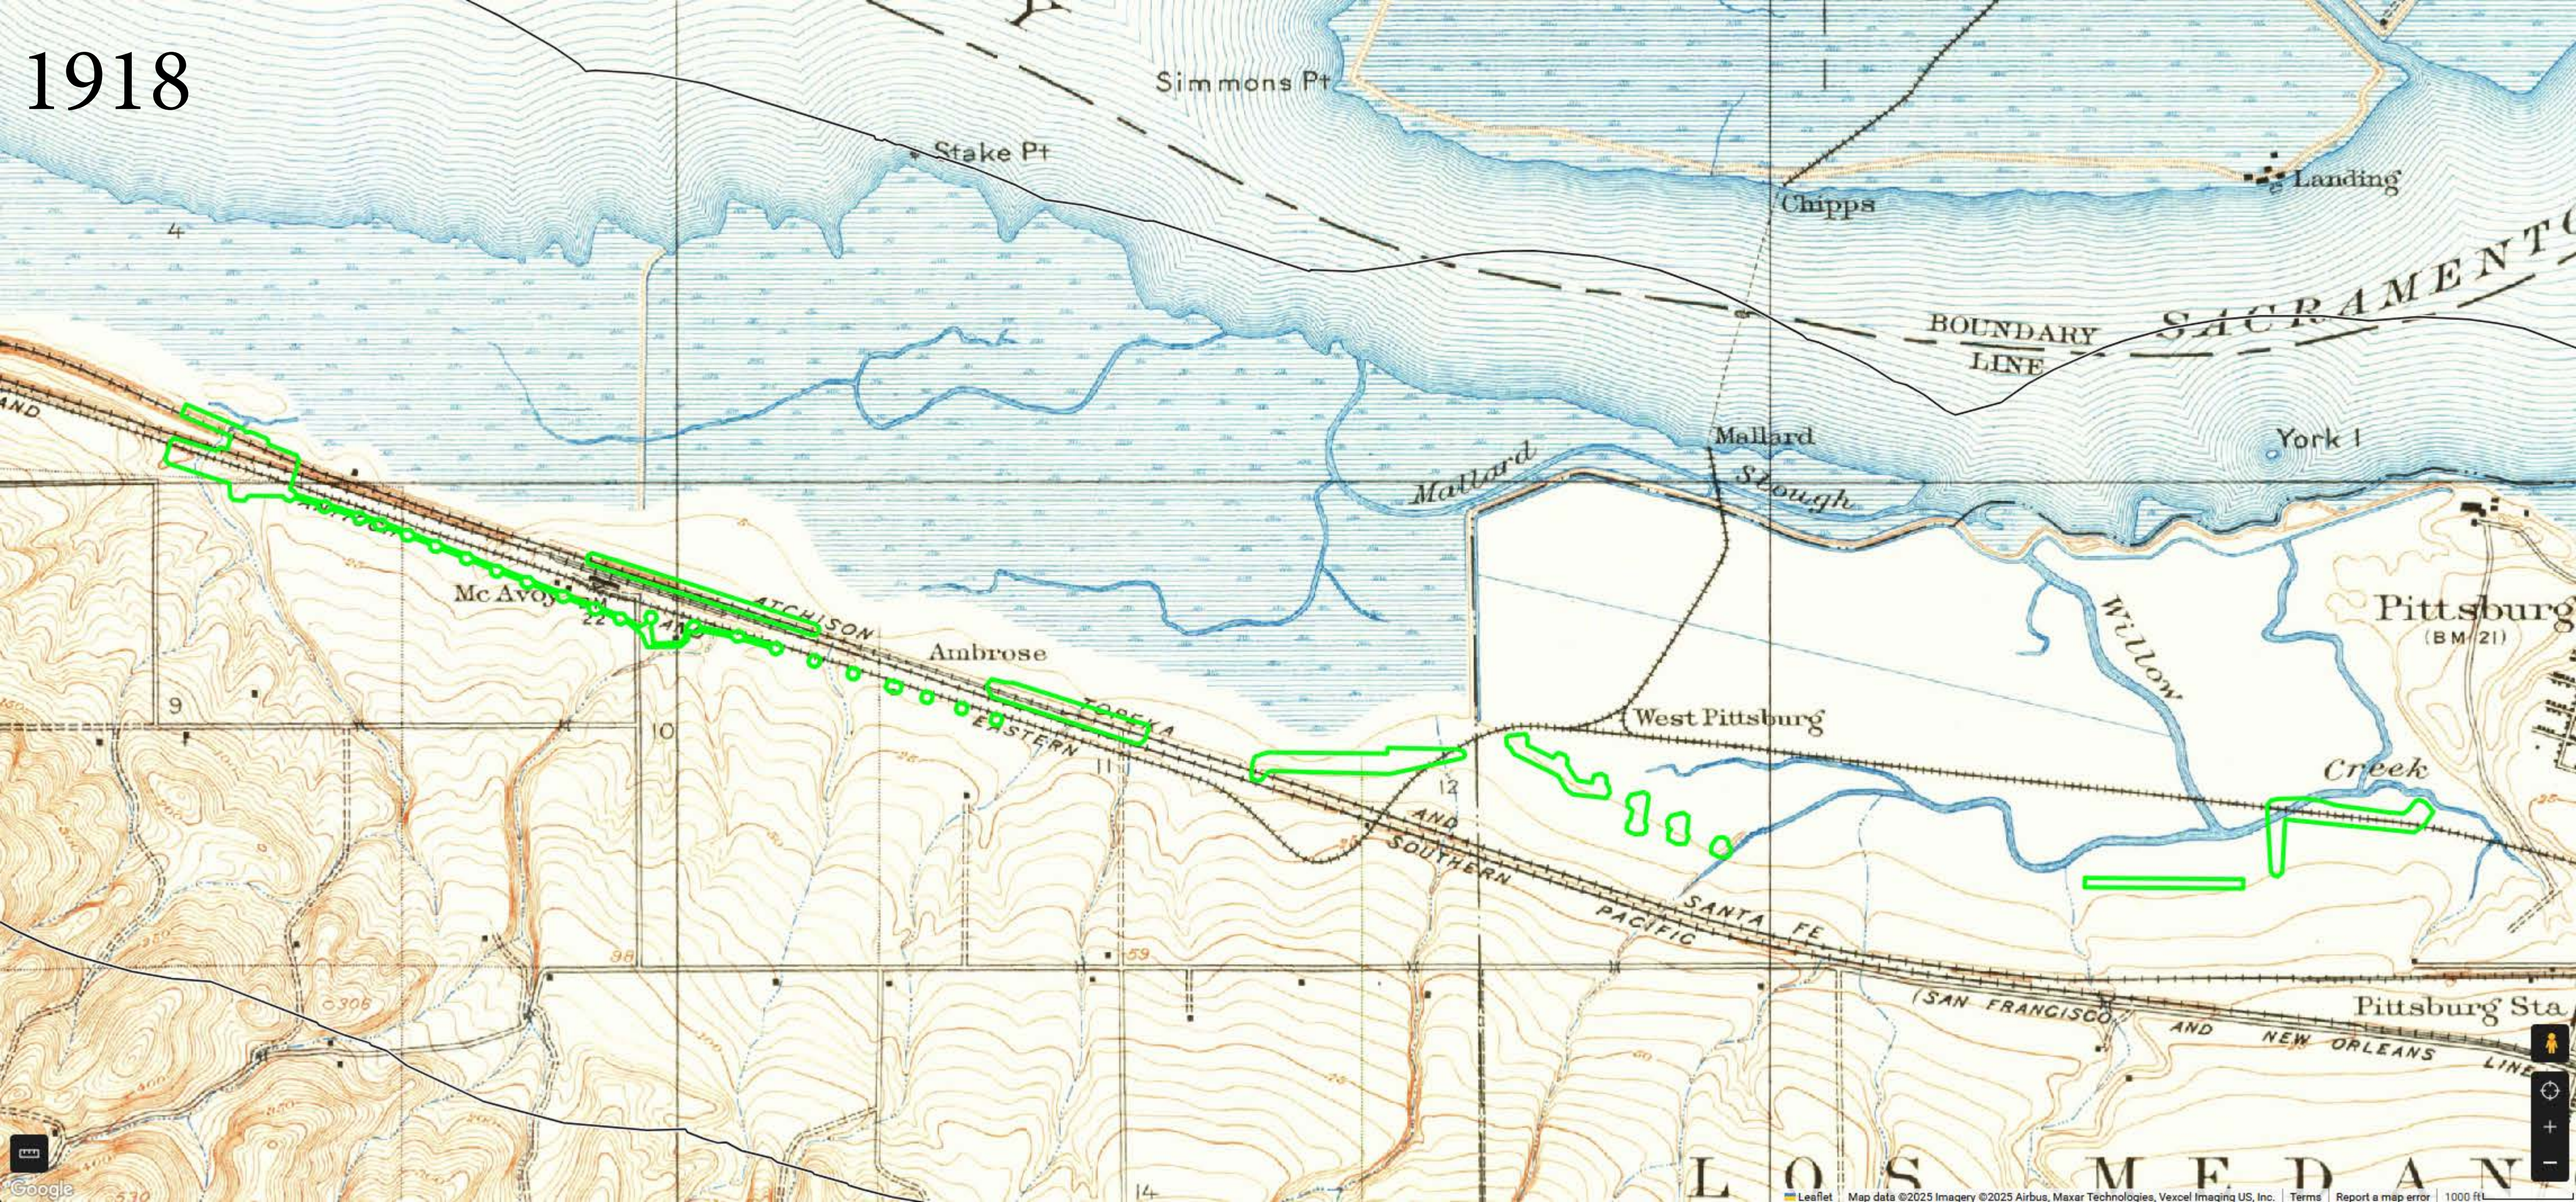
An REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (e.g., engineering controls, land use restrictions, or other property use limitations).



**Historical Recognized Environmental Condition (HREC)**



A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (e.g., engineering controls, land use restrictions, or other property use limitations). An HREC is not an REC.



A past release that qualified as a HREC may no longer qualify as a HREC if new conditions or information have been identified such as, among other things, a change in regulatory criteria or a subsequently identified migration pathway that was not previously known or evaluated.

# APPENDIX C

# SITE PHOTOGRAPHS

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

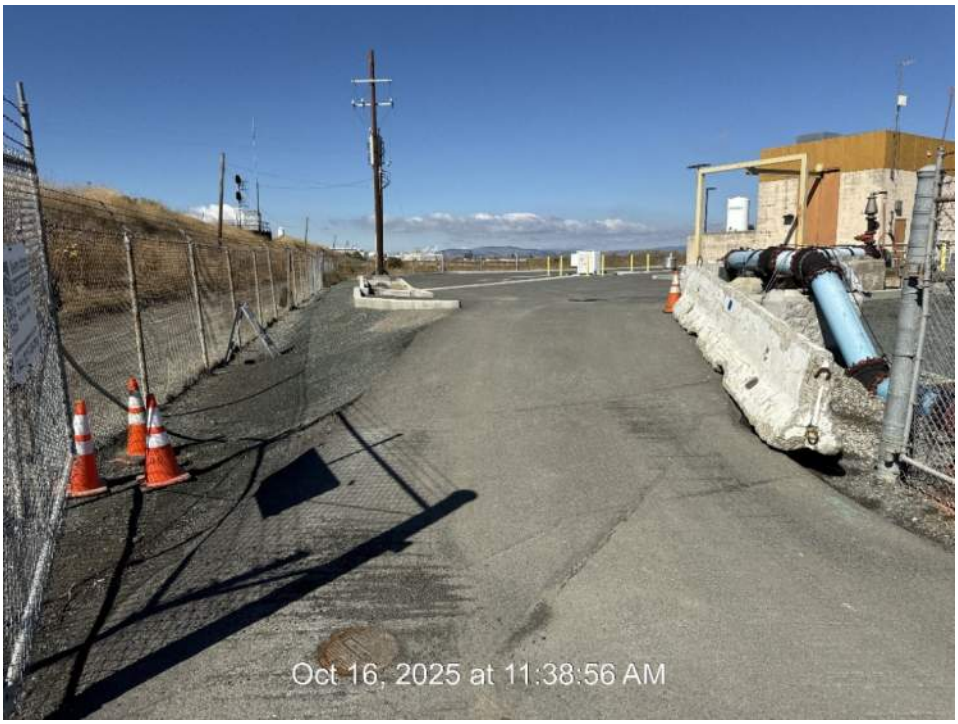

**Photo C1**

View of the Delta Diablo pump station in the northwest corner of the Site, looking west. A diesel AST was present adjacent to the building on the right.

**Photo C2**

View of miscellaneous items/debris illegally dumped between the access road and railroad tracks in the northwest portion of the Site, looking southwest.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C3**

View of used oil containers full of liquid in the area of illegal dumping between the access road and railroad tracks in the northwest portion of the Site.

**Photo C4**

View of a used oil container that leaked on the north side of the access road in the northwest portion of the Site, near the bend in the access road.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C5**
View of several refrigerators in the area of illegal dumping between the access road and railroad tracks in the northwest portion of the Site, looking southwest from the bend in the access road.

**Photo C6**
View of the railroad tracks in the western portion of the Site, looking west from the access road crossing.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C7**

View of used paint buckets dumped on the east side of the access road and just north of Port Chicago Highway in the northwest portion of the Site.

**Photo C8**

View of a manhole on the south side of Port Chicago Highway with a petroleum pipeline marker beyond the manhole. Looking west from Port Chicago Highway near Bay Drive.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C9**

View of a manhole location with sewer bypass pipes to the south of McAvoy Yacht Harbor in the west-central portion of the Site, looking west.

**Photo C10**

View of a manhole in the west-central portion of the Site located west of Broadway Pump Station. Darkened soil was observed to the west and northwest of the manhole.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C11**
View of darkened soil observed near a drainage channel in the west-central portion of the Site to the west of the Broadway Pump Station.

**Photo C12**
View of the Broadway Pump Station. A diesel AST was observed in the fenced area adjacent to the small building. Looking southeast from the adjacent access road.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C13**
View of a homeless encampment area and drainage channel in the east-central portion of the Site near an access gate off Poinsettia Avenue. No oily sheen was observed on the water.

**Photo C14**
View of an abandoned railroad spur that crosses through the east-central portion of the Site adjacent to the east of the access road that connects to Poinsettia Avenue.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C15**

View of shallow soil that was dug from near a manhole by a retention pond in the east-central portion of the Site. The soil was observed to have an abnormal consistency (very light weight) and orange color.

**Photo C16**

View of a drainage channel in the eastern portion of the Site adjacent to the south of the former ASTs area of the Pittsburg Power Plant site. No oily sheen was observed on the water.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C17**
View of an access road that was formerly a railroad spur in the eastern portion of the Site adjacent to the south of the former ASTs area of the Pittsburg Power Plant.

**Photo C18**
View of a diesel AST in the Pittsburg Pump Station at the east end of the Site.

APPENDIX C: PHOTOGRAPHS FROM SITE RECONAISSANCE

**Photo C19**

View of a heavy staining around a ferrous chloride AST at the Pittsburg Pump Station.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**SUBJECT PROPERTY INFORMATION**

**ADDRESS**

CONTRA COSTA COUNTY
PITTSBURG, CA 94565

**TARGET PROPERTY SEARCH RESULTS**

The Target Property was identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

A review of the NPL list, as provided by EDR, and dated 06/26/2025 has revealed that there is 1 NPL site within the requested target property.

Summary Details:

Conditions at Proposal February 7, 1992): Concord Naval Weapons Station is located in the north-central portion of Contra Costa County, California. Approximately 30 miles northeast of San Francisco, it is bordered to the north

**CONCORD NAVAL WEAPONS STATION (Continued)** **1009966241**

by Suisun Bay andto the south and west by the City of Concord. The facility encompasses over 12,800 acres in three separate holdings: the Inland Area 6,150 acres), the Tidal Area 6,650 acres), and a radiography facility in Pittsburg, California. On-site activities also include administrative and support work. Transshipment operations are centered on the wetlands bordering Suisun Bay Tidal Area). Wastes generated on site from base operations have been disposed of in the Tidal Area since base operationsbegan in 1942. The Navy s substantial investigations of the station have identified 19 sites to be investigated under the Installation Restoration IR) program, of which 8 are located in the Tidal Area. In addition, 24 Solid Waste ManagementUnits SWMUs) will be investigated, pursuant to RCRA, 4 of which are located in the Tidal Area. The Tidal Area Landfill, R-Area Disposal Site, and the Wood Hogger Site are wetlands in the western portion of the Tidal Area contaminated from on-base waste disposal. The 20 acre site was a major disposal area from 1944 to 1979 and received an estimated 33,000 tons of waste. Materials and waste generated during the segregation of conventional munitions were discarded in the R-Area DisposalSite. At the Wood Hogger Site, wood contaminated with pentachlorophenol PCP) was chipped and placed in an adjacent wetland. Another potential wetland area of concern is the Froid and Taylor Road site. Chemical analytical data identified ha ardous substances including inc, copper, cadmium, lead, arsenic, naphthalene, and methylene chloride, in soil, sediment, or surface water. The Kiln Site and the K-2 Area are wetlands in the eastern portion of the Tidal Area. They were contaminated as a result of private sector industrial activities, and were subsequently purchased by the Navy to create a buffer one for base operations. Soil sampling in these areas in 1986 detected inc, copper, lead, cadmium, and arsenic. High tidesinundated the sources, carrying contaminants to Suisun Bay. Elevated levels of copper, inc, lead, and arsenic were detected in surface and composite soil samples in the K-2 Area. The contaminated areas are critical habitats for the salt marsh harvest mouse, a Federally endangered species. The black California rail, a candidate Federally endangered species, and the California clapper rail, a Federally endangered species, inhabit adjacent wetlands. Suisun Bay supports extensive commercial and recreational fishing and is a habitat for the Winter-run Chinook Salmon, also a Federally endangered species. Status December 1994): Workplans for the Tidal and Inland Areas have been completed and approved. Field sampling occurredin the Tidal Area in 1994 and is planned for the Inland Area in the spring of 1995. RCRA solid waste management units will also be sampled in 1995. Those requiring clean up will be folded into the CERCLA remediation. The Navy conducted a removal of sediments in the Litigation Area in 1994. A post removal ecological assessment is also planned for 1995. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991 or subsequent FR notices.)

| Waste Description: | Silver |
| Waste Code: | D018 |
| Waste Description: | Benzene |
| Waste Code: | D035 |
| Waste Description: | Methyl Ethyl Ketone |
| Waste Code: | F002 |
| Waste Description: | The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures. |
| Waste Code: | F003 |
| Waste Description: | The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends |

**CONCORD NAVAL WEAPONS STATION (Continued)** **1009966241**

Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U057
Waste Description: Cyclohexanone (I)

Waste Code: U074
Waste Description: 1,4-Dichloro-2-Butene (I,T) (Or) 2-Butene, 1,4-Dichloro- (I,T)

Waste Code: U075
Waste Description: Dichlorodifluoromethane (Or) Methane, Dichlorodifluoro-

Waste Code: U102
Waste Description: 1,2-Benzenedicarboxylic Acid, Dimethyl Ester (Or) Dimethyl Phthalate

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U134
Waste Description: Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Waste Code: U227
Waste Description: 1,1,2-Trichloroethane (Or) Ethane, 1,1,2-Trichloro-

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and

**FERNANDES AUTO WRECKING & TOWING INC (Continued)** **S106101786**

disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes: Returned to compliance on 05/18/2023. OBSERVATION: A hazardous waste tank assessment has not been conducted for the waste oil and coolant tanks within 5 years of the previous tank system assessment or within the remaining service life of the tank system as stated in the engineer's report, whichever is less. CORRECTIVE ACTION: Obtain a written hazardous waste tank system reassessment for the tank system in accordance with 22 CCR 15 66265.192 and submit a copy to the CUPA.

Violation Date: 05-18-2023
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to label stationary hazardous waste tanks as "hazardous waste" and mark with an accumulation start date.
Violation Notes: Returned to compliance on 10/26/2023. OBSERVATION: Owner/Operator failed to properly label hazardous waste with all the informations, including accumulation dates, for stationary tank. CORRECTIVE ACTION: Properly label hazardous waste and submit proof of compliance and/or a photo of the waste labeled properly.
Violation Division: Contra Costa County Health Services Department

Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 116290
Site Name: FERNANDES AUTO WRECKING & TOWING INC
Violation Date: 10-26-2020
Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes: Returned to compliance on 05/18/2023. OBSERVATION: A hazardous waste tank assessment has not been conducted for the waste oil and coolant tanks within 5 years of the previous tank system assessment or within the remaining service life of the tank system as stated in the engineer's report, whichever is less. CORRECTIVE ACTION: Obtain a written hazardous waste tank system reassessment for the tank system in accordance with 22 CCR 15 66265.192 and submit a copy to the CUPA.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and

**FERNANDES AUTO WRECKERS (Continued)** **1023690426**

reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D008
Waste Description: Lead

Waste Code: D018
Waste Description: Benzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000

**REDWOOD PAINTING COMPANY (Continued)** **1001404359**

regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

| Citation: | HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1) |
| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 06/24/2019. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste off-site for treatment, storage, or disposal within 180 days. CORRECTIVE ACTION: At the time of inspection no waste was stored on site for more than 180 days however the facility was documenting this violation with accurate manifest record keeping. HMS Heller had a conversation with facility representatives and informed them of disposal requirements; the facility offered guarantees that waste will be disposed of in an appropriate time frame. |

Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes: Returned to compliance on 05/22/2023. OBSERVATION: The emergency response plan lists an old phone number for the UPA. The phone number for the UPA in the emergency response needs to be updated to (925) 655-3200 for main line or (925) 655-3232 for the emergency line. CORRECTIVE ACTION: Update the emergency response plan to provide the correct phone number for the UPA and submit in CERS.

**UNITED TRUCK REPAIR CO. (Continued)** **S106434312**

| | |
|---|---|
| | Section(s) 25160.2 |
| Violation Description: | Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years. |
| Violation Notes: | Returned to compliance on 04/30/2019. OBSERVATION: The facility had hazardous waste disposal documentation through June 2018, but was unable to locate the documentation for more recent hazardous waste pick ups. CORRECTIVE ACTION: By May 2, 2019, provide copies of the hazardous waste disposal documentation for 2018 and 2019, not including the 2 used oil pick ups from March and June 2018 (260 gallons and 270 gallons, respectively) to CCHSHMP. |
| Violation Division: | Contra Costa County Health Services Department |

| Site Name: | UNITED TRUCK REPAIR CO. |
| Violation Date: | 04-02-2019 |
| Citation: | HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1) |
| Violation Description: | Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities. |
| Violation Notes: | Returned to compliance on 04/30/2019. OBSERVATION: The hazardous materials inventory has not been updated to show the federal hazard categories. CORRECTIVE ACTION: By May 2, 2019, update each hazardous material in the inventory to uncheck the old hazard categories (look for boxes that say "obsolete") and check the appropriate federal hazard categories. |

| Citation: | HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1) |
| Violation Description: | Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. |
| Violation Notes: | Returned to compliance on 09/13/2023. OBSERVATION: Based on disposal documentation and labels on the drums of used filters, the metal filters have been stored longer than 1 year and the non-metal filters have been stored longer than 180 days. CORRECTIVE ACTION: Provide a copy to CCHHMP of the hazardous waste disposal documentation that demonstrates the filters have been picked up for appropriate disposal. |

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

|---|---|
| Waste Code: | D004 |
| Waste Description: | Arsenic |
| Waste Code: | D005 |
| Waste Description: | Barium |
| Waste Code: | D006 |
| Waste Description: | Cadmium |
| Waste Code: | D007 |
| Waste Description: | Chromium |
| Waste Code: | D008 |
| Waste Description: | Lead |
| Waste Code: | D009 |
| Waste Description: | Mercury |
| Waste Code: | D011 |
| Waste Description: | Silver |
| Waste Code: | D018 |
| Waste Description: | Benzene |
| Waste Code: | D022 |
| Waste Description: | Chloroform |
| Waste Code: | D035 |
| Waste Description: | Methyl Ethyl Ketone |
| Waste Code: | F001 |
| Waste Description: | The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures. |
| Waste Code: | F002 |
| Waste Description: | The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures. |
| Waste Code: | F003 |
| Waste Description: | The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends |

**PITTSBURG GENERATING STATION (Continued)** **1015730702**

Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U003
Waste Description: Acetonitrile (I,T)

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U123
Waste Description: Formic Acid (C,T)

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

WMUDS/SWAT:

| | |
|---|---|
| Edit Date: | Not reported |
| Complexity: | Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells. |
| Primary Waste: | PROCES |
| Primary Waste Type: | Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards. |

Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 07/16/2020
Comments: The Ecological Risk Assessment (ERA) did not identify any chemicals of ecological concerns for the soil or groundwater exposure pathways listed. The Site is recommended for no further evaluation for ecological exposures. However, the potential for erosion of surface soil and transport as sediment to surface water and aquatic receptors due to potential future sea level was not considered a pathway in the Revised ERA. This issue will be resolved via one or a combination of the following: tracking in 5-year reviews; Evaluation in future ERAs; Corrective Measure Implementation requirements; and Future Actions, Contingent Remedies, or other means in the forthcoming Statement of Basis.

| Quarterly Update: | The entire facility including the Pittsburg Power Plant, and the Shell Pond and Carbon Black Area property belonged to PG&E until 1999. In 1987, DTSC issued PG&E a Hazardous Waste Facility Permit to conduct treatment and storage at the facility. This permit expired in September 1992. PG&E Pittsburg submitted a renewal application for continued operation of the existing permit in March 1992. On January 20, 1995 a permit was issued to PG&E. In 1999, PG&E sold portions of the Facility to Southern Energy LLC and retained ownership of the Shell Pond and Carbon Black Area property. On March 11, 1999 the permit was transferred to Southern Energy LLC and on April 17, 2003 the permit was modified to reflect the change in the name of the owner and operator to Mirant Delta LLC (Mirant). This permit had an expiration date of January 19, 2005. On January 31, 2005 Mirant submitted a RCRA Closure Certification Report to DTSC. The Report addressed the closure of four RCRA regulated units. The four regulated units were (1) Boiler Chemical Cleaning Solution Pond, (2) Boiler Chemical Cleaning Rinse Pond, (3) Air Preheater Wash Pond, and (4) Demineralization Neutralization Pond. On April 28, 2005, DTSC acknowledged the closure certification and determined that the four hazardous waste management units at Mirant closed. DTSC, however, in the same letter required Mirant to conduct a groundwater monitoring event for the four regulated units in January 2006 and submit the groundwater sampling results to DTSC by March 1, 2006. The requirement is to account for the potential of liner-induced concentrations which may exceed either Maximum Contaminants Levels (MCLs). On September 19, 2005, DTSC authorized release of Mirant from maintaining financial assurance. Starting in the Fourth Quarter of 2005, Mirant submitted quarterly groundwater monitoring reports. in the Second Quarter 2006 Report Mirant DTSC concluded that the statistical exceedance of potassium at the power plant site was due to natural processes and not the result of a release at the facility. DTSC approved this conclusion. In a letter dated March 30, 2007 DTSC confirmed he technical completeness of all reports and determined that Mirant had fulfilled conditions agreed upon with DTSC, and declared as completed the closure of the Power Plant portion of the |

Facility. Corrective Action: In 1986, U.S.EPA completed a RCRA Facility Assessment of the Facility and identified seven Solid Waste Management Units (SWMUs) requiring corrective action. The SWMUs included five located in the power plant property (4.4, 4.6, 4.8, 4.12, 4.13) and two located in the Shell Pond Carbon Black Area property (4.15, and 4.18) Mirant conducted a RCRA Facility Investigation of SWMUs 4.4, 4.6, 4.8, 4.13, and 4.15 and concluded that there was no need for further action. DTSC approved the report agreeing that no further action was required for those units. On December 21, 1996 DTSC approved a Corrective Measures Study Workplan prepared by PG&E for the two SWMUs in the Shell Pond and Carbon Black Area property. As part of this work plan, PG&E undertook interim measures in 1997 removing product and contaminated media form the property and disposing of it at authorized disposal facilities. PG&E also graded portions of the Carbon Black Area. PG&E also undertook a Human Health and Ecological Risk Assessment which concluded that Contaminants of Concern remaining at the site did not pose an unacceptable risks to public health and the environment if access to the property remained restricted. During the year 2000, PG&E prepared and DTSC approved a remedy for both units. The remedy prescribed maintenance of a fresh water cap over the contaminated sediments remaining in the Shell Pond, periodic pond levee inspection and maintenance, installation of a fresh water recirculation system to stabilize the salinity in the Shell Pond, and a deed restriction on the title of the property

| Violation Description: | Failure of owner or operator to properly close a hazardous waste tank system ensuring the minimization of further maintenance and that the required requirements have been met. |
| Violation Notes: | Returned to compliance on 06/12/2019. OBSERVATION: Owner/Operator failed to properly notify the CUPA prior to the initiation of closure of a hazardous waste tank system per 22 CCR 67383. CORRECTIVE ACTION: Notification requirement is not resolvable. Facility will/has submit photos/documentation to the CUPA demonstrating the hazardous waste tank system has been closed in accordance with the requirements of 22 CCR 15 66265.197, and facility has complied with the requirements of 22 CCR 15 66265.111. and 66265.114. |

| Citation: | HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f) |
| Violation Description: | Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan. |
| Violation Notes: | Returned to compliance on 07/17/2023. OBSERVATION: The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material; a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. On Januar 31, 2023, 4500 gallons of non-rcra hazardous waste liquid (mineral oil) was shipped off site. The material is not in the HMBP inventory and needs to be in it for calendar year 2023. CORRECTIVE ACTION: Update the hazardous materials business plan inventory and electronically submit the update within 30 days. |

| Violation Description: | Failure to prepare an SPCC Plan that meets all applicable requirements. |
| Violation Notes: | Returned to compliance on 06/25/2019. OBSERVATION: Failure to prepare an SPCC Plan that meets all applicable requirements. The diesel fueling container is referred to as a permanently closed container in the SPCC Plan. However, it has not been properly permanently closed. CORRECTIVE ACTION: Complete or revise SPCC plan that meets all applicable requirements or properly permanently close the diesel container. |

| Citation: | HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a) |
| Violation Description: | "Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan: 1. On a regular schedule. 2. After making material repairs. 3. Use non-destructive testing. 4. Inspect each container s supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas." |
| Violation Notes: | Returned to compliance on 07/12/2019. OBSERVATION: Failure to test or inspect each aboveground container for integrity based on industry standards. The SPCC Plan states that it is not possible to physically enter the fuel oil tanks and a comprehensive API 653 inspection is not possible. The plan does not provide environmental equivalence to meet the requirements. CORRECTIVE ACTION: State the reasons for non-conformance in your plan and describe in detail alternate methods and how you will achieve equivalent environmental protection. Or, test or inspect each aboveground container for integrity based on industry standards. Facility can update the SPCC Plan to do a risk based inspection in accordance with API standards. Maintain testing and inspection records. |

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to properly close tanks when making a claim of "permanently closed."
Violation Notes: Returned to compliance on 06/23/2023. OBSERVATION: Owner/Operator failed to comply with one or more of the following permanent closure requirements: 1. All liquid and sludge has been removed from each container and connecting line; 2. All connecting lines and piping have been disconnected from the container blanked off; 3. All valves have been closed and locked; 4. Conspicuous signs have been posted on the container stating that it is a permanently closed container and denoting the date of closure. Tanks 5 and 6 were not labeled with appropriate markings. CORRECTIVE ACTION: On 6/23/2023 an email was received showing photos of tanks 5 and 6 properly labeled, correcting the violation.
