Subject: Phase I Environmental Site Assessment
Norseman Elementary School Modernization
APNs: 447-280-01T and 447-280-18T
4636 East Weldon Avenue
Fresno, California 93703

Dear Ms. Gonzalez;

Pursuant to your request and authorization, a Phase I Environmental Site Assessment has been performed at the Subject Property in accordance with the current Standard of Practice for Phase I Environmental Site Assessments per the ASTM: E1527-21 guidelines. This report is presented for the sole use of Fresno Unified School District. The enclosed report summarizes the significant findings about Recognized Environmental Conditions in connection with the Subject Property referenced above.

If you have any questions regarding the information presented in this report, please do not hesitate to contact our office. We appreciate the opportunity to be of service to you.

Sincerely,
Certerra Southwest, LLC

EXECUTIVE SUMMARY

Certerra Southwest, LLC dba Certerra RMA GeoScience ("Certerra") completed a Phase I Environmental Site Assessment (ESA) for the Norseman Elementary School located at 4636 East Weldon Avenue in Fresno, California (Subject Property). The purpose of this ESA was to identify to the extent feasible pursuant to the processes described herein, *Recognized Environmental Conditions (RECs)* and *Controlled RECs (CRECs)*, and to evaluate other environmental conditions for consideration such as *Historical RECs (HRECs)*, *Vapor Encroachment Conditions (VECs), Business Environmental Risk (BER)* and *de minimis conditions* in connection with the Subject Property.

Subject Property - The Subject Property consists of the existing Norseman Elementary School campus with eight classroom buildings, five portable classroom buildings, one administrative building, one multipurpose building, five cargo containers, one shed, two asphalt playgrounds, three woodchip playgrounds, five parking lots, and an open grass area. The Subject Property is located at 4636 East Weldon Avenue in Fresno, California and is identified by the Fresno County Assessor as Parcels 447-280-01T and 447-280-18T. Although the parcel boundaries only include the school campus itself, the site reconnaissance covered the school campus as well as the residential developments immediately surrounding the school campus.

At the time of the reconnaissance, every building contained a combination of the following: classroom; custodian room; mechanical room; restrooms; offices; server room; storage room; stage; kitchen; cold storage room; breakroom; nurse room; library; and computer room. Typical classroom furniture and supplies were observed throughout the buildings. Retail-sized cleaning products were observed in the classroom's sink, breakroom, kitchen, nurse room, custodian room, and storage room. At the time of the reconnaissance, the containers appeared appropriately stored with no indications of leaks or spills. Based on our observations, we do not consider these products representative of a *REC* for the Subject Property.

Custodial equipment such as gas-powered leaf blowers, hedge trimmers, and a power washer were observed in the custodian room and/or cargo containers. At the time of the reconnaissance, the custodial equipment appeared in good condition with no leaks or staining on the units or the underlying ground surface. Based on our observations, the custodian equipment is not considered a *REC* for the Subject Property.

Three 5-gallon gas cans were observed in the custodian room, next to the multipurpose building. At the time of the reconnaissance, the gas cans appeared in good condition with no leaks or staining on the units or the underlying ground surface. Based on our observations, the gas cans are not considered a *REC* for the Subject Property.

Paint gas cans were observed in the custodian rooms and the multipurpose building. At the time of the reconnaissance, the paint cans appeared in good condition with no leaks or staining on the units or the underlying ground surface. Based on our observations, the paint cans are not considered a *REC* for the Subject Property.

One pole-mounted transformer was observed to the east of the northwest corner along the northern boundary of the school campus. At the time of the reconnaissance, the transformer appeared in good condition with no staining on the units or the underlying ground surface. Based on our observations, the transformer is not considered a *REC* for the Subject Property.

During the reconnaissance of the Subject Property, Certerra did not observe indications of the following potential environmental conditions: existing or former aboveground storage tanks (ASTs); existing or former underground storage tanks (ASTs); air emission control equipment; or existing or former groundwater wells.

Adjoining Sites - The Subject Property is situated within an area of Fresno, California characterized by residential uses. At the time of this assessment, the sites adjoining the Subject Property consisted of the following: north were East Weldon Avenue, followed by residential develoment; south were East University Avenue, followed by residential develoment; east were North Woodrow Avenue, followed by residential development, and; west were North Maple Avenue, followed by residential development. Based on our observations during the reconnaissance, we did not identify indications of potential *REC*s in connection with the Subject Property resulting from activities on the adjoining sites.

Historical Subject Property Use - In the aerial photographs dated 1937 (the earliest photograph reviewed) to 1950, the Subject Property was visible as agricultural land. In 1957, the existing Norseman Elementary School was present. Significant changes were not observed in subsequent years to 2024.

Historical Use of Adjoining and Surrounding Area - Based on our review of historical aerial photographs, North Maple Avenue is present to the west of the Subject Property. Agricultural land is visible to the north. east, south, and west of the Subject Property. A residence and associated outbuildings are located to the north and south of the Subject Property. By 1946, a residence and associated outbuildings are immediately present to the north of the Subject Property. By 1950, additional residences and associated outbuildings are located to the north. By 1957, East Weldon Avenue, North Woodrow Avenue, and East University Avenue are located to the north, east, and south, respectively. The existing residential development is located to the north, south, and west of the Subject Property. The property to the east is vacant. By 1962, the property to the east and remainder of the property to the south are occupied by the existing residential development. Significant changes were not observed in subsequent years to 2024.

Regulatory Agency Database Results for the Subject Property and Surrounding Area - Certerra reviewed a commercial database report that compiles information from regulatory databases and lists kept by the Federal and State agency databases.

Norseman Elementary School was listed in the HWTS, HAZNET, FINDS, and ECHO databases. Per the available records, hazardous materials (asbestos containing waste [1989], other inorganic solid waste [2006], laboratory waste chemicals [2016], and detergent and soap [2016]) were disposed of from this facility, with no reported violations. The disposal of hazardous materials from Norseman Elementary School does not constitute a recognized environmental condition (REC) with respect to the Subject Property.

Grimco Inc. / Denco Sales Company was located approximately 0.226 mile south of the Subject Property and listed in the CUPA LISTINGS, HWTS, HAZNET, CERS, and PFAS ECHO databases. After reviewing Fresno County records, hazardous materials (DS-3, ethanol, enamel paint, polyvinyl chloride plastisol, acrylic, isopropyl alcohol, Danacolors speedy blockout white, and super white lettering enamel) were stored at the facility during Denco Sales Company's occupation. According to available records, hazardous materials (non-RCRA hazardous waste liquid [2024] and inorganic waste corrosive liquid [2024]) were disposed of from this facility, with no reported violations. On June 18, 2025, Fresno County inspected this facility and found no hazardous materials being stored at this facility. Due to this information and the distance between this facility and the Subject Property, Grimco Inc. / Denco Sales Company is not a REC with respect to the Subject Property.

Pacific Bell was located approximately 0.233 mile southeast of the Subject Property and listed in the RCRA-VSQG, LUST, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, CORTESE, CUPA LISTINGS, HIST CORTESE, CERS, and UST FINDER RELEASE databases. On November 14, 1988, soil samples were collected after the removal of a 6,000-gallon unleaded gasoline UST. Additional assessments and remediation activities took place after the removal of the UST. The County of Fresno, Department of Health issued a letter dated May 31, 1990, stating that "this site should now be properly closed". The State Water Resources Control Board's (State Water Board) GeoTracker website listed this facility as a leaking underground storage tank with a "case closed" status. Due to this information and the distance between this facility and the Subject Property, Pacific Bell is not a REC with respect to the Subject Property.

Skee's Recycling is located approximately 0.964 mile south of the Subject Property and listed in the ENVIROSTOR, SWRCY, CERS HAZ WASTE, EMI, NPDES, CIWQS, and CERS databases. From 1959 to present, Skee's Recycling operated as a metal recycling business, which includes generation and management of hazardous wastes. On August 28, 2019, the Department of Toxic Substance Control (DTSC) and Fresno County Department of Public Health conducted an inspection at this facility. This inspection concluded with three violations in association with this facility. The three violations are as follows: (1) failure to removal materials requiring special handling (MRSH) from major appliances before being processed, (2) failure to receive Certified Appliance Recycler (CAR) certification prior to removing MRSH from major appliances, and (3) failure to minimize the possibility of a release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health and the environment. According to the Department of Toxic Substance Control's (DTSC) EnviroStor website database, this facility has an "active" status with an ongoing investigation to address these violations. Due to this information and the distance between this facility and the Subject Property, Skees Recycling is not a REC with respect to the Subject Property.

Evaluation of Vapor Encroachment Condition (VEC) - Certerra considered the potential for a *VEC* to exist at the Subject Property by comparing the relative locations of the listings identified in the regulatory agency database report to the Subject Property using the geographical and hydrogeological gradients described in the physical setting data. Based on our review, the potential for a *VEC* to exist beneath the Subject Property does not appear to be likely.

At the request of Fresno Unified School District, Certerra completed this Phase I ESA in general agreement with the scope and limitations of ASTM E 1527-21 of the Norseman Elementary School located at 4636 East Weldon Avenue in Fresno, California. Any exceptions to or deletions from this practice are summarized in the report. This assessment did not reveal indications of *RECs, HRECs, CRECS, VECs*, *de minimis conditions,* or significant *data gaps* in connection with the Subject Property.

Business Environmental Risks (BERs) - The Subject Property has been used for agricultural purposes sometime prior to 1937 to the mid-1950s. It is recommended that prior to the proposed modernization of the school campus, the Subject Property be tested for agricultural pesticides.

Based on our findings, further environmental review is warranted at this time.

If additional information becomes available or known that may suggest the presence of *RECs* currently in connection with the Subject Property, contact this firm for potential recommendations.

CERTERRA
RMA GEOSCIENCE

1.0 INTRODUCTION

1.1 Purpose

A Phase I Environmental Site Assessment (ESA) was performed for the Norseman Elementary School Modernization project, which is comprised of APNs 447-280-01T and 447-280-18T, located in Fresno, California (Subject Property). The purpose of the assessment was to identify to the extent feasible recognized environmental conditions (RECs) in connection with the aforementioned property. ASTM International (ASTM) E1527-21 defines RECs as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. De minimis conditions generally do not present a material risk of harm to public health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Site Location and Description

The Subject Property is located at 4636 East Weldon Avenue in Fresno, California 93703 (Figure 1). The Subject Property is comprised of two parcels, APNs 447-280-01T and 447-280-18T, with a total area of approximately 12.41-acres (Figure 2). The Subject Property is occupied by the existing Norseman Elementary School.

Its central geographic position is 36.7677° north latitude and 119.7442° west longitude.

1.3 Scope of Work

Our work was performed in conformance with the scope and limitations of the ASTM E:1527-21. In order to complete this report, the following scope of work was completed:

a. A reconnaissance of the Subject Property and surrounding area to visually evaluate the potential for site contamination and to identify the current land use;

b. A review of the regional geologic maps and geologic references pertinent to the Subject Property;

c. A review of historical aerial photographs and topographic maps to assess the Subject Property's historical land use, and for indications of potential recognized environmental conditions, as defined by ASTM E1527-21;

d. A database search of federal, state, and local regulatory agencies obtained by Environmental Data Resource (EDR), which is attached to this report;

e. Review of local governmental databases and files;

f. Identify key personnel, local officials, and current owners of the Subject Property to conduct interviews with people knowledgeable of the Subject Property and surrounding areas; and,

g. Preparation of this report.

1.4 General Limitations and Exceptions

This report was completed in substantial conformance with the scope and practice set forth by the ASTM Standard E1527-21 with a level of care and skill ordinarily exercised by members of our profession currently practicing in California. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs. This assessment is not, and should not be construed as, a warranty or guarantee concerning the presence or absence of hazardous substances or petroleum products which may affect the Subject Property. The information presented in this report is based on visual observations, research of publicly available information, review of maps and literature, experience, and professional judgment. The ASTM standard defines reasonably ascertainable information as information that is publicly available with reasonable time and cost constraints and yields relevant information without the need for extraordinary analysis of irrelevant data.

The Subject Property was accessible on foot.

The following are considered non-scope items excluded from the scope of this report:

* Asbestos Containing Building Materials
* Biological Agents
* Cultural and Historical Resources
* Ecological Resources
* Endangered Species
* Health and Safety
* Indoor Air Quality
* Industrial Hygiene
* Lead-Based Paint
* Lead in Drinking Water
* Mold or Microbial Growth Conditions
* Polychlorinated Biphenyl (PCB)-Containing Building Materials
* Naturally Occurring Radon
* Regulatory Compliance
* Substances not defined as hazardous substances (including some substances sometime generally referred to as emerging contaminants) unless or until such substances are classified as a CERCLA hazardous substance
* Wetlands

1.5 Special Terms and Conditions

This report is intended for the sole use of Fresno Unified School District (User). Its contents are considered to be privileged and confidential. The contents should not be relied upon by any party other than the aforementioned without the express written consent of Certerra Southwest, LLC dba Certerra RMA GeoScience ("Certerra") and Fresno Unified School District.

An environmental liens and activity and use limitations (AULs) search was not a part of the scope of this report, as per the direction of the User.

1.6 User Provided Information

A User Questionnaire was sent to Mr. Scott Robb, the Technical Specialist II of Fresno Unified School District, who was identified as a representative of the user or party seeking to complete an environmental site assessment of the Subject Property. The All Appropriate Inquiries (AAI) Rule at 40 CFR § 312 requires the prospective purchaser, also the User, to evaluate certain "*additional inquiries*" but AAI Rule and ASTM E1527-21 do not require the User to disclose this information to the *environmental professional*. The User Questionnaire assists the User in gathering information to address the AAI Additional Inquiries.

Mr. Robb indicated that it is "N/A" if environmental liens were filed or recorded against the Subject Property. The User stated to "*please refer to Title 5, Division 1, Chapter 13, Subchapter 1 "School Facilities Construction" for applicable state laws for school sites in California. The property has been operated by a school district since at least 1920, and the surrounding properties are single family residences, unrelated to this land use. The pesticides and herbicides used are in accordance with the California Healthy School Act.*" Mr. Robb indicated that the Subject Property is "*not being purchased. There is no known contamination at the site that would affect value."* The User revealed that no spills, chemical releases, or environmental cleanup have taken place at the Subject Property. Mr. Robb stated that the Master AHERA documents are stored at the school. A copy of the questionnaire completed by Mr. Robb is attached to this report.

2.0 SITE OVERVIEW

2.1 Site Observations

Our visual site reconnaissance was conducted on February 3 and 10, 2026. The purpose of our reconnaissance was to visually assess the Subject Property and surrounding area for potential RECs. Selected photographs of the Subject Property taken during site reconnaissance are attached to this report.

2.1.1 Exterior Observations

Item	Observed or Suspected	Not Observed or Suspected
Hazardous substances & Petroleum products	X	
Above Ground Storage Tanks		X
Underground Storage Tanks		X
Odors		X
Standing water or pools of liquids		X
Drums, hazardous substance, or petroleum containers	X	
Unidentified substance containers		X
Electrical or hydraulic equipment known or likely to contain PCBs	X	
Pits, ponds, or lagoons		X
Stained soil or pavement		X
Stresses vegetation (other than from insufficient water)		X
Solid waste, mounds or depressions suggesting trash or soil waste disposal		X
Wastewater or storm water discharge into a drain, ditch, stream, or adjacent property		X
Wells (active, inactive, or abandoned)		X
Sewage disposal system		X
Railroad lines or spurs		X

2.2 Hazardous Substances & Petroleum Containers/Products

Hazardous substances or petroleum product containers for liquids are generally less than 5 gallons and may be made of metal, glass, or plastic. Containers may also contain solids and gasses and may be made of paper, plastic, cardboard, or metal. Hazardous substances or petroleum products can be contained in equipment such as elevator and hoist pistons, machinery, forklifts, and other equipment.

During our site reconnaissance, the following were observed at the Subject Property.

- Numerous bottles of cleaning products were observed in the custodian rooms, underneath the classroom sinks, within the cargo containers, and the multipurpose building. No leaks or stains were observed in the vicinity of these bottles.
- Gas-powered leaf blowers and hedge trimmers were observed in the custodian rooms. No leaks or stains were observed beneath the leaf blower or hedge trimmers.
- A spray can of WD-40 was observed in one of the custodian rooms. No leaks or stains were observed beneath this spray can.

- Two mechanical rooms, each with their own natural gas-powered boilers, were observed at the Subject Property. No leaks or stains were observed beneath the boilers.
- Paint cans were observed in the multipurpose building and custodian rooms. No leaks or stains were observed in the vicinity of the paint cans.
- Three 5-gallon gas cans were observed in a custodian room, next to the multipurpose building. No leaks or stains were observed in the vicinity of these gas cans.
- One gas-powered power washer was observed in the cargo container. No leaks or stains were observed beneath the power washer.

2.3 Aboveground Storage Tanks (ASTs)

During our site reconnaissance, features associated with ASTs were not observed on the Subject Property.

2.4 Underground Storage Tanks (USTs)

During our site reconnaissance, features associated with USTs were not observed on the Subject Property.

2.5 Polychlorinated Biphenyls (PCBs)

PCBs were once widely used in dielectric and coolant oils in transformers and capacitors. PCB production was banned in the US in 1979 but some older transformers and electrical equipment may still contain PCBs. Many fluorescent light ballasts manufactured before 1979 also contained small quantities of PCBs. An inventory and inspection of fluorescent light ballasts was not conducted as part of this environmental review.

During our site reconnaissance, pad-mounted transformers were not observed on the Subject Property. One pole-mounted transformer was observed east of the northwest corner along the northern boundary of the Subject Property. No leaks or stains were observed in the vicinity of the pole-mounted transformer.

2.6 Stressed Vegetation, Pits, Ponds and Lagoons and Standing Water

During our site reconnaissance, stressed vegetation, pits, ponds, lagoons, or standing water were not observed on the Subject Property.

2.7 Solid Waste, Mounds, or Depressions Suggesting Trash or Solid Waste Disposal

During our site reconnaissance, solid waste, mounds, or depressions suggesting trash or solid waste disposal were not observed on the Subject Property.

2.8 Wastewater or Stormwater

During our site reconnaissance, stormwater retention basins were not noted on the Subject Property. In addition, we did not observe indications of industrial wastewater on the Subject Property or wastewater treatment facilities on or near the Subject Property.

2.9 Existing or Abandoned Oil and Water Wells

According to the database maintained by the California Department of Conservation Geologic Energy Management Division, there are no oil wells located at or in the near vicinity of the Subject Property. During our site reconnaissance, features associated with water wells were not observed on the Subject Property. According to the EDR database, there is one water well with little to no data, located 893 feet to the northeast of the Subject Property. The City of Fresno water well with more data is located 1,230 feet southwest of the Subject Property.

2.10 Septic Systems

During our site reconnaissance, features associated with a septic system were not observed on the Subject Property. The City of Fresno provides sewer services to Norseman Elementary School, the Subject Property.

2.11 Railroad Lines or Spurs

During our site reconnaissance and review of the standard historical resources (aerial photograph, Sanborn maps, topographic maps), indications of railroad lines or spurs were not noted on the Subject Property.

2.12 Site Reconnaissance of Adjacent Properties

Properties immediately adjacent to the Subject Property consist of the following:

- To the north – East Weldon Avenue / Residential development
- To the east – North Woodrow Avenue / Residential development
- To the south – East University Avenue / Residential development
- To the west – North Maple Avenue / Residential development

2.13 Current Site Use

The Subject Property is occupied by an existing school campus, identified as Norseman Elementary School.

2.14 Drains and Sumps

During our site reconnaissance, sumps were not observed on the Subject Property. Multiple floor drains located in bathrooms, were observed throughout the school campus. No evidence of staining or foul odors were present near these floor drains during our site reconnaissance.

3.0 GEOLOGY AND HYDROGEOLOGY

3.1 Geology

The Subject Property is located in the east-central San Joaquin Valley, which comprises the southern half of the Great Valley geomorphic province. The valley is a westward-tilting trough which forms a broad alluvial fan, approximately 200 miles long and 50 to 70 miles wide, the eastern flank is broad and gently inclined, as opposed to the western flank, which is relatively narrow (Bartow, 1991; Page, 1986). The Central Valley consists of the Great Valley Sequence, overlain by Cenozoic alluvium. Underlying the Great Valley Sequence are the Franciscan Assemblage to the west and the Sierra Nevada batholith to the east (Bailey, Irwin, and Jones, 1964).

The Franciscan Assemblage, made up of deformed and high pressure and low temperature metamorphosed mafic and ultramafic rocks, was formed around the Late Jurassic through the Miocene (160 to about 20 million years ago) by the offscraping of rocks from a subducting plate dipping to the east (Wakabayashi, 1992; Wakabayashi, 2011).

The Sierra Nevada started to form during the Early Jurassic (around 200 million years ago) when the Farallon Plate began subducting under the North American Plate. This subduction resulted in several orogenies, or mountain building events, that created the granitic Sierra Nevada Batholith deep below the surface. During the Miocene (around 10 million years ago), vertical movement along the Sierra Nevada Frontal Fault Zone (part of the Eastern California Shear Zone) began to uplift the Sierra Nevada. This uplift and erosion exposed the batholiths to the surface. From the Pleistocene (commonly known as the last Ice Age) to the present, glaciers have been carving out many parts of the Sierras. The current uplift of the Sierra Nevada is 1 to 2mm per year (Hammond, et al. 2012).

The Great Valley Sequence is a 40,000-foot sequence of marine shale, sandstone, and conglomerate beds, deposited in a deep marine environment during the Late Jurassic through the Cretaceous (150 to 65 million years ago). Overlying the Great Valley Sequence is several thousand feet of Cenozoic alluvium, deposited by: streams and rivers draining from the mountains and creating alluvial fans; by lakes that covered parts of the valley floor from time to time; flooding; and marsh environments (Page, 1986). In some places, it is thousands of feet thick, and more than half of this thickness is composed of fine grained fluvial and lacustrine deposits. Holocene deposition consists mainly of episodic deposition of alluvial sediments (Bartow, 1991; Page, 1986). The Subject Property is situated on Quaternary fan deposits that are several thousand feet deep.

3.2 Hydrogeology

The Subject Property is located within the Kings Subbasin within the San Joaquin Valley Groundwater Basin. The Kings Subbasin is bounded by the Madera Subbasin to the north, by the Kaweah and Tulare Lake Subbasin to the south, by the Sierra Nevada Mountains to the east, and by the Westside and Delta-Mendota Subbasins to the west. The primary recharge source to the area is river and stream seepage, deep percolation of applied irrigation water, canal seepage, and intentional recharge (Groundwater Bulletin 118, 2003).

According to Groundwater Contour Maps available at California Department of Water Resources website, the depth to groundwater in Spring 2025 was approximately 110 feet below ground surface and the direction of groundwater flow was to the west in the vicinity of the Subject Property.

4.0 RESULTS OF RECORDS SEARCH

4.1 Aerial Photograph Review

1937, 1946, and 1950

Subject Property:

The Subject Property is occupied by agricultural land. Dirt roads are visible on the Subject Property. In the 1946 aerial photo, the eastern portion of the Subject Property is occupied by fallow land.

Surrounding properties:

North Maple Avenue is present to the west of the Subject Property. Agricultural land is visible to the north. east, south, and west of the Subject Property. A residence and associated outbuildings are located to the north and south of the Subject Property. By 1946, a residence and associated outbuildings are immediately present to the north of the Subject Property. By 1950, additional residences and associated outbuildings are located to the north.

1957, 1962, 1967, 1973, 1979, 1984, 1987, 2006, 2009, 2012, 2016, 2020, and 2024

Subject Property:

The existing Norseman Elementary School is visible on the Subject Property. By 1987, two additional structures are located on the eastern portion of the school. By 1998, three additional structures are positioned on the eastern portion of the school. By 2009, three additional buildings are situated in the central portion of the school.

Surrounding properties:

East Weldon Avenue, North Woodrow Avenue, and East University Avenue are located to the north, east, and south, respectively. The existing residential development is located to the north, south, and west of the Subject Property. The property to the east is vacant. By 1962, the property to the east and remainder of the property to the south are occupied by the existing residential development.

Copies of the aerial photographs are attached to this report.

4.2 Sanborn Map Review

The Sanborn Library collection was searched by EDR. No maps covering the Subject Property were found.

4.3 Topographic Map Review

NW, Bullard, 1921, 7.5-minute

Subject Property and Surrounding properties:

The Subject Property and adjacent properties are in the "unmapped" area of the topographic map.

TP, Clovis, 1923, 7.5-minute / SE, Malaga, 1923, 7.5-minute / SW, Fresno, 1923, 7.5-minute / NW, Bullard, 1923, 7.5-minute

Subject Property:

There are no structures on the Subject Property.

Surrounding properties:

North Maple Avenue is located to the west of the Subject Property. A structure is located to the north and south of the Subject Property.

TP, Clovis, 1946 & 1947, 7.5-minute / SE, Malaga, 1946 & 1947, 7.5-minute / SW Fresno South, 1946 & 1947, 7.5-minute / NW, Fresno North, 1946 & 1947, 7.5-minute

Subject Property:

There are no structures on the Subject Property. A high voltage overhead power line is located on the northwest corner of the Subject Property.

Surrounding properties:

Structures are located to the north and south of the Subject Property. The overhead power line extends from the northwest corner of the Subject Property and heads into two directions (southeast and northwest).

SW, Fresno, 1963, 15-minute / NW, Herndon, 1965, 15-minute

Subject Property and Surrounding properties:

The Subject Property and adjacent properties are in the "unmapped" area of the topographic map.

TP, Clovis, 1972 & 1981, 7.5-minute / SE, Malaga, 1972 & 1981, 7.5-minute / SW Fresno South, 1972 & 1981, 7.5-minute / NW, Fresno North, 1972 & 1981, 7.5-minute

Subject Property:

The existing elementary school is located on the Subject Property.

Surrounding properties:

East Weldon Avenue, North Woodrow Avenue, and East University Avenue are located to the north, east, and south of the Subject Property, respectively.

TP, Clovis, 2012, 2015, 2018, & 2021, 7.5-minute / SE, Malaga, 2012, 2015, 2018, & 2021, 7.5-minute / SW Fresno South, 2012, 2015, 2018, & 2021, 7.5-minute / NW, Fresno North, 2012, 2015, 2018, & 2021, 7.5-minute

Subject Property and Surrounding properties:

These topographic maps do not reveal any structures on the Subject Property or surrounding properties.

Copies of the topographic maps are attached to this report.

4.4 Governmental Agency Database Review

A search of available government databases was conducted for Certerra by EDR, an information retrieval service which identifies current and historical environmental risk management information for a specific site (Subject Property) and surrounding area. The search was extended to the applicable approximate minimum search distances prescribed by ASTM E1527-21 for the standard Federal and State agency databases. Copies of the EDR reports are attached to this report. The following is an abridged list of environmental databases that were searched by EDR:

Federal

* Proposed National Priorities List (NPL)
* Delisted National Priorities List (DNPL)
* Federal Superfund Liens
* Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)
* Federal Facility Site Information listing
* CERCLIS No Further Remedial Action Planned (CERCLIS-NFRAP)
* Corrective Action Report (CORRACTS)
* RCRA Treatment Storage and Disposal
* RCRA-LQG RCRA - Large Quantity Generators
* RCRA-CESQG RCRA - Conditionally Exempt Small Quantity Generator
* US ENG CONTROLS Engineering Controls Sites List
* US INST CONTROL Sites with Institutional Controls
* LUCIS Land Use Control Information System
* US BROWNFIELDS A Listing of Brownfields Sites
* Emergency Response Notification System (ERNSCA)
* National Pollutant Discharge Elimination System-Region 9 (NPDSR09)
* PCB Activity Database
* Open Dump Inventory (ODI)
* Toxics Release Inventory (TRI)

State

* Above Ground Storage Tanks (ABST)
* INDIAN LUST Leaking Underground Storage Tanks on Indian Land
* INDIAN UST Underground Storage Tanks on Indian Land
* FEMA UST Underground Storage Tank Listing
* RESPONSE State Response Sites
* Solid Waste Information System (SWIS)
* VCP Voluntary Cleanup Program Properties

* INDIAN VCP Voluntary Cleanup Priority Listing
* Clandestine Drug Labs (CDL)
* State Brownfields Properties Calsites Database
* California Hazardous Material Incident Report System (CHMIRS)
* Dry Cleaner Facilities

* US HIST CDL National Clandestine Laboratory Register
* LIENS 2 CERCLA Lien Information
* LIENS Environmental Liens Listing
* DEED Deed Restriction Listing

4.4.1 Subject Property Search Results

The Subject Property was listed in the EDR provided databases.

Facility Name	Address	Databases
Norseman Elementary School	4636 East Weldon Avenue	HWTS, HAZNET, FINDS, and ECHO

Norseman Elementary School, 4636 East Weldon Avenue

This facility is listed in the HWTS, HAZNET, FINDS, and ECHO databases. Per the available records, hazardous materials (asbestos containing waste [1989], other inorganic solid waste [2006], laboratory waste chemicals [2016], and detergent and soap [2016]) were disposed of from this facility, with no reported violations. The disposal of hazardous materials from Norseman Elementary School does not constitute a recognized environmental condition (REC) with respect to the Subject Property.

4.4.2 Surrounding Facilities Search Results

The following facilities listed by EDR within the approximate minimum search distance of the Subject Property have or have had known releases of contaminants to the environment are listed in the table below.

Facility Name	Address	Databases	Distance (miles)
Grimco Inc. / Denco Sales Company	4634 East Weathermaker Avenue	CUPA LISTINGS, HWTS, HAZNET, CERS, and PFAS ECHO	0.226
Pacific Bell	4734 East Carmen Avenue	RCRA-VSQG, LUST, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, CORTESE, CUPA LISTINGS, HIST CORTESE, CERS, and UST FINDER RELEASE	0.233
Skee's Recycling	4628 East Thomas Avenue	ENVIROSTOR, SWRCY, CERS HAZ WASTE, EMI, NPDES, CIWQS, and CERS	0.964

Grimco Inc. / Denco Sales Company, 4634 East Weathermaker Avenue

This facility was located approximately 0.226 mile south of the Subject Property and listed in the CUPA LISTINGS, HWTS, HAZNET, CERS, and PFAS ECHO databases. After reviewing Fresno County records, hazardous materials (DS-3, ethanol, enamel paint, polyvinyl chloride plastisol, acrylic, isopropyl alcohol, Danacolors speedy blockout white, and super white lettering enamel) were stored at the facility during Denco Sales Company's occupation. According to available records, hazardous materials (non-RCRA hazardous waste liquid [2024] and inorganic waste corrosive liquid [2024]) were disposed of from this facility, with no reported violations. On June 18, 2025, Fresno County inspected this facility and found no hazardous materials being stored at this facility. Due to this information and the distance between this facility and the Subject Property, Grimco Inc. / Denco Sales Company is not a REC with respect to the Subject Property.

Pacific Bell, 4734 East Carmen Avenue

This facility was located approximately 0.233 mile southeast of the Subject Property and listed in the RCRA-VSQG, LUST, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, CORTESE, CUPA LISTINGS, HIST CORTESE, CERS, and UST FINDER RELEASE databases. On November 14, 1988, soil samples were collected after the removal of a 6,000-gallon unleaded gasoline UST. Additional assessments and remediation activities took place after the removal of the UST. The County of Fresno, Department of Health issued a letter dated May 31, 1990, stating that "this site should now be properly closed". The State Water Resources Control Board's (State Water Board) GeoTracker website listed this facility as a leaking underground storage tank with a "case closed" status. Due to this information and the distance between this facility and the Subject Property, Pacific Bell is not a REC with respect to the Subject Property.

Skee's Recycling, 4628 East Thomas Avenue

This facility is located approximately 0.964 mile south of the Subject Property and listed in the ENVIROSTOR, SWRCY, CERS HAZ WASTE, EMI, NPDES, CIWQS, and CERS databases. From 1959 to present, Skee's Recycling operated as a metal recycling business, which includes generation and management of hazardous wastes. On August 28, 2019, the Department of Toxic Substance Control (DTSC) and Fresno

County Department of Public Health conducted an inspection at this facility. This inspection concluded with three violations in association with this facility. The three violations are as follows: (1) failure to removal materials requiring special handling (MRSH) from major appliances before being processed, (2) failure to receive Certified Appliance Recycler (CAR) certification prior to removing MRSH from major appliances, and (3) failure to minimize the possibility of a release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health and the environment. According to the Department of Toxic Substance Control's (DTSC) EnviroStor website database, this facility has an "active" status with an ongoing investigation to address these violations. Due to this information and the distance between this facility and the Subject Property, Skees Recycling is not a REC with respect to the Subject Property.

4.4.3 Subject Property & Surrounding Facilities Search Results for Per- and Poly-Fluoroalkyl Substances

Per- and poly-fluoroalkyl substances (PFAS) are a group of manufactured chemicals that have been widely used in industry and consumer products and are commonly referred to as emerging contaminants. Perfluorooctanoic Acid (PFOA) and Perfluoro-octane Sulfonate (PFOS) are two of the most widely used and studied chemicals in the PFAS group and those two compounds have been designated as CERCLA hazardous substances by the USEPA.

The EDR database reported findings from a review of 15 databases that report the identification, detection, or use of PFAS. The PFAS databases consist of aggregated datasets created by the USEPA from various sources that show which industries may be handling PFAS. The inclusion of a facility on this list does not indicate that PFAS compounds are actively in use, that a release of PFAS has been documented, or that PFAS compounds are present. The Subject Property was not reported in the PFAS databases.

One facility within the approximate ¼-mile search distance was reported in the PFAS ECHO database. Grimco Inc., located approximately 0.226 mile south of the Subject Property, was listed in the database due to involvement with Electroplating, Plating, Anodizing, and Coloring (NAICS code: 332813). Other state and federal PFAS databases reported by EDR did not disclose a PFAS release at this facility or at other facilities within the designated search distances.

4.4.4 Evaluation of Vapor Encroachment Conditions

Certerra considered the potential for a *VEC* to exist at the Subject Property by comparing the relative locations of the listings identified in the regulatory agency database report to the Subject Property using the geographical and hydrogeological gradients described in the physical setting data. Based on our review, the potential for a *VEC* to exist beneath the Subject Property does not appear to be likely.

4.5 City Directory Review

A search of available city directories from 1952 to 2022 was conducted for Certerra by EDR, an information retrieval service which identifies current and historical environmental risk management information for a specific site (Subject Property) and surrounding area. The following listings for the Subject Property address and adjacent property's addresses are identified and listed below.

Subject Property address:

4636 East Weldon Avenue

- 2022 Fresno Unified School District / Norseman Elementary School / Jennifer St. Louis / Kimberly Collins / Marcella Linares / Panouly Her
- 2014 – 2017 Fresno Unified School District
- 2002 – 2010 Norseman Elementary School
- 2000 Fresno Unified School District
- 1958 – 1996 Norseman Elementary School

Adjacent property addresses:

4597 – 4680 East Weldon Avenue

- 1958 – 2022 Residential Listing

1730 – 1914 North Woodrow Avenue

- 1962 – 2017 Residential Listing

4610 – 4670 East University Avenue

- 1958 – 2022 Residential Listing

1731 North Maple Avenue

- 2017 Jose Salinas
- 1990 – 2000 H Williams Construction
- 1986 Ashley Charles R Construction
- 1980 National Treasury Employees Union
- 1970 – 1975 De Luca Rod Construction Co / De Luca Rod Realty / Ashley Construction Co

1732 North Maple Avenue

- 2005 American Overhead Door
- 1962 – 2022 Residential Listing

1805 North Maple Avenue

- 1952 – 2022 Not listed

2004 North Maple Avenue

- 1952 – 2002 Residential Listing

2014 North Maple Avenue

- 1962 – 2002 Residential Listing

4598 East Cambridge Avenue

- 1958 – 2022 Residential Listing

4595 East Normal Avenue

- 2022 Richard Garcia / Jorge Jamarillo / R&KS Quality Auto Detailing
- 2005 – 2017 Residential Listing

- 1996 McAllister Sherida E
- 1992 – 1995 Mcallister, Sheri H / Valley Patrol & Detective Agency
- 1965 – 1990 Valley Patrol & Detective / McAllister Sherida E

4596 East Normal Avenue

- 1965 – 2022 Residential Listing

4.6 State and Local Agencies

California Department of Conservation – Geologic Energy Management Division

According to California Department of Conservation – Geologic Energy Management Division online database (Well Finder), there are no existing or abandoned oil wells listed on the Subject Property.

Fresno County Public Health Department, Division of Environmental Health

A review for available records for the Subject Property and surrounding properties was searched on the Fresno County Public Health Department, Division of Environmental Health (EH) website on January 30, 2026. According to the Fresno County EH website, there were no records listed for the Subject Property. Records for the surrounding properties were discussed in the section 4.4.2 above.

City of Fresno, City Clerk

A request to review available records for the Subject Property was submitted to this agency on January 20, 2026. We specified that we were looking for building records, application, and plans. In a January 30, 2026, email, the City of Fresno provided a statement for the request: "*The City has reviewed its files and has determined the request seeks records that are not in the custody and/or control of the City. You may consider contacting the Department of General Services."* Copies of the request and response from the City of Fresno are attached to this report.

California Department of General Services, Division of the State Architect

A request to review available records for the Subject Property was submitted to this agency on January 30, 2026. We specified that we were looking for building records, applications, and plans. On February 10, 2026, California Department of General Services provided records (inspection reports, project inspector verified report, field trip note, project inspector semi-monthly report, etc.) for the Subject Property. Copies of the request and response from California Department of General Services, Division of the State Architect are attached to this report.

5.0 INTERVIEWS

5.1 Present Owner

An interview questionnaire was sent to Mr. Scott Robb, the Technical Specialist II of FUSD, with questions pertaining to his knowledge of the Subject Property. Mr. Robb indicated that there are no litigation or administrative proceedings relevant to hazardous substances or petroleum products. Mr. Robb stated that

some buildings contain ACBM and further details can be found in the Master AHERA management plan. Monthly pest and weed abatement services are conducted at this school, per Mr. Robb. According to Mr. Robb, none of the following took place or are stored on the Subject Property: AST; USTs; solid or liquid waste being disposed of, treated or neutralized; and spills, leaks, or other releases of chemicals. Mr. Robb stated that the Subject Property was zoned as AE-20 sometime before 1920. A copy of this questionnaire is attached to this report.

6.0 FINDINGS

6.1 Recognized Environmental Conditions

ASTM E1527-21 defines RECs as "(1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment."

This assessment has revealed no evidence of RECs in connection with the Subject Property.

6.2 Controlled Recognized Environmental Conditions

ASTM E1527-21 defines controlled recognized environmental conditions (CRECs) as "a recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitation or other property use limitations)."

This assessment has revealed no evidence of CRECs in connection with the Subject Property.

6.3 Historical Recognized Environmental Conditions

ASTM E1527-21 defines historical recognized environmental conditions (HRECs) as "a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations)."

This assessment has revealed no evidence of HRECs in connection with the Subject Property.

6.4 Business Environmental Risk

ASTM E1527-21 defines business environmental risks (BERs) as "a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate and is not necessarily an issue required to be investigated under this practice. A BER may include one or more of the non-scope issues that were indicated in Section 1.4 of this report.

This assessment has revealed the following BER in connection with the subject property.

- The Subject Property has been used for agricultural purposes sometime prior to 1937 to the mid-1950s. It is recommended that prior to the proposed modernization of the school campus, the Subject Property be tested for agricultural pesticides.

6.5 De minimis Conditions

ASTM E1527-21 defines de minimis conditions as "a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a REC nor a CREC."

This assessment has revealed no evidence of de minimis conditions in connection with the Subject Property.

6.6 Data Gap and Data Failure

ASTM E1527-21 defines data gaps as "a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials)."

ASTM E1527-21 defines data failures as "failure to achieve the historical research objectives even after reviewing standard historical sources that are reasonably attainable and likely to be useful. Data failure is one type of data gap. Data failures can occur when the use of the property was unable to be identified at approximately five-year intervals back to the first use or 1940, whichever is earlier."

This assessment has revealed the following data gaps or data failures in connection with the Subject Property.

- Data gaps in excess of five years were encountered during the review of the standard historical sources.

- Interviews were not conducted with past owners, operators, or occupants.

In the opinion of the environmental professional, these data gaps are not significant since the Subject Property was cultivated land from 1937 to the mid-1950s and the existing school campus from the mid-1950s to present day.

6.7 Vapor Encroachment Conditions

Certerra considered the potential for a *VEC* to exist at the Subject Property by comparing the relative locations of the listings identified in the regulatory agency database report to the Subject Property using the geographical and hydrogeological gradients described in the physical setting data. Based on our review, the potential for a *VEC* to exist beneath the Subject Property does not appear to be likely.

7.0 CONCLUSIONS

7.1 Conclusions

Certerra has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of two parcels (APNs: 447-280-01T and 447-280-18T/ Address: 4636 East Weldon Avenue) in Fresno, California, the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 1 of this report.

Environmental Concern	Number of Findings
Recognized Environmental Conditions (RECs)	0
Controlled Recognized Environmental Conditions (CRECs)	0
Historical Recognized Environmental Conditions (HRECs)	0
Business Environmental Risk (BER)	1
De minimis Conditions	0
Data Gap / Data Failure	2
Vapor Encroachment Conditions (VECs)	0

This assessment has revealed the following BER in connection with the Subject Property.

- The Subject Property has been used for agricultural purposes sometime prior to 1937 to the mid-1950s. It is recommended that prior to the proposed modernization of the school campus, the Subject Property be tested for agricultural pesticides.

This assessment has revealed the following data gaps or data failures in connection with the Subject Property.

- Data gaps in excess of five years were encountered during the review of the standard historical sources.

- Interviews were not conducted with past owners, operators, or occupants.

In the opinion of the environmental professional, these data gaps are not significant since the Subject Property was cultivated land from 1937 to the mid-1950s and the existing school campus from the mid-1950s to present day. This assessment has revealed no evidence of RECs, CRECs, HRECs, VECs, or de minimis conditions in connection with the Subject Property.

Based on our findings, further environmental review is warranted at this time.

8.0 QUALIFICATIONS

The following statements are provided as specified by ASTM E1527-21 and 40 CFE 312.21(d):

> "We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined by §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed all the appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312."

9.0 LIMITATIONS

This Phase I Environmental Site Assessment was completed in accordance with generally accepted industry practice for determining the likelihood of the presence of hazardous substances at or beneath the Subject Property. Information presented in this report is based on visual observations, limited research, review of maps and literature, experience, and professional judgment. This assessment is not, and should not be construed as, a warranty or guarantee concerning the presence or not of hazardous substances which may affect the property. All discovered information has been disclosed and a good faith effort has been made to consult pertinent sources.

Per- and polyfluoroalkyl substances (PFAS) are a group of manufactured chemicals that have been used in industry and consumer products since the 1940s because of their useful properties. PFAS are ubiquitous in the anthropogenic environment and can result in the presence of ultra-trace concentrations in soil and water, even at sites where these materials were not used, stored, handled or otherwise used. Two compounds, PFOA and PFOS, have been designated as CERCLA hazardous substances; therefore, discussion about PFAS in this report is limited in application to those two compounds.

This study and report have been prepared on behalf and for the exclusive use of Fresno Unified School District, and solely for use in an environmental evaluation of the Subject Property. This report and its findings shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without prior written consent of Certerra and Fresno Unified School District. However, Certerra acknowledges and agrees that the report may be conveyed to the Buyer, Seller and Lender associated with the financing of the Subject Property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

4636 EAST WELDON AVENUE
FRESNO, CA 93703

COORDINATES

Latitude (North):	36.7677180 - 36° 46' 3.78''

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE ---------- State Response Sites

EXECUTIVE SUMMARY

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---------- Solid Waste Information System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land
CPS-SLIC ---------- Statewide SLIC Cases

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing
AST ---------- Aboveground Petroleum Storage Tank Facilities
INDIAN UST ---------- Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

VCP ---------- Voluntary Cleanup Program Properties
INDIAN VCP ---------- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS ---------- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/20/2025 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/17/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 11/30/2025 has revealed that there are 23 E MANIFEST sites within approximately 0.25 miles of the target property.

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 42 CUPA Listings sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

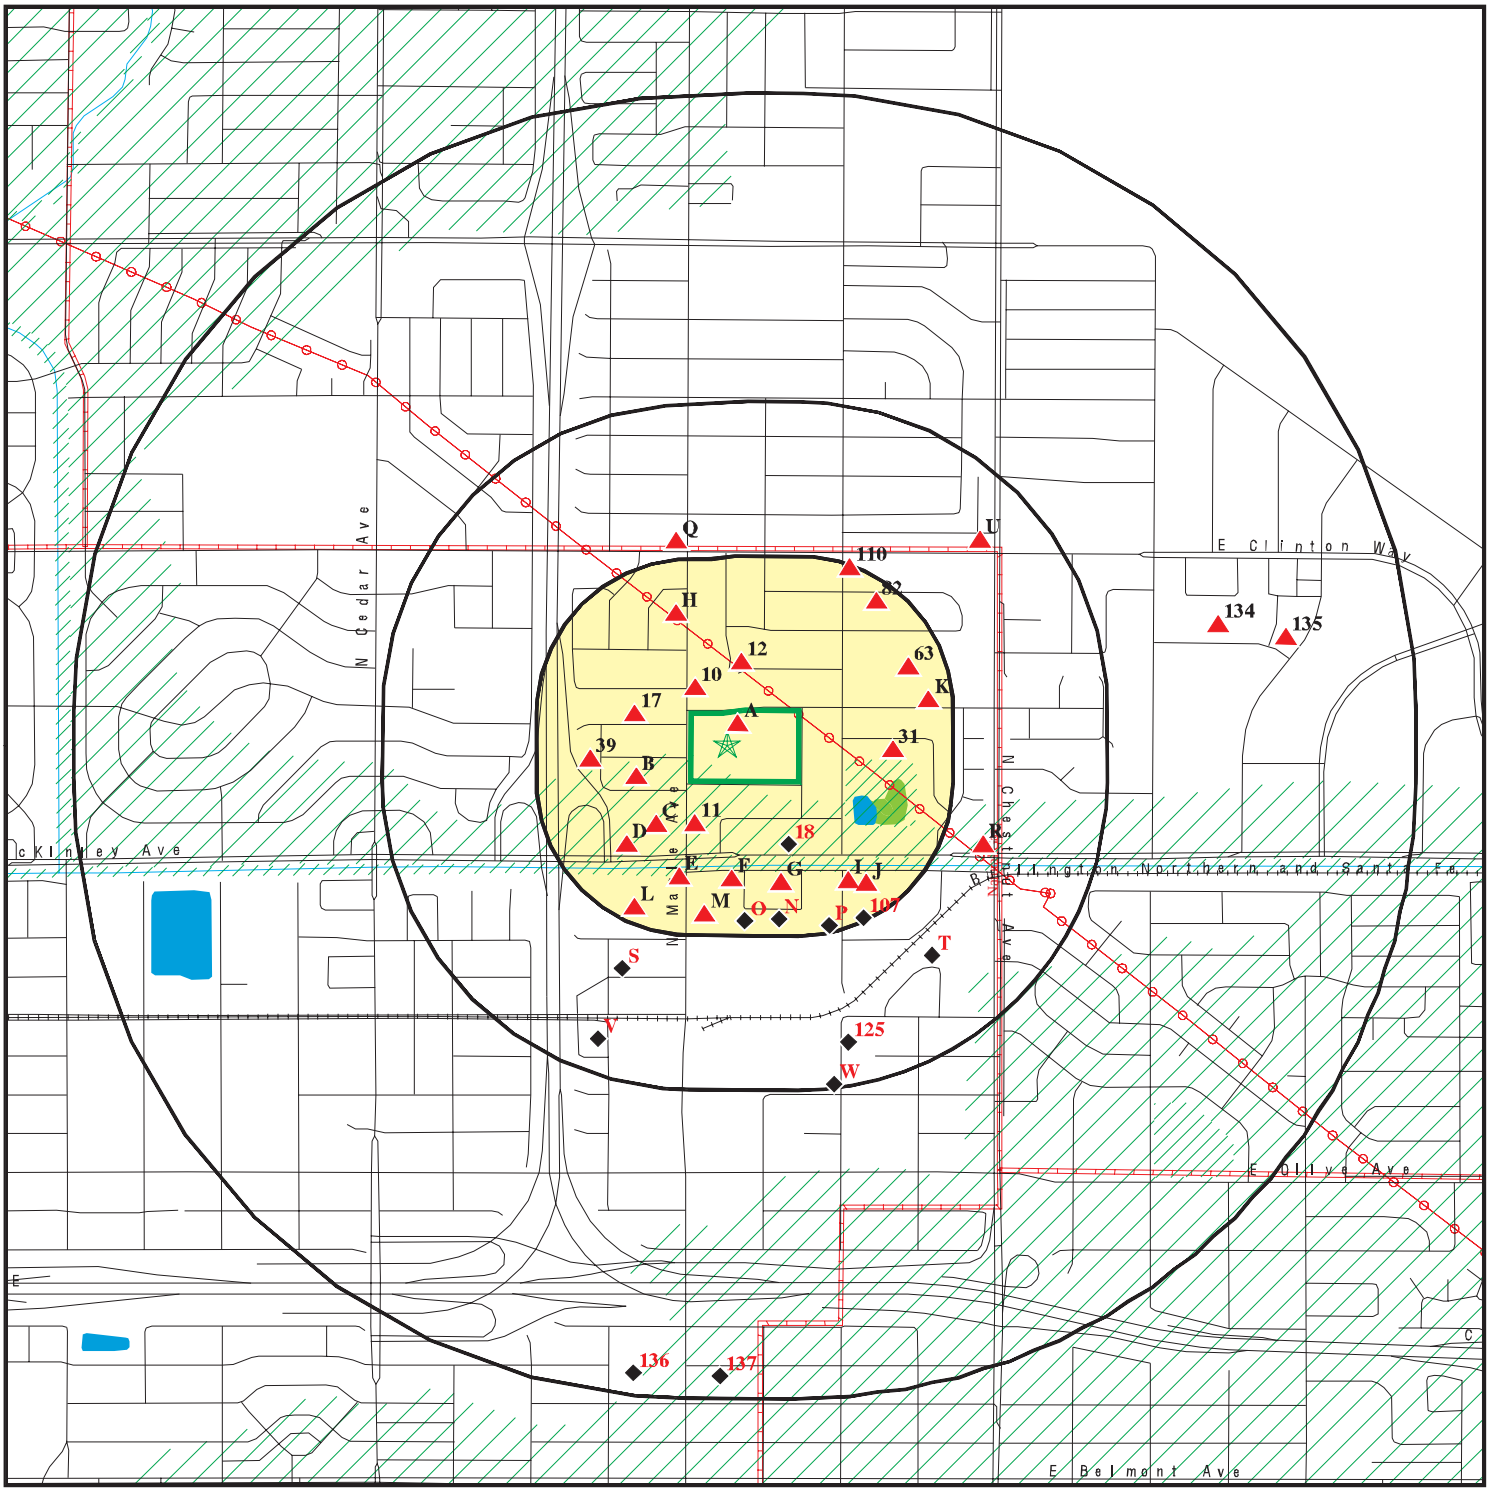

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	52. VIOLATION: Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SAN SIERRA BUSINESS SYSTEMS (Continued) **1000131821**

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Comments: Pursuant to the MOU, DTSC has prepared a Phase I Environmental Assessment for the Fresno Dialysis Clinic. The property, containing a one-story commercial office building, is intended for the relocation of their existing dialysis clinic. A Phase I Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/22/2025

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

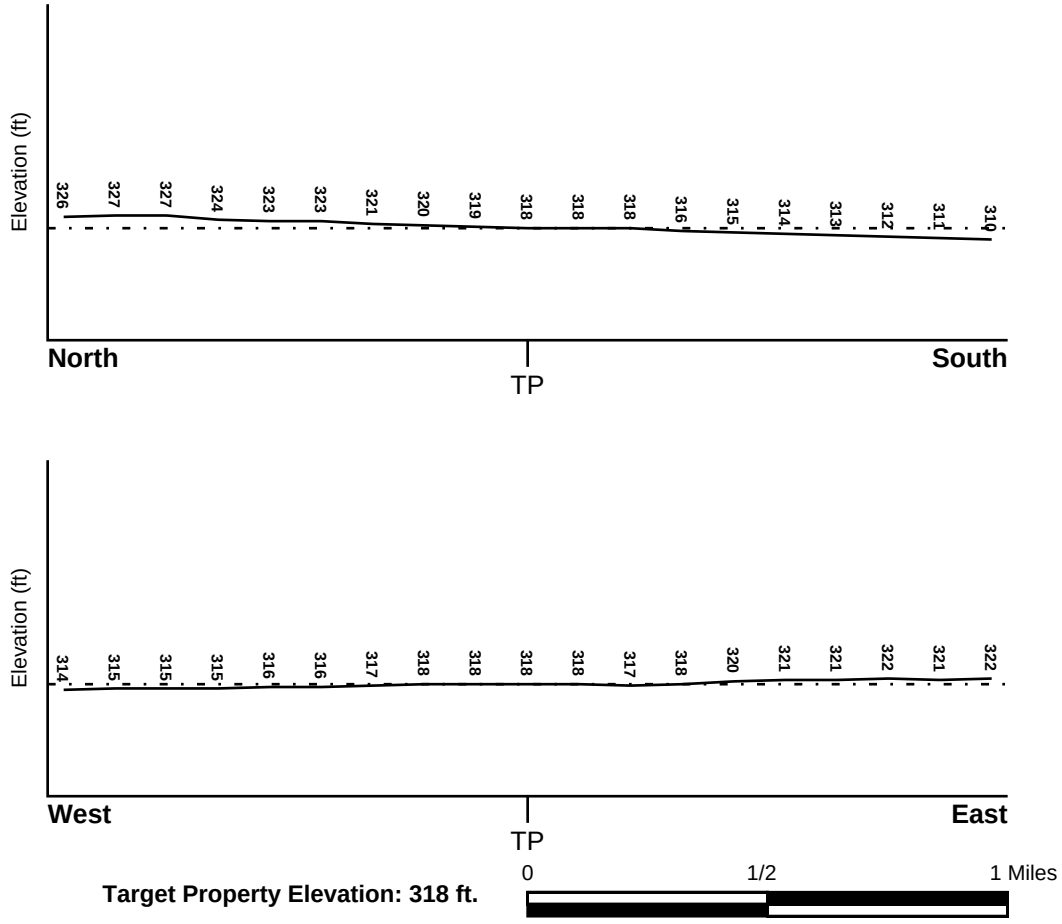

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06019C1590H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06019C1570H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CLOVIS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ATWATER

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	24 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.6
2	24 inches	42 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.6
3	42 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.6

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: stratified sand to loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	3 inches	59 inches	stratified sand to loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	0 inches	3 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Map ID: 3

Soil Component Name: GREENFIELD

Soil Surface Texture: cemented

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	38 inches	42 inches	cemented	Not reported	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	0 inches	16 inches	sandy loam	Not reported	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
3	16 inches	38 inches	sandy loam	Not reported	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1

Soil Map ID: 4

Soil Component Name: HANFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1
2	16 inches	72 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

Orphan Well Prioritization Listing
California Department of Conservation
Telephone: 916-445-9686
Includes locations of wells included in the California State Well Plugging and Sealing Project, managed by CalGEM (California Geologic Energy Management Division).

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Certerra were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Certerra were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # E5EE-45DF-95DE

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

USER QUESTIONNAIRE

CERTERRA
RMA GEOSCIENCE

USER QUESTIONNAIRE

ASTM E 1527-21

(1) Environmental liens that are filed or recorded against the subject property (40 CFR 312.25).

Did a search of land title records (or judicial records where appropriate) identify any environmental liens filled or recorded against the subject property under federal, tribal, state, or local law? N/A

(2) Activity and use limitations that are in place on the subject property or that have been filed or recorded in a registry against the subject property.

Did a search of land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state, or local law? Please refer to Title 5, Division 1, Chapter 13, Subchapter 1 "School Facilities Construction" for applicable state laws for school sites in California.

(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? The property has been operated by a school district since at least 1920, and the surrounding properties are single family residences, unrelated to this land use. The pesticides and herbicides used are in accordance with the California Healthy Schools Act.

(4) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the subject property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property? N/A. Property is not being purchased. There is no known contamination at the site that would affect value.

(5) Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

(a) Do you know the past uses of the subject property? Site has been owned and operated by a school district since at least 1920. Previous zoning was listed as AE-20. The County of Fresno may have more records on this.

(b) Do you know of specific chemicals that are present or once were present at the subject property? The older buildings contain ACBM in some areas, but no fiber release that we are aware of. Master AHERA asbestos management plans show locations of these. All pesticides & herbicides are in accordance with the California Healthy Schools Act.

(c) Do you know of spills or other chemical releases that have taken place at the subject property? No

(d) Do you know of any environmental cleanups that have taken place at the subject property? No

(6) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property? No

(7) Site Contact

Please identify and provide contact information of a Site Contact to setup an inspection of the subject property. Ronika Barnes - Project Manager (559) 457-3120 Ronika.Barnes@fresnounified.org
Derek Vedenoff - Environmental Health and Safety Supervisor (559) 457-3055 Derek.Vedenoff@fresnounified.org

(8) Key Site Manager

Please identify and provide contact information of a Key Site Manager with good knowledge of the uses and physical characteristic of the subject property. This may be the same as the Site Contact.
Ronika Barnes - Project Manager (559) 457-3120 Ronika.Barnes@fresnounified.org
Derek Vedenoff - Environmental Health and Safety Supervisor (559) 457-3055 Derek.Vedenoff@fresnounified.org

(9) Current or Former Owners, Occupants, and/or Operators

Please identify and provide contact information of any Current or Former Owners, Occupants, and/or Operators that we may contact about the subject property.
Site has been owned and operated by school districts since at least 1920. Contact FUSD for recent information.
Ronika Barnes - Project Manager (559) 457-3120 Ronika.Barnes@fresnounified.org
Armando Zinzun - Design Lead (559) 457-3703 Armando.Zinzun@fresnounified.org
Alex Belanger - Chief Executive(559) 457-6126 William.Belanger@fresnounified.org
Rick Hopelian - Business Operations Manager (559) 457-3705 Richard.Hopelian@fresnounified.org

(10) Prior Assessments

Are there any prior assessment reports, documents, or correspondence concerning the subject property which may be pertinent to the environmental professional? If so, please describe them and provide copies if possible.
All relevant information for these assessments will be found in the Master AHERA document on site.
There are no digital copies of this documentation.

(11) Other Relevant Information

Please use the remaining space to provide any other relevant information regarding the subject property.

Acronyms and Definitions

AUL Activity and Use Limitations

CFR Code of Federal Regulations

ESA Environmental Site Assessment

Engineering Controls

Physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Institutional Controls

A legal or administrative mechanism (for example, "deed restrictions" restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with effectiveness of a response action, in order to ensure maintenance of a conditions of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

User

The party seeking to use Practice E 1527-21 to complete an environmental site assessment of the subject property. A user may include, without limitation, a potential purchaser of subject property, a potential tenant of the subject property, an owner of subject property, a lender, or a property manager. A user seeking to qualify for an LLP to CERCLA liability, or a user that is an EPA Brownfield Assessment and Characterization grantee, has specific responsibilities for completing a successful application of this practice as outlined in Section 6 of ASTM E 1527-21.

INTERVIEW QUESTIONNAIRE
ASTM E 1527-21

In accordance with Section 10 of the Standard Practice for Phase I Environmental Site Assessments (ESA); Designation E1527-21 the environmental professional shall address questions to be asked of past and present owners, operators, and occupants of the subject property.

We ask that you complete the following questions to the best of your knowledge and return it to us at your earliest convenience for inclusion in the Phase I ESA.

1. Is there litigation or administrative proceedings relevant to hazardous substances or petroleum products? None to the knowledge of the district.

2. Are you aware of the existence of structures on site in the past? Yes
   If so, was there asbestos containing building materials in the structure? Some of the existing, older buildings contain ACBM. The Master AHERA management plan has the information on location.

3. Are there or has there ever been chemicals, pesticides or herbicides used, mixed or formulated on the subject property?
   Monthly pest and weed abatement services.
   If so, what types? No restricted chemicals have been used, stored, or mixed on site to our knowledge.
   Storage areas: N/A

4. Are there or has there ever been above ground or underground storage tanks at the subject property? We have no records of such tanks.
   Location N/A
   Contents N/A
   Permits N/A

5. Have any solid or liquid waste been disposed of, treated or neutralized on the subject property? No
   If so, what types N/A
   Permits N/A

6. Have there been any spills, leaks or other releases of chemicals on the subject property? No
   What chemicals?
   Quantity
   Cleanup measures?
   Are there any enforcement actions pending against the subject property?

7. Are you aware of any past uses of the subject property such as agricultural or commercial usage?
   Site was previously zoned as AE-20 some time before 1920. Please contact the County of Fresno for older information on the site.

City of FRESNO

Dear Jim Vue:

Thank you for your interest in public records of City of Fresno. Your request has been received and is being processed in accordance with the California Public Records Act (CPRA). Your request was received on 1/20/2026 and given the reference number R091181-012026 for tracking purposes. Your request mentioned:

> **Hi, I'm looking for building permits, applications, plans, and records for the following address.**
> **Address: 4636 East Weldon Avenue, Fresno, CA 93703**

If reassigned to the City Attorney's Office for processing, the City Attorney's Office will coordinate with other City Departments regarding the collection and review process of responsive records. Within 10 days of receipt of your request, you will be contacted about the availability of the records in question, unless the response time is extended by written notification to you. PLEASE NOTE: The CPRA does not require a governmental body to create new records to respond to a request, do legal research, or answer questions that seek information only and do not seek production of an existing public record.

You can monitor the progress of your request at the link below. You will receive an email if an extension of time is required and once your request has been completed.

If you have any questions or need additional information, please feel free to contact the City Attorney's Office at 559-621-7500. For Police Department requests, you may contact the Police Department's Record's Division at 559-621-2534.

Again, thank you for using the Public Records Center.

RE: PUBLIC RECORDS REQUEST of January 20, 2026, Reference # R091181-012026.

Dear Jim Vue,

The City of Fresno (City) received your public information request for records under the California Public Records Act (Gov. Code, § 7920.000 et seq.) on January 20, 2026. Your request seeks:

> *Hi, I'm looking for building permits, applications, plans, and records for the following address. Address: 4636 East Weldon Avenue, Fresno, CA 93703*

The City responds as follows:

The City has reviewed its files and has determined the request seeks records that are not in the custody and/or control of the City. You may consider contacting:

> *The Department of General Services.*
>
> *https://www.dgs.ca.gov/dsa.*

Please feel free to contact the Fresno City Attorney's Office at 559-621-7500 if you have any questions regarding this response or would like to provide additional information relating to your request.

Very truly yours,

Sheila Bess
Paralegal

CALIFORNIA DEPARTMENT OF GENERAL SERVICES

RE: Public Records Request of January 30, 2026, Reference # R001063-013026

Dear Staff Geologist Jim Vue,

The CA Department of General Services (DGS) received a public records request from you on January 30, 2026. Your request mentioned:

> **Hi there,**
>
> **I'm looking for building permits, applications, and records for the following property in Fresno, CA.**
> **Address: 4636 East Weldon Avenue, Fresno, CA 93703**
> **Property name: Norseman Elementary School (Fresno Unified School District)**

The CA Department of General Services (DGS) Division of the State Architect (DSA) has reviewed its files and has located responsive records to your request. Please log in to the Public Records Center at the following link to retrieve the responsive records.

Public Records Request - R001063-013026

DSA does not issue building permits. That's done at the local level.

For questions or additional information, please reply to this email.

Sincerely,

Mickie Ferrari
DSA - HQ

Sacramento, September 26, 1995

To Customer Service:

On October 1, 1995 the Pacific Bell Environmental Permit Desk will be centralized into one location, Sacramento. Our new mailing address is:

Pacific Bell - Permit Desk
P. O. Box 601883
Sacramento, California 95860-1883

Please mail any bills, permits or correspondence for all Pacific Bell locations in your area to our new location.

I would also like to have all permits mailed to me and I will take full responsibility of making sure that the permits are posted at the site location.

If you have any further questions, feel free to call me at 916-972-4086.

Thank you for your co-operation.

Sincerely yours,

Louana J. Uribe

Inter Office Memo

Date: 2-2-89

To: File

From: Peggy Wilkinson

Subject: 4731 E Carmen -

Rick Strider of Versar called to inform us that 3 soil borings have been completed and all samples analyzed showed - ~~none~~ non detected for all constituents. A written report will be sent to our office in 2-3 weeks. He indicated that soil aeration will be suggested by Versar as a remediation recommendation

HAZARDOUS MATERIAL EMERGENCY RESPONSE FORM

. **Business Identification**
Business Name PACIFIC BELL
Address 4734-E. CARMEN AVE, FRESNO
Mailing Address PO BOX 7631, DEPT 30, SAN FRANCISCO, CA 94120
Telephone 209-454-4560

2. **Describe Procedures Used to Prevent a Hazardous Materials Release:** TRAINING: Employees are provided training annually through the Pacific Safety Plan modules on how to handle hazardous materials and how to read MSDSs as required by the Federal Hazard Communication Standard. Additionally annually they are trained on Emergency Operating procedures. (Pacific Safety Plan / SI 131-5).

MATERIALS: Hazardous materials are utilized and stored following manufacuters recommendations as we are a consumer of products and not a manufacturer of hazardous materials.

4. **Describe Procedures to Reduce Damage in the Event of a Hazardous Materials Release:**

BATTERY ELECTROLYTE:Electrolyte is contained in batteries and batteries are secured in specially designed battery racks which work in conjection with earthquake bracing. DIESEL/GAS/OIL/ANTIFREEZE:Under/above ground tanks are tested frequently to maintain the integrity of tank contents.

NITROGEN/ACETYLENE: Compressed gasses are stored in a controlled and separate area. Nitrogen tanks have safety caps.

. **Describe Procedures for Immediate Notification and Evacuation of Business Site:** The Building Warden/Site Manager is responsible for following these steps as outlined in the Emergency Operating procedures outlined in SI 131-5: (1) Determinining the nature, location, magnitude and severity of the incident(2)Move people away from the area as appropriate, (3)Avoid inhalation of all gasses, fumes or smoke (4)Contain material as appropriate by arranging physical barriers, use of sorbents (ie.,dirt,oil, baking soda or other absorbent material) (5)Notify appropriate emergency personnel.

5. **Emergency Notifications**
Are all employees instructed regarding emergency telephone numbers? yes

°9-1-1 for police, fire, and medical
°488-3111 for Fresno County Environmental Health
°(800) 852-7550 State Office of Emergency Services

Are all employees instructed regarding notification of emergency facility personnel? yes

6. **Describe Employee Emergency Response Training for:**

(1) **New employees:** Employees are provided initial Safety Plan training on the HAZARD RECOGNITION?COMMUNICATION module as well the function specific modules before they begin their work oper ons. This also includes training on the Emergency Operating Procedures. (Pacific Safety Plan/ SI 131-5)

(2) **Refresher:** The Pacific Safety Plan requires that employees receive annual refresher training on the HAZARD RECOGNITION / COMMUNICATION module, function specific safety modules and the Emergency Operating Procedures Instructions (Pacific Safety Plan / SI 131-5).

(3) **Safe Handling of Hazardous Materials:**

SEE LEFT SIDE OF THIS PAGE 1ST PARAGRAPH: "DESCRIBE PROCEDURES USED TO PREVENT A HAZARDOUS MATERIALS RELEASE:.

(4) **Proper Use of On-site Emergency Response Equipment:**

SEE ITEM 6 (1) and (2).

(5) **Procedures for Coordinating Activities with Response Agencies:**

SEE LEFT SIDE OF THIS PAGE 3RD PARAGRAPH: "DESCRIBE PROCEDURES FOR IMMEDIATE NOTIFICATION AND EVACUATION OF BUSINESS SITE".

7. **Certification:**

I certify that the above information will be used to fulfill my business's obligations under the laws and that inaccurate information constitutes perjury under the law.

FRESNO COUNTY DEPARTMENT OF HEALTH
ENVIRONMENTAL HEALTH SYSTEM

GENERAL CRITERIA FOR SUBSURFACE ASSESSMENT/REMEDIATION ACTIVITIES

Variations to any General Criteria may be appropriate on a site specific basis and should be discussed with FCDH prior to the initiation of any investigation.

1. All environmental assessments and/or remedial actions shall be preceded by a written workplan which is to be submitted to Fresno County Department of Health (FCDH) for review and comment prior to the commencement of work. The workplans should fully describe soil and water sampling procedures which are consistent with generally accepted engineering principles and practices.

2. Samples are to be analyzed for constituents representative of known and/or suspected contaminants of concern.

3. Documentation of the precision (reproducibility) and accuracy (use of spiked samples) of the chemical analytical methodology used for the assessment may be required from the laboratory performing the analyses.

4. Workplans and/or reports of remedial excavation operations shall include a scale diagram depicting excavation limits, existing site features, confirmation sample locations and depths and shall outline in detail the handling and disposition of contaminated soil. All excavation procedures shall conform to appropriate CAL-OSHA requirements. Contractors designated to perform work at sites where soil has been impacted by hydrocarbon constituents should possess a General Engineering "A" license and/or demonstrate experience handling hazardous materials.

5. All work and reports which require geologic or engineering evaluations and/or judgements must be performed under the direction of an appropriately registered or certified professional (Business and Professions Code Section 6735, 7835, 7835.1).

6. Workplans for environmental assessments should include a statement from a property owner, responsible party, or other interested party stating what response, if any, is needed or expected from FCDH following submission of the results of the investigation.

7. All reportings of soil and/or water sampling events must be accompanied by a site plan depicting sampling locations and all pertinent site features (i.e., former or existing tank locations, etc.).

8. Excavated soil, drill cuttings from soil borings, liquid generated by rinsing drilling equipment, liquid purged from groundwater monitoring wells and any other hazardous or potentially hazardous waste generated by any assessment,

Reference: Letter Workplan for Abandonment of the Vapor Extraction Well at the Pacific Bell Facility at 4734 East Carmen Avenue, City of Fresno, Fresno County, California; Versar Project No. 2362-001

Dear Mr. Armstrong:

We have reviewed the letter from your office dated May 9, 1990 regarding site closure and well abandonment included as Attachment I. In response, Versar, Inc. (Versar) is submitting on behalf of Pacific Bell this letter workplan and vapor extraction well abandonment application. A site location map is included as Figure 1 in Attachment II. Versar is planning to perform the following tasks in the proper abandonment of the 65-foot well at the site:

- Remove protective well box by overdrilling with 12-inch diameter coring equipment.
- Overdrill the entire length of the well with 10-inch outside diameter (O.D.) hollow-stem augers. The well will be overdrilled with no center bit, allowing for the casing to remain intact. The cuttings produced during overdrilling will be placed in 55-gallon drums approved by the Department of Transportation (DOT) and stored onsite until proper disposal is arranged and approved.
- Remove casing and place in 55-gallon DOT-approved drums.
- Backfill the open boreholes by treming a mixture of neat cement with less than 5% bentonite to ground surface.

It is our understanding that by conducting these tasks, we will have successfully abandoned the vapor extraction well. The tasks outlined are currently scheduled to be performed by a Versar representative and a C-57 licensed well driller on December 23, 1993. I will contact you within 24 to 48 hours before this event in order to verify that you have received and reviewed this letter workplan and the enclosed vapor extraction well abandonment application. At that time, I will be happy to address any additional concerns you may have.

If you have any questions or comments regarding the contents of this letter, please do not hesitate to contact me at (916) 962-1612.

Sincerely,

Philip Cox

SUBJECT: Certification of Response Action
LOCATION: 4734 E. Carmen, Fresno, Ca

Dear Mr. Watt:

This letter confirms the completion of a site investigation and/or remedial action with regard to a release of hazardous substances or waste in relation to underground storage tanks at the above site, as per our meeting on December 8, 1989. With the provision that the information provided to this office is accurate and representative of existing conditions,no further action is required at this time.

The site should now be properly closed, including backfilling or destruction of any monitoring/sampling/venting wells.

We are required by the State to advise you that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health. Additionally, changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

Further, nothing in the above determination: 1) is intended or shall be construed to limit the rights of any parties with respect to claims arising out of or relating to deposit or disposal at any other location of substances removed from the site: 2) is intended or shall be construed to limit or preclude the County or any other agency from taking any action authorized by law, including, but not limited to, any further enforcement actions. Notwithstanding compliance with any previous directives, you may be required to take further actions as are necessary to protect public health and the environment.

Please call me at (209) 445-3271 if you have any questions.

Respectfully,

Peggy Wilkinson

Versar INC. SACRAMENTO

November 14, 1989

RECEIVED
NOV 16 1989
ENVIRONMENTAL HEALTH SYSTEM
FRESNO COUNTY DEPT. OF HEALTH

Mr. Simeon Bugay, Air Quality Engineer
Fresno County Department of Health
Air Pollution Control District
1221 Fulton Mall
P.O. Box 11867
Fresno, California 93775

Reference: Results of Air Sampling at the Pacific Bell Facility Located at 4734 East Carmen Avenue, Fresno, California (SB-055); Versar Job No. 6264.309.3

Dear Mr. Bugay:

The purpose of this letter is to present the results of the laboratory analyses of vapor emission samples collected on October 4 and October 17, 1989, from the soil vapor recovery system (SVX) presently in operation at the Pacific Bell East Carmen Avenue facility in Fresno. On each occasion, one vapor sample was obtained from each of the SVX's three sampling ports (proximal, medial, and distal). Sampling methodologies and sample labeling were unchanged from those described in the previous sampling report dated September 25, 1989. The vapor samples were delivered to Trace Analysis Laboratory where they were analyzed for total petroleum hydrocarbons as gasoline (TPH-g) and benzene, toluene, ethylbenzene, and xylenes (BTEX) by Modified Method CA-ADDL004.

The analytical results from the October 4, 1989, sampling indicated that the activated carbon was saturated with contaminants. The saturation resulted in a breakthrough to the atmosphere of 9.14 pounds per day (ppd) of TPH-g along with 0.02 ppd of BTEX compounds. As a result the spent carbon was exchanged for fresh activated carbon on October 13, 1989, by representatives of Westates Carbon, Inc. The spent carbon was sealed in DOT-approved, 55-gallon steel drums, and retained on site for future collection and transportation to a carbon regeneration station. Air flow, temperature, and vacuum readings obtained during the October 4 sampling are given in Table 1, Attachment I. The results of the laboratory analyses of those samples are summarized in Table 2, Attachment I. The calculated daily rates of extraction and discharge for TPH-g and individual BTEX compounds based on the results of the analyses are shown in Table 3, Attachment I. The laboratory analytical results with Versar's chain of custody are included as Attachment II.

The analytical results from the October 17, 1989, sampling indicated that atmospheric discharge was 0.08 ppd of TPH-g and 0.02 ppd of BTEX at that time. The rate of contaminant extraction was 3.54 ppd of TPH-g and 0.59 ppd of BTEX. Air flow, temperature, and vacuum readings obtained

5330 PRIMROSE DRIVE • SUITE 228 • FAIR OAKS, CALIFORNIA 95628
TELEPHONE: (916) 962-1612 • FAX: (916) 962-2678

during the October 17 sampling are given in Table 4, Attachment I. Table 5, Attachment I, summarizes the laboratory analytical results of that sampling, while Table 6, Attachment I, gives the calculated daily extraction and discharge rates for TPH-g and individual BTEX compounds based upon the analyses. The laboratory analytical results with Versar's chain of custody are included as Attachment III.

Laboratory analyses of the October 4 and October 17 vapor samplings indicate that the quantities of contaminants being extracted are essentially constant. During that period, approximately 3.5 pounds of TPH-g and 0.5 pounds of BTEX were being removed from the soil on a daily basis. At these extraction rates, saturation of the activated carbon by contaminants is expected approximately 100 days after the October 13, 1989, carbon exchange. Vapor sampling will continue on a regular basis to document the rate of contaminant extraction. Those results will be presented to you as soon as they are available.

Should you have any questions, please do not hesitate to call me at (916) 962-1612.

Sincerely yours,

Kayo Dokken

Dear Mr. Kleinecke:

Trace Analysis Laboratory received three air samples for your Project No. 6264.3093.3, Pac Bell - Fresno on October 4, 1989, (our custody Log No. 7906).

The samples were analyzed for Total Petroleum Hydrocarbons as Gasoline and for Benzene, Toluene, Xylenes, and Ethyl Benzene. Our analytical report, the completed chain of custody form, and our analytical methodologies are enclosed for your review.

If you should have any questions or require additional information, please call me.

Sincerely yours,

BENZENE, TOLUENE, XYLENES, AND ETHYL BENZENE (BTXE)
FOR AIR

Method:

This method is based on California method ADDL004, August 27, 1985, by the Air Resources Board, State of California. This method uses alternative sample introduction and gas chromatographic conditions as specified below.

Sample Preparation:

There is no sample preparation.

Sample Introduction:

Air samples are introduced to the gas chromatograph (GC) through a purge and trap device.

A gas tight syringe is used to draw a sample from the Tedlar bag or sample canister. The sample is slowly injected into the purge and trap, and is adsorbed onto the trap. The trap is then heated, and the sample is thermally desorbed into the GC column.

Gas Chromatography Analysis:

The volatile organics are separated on a 6-ft x 2 mm I.D. gas chromatography column packed with 5% SP-1200/1.75% Bentone-34 on Supelcoport. A photoionization detector (PID) is used to detect (BTXE). The PID is followed by a flame ionization detector (FID).

Gas Chromatograph Conditions:

CARRIER GAS:	Nitrogen
FLOW RATE:	30 ml/min.
INJECTOR TEMPERATURE:	240° C
DETECTOR TEMPERATURE:	270° C
INITIAL TEMPERATURE:	50° C - Hold for 2 minutes
PROGRAM RATE:	6° C/min.
FINAL TEMPERATURE:	90° C - Hold for 17 minutes

Calculation:

BTXE are identified by comparing the retention times of the sample peaks to those of the standards. BTXE are quantified by comparing the area of the sample peaks to those of the standards. If BTX or E is present, and total petroleum hydrocarbons as gasoline (TPH-G) is not, the analysis is confirmed by using a second column or a gas chromatograph mass spectrometer (GC/MS).

TAL

TOTAL PETROLEUM HYDROCARBONS AS GASOLINE (TPH-G)
FOR AIR

Method:

This method is based on California method ADDL004, August 27, 1985, by the Air Resources Board, State of California. This method uses alternative sample introduction and gas chromatographic conditions as specified below.

Sample Preparation:

There is no sample preparation.

Sample Introduction:

Air samples are introduced to the gas chromatograph (GC) through a purge and trap device.

A gas tight syringe is used to draw a sample from the Tedlar bag or sample canister. The sample is slowly injected into the purge and trap, and is adsorbed onto the trap. The trap is then heated, and the sample is thermally desorbed into the GC column.

Gas Chromatography Analysis:

The volatile organics are separated on a 6-ft x 2 mm I.D. gas chromatography column packed with 5% SP-1200/1.75% Bentone-34 on Supelcoport. A flame ionization detector (FID) is used to detect total petroleum hydrocarbons as gasoline (TPH-G). The FID is preceded by a photoionization detector (PID).

Gas Chromatograph Conditions:

CARRIER GAS:	Nitrogen
FLOW RATE:	30 ml/min.
INJECTOR TEMPERATURE:	240° C
DETECTOR TEMPERATURE:	270° C
INITIAL TEMPERATURE:	50° C
Hold for 2 minutes	
PROGRAM RATE:	6° C/min.
FINAL TEMPERATURE:	90° C
Hold for 17 minutes	

Calculation:

TPH-G is quantified by comparing the sum of the area of peaks from the sample to the sum of the area of peaks in the gasoline standard.

Dear Mr. Dokken:

Trace Analysis Laboratory received three air samples for your Project No. 6264.309.3, PBF on October 19, 1989, (our custody log No. 7964).

The samples were analyzed for Total Petroleum Hydrocarbons as Gasoline and for Benzene, Toluene, Xylenes, and Ethyl Benzene. Our analytical report, the completed chain of custody form, and our analytical methodologies are enclosed for your review.

If you should have any questions or require additional information, please call me.

Sincerely yours,

Ishaque Khalil

Dear Mr. Wat,

The workplan submitted regarding the subject location is hereby approved by the County Health Department, subject to any amendments agreed to in consultation with me and noted below.

You should now secure any County subsurface site assessment and drilling permits, State hazardous waste manifests, etc., necessary to perform the work.

Please ensure that copies of all analyses and reports relating to the project are forwarded to this office. Upon completion of the project, the final report must be reviewed by the County in order for you to receive certification that no further action is necessary.

Please call me at (209) 445-3271 if you have any questions.

Respectfully,

Peggy Wilkinson

Peggy Wilkinson, R.E.H.S.
Environmental Health Analyst
Environmental Health System

Workplan Amendments:

1) This approval is for the boring to be drilled to a maximum of 65 feet. Every sample obtained at 5 foot intervals beginning at 25 feet shall be analyzed. All samples shall be analyzed for BTXE and TPH - Gas. This approval does not include the soil venting air extraction system at this time.

Reference: Progress Report of Remediation at the Pacific Bell Facility Located at 4734 East Carmen Avenue, Fresno, California (SB-055) Versar Job No. 6264.309.3

Dear Mr. Wat:

The purpose of this letter is to summarize the findings of the remedial underground storage tank pit excavation and to present a proposal for the installation of a soil venting vapor extraction system at the Pacific Bell facility at 4734 East Carmen Avenue, Fresno, California.

INTRODUCTION

During the period from May 17 to May 26, 1989, Versar completed the remedial excavation and backfilling of a underground storage tank pit located at the Pacific Bell facility at 4734 East Carmen Avenue in Fresno, California. The location of the facility is shown in Figure 1, Attachment I. Approximately 130 cubic yards of contaminated soil as well as additional noncontaminated soil were removed from the ground beneath the former site of a leaking underground fuel storage tank. The plume of contamination was found to have penetrated a hardpan layer at the southern end of the pit at a depth of 25 feet below the surface and has extended beyond the reach of excavation at this time.

OVERVIEW OF PREVIOUS WORK

On November 14, 1988, a 6,000-gallon unleaded gasoline underground storage tank was removed from the site by LBME Corporation. The facility layout and site of the underground tank is shown in Figure 2, Attachment I. Soil samples collected from beneath the tank were determined to contained petroleum hydrocarbons. As a result, the tank pit which ranged in depth from approximately 13 to 15 feet was left open and enclosed within a fence The laboratory analytical results and additional data obtained during the tank removal were reported by Versar in a letter report dated December 5, 1988.

On January 4, 1989, a site assessment was conducted which consisted of drilling three investigative boreholes around the perimeter of the tank pit to a depth of approximately 31.5 feet below the surface. A borehole

5330 PRIMROSE DRIVE • SUITE 228 • FAIR OAKS, CALIFORNIA 95628
TELEPHONE: (916) 962-1612 • FAX: (916) 962-2678

was not drilled through the center of the pit due to the depth of the existing excavation pit. No contamination was identified during analyses of borehole samples. The results of the site assessment were detailed in the report entitled "Site Assessment of the Pacific Bell East Carmen Avenue Facility (SB-055)," dated February 16, 1989. Based upon the available data, a remediation plan was developed for the excavation and aeration of the contaminated soil. The remediation plan was submitted as part of the site assessment report. A permit was issued to excavate and aerate the soil by the County of Fresno Department of Health, Environmental Health System and Air Pollution Control District, respectively.

EXCAVATION OF CONTAMINATED SOIL

On May 17, 1989, remedial activities began at the Pacific Bell facility to extend the tank pit excavation and remove the gasoline contaminated soil. The previously existing tank excavation pit measured approximately 23 by 13 feet and ranged from 13 to 15 feet deep. An excavator extended the pit depth to approximately 25 feet overall, which required benching to a depth of approximately 10 feet.

During the excavation soil samples were obtained from the side walls and the bottom of the pit in order to determine the extent of the contamination. The samples were analyzed for total petroleum hydrocarbons (TPH) by EPA Method 8015M and for benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8020. The reporting limits for the analyses were 10 milligrams per kilogram (mg/kg) TPH and for BTEX .05, .10, .20, and .10 mg/kg, respectively. The locations of the samples are shown in Figures 3 and 4, Attachment I. The analyses were performed on site with a mobile laboratory by Western Environmental Science and Technology. Two samples were obtained from each side wall of the excavation at approximately 10 and 15 feet below the surface (SN, SE, SS, SW = Side North, East, South, and West). The north, west, and south side wall samples were below the reporting limit (BRL) for TPH and BTEX. On the east side wall sample SE-10 was BRL for TPH, benzene, toluene, and ethylbenzene but contained .22 mg/kg xylenes. A foot of side wall was subsequently removed from the area of sample SE-10. Sample SE-15 taken from beneath SE-10 was BRL. As the pit was extended, bottom samples from the north end were obtained at 18 and 22 feet, while at the south end samples were obtained at 18, 24, 26, and 28 feet below the surface. Samples from 18, 22, and 24 feet were obtained from soft, loose, slightly moist silty sand which extended from approximately 17 to 25 feet below the surface. A hardpan layer up to one foot thick extended to approximately 26 feet from which sample BS-26 was obtained. Below the hardpan, soft, loose, slightly moist silty sands were again encountered. From the north end of the pit sample BN-18 (Bottom North at 18 feet) was found to contain 190 mg/kg TPH as well as .07 mg/kg benzene, .15 mg/kg toluene, and 1.9 mg/kg xylenes,

while ethylbenzene was BRL. Sample BN-22 was BRL for all analytites. From the south end of the pit sample BS-18 (Bottom South at 18 feet) was found to contain 3700 mg/kg TPH and 28, 194, 72, and 660 mg/kg of BTEX, respectively. BS-24 contained 5000 mg/kg TPH while BTEX were 17, 184, 85, and 720 mg/kg. Within the hardpan layer levels of contamination dropped off to 90 mg/kg TPH and 2.5, 2.3, 0.78, and 4.5 mg/kg BTEX. Once the hardpan was breached, vapors became increasingly noticeable around the pit. Through the breached hardpan, sands were removed from one location to a depth of approximately 28 feet where a sample was obtained. Analyses of that sample identified 10,000 mg/kg TPH and 61, 340, 160, and 820 mg/kg BTEX. The laboratory analytical results are summarized in Table 1, Attachment I, while the report of the laboratory analyses is included in Attachment II.

The laboratory analytical results were conveyed to Ms. Peggy Wilkinson of the Department of Health, Environmental Health System. Ms. Wilkinson concurred with the engineering determination that no further contamination could be excavated from the site, and that the pit should be backfilled to ensure the integrity of the site. The pit was returned to grade in one foot lifts and compacted with a vibrating plate compactor. Once returned to bench grade, a sheepsfoot rolling compactor was also used. Compaction was made to 90% or greater, with testing and certification done by Twining Laboratories, Inc. The surface was covered with a four inch base of grade rock compacted to greater than 90% and covered by two inches of asphalt. The surface grade matched that of the surrounding pavement.

The contaminated soil removed during both phases of excavation were laid out upon plastic sheeting to an approximate depth of six inches. A rototiller was passed through the soil three times to break up the numerous soil clods present and the compaction caused by the tires of the loaders driving over the soil. The soil was divided into four quadrants, (South East, South West, North East, and North West Quadrants) from each of which a composite sample was obtained for analyses. Samples SEQ-1, SWQ-1, NEQ-1, and NWQ-1 contained 59, 20, 19, and 80 mg/kg TPH, respectively. BTEX were BRL for all samples except for SEQ-1 which contained .12 mg/kg benzene and NWQ-1 with .13 mg/kg benzene. The soil samples were analyzed for TPH and BTEX, the results of which are summarized in Table 2, Attachment I, while the report of the laboratory analyses is included in Attachment II. Approximately 70 cubic yards of soil were covered with plastic to control hydrocarbon emissions.

SOIL VENTING AIR EXTRACTION SYSTEM

The plume of hydrocarbon contamination which originated in the underground unleaded gasoline storage tank has extended beyond the reach of further excavation. Minimal lateral movement of contamination is present based on the analyses of soil samples from the boreholes

north end of the excavation below 18 feet. In the south end of the excavation, a vertical plume is documented by the consistently high levels of contamination present which penetrated the hardpan layer at 25 feet and extends down to a undetermined depth. It is unknown if the contamination could have reached the aquifer, which is reported to be at a depth of approximately 80 feet below the surface.

In order to determine the vertical extent of the plume and develop a remediation system in one operation, a soil venting vapor extraction system is recommended. The system would be enplaced in two phases: 1) the determination of the plume depth and installation of a soil venting system and 2) the addition of an vapor extraction system with air quality emission controls.

A 10 inch outside diameter (OD) borehole would be drilled directly over the known vertical plume. Beginning at approximately 25 feet below the surface, soil samples would be obtained at five foot intervals using a decontaminated California-modified, split-spoon sampler. From each sampler, one sample would be preserved for laboratory analyses. Decontamination and sampling methods are outlined in Attachment III. A second sample would be placed in a clean container, covered with foil, and after approximately 10 minutes a headspace measurement obtained. The borehole would be extended to at least 10 feet below the deepest identified contamination. In no case will the borehole be extended to a depth of more than 65 feet below the surface, which is 15 feet above the level of the uppermost aquifer at 80 feet below the surface.

In the borehole a soil venting system will be constructed with the installation of a vapor extraction well. Four-inch inside diameter well screen will be inserted in the borehole with a screened interval (0.020 inch slots) extending from approximately 24 feet to the bottom of the hole which will terminate in a threaded end cap. Blank casing will be installed from 24 feet to the surface. A coarse sand pack (#3 sand) would be installed around the casing to 23 feet above which would be a two foot bentonite seal followed by neat cement to the surface. The casing will be sealed with a locking cap and secured within the traffic box. The soil venting well is shown in Figure 5, Attachment I. The samples will be submitted for laboratory analyses for TPH by EPA Method 8015M and for BTEX by EPA Method 8020. The results of the analyses will be submitted to the County of Fresno, Department of Health, Environmental Health System and Air Pollution Control District.

VAPOR EXTRACTION AND REMEDIATION

After review of the laboratory analytical results, the vapor extraction well will be connected to a Carbtrol SVX Soil Venting System (SVX). The SVX consists of a dehumidifier and blower with vacuum,

temperature, pressure, and flow monitoring capabilities along with inline sampling of air. The SVX has a capacity of 105 cubic feet per minute (cfm) at six inches of mercury. The system will discharge to a carbon absorption system consisting of two or more inline canisters of a size yet to be determined. Figure 6, Attachment I shows the system schematic. If the SVX system is determined to be too large for the job requirements, a smaller system of comparable quality may be substituted.

Emission monitoring of the effluent air will occurs at two locations: 1) at the sampling port proximal to the carbon canisters and 2) at the atmospheric vent distal to the carbon canisters. Emission monitoring will be accomplished using a field instrument, i.e. Photo Ionization Detector (PID) or an Organic Vapor Analyzer (OVA) with detection limits of 0.1 parts per million of total organic vapors. The monitoring will occur on the following schedule:

1) Continually during system start up
2) Every hour for four hours
3) Every two hours for eight hours
4) Every six hours for 48 hours
5) Weekly for the duration of the vapor extraction

More frequent monitoring will occur if needed.

Adjustments will be made in the number of cfm of air flow through the SVX so that the effluent discharge meets the permit requirements of the Air Quality Control District. Initial soil vapor concentrations may be significantly above the lower concentration explosive limit (LEL) which is 1.4% by weight for gasoline vapors according to "Dangerous Properties of Industrial Materials", Fifth Edition, By N. Irving Sax. Therefore, initial startup of the system will be with the dilution valve fully open and gradually closed as continual monitoring of air at the proximal sampling port occurs to ensure the safe operation of the system. It should be noted that the SVX system has an explosion proof motor and controls as well as a spark proof aluminum exhaust impeller.

Charcoal canisters will be changed as necessary to meet the discharge requirements. The used canisters will be regenerated at a facility as yet to be determined. The entire system will be in operation until analyses of air samples for TPH and BTEX are BRL or are deemed no longer needed by the County of Fresno, Department of Health, Environmental Health System.

If you have any questions regarding this information, please do not hesitate to call me at (916) 962-1612.

Yours sincerely,

Kaye Dokken
Geohydrologist

Subject: Analytical Results for 15 Soil Samples from the Pacific Bell Service Facility at 4734 East Carmen Street, Fresno, CA, Received and Analyzed on May 18 and 19, 1989.

Dear Mr. Dokken:

Analysis of the samples referenced above has been completed. This report is written to confirm results transmitted verbally on May 18 and 19, 1989 and describes procedures used to analyze the samples.

Samples were received in brass sleeves sealed with aluminum foil and plastic endcaps. Each sample was received under documented chain of custody, assigned a consecutive log number and stored at 4 degrees C until analysis commenced.

Samples were analyzed for content of Total Petroleum Hydrocarbons as Gasoline (modified EPA Method 8015) and Benzene, Toluene, Ethylbenzene, and Total Xylenes (EPA Method 8020). Samples were prepared for analysis by purge-and-trap concentration and analyzed by a gas chromatograph with a photoionization detector in series with a flame ionization detector. The chromatographic response of each sample was compared to responses to known amounts of commercial gasoline and reagent grade benzene, toluene, ethylbenzene, and xylenes in order to determine the concentration of gasoline in each sample.

The analytical sequence involved instrument calibration at three concentration levels, analysis of method blanks, analysis of analyte-fortified (spiked) samples to assess method accuracy, analysis of replicates to assess method precision, and analysis of external reference standards to assess calibration accuracy.

Subject: Analytical Results for 4 Soil Samples from the Pacific Bell Service Facility at 4734 East Carmen Street, Fresno, CA, Received May 31, 1989 and Analyzed June 1, 1989.

Dear Mr. Dokken:

Analysis of the samples referenced above has been completed. This report is written to confirm results transmitted verbally on June 1, 1989 and describes procedures used to analyze the samples.

Samples were received in brass sleeves sealed with aluminum foil and plastic endcaps. Each sample was received under documented chain of custody, assigned a consecutive log number and stored at 4 degrees C until analysis commenced.

Samples were analyzed for content of Total Petroleum Hydrocarbons as Gasoline (modified EPA Method 8015) and Benzene, Toluene, Ethylbenzene, and Total Xylenes (EPA Method 8020). Samples were prepared for analysis by purge-and-trap concentration and analyzed by a gas chromatograph with a photoionization detector in series with a flame ionization detector. The chromatographic response of each sample was compared to responses to known amounts of commercial gasoline and reagent grade benzene, toluene, ethylbenzene, and xylenes in order to determine the concentration of the analytes of interest in each sample.

The analytical sequence involved instrument calibration at three concentration levels, analysis of method blanks, analysis of analyte-fortified (spiked) samples to assess method accuracy, analysis of replicates to assess method precision, and analysis of external reference standards to assess calibration accuracy.

Please refer to the following table for summarized analytical results and contact us if you have questions regarding procedures or results.

Attachment III

ATTACHMENT III

Collection of Samples

Decontamination Procedures

The decontamination procedures for field sampling containers and equipment are given below.

1. Well purging and sampling equipment is nondedicated. As such, it must be carefully cleaned prior to each use, as follows:

   a. Carefully brush off any loose foreign debris with a soft bristle brush.

   b. Rinse the equipment thoroughly in clean water.

   c. Wash the equipment in a nonphosphate detergent bath.

   d. Rinse thoroughly in clean water.

   e. Rinse thoroughly with deionized water.

   f. Rinse with acetone or hexane.

   g. Air dry in a dust-free environment.

   h. Store in sterile plastic bags or other suitable clean cover until use.

2. Clean, disposable gloves must be worn by all field personnel when handling decontaminated equipment.

3. A clean plastic apron will be positioned adjacent to or around the well riser in order to prevent equipment from coming into contact with surface materials. All purging equipment and lines must be kept on the apron or an adjacent plastic "clean area" following decontamination and when not in use.

Soil Sampling

Each soil core and drive sample will be subjected to field analysis with either a Foxboro Century 128 Organic Vapor Analyzer (OVA) meter or a Photovac Tip II Air Analyzer as soon as the sampling device is opened. Following this, a representative sample of the soil will be placed in a glass jar. The jar will be sealed and warmed allowing any hydrocarbons present to vaporize and collect in the headspace. The foil cover will be punctured and the probe of the field instrument inserted into the hole to detect any organic vapors present. During drilling, a minimum of four soil samples will be collected from each borehole. The samples will be collected in brass tubes and will be fitted with air tight end

caps. The tubes will be packed as full as possible with the soil to minimize the head space. Based on the results of the field headspace analysis and observations, selected samples will be analyzed for TPH and BTEX.

Analysis of Samples

All of the soil samples will be analyzed for TPH using EPA Method 8015M, and BTEX using EPA Method 8020, respectively. All of the quantitative chemical analyses will be performed by Trace Analysis Laboratory, Inc.

Field Quality Control

Sampling methods detailed in this sampling plan will be strictly adhered to; deviations or additions to this plan will be carefully documented in the field notebook. All field observations, field-generated forms, and labels will be noted and attached to the field notebook. Any photographs will be logged in the field notebook and labeled when returned from the developing laboratory.

Sample Handling

All samples will be collected, placed in containers, preserved, and analyzed within the time constraints consistent with applicable US EPA and California State procedures. All sample containers will be precleaned in accordance with prescribed EPA methods. Tape will be placed around all sample container lids to prevent leaks and to detect unauthorized tampering with individual samples following collection and prior to the time of analysis.

All samples will be tracked using Versar's standard chain of custody form, which is shown in Figure 1, Attachment III. The chain of custody record will include the following information:

1. Sample number
2. Signature of collector
3. Date and time of collection
4. Sample collection location
5. Sample type
6. Signature of persons involved in the chain of possession
7. Inclusive dates of possession
8. Analytical parameters
9. Pertinent field observations

The custody record will be completed using waterproof ink. Any corrections will be made by drawing a line through and initialing the error, then entering the correct information.

Custody of the samples begins at the time of sample collection and will be maintained by the sampling team supervisor until samples are relinquished for shipment to the laboratory, or until samples are hand

delivered to the designated laboratory sample custodian. Partial sample sets being accumulated for hand delivery to the laboratory will be stored in coolers with custody tape affixed.

Each sample shipment will be accompanied by a chain of custody record identifying its contents. The original record will accompany the shipment and the copy will be retained by the sampling team leader. The original (the top copy) will be enclosed in a plastic zip-lock bag and secured to the inside of the cooler lid with tape.

Site Safety Procedures

A designated site safety officer will be appointed for the investigation. Site personnel will wear gloves when handling the drill cuttings and samples. In addition, the drill cuttings and samples will be monitored with an analytical field instrument. If the site safety officer determines that harmful levels of organic vapors are present, all site personnel will don Tyvek coveralls and respirators. This equipment will be worn until the site safety officer determines that no harmful vapors are present.

Contaminated Materials Control

Drill cuttings recovered during the installation of the soil venting system will be added to the soil aerating on site and disposed of with that soil.

Reference: Remediation of Soil Contamination at the Pacific Bell Fresno Site (SB-055), 4734 E. Carmen, Fresno, California
Versar Inc. Job No. 6264.309.3

Dear Ms. Wilkinson,

The purpose of this letter is to acknowledge your correspondence of March 20, 1989, approving Versar's remediation plan for the Pacific Bell facility located at 4734 East Carmen, Fresno, California. The four amendments to the plan agreed to during consultation with you and outlined in your letter are addressed below.

1. A minimum of twelve soil samples will be obtained from the excavation pit and presented to your office for approval before the excavation is backfilled.

2. At least one sample shall be taken from each sidewall, including the east wall of the excavation. Two samples shall be taken from the bottom of the pit (one from each end).

3. The Fresno County Air Pollution Control District guidelines require aeration permits be obtained in person. This permit will be applied for and obtained prior to the start of aeration activities.

4. Chemwest Analytical Laboratories, Inc. performed the analyses during the tank removal project on a RUSH basis. During preparation for analyses, Chemwest found the sample to have a strong odor of hydrocarbon contamination. Because they suspected a high level of contamination, the sample was diluted in order for the analyses to be completed during the time available on a RUSH basis. The reporting limit of 5 mg/kg for benzene is the result of this dilution of a contaminated sample analyzed on a RUSH basis.

Should you have any questions please do not hesitate to call me at (916) 962-1612.

Yours truly,

James R Franks

Subject: Soil Aeration
Location: 4734 E. Carmen, Fresno

Dear Mr. Della-Rocco,

Based on the levels of organic chemicals as shown on the laboratory report dated November 22, 1988, the Fresno County Air Pollution Control District will accept aeration of contaminated soil at a rate of 60 cubic yards per day.

All contaminated soil shall be placed on an impervious surface to a depth not to exceed six (6) inches and will be turned over periodically. All contaminated soil which is not currently being aerated shall be covered with a water proof cover.

All confirmatory soil samples taken from aerated soil shall be analyzed for Benzene, Toluene, Xylene, Ethylbenzene and Total Petroleum Hydrocarbons.

Please call me at (209) 445-3271 if you have any questions.

Sincerely,

Peggy Wilkinson

County of FRESNO

Department of Health

George Bleth
Director

March 20, 1989

PACIFIC BELL
Design & Construction Property Management
3707 Kings Way
Sacramento, CA 95851

Subject: Workplan Approval (3/9/89)
Location: 4734 E. Carmen, Fresno

To Whom It May Concern:

The workplan submitted regarding the subject location is hereby approved by the County Health Department, subject to any amendments agreed to in consultation with me and noted below.

You should now secure any County subsurface site assessment and drilling permits, State hazardous waste manifests, etc., necessary to perform the work.

Please ensure that copies of all analyses and reports relating to the project are forwarded to this office. Upon completion of the project, the final report must be reviewed by the County in order for you to receive certification that no further action is necessary.

Please call me at (209) 445-3271 if you have any questions.

Respectfully,

Peggy Wilkinson

Peggy Wilkinson R.S.
Environmental Health Analyst II
Environmental Health System

Workplan Amendments:

1. The final number of confirming soil samples shall be presented to our office for approval before excavation is backfilled. 2. At least one (1) confirming soil sample shall be taken from the East wall of the excavation. 3. Approval from the Fresno County Air Pollution Control District must be obtained before aerati of contaminated soil is allowed. 4. Further explanation regarding the reporting levels listed on the lab analysis from Chemwest Analytical Lab (Chemwest I.D. 2698-1 is requested. Specifically, why is the RL for Benzene 5 mg/kg, and not lower.

CERTIFICATES OF DISPOSAL

NOVEMBER 18, 1988

H & H Ship Service Company certifies to BASSETT CONSTRUCTION that:

1. The storage tank(s), size(s) ONE (1) 6,000 GALS. FIBERGLASS

   removed from the PACIFIC BELL

   facility at 4734 E. CARMEN AVENUE

   FRESNO, CALIFORNIA

   were transported to H & H Ship Service Company, 220 China Basin Street, San Francisco, CA 94107.

2. The following tank(s), H & H Job Number: 9118 have been steam cleaned, rendered harmless, demolished and disposed of as general refuse.

3. Disposal site: SANITARY FILL COMPANY, SAN FRANCISCO, CALIFORNIA.

4. The foregoing method of destruction/disposal is suitable for the materials involved and fully complies with all applicable regulatory and permit requirements.

5. Should you require further information, please contact (415) 543 4835.

Very Truly Yours,

Cleveland Valrey

Reference: Underground Storage Tank Removal,
4734 East Carmen Street, Fresno, California (SB-055)
Versar Job No. 6264.9

Dear Mr. Wat:

The purpose of this letter is to summarize the findings of the tank removal project at 4734 East Carmen Street, Fresno, California, the results of which are presented below.

INTRODUCTION

Versar Inc. was retained by Pacific Bell to sample soils and characterize subsurface contamination during the removal of the underground unleaded gasoline storage tank at the Pacific Bell site located at 4734 East Carmen Street, Fresno, California. The location of the site is shown in Figure 1, Attachment I. The underground storage tank was situated along the southwestern corner of the operations building. Figure 2, Attachment I, shows the layout of the East Carmen facility.

OVERVIEW

On November 1, 1988, a PetroTite Tank System Integrity Test was performed on the underground unleaded gasoline storage tank. According to the test results, the test was terminated after two hours of testing because of evidence of a large product displacement. The test showed a product loss of more than 1.000 gallons per hour and it was determined that the tank was not tight. The Automatic Tank Gauging System (ATGS) TLS 250, which measures tank fluid level, gain, and fluid loss, also indicated that the tank was losing product.

The 6,000-gallon underground unleaded gasoline storage tank was removed on November 17, 1988, by LBME Corporation. The tank removal project consisted of: (1) acquisition of permits from the Fresno County Environmental Health Department; (2) crushing and distributing 200 pounds of solid carbon dioxide (dry ice) evenly into the tank to

displace the fuel vapors; (3) removal of the tank and appurtenant piping; (4) collection of subsurface soil samples and characterization of soil conditions; and (5) transport of the removed tank to H & H Ship Service Company (EPA ID No. CAD004771168) in San Francisco, California, for disposal. No certificate of disposal is available at this time. Ms. Peggy Wilkinson, Environmental Health Analyst, Fresno County Department of Health (FCDOH), was present on site for the tank removal.

RESULTS

As the tank was excavated, Versar's representative identified one area of slight contamination; the backfill pea gravel surrounding the the fill pipe (from the surface to the tank) exhibited a hydrocarbon odor, and visible product extended approximately two feet from the pipe and down the side of the tank. It appeared that the odor and related visible product were generated by a release of product from overfilling of the tank. The location of the fill pipe is shown in Figure 3, Attachment I. The contamination surrounding the fill pipe appeared to extend to the bottom of the tank excavation along the edge of the tank.

When the tank was lifted from one side, the bottom of the tank became exposed. It appeared that there were several pinholes along the bottom of the tank where a mixture of fuel and water, used to increase dry ice activity, were escaping. While the tank excavation was being performed, the excavator had punctured the tank on the north end allowing pea gravel to enter the tank at that side. A small amount of fuel in the tank and contaminated pea gravel were emptied into the excavation pit from the punctured Fiberglas tank during tank removal.

Immediately following the removal of the 6,000-gallon unleaded gasoline tank, a Versar representative collected two soil samples from the native soils beneath the tank excavation just off the edge of the tank pad at a depth of approximately 15 feet below the existing land surface. The native soil beneath the excavated tank appeared to be composed of a slightly moist, stiff clay (hardpan) containing small pebbles. The sample locations are also shown in Figure 3, Attachment I. A hydrocarbon odor was observed but no soil discoloration was evident. Head-space analyses were also collected in the native soils for field evaluation.

Samples were collected in precleaned brass tubes and sealed with aluminum foil, plastic lids, and duct tape. Each sample container was placed on ice in an ice chest for delivery to the laboratory. The samples were delivered by Versar to Chemwest Analytical Laboratories, Inc., on November 18, 1988, following standard protocol for sample

transportation and storage. The TPH samples were analyzed on a three-to-five day rush basis. Two soil samples were submitted to Chemwest to be analyzed for total petroleum hydrocarbon (TPH) constituents by EPA Method 8015M, and for benzene, toluene, ethylbenzene, and xylene (BTEX) by EPA Method 8020. Results from the rush laboratory analyses for TPH identified the presence of elevated levels of gasoline in native soil samples collected below the unleaded gasoline tank excavation pit. The results for TPH in the two samples were 1,400 milligrams per kilogram (mg/kg) for sample N-1-15, and 4,100 mg/kg for sample S-1-15. The results for BTEX for sample N-1-15 were: toluene, 30 mg/kg; xylene, 51 mg/kg; and benzene and ethylbenzene were below reportable limits. The results for BTEX for sample S-1-15 were: benzene, 40 mg/kg; toluene, 16 mg/kg; ethylbenzene, 26 mg/kg; and xylene, 170 mg/kg. Prior to receiving the results from the laboratory, a Photovoltaic Ionization Detector (PID) instrument was used on two head-space samples taken from the same soil used for laboratory analysis. These two samples were used only as a vapor detection indicator for soil contamination. Head-space sample N-1-15 had a vapor concentration of greater than 140 parts per million (ppm) and head-space sample S-1-15 had a vapor concentration of greater than 280 parts ppm. These indicators have a positive correlation respectively when compared with the TPH laboratory results. The laboratory analyses, results, and the chain of custody form for the soil samples are included as Attachment II.

CONCLUSIONS

The results of chemical analyses of soil samples from beneath the removed underground unleaded gasoline storage tank indicate that significant levels of petroleum hydrocarbons are present. According to the FCDOH representative at the site during the tank removal, the uppermost aquifer in the area is at a depth of approximately 80 feet below the land surface. Therefore, it appears that fuel, which may have been released from overfilling and from holes in the bottom of the tank, may have entered the soil beneath the tank, and its downward movement through the soil may have been impeded by the clay-rich hardpan. This vertical impedance of fluids from the tank may have caused the fluid to move laterally along the hardpan; however, there is no conclusive evidence of this activity at this time. In any event, to ensure that the release to the soil was minimal, and to fulfill the requirements of the FCDOH, an investigation should be conducted to adequately assess the areal extent of the migration of contamination and to reduce the risk

Versar INC.

for causing any additional environmental impairment. This will help to ensure that the impact to the surrounding soils is corrected. An investigation involving the remediation of contaminated soils beneath the excavated tank should fulfill the requirements of the FCDOH. A work plan for the investigation is being submitted under separate cover.

If you have any questions pertaining to the contents of this letter-report, please contact me and I will attempt to supply any additional information requested.

Very truly yours,

James R. Franstes

Attention: Mr. Clarence Johnson

Subject: Report of Data - Case Number 2698

Dear Mr. Johnson:

The technical staff at CHEMWEST is pleased to provide our report for the analyses you requested: TPH EXTN/GC-FID and BTEX - EPA Method 602.

Two soil samples for Project Fresno, CA, Project Number 6264.9 were received November 18, 1988 in good condition. Results of the analyses, along with the analytical methodology and appropriate reporting limits, are presented on the following pages.

Thank you for choosing CHEMWEST Laboratories. Should you have questions concerning this data report or the analytical methods employed, please do not hesitate to contact Toni Weeks, our Technical Service Representative, or your project manager. We hope that you will consider CHEMWEST Laboratories for your future analytical support and service requirements.

Sincerely,

Jill B. Henes, Ph.D.
Vice President of Technical Services

and

Kirk Pocan
Project Manager

ANALYTICAL METHODOLOGY

Total Petroleum Hydrocarbons (TPH) Extractables by GC-FID

Extraction Procedure:

WATER -

A 1 liter sample is poured into a 2 liter separatory funnel. 3x100 ml extractions with methylene chloride (2 minute shake outs) are completed. The methylene chloride is decanted off and concentrated to a 5 ml final volume.

SOIL -

A 30 gram, or other appropriate aliquot of soil, is mixed with 10 grams of washed sodium sulfate. 100 mls of methylene chloride is added to the soil and placed on a mechanical shaker for 1 hour. The liquid is decanted off and the process is repeated with an additional 50 ml of methylene chloride. The combined solvent extracts are filtered through sodium sulfate and the extract is concentrated to a 5 ml final volume.

GC ANALYSIS -

An appropriate volume of the sample extract is injected into a Gas Chromatograph equipped with a Flame Ionization Detector (FID), a split/splitless capillary injector (operated in the splitless mode), and a fused silica capillary column. The TPH fraction is quantitated as gasoline and/or #2 diesel fuel (and/or different petroleum hydrocarbon fuel types if requested, such as JP-4 jet fuel) based on relative retention times and examination of the elution profile. The TPH fraction quantitation is based on chromatographic peak areas against a multipoint standard curve.

ANALYTICAL METHODOLOGY

BTEX (Benzene, Toluene, Ethyl Benzene, and Xylenes) by Purge & Trap and GC-PID

WATER - Method 602 or 8020

A 5 ml sample volume, or 5 ml of a suitable dilution, is purged on a suitable purge and trap system with helium. The purged sample is analyzed on a Gas Chromatograph equipped with a Photoionization Detector (PID). A packed column is used to separate the compounds.

SOIL - Method 8020

A 10 gram, or other appropriate aliquot of soil, is weighed into a clean VOA vial. Soils received in brass core tubes are sampled by discarding 2-5 centimeters of soil from each end of the tubes (this is done to reduce the possibility of analyzing a portion of soil that has been exposed to sampling technique contamination). Equal aliquots of soil are then removed from each end of the tube and combined in the VOA vial. Soil in jars or bags is aliquoted using a similar technique, which discards exposed sample surfaces. A 10 ml, or other appropriate volume of methanol, is added to the soil and the soil is shaken with the solvent. 100 ul of the extract, or a reduced aliquot or volume of a suitable dilution, is injected into 5 ml of laboratory blank water and analyzed by the same technique used for water samples.

CONDITIONS OF ABANDONMENT

1. If the tanks are to be REMOVED FROM THE SITE, soil samples shall be obtained under the direction of an approved professional engineer, geologist, authorized representative of a California State approved by this office. Sample numbers, locations and consultant must be approved by this office prior to commencement.
2. 48 Hour advance notice shall be given to Fresno County Environmental Health Officer prior to initiating excavation.
3. All residual liquid, solids, or sludges shall be removed and the tank purged with dry ice at the rate of 15 lbs. per 1,000 gallon capacity prior to excavation.
4. All associated piping shall be removed from the underground soil.
5. This permit shall be onsite during excavation.
6. This permit shall accompany the tank(s) to the final destination, shall be signed and dated by all parties listed below and returned to this office within five (5) days upon final destination.
7. Permittee shall contact the local Fire Department prior to initiating abandonment procedures.
8. If the tanks are to be ABANDONED IN PLACE and BACKFILLED, a written proposal for soil analysis shall be submitted to this office by a qualified soils consultant and the existence of the in place tank and fittings shall be recorded on the property deed using the enclosed form.

Tank Destination Tank to be hauled as hazardous waste by H-H Ship Service
Final Tank Disposition Tank to be cleaned by H-H Ship, 220 China Basin, San Fran 94
Samples Taken By: Geologist-Rick Strudley Scraped Firm: Versar, Sacto
Permit Approved By: [signature] Date: 11/15/88

Permit #	Size	Product	Age of Tank	Previously Stored Material
1009	6,000	U/L gasoline	10 years	gasoline continuously

CONDITIONS OF ABANDONMENT

1. If the tanks are to be REMOVED FROM THE SITE, soil samples shall be obtained under the direction of an approved professional engineer, geologist, authorized representative of a California State approved by this office. Sample numbers, locations and consultant must be approved by this office prior to commencement.
2. 48 Hour advance notice shall be given to Fresno County Environmental Health Officer prior to initiating excavation.
3. All residual liquid, solids, or sludges shall be removed and the tank purged with dry ice at the rate of 15 lbs. per 1,000 gallon capacity prior to excavation.
4. All associated piping shall be removed from the underground soil.
5. This permit shall be onsite during excavation.
6. This permit shall accompany the tank(s) to the final destination, shall be signed and dated by all parties listed below and returned to this office within five (5) days upon final destination.
7. Permittee shall contact the local Fire Department prior to initiating abandonment procedures.
8. If the tanks are to be ABANDONED IN PLACE and BACKFILLED, a written proposal for soil analysis shall be submitted to this office by a qualified soils consultant and the existence of the in place tank and fittings shall be recorded on the property deed using the enclosed form.

Subject: Leaking Underground Storage Tank Remediation
Location: 4734 E. Carmen, Fresno

Dear Mr. Della-Rocco,

An inspection, sampling, or testing conducted at your underground storage facility indicates the presence of contamination. This preliminary evidence does not quantify or qualify the extent of contamination.

If you have not already done so, you must secure the services of a qualified consultant within ten days of receipt of this notice, and contact our office to make an appointment. We need to meet with you and your consultant to discuss the scope of work which will be required to determine the type and extent of contamination. A partial list of firms qualified to do the work is available upon request.

The County of Fresno is responsible for overseeing your efforts, and your contractor's efforts, to remediate the contamination. The County's and the state's costs of administrating and overseeing remedial action at your site are funded by the California Hazardous Substance Cleanup Fund or the federal Petroleum Leaking Underground Storage Tank Fund.

Both the State and federal funding sources require you, as the party (or one of the parties) responsible for the site, to reimburse the State Water Resources Control Board (SWRCB) for all direct and indirect costs incurred by government agencies while overseeing the cleanup of your site. The agencies involved include the County of Fresno, SWRCB, Central Valley Regional Water Quality Control Board, State Department of Health Services, and U.S. Environmental Protection Agency. Upon completion of your project or some other work milestone, you will receive a detailed invoice from the SWRCB and will be required to make full payment within 30 days. A copy of the enclosed notificaton form has been forwarded to the SWRCB (attachment).

The County is committed to ensuring a healthy environment for its citizens. We will work with you to secure an effective and efficient solution to the contamination on your property.

Please contact me at (209) 445-3271 to schedule a meeting and to answer any questions you may have.

Respectfully,

Peggy Wilkinson

DATE: November 14, 1988 — XXXX **New Incident**

TIME: 11:50 A.M. — ____ **Update**

ISSUE: SOIL CONTAMINATION FROM PETROLEUM PRODUCTS DUE TO UNDERGROUND STORAGE TANKS.

LOCATION: 4734 E. Carmen, Fresno **Community:** Fresno

NAME, ADDRESS, PHONE: Pacific Bell, 2600 Camino Ramon, San Ramon, CA 94583

HEALTH DEPT. PROGRAM: UNDERGROUND STORAGE TANK SECTION.

ISSUE DESCRIPTION: SUBSURFACE ANALYSIS REVEALED THE PRESENCE OF PETROLEUM CONSTITUENTS IN SOIL.

POTENTIAL RISKS AND HEALTH EFFECTS: BENZENE, A CONSTITUENT OF PETROLEUM PRODUCTS IS CURRENTLY ON THE LIST OF PROP. 65 CHEMICALS AS A KNOWN CARCINOGEN.

COMMUNITY AFFECTED: Fresno

Date Index Case Diagnosed: N/A

Number of People Involved: N/A

Additional Information: N/A

TIME LINE: PRELIMINARY INVESTIGATION CONDUCTED AT THE ABOVE SITE SHOWED SOIL CONTAMINATION. FURTHER INVESTIGATION WILL BE REQUIRED.

PLANNED INTERVENTION AND DEPARTMENT ACTIVITIES: OUR OFFICE WILL REVIEW FUTURE SITE INVESTIGATIONS AND DIRECT FURTHER ASSESSMENT WORK IF NEEDED.

OTHER PERTINENT INFORMATION: SCOPE OF FUTURE SUBSURFACE INVESTIGATION MAY BE NECESSARY TO DETERMINE POTENTIAL GROUNDWATER IMPACTS.

OTHER DEPARTMENTS OR AGENCIES INVOLVED: THE REGIONAL WATER QUALITY CONTROL BOARD WILL BE ADVISED VIA STATUS REPORTS.

PACIFIC BELL
A Pacific Telesis Company

San Ramon, May 19, 1988

Fresno County Health Department
P.O. Box 11867
Fresno, CA 93775
Attn: Louis Dooley, Assistant Director
Underground Storage Tank Permit Department

In order to comply in a timely fashion with the UST permit renewal program, Pacific Bell has centralized their Permit Department. For permit renewals, please send renewal notification to:

Pacific Bell
Fresno Fuel Unit
1445 Van Ness Ave., Rm. 236
Fresno, CA. 93762

For new underground storage tanks, our Environmental Department will be responsible for the initial applications and permits. We may be reached at the following:

Pacific Bell
Environmental Management
2600 Camino Ramon, Rm. 2E050
San Ramon, CA 94583
(415) 823-0560

We sincerely hope this will help remove the confusion of where to send permit renewals and help eliminate the fines and late fees.

If you have any questions, please feel free to contact me on (415) 823-8723.

January 12, 1987

Fresno County
Health Department
Attn: Mr. Gary Carozza
P.O. Box 11867
Fresno, CA 93775

Dear Mr. Carozza:

Please find enclosed, two (2) sets of Pacific Bell Underground Storage Tank Hazardous Materials Management Plans for our facilities at 4734 E. Carmen Ave., and 1420 Tuolumne St., Fresno.

Subsequent to your review and approval of our proposed monitoring plans, we request that (1) copy of each plan be appropriately identified as approved and returned to us for implementation.

During the interval between this filing and the installation of the TLS-250 System, it is our intent to continue with our present inventory reconciliation program which requires daily dip sticking of our gasoline tanks, which service our fleet vehicles and weekly dip sticking our diesel tanks, which service our stand-by power generators.

If you or your staff require additional information regarding our Hazardous Materials/Waste Management program, please contact us.

Sincerely,

R. A. Noordenbrook

INTRODUCTION

This Hazardous Materials Management Plan (HMMP) has been prepared in accordance with the California Administrative Code, Title 23 Water, Chapter 3 Water Resources Control Board, Subchapter 16 Underground Tank Regulations regulating the storage of hazardous substances in underground tanks. It pertains to the storage and handling of unleaded gasoline at the Pacific Bell Field Operating Center located at 4734 East Carmen Avenue, Fresno, CA 93727.

The fuel is stored in an underground tank with a nominal capacity of 6,000 gallons. This HMMP is designed for the early detection and containment of gasoline leaks or spills.

This document has been prepared by L.B.M.E. Corporation of Sacramento, California.

A. FACILITY DESCRIPTION

Business Name:	PACIFIC BELL (SB-055) (FRSN CA-1C)
Facility Address:	4734 East Carmen Avenue, Fresno, CA 93727
Mailing Address:	Fleet Management Permits 770 E. Shaw Avenue, Room 136 Fresno, CA 93762
Person Submitting Application:	E. J. Koehler Staff Manager Environmental Management (415) 823-9821
Responsible Official on Site:	D. Nickel (209) 264-5465
Emergency Response:	Pacific Bell Emergency Control Center (415) 823-7777 (24-Hours/day) Abnormal, hazardous, and emergency conditions which may affect service, company buildings and/or adverse publicity should be reported to the Emergency Control Center. This organization maintains the names, home addresses and phone numbers (office and home) of contact persons who are qualified and authorized to assist federal, state, and local emergency response personnel in the event of an emergency. The center is manned on a 24-hour per day, 7-day per week basis.
Employees:	21
Shifts:	Not required by county.
Hours of Operation:	Not required by county.
Uniform Building Code Class:	B-2, B-4
Business Activity:	Construction and vehicle maintenance, the gasoline is used for motor vehicle refueling.

Permits Relating to Hazardous Material Storage from Others:	None.
Water Table:	Not known.
Earthquake Faults:	None known within one mile.
Surrounding General Land Uses:	See Vicinity Map in Appendix IV.
Adjacent Properties:	North: East Carmen Avenue South: Commercial East : Commercial West : Commercial
Special Land Use:	See Vicinity Map in Appendix IV.
Facility Storage Map:	See Facility Storage Map in Appendix IV.

B. HAZARDOUS SUBSTANCE STORAGE STATEMENT

A hazardous substance storage statement for the site was submitted to the California Water Resources Control Board on or before July 1, 1984. It is presented in Appendix I.

C. SEPARATION OF MATERIALS

This facility does not store material by type or quantity which requires special separation consideration. The facility was designed to prevent fire or explosion in accordance with applicable National Fire Prevention Association guidelines and local fire codes. The underground storage tank was provided with a corrosion-resistant coating. The material of construction is compatible with the gasoline stored.

D. MONITORING PROGRAM

The monitoring program will consist of an "initial" leak test using the "petro-tite" technique followed by in-tank precision product monitoring. Subsequent leak tests will be done annually starting within twelve months from the initial leak test. The monitoring program and the initial leak test results are presented in Appendix II.

E. RECORDKEEPING

Teletype of computer printouts associated with underground tank monitoring will be reviewed and initialed daily by the responsible Fresno Fuel Unit person. The report will be compared with the

previous days' results to identify any ongoing trends or differences that would indicate product leakage.

All visual inspection records and tank monitoring printouts will be filed and retained for a period of three years. All recordable leaks and spills will be recorded on a Hazardous Material Incident Report, Form Number FR-0023. This form is also illustrated in Appendix III.

F. EMERGENCY EQUIPMENT

A number of registered fire extinguishers are kept on the premises at all times. The location of the emergency equipment is shown on the Vicinity Map and the Facility Storage Map presented in Appendix IV. Additional emergency equipment will be obtained as needed from Pacific Bell contracted hazardous material and hazardous waste handling vendors.

The fire extinguishers are maintained and serviced by a professional outside contractor on a yearly basis.

A visual inspection is made by the facility wardens on a daily basis to ensure the adequacy of the emergency equipment.

G. ADDITIONAL INFORMATION (Contingency Plan)

Unauthorized releases (leaks and spills) of petroleum products will be recorded utilizing the Hazardous Material Incident report, Form Number FR-0023 and reported by the operator of the underground storage tank immediately to the following:

1) Pacific Bell Emergency Control Center
(415) 823-7777

2) Real Estate Department
(415) 823-1028

3) Respective upper management within group.

4) Headquarters Staff
(415)823-0632

In instances involving spills, the operator of the underground tank will notify the Fresno County Environmental Health Department at (209) 445-3357 as required by the County Ordinance. In case of fires, the local fire department (911) and Pacific Bell Emergency Control Center will be notified promptly by the operator of the underground tank.

In each step of notification, good documentation will be prepared to include:

1) Location

2) Specific description and location of the area involved

3) Time and date of occurence

4) Description of spill and type of material

5) Approximate quantity of material that spilled/leaked

All recordable leak and spill records will be maintained on the site.

The key personnel on the site (building warden and all the supervisors) are trained for responding appropriately to any major catastrophe.

A training program conducted by the local safety department of Pacific Bell provides the information to the key personnel regarding emergency telephone numbers, reporting requirements, location of emergency equipment, and evacuation procedures.

This information is true and correct. If there is any change which would materially affect the Hazardous Materials Management Plan, we will apply for an appropriate amendment.

Official Registration Form

California Water Resources Control Board

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms).

Definition of Underground Containers: The law applies to concrete sumps, nonvaulted buried tanks or other underground containers. (Water Code section 13173) All containers including earthen walled pits, ponds, lagoons and sumps that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance. Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

APPENDIX II

MONITORING PROGRAM

DATA CHART FOR TANK SYSTEM TIGHTNESS TEST

MONITORING PROGRAM

FLEET MANAGEMENT

A. Initial Leak Test

An initial testing of the underground fuel storage tanks was conducted by a licensed contractor using the "petro-tite" testing technique to determine container integrity. This testing indicated that the underground fuel storage tank and the underground piping was not leaking. Immediate action will be taken to precision test the underground tank and associated piping should the precision monitoring records indicate a loss or gain of product that cannot be reconciled or presence of other indications that would indicate in all probability that the tank or piping is leaking.

Any leakage from the underground tanks or associated piping resulting in soil or water contamination that may be identified during any subsequent leak testing or monitoring will be reported to the Fire Department. Any remedial action required will be accomplished in compliance with the regulatory agency having jurisdiction.

B. Precision Product Monitoring

Because of underground tank orientation and facility staffing daily manual inventory control monitoring of the motor vehicle fuel and long term tank monitoring for product leakage will be accomplished with in-tank precision product monitoring. This will be provided through the installation of the TLS-250 Tank Level Sensor manufactured by Veeder-Root, a subsidiary of Western Pacific Industries Corporation or equivalent.

The TLS-250 system consists of a Computerized Inventory Monitor (CIM) and one Digital Sending Probe (DSP) for each tank being monitored. The highly accurate, all-electronic probe has no moving parts for greater accuracy and less maintenance than other electromechanical, float-type devices. A single CIM can handle four probes and continuously monitor each one, analyzing their signals for liquid, temperature, depth, and water level. Based on this input, the CIM computes volumes, and stores this information for remote polling. The RS-232C Serial Interface Communica-

tions port permits access to TLS-250 information from remote locations via telephone lines. This serial interface is capable of handling up to 16 polling stations from centralized remote locations (SCC). The output of the serial port can be formatted for teletype or computer (IBM-PC) interface. The teletype output printout displays formatted reports with spaces and headers on most 72-column printers or CRT terminals. The computer output gives the information in packed data format (without spaces, carriage returns, etc.) and is the most efficient way to interface the CIM.

The TLS System has three modes of operation - Leak Detection, Tank Inventory, and Automatic Delivery Reporting. When the leak monitor mode is activated, the TLS System continuously monitors fuel levels in each tank and can detect small losses. An hourly report on each tanks shows temperature-compensated inventory changes to 0.1 gallon based on inventories when the tank leak mode is initiated. An Inventory Loss Alarm feature can initiate a signal to an alarm on the premises, to a security agency or to a central management location when a loss of 25 gallons occurs during any one-hour period. The Leak Monitor is activated through a pushbutton mounted on the front panel, or remotely through the RS-232 Telecommunications Interface.

The Tank Inventory Report presents the current status of each tank. It provides station location, date and time, volume of fuel, level of fuel, water level and temperature.

The Automatic Delivery Increase Report features are generated two minutes after fuel is delivered to the tank. The printout includes date, time, volume and temperature before and after the increase and the net increase in inventory.

Security Code

The system is designed to prevent unauthorized use from outside persons by the security code feature. Each site location will be assigned a Security Code in place of the address code.

Performance specifications listed below represent values that could be expected from a TLS-250 if a perfectly cylindrical, calibrated (10-foot diameter, 10,000-gallon) tank was used.

Height of Fuel at location of DSP	- 0.1 inch
Volume of Fuel	- 15 gallons
Leak Detection Mode	- 0.1 gallon
Fuel Temperature	- 1 1/2 degrees F
Time	- Minutes/Week

When the RS-232C Serial Interface Communications Port is used, each site location can be queried for a system status report. This report checks the system's operational status by transmitting the data, time, whether the leak monitor is on, and whether the inventory loss alarm has been activated.

INTRODUCTION

This Hazardous Materials Management Plan (HMMP) has been prepared in accordance with the California Administrative Code, Title 23 Water, Chapter 3 Water Resources Control Board, Subchapter 16 Underground Tank Regulations regulating the storage of hazardous substances in underground tanks. It pertains to the storage and handling of unleaded gasoline, diesel fuel, and waste oil at the Pacific Bell Field Operating Center located at 2515 South Orange Avenue, Fresno, CA 93725.

The fuels and waste oil are stored in three underground tanks with nominal capacities of 10,000 gallons (unleaded), 6,000 gallons (diesel), and 550 gallons (waste oil). This HMMP is designed for the early detection and containment of unleaded gasoline, diesel fuel, and waste oil leaks or spills.

This document has been prepared by L.B.M.E. Corporation of Sacramento, California.

A. FACILITY DESCRIPTION

Business Name:	PACIFIC BELL (SB-640) (FRSN CA-1B)
Facility Address:	2515 S. Orange Avenue, Fresno, CA 93725
Mailing Address:	Fleet Management Permits 770 E. Shaw Avenue, Room 136 Fresno, CA 93762
Person Submitting Application:	E. J. Koehler Staff Manager Environmental Management (415) 823-9821
Responsible Official on Site:	D. Nickel (209) 264-5465
Emergency Response:	Pacific Bell Emergency Control Center (415) 823-7777 (24-Hours/day) Abnormal, hazardous, and emergency conditions which may affect service, company buildings and/or adverse publicity should be reported to the Emergency Control Center. This organization maintains the names, home addresses and phone numbers (office and home) of contact persons who are qualified and authorized to assist federal, state, and local emergency response personnel in the event of an emergency. The center is manned on a 24-hour per day, 7-day per week basis.
Employees:	65
Shifts:	Not required by county.
Hours of Operation:	Not required by county.
Uniform Building Code Class:	B-2, B-4
Business Activity:	Construction and vehicle maintenance, the gasoline and diesel fuel are used for motor vehicle refueling.

Permits Relating to Hazardous Material Storage from Others:	None.
Water Table:	Not known.
Earthquake Faults:	None known within one mile.
Surrounding General Land Uses:	See Vicinity Map in Appendix IV.
Adjacent Properties:	North: Residential South: Commercial/Industrial East: Residential West: South Orange Avenue - Industrial
Special Land Use:	See Vicinity Map in Appendix IV.
Facility Storage Map:	See Facility Storage Map in Appendix IV.

B. HAZARDOUS SUBSTANCE STORAGE STATEMENT

A hazardous substance storage statement for the site was submitted to the California Water Resources Control Board on or before July 1, 1984. It is presented in Appendix I.

C. SEPARATION OF MATERIALS

This facility does not store material by type or quantity which requires special separation consideration. The facility was designed to prevent fire or explosion in accordance with applicable National Fire Prevention Association guidelines and local fire codes. The underground storage tanks were provided with a corrosion-resistant coating. The material of construction is compatible with the unleaded gasoline, diesel fuel, and waste oil stored.

D. MONITORING PROGRAM

The monitoring program will consist of an "initial" leak test using the "petro-tite" technique followed by in-tank precision product monitoring. Subsequent leak tests will be done annually starting within twelve months from the initial leak test. The monitoring program and the initial leak test results are presented in Appendix II.

E. RECORDKEEPING

Teletype of computer printouts associated with underground tank monitoring will be reviewed and initialed daily by the responsible Fresno Fuel Unit person. The report will be compared with the

previous days' results to identify any ongoing trends or differences that would indicate product leakage.

All visual inspection records and tank monitoring printouts will be filed and retained for a period of three years. All recordable leaks and spills will be recorded on a Hazardous Material Incident Report, Form Number FR-0023. This form is also illustrated in Appendix III.

F. EMERGENCY EQUIPMENT

A number of registered fire extinguishers are kept on the premises at all times. The location of the emergency equipment is shown on the Vicinity Map and the Facility Storage Map presented in Appendix IV. Additional emergency equipment will be obtained as needed from Pacific Bell contracted hazardous material and hazardous waste handling vendors.

The fire extinguishers are maintained and serviced by a professional outside contractor on a yearly basis.

A visual inspection is made by the facility wardens on a daily basis to ensure the adequacy of the emergency equipment.

G. ADDITIONAL INFORMATION (Contingency Plan)

Unauthorized releases (leaks and spills) of petroleum products will be recorded utilizing the Hazardous Material Incident report, Form Number FR-0023 and reported by the operator of the underground storage tank immediately to the following:

1) Pacific Bell Emergency Control Center
(415) 823-7777

2) Real Estate Department
(415) 823-1028

3) Respective upper management within group.

4) Headquarters Staff
(415)823-0632

In instances involving spills, the operator of the underground tank will notify the Fresno County Environmental Health Department at (209) 445-3357 as required by the County Ordinance. In case of fires, the local fire department (911) and Pacific Bell Emergency Control Center will be notified promptly by the operator of the underground tank.

In each step of notification, good documentation will be prepared to include:

1) Location

2) Specific description and location of the area involved

3) Time and date of occurence

4) Description of spill and type of material

5) Approximate quantity of material that spilled/leaked

All recordable leak and spill records will be maintained on the site.

The key personnel on the site (building warden and all the supervisors) are trained for responding appropriately to any major catastrophe.

A training program conducted by the local safety department of Pacific Bell provides the information to the key personnel regarding emergency telephone numbers, reporting requirements, location of emergency equipment, and evacuation procedures.

This information is true and correct. If there is any change which would materially affect the Hazardous Materials Management Plan, we will apply for an appropriate amendment.

Official Registration Form

California Water Resources Control Board

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms)

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173) All containers, including earthen walled pits, ponds lagoons and sumps that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance. Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $10 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file the penalty is $500-$5,000 per day. If you falsify information you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

California Water Resources Control Board

Hazardous Substance Storage Statement

Who Must File: Each person storing hazardous substances in any underground container must file this form no later than July 1, 1984 (After October 1, 1984 and no later than January 1, 1985 for tanks used on farms)

Definition of Underground Containers: The law applies to "concrete sumps, nonvaulted buried tanks or other underground containers." (Water Code section 13173). All containers, including earthen walled pits, ponds lagoons and sumps that are below the normal ground surface level must register. A tank sitting on the ground is not included. Containers partially beneath the surface are included. Lined or unlined pits, ponds and lagoons are covered if earth has been removed from the storage area to construct the facility. Normal grading is not considered construction below ground level.

Definition of Hazardous Substance: Any substance listed in Section 6382 of the Labor Code or in Section 25316 of the Health and Safety Code. This includes gasoline, diesel fuel, all industrial solvents, pesticides, herbicides and fumigants. If the material must be carried by a registered hauler, disposed of at a hazardous waste site, is explosive, generates pressure due to heat or decomposition or would harm humans or wildlife you must register the tank. Wastes are included.

Fee: For each tank registered a $40 fee must be paid, except that retail gasoline stations pay $5 per tank.

Penalties: For failure to file, the penalty is $500-$5,000 per day. If you falsify information, you can be fined up to $20,000 for each day the information is incorrect and has not been corrected.

Confidentiality: If you have information protected by trade secret laws, please attach a list of the information on this form that is confidential and the justification for confidentiality, including specific citations of relevant statutory and case law.

Multiple Containers: Fill I and II on one form and leave it blank on all the remaining forms. Attach all forms together securely. If you own more than 50 tanks you can file information on computer tape. Call 916/324-1262 for information.

This is not a Permit Application. All Underground Tanks will be subject to local regulation. Some jurisdictions have already begun programs. Check with your local county government for further information.

NOTE: ALL UNDERGROUND CONTAINERS MUST REGISTER EVEN IF STATE AND/OR LOCAL PERMITS ARE IN FORCE.

APPENDIX I

HAZARDOUS MATERIALS INVENTORY STATEMENT

HAZARDOUS SUBSTANCE STORAGE STATEMENT

MONITORING PROGRAM

FLEET MANAGEMENT

A. Initial Leak Test

An initial testing of the underground fuel storage tanks was conducted by a licensed contractor using the "petro-tite" testing technique to determine container integrity. This testing indicated that the underground fuel storage tank and the underground piping was not leaking. Immediate action will be taken to precision test the underground tank and associated piping should the precision monitoring records indicate a loss or gain of product that cannot be reconciled or presence of other indications that would indicate in all probability that the tank or piping is leaking.

Any leakage from the underground tanks or associated piping resulting in soil or water contamination that may be identified during any subsequent leak testing or monitoring will be reported to the Fire Department. Any remedial action required will be accomplished in compliance with the regulatory agency having jurisdiction.

B. Precision Product Monitoring, Motor Fuels

Because of underground tank orientation and facility staffing daily manual inventory control monitoring of the motor vehicle fuel and long term tank monitoring for product leakage will be accomplished with in-tank precision product monitoring. This will be provided through the installation of the TLS-250 Tank Level Sensor manufactured by Veeder-Root, a subsidiary of Western Pacific Industries Corporation or equivalent. Monitoring of the waste oil tank will be accomplished using alternative 7 as described hereafter in Paragraph C.

The TLS-250 system consists of a Computerized Inventory Monitor (CIM) and one Digital Sending Probe (DSP) for each tank being monitored. The highly accurate, all-electronic probe has no moving parts for greater accuracy and less maintenance than other electromechanical, float-type devices. A single CIM can handle four probes and continuously monitor each one, analyzing their signals for liquid, temperature, depth, and water level. Based on this input, the CIM computes volumes, and stores this information for remote polling. The RS-232C Serial Interface Communica-

tions port permits access to TLS-250 information from remote locations via telephone lines. This serial interface is capable of handling up to 16 polling stations from centralized remote locations (SCC). The output of the serial port can be formatted for teletype or computer (IBM-PC) interface. The teletype output printout displays formatted reports with spaces and headers on most 72-column printers or CRT terminals. The computer output gives the information in packed data format (without spaces, carriage returns, etc.) and is the most efficient way to interface the CIM.

The TLS System has three modes of operation - Leak Detection, Tank Inventory, and Automatic Delivery Reporting. When the leak monitor mode is activated, the TLS System continuously monitors fuel levels in each tank and can detect small losses. An hourly report on each tanks shows temperature-compensated inventory changes to 0.1 gallon based on inventories when the tank leak mode is initiated. An Inventory Loss Alarm feature can initiate a signal to an alarm on the premises, to a security agency or to a central management location when a loss of 25 gallons occurs during any one-hour period. The Leak Monitor is activated through a pushbutton mounted on the front panel, or remotely through the RS-232 Telecommunications Interface.

The Tank Inventory Report presents the current status of each tank. It provides station location, date and time, volume of fuel, level of fuel, water level and temperature.

The Automatic Delivery Increase Report features are generated two minutes after fuel is delivered to the tank. The printout includes date, time, volume and temperature before and after the increase and the net increase in inventory.

Security Code

The system is designed to prevent unauthorized use from outside persons by the security code feature. Each site location will be assigned a Security Code in place of the address code.

Performance specifications listed below represent values that could be expected from a TLS-250 if a perfectly cylindrical, calibrated (10-foot diameter, 10,000-gallon) tank was used.

Height of Fuel at location of DSP	- 0.1 inch
Volume of Fuel	- 15 gallons
Leak Detection Mode	- 0.1 gallon
Fuel Temperature	- 1 1/2 degrees F
Time	- Minutes/Week

When the RS-232C Serial Interface Communications Port is used, each site location can be queried for a system status report. This report checks the system's operational status by transmitting the data, time, whether the leak monitor is on, and whether the inventory loss alarm has been activated.

C. Precision Monitoring, Waste Oil, Alternative 7

Tank gauging inventory reconciliation based on weekly stick gauging during a 24 to 48 hour period during which no imputs or withdrawals are made to the tank will be used. At least two stick gauge measurements will be taken and the average used to calculate volume of product. Gauging will be capable of measuring to within 5 gallons or 1% of tank volume. Inventory Reconciliation and tank gauging will conform to Section 2644 of the California Administrative Code, Title 23, Chapter 3, Subchapter 16 and ground tank regulations.

FOREWORD

This project work plan was prepared by Versar Inc. of Sacramento, California, for Pacific Bell, under a contract dated July 22, 1988. Mr. Richard Strider, Environmental Scientist, prepared this work plan and Mr. James R. Frantes, Senior Geohydrologist, reviewed this work plan.

Approved for Release:

James R. Frantes

for: Michael A. Neely, Manager
West Coast Risk Management Services

DISCLAIMER

The purpose of this investigation and report is only to inform the client of the environmental conditions as they currently exist at the subject facility. Versar Inc. does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations and/or suggestions in no way assures elimination of hazards or the fulfillment of a client's obligation under any local, state, or federal laws or any modifications or changes thereto. In many cases, federal, state, or local codes require the prompt reporting to relevant authorities if a release occurs. It is the responsibility of the client to comply with requirements to notify authorities of any conditions that are in violation of the current legal standards.

Factual information regarding operations, conditions, and test data were obtained, in part, from the client and have been assumed by Versar to be correct and complete. Since the facts stated in this report are subject to professional interpretation, they could result in differing conclusions. In addition, the findings and conclusions contained in this report are based on various quantitative and qualitative factors as they existed on or near the date of the investigation. Therefore, if the recommendations made in this report are not implemented within a reasonable period of time, there can be no assurances that intervening factors will not arise that will affect the conclusions reached herein.

Versar makes no warranty and assumes no liability with respect to the use of information contained in this report. No changes to its form or content may be made without Versar's express written approval.

1.0 INTRODUCTION

On November 14, 1988, the Fresno County Department of Health (FCDOH), Environmental Health System notified Pacific Bell of measures that needed to be taken involving the determination of contamination from the leaking underground storage tank at the Pacific Bell East Carmen site in Fresno. A copy of this letter is attached to this work plan as Appendix A. An underground unleaded gasoline tank was removed at the Pacific Bell facility in Fresno, California on November 17, 1988. Soil sampled from beneath the storage tank contained petroleum hydrocarbons which were identified as gasoline by the Chemwest Laboratory in Sacramento, California. The laboratory analytical results and additional data obtained during the tank removal were reported in a letter dated December 5, 1988.

2.0 ENVIRONMENTAL SETTING

The Pacific Bell site to be investigated is located at 4734 East Carmen Street, Fresno, California (Pacific Bell site SB-055). The site layout is depicted in Figure 2-1.

2.1 Geology and Geohydrology

The site is located within the Great Valley physiographic province in California. The valley soils in the Fresno area are primarily developed from mixed alluvial materials eroded from the Sierra Nevada since the early Pleistocene. The uppermost aquifer beneath the site is reported to be at approximately 80 feet below the land surface.

3.0 PROPOSED INVESTIGATION

The objectives of this investigation are to: (1) determine the lateral and vertical extent of petroleum hydrocarbons found in the soil; (2) determine if the contamination is present in, or threatens, the

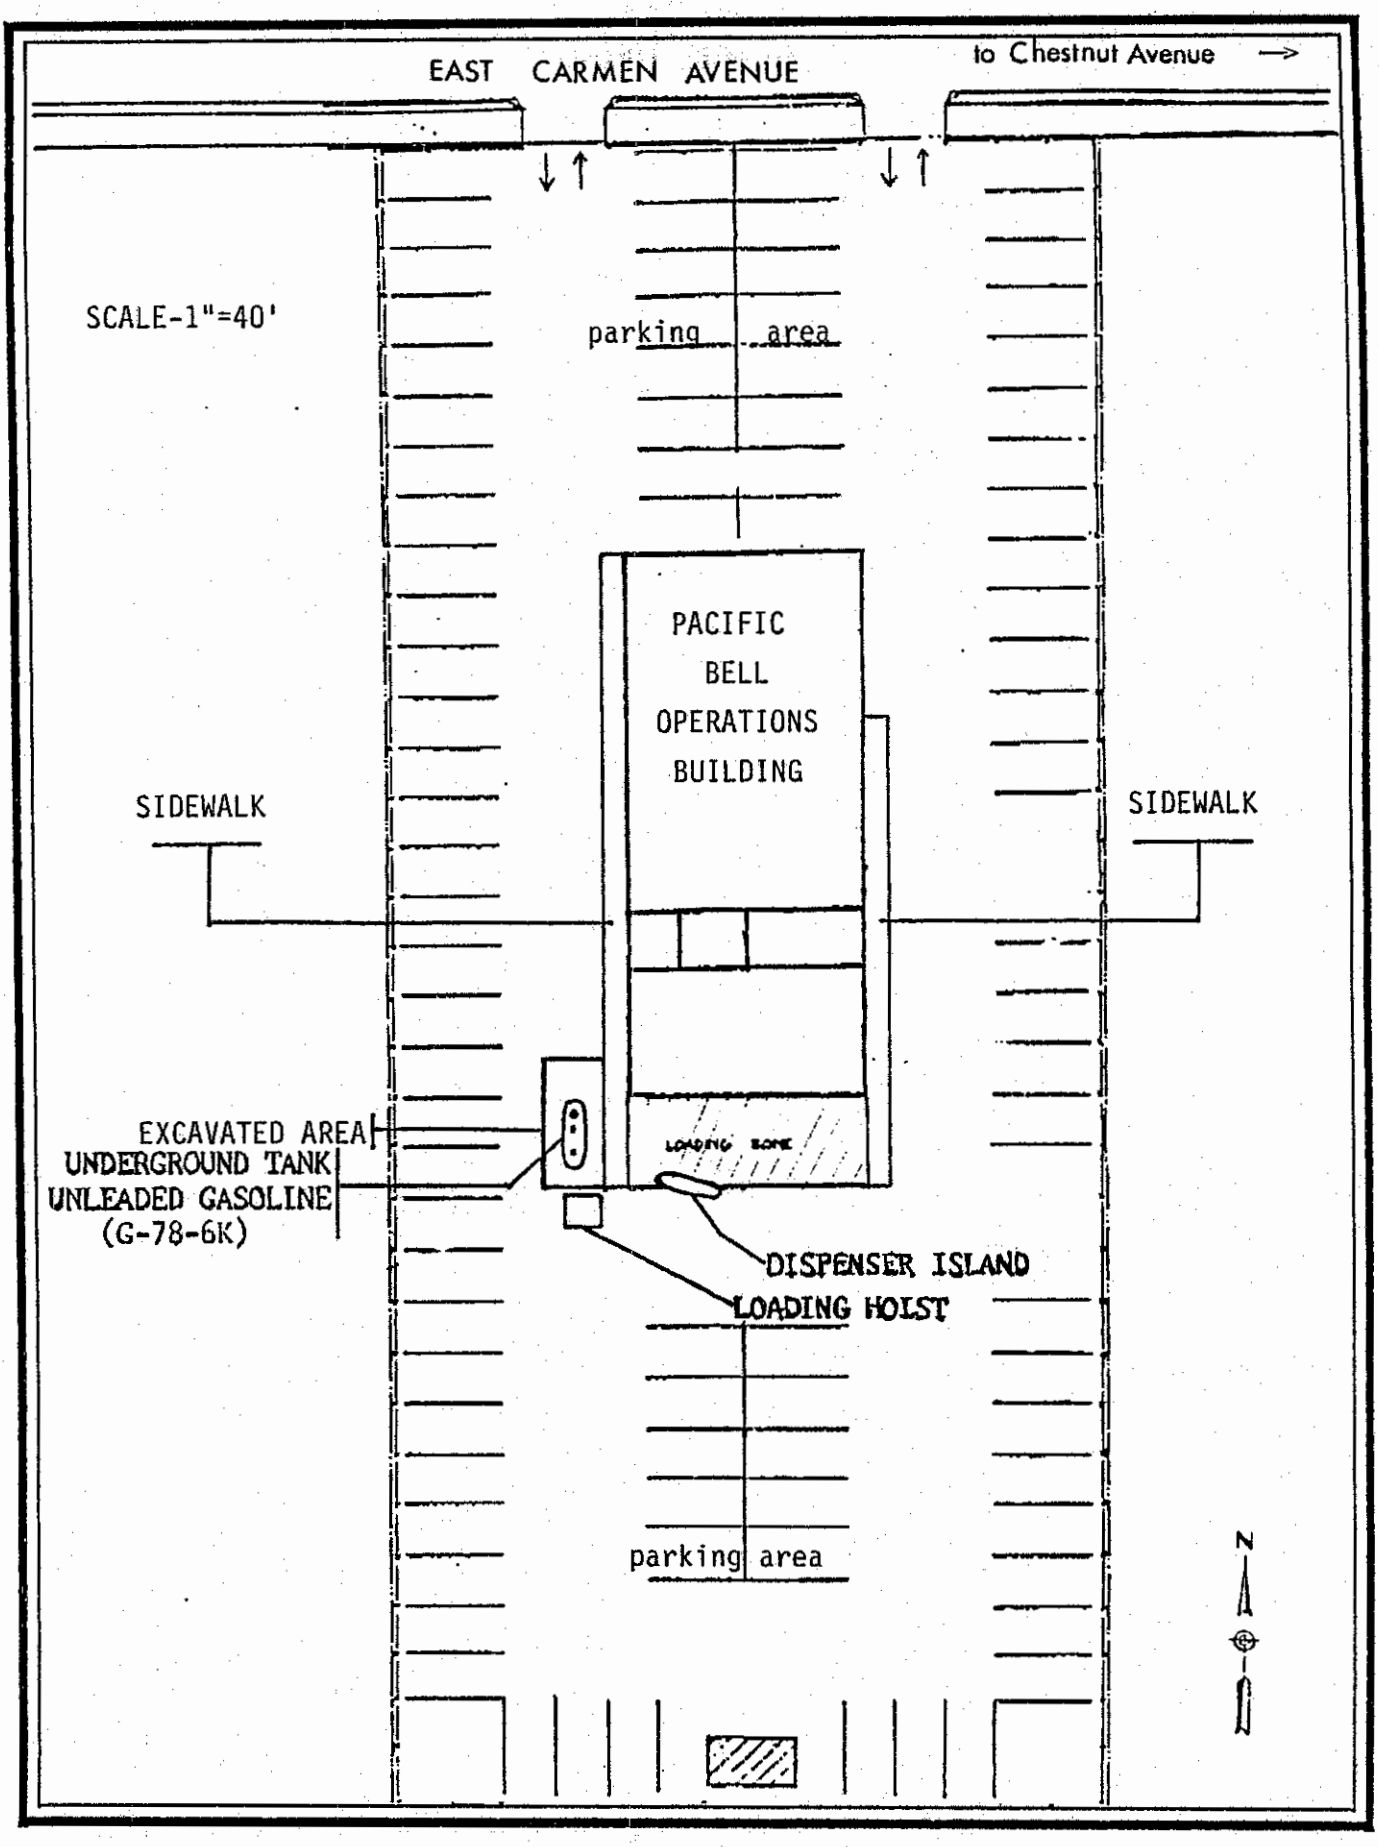

Figure 2-1. Site Layout of the Fresno Facility (SB-055)

ground water; and (3) accurately determine the concentrations of petroleum hydrocarbons present in the soil and ground water, if necessary.

To accomplish this, soil samples will be collected for chemical analyses during the drilling of three boreholes. The proposed locations of the boreholes are shown in Figure 3-1.

3.1 Drilling of the Boreholes

It is necessary to determine the lateral and vertical extent of soil contamination. Each borehole will be drilled with hollow stem augers. Soils encountered in the first borehole will be sampled using a California modified spoon sampler at intervals frequent enough to accurately define the stratigraphy. The other boreholes will be sampled using a drive sampler at intervals of five feet or less. The soil cores, drive samples, and drill cuttings will be logged by a Versar representative at the site. The bottom of the boreholes will be located at a depth of approximately 30 feet below the surface, or about 15 feet below the deepest contamination (whichever is deeper), unless the uppermost aquifer is identified at that level. If contamination extends to a depth greater than 65 feet, the borehole may be discontinued to prevent contamination of the aquifer by drilling equipment.

All of the augers, bits, and down-the-hole sampling equipment will be decontaminated with a steam cleaner after each borehole has been drilled. A copy of the application for the permit for the drilling of boreholes at the Fresno Site is also included in Appendix A.

3.2 Collection of Samples

3.2.1 Decontamination Procedures

All sample containers will be decontaminated in a laboratory. The decontamination procedures for field sampling are given below.

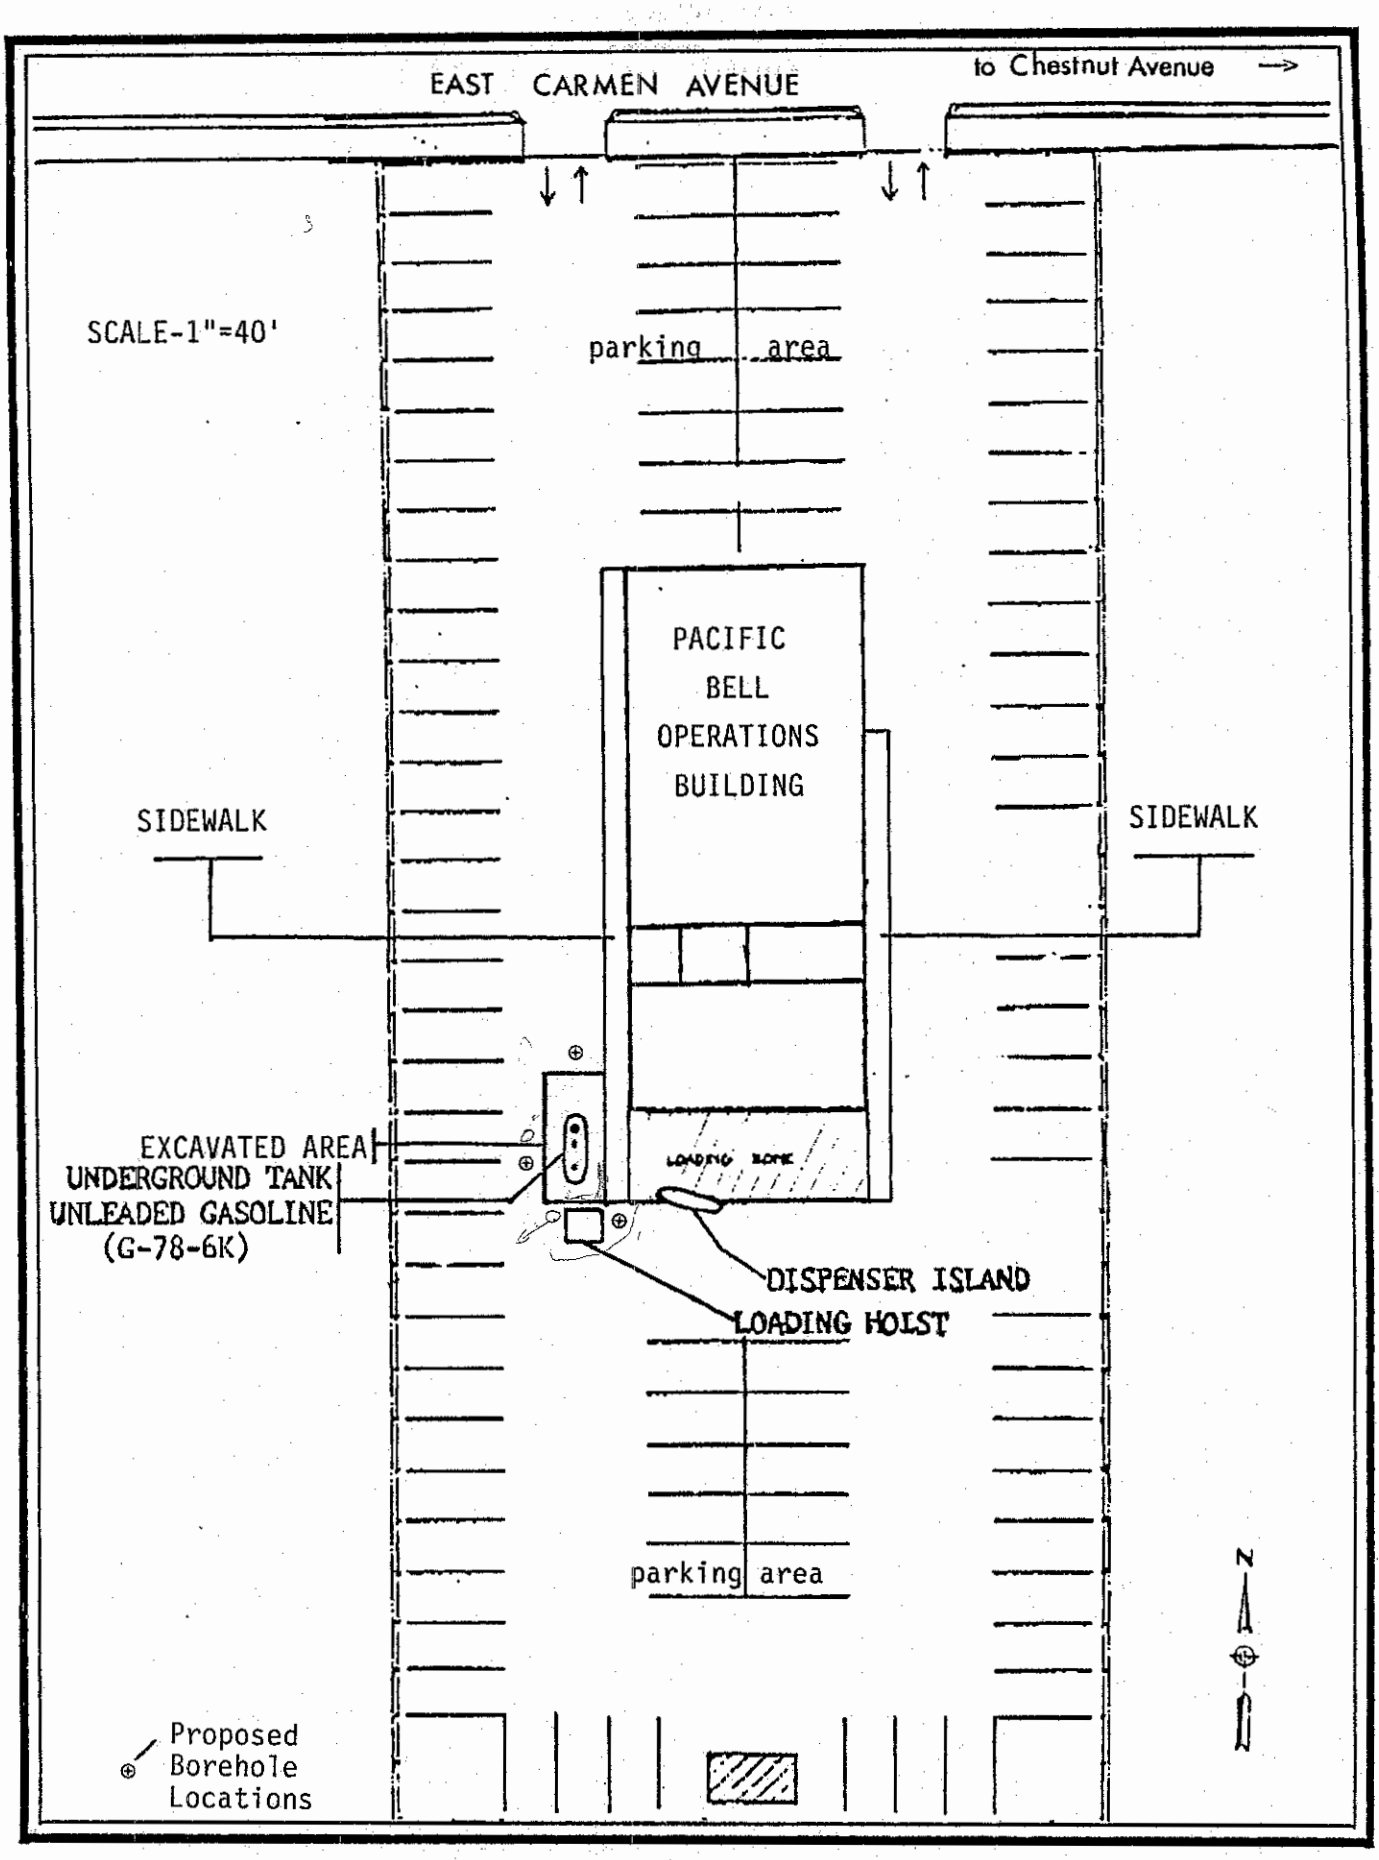

Figure 3-1. Proposed Locations of Boreholes

1. Sampling equipment is nondedicated. As such, it must be carefully cleaned prior to each use, as follows:

   a. Carefully brush off any loose foreign debris with a soft bristle brush.

   b. Rinse the equipment thoroughly in clean water.

   c. Wash the equipment in a nonphosphate detergent bath.

   d. Rinse thoroughly in clean water.

   e. Rinse thoroughly with deionized water.

   f. Rinse with acetone.

   g. Rinse with pesticide-grade hexane.

   h. Air dry in a dust-free environment.

   i. Store in sterile plastic bags or other suitable clean cover until use.

2. Clean, disposable gloves must be worn by all field personnel when handling decontaminated equipment.

3.2.2 Soil Sampling

Each soil core and drive sample will be examined with an Organic Vapor Analyzer (OVA) meter or a photovoltaic ionization detector (PID) as soon as the sampling device is opened. Following this, representative samples of the soil will be placed in a glass jar. The jar will be sealed, and the sample shaken. After 10 minutes, a small hole will be made in the seal and the head space above the sample will be analyzed for organic compounds with an OVA meter or a PID. Any contaminated zones identified with the OVA meter or PID will be sampled for chemical analysis. Approximately six soil samples will be collected from each borehole during drilling. The samples will be collected in brass tubes and will be fitted

with an air-tight lid. The tubes will be packed as full as possible with the soil to minimize the head space. A total of 18 soil samples will be collected, approximately six of which will be submitted for analysis for total petroleum hydrocarbons (TPH) using EPA Method 8015M.

3.3 Analysis of Samples

All of the soil samples will be analyzed for TPH using EPA Method 8015M. Additionally, three soil samples will be analyzed for benzene, toluene, ethylbenzene, and xylene (BTEX) using EPA Method 8020. All of the quantitative chemical analyses will be performed by Chemwest Analytical Laboratories, Inc.

3.4 Field Quality Control

Sampling methods detailed in this sampling plan will be strictly adhered to; deviations or additions to this plan will be carefully documented in the field notebook. All field observations, field-generated forms, and labels will be noted and attached to the field notebook. Any photographs will be logged in the field notebook and labeled when returned from the developing laboratory.

3.5 Sample Handling

3.5.1 Sample Containers, Preservation, and Holding Times

All samples will be collected, placed in containers, preserved, and analyzed within the time constraints consistent with applicable US EPA and California State procedures. All sample containers will be precleaned in accordance with prescribed EPA methods. Tape will be placed around all sample container lids to prevent leaks and to detect unauthorized tampering with individual samples following collection and prior to the time of analysis.

3.5.2 Sample Tracking and Management

All samples will be tracked using Versar's standard chain of custody form, which is shown in Figure 3-2. The chain of custody record will include the following information:

1. Sample number
2. Signature of collector
3. Date and time of collection
4. Sample collection location
5. Sample type
6. Signature of persons involved in the chain of possession
7. Inclusive dates of possession
8. Analytical parameters
9. Pertinent field observations

The custody record will be completed using waterproof ink. Any corrections will be made by drawing a line through and initialing the error, then entering the correct information.

Custody of the samples begins at the time of sample collection and will be maintained by the sampling team supervisor until samples are relinquished for shipment to the laboratory, or until samples are hand delivered to the designated laboratory sample custodian. Partial sample sets being accumulated for hand delivery to the laboratory will be stored in coolers with custody tape affixed.

Each sample shipment will be accompanied by a chain of custody record identifying its contents. The original record will accompany the shipment and the copy will be retained by the sampling team leader. The original (the top copy) will be enclosed in a plastic zip-lock bag and secured to the inside of the cooler lid with tape.

3.6 Site Safety Procedures

A designated site safety officer will be present during all of the drilling and sampling operations. Site personnel will wear gloves when

Figure 3-2. Versar Chain of Custody Form

handling the drill cuttings and samples. In addition, the drill cuttings and samples will be monitored with an OVA meter. If the site safety officer determines that harmful levels of organic vapors are present, all site personnel will don Tyvek coveralls and respirators. This equipment will be worn until the site safety officer determines that no harmful vapors are present.

3.7 Contaminated Materials Control

Drill cuttings generated from drilling operations will be stored in sealed DOT approved 55-gallon drums or similar containers in a secure area on site. The contents of the drums and the dates of collection will be clearly marked on appropriate labels. All equipment decontamination material and disposable personal protective gear will also be placed in appropriate containers. When the hazardous characteristics of these materials have been determined, they will be disposed of using proper procedures.

4.0 ADDITIONAL STUDIES

When the data obtained from the work described in this plan has been analyzed, a determination of which additional studies may be required at the site will be made. The additional work may include the establishment of a regular monitoring program, the installation of additional wells to further define the migration of the contamination, tests to determine aquifer characteristics, computer modeling to determine contaminant migration paths and velocities, and the development of a remedial action plan.

5.0 APPENDIX

Appendix A comprises the technical appendix to this work plan. The contents of the appendix are listed below.

Subject: Leaking Underground Storage Tank Remediation
Location: 4734 E. Carmen, Fresno

Dear Mr. Della-Rocco,

An inspection, sampling, or testing conducted at your underground storage facility indicates the presence of contamination. This preliminary evidence does not quantify or qualify the extent of contamination.

If you have not already done so, you must secure the services of a qualified consultant within ten days of receipt of this notice, and contact our office to make an appointment. We need to meet with you and your consultant to discuss the scope of work which will be required to determine the type and extent of contamination. A partial list of firms qualified to do the work is available upon request.

The County of Fresno is responsible for overseeing your efforts, and your contractor's efforts, to remediate the contamination. The County's and the state's costs of administrating and overseeing remedial action at your site are funded by the California Hazardous Substance Cleanup Fund or the federal Petroleum Leaking Underground Storage Tank Fund.

Both the State and federal funding sources require you, as the party (or one of the parties) responsible for the site, to reimburse the State Water Resources Control Board (SWRCB) for all direct and indirect costs incurred by government agencies while overseeing the cleanup of your site. The agencies involved include the County of Fresno, SWRCB, Central Valley Regional Water Quality Control Board, State Department of Health Services, and U.S. Environmental Protection Agency. Upon completion of your project or some other work milestone, you will receive a detailed invoice from the SWRCB and will be required to make full payment within 30 days. A copy of the enclosed notificaton form has been forwarded to the SWRCB (attachment).

The County is committed to ensuring a healthy environment for its citizens. We will work with you to secure an effective and efficient solution to the contamination on your property.

Please contact me at (209) 445-3271 to schedule a meeting and to answer any questions you may have.

Respectfully,

Peggy Wilkinson

PROJECT SUMMARY

Versar conducted a site assessment of the Pacific Bell East Carmen Avenue facility (SB-055), which is located in Fresno, California, on January 4, 1989. The assessment included a review of records, the drilling of three boreholes, the collection of soil samples for analyses, and associated research. Mr. Richard Strider, Environmental Scientist, and Mr. James R. Frantes, Senior Geohydrologist, conducted the site assessment. Mr. Strider prepared this site assessment report. Mr. James Frantes and Mr. Clarence Johnson, Assistant Manager, Versar West Coast Risk Management Services, reviewed this site assessment report.

The following brief conclusions summarize the findings of Versar's assessment:

- Soil samples were taken from three boreholes around the periphery of the removed underground unleaded gasoline storage tank (UST) excavation pit. These samples were analyzed for total petroleum hydrocarbons and for benzene, toluene, ethylbenzene, and xylene by Chemwest Analytical Laboratories, Inc. All soil samples analyzed from the borings were determined to be below reporting limits.

- The gasoline contamination, which was discovered during the tank removal investigation from soil samples taken beneath the underground storage tank, has not migrated off site. The contamination is confined to an essentially small plume, beneath the former location of the underground storage tank.

- Remedial action is necessary to clean up the soil contamination at the facility. The contaminated soil beneath the former location of the underground storage tank should be excavated. The aeration of approximately 80 cubic yards of contaminated soil should be performed on site and the resulting soils should be properly disposed of.

1.0 INTRODUCTION

The purpose of this report is to present the results of Versar's site assessment at the Pacific Bell facility located on East Carmen Avenue in Fresno, California.

An underground storage tank (UST), which had been used to store only unleaded gasoline, was removed at the Pacific Bell Fresno facility on November 17, 1988. Soil samples obtained from beneath the tank contained petroleum hydrocarbons, which were identified by Chemwest Laboratories, Inc., as gasoline. A letter was sent by Versar to Mr. Steve Wat of Pacific Bell which summarized the findings of the tank removal project. A copy of the letter was also sent to Ms. Peggy Wilkinson of the Fresno County Department of Health (FCDOH). With the approval of the FCDOH, a site assessment was conducted on January 4, 1989. The results of that assessment are presented in this report.

2.0 ENVIRONMENTAL SETTING

2.1 Site Location

The Pacific Bell facility is located at 4734 East Carmen Avenue, Fresno, California. The facility is located in a light industrial and mixed residential area of Fresno, at the southwestern edge of the community of Clovis. The nearest residential area is approximately 400 feet north of the facility and the closest school is approximately 1,500 feet northwest of the facility. The facility is located four miles east of Highway 99 and one mile southwest of the Fresno Air Terminal. The location of the facility is shown in Figure 2-1. The site layout is depicted in Figure 2-2. The facility was built and first operated in 1964 as a Pacific Bell switching station.

2.2 Surface Water

The nearest surface water to the Pacific Bell facility is a westward flowing flood control channel (Mill Ditch), which is located

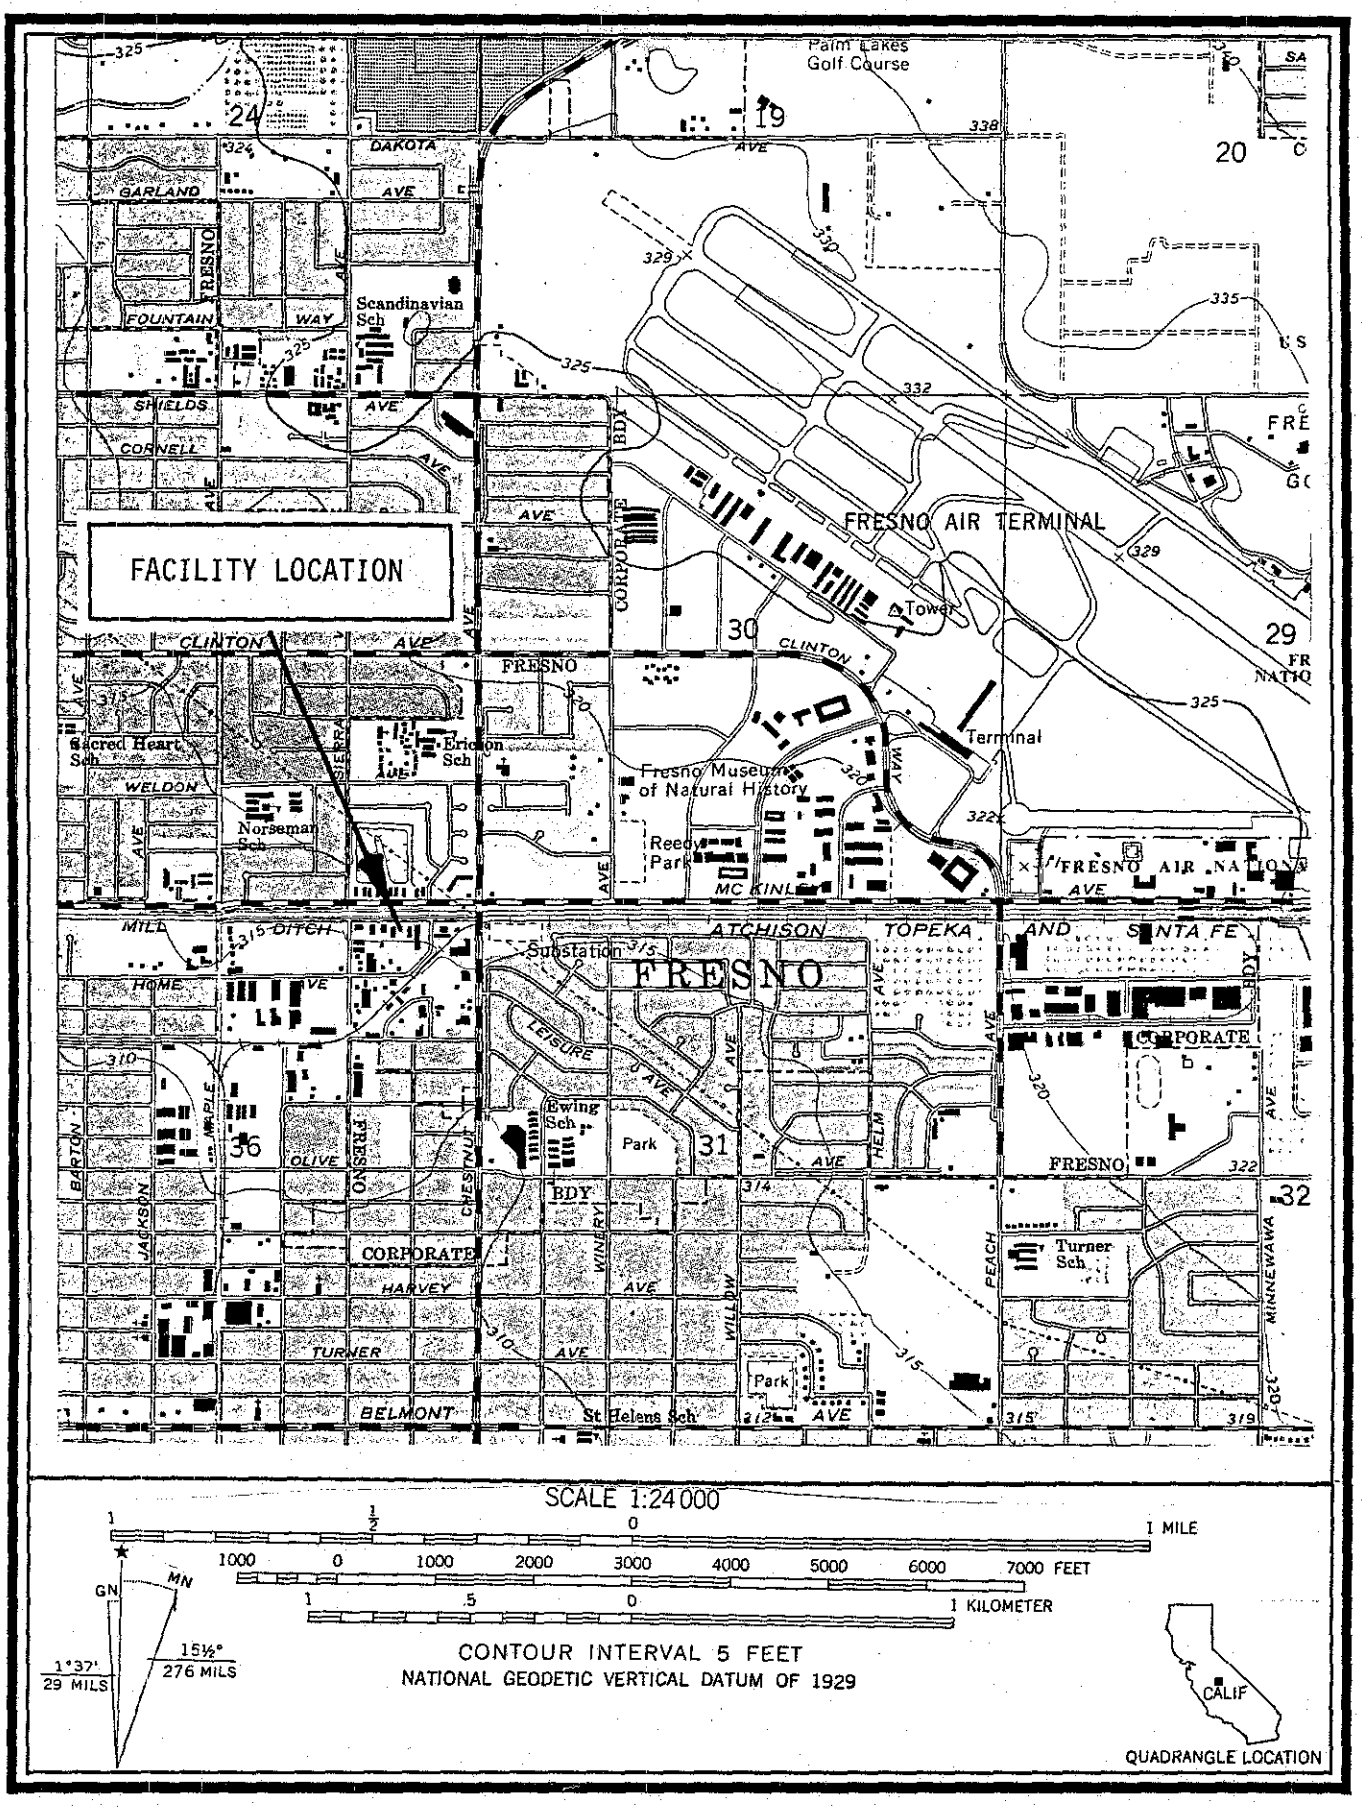

Figure 2-1. Location of the Pacific Bell East Carmen Facility in Fresno

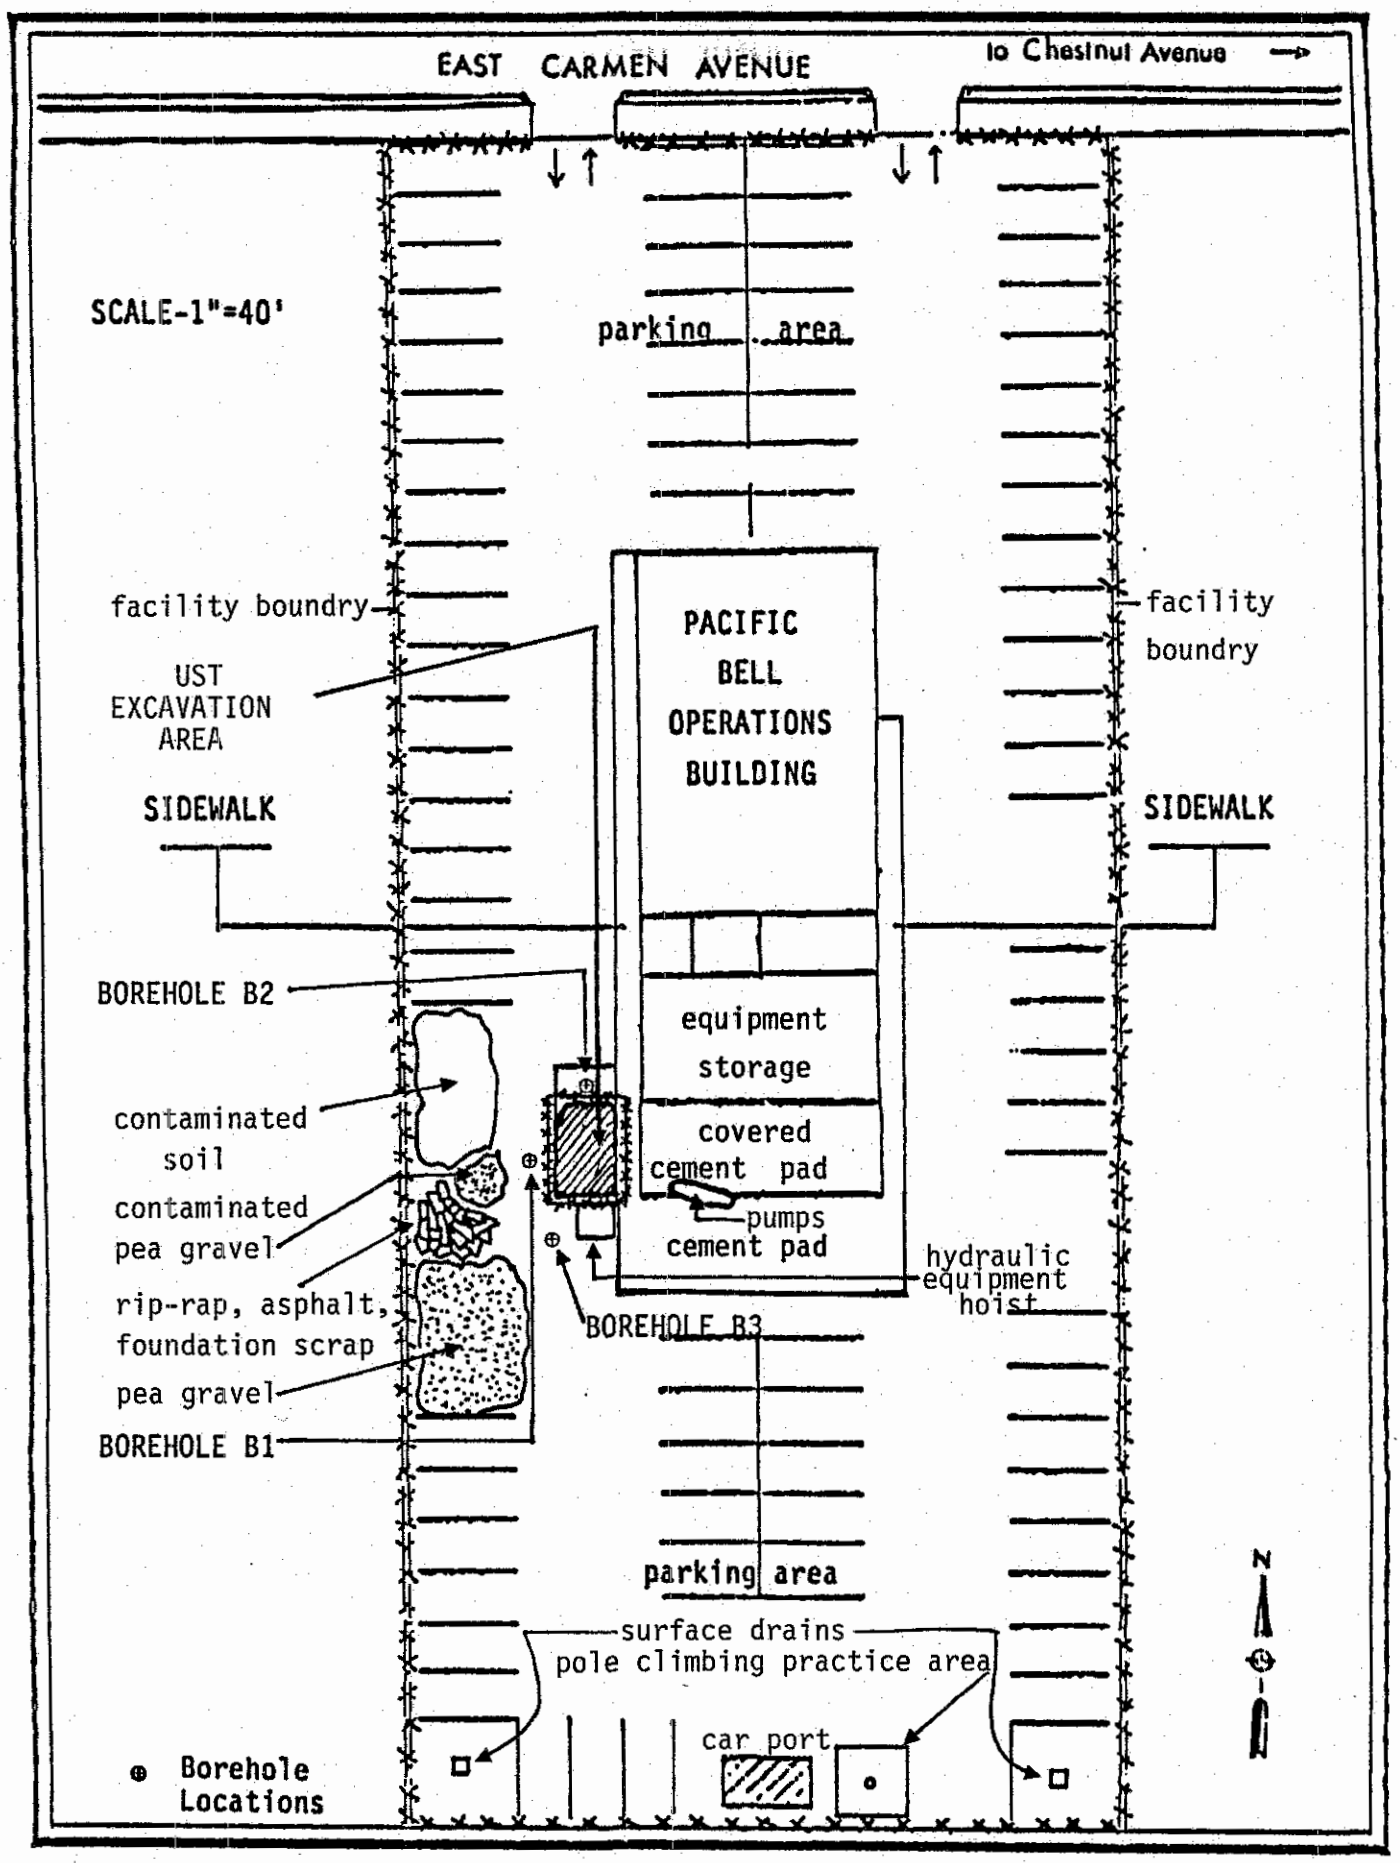

Figure 2-2. The Pacific Bell East Carmen Facility Layout

approximately 15 yards to the north of the facility boundary. This channel separates McKinley Avenue and East Carmen Avenue.

2.3 Geology

The facility is located in the San Joaquin Valley of the Great Valley physiographic province in California. The Great Valley is underlain by Quaternary continental deposits of silt, clay, sand, and gravel. These sediments, which are generally unconsolidated or loosely consolidated, consist primarily of channel, flood, and deltaic deposits formed by the major rivers in the valley and their tributaries. The resulting topography of the area is broad and flat to slightly undulating with an elevation at the facility of approximately 135 feet above mean sea level (MSL). Runoff of surface water is slow and erosion is moderate.

Based on borehole log data at the site, the following generalized soil stratigraphy was identified at the East Carmen Avenue facility. From the ground surface to a depth of approximately 13 feet, the soil is composed primarily of a reddish-brown, silty sand. The lithology changes slightly below this level to a lighter reddish-brown, or light-brown, clay-rich silty sand from about 13 feet to about 16 feet below the surface. At this level, the lithology alters to a light-brown slightly silty, slightly clay-rich sand, which exists below 16 feet to approximately 23 feet below the surface. The soil at this depth changes to a greyish-green, very stiff, clay-rich silt from 23 feet to about 25 feet, where the lithology of the soil is similar to the reddish-brown silty sand found at the surface. Below 25 feet the clay content of the sand increased gradationally to the bottom of the holes. At a depth of 31.5 feet, the soil consists of a greyish-brown to reddish-brown, slightly clay-rich, sandy clay. The descriptive logs of the boreholes are included in this report as Appendix A.

2.4 Geohydrology

Ground water is reportedly present at a depth between 60 and 90 feet below the surface. The combination of recent dry winters, current stream control, flood protection, and deep well pumping have lowered the water table in the valley. The regional ground water flow direction is to the west. The ground water aquifer is used for domestic and agricultural purposes throughout the rural area surrounding the Pacific Bell facility. The nearest water well is owned by Pacific Bell, and is located approximately 15 feet southeast of the tank excavation site. This water well is reportedly screened in the aquifer at a depth greater than 100 feet; however no accurate well driller's record is available. The well is used by Pacific Bell employees as a supply of drinking water and for cleaning equipment.

3.0 PREVIOUS WORK

On November 17, 1988, a 6,000-gallon fiberglass underground unleaded gasoline storage tank was removed from the southwest corner of the building at the East Carmen Avenue facility by Bassett Construction Inc. During tank removal operations, approximately 65 cubic yards of uncontaminated, contaminated, and slightly contaminated pea-gravel and soil were excavated from the pit. Contaminated soil was placed onto a plastic tarp and then covered with a second plastic tarp to prevent erosion and runoff of contaminated materials during rainy periods. Asphalt, concrete foundation footings, and other miscellaneous concrete rip rap is stored adjacent to the soil and pea-gravel piles, which are located on the west side of the excavation pit (see Figure 3-1). Following the removal of the tank and the excavation of contaminated materials, two soil samples were taken from beneath the tank in native soils at the bottom of the excavation pit. The excavation pit was then enclosed with a cyclone fence system for site safety. The two soil samples were analyzed by Chemwest Analytical Laboratories, Inc., for

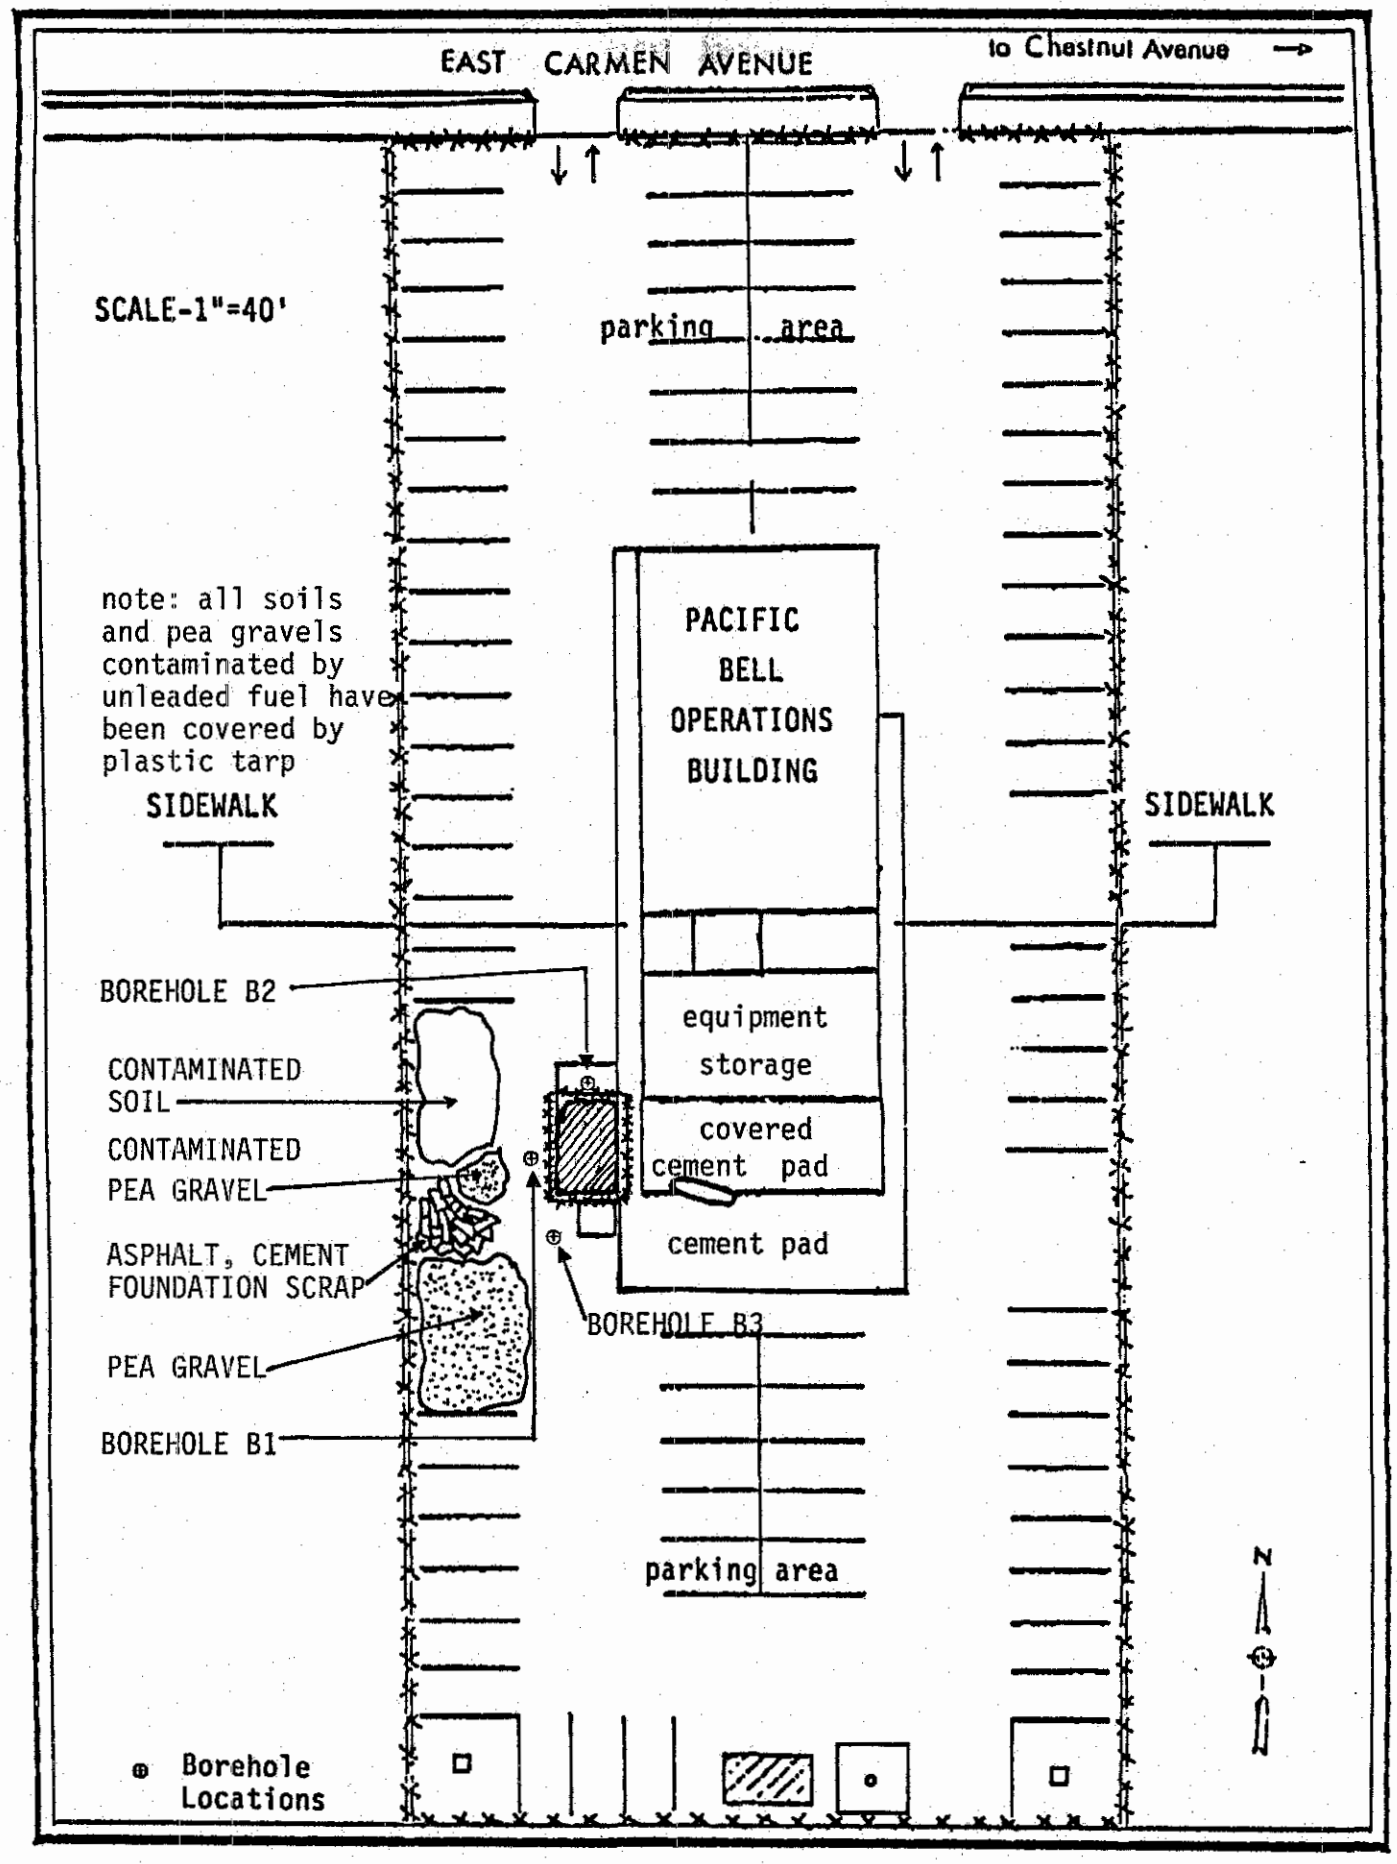

Figure 3-1. Locations of Soil Piles from Excavation Activities at the East Carmen Avenue Facility

total petroleum hydrocarbons (TPH) using EPA Method 8015M, and for benzene, toluene, ethylbenzene, and xylene (BTEX) using EPA Method 8020. Samples N-1-15 and S-1-15 were found to contain TPH, which were identified as gasoline, at levels of 1,400 milligrams per kilogram (mg/kg) and 4,100 mg/kg, respectively. Sample N-1-15 contained 30 mg/kg toluene, 51 mg/kg xylene, and benzene and ethylbenzene were not present at the reporting limit. Soil sample S-1-15 contained 40 mg/kg benzene, 16 mg/kg toluene, 26 mg/kg ethylbenzene and 170 mg/kg xylene.

The results of the laboratory analyses of the initial soil samples were reported to the FCDOH in a report from Versar dated December 5, 1988. The initial tank removal report, chain of custody, and laboratory analytical results are included in this report as Appendix B. A site assessment work plan, dated December 16, 1988, was prepared by Versar for Pacific Bell and submitted to the FCDOH for the investigative drilling at the Pacific Bell Fresno facility. In a letter dated December 29, 1988, the FCDOH approved the proposed work plan contingent upon three modifications which were incorporated into the work plan. A copy of the work plan, the letter, and the associated permit to drill boreholes to collect soil samples are included in this report as Appendix C.

4.0 VERSAR INVESTIGATION

On January 4, 1989, under the direction of a Versar geohydrologist, Bakersfield Well and Pump Company, Inc., drilled three boreholes around the former location of the UST. A truck-mounted drilling rig equipped with eight-inch diameter, hollow-stem augers was used to drill the boreholes. Each of the three boreholes was completed to a depth of 31.5 feet below the surface. Borehole B1 was located west of the excavation pit, approximately six feet from the center of the western edge of the pit. Borehole B2 was located on the north side of the excavation pit, approximately four feet from the center of the northern edge of the pit.

Borehole B3 was located approximately six feet south of the excavation pit. The locations of boreholes B1, B2 and B3, are shown in Figure 4-1. During the drilling, a photovoltaic ionization detector (PID) and a flame ionization detector (FID) were used periodically to monitor for volatile organic compounds (VOC) in drill cuttings and split-spoon samples. No VOCs were detected in the drill cuttings or the headspace analysis of samples. During the drilling, soil cuttings from the boreholes were continually examined for changes in lithology or indications of contamination.

Two soil samples were collected for laboratory analyses from each of the three boreholes during the investigation. These samples were chosen, out of the approximately six soil samples collected from each borehole, because they characterized a change in lithology or represented different zones of potential interest. All soil samples to be analyzed by the laboratory were sealed and preserved in an ice chest using standard methodology and were transported using proper chain of custody procedures. The six soil samples were analyzed for TPH by EPA Method 8015M using a gas chromatograph-flame ionization detector (GC-FID) and for BTEX by EPA Method 8020 by Chemwest Analytical Laboratories, Inc. The laboratory analytical results are summarized in Table 4-1. The soil samples were all below reporting limits (BRL) for both TPH and BTEX. Copies of the chain of custody and the laboratory analytical results of soil samples analyzed are included in this report as Appendix D.

It appears that cement foundation footings and other rip rap were used in this area to bring the surface level up to grade. These materials were encountered during the tank removal project and again while attempting to install borehole B3. The augers intersected cement barriers at a depth of about three feet on five separate occasions while attempting to drill borehole B3.

5.0 CONTAMINATION REMEDIATION

5.1 Remediation Work Plan

Gasoline contaminated soil was discovered beneath the UST in native soils at the East Carmen Avenue facility. The highest concentration of TPH reported in the soil of the excavation pit (sample S-1-15) as determined by chemical analyses, was 4,100 mg/kg. Soil sample N-1-15, which was taken approximately five feet north of sample S-1-15, had a TPH concentration of 1,400 mg/kg. The limit of the migration of hydrocarbons with depth has not been completely defined. Based on the results of the chemical analyses and the observations made at the site, it is believed that gasoline contaminated soil which has not been excavated is contained in a smaller plume below the excavation pit walls. The clay-rich hard pan layer at 14 feet is expected to limit the migration of the hydrocarbons. Therefore, to remove the remaining contaminated material, approximately 40 cubic yards of contaminated soil must be excavated. Each excavator bucket of soil removed from the pit will be field tested with the PID to determine if the load is clean or contaminated before it is piled in the appropriate area. If the level of contamination decreases to an acceptable level as the excavation continues, the excavation will be halted in that area of the pit. Samples will be taken from the walls and bottom of the excavation at points where the soil is believed to be clean. Following the laboratory testing of the soil, the deepest part of the excavation will be backfilled with drain rock and then clean soil will be compacted in the hole above the drain rock. Of the 65 cubic yards of soil and pea-gravel previously removed, approximately 40 cubic yards are believed to be contaminated. Therefore, it is estimated that 80 cubic yards of soil will require remediation.

Aeration will be the principal technique used to remove the unleaded gasoline from the impacted soil. An area 60 feet long by 40 feet wide

is available for treatment of the soil. A plastic sheet will be spread under the treatment area and dikes will be constructed on the perimeters to prevent the release of potentially contaminated stormwater. A three-inch layer of contaminated soil will be initially spread onto the plastic sheets. This layer of soil can be rapidly aerated and used as a buffer zone so that the plastic containment sheet below the soil will not be damaged when approximately nine additional inches of contaminated soil are added to the top three-inch layer and periodically reworked for greater aeration. This two-part treatment will also decrease the amount of TPH emitted to the atmosphere at any one period of time. Prior to or after spreading for treatment, the soil will be broken apart to increase the available effective surface area. Composite samples will be taken from each quadrant for analysis for TPH at the start of aeration to establish an initial contamination level, and periodically to determine the effective rate of remediation.

Initially, samples will be taken from each sampling area once every two weeks. When the remediation rate has been established, sampling may be reduced or increased as appropriate to measure the rate of remediation. Following each sampling episode, the soil will be reworked. Final disposal of the contaminated soil will be dependent on the concentration of TPH in the remaining soil, and the time available for additional remediation.

5.2 Schedule for Remediation

As soon as the remediation plan has been approved by the applicable regulatory agencies, operations for remediation of contaminated soil at the site will begin. It is estimated that the excavation of the remaining contaminated soil and the initial backfilling of the hole will take four days. The length of time required for the aeration of the soil is dependent on the ambient temperatures, clay content of the soil, the average wind speed, and the amount of precipitation. It is

estimated that the remediation will take three months from the initiation of the aeration.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

The laboratory analytical results of soil samples from boreholes B1, B2, and B3 at the East Carmen site indicate that no gasoline contamination is present in the soil beneath the margins of the excavation pit. Soil samples from boreholes B1, B2, and B3 were all BRL for TPH and BTEX. The downward migration of the released hydrocarbons is limited by a clay-rich hardpan layer approximately 14 feet below the surface. The results of the chemical analyses and the presence of the hardpan layer demonstrate that the ground water beneath the site has not been impacted. To eliminate the possibility that the hydrocarbons remaining in the ground might significantly impact the environment, the remaining contaminated soil should be excavated for aeration and proper disposal.

6.2 Recommendations

Based on the findings of the East Carmen Avenue Facility site assessment, the following recommendations are made:

- 89-2-1: The soil from the location of the UST should be excavated to remove all TPH contamination in concentrations of greater than 10 ppm. The excavation should be completed in a manner so as to ensure the structural integrity of the adjacent Pacific Bell facility building and the hydraulic lift system, while maintaining strict safety controls. The excavation would then be filled with noncontaminated soil from the excavation as well as drain rock and imported fill material.

- 89-2-2: The excavated soil should be spread out on the property and treated using aeration. Final disposition of the soil would be dependent upon remediation results.

7.0 APPENDICES

Appendices A through D comprise the Appendix to this report. The contents of the Appendix are listed below.

Reference: Underground Storage Tank Removal,
4734 East Carmen Street, Fresno, California (SB-055)
Versar Job No. 6264.9

Dear Mr. Wat:

The purpose of this letter is to summarize the findings of the tank removal project at 4734 East Carmen Street, Fresno, California, the results of which are presented below.

INTRODUCTION

Versar Inc. was retained by Pacific Bell to sample soils and characterize subsurface contamination during the removal of the underground unleaded gasoline storage tank at the Pacific Bell site located at 4734 East Carmen Street, Fresno, California. The location of the site is shown in Figure 1, Attachment I. The underground storage tank was situated along the southwestern corner of the operations building. Figure 2, Attachment I, shows the layout of the East Carmen facility.

OVERVIEW

On November 1, 1988, a PetroTite Tank System Integrity Test was performed on the underground unleaded gasoline storage tank. According to the test results, the test was terminated after two hours of testing because of evidence of a large product displacement. The test showed a product loss of more than 1.000 gallons per hour and it was determined that the tank was not tight. The Automatic Tank Gauging System (ATGS) TLS 250, which measures tank fluid level, gain, and fluid loss, also indicated that the tank was losing product.

The 6,000-gallon underground unleaded gasoline storage tank was removed on November 17, 1988, by LBME Corporation. The tank removal project consisted of: (1) acquisition of permits from the Fresno County Environmental Health Department; (2) crushing and distributing 200 pounds of solid carbon dioxide (dry ice) evenly into the tank to

displace the fuel vapors; (3) removal of the tank and appurtenant piping; (4) collection of subsurface soil samples and characterization of soil conditions; and (5) transport of the removed tank to H & H Ship Service Company (EPA ID No. CAD004771168) in San Francisco, California, for disposal. No certificate of disposal is available at this time. Ms. Peggy Wilkinson, Environmental Health Analyst, Fresno County Department of Health (FCDOH), was present on site for the tank removal.

RESULTS

As the tank was excavated, Versar's representative identified one area of slight contamination; the backfill pea gravel surrounding the the fill pipe (from the surface to the tank) exhibited a hydrocarbon odor, and visible product extended approximately two feet from the pipe and down the side of the tank. It appeared that the odor and related visible product were generated by a release of product from overfilling of the tank. The location of the fill pipe is shown in Figure 3, Attachment I. The contamination surrounding the fill pipe appeared to extend to the bottom of the tank excavation along the edge of the tank.

When the tank was lifted from one side, the bottom of the tank became exposed. It appeared that there were several pinholes along the bottom of the tank where a mixture of fuel and water, used to increase dry ice activity, were escaping. While the tank excavation was being performed, the excavator had punctured the tank on the north end allowing pea gravel to enter the tank at that side. A small amount of fuel in the tank and contaminated pea gravel were emptied into the excavation pit from the punctured Fiberglas tank during tank removal.

Immediately following the removal of the 6,000-gallon unleaded gasoline tank, a Versar representative collected two soil samples from the native soils beneath the tank excavation just off the edge of the tank pad at a depth of approximately 15 feet below the existing land surface. The native soil beneath the excavated tank appeared to be composed of a slightly moist, stiff clay (hardpan) containing small pebbles. The sample locations are also shown in Figure 3, Attachment I. A hydrocarbon odor was observed but no soil discoloration was evident. Head-space analyses were also collected in the native soils for field evaluation.

Samples were collected in precleaned brass tubes and sealed with aluminum foil, plastic lids, and duct tape. Each sample container was placed on ice in an ice chest for delivery to the laboratory. The samples were delivered by Versar to Chemwest Analytical Laboratories, Inc., on November 18, 1988, following standard protocol for sample

transportation and storage. The TPH samples were analyzed on a three-to-five day rush basis. Two soil samples were submitted to Chemwest to be analyzed for total petroleum hydrocarbon (TPH) constituents by EPA Method 8015M, and for benzene, toluene, ethylbenzene, and xylene (BTEX) by EPA Method 8020. Results from the rush laboratory analyses for TPH identified the presence of elevated levels of gasoline in native soil samples collected below the unleaded gasoline tank excavation pit. The results for TPH in the two samples were 1,400 milligrams per kilogram (mg/kg) for sample N-1-15, and 4,100 mg/kg for sample S-1-15. The results for BTEX for sample N-1-15 were: toluene, 30 mg/kg; xylene, 51 mg/kg; and benzene and ethylbenzene were below reportable limits. The results for BTEX for sample S-1-15 were: benzene, 40 mg/kg; toluene, 16 mg/kg; ethylbenzene, 26 mg/kg; and xylene, 170 mg/kg. Prior to receiving the results from the laboratory, a Photovoltaic Ionization Detector (PID) instrument was used on two head-space samples taken from the same soil used for laboratory analysis. These two samples were used only as a vapor detection indicator for soil contamination. Head-space sample N-1-15 had a vapor concentration of greater than 140 parts per million (ppm) and head-space sample S-1-15 had a vapor concentration of greater than 280 parts ppm. These indicators have a positive correlation respectively when compared with the TPH laboratory results. The laboratory analyses, results, and the chain of custody form for the soil samples are included as Attachment II.

CONCLUSIONS

The results of chemical analyses of soil samples from beneath the removed underground unleaded gasoline storage tank indicate that significant levels of petroleum hydrocarbons are present. According to the FCDOH representative at the site during the tank removal, the uppermost aquifer in the area is at a depth of approximately 80 feet below the land surface. Therefore, it appears that fuel, which may have been released from overfilling and from holes in the bottom of the tank, may have entered the soil beneath the tank, and its downward movement through the soil may have been impeded by the clay-rich hardpan. This vertical impedance of fluids from the tank may have caused the fluid to move laterally along the hardpan; however, there is no conclusive evidence of this activity at this time. In any event, to ensure that the release to the soil was minimal, and to fulfill the requirements of the FCDOH, an investigation should be conducted to adequately assess the areal extent of the migration of contamination and to reduce the risk

Versar INC.

for causing any additional environmental impairment. This will help to ensure that the impact to the surrounding soils is corrected. An investigation involving the remediation of contaminated soils beneath the excavated tank should fulfill the requirements of the FCDOH. A work plan for the investigation is being submitted under separate cover.

If you have any questions pertaining to the contents of this letter-report, please contact me and I will attempt to supply any additional information requested.

Very truly yours,

James R. Frantes

Attention: Mr. Clarence Johnson

Subject: Report of Data - Case Number 2698

Dear Mr. Johnson:

The technical staff at CHEMWEST is pleased to provide our report for the analyses you requested: TPH EXTN/GC-FID and BTEX - EPA Method 602.

Two soil samples for Project Fresno, CA, Project Number 6264.9 were received November 18, 1988 in good condition. Results of the analyses, along with the analytical methodology and appropriate reporting limits, are presented on the following pages.

Thank you for choosing CHEMWEST Laboratories. Should you have questions concerning this data report or the analytical methods employed, please do not hesitate to contact Toni Weeks, our Technical Service Representative, or your project manager. We hope that you will consider CHEMWEST Laboratories for your future analytical support and service requirements.

Sincerely,

Jill B. Henes, Ph.D.
Vice President of Technical Services

and

Kirk Pocan
Project Manager

ANALYTICAL METHODOLOGY

Total Petroleum Hydrocarbons (TPH) Extractables by GC-FID

Extraction Procedure:

WATER -

A 1 liter sample is poured into a 2 liter separatory funnel. 3x100 ml extractions with methylene chloride (2 minute shake outs) are completed. The methylene chloride is decanted off and concentrated to a 5 ml final volume.

SOIL -

A 30 gram, or other appropriate aliquot of soil, is mixed with 10 grams of washed sodium sulfate. 100 mls of methylene chloride is added to the soil and placed on a mechanical shaker for 1 hour. The liquid is decanted off and the process is repeated with an additional 50 ml of methylene chloride. The combined solvent extracts are filtered through sodium sulfate and the extract is concentrated to a 5 ml final volume.

GC ANALYSIS -

An appropriate volume of the sample extract is injected into a Gas Chromatograph equipped with a Flame Ionization Detector (FID), a split/splitless capillary injector (operated in the splitless mode), and a fused silica capillary column. The TPH fraction is quantitated as gasoline and/or #2 diesel fuel (and/or different petroleum hydrocarbon fuel types if requested, such as JP-4 jet fuel) based on relative retention times and examination of the elution profile. The TPH fraction quantitation is based on chromatographic peak areas against a multipoint standard curve.

ANALYTICAL METHODOLOGY

BTEX (Benzene, Toluene, Ethyl Benzene, and Xylenes) by Purge & Trap and GC-PID

WATER - Method 602 or 8020

A 5 ml sample volume, or 5 ml of a suitable dilution, is purged on a suitable purge and trap system with helium. The purged sample is analyzed on a Gas Chromatograph equipped with a Photoionization Detector (PID). A packed column is used to separate the compounds.

SOIL - Method 8020

A 10 gram, or other appropriate aliquot of soil, is weighed into a clean VOA vial. Soils received in brass core tubes are sampled by discarding 2-5 centimeters of soil from each end of the tubes (this is done to reduce the possibility of analyzing a portion of soil that has been exposed to sampling technique contamination). Equal aliquots of soil are then removed from each end of the tube and combined in the VOA vial. Soil in jars or bags is aliquoted using a similar technique, which discards exposed sample surfaces. A 10 ml, or other appropriate volume of methanol, is added to the soil and the soil is shaken with the solvent. 100 ul of the extract, or a reduced aliquot or volume of a suitable dilution, is injected into 5 ml of laboratory blank water and analyzed by the same technique used for water samples.

FOREWORD

This project work plan was prepared by Versar Inc. of Sacramento, California, for Pacific Bell, under a contract dated July 22, 1988. Mr. Richard Strider, Environmental Scientist, prepared this work plan and Mr. James R. Frantes, Senior Geohydrologist, reviewed this work plan.

Approved for Release:

James R. Frantes

for: Michael A. Neely, Manager
West Coast Risk Management Services

Versar INC.

DISCLAIMER

The purpose of this investigation and report is only to inform the client of the environmental conditions as they currently exist at the subject facility. Versar Inc. does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations and/or suggestions in no way assures elimination of hazards or the fulfillment of a client's obligation under any local, state, or federal laws or any modifications or changes thereto. In many cases, federal, state, or local codes require the prompt reporting to relevant authorities if a release occurs. It is the responsibility of the client to comply with requirements to notify authorities of any conditions that are in violation of the current legal standards.

Factual information regarding operations, conditions, and test data were obtained, in part, from the client and have been assumed by Versar to be correct and complete. Since the facts stated in this report are subject to professional interpretation, they could result in differing conclusions. In addition, the findings and conclusions contained in this report are based on various quantitative and qualitative factors as they existed on or near the date of the investigation. Therefore, if the recommendations made in this report are not implemented within a reasonable period of time, there can be no assurances that intervening factors will not arise that will affect the conclusions reached herein.

Versar makes no warranty and assumes no liability with respect to the use of information contained in this report. No changes to its form or content may be made without Versar's express written approval.

1.0 INTRODUCTION

On November 14, 1988, the Fresno County Department of Health (FCDOH), Environmental Health System notified Pacific Bell of measures that needed to be taken involving the determination of contamination from the leaking underground storage tank at the Pacific Bell East Carmen site in Fresno. A copy of this letter is attached to this work plan as Appendix A. An underground unleaded gasoline tank was removed at the Pacific Bell facility in Fresno, California on November 17, 1988. Soil sampled from beneath the storage tank contained petroleum hydrocarbons which were identified as gasoline by the Chemwest Laboratory in Sacramento, California. The laboratory analytical results and additional data obtained during the tank removal were reported in a letter dated December 5, 1988.

2.0 ENVIRONMENTAL SETTING

The Pacific Bell site to be investigated is located at 4734 East Carmen Street, Fresno, California (Pacific Bell site SB-055). The site layout is depicted in Figure 2-1.

2.1 Geology and Geohydrology

The site is located within the Great Valley physiographic province in California. The valley soils in the Fresno area are primarily developed from mixed alluvial materials eroded from the Sierra Nevada since the early Pleistocene. The uppermost aquifer beneath the site is reported to be at approximately 80 feet below the land surface.

3.0 PROPOSED INVESTIGATION

The objectives of this investigation are to: (1) determine the lateral and vertical extent of petroleum hydrocarbons found in the soil; (2) determine if the contamination is present in, or threatens, the

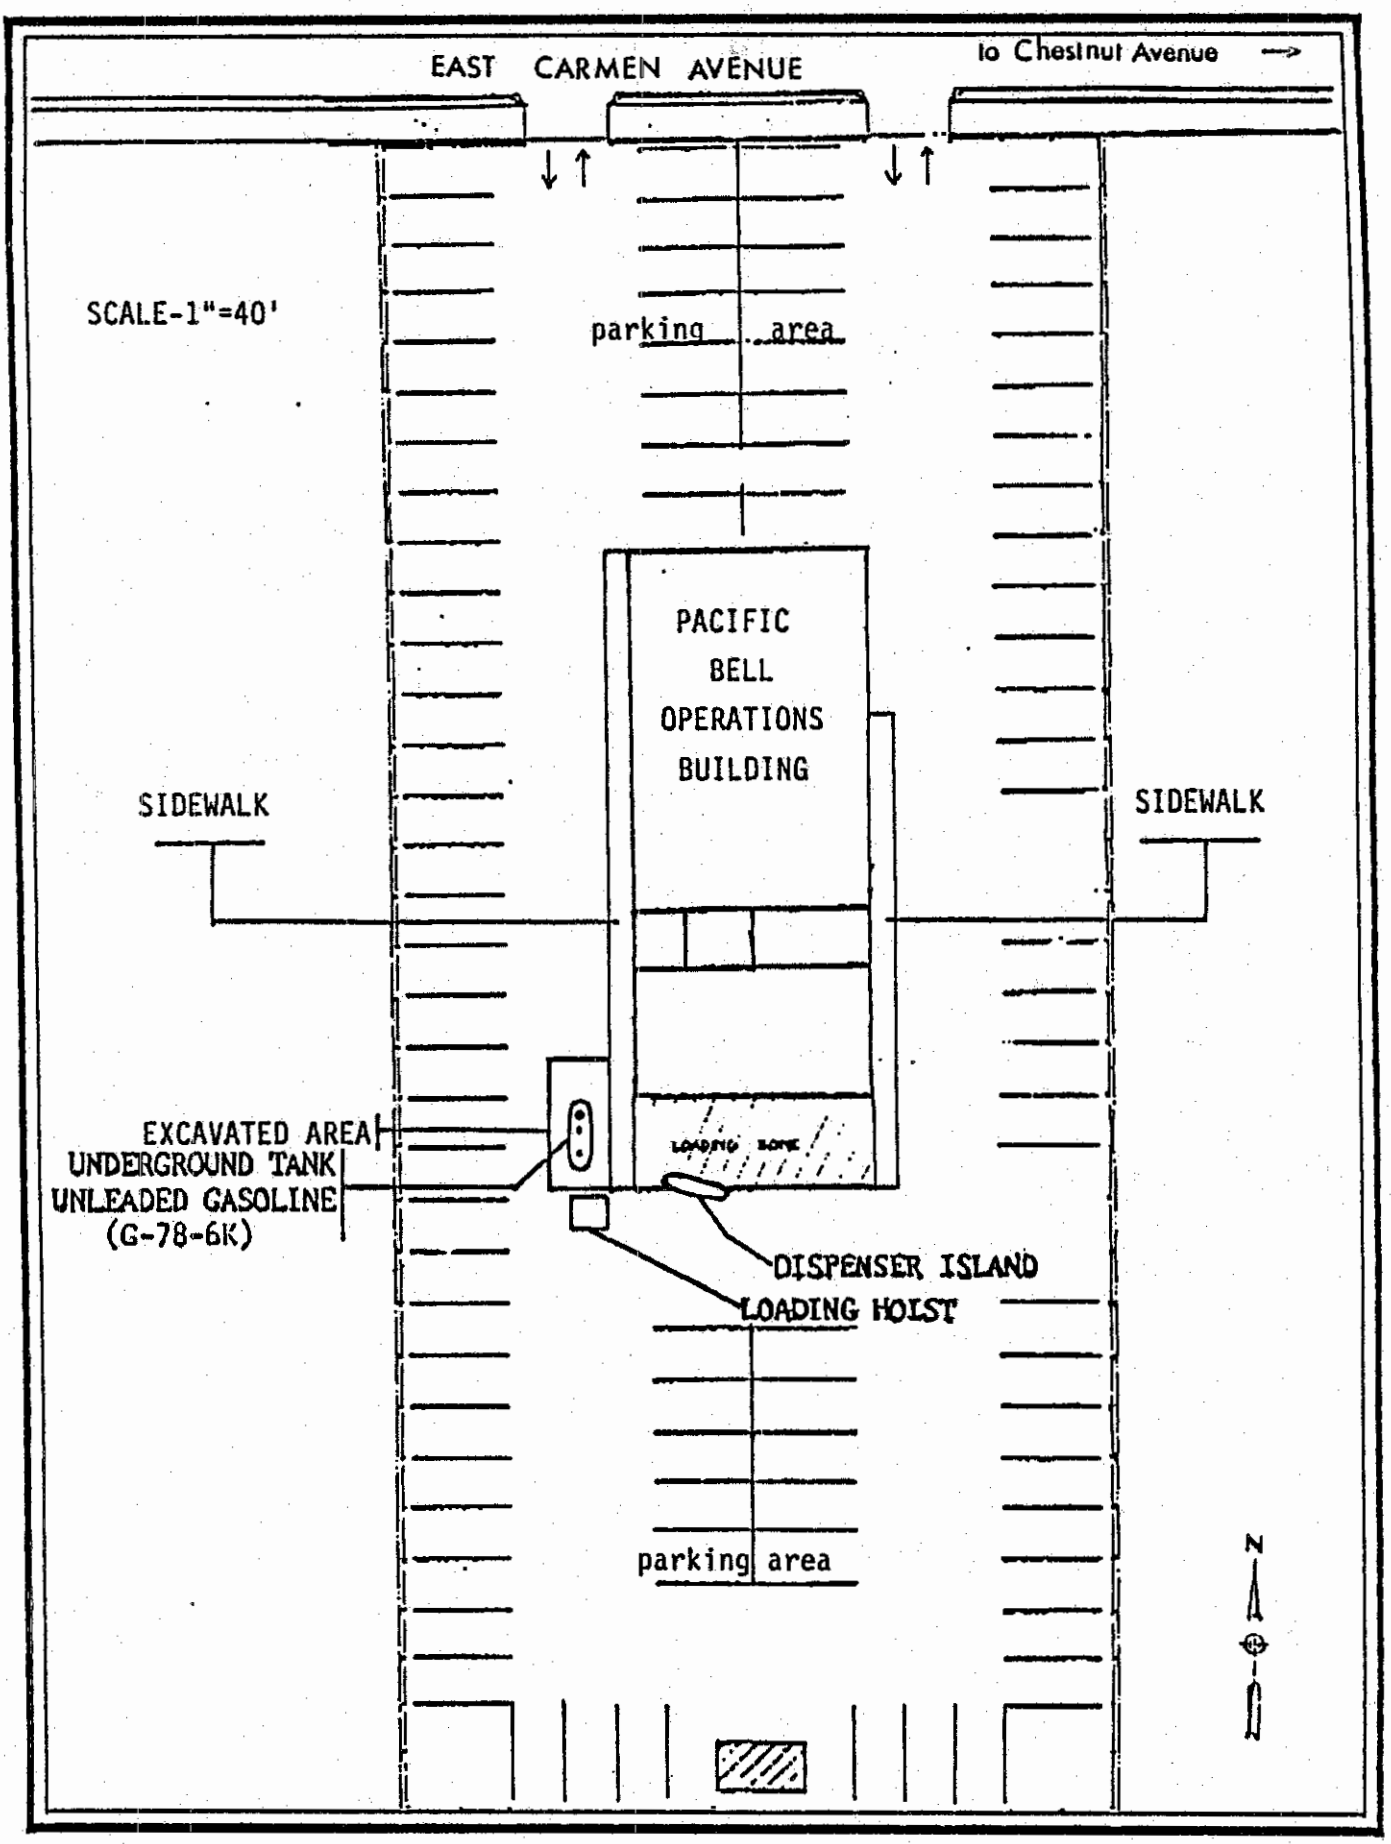

Figure 2-1. Site Layout of the Fresno Facility (SB-055)

ground water; and (3) accurately determine the concentrations of petroleum hydrocarbons present in the soil and ground water, if necessary.

To accomplish this, soil samples will be collected for chemical analyses during the drilling of three boreholes. The proposed locations of the boreholes are shown in Figure 3-1.

3.1 Drilling of the Boreholes

It is necessary to determine the lateral and vertical extent of soil contamination. Each borehole will be drilled with hollow stem augers. Soils encountered in the first borehole will be sampled using a California modified spoon sampler at intervals frequent enough to accurately define the stratigraphy. The other boreholes will be sampled using a drive sampler at intervals of five feet or less. The soil cores, drive samples, and drill cuttings will be logged by a Versar representative at the site. The bottom of the boreholes will be located at a depth of approximately 30 feet below the surface, or about 15 feet below the deepest contamination (whichever is deeper), unless the uppermost aquifer is identified at that level. If contamination extends to a depth greater than 65 feet, the borehole may be discontinued to prevent contamination of the aquifer by drilling equipment.

All of the augers, bits, and down-the-hole sampling equipment will be decontaminated with a steam cleaner after each borehole has been drilled. A copy of the application for the permit for the drilling of boreholes at the Fresno Site is also included in Appendix A.

3.2 Collection of Samples

3.2.1 Decontamination Procedures

All sample containers will be decontaminated in a laboratory. The decontamination procedures for field sampling are given below.

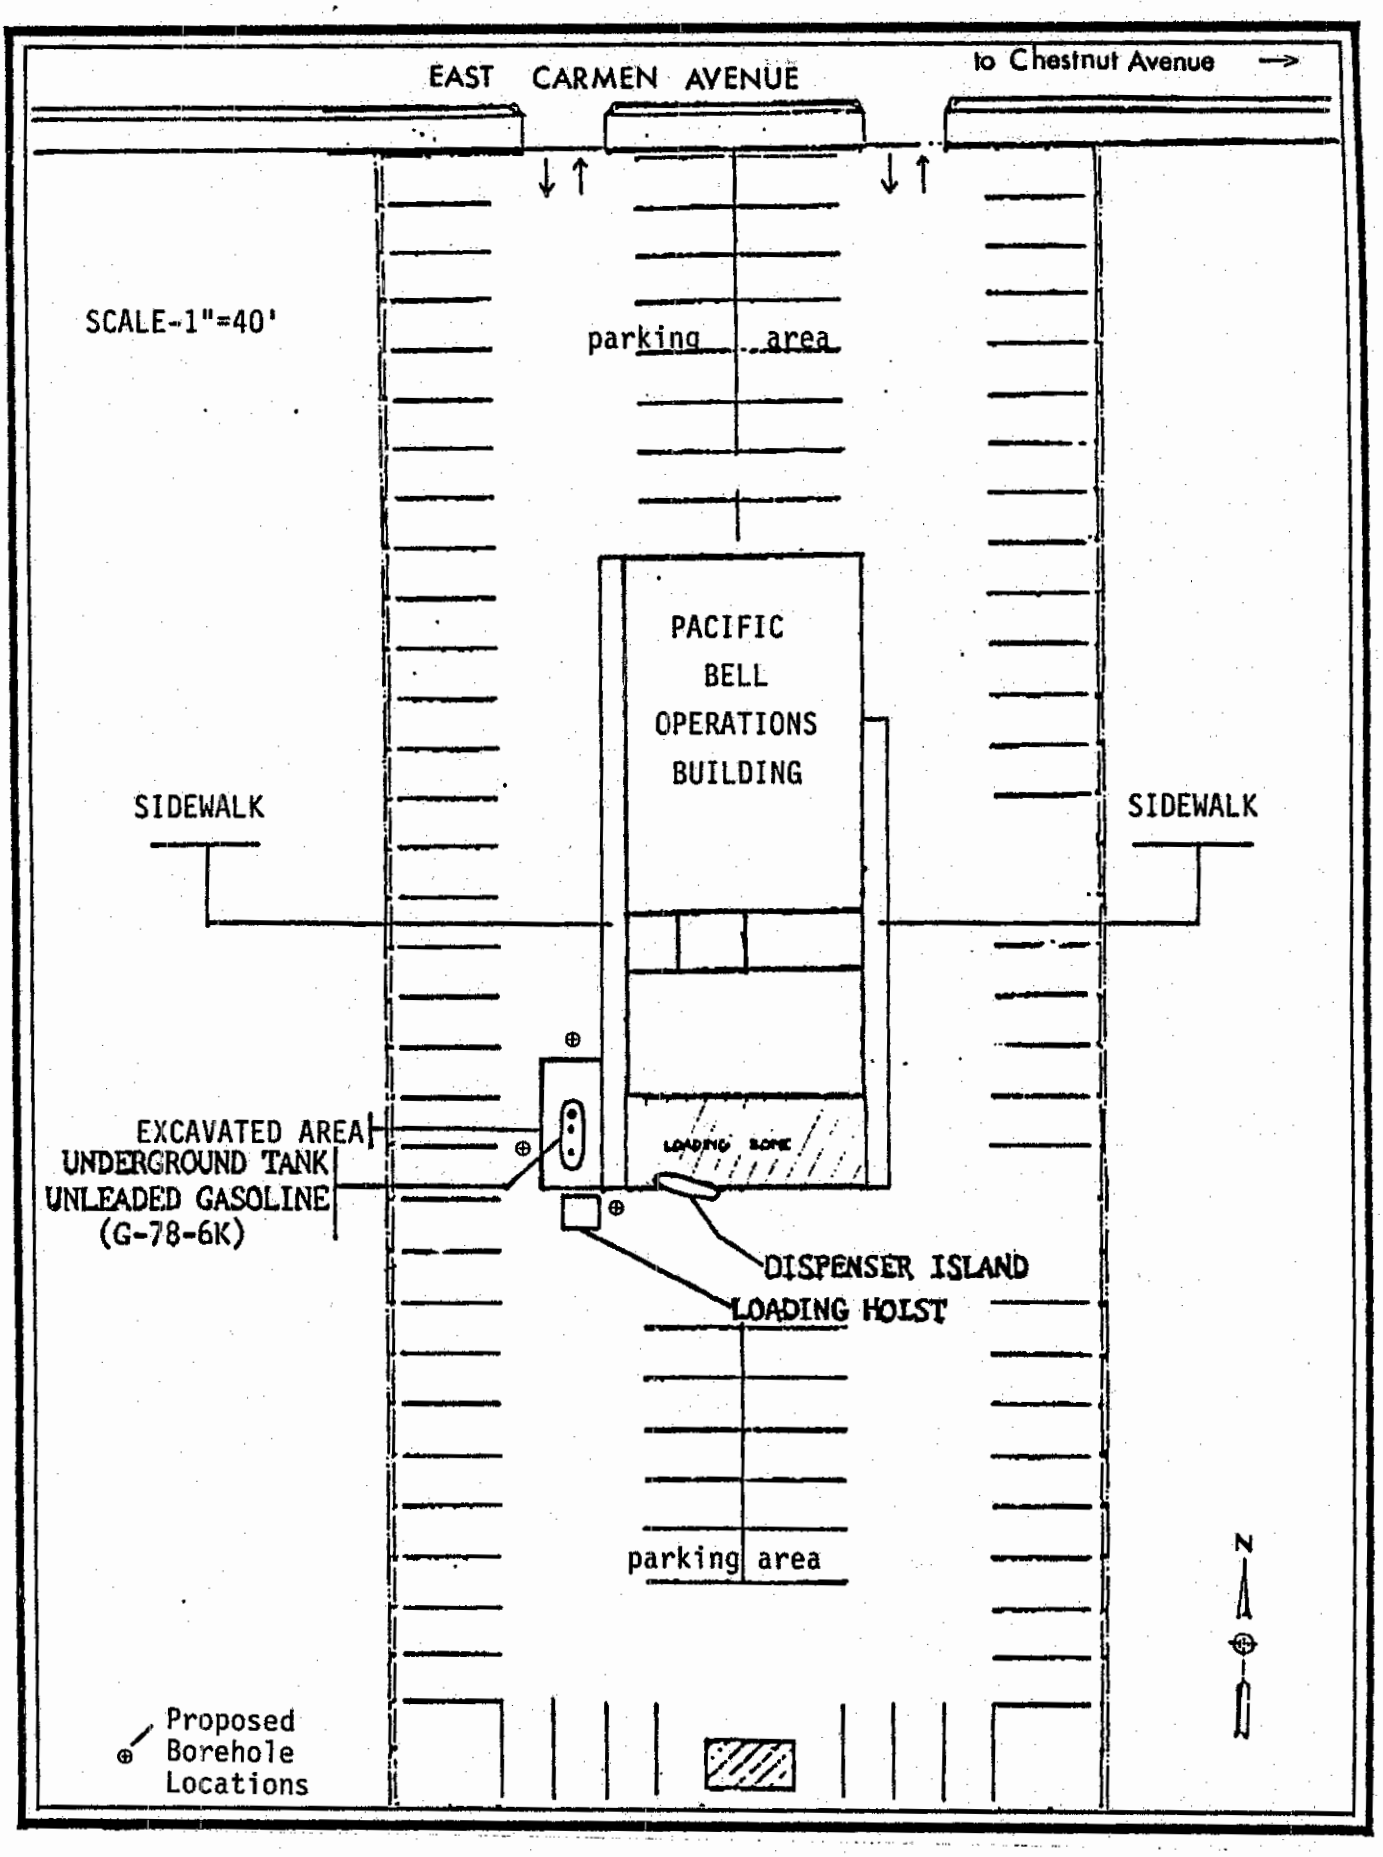

Figure 3-1. Proposed Locations of Boreholes

1. Sampling equipment is nondedicated. As such, it must be carefully cleaned prior to each use, as follows:

   a. Carefully brush off any loose foreign debris with a soft bristle brush.

   b. Rinse the equipment thoroughly in clean water.

   c. Wash the equipment in a nonphosphate detergent bath.

   d. Rinse thoroughly in clean water.

   e. Rinse thoroughly with deionized water.

   f. Rinse with acetone.

   g. Rinse with pesticide-grade hexane.

   h. Air dry in a dust-free environment.

   i. Store in sterile plastic bags or other suitable clean cover until use.

2. Clean, disposable gloves must be worn by all field personnel when handling decontaminated equipment.

3.2.2 Soil Sampling

Each soil core and drive sample will be examined with an Organic Vapor Analyzer (OVA) meter or a photovoltaic ionization detector (PID) as soon as the sampling device is opened. Following this, representative samples of the soil will be placed in a glass jar. The jar will be sealed, and the sample shaken. After 10 minutes, a small hole will be made in the seal and the head space above the sample will be analyzed for organic compounds with an OVA meter or a PID. Any contaminated zones identified with the OVA meter or PID will be sampled for chemical analysis. Approximately six soil samples will be collected from each borehole during drilling. The samples will be collected in brass tubes and will be fitted

with an air-tight lid. The tubes will be packed as full as possible with the soil to minimize the head space. A total of 18 soil samples will be collected, approximately six of which will be submitted for analysis for total petroleum hydrocarbons (TPH) using EPA Method 8015M.

3.3 Analysis of Samples

All of the soil samples will be analyzed for TPH using EPA Method 8015M. Additionally, three soil samples will be analyzed for benzene, toluene, ethylbenzene, and xylene (BTEX) using EPA Method 8020. All of the quantitative chemical analyses will be performed by Chemwest Analytical Laboratories, Inc.

3.4 Field Quality Control

Sampling methods detailed in this sampling plan will be strictly adhered to; deviations or additions to this plan will be carefully documented in the field notebook. All field observations, field-generated forms, and labels will be noted and attached to the field notebook. Any photographs will be logged in the field notebook and labeled when returned from the developing laboratory.

3.5 Sample Handling

3.5.1 Sample Containers, Preservation, and Holding Times

All samples will be collected, placed in containers, preserved, and analyzed within the time constraints consistent with applicable US EPA and California State procedures. All sample containers will be precleaned in accordance with prescribed EPA methods. Tape will be placed around all sample container lids to prevent leaks and to detect unauthorized tampering with individual samples following collection and prior to the time of analysis.

3.5.2 Sample Tracking and Management

All samples will be tracked using Versar's standard chain of custody form, which is shown in Figure 3-2. The chain of custody record will include the following information:

1. Sample number
2. Signature of collector
3. Date and time of collection
4. Sample collection location
5. Sample type
6. Signature of persons involved in the chain of possession
7. Inclusive dates of possession
8. Analytical parameters
9. Pertinent field observations

The custody record will be completed using waterproof ink. Any corrections will be made by drawing a line through and initialing the error, then entering the correct information.

Custody of the samples begins at the time of sample collection and will be maintained by the sampling team supervisor until samples are relinquished for shipment to the laboratory, or until samples are hand delivered to the designated laboratory sample custodian. Partial sample sets being accumulated for hand delivery to the laboratory will be stored in coolers with custody tape affixed.

Each sample shipment will be accompanied by a chain of custody record identifying its contents. The original record will accompany the shipment and the copy will be retained by the sampling team leader. The original (the top copy) will be enclosed in a plastic zip-lock bag and secured to the inside of the cooler lid with tape.

3.6 Site Safety Procedures

A designated site safety officer will be present during all of the drilling and sampling operations. Site personnel will wear gloves when

Versar INC.

handling the drill cuttings and samples. In addition, the drill cuttings and samples will be monitored with an OVA meter. If the site safety officer determines that harmful levels of organic vapors are present, all site personnel will don Tyvek coveralls and respirators. This equipment will be worn until the site safety officer determines that no harmful vapors are present.

3.7 Contaminated Materials Control

Drill cuttings generated from drilling operations will be stored in sealed DOT approved 55-gallon drums or similar containers in a secure area on site. The contents of the drums and the dates of collection will be clearly marked on appropriate labels. All equipment decontamination material and disposable personal protective gear will also be placed in appropriate containers. When the hazardous characteristics of these materials have been determined, they will be disposed of using proper procedures.

4.0 ADDITIONAL STUDIES

When the data obtained from the work described in this plan has been analyzed, a determination of which additional studies may be required at the site will be made. The additional work may include the establishment of a regular monitoring program, the installation of additional wells to further define the migration of the contamination, tests to determine aquifer characteristics, computer modeling to determine contaminant migration paths and velocities, and the development of a remedial action plan.

Subject: Leaking Underground Storage Tank Remediation
Location: 4734 E. Carmen, Fresno

Dear Mr. Della-Rocco,

An inspection, sampling, or testing conducted at your underground storage facility indicates the presence of contamination. This preliminary evidence does not quantify or qualify the extent of contamination.

If you have not already done so, you must secure the services of a qualified consultant within ten days of receipt of this notice, and contact our office to make an appointment. We need to meet with you and your consultant to discuss the scope of work which will be required to determine the type and extent of contamination. A partial list of firms qualified to do the work is available upon request.

The County of Fresno is responsible for overseeing your efforts, and your contractor's efforts, to remediate the contamination. The County's and the state's costs of administrating and overseeing remedial action at your site are funded by the California Hazardous Substance Cleanup Fund or the federal Petroleum Leaking Underground Storage Tank Fund.

Both the State and federal funding sources require you, as the party (or one of the parties) responsible for the site, to reimburse the State Water Resources Control Board (SWRCB) for all direct and indirect costs incurred by government agencies while overseeing the cleanup of your site. The agencies involved include the County of Fresno, SWRCB, Central Valley Regional Water Quality Control Board, State Department of Health Services, and U.S. Environmental Protection Agency. Upon completion of your project or some other work milestone, you will receive a detailed invoice from the SWRCB and will be required to make full payment within 30 days. A copy of the enclosed notificaton form has been forwarded to the SWRCB (attachment).

The County is committed to ensuring a healthy environment for its citizens. We will work with you to secure an effective and efficient solution to the contamination on your property.

Please contact me at (209) 445-3271 to schedule a meeting and to answer any questions you may have.

Respectfully,

Peggy Wilkinson

Subject: Workplan Approval
Location: 4734 E. Carmen, Fresno

The workplan submitted regarding the subject location is hereby approved by the County Health Department, subject to any amendments agreed to in consultation with me and noted below.

You should now secure any County subsurface site assessment and drilling permits, State hazardous waste manifests, etc., necessary to perform the work.

Please ensure that copies of all analyses and reports relating to the project are forwarded to this office. Upon completion of the project, the final report must be reviewed by the County in order for you to receive certification that no further action is necessary.

Please call me at (209) 445-3271 if you have any questions.

Respectfully,

Peggy Wilkinson

Peggy Wilkinson, R.S.
Environmental Health Analyst
Environmental Health Services

Workplan Amendments: 1. All samples collected for analysis shall be sampled for Benzene, Toluene, Xylene, Ethylbenzene (EPA 8020), and TPH (EPA 8015). 2. Two samples shall be collected and analyzed past the point of suspected contamination. 3. All 3 borings shall be discontinued 15 feet above groundwater.

CHEMWEST
ANALYTICAL LABORATORIES, INC.

January 24, 1989

Versar Inc.
5330 Primrose Dr., Suite 228
Fair Oaks, CA 95628

Attention: Mr. Clarence Johnson

Subject: Report of Data - Case Number 3038

Dear Mr. Johnson:

The technical staff at CHEMWEST is pleased to provide our report for the analyses you requested: BTEX - EPA Method 602; and Total Petroleum Hydrocarbons (gasoline) - DHS Method, LUFT Field Manual.

Six soil samples for Project Fresno, Project Number 6264.10 were received January 6, 1989 in good condition. Results of the analyses along with the analytical methodology and appropriate reporting limits are presented on the following page(s).

Thank you for choosing CHEMWEST Laboratories. Should you have questions concerning this data report or the analytical methods employed, please do not hesitate to contact Toni Weeks, our Technical Service Representative or your project manager. We hope that you will consider CHEMWEST Laboratories for your future analytical support and service requirements.

Sincerely,

Jill B Henes

Jill B. Henes, Ph.D.

ANALYTICAL METHODOLOGY

BTEX (Benzene, Toluene, Ethyl Benzene, and Xylenes) by Purge & Trap and GC-PID

WATER - Method 602 or 8020

A 5 ml sample volume, or 5 ml of a suitable dilution, is purged on a suitable purge and trap system with helium. The purged sample is analyzed on a Gas Chromatograph equipped with a Photoionization Detector (PID). A packed column is used to separate the compounds.

SOIL - Method 8020

A 10 gram, or other appropriate aliquot of soil, is weighed into a clean VOA vial. Soils received in brass core tubes are sampled by discarding 2-5 centimeters of soil from each end of the tubes (this is done to reduce the possibility of analyzing a portion of soil that has been exposed to sampling technique contamination). Equal aliquots of soil are then removed from each end of the tube and combined in the VOA vial. Soil in jars or bags is aliquoted using a similar technique, which discards exposed sample surfaces. A 10 ml, or other appropriate volume of methanol, is added to the soil and the soil is shaken with the solvent. 100 ul of the extract, or a reduced aliquot or volume of a suitable dilution, is injected into 5 ml of laboratory blank water and analyzed by the same technique used for water samples.

ANALYTICAL METHODOLOGY

Total Petroleum Hydrocarbons by Purge & Trap and GC-FID

WATER - DHS Method - Luft Field Manual

A 5 ml sample volume, or 5 ml of a suitable dilution, is purged on a suitable purge and trap system with helium. The purged sample is analyzed on a Gas Chromatograph equipped with a Flame Ionization Detector (FID). A packed column is used to separate the compounds.

SOIL - DHS Method - Luft Field Manual

A 10 gram, or other appropriate aliquot of soil, is weighed into a clean VOA vial. Soils received in brass core tubes are sampled by discarding 2-5 centimeters of soil from each end of the tubes (this is done to reduce the possibility of analyzing a portion of soil that has been exposed to sampling technique contamination). Equal aliquots of soil are then removed from each end of the tube and combined in the VOA vial. Soil in jars or bags is aliquoted using a similar technique, which discards exposed sample surfaces. A 10 ml, or other appropriate volume of methanol, is added to the soil and the soil is shaken with the solvent. 100 ul of the extract, or a reduced aliquot or volume of a suitable dilution, is injected into 5 ml of laboratory blank water and analyzed by the same technique used for water samples.

III. HAZARDS IDENTIFICATION

	HMIS
HEALTH	2
FLAMMABILITY	2
REACTIVITY	0

0 = Least 1 = Slight 2 = Moderate 3 = High 4 = Extreme * = Chronic Health Effects

Routes of Entry: Inhalation, Ingestion, Skin contact, Eye contact, Absorption.

Medical Conditions Aggravated: Lung disease, Eye disease, Skin disease including eczema and sensitization, Digestive tract disease, Kidney disease.

Immediate (Acute) Health Effects:

Inhalation: Can cause moderate respiratory irritation, dizziness, weakness, fatigue, nausea and headache. Can cause severe central nervous system depression (including unconsciousness).

Skin Contact: Can cause moderate skin irritation, defatting, and dermatitis. Not likely to cause permanent damage.

Eye Contact: Can cause moderate irritation, tearing and reddening, but not likely to permanently injure eye tissue.

Skin Absorption: May cause irritation and minor systemic damage.

Ingestion: Harmful if swallowed. May cause systemic poisoning. Can cause abdominal discomfort, nausea, vomiting and diarrhea. Aspiration of material into the lungs can cause chemical pneumonitis.

Target Organ Acute Toxicity: Respiratory System, Eyes, Skin, Nervous System, Digestive Tract, Stomach, Kidneys, Cardiovascular System, Blood.

Long-Term (Chronic) Health Effects:

Inhalation: Upon prolonged and/or repeated exposure, can cause moderate respiratory irritation, dizziness, weakness, fatigue, nausea and headache.

Skin Contact: Upon prolonged or repeated contact, can cause moderate skin irritation, defatting, and dermatitis. Not likely to cause permanent damage.

Eye Contact: Upon prolonged or repeated contact, can cause moderate irritation, tearing and reddening, but not likely to permanently injure eye tissue.

Skin Absorption Upon prolonged or repeated exposure, harmful if absorbed through the skin. May cause minor systemic damage.

Carcinogenicity: IARC: No NTP: No OSHA: No

Target Organ Chronic Toxicity: Respiratory System, Nervous System, Eyes, Skin, Digestive Tract, Stomach, Kidneys, Cardiovascular System, Blood.

NOTICE - Reports have associated repeated and prolonged occupational overexposure to solvents with brain and nervous system damage. Intentional misuse by deliberately concentrating and inhaling the contents may be harmful or fatal.

This product contains pigments which may become a dust nuisance when removed by abrasive blasting, sanding or grinding.

IARC has recently re-evaluated titanium dioxide as possibly carcinogenic to humans (Group 2B) based on animal studies. However, human studies available to date do not suggest that occupational exposure to titanium dioxide increases cancer risk. The ACGIH classifies titanium dioxide as A4 (not classifiable as a human carcinogen). NTP does not classify it as carcinogenic. IARC's evaluation shows inadequate evidence of carcinogenicity in humans, but sufficient evidence of carcinogenicity in experimental animals. The evidence shows that high concentrations of powdered and ultrafine titanium dioxide dust caused respiratory tract cancer in rats exposed by either natural inhalation or direct introduction into the lungs. However, the same results are observed in people working in dusty environments. Therefore, IARC extended this idea to workers with exposures to titanium dioxide dust, if there are insufficient dust control measures in place. Based on the IARC decision, Canadian officials have agreed that titanium dioxide is classifiable as WHMIS D2A (carcinogen), and that it is not necessary to wait for release of the full monograph. OSHA requires the status on US MSDSs to change within 90 days of publication in the IARC monograph volume 93.

IV. FIRST AID

Inhalation: Remove to fresh air. If breathing is difficult, have a trained individual administer oxygen. If not breathing, give artificial respiration and have a trained individual administer oxygen. Get medical attention immediately.

Eyes: Immediately flush eyes with plenty of luke warm water for at least 20 minutes retracting eyelids often. Tilt the head to prevent chemical from transferring to the uncontaminated eye. Get immediate medical attention and monitor the eye daily as advised by your physician.

Skin Contact: Wash with soap and water. Remove contaminated clothing and launder. Get medical attention if irritation develops or persists.

Ingestion: Seek medical advice immediately. Provide ingredients information from Section II of this MSDS to the medical care provider. Contact your local Poison Control Center (listed in the telephone book), or dial the local "Emergency" (911) number for additional information. Do not induce vomiting unless instructed to do so by a physician or other competent medical personnel. Never give anything by mouth to an unconscious person.

V. FIRE FIGHTING MEASURES

Flammability Summary: **Combustible**

Flash Point: 40 °C; 104 °F

Autoignition Temperature: 226 °C; 439 °F

Lower Flammable/Explosive Limit, % in air: 0.9 **Upper Flammable/Explosive Limit, % in air:** 6.0

Fire Hazards: Vapors may be ignited by sparks, flames or other sources of ignition if material is above the flash point giving rise to a fire (Class B). Vapors are heavier than air and may travel to a source of ignition and flash back. This product, when dried or cured, may support combustion when subjected to sources of ignition or heat in sufficient amount.

Extinguishing Media: Use alcohol resistant foam, carbon dioxide, or dry chemical extinguishing agents. Water may be ineffective but water spray can be used to extinguish a fire if swept across the base of the flames. Water can absorb heat and keep exposed material from being damaged by fire.

Fire Fighting Instructions: Do not enter fire area without proper protection including self-contained breathing apparatus and full protective equipment. Fight fire from a safe distance and a protected location due to the potential of hazardous vapors and decomposition products. Flammable component(s) of this material may be lighter than water and burn while floating on the surface. Use water spray/fog for cooling.

Hazardous Combustion Products: Toxic fumes, Toxic gases.

VI. ACCIDENTAL RELEASE MEASURES

Health Consideration for Spill Response: Exposure to the spilled material may be irritating or harmful. Follow personal protective equipment recommendations found in Section VIII of this MSDS. Additional precautions may be necessary based on special circumstances created by the spill including: the material spilled, the quantity of the spill, and the area in which the spill occurred. Also consider the expertise of employees in the area responding to the spill. Evaporation of volatile substances can lead to the displacement of air creating an environment that can cause asphyxiation.

Spill Mitigation Procedures:

General Methods: Prevent the spread of any spill to minimize harm to human health and the environment if safe to do so. Wear complete and proper personal protective equipment following the recommendation of Section VIII at a minimum. For liquid spills, dike with suitable absorbent material like granulated clay. Gather and store in a sealed container pending a waste disposal evaluation.

Air Release: Ventilate the area by opening door and/or turning on fans and blowers.

Water Release: Retain all contaminated water for treatment.

Land Spills: Avoid runoff into storm sewers and ditches that lead to waterways.

VII. HANDLING AND STORAGE

Handling: Harmful or irritating; avoid overexposure to the material. Use only in a well ventilated area. As with all chemicals, good industrial hygiene practices should be followed when handling this material. Do not get in eyes, on skin and clothing. Ground and bond containers when transferring material. Use spark-proof tools and explosion-proof equipment. "Empty" containers retain product residue (liquid and/or vapor) and can be dangerous. Remove contaminated clothing and wash before reuse.

Storage: Store in a cool dry ventilated location. Isolate from incompatible materials and conditions. Keep container(s) closed when not in use. Keep away from heat, sparks, and flame.

VIII. ENGINEERING CONTROLS, PERSONAL PROTECTIVE EQUIPMENT, AND EXPOSURE LIMITS

Engineering Controls: Local exhaust ventilation or other engineering controls are normally required when handling or using this product to avoid overexposure. See table at the end of this Section VIII below for exposure limits. Engineering controls must be designed to meet any relevant OSHA chemical specific standards in 29 CFR 1910. Use process enclosures, local exhaust ventilation, or other engineering controls to control airborne levels below recommended exposure limits. Explosion proof exhaust ventilation should be used.

Protective Equipment:

Respiratory Tract: If general or local exhaust ventilation is not available or sufficient to reduce exposure to below acceptable levels, then respiratory protection is required to avoid overexposure when handling this product.

Eyes: Wear safety glasses with side shields when handling this product. When the possibility exists for eye contact with splashing or spraying liquid, or airborne material, wear additional eye protection such as chemical splash goggles and/or face shield. Do not wear contact lenses. Have an eye wash station available.

Skin: Wear protective gloves. Inspect gloves for chemical break-through and replace at regular intervals. Clean protective equipment regularly. Wash hands and other exposed areas with mild soap and water before eating, drinking, and when leaving work.

Protective Clothing: Wear chemically resistant gloves and apron. (Consult your safety equipment supplier).

CHEMICAL NAME	CAS #	ACGIH TLV	OSHA PEL	IDLH
Titanium dioxide	13463-67-7	10 mg/m3 TWA	15 mg/m3 TWA (total dust)	5000 mg/m3 IDLH
Petroleum Spirits	8032-32-4	300 ppm TWA	No PEL established	Not determined.
Kaolin	1332-58-7	2 mg/m3 TWA (respirable fraction, particulate matter containing no asbestos and < 1% crystalline silica)	15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)	Not determined.
Calcium carbonate	471-34-1	No TLV	No PEL established	Not determined.
Stoddard solvent	8052-41-3	100 ppm TWA	500 ppm TWA; 2900 mg/m3 TWA	20000 mg/m3 IDLH
Light aliphatic solvent naphtha	64742-89-8	No TLV	No PEL established	Not determined.

1,3,5-Trimethylbenzene	108-67-8	No TLV	No PEL established	Not determined.

IX. PHYSICAL DATA

Appearance: White Liquid.
Color: White
pH: N/A
Octanol/Water Coeff: Not Determined.
Solubility in Water: Minimal.
Vapor Pressure (mmHg): 1-10
Vapor Density: Heavier than air. Vapors that evolve from this product will tend to settle and accumulate near the floor.
Evaporation Rate: Slower than n-Butyl Acetate.
Specific Gravity/Density: 1.371 / 11.44 Lbs./Gl.
V.O.C. 3.62 Lbs/Gl less water & exempt solvent; 434 g/l less water & exempt solvent; 3.6 Lbs/Gl as packed

The VOC content is determined by using a percent solids basis, less water and exempt solvents, for adhesives, coatings and inks and the calculations of EPA Reference Method 24 or equivalent ASTM method approved by the executive office.

Initial Boiling Point: 121 °C; 250 °F

X. STABILITY AND REACTIVITY

Stability Information: Stable under normal conditions.
Conditions to Avoid: Temperatures above flash point in combination with sparks, open flames, or other sources of ignition. Contamination.
Chemical Incompatibility: Strong oxidizing agents.
Hazardous Decomposition Products: Carbon dioxide, Carbon monoxide, Toxic fumes, Toxic gases.

XI. TOXICOLOGICAL INFORMATION

Chemical Name	LD50/LC50
Ligroine	Inhalation LC50 Rat: 3400 ppm/4H
Carbonic acid, calcium salt (1:1)	Oral LD50 Rat: 6450 mg/kg
Benzene, 1,2,4-trimethyl-	Inhalation LC50 Rat: 18 gm/m3/4H; Oral LD50 Rat: 5 gm/kg
Mesitylene	Inhalation LC50 Rat: 24 gm/m3/4H

XII. ECOLOGICAL INFORMATION

Overview: Care should be taken to minimize releases of any industrial chemicals to the environment.

XIII. DISPOSAL CONSIDERATIONS

Waste Description for Unused Product: Spent or discarded material is a hazardous waste.

Disposal Methods: Information in this MSDS is provided only as a guide. Consult with competent authority to determine proper waste disposal procedures. Clean up and dispose of waste and clean-up materials in accordance with all federal, state, and local environmental regulations.

Potential EPA Waste Codes: D001, .

Some Components Possibly Subjected to USEPA Land Disposal Restrictions:

When disposing of unused products or any waste, the preferred options are to send to a licensed reclaimer or to permitted incinerators. There may be some other ingredients subject to LDR categories.
None expected.

XIV. TRANSPORTATION INFORMATION

Agency	Basic Description and Label
DOT	DOT by Land Transport: Not Regulated; DOT by Air and IATA (all modes): Paint, 3, UN1263, PG III, Label Required: Flammable Liquid

Hazardous Substance

None expected.

XV. REGULATORY INFORMATION

Regulation

SARA 313 Reportable : 1,2,4-Trimethylbenzene

TSCA Inventory : All components of this product are listed in, or exempt from, the TSCA 8(b) Inventory.

M.S.D.S. Reportable HAP(s) : This product contains no HAP chemicals at or above de minimis values..

California Proposition 65 : The following statement is made in order to comply with the California Safe Drinking Water and Toxic Enforcement Act of 1986 - Proposition 65: "WARNING: This product contains chemical(s) known to the State of California to cause cancer and birth defects or other reproductive harm."

SARA/CERCLA Section 302 : N/A

XVI. ADDITIONAL INFORMATION

Major References: VENDOR'S MSDS's, PAINT & COATINGS HANDBOOK, EPA's LIST OF LISTS, AND OTHER PUBLISHED MATERIALS.

IMPORTANT: WHILE THE DESCRIPTIONS, DATA AND INFORMATION CONTAINED HEREIN ARE PRESENTED IN GOOD FAITH AND BELIEVED TO BE ACCURATE, THEY ARE PROVIDED FOR YOUR GUIDANCE ONLY. MANY FACTORS MAY AFFECT PROCESSING OR APPLICATION OR USE, INCLUDING USE OF THIS MATERIAL IN COMBINATION WITH OTHER MATERIALS OR PROCESSES. YOU THEREFORE SHOULD, AND THIS MATERIAL IS SUPPLIED ON THE CONDITION THAT YOU, PERFORM AN ASSESSMENT TO DETERMINE THE SUITABILITY OF THE MATERIAL PRIOR TO USE, AND YOU ACCEPT RESPONSIBILITY FOR SATISFYING YOURSELF THAT THE MATERIAL IS SUITABLE AND THE COMPLETENESS OF THIS INFORMATION IS SUFFICIENT FOR YOUR USE. ALTHOUGH CERTAIN HAZARDS MAY BE DESCRIBED HEREIN, OTHER HAZARDS MAY ALSO EXIST. NO WARRANTIES OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING FITNESS FOR A PARTICULAR PURPOSE, ARE MADE REGARDING PRODUCTS DESCRIBED, DATA, OR INFORMATION SET FORTH. IN NO CASE SHALL THE DESCRIPTIONS, INFORMATION, OR DATA PROVIDED BE CONSIDERED A PART OF OUR TERMS AND CONDITIONS OF SALE, AND WE DISCLAIM LIABILITY FOR LOSS OR INJURY ARISING FROM YOUR USE OF THIS MATERIAL, DATA OR INFORMATION. FURTHER, THE DESCRIPTIONS, DATA AND INFORMATION FURNISHED HERE ARE GIVEN GRATIS. NO OBLIGATIONS NOR LIABILITIES FOR THE DESCRIPTION, DATA AND INFORMATION GIVEN ARE ASSUMED, ALL SUCH BEING GIVEN AND ACCEPTED AT YOUR RISK.

III. HAZARDS IDENTIFICATION

	HMIS
HEALTH	2 *
FLAMMABILITY	2
REACTIVITY	0

0 = Least 1 = Slight 2 = Moderate 3 = High 4 = Extreme * = Chronic Health Effects

Routes of Entry: Inhalation, Ingestion, Skin contact, Eye contact, Absorption.

Medical Conditions Aggravated: Lung disease, Eye disease, Skin disease including eczema and sensitization, Kidney disease, Digestive tract disease, Liver disease.

Immediate (Acute) Health Effects:

Inhalation: Can cause moderate respiratory irritation, dizziness, weakness, fatigue, nausea and headache.

Skin Contact: Can cause moderate skin irritation, defatting, and dermatitis. Not likely to cause permanent damage.

Eye Contact: Can cause moderate irritation, tearing and reddening, but not likely to permanently injure eye tissue. Can cause mechanical irritation if dusts are generated.

Skin Absorption: May cause irritation and minor systemic damage.

Ingestion: Harmful if swallowed. May cause systemic poisoning. Can cause abdominal discomfort, nausea, vomiting and diarrhea.

Target Organ Acute Toxicity: Respiratory System, Eyes, Skin, Kidneys, Nervous System, Digestive Tract, Stomach, Blood, Liver, Thyroid, Pituitary, Testes.

Long-Term (Chronic) Health Effects:

Inhalation: Upon prolonged and/or repeated exposure, can cause moderate respiratory irritation, dizziness, weakness, fatigue, nausea and headache.

Skin Contact: Upon prolonged or repeated contact, can cause moderate skin irritation, defatting, and dermatitis. Not likely to cause permanent damage.

Eye Contact: Upon prolonged or repeated contact, can cause moderate irritation, tearing and reddening, but not likely to permanently injure eye tissue. Upon prolonged or repeated contact, dust contact can cause mechanical irritation.

Skin Absorption Upon prolonged or repeated exposure, harmful if absorbed through the skin. May cause severe irritation and systemic damage.

Carcinogenicity: IARC: Yes NTP: No OSHA: No

Target Organ Chronic Toxicity: Respiratory System, Nervous System, Eyes, Skin, Kidneys, Digestive Tract, Stomach, Blood, Liver, Pituitary, Testes.

NOTICE - Reports have associated repeated and prolonged occupational overexposure to solvents with brain and nervous system damage. Intentional misuse by deliberately concentrating and inhaling the contents may be harmful or fatal.

This product contains pigments which may become a dust nuisance when removed by abrasive blasting, sanding or grinding.

IARC has recently re-evaluated titanium dioxide as possibly carcinogenic to humans (Group 2B) based on animal studies. However, human studies available to date do not suggest that occupational exposure to titanium dioxide increases cancer risk. The ACGIH classifies titanium dioxide as A4 (not classifiable as a human carcinogen). NTP does not classify it as carcinogenic. IARC's evaluation shows inadequate evidence of carcinogenicity in humans, but sufficient evidence of carcinogenicity in experimental animals. The evidence shows that high concentrations of powdered and ultrafine titanium dioxide dust caused respiratory tract cancer in rats exposed by either natural inhalation or direct introduction into the lungs. However, the same results are observed in people working in dusty environments. Therefore, IARC extended this idea to workers with exposures to titanium dioxide dust, if there are insufficient dust control measures in place. Based on the IARC decision, Canadian officials have agreed that titanium dioxide is classifiable as WHMIS D2A (carcinogen), and that it is not necessary to wait for release of the full monograph. OSHA requires the status on US MSDSs to change within 90 days of publication in the IARC monograph volume 93.

Lifetime inhalation exposure of rats and mice to high concentrations of ethylbenzene (750 ppm) resulted in increases in certain types of cancer, including kidney, lung and liver tumors. Testicular adenomas were increased as were thyroid effects in rats at 750 ppm. Pituitary effects were observed in female mice at 250 ppm. These effects were absent when exposure was below 75 ppm ethylbenzene. The study does not address the relevance of these results to humans.

IV. FIRST AID

Inhalation: Remove to fresh air. If breathing is difficult, have a trained individual administer oxygen. If not breathing, give artificial respiration and have a trained individual administer oxygen. Get medical attention immediately.

Eyes: Immediately flush eyes with plenty of luke warm water for at least 20 minutes retracting eyelids often. Tilt the head to prevent chemical from transferring to the uncontaminated eye. Get immediate medical attention and monitor the eye daily as advised by your physician.

Skin Contact: Wash with soap and water. Remove contaminated clothing and launder. Get medical attention if irritation develops or persists.

Ingestion: Seek medical advice immediately. Provide ingredients information from Section II of this MSDS to the medical care provider. Contact your local Poison Control Center (listed in the telephone book), or dial the local "Emergency" (911) number for additional information. Do not induce vomiting unless instructed to do so by a physician or other competent medical personnel. Never give anything by mouth to an unconscious person.

V. FIRE FIGHTING MEASURES

Flammability Summary: **Combustible**

Flash Point: 41 °C; 106 °F

Autoignition Temperature: 226 °C; 439 °F

Lower Flammable/Explosive Limit, % in air: 1.0 **Upper Flammable/Explosive Limit, % in air:** 7.0

Fire Hazards: Vapors may be ignited by sparks, flames or other sources of ignition if material is above the flash point giving rise to a fire (Class B). Vapors are heavier than air and may travel to a source of ignition and flash back. This product, when dried or cured, may support combustion when subjected to sources of ignition or heat in sufficient amount.

Extinguishing Media: Use alcohol resistant foam, carbon dioxide, or dry chemical extinguishing agents. Water may be ineffective but water spray can be used to extinguish a fire if swept across the base of the flames. Water can absorb heat and keep exposed material from being damaged by fire.

Fire Fighting Instructions: Do not enter fire area without proper protection including self-contained breathing apparatus and full protective equipment. Fight fire from a safe distance and a protected location due to the potential of hazardous vapors and decomposition products. Flammable component(s) of this material may be lighter than water and burn while floating on the surface.

Hazardous Combustion Products: Toxic fumes, Toxic gases.

VI. ACCIDENTAL RELEASE MEASURES

Health Consideration for Spill Response: Exposure to the spilled material may be irritating or harmful. Follow personal protective equipment recommendations found in Section VIII of this MSDS. Additional precautions may be necessary based on special circumstances created by the spill including: the material spilled, the quantity of the spill, and the area in which the spill occurred. Also consider the expertise of employees in the area responding to the spill. Evaporation of volatile substances can lead to the displacement of air creating an environment that can cause asphyxiation.

Spill Mitigation Procedures:

General Methods: Prevent the spread of any spill to minimize harm to health and the environment if safe to do so. Wear proper personal protective equipment following the recommendations of Section VIII. For liquid spills, dike with suitable absorbent material like granulated clay. Gather and store in a sealed container pending a waste disposal evaluation.

Air Release: Ventilate the area by opening door and/or turning on fans and blowers.

Water Release: Retain all contaminated water for treatment.

Land Spills: Avoid runoff into storm sewers and ditches that lead to waterways.

VII. HANDLING AND STORAGE

Handling: Harmful or irritating; avoid overexposure to the material. Use only in a well ventilated area. As with all chemicals, good industrial hygiene practices should be followed when handling this material. Do not get in eyes, on skin and clothing. Launder work clothes frequently. "Empty" containers retain product residue (liquid and/or vapor) and can be dangerous. Minimize dust generation and accumulation. Use spark-proof tools and explosion-proof equipment.

Storage: Store in a cool dry ventilated location. Isolate from incompatible materials and conditions. Keep container(s) closed when not in use. Keep away from sources of ignition.

VIII. ENGINEERING CONTROLS, PERSONAL PROTECTIVE EQUIPMENT, AND EXPOSURE LIMITS

Engineering Controls: Local exhaust ventilation or other engineering controls are normally required when handling or using this product to avoid overexposure. See table at the end of this Section VIII below for exposure limits. Use process enclosures, local exhaust ventilation, or other engineering controls to control airborne levels below recommended exposure limits. Engineering controls must be designed to meet any relevant OSHA chemical specific standards in 29 CFR 1910.

Protective Equipment:

Respiratory Tract: If general or local exhaust ventilation is not available or sufficient to reduce exposure to below acceptable levels, then respiratory protection is required to avoid overexposure when handling this product.

Eyes: Wear safety glasses with side shields when handling this product. When the possibility exists for eye contact with splashing or spraying liquid, or airborne material, wear additional eye protection such as chemical splash goggles and/or face shield. Do not wear contact lenses. Have an eye wash station available.

Skin: Wear protective gloves. Inspect gloves for chemical break-through and replace at regular intervals. Clean protective equipment regularly. Wash hands and other exposed areas with mild soap and water before eating, drinking, and when leaving work.

Protective Clothing: Wear chemically resistant gloves and apron. (Consult your safety equipment supplier).

CHEMICAL NAME	CAS #	ACGIH TLV	OSHA PEL	IDLH
Titanium dioxide	13463-67-7	10 mg/m3 TWA	15 mg/m3 TWA (total dust)	5000 mg/m3 IDLH
Stoddard solvent	8052-41-3	100 ppm TWA	500 ppm TWA; 2900 mg/m3 TWA	20000 mg/m3 IDLH
Kaolin	1332-58-7	2 mg/m3 TWA (respirable fraction, particulate matter containing no asbestos and < 1% crystalline silica)	15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)	Not determined.
Silicon Dioxide (amorphous)	7631-86-9	10 mg/m3 TWA	Respirable Dust: 20 mppcf	3000 mg/m3 IDLH
Aluminum oxide	1344-28-1	10 mg/m3 TWA (as Al, particulate matter containing no asbestos and < 1% crystalline silica)	15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)	Not determined.
Xylene	1330-20-7	100 ppm TWA 150 ppm STEL	100 ppm TWA; 435 mg/m3 TWA	900 ppm IDLH
1,2,4-Trimethylbenzene	95-63-6	No TLV	No PEL established	Not determined.
1,3,5-Trimethylbenzene	108-67-8	No TLV	No PEL established	Not determined.
Ethylbenzene	100-41-4	100 ppm TWA 125 ppm STEL	100 ppm TWA; 435 mg/m3 TWA	800 ppm IDLH

IX. PHYSICAL DATA

Appearance: White Liquid.
Color: White
pH: N/A
Octanol/Water Coeff: Not Determined.
Solubility in Water: Minimal.
Vapor Pressure (mmHg): 1-10
Vapor Density: Heavier than air. Vapors that evolve from this product will tend to settle and accumulate near the floor.
Evaporation Rate: Slower than n-Butyl Acetate.
Specific Gravity/Density: 1.461 / 12.19 Lbs./Gl.
V.O.C. 2.83 Lbs/Gl less water & exempt solvent; 339 g/l less water & exempt solvent; 2.8 Lbs/Gl as packed

The VOC content is determined by using a percent solids basis, less water and exempt solvents, for adhesives, coatings and inks and the calculations of EPA Reference Method 24 or equivalent ASTM method approved by the executive office.

Initial Boiling Point: 154 °C; 309 °F

X. STABILITY AND REACTIVITY

Stability Information: Stable under normal conditions.
Conditions to Avoid: Sparks, open flame, other ignition sources, and elevated temperatures.Contamination.
Chemical Incompatibility: Ethylene oxide.
Hazardous Decomposition Products: Carbon dioxide, Carbon monoxide, Toxic fumes, Toxic gases.

XI. TOXICOLOGICAL INFORMATION

Chemical Name	LD50/LC50
Xylene	Inhalation LC50 Rat: 5000 ppm/4H; Oral LD50 Rat: 4300 mg/kg; Dermal LD50 Rabbit: >1700 mg/kg
Benzene, 1,2,4-trimethyl-	Inhalation LC50 Rat: 18 gm/m3/4H; Oral LD50 Rat: 5 gm/kg
Mesitylene	Inhalation LC50 Rat: 24 gm/m3/4H

Benzene, ethyl-	Oral LD50 Rat: 3500 mg/kg; Dermal LD50 Rabbit: 17800 uL/kg

XII. ECOLOGICAL INFORMATION

Overview: Care should be taken to minimize releases of any industrial chemicals to the environment.

XIII. DISPOSAL CONSIDERATIONS

Waste Description for Unused Product: Spent or discarded material is a hazardous waste.

Disposal Methods: Information in this MSDS is provided only as a guide. Consult with competent authority to determine proper waste disposal procedures. Clean up and dispose of waste and clean-up materials in accordance with all federal, state, and local environmental regulations.

Potential EPA Waste Codes: D001, .

Some Components Possibly Subjected to USEPA Land Disposal Restrictions:

When disposing of unused products or any waste, the preferred options are to send to a licensed reclaimer or to permitted incinerators. There may be some other ingredients subject to LDR categories.

Xylenes (o-, m-, p- isomers)	1330-20-7
Ethyl benzene	100-41-4

XIV. TRANSPORTATION INFORMATION

Agency	Basic Description and Label
DOT	Paint, 3, UN1263, PG III

Hazardous Substance

Xylenes (isomers and mixture)	RQ = 100 pounds (45.4 kg); also listed as Xylene; also listed as Xylene (mixed); also listed as Benzene, dimethyl-
Ethyl benzene	RQ = 1000 pounds (454 kg)

XV. REGULATORY INFORMATION

Regulation

SARA 313 Reportable :	Aluminum oxide, ., Xylene (mixed isomers), 1,2,4-Trimethylbenzene, ethylbenzene
TSCA Inventory :	All components of this product are listed in, or exempt from, the TSCA 8(b) Inventory.
M.S.D.S. Reportable HAP(s) :	Xylenes (nos), ethylbenzene.
California Proposition 65 :	The following statement is made in order to comply with the California Safe Drinking Water and Toxic Enforcement Act of 1986 - Proposition 65: "WARNING: This product contains chemical(s) known to the State of California to cause cancer and birth defects or other reproductive harm."

SARA/CERCLA Section 302 : N/A

XVI. ADDITIONAL INFORMATION

Major References: VENDOR'S MSDS's, PAINT & COATINGS HANDBOOK, EPA's LIST OF LISTS, AND OTHER PUBLISHED MATERIALS.

IMPORTANT: WHILE THE DESCRIPTIONS, DATA AND INFORMATION CONTAINED HEREIN ARE PRESENTED IN GOOD FAITH AND BELIEVED TO BE ACCURATE, THEY ARE PROVIDED FOR YOUR GUIDANCE ONLY. MANY FACTORS MAY AFFECT PROCESSING OR APPLICATION OR USE, INCLUDING USE OF THIS MATERIAL IN COMBINATION WITH OTHER MATERIALS OR PROCESSES. YOU THEREFORE SHOULD, AND THIS MATERIAL IS SUPPLIED ON THE CONDITION THAT YOU, PERFORM AN ASSESSMENT TO DETERMINE THE SUITABILITY OF THE MATERIAL PRIOR TO USE, AND YOU ACCEPT RESPONSIBILITY FOR SATISFYING YOURSELF THAT THE MATERIAL IS SUITABLE AND THE COMPLETENESS OF THIS INFORMATION IS SUFFICIENT FOR YOUR USE. ALTHOUGH CERTAIN HAZARDS MAY BE DESCRIBED HEREIN, OTHER HAZARDS MAY ALSO EXIST. NO WARRANTIES OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING FITNESS FOR A PARTICULAR PURPOSE, ARE MADE REGARDING PRODUCTS DESCRIBED, DATA, OR INFORMATION SET FORTH. IN NO CASE SHALL THE DESCRIPTIONS, INFORMATION, OR DATA PROVIDED BE CONSIDERED A PART OF OUR TERMS AND CONDITIONS OF SALE, AND WE DISCLAIM LIABILITY FOR LOSS OR INJURY ARISING FROM YOUR USE OF THIS MATERIAL, DATA OR INFORMATION. FURTHER, THE DESCRIPTIONS, DATA AND INFORMATION FURNISHED HERE ARE GIVEN GRATIS. NO OBLIGATIONS NOR LIABILITIES FOR THE DESCRIPTION, DATA AND INFORMATION GIVEN ARE ASSUMED, ALL SUCH BEING GIVEN AND ACCEPTED AT YOUR RISK.

MATERIAL SAFETY DATA SHEET

I. GENERAL INFORMATION

TRADE NAME (as labeled): CG-2

Description: Press Wash/Screen Wash

DATE PREPARED/ REVISED:

July 25, 2005

MANUFACTURER'S NAME

Chemical Consultants, Inc.
1850 Wild Turkey Circle
Corona, CA 92880-1799 USA

PREPARER

J. Monte Ross

PHONE NUMBER:

(951)735-5511

II. COMPONENT SAFETY DATA

Chemical Names	CAS Numbers	%	Exposure Limits in Air (give units) ACGH TLV	OSHA PEL	Other (specify)
Citrus Terpenes	5989-27-5	>30	Not est'd	Not est'd	
Petroleum Hydrocarbons	Mixture	>20	Not Est'd	Not Est'd	
Propylene Glycol Ethers	Mixture	<10	Not Est'd	Not Est'd	

III. PHYSICAL PROPERTIES

Vapor density (air =1): >1
Specify gravity: 0.816
Solubility in water: Partial
Vapor pressure, mmHg at 20 °C: .1
Melting point or range, °F NA
Boiling point or range, °F >300
Evaporation rate (butyl acetate =1): <1
pH (1% solution): 7.2

Appearance and odor:
Clear liquid with a slight odor.

IV. FIRE AND EXPLOSION

Flash point, °F (give method): 122 (TCC)
Auto ignition temperature, °F: Not Tested
Flammable limits in air volume %: **lower (LEL)** Unknown **upper (UEL)** Unknown
Fire extinguishing materials: **water spray** X **carbon dioxide** X **other** ____
foam X **dry chemical** X

Special fire fighting procedures:
Caution. Combustible. Do NOT enter confined fire space without full bunker gear, including a positive pressure NIOSH approve self-contained breathing apparatus.

Unusual fire and explosion hazards:
Containers exposed to intense heat should be cooled with water to prevent vapor pressure build up, which could result in container rupture. Solvent impregnated rags or wipes should be kept in a tightly closed container.

V. REACTIVITY DATA

Stability: **Stable** X **Unstable** ____
Conditions to avoid:
Keep away from heat flames, and sparks
Incompatibility (materials to avoid):
Strong oxidizers, and alkalis.
Hazardous decomposition products (including combustion products):
CO, CO2, and unidentified organic compounds.
Hazardous polymerization: **May occur** ____ **Will not occur** X
Conditions to avoid:
None known.

VI. HEALTH HAZARD INFORMATION

SYMPTOMS OF OVEREXPOSURE for each potential route of exposure.

Inhaled: May cause irritation of mucous membranes, nose, eyes and throat.

Skin: No effect of exposure expected due to contact. May cause irritation or dermatitis in some individuals.

Swallowed: May cause irritation of mouth and throat. Nausea and vomiting.

HEALTH EFFECTS OR RISKS FROM EXPOSURE: Explain in lay terms.

Acute: Skin irritation, defatting of natural oils causing dryness and redness.

Chronic: None known.

FIRST AID EMERGENCY PROCEDURES:

Eye contact: Immediately flush eyes with fresh water or use emergency eye wash station.

Skin contact: Remove contaminated clothing. Flush skin with fresh water.

Inhaled: Remove victim to fresh air.

Swallowed: Drink large quantities of water. Do not induce vomiting. Seek medical aid.

CARCINOGENICITY? YES: _____ **NO:** X

This product's ingredients are found in this list. Federal OSHA _____ **NTP** _____ **IARC** _____ **ACGIH** _____

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE: Pre-existing skin conditions.

VII. SPILL, LEAK, AND DISPOSAL PROCEDURES

Spill response procedures (include employee protection measures): Eliminate sources of ignition. Absorb large spills with absorbant materials. Use appropriate personal protective equipment during clean up. Flush spill area with water.

Disposal Methods: May be incinerated. EPA hazardous substance reportable quantity. Not listed.
RCRA Class: Regulated

***NOTE:* Dispose of all wastes in accordance with federal, state, and local regulations.**

VIII. SPECIAL HANDLING PROCEDURES

Respiratory protection (type): None required under normal use conditions

Ventilation and engineering controls: General
Eye protection (type): Chemical safety goggles.
Gloves (specify material): Nitrile or neoprene gloves to prevent skin contact.
Other clothing and equipment: Adequate protective clothing to prevent skin contact.
Work practices, hygienic practices: Wash hands thoroughly after contact and before eating.
Other handling and storage requirements: Store away from ignition sources and in a cool dry area. Combustible: Keep soiled rags in a proper container.

IX. REPORTING REQUIREMENTS & ADDITIONAL INFORMATION

HMIS Code System Rating = Health 1; Flammability 2; Reactivity 0.
NFPA Code system Rating = Health 1; Flammability 2; Reactivity 0
Volatile Organic Compound (VOC) - 645 grams per liter or 5.38 lbs. per gallon
Contains no components subject to reporting under Sara Title III, Section 313 or Section 40 CFR/372
This product contains no Proposition 65 designated chemicals
Non-photochemically reactive.

Health and Safety/Emergency Response Plan

Facility Name: DEMCO SALES COMPANY

Facility Address: 4634 E. WEATHERMAKER AVE, FRESNO, CA 93703

Section 1: Storage and Handling of Hazardous Materials

1. Hazardous materials are stored in their original containers. The containers are labeled with the contents clearly identified. If materials are transferred into other containers, the receiving container will be labeled.

2. Hazardous materials are handled in such a manner as to minimize the amount on site at any one time.

3. Hazardous materials are stored so as to prevent damage to the containers from vehicle traffic, equipment, etc.

4. Compressed (i.e. welding) gases are stored in an upright position and properly secured/chained. The shipping bonnet should remain in place until ready for use. Empty and full cylinders are separated and labeled accordingly ("FULL" and "EMPTY").

5. Current copies of the Material Safety Data Sheets are maintained on-site and available for reference by employees and used during an emergency.

Section 2: Storage and Handling of Hazardous Wastes

Waste Oil - Waste oil and other lubricating fluids are stored in no more than four (4) 55-gallon drums or other appropriate covered container(s). Each container is labeled with a weatherproof label containing the following information:

"HAZARDOUS WASTE"
"USED OIL"
Generator's Name (Business Name)
Generator's Address
Generator's Telephone Number
Accumulation Start Date
Physical State
Hazardous Properties

Waste oil is stored to prevent spilling or spreading and to prevent rainwater from entering the container. A secondary containment system can be provided around the primary (container) containment system for added spill prevention. Waste oil is accumulated for 90 days and no longer than 180 days *. Waste oil is picked up and recycled by a properly licensed hazardous waste company (as listed in Section 5 of this Plan). * *If less than 100 kg (approximately 27 gallons) is generated in one calendar month, the 90 day time-frame starts once the 27 gallons has accumulated. If generating between 100 kg/month and 1000 kg/month and never above 6000 kg/month on site, both time frames begin from the first drop of accumulation.*

Oil Filters - Oil filters are drained of all free flowing oil (typically for 24 hours) then placed into a rainproof container. The container shall be labeled "DRAINED USED OIL FILTERS". Up to one ton of used oil filters may be accumulated on site for no more than one year prior to recycling. Used filters are collected for recycling by a qualified recycler (as noted in Section 5).

Antifreeze/Coolant - Waste radiator fluid shall be placed in the appropriate covered container for recycling. The container shall be labeled "WASTE ANTIFREEZE/COOLANT" with the same information as noted above.

Batteries – Undamaged batteries should be stored upright on a covered pallet over a non-reactive, curbed and sealed surface and protected from the weather. Care should be taken to prevent the terminals from short-circuiting. Damaged batteries (cracked, broken, or missing caps) shall be stored and transported in non-reactive structurally-secure closed containers such as polyethylene buckets or drums. Spent batteries may be stored at a designated location for no longer than one year if less than one ton, or 180 days if more than one ton. Spent batteries are collected and transported by a qualified recycler (as noted in Section 5). Intact spent batteries and properly contained damaged batteries are marked with either the date the battery was taken out of service or the date it was received for transport/storage. The date shall be written in a weather-resistant material such as ink or paint and be legible and conspicuous.

Contaminated Rags – Rags or textile materials (e.g. shop towels, uniforms, linens, etc.) which have become soiled with hazardous waste during commercial or industrial use are exempt from certain hazardous waste laws and regulations if all of the following requirements are met:

- They are made reusable by laundering or comparable methods of cleaning at a facility (commercial laundry with records maintained or accepted industry methods).
- They are not subject to federal regulation as hazardous waste.
- They are not used to clean up or control a spill that is required to be reported to any state or federal agency.
- No hazardous waste has been added after the material's original use.
- No free liquids are released during transportation or storage of the materials.

Empty Containers - The moment a container is emptied, the date shall be marked on the container with weatherproof ink. Containers previously used to store hazardous materials shall be properly recycled or disposed of within one year of being emptied. Containers of five (5) gallon capacity or smaller that are empty may be crushed and disposed of as solid waste (check with solid waste facility to see if they will accept them). Containers larger than a five (5) gallon capacity shall be recycled or reconditioned.

Record Keeping - All records pertaining to the disposal and/or recycling of hazardous wastes shall be maintained and available on site for at least three (3) years.

Section 3: Prevention of discharges to the storm water system and sewer system

1. All discharges of anything other than clean water to the street gutters, parking lot or sidewalks are prohibited. Small spills or leaks, which may reach storm or sewer water inlets, shall be addressed as detailed below.

2. Cleaning and degreasing of engines or related parts shall only be done in areas where run off can be properly treated and legally discharged.

3. Floor or shop drains shall not be used for disposal of hazardous materials or hazardous wastes.

4. Oil water separators shall be managed in accordance with procedures established by the local wastewater treatment facility.

Section 4: Spills and Leaks

1. Notification: In the event of a hazardous material release, or a threatened release, immediately notify the appropriate authorities. This is to be done as soon as possible without delaying the immediate control of the release or threatened release, or delaying emergency medical procedures. Make the following notifications:

   1) **911** - Police, fire, and medical

   2) **445-3271** - Fresno County Environmental Health Division (after working hours or weekends use Sheriffs Office number 488-3111)

   3) **1-800-852-7550** - California Office of Emergency Services (OES)

   Notification shall include the following information:

   a. Exact location of release or threatened release.

   b. Name of person reporting and call back telephone number.

   c. Hazardous material(s) involved.

   d. Estimated quantity of hazardous material(s).

   e. Potential hazards presented by the hazardous material(s).

   Immediate reporting IS NOT required if there is a reasonable belief that the release poses no significant present or potential hazard to human health and safety, property, or the environment. Be extremely cautious about reaching this conclusion in the absence of consultation with the proper authorities. If you need assistance in evaluating the significance of a release, you may contact a member of the Fresno County Emergency Response Team at (559) 445-3271 during regular office hours or (559) 488-3111 after office hours.

2. Emergency Actions: In the event of a large spill the following actions shall be taken.

   1) Turn power off at electrical panel, if it is safe to do so.

   2) Evacuate employees and customers to the staging area indicated on the facility map.

3) Identify location of storm drain and block it with designated equipment.

4) Emergency coordinator (predetermined employee) shall meet with responding agencies.

5) Consult/review the Material Safety Data Sheet (MSDS) to evaluate possible cleanup options and necessary safety equipment.

3. Small Spills: In the event of a small spill the following actions shall be taken.

1) Notify the Environmental Health Division (at the number listed above) if the spill runs off the immediate storage area.

2) Contain spill and secure the area so that no one walks over the spill. This can be accomplished using absorbent material, or other cleanup material, and high visibility cones or hazard tape.

3) Eliminate any potential ignition sources, such as automobiles and cigarettes.

4) Clean up the contaminated absorbent and place it in the appropriately labeled container or call a clean up contractor to clean up the spill. The label must include the facility's name and address, contents of the container, and the date the material was placed in the container.

5) Arrange for proper disposal of the absorbent (hazardous waste contractor listed below).

Spill Kit

A kit for cleaning up a small spill shall contain at least the following items:

1. Bag(s) of absorbent as well as absorbent pads or coils;

2. A drum or other suitable container for the storage of used absorbent;

3. A flathead shovel, broom and dustpan;

4. High visibility cones and hazard tape;

5. Gloves, coveralls, safety glasses or goggles, and protective boots.

Section 5: Emergency Equipment

List all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment) below. **List the locations of all emergency equipment on the Site Map.**

1) Equipment Type FIRE ALARM Description INTERNAL

2) Equipment Type FIRE EXTINGUISHER Description _____
3) Equipment Type FIRST AID KIT Description _____
4) Equipment Type _____ Description _____
5) Equipment Type _____ Description _____

Section 6: Hazardous Waste Contractor(s)

Hazardous waste contractor(s) for waste oil, waste antifreeze, etc.:

1) _____ Telephone # _____

2) _____ Telephone # _____

Used oil filter recycler(s):

1) _____ Telephone # _____

2) _____ Telephone # _____

Battery recycler(s):

1) _____ Telephone # _____

Other resources(s):

1) _____ Telephone # _____

2) _____ Telephone # _____

For information regarding the proper disposal of hazardous waste, please contact:

- Environmental Health Division: #(559) 445-3271
- Department of Toxic Substances Control: #(559) 297-3901

Section 7: SUGGESTED FIRST AID PROCEDURES (for exposure to flammables such as solvents, thinners, gasoline and diesel fuel):

1. EYE CONTACT: Flush with water for 15 minutes while holding eyelids open. Get medical attention.

2. SKIN CONTACT: Flush with water while removing contaminated clothing and shoes. Follow by washing skin with soap and water. Do not reuse clothing or shoes until cleaned. If irritation persists, get medical attention.

3. INHALATION (Breathing): Remove victim to fresh air. If breathing is difficult, provide oxygen. If not breathing, administer CPR. Get immediate medical attention.

4. INGESTION (Swallowing): DO NOT INDUCE VOMITING, BECAUSE GASOLINE CAN ENTER LUNGS AND CAUSE SEVERE LUNG DAMAGE! If vomiting occurs spontaneously, keep head below hips to prevent aspiration of liquid into the lungs. Get immediate medical attention.

5. FOR FURTHER INFORMATION: Consult the Material Safety Data Sheet for these products and for other hazardous material.

First Aid Procedures (for exposure to other materials):

Consult the warning advice on container labels or refer to the Material Safety Data Sheets.

Section 8: EMPLOYEE EMERGENCY RESPONSE TRAINING FOR:

1. NEW EMPLOYEES: Prior to job startup, new employees are given an orientation which includes: information covered in this document; Right-To-Know hazardous materials laws; National Fire Protection Association labeling and placarding; and Material Safety Data Sheets.

2. ANNUAL REFRESHER TRAINING: Refresher training is held annually for all employees. Training is also provided when any new hazard or hazardous material is introduced into the work environment.

3. SAFE HANDLING OF HAZARDOUS MATERIALS: The use of Material Safety Data Sheets, safe handling of products and wastes, proper cleanup, protective clothing and other safety precautions are discussed.

4. PROPER USE OF ON-SITE EMERGENCY RESPONSE EQUIPMENT AND SUPPLIES: Employees are trained in the use of fire retardants, extinguishers, absorbents, clean rags, brooms, shovels and other available equipment.

5. PROCEDURES TO NOTIFYING AND COORDINATING WITH LOCAL EMERGENCY RESPONSE AGENCIES: Management personnel are responsible for coordinating with and cooperating with local emergency response agencies.

VIOLATIONS NOTED BELOW SHALL BE CORRECTED WITHIN 30 DAYS / *IMMEDIATELY

A Hazardous Materials Business Plan (HMBP) inspection was conducted by Boom Phouthavong of the Fresno County Environmental Health Division. Todd Castillo, operations Manager, and Dave Beyer were present and granted the inspection.

The following observations were made:

1. This facility is a sign distributor.
2. 20 boxes of 4-1gallon Container of Rapid Tac Application Fluid.
3. approximately 19 boxes of 4-1gallon Rapid Bover.
4. approximately 10 boxes of 4-1gallon Isopropyl Alcohol.
5. paint related products ≥ 55 gallons combined.
6. 13-5gallon buckets of Tri ARC paint.
7. Numerous containers of quart size lettering enamel.
8. 12-5gallon buckets of Solvent blend.
9. approximately 9-5gallon containers of easi strip.
10. Numerous ink related products ≥ 55 gallons.
11. Multiple boxes of Ulano QTX in quarts and 1gallon containes.

Advised Mr. Castillo to verify the inventories of the chemicals for the threshold limits for the HMBP requirements.

REINSPECTION DATE: _____

NOTICE: REINSPECTION FEES WILL BE CHARGED FOR MULTIPLE REINSPECTIONS DUE TO UNCORRECTED VIOLATIONS.

NOTICE OF HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS

Date: 4-10-08

Facility: 4634 Weathermaker

Location: Denco Sales

Dear Business Owner/Operator:

A representative of the Fresno County Department of Community Health – Environmental Health Division made a site visit to your facility today. At that time, the business was closed or staff at your facility was unavailable. The purpose of the site visit was to notify you of Hazardous Materials Business Plan (HMBP) regulatory requirements (California Health and Safety Code, Chapter 6.95, Section 25503.5) and to make a determination whether the requirements are applicable to your business.

Attached to this notice is a HMBP Fact Sheet providing additional information for your review.

Please contact Boom. at (559) 445-3271 within 48 hours of receiving this notice in order to schedule a consultation appointment.

If your business is not required to comply with the HMBP requirements, our representative will conduct a walk-thru inspection of your facility to verify the status.

Thank you in advance for your cooperation.

Geologist-in-Training (GIT), California, No. 815

Relevant Experience

Arvin Town Center, Arvin, California (2025)
For this Phase I ESA of a proposed town center development, Jim managed project coordination, reviewed records research, and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

Lance Lane Estates, Visalia, California (2025)
For this Phase I ESA of a vacant lot, Jim performed site reconnaissance, reviewed historical and regulatory records, and engaged in property owner and user interviews. He contributed to interpreting recognized environmental conditions (RECs) and prepared the final report in alignment with ASTM E1527-21 standards. Following the Phase I ESA report, a limited site assessment was conducted to address an underground storage tank on the Subject Property. Jim performed sample collection, reviewed laboratory analysis, and prepared a report. His analysis provided awareness into addressing the presence of petroleum hydrocarbon on the Subject Property.

99 Cent Only Store, Porterville, California (2025)
Jim conducted a Phase I ESA of an existing commercial property that will be renovated into a future medical facility. He managed project coordination, conducted records research and interviews, and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

Fresno Chaffee Zoo Maintenance Facility, Fresno, California (2024)
Jim supported the Phase I ESA for a new maintenance facility. He managed project coordination, conducted records research and interviews, and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

Kerman Unified School District, Kerman, California (2024)
Jim conducted a soil assessment for a future Caltrans right of way, overseeing project management, sample collection, reviewing laboratory analysis, and report writing. He evaluated potential environmental concerns and provided key input into the final assessment report, ensuring compliance with Caltrans standards.

City of Coalinga – 5th Street Property, Coalinga, California (2023)
Jim supported the Phase I ESA for a proposed City of Coalinga property. He managed project coordination, conducted records research and interviews, and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

Avenue 376 over Traver Canal Bridge, Tulare County, California (2023)

Jim led a limited soil sampling assessment for a roadway along Avenue 376 over the Traver Canal Bridge, performing sample collection, reviewing laboratory analysis, and report writing. His analysis provided insights into addressing the presence of pesticides and aerially deposited lead on upcoming roadway projects.

Madera Unified School District New Property, Madera, California (2022)

For this Phase I ESA of a rural residence and agricultural land, Jim performed site reconnaissance, conducted historical and regulatory record reviews, and engaged in stakeholder interviews. He contributed to interpreting recognized environmental conditions and prepared the final report in alignment with ASTM E1527-21 standards.

City of Kerman – Union Pacific Property, Kerman, California (2022)

Jim conducted a Phase I ESA of an existing agricultural property that will be renovated into a public park. He managed project coordination, conducted records research and interviews, and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

Merced County Regional Waste Authority, Merced, California (2020)

Jim conducted a geotechnical investigation to support the design of an expansion at the Merced County Regional Waste Authority facility. His responsibilities included coordinating field activities, performing geotechnical logging and sampling, and preparing comprehensive reports to inform design strategies.

Proposed Dutch Bros, Sanger, California (2020)

For this Phase I ESA of a commercial property, Jim performed site reconnaissance, conducted historical and regulatory record reviews, and engaged in stakeholder interviews. He contributed to interpreting recognized environmental conditions and prepared the final report in alignment with industry standard.

Mount Signal 3 Solar Farm, Calexico, California (2018)

Jim conducted a Phase I ESA of an existing solar farm. He managed project coordination, conducted records research and interviews, and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

Bedrosian Truck Service, Fresno, California (2018)

Jim served as Staff Geologist for a Leaking Underground Storage Tank (LUST) investigation at a former gas station, overseen by the State Water Resources Control Board. He coordinated project logistics, secured permits, and conducted groundwater and soil sampling. He managed the removal of underground storage tanks and impacted soils and oversaw the installation, monitoring, and removal of groundwater wells. His work culminated in detailed reporting that aligned with regulatory requirements.

Gabriel J. Valov

Staff Geologist, GIT

Gabriel has more than four years of geotechnical experience in California. He specializes in geohazard studies, environmental site assessment, seismic assessments, site investigations, and soil characterization, supporting a range of residential, industrial, and infrastructure projects. His expertise includes geotechnical soil sampling, percolation test setup and testing, various soil inspections, and report preparation.

Education
BS, Geology, California State University – Fresno, 2018
MS, Geology, California State University – Fresno, 2021

Certifications
OSHA 40-Hr HAZWOPER Training No. 2506201576112
APNGA Nuclear Gauge Safety & U.S. D.O.T. Hazmat No. 10069-163-546-9631
ACI Concrete Field Testing – Grade I No. 02227218

Registrations
GIT Certificate No. 1553

Relevant Experience

St. Agnes Medical Center – New Emergency Department Addition (Fresno, CA)
This project consisted of both a geotechnical and geohazard investigation for a combination, single- and multi-story hospital expansion, with a total footprint area of approximately 46,000 square feet, and associated pavement section improvements. I helped coordinate with hospital staff, performed geotechnical drilling and soil sampling, and assisted in geotechnical and geohazard report preparation.

Merced County Jail Expansion – Phases 1 and 2 (Merced County, CA)
This project consisted of a geotechnical investigation for a new 10,000-square foot programs and services building, a new intake/transfer/release building, new kitchen and laundry facilities, a new administration building, and new pavement sections over an area of approximately 10 acres. I helped coordinate with the contractors, observed cone penetration tests, performed geotechnical drilling and soil sampling, kept regular contact with prison escorts, and assisted in geotechnical report preparation.

NAS Lemoore – New F35V Simulator Expansion (NAS Lemoore, CA)
This project consisted of the construction of a new F-35V simulator expansion building with an area of approximately 26,521 square feet. This project consisted of observing and inspecting the installation of several hundred soilcrete columns which were used to stabilize expansive soils beneath the structure. I coordinated with contractors and fellow inspectors, performed footing inspections, kept track of project progress, and wrote required daily inspection/progress reports.

Clovis Unified School District – Terry Bradley Education Center (Fresno, CA)
This project consisted of both a geotechnical and geohazard investigation for the construction of a new Clovis Unified School District multi-phase educational complex, consisting of a high school and middle school, covering an area of approximately 165 acres. I performed geotechnical drilling and soil sampling, helped with geotechnical and geohazard report preparation, and performed various soil inspections and compaction testing during several construction phases.

Proposed Pearl Woods Subdivision (Visalia, CA)
This project consisted of a geotechnical investigation for a residential development consisting of 325, one to two-story single-family residences, as well as associated roadways, ponding basins, public spaces and other improvements over an area of approximately 68-acres. I helped coordinate with the contractors, performed geotechnical drilling and soil sampling, performed percolation test setup and testing, and assisted in geotechnical report preparation.

Barcellos Dairy Cluster (Tulare County, CA)
This project consisted of a geotechnical investigation for a new dairy digester lagoon with an associated stacking slab, screen separator, well pumps, and underground piping over a cluster of dairy farms spread out over several miles. I helped coordinate with the dairy farm owners, performed geotechnical drilling and soil sampling, and assisted in geotechnical report preparation.

The Golden Triangle – Multi-Use Commercial Development (Clovis, CA)
This project consisted of a geotechnical investigation for the development of several commercial parcels consisting of luxury car dealerships and dining establishments over an area of approximately 15 acres. I performed geotechnical drilling and soil sampling, assisted in environmental passive soil gas sampling, and helped with geotechnical report preparation.

Arvin Town Center (Arvin, CA)
This project consisted of a Phase I Environmental Site Assessment regarding an undeveloped property. I performed site reconnaissance, reviewed historical and regulatory records, and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

Megan Stewart, PG

Project Geologist

Megan has more than eight years of geotechnical experience in California. She specializes in geohazard studies, seismic assessments, site investigations, soil characterization, and environmental site assessment supporting a range of residential, institutional, and infrastructure projects. Her expertise includes proposal preparation, project coordination, subsurface sampling, borehole logging, and geotechnical reporting.

Dates of Employment
February 28, 2017 - Present

Office Address
3897 N. Ann Avenue
Fresno, CA 93727

Education
BS, Geology
California State University, Fresno

Registrations
CA Professional Geologist
No. 10341

Relevant Experience

Terry P. Bradley Educational Center, *Fresno, CA*
As Project Geologist, Megan conducted subsurface exploration and geologic hazard evaluations for a 630,000 SF, multi-phase educational development on a 165-acre site. Delivered recommendations for grading, site stabilization, and seismic resilience.

Affordable Student Housing at Fresno State, *Fresno, CA*
As Project Geologist, Megan led site exploration and subsurface investigations for the first new student housing project at CSU Fresno in over 50 years. Conducted soil characterization and provided foundation recommendations for the multi-story residential development.

Hirayama Elementary School, *Fresno, CA*
This project involved geotechnical and geohazard investigations for a 165-acre Clovis Unified School District educational complex with a new high school and middle school. Megan conducted drilling and soil sampling, assisted in report preparation, and performed soil inspections and compaction testing across multiple construction phases.

Classroom Buildings J3 & M1 for Sierra Pacific High School, *Hanford, CA*
As Project Geologist, Megan led site exploration and subsurface investigation for geotechnical engineering and geologic hazards evaluations for 2 new classroom buildings at Sierra Pacific High School, which include a ceramic classroom, arts classroom, and theater classroom. Delivered recommendations for grading, site stabilization, and seismic resilience.

Cafeteria & Kitchen Replacement for Fremont Elementary School, *Fowler, CA*
As Project Geologist, Megan conducted subsurface exploration and geologic hazard evaluations for a new cafeteria building at Fremont Elementary School. The project involved evaluating seismic risk, expansive soils, and foundation performance.

Arvin Town Center, *Arvin, CA*
This project consisted of a Phase I Environmental Site Assessment regarding an undeveloped property. Megan managed the project and contributed to the preparation of a detailed assessment report, ensuring it adhered to industry standards.

99 Cent Only Store, *Porterville, CA*
As Project Geologist, Megan led the investigation for a Phase I Environmental Site Assessment regarding a commercial property. She contributed to interpreting recognized environmental conditions and prepared the final report in alignment with ASTM E1527-21 standards.
