5.0 Findings
The 10.0-acre subject property is identified by the San Bernardino County Assessor's website as parcel number 0459-451-31-0-000, 0459-451-32-0-000, 0459-451-33-0-000, and 0459-451-34-0-000 and by the address of Yucca Road, Adelanto, CA 92301.

This report is prepared for the sole use and benefit of U.S. Bank and the U.S. Small Business Administration and is based in part, upon documents, writings, and information owned and possessed by U.S. Bank. Neither this report, nor any of the information contained herein, shall be used or relied upon for any purpose by any Person or entity other than U.S. Bank and the U.S. Small Business Administration. Furthermore, this document is prepared to satisfy a Bank Policy requirement. The document does not meet the "All Appropriate Inquiries" standards set forth at 40 CFR 312.20 or the Phase I Environmental Site Assessment Standard (ASTM E-1527-21).

5.0 Findings

The EQ identified the current occupants as truck parking businesses; however, the dates of occupancy were not provided. No evidence of truck parking activities was depicted on the EPI site visit photographs or Google Earth Pro imagery; therefore, truck parking is likely the proposed use of the subject property. The proposed use of the subject property as a truck parking facility is not considered a significant environmental concern.

The 2024 Google Earth Pro aerial photograph depicts two trailers on the western portion of the subject property; however, no environmentally sensitive activities were depicted. No trailers were depicted on the EPI site visits photographs; therefore, the trailers have likely been removed. Based on the absence of environmentally sensitive activities, the trailers are not considered a significant environmental concern.

The subject property was not identified in the Regulatory Database Report (RDR).

Multiple occupants of the western adjacent truck repair facility, located at 12231 Hibiscus Road, were listed in the San Bernardino County Permit (SAN BERN. CO. PERMIT), California Environmental Reporting System (CERS), CERS Hazardous Waste (CERS HAZ WASTE), Hazardous Waste Tracking System (HWTS), Facility and Manifest Data (HAZNET), US National Pollutant Discharge Elimination System (NPDES), California Integrated Water Quality System (CIWQS), Resource Conservation and Recovery Act (RCRA) Non-Generator/No Longer Regulated (NonGen/NLR), and/or Hazardous Waste Electronic Manifest System (E MANIFEST) regulatory databases. There are no unresolved violations associated with the RCRA or CERS listings. The MANIFEST, HWTS, and HAZNET listings are associated with the offsite disposal of regulated waste. The NPDES and CIWQS listing are associated with stormwater management permits. Based on the regulatory status, this adjacent property is not considered a significant environmental concern.

The northwestern adjacent property, identified as TPST Soil Recyclers and Soil Safe Stockpile and located at 12328 Hibiscus Road, was listed in the Waste Management Unit Database System (WMUDS), CERS HAZ WASTE, HWTS, HAZNET, CERS, NPDES, CERS TANKS, SAN BERN. CO. PERMIT, Aboveground Storage Tank (AST), RCRA NonGen/NLR, Solid Waste Facility/Landfill (SWF/LF), Land Disposal Sites Listing (LDS), Emissions Inventory Data (EMI), Enforcement and Violation Listing (ENF), NPDES, and CIWQS regulatory databases. There are no unresolved violations associated with the RCRA or CERS listings. The MANIFEST, HWTS, and HAZNET listings are associated with the offsite disposal of regulated waste. An AST of unknown contents and capacity was identified as closed and no releases were reported. Based on the regulatory status, this adjacent property is not considered a significant environmental concern

Based on the regulatory status, distance considerations, and/or hydraulic gradient, the remaining facilities identified on the RDR are not considered a significant environmental concern.

Historical documentation back to 1940 or the first developed use (whichever is earliest) was not available; however, because the 1953 aerial photograph depicts the subject property as undeveloped land, the absence of additional historical documentation back to 1940 is not a significant environmental concern.

6.0 Conclusions

No significant environmental concerns were identified for the subject property or the surrounding area. The subject property represents a LOW RISK with regard to environmental issues and concerns.

ENVIRONMENTAL PROPERTY INSPECTIONS
What to look for during the inspection

Note – If gasoline, diesel, or heating oil are sold, supplied, or dispensed at the property, contact RETECHS before performing an Environmental Inspection. A Phase I may be needed.

Please review the significant issues identified below for the type of property you are inspecting.

Other Property Types: see the "Environmental Risk Guidance" document at RETECHS SharePoint:

Auto Repair (including Tire & Alignment Shops and Auto Body Repair & Repainting)

Issues	What to look for	Questions to ask
Pre-mid-1980s shops used chlorinated solvents and operators often improperly disposed of the used solvent.	Existing or former parts washer.	Inquire about type of solvents used and waste disposal practices. Request copies of waste disposal manifests.
Hazardous chemicals used on site.	Are shop floors stained? Are there floor drains in the shop areas? Are storage facilities equipped with secondary containment?	Ask if any hazardous chemicals are used on site. If so, ask to see where they are stored and ask how they are disposed.
Hydraulic lifts in operation prior to 1977 may have used PCBs and may have leaked.	Existing in-ground hydraulic lift or hoist with oil reservoirs. Patched concrete in the shop may indicate a former hoist was removed or abandoned in-place.	Has there ever been any lifts? Were soil samples collected after lift removal. If so, ask for a copy of the results.
Drains, oil/water separators designed to keep oil out of wastewater, but potentially release oil and solvent to soil and groundwater.	Trench drains located in shop or in front of bay doors	When was the oil/water separator last inspected? Ask for copy of report.
Paint Booths	Evidence of overspray on shop walls or floors. Evidence of improper disposal in slop sinks or around drains.	Request copy of property permitting.
Aboveground Storage Tanks or storage drums	Are there any ASTs and drum storage areas without secondary containment and/or located on unpaved surfaces or near floor drains discharging to storm or sanitary sewer service? Is there any staining near the storage area?	Request Obligor complete the Supplemental Tank Questionnaire.
Underground storage tanks - **Existing**	Vent pipes, concrete dispenser island or canopies, fuel dispensers. Is there any staining near the USTs?	Request copies of automatic tank gauging system results, tank tightness tests. Ask when the tank system was last inspected by regulators. Request Obligor complete the Supplemental Tank Questionnaire.
Underground storage tanks - **Former**	Vent pipes, old concrete dispenser island or canopies, fuel dispensers, large concrete or asphalt patching, groundwater monitoring wells, covers on ground (steel covers, commonly 8-12-inch diameter)	Ask when tanks were removed and obtain the tank removal report. If so, were regulators notified? Is there any documentation on a soil or groundwater cleanup or investigation?
Existing/former septic systems or drywells that can act as conduit to subsurface for chemicals		Request copy of dry well permit. Ask when facility was placed on city sewer system.

Day Cares, Schools, and Residential Facilities

Issues	What to look for	Questions to ask
Asbestos in buildings built prior to 1980	Damaged building materials, particularly ceiling tiles, floor and wall tiles and pipe wrap which may contain asbestos should be sampled for asbestos.	Request copy of Sampling/O&M plan or abatement report if they have.
Lead-Based Paint in buildings built prior to 1978. **SBA loans:** "Child Occupied Facilities" must undergo a lead risk assessment (including a drinking water test for lead) according to 2012 HUD standards – this is separate from a Phase I environmental site assessment.	Peeling and or chalky paint is a potential risk, particularly in areas near doors and windows. Damaged paint must be tested for lead content.	Request copy of Sampling/O&M Plan or abatement report if available.
Lead-in-Drinking-Water in buildings built prior to 1987. An assessment of drinking water is a required part of the lead risk assessment which must be completed for SBA loans on Child Occupied Facilities	Lead pipes or lead solder in the building water supply system may have leached lead into drinking water.	What type of pipes are used to transport drinking water? Request copy of most recent drinking water testing results.
Mold	Mold growth on building materials saturated with water. Water damaged building materials	Request copy of mold abatement plan or report.
Contaminants in Drinking Water Wells	Water wells	Ask how water is supplied to property. Request copy of most recent drinking water testing results.
Existing/Former Heating Oil Tanks	Fill ports, concrete patches, raised concrete pads, brick vaults or other containment structures in basement.	Request Obligor complete the Supplemental Tank Questionnaire.

Dry Cleaners

Issues	What to look for	Questions to ask
Use of Chlorinated Solvents (Perc)	Chemical storage area. Note any cracks in the flooring which could be a potential conduit for subsurface contamination	Have you used solvents? If not, what do you use to clean? Has there ever been soil or groundwater sampling for solvents?
Releases or spills of solvent	Concrete patches (boring locations), groundwater monitoring wells covers on ground (steel covers, commonly 8-12-inch diameter)	Has there ever been a spill? If so, what documentation is available on the cleanup?

Properties with ASTs, USTs, Chemicals and Waste Storage Areas

Issues	What to look for	Questions to ask
Hazardous chemicals used on site	Is there floor staining where kept? Is there secondary containment. Are there drains nearby?	Where stored, how disposed?
Drains, oil/water separators that can release oil and solvent to soil and groundwater	Trench drains located in shop or in front of bay doors.	When was oil/water separator inspected?
Aboveground Storage Tanks or storage drums	Are there any ASTs and drum storage areas without secondary containment and/or located on unpaved surfaces or near floor drains discharging to storm or sanitary sewer service? Is there any staining near the storage area?	Request the Obligor to complete the Supplemental Tank Questionnaire.
Underground storage tanks - **Existing**	Vent pipes, concrete dispenser island or canopies, fuel dispensers. Is there any staining near the USTs?	Request copies of automatic tank gauging system results, tank tightness tests. Ask when the tank system was last inspected by regulators. Request Obligor complete the Supplemental Tank Questionnaire.
Underground storage tanks - **Former**	Vent pipes, old concrete dispenser island or canopies, fuel dispensers, large concrete or asphalt patching, groundwater monitoring wells, covers on ground (steel covers, commonly 8-12-inch diameter)	Ask when tanks were removed and obtain the tank removal report. Ask if there as ever been a fuel release fuel release/spill from the underground storage tanks, piping or dispensers? If so, were regulators notified? Is there any documentation on a soil or groundwater cleanup or investigation?
Existing/former septic systems or dry wells that can act as conduit to subsurface for chemicals		Ask whether facility is on a city sewer system or on a septic system. If on city sewer, determine when it was placed on city sewer. Request a copy of the dry well permit.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS

site within approximately 0.5 miles of the target property.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/16/2024 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Summary Details:

Conditions at proposal July 14, 1989): George Air Force Base GAFB) occupies 5,347 acres in the Mojave Desert region near Victorville, San Bernardino County, California. It was established in 1941 to conduct tactical fighter operations andprovide training for aircraft and maintenance personnel. Industrial operations, including maintenance of aircraft and ground support equipment, involved use and disposal of solvents. GAFB is participating in the Installation RestorationProgram IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. During IRP tests conducted between March and May 1986, the Air Force discovered trichloroethylene TCE) in ground water on and off the base. The northeast section of GAFB, used for disposal of solvents, appears to be one source of the contamination, although several other areas on the base are also suspected of contributing to the contamination. In addition to TCE, ben ene and 1,2-dichloroethane were detected in on-base monitoring wells at levels that exceed State and Federal drinking water standards. An estimated 11,000 people obtain drinking water from wells within 3 miles of ha ardous substances on the base. The wells are upgradient of known contamination. GAFB has installed additional wells to determine the extent of TCE contamination. Remedial action is planned to recover, treat, and dispose of contaminated ground water. The California Regional Water Quality Control Board is reviewing GAFB s workplan for these activities. GAFB is in the process of contracting for the remedial action. Status February 21, 1990): GAFB has contracted for the remedial action, which is scheduled to begin early in 1990.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

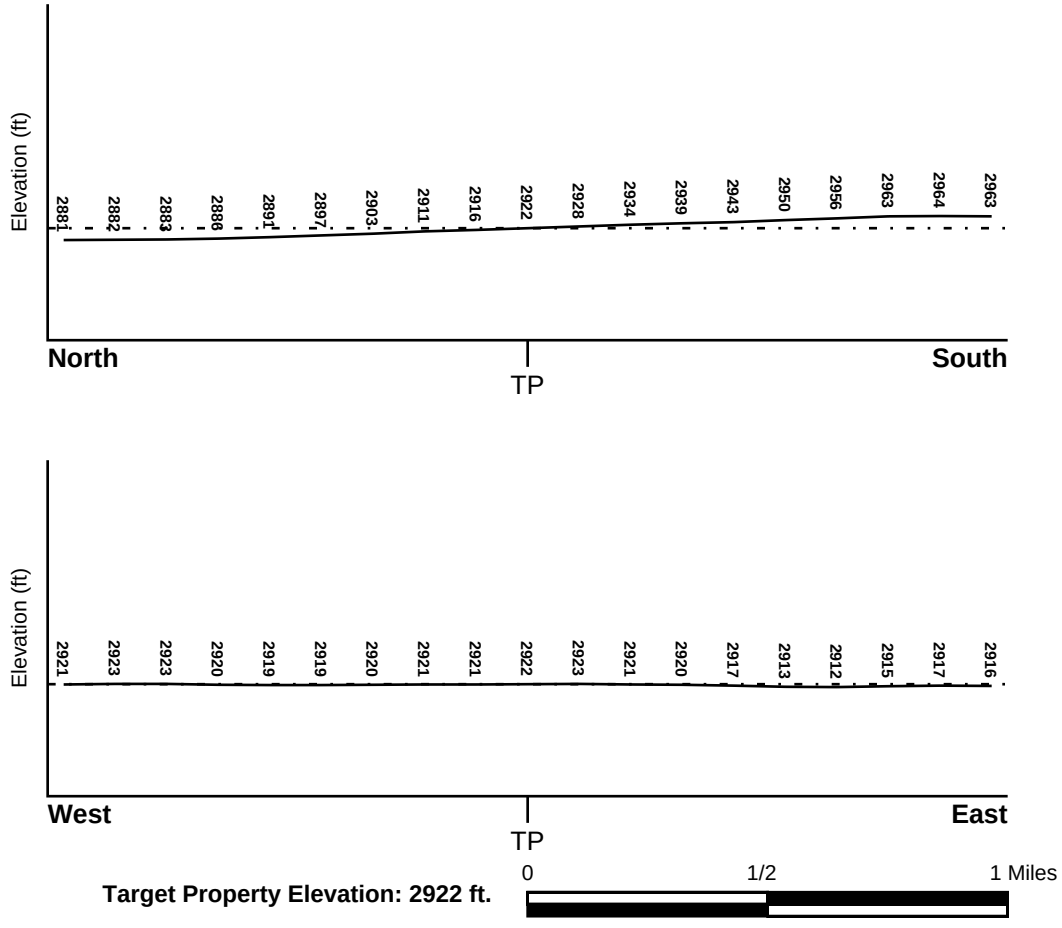

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 2922 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.
