Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
California's Department of Toxic Substances Control's (DTSC's)-EnviroStor database is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS

MONTROSE CHEMICAL CORP OF CALIFORNIA (Continued) **1000420366**

WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date:	03-23-2022
Citation:	HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description:	Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes:	Returned to compliance on 03/24/2022. OBSERVATION: Used oil was observed in a 55 Gallon drum without a clearly marked label containing generator information, physical state, hazardous properties and an accumulation start date. Used filters were observed in a 55 Gallon drum without a clearly marked label containing generator information, physical state, hazardous properties and an accumulation start date. Bill of ladings were reviewed to determine appropriate accumulation dates and compliance to allowed accumulation periods and hazardous waste pick up. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the used oil and fuel filters are being properly managed and labeled.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:
Site ID: 150109
Site Name: SAKURA FINETEK USA INC
Violation Date: 03-11-2020
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes: Returned to compliance on 09/23/2020. OBSERVATION: Employees are not thoroughly familiar with proper waste handling and emergency procedures as demonstrated by the number and/or type of hazardous waste violations observed at the time of inspection. The following deficiencies demonstrate that employees have not received the proper training: 1) Laboratory personnel are unfamiliar with the proper disposal procedure for cleaning wipes 2) Laboratory personnel do not consistently label all hazardous waste containers. Some are mislabeled, others are missing labels. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that employees have been properly trained.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 150109
Site Name: SAKURA FINETEK USA INC
Violation Date: 03-11-2020
Citation: 40 CFR 1 265.172 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.172
Violation Description: Failure to accumulate or store hazardous waste in container made of or lined with materials which will not react with, and are otherwise compatible with, the hazardous waste to be stored.

SAKURA FINETEK USA INC (Continued) **S123501982**

Violation Notes:	Returned to compliance on 09/23/2020. OBSERVATION: No containers available in any area of the business observed dedicated for disposal of used cleaning wipes. CORRECTIVE ACTION: Obtain containers compatible with cleaning wipes contaminated with alcohol and other solvents/cleaners used and submit documentation (photos, purchase orders) demonstrating they have been obtained.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	150109
Site Name:	SAKURA FINETEK USA INC
Violation Date:	06-14-2016
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 07/13/2016. OBSERVATION: One-gallon containers of waste formalin and waste alcohol in the Histology and Bioscience labs, respectively, did not have hazardous waste labels and two 5-gallon containers of used oil in the hazardous waste storage shed had hazardous waste labels that were faded and illegible. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); and 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	150109
Site Name:	SAKURA FINETEK USA INC
Violation Date:	03-11-2020
Citation:	22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description:	Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will

SAKURA FINETEK USA INC (Continued) **1010461992**

completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Section Seven Tracking System (SSTS) tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed.

Violations:

Site ID:	572854
Site Name:	Intellisense Systems Inc
Violation Date:	07-15-2021
Citation:	HSC 6.11 25404(e)(4) - California Health and Safety Code, Chapter 6.11, Section(s) 25404(e)(4)
Violation Description:	Failure to report program data electronically.
Violation Notes:	Returned to compliance on 09/01/2021. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS (California Environmental Reporting System). CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25158 electronically to CERS. 1) Login to the CERS website https://cersbusiness.calepa.ca.gov 2) Select CERS #10865749 for 21041 S WESTERN AVE 3) Complete the "Facility Information" section which

INTELLISENSE SYSTEMS INC (Continued) **S127393124**

includes "Business Activities" & "Business Owner/Operator Identification". 4) In the "Business Activities" questionnaire page, check "Yes" to the question "Does your facility generate Hazardous Waste?" & input your EPA ID# 5) Submit the "Facility Information" section. ***Please Call our CERS helpdesk at 323-890-4000 for any CERs related questions***

Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 572854
Site Name: Intellisense Systems Inc
Violation Date: 07-15-2021
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 08/26/2021. OBSERVATION: The generator has not obtained an Identification Number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without obtaining an Identification Number. -Facility was using EPA ID CAL000111850, which is for other site located at 20600 GRAMERCY PL. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have obtained an Identification Number. Use the following website and the instructions listed to obtain an EPA ID. https://dtsc.ca.gov/apply-for-hazardous-waste-epa-id-number/

Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 01/30/2024. Your chemical submission is missing the 50 pounds of ammonia in the existing freezer system. Volumes of Acetylene and Oxygen does not match the volumes typically found onsite. You may add the new ammonia system to the next submittal or wait until the ammonia is actually installed. Please contact Alvin Dong, alvin.dong@lacity.org, 213.238.3515 for questions

Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 01/30/2024. Your chemical submission is missing the 50 pounds of ammonia in the existing freezer system. Volumes of Acetylene and Oxygen does not match the volumes typically found onsite. You may add the new ammonia system to the next submittal or wait until the ammonia is actually installed. Please contact Alvin Dong, alvin.dong@lacity.org, 213.238.3515 for questions

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
California's Department of Toxic Substances Control's (DTSC's)-EnviroStor database is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with

AMERICAN HONDA MOTOR CO INC (Continued) **1005643461**

Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violations:

Site ID:	5122
Site Name:	American Honda Torrance Campus
Violation Date:	09-15-2021
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to provide the following training to all oil-handling personnel: 1. Operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. 5. Contents of the SPCC Plan.

LA COUNTY SANITATION DISTRICTS (Continued) **S113020233**

Violation Notes:	Returned to compliance on 10/26/2021. OBSERVATION: Failure to provide training to all oil-handling personnel regarding one or more of the following: 1. The operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. AND 5. The contents of the SPCC Plan. CORRECTIVE ACTION: Provide training in: 1. The operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. AND 5. The contents of the SPCC Plan.
Violation Division:	Los Angeles County Fire Department
Violation Program:	APSA
Violation Source:	CERS,
Site ID:	5122
Site Name:	American Honda Torrance Campus
Violation Date:	04-09-2019
Citation:	HSC 6.67 25270.4.5 (a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5 (a)
Violation Description:	Failure to amend the SPCC Plan within 6 months: 1. When the facility has had a change in design, construction, operation, or maintenance which affects the facility s discharge potential. AND/OR 2. To include more effective proven technology at the time of the 5-year SPCC Plan review and evaluation.
Violation Notes:	Returned to compliance on 04/11/2019. OBSERVATION: 1. Failure to amend SPCC plan within 6 months of when the facility has had a change in: design, construction, operation, or maintenance which affects the facility s discharge potential. One 460-gallon aboveground storage tank (AST) containing diesel fuel for the fire pump located outside of Building 310 was not included in the current SPCC plan. CORRECTIVE ACTION: Amend SPCC as required.

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F002

PEPTISYNTHA INC (Continued) **1000350893**

Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl

PHENOMENEX INC (Continued) **1016140068**

Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated,

PHENOMENEX INC (Continued) **1016140068**

transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Waste Description: Tetrachloroethylene

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Name: CREATIVE PATHWAYS, INC.
Address: 20815 HIGGINS CT
City,State,Zip: TORRANCE, CA 90501
Site ID: 108716
CERS ID: 10591330
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 108716
Site Name: Creative Pathways, Inc.
Violation Date: 07-17-2023
Citation: HSC 6.11 25404(e)(4) - California Health and Safety Code, Chapter 6.11, Section(s) 25404(e)(4)
Violation Description: Failure to report, and report accurately, program data (such as hazardous waste generation activities) electronically.
Violation Notes: Returned to compliance on 07/19/2023. OBSERVATION: Owner/Operator failed to report program data electronically into CERS, or reported information incorrectly. At the time of inspection there is no CERS submittal for 2023. CORRECTIVE ACTION: Complete all required reporting into CERS. Notify inspector of submittal via email.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 108716
Site Name: Creative Pathways, Inc.
Violation Date: 05-16-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 05/19/2017. 2017 CERS submitted
Violation Division: Torrance Fire Department
Violation Program: HMRRP

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

THREE BOND INTERNATIONAL INCORPORATED (Continued) **1001075487**

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info:	National Supply COnmpany (NSC), a division of Armco, Inc., operated a steel and machinery manufacturing facility on a 39.79 acre parcel of land in East Torrance from 1926 through February of 1985. The remedial investigation by Armco's consultant revealed the prescence of total petroleum hydrocarbons and heavy metals. All structures were demolished and the site has been remediated. The property will be sold and developed within the next year (1987).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site History:	Regional Board records indicate that the site is an 0.92-acre undeveloped property owned by the City of Torrance and located on the southern end of American Honda (Honda) Campus in Torrance, California. The site was previously owned and operated by Former Solvent Coatings, a company that reportedly used solvents for paper coatings from 1960 to 1980. The solvents were initially stored in 55-gallon drums and were later transferred to underground storage tanks in 1980. In March 1987, all 19 USTs were removed and were leak-test certified < 0.05 gallons/hr. In 1987, SCS Engineers (SCS) conducted multiple soil investigations. The results of these investigations showed that soil was impacted with residual petroleum and chlorinated hydrocarbons primarily between 10-30 feet below ground surface (bgs). The specific contaminants included benzene, toluene, ethylbenzene, and xylenes (BTEX); and 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA), tetrachloroethylene (PCE), and trichloroethylene (TCE). From 1990 to 1993, SCS conducted soil vapor extraction (SVE) remediation of soil. No SVE pilot testing was conducted. However, available reports indicate that the SVE system was overdesigned (wells spaced 40-50 feet apart) with an estimated radius of influence (ROI) of 100 feet (screen interval: 20-50ft). The SVE system operated for 18,000 hours over a 3-year period and reportedly extracted approximately 65,000 pounds of solvents (10,600 gallons as gasoline. TPH inlet concentrations ranged from 190 - 14,800 ppm (v/v), with an average of 7,000 ppm (v/v). Note that the initial inlet concentration was 190 ppm (v/v); the final inlet concentration was 14,800 ppm (v/v). In February 2001, SCS drilled and collected soil samples from five confirmation soil borings (CB1 through CB5). The highest concentrations were detected in CB3 and CB4 at depths of 10-30 feet

CITY OF TORRANCE (Continued) **S106483716**

bgs within fine-grained clay and clayey sand/silt unit. However, VOCs were generally not detected in any of these boring below 30 feet bgs. Pre-remediation soil data show this same trend, though they were limited to 50 feet bgs. Our records indicate that there was no specific groundwater investigation associated with the Solvent Coatings site and groundwater was not encountered during any of the investigations. However, there are a couple of monitoring wells near the site that have been monitored and sampled for other sites. The available groundwater data from these wells shows evidence of petroleum hydrocarbon impacts, but no impacts from chlorinated hydrocarbons.

Hazardous Waste Summary:
Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Quarterly Update:	Northrop Aircraft K1 facility is an inactive facility and it is currently certified closed. Northrop Grumman Corporation, Inc (NGC) operated and leased the K1 facility from 1967 to 1999 when it ceased operations. This facility was used to store, maintain and shape plaster molds for aircraft parts manufacturing. The building is located at 2135 Dominguez Avenue, Torrance, CA 9050. This facility was permitted by the California Department of Health Services as a hazardous waste storage facility from 1983 to 1988. The former NGC K1 Facility was permitted by the California Department of Health Services (DOHS) as a hazardous waste storage facility between 1983 and 1988. In July of 1989, NGC requested that the DOHS change the status of the facility from a hazardous waste storage facility to a generator because it had never stored hazardous waste at any time and did not intend to store waste at this location for more than 90 days. In a letter to the USEPA, DOHS recommended that facility status be changed to generator without the formal closure process. In 1992, McLaren Hart Engineering prepared a report "Hazardous Waste Storage Unit Closure Report". This report describes the demolition, sampling and formal closure of the hazardous waste storage unit. DTSC issued a Closure Certification letter on August 24, 1992 to NGC.

Claim No:	Not reported
Claim Status:	Not reported
Site History:	The site was a rubber manufacturing facility from approximately 1920 to 1986. Two 8,000 and 10,000 gallon underground storage tanks (USTs) were maintained at the site for storage of gasoline and waste oil and were removed in October 1988. Low levels of oil and fuel hydrocarbons were detected in the soil beneath the USTs upon their removal. The site was developed into a multi-unit commercial/industrial business park in 1988. Site investigations were conducted in 1990 and 1998 after tank removal and indicated that the soil and soil vapor beneath the site were contaminated with trichloroethene (TCE), trans-1,2-dichloroethene (trans-1,2-DCE), cis-1,2-dichlororethene (cis-1,2-DCE) and other volatile organic compounds (VOCs). Soil and

RUBBERCRAFT CORPORATION OF CAL (Continued) **S106483999**

groundwater investigation is still underway at the site. Quarterly groundwater monitoring is being conducted.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 03/06/1997
Comments: Site was referred to DTSC by US EPA as a result of EPA doing a Preliminary Assessment. EPA found site to be NFA according to their criteria. However, due to the evidence of contamination at the site, a PEA is required by DTSC. A letter was sent to RP dated 2-23-95 recommending that a PEA be done.

Facility Project Subtype:	Not reported
RWQCB Region:	LOS ANGELES RWQCB (REGION 4)
Claim No:	Not reported
Claim Status:	Not reported
Site History:	The Site is a 57-acre commercial property located within a commercial/industrial area of Torrance and includes three major parcels: Parcel II, Unit 100 and Unit 3. Historical operations include manufacturing of jet engines, aerospace parts and heat exchangers; degreasing, painting and plating. As a result, soil and groundwater have been impacted with petroleum hydrocarbons, 1,4-dioxane and volatile organic compounds (VOCs), including 1,1,1-trichloroethane (1,1,1-TCA) and 1,1-dichloroethene (1,1-DCE). Subsurface lithology at the Site consists primarily of unconsolidated clay, silt, and silty sand from the surface to a depth of approximately 40 feet below ground surface (bgs). From 40 to 75 feet bgs, the soil is primarily sand. Soils from 75 to 120 consist of primarily sand with localized sandy clay, silt and gravel zones. Perched groundwater has been reported offsite to the west and northwest, but no perched zones exist beneath the Site. First encountered groundwater beneath the Site occurs under unconfined conditions at depths of approximately 60 to 65 feet bgs within a sand zone near the base of the lower Bellflower aquitard. In October 2014, groundwater flow was south-southwest with a gradient of 0.0014 foot

MOOG, INC., AIRCRAFT GROUP TORRANCE OPERATIONS (Continued) **S105153717**

per foot, which is generally consistent with historical flow conditions. The flow direction has reportedly been modified and influenced by remedial groundwater extraction activities at the adjacent ExxonMobil site. Groundwater monitoring has been conducted on a semiannual basis since 2001. There are 15 groundwater monitoring wells at the Site, five of which are owned by ExxonMobil Corporation (ExxonMobil) and monitored semiannually. These wells include URS-01 through URS-05. ExxonMobil samples these wells and shares the data with Honeywell under a cooperative agreement. Groundwater monitoring and sampling of the remaining ten wells is conducted on a semiannual basis using the approved Hydrosleeve sampling method. Groundwater samples from Honeywell-owned wells are analyzed for the following parameters: VOCs, including methyl tertiary butyl ether (MTBE), by USEPA Method 8260B; and 1,4-dioxane by USEPA Method 8270C Modified Isotope Dilution In addition to VOCs, Honeywell-owned wells and select ExxonMobil wells are analyzed for monitored natural attenuation (MNA) parameters, including dissolved oxygen, oxidation-reduction potential, chloride, ferrous iron, nitrate, sulfate, total alkalinity, total organic carbon, ethane, ethane, methane and carbon dioxide. The MNA parameters are analyzed annually (generally April) and the results are used to monitor and evaluate anaerobic dechlorination in groundwater beneath the Site. MNA analyses are planned for the next sampling event in April 2015 and will continue to be conducted on an annual basis. Groundwater samples from Honeywell-owned wells are also analyzed for total petroleum hydrocarbons (TPH) as gasoline (TPH-g) and as diesel (TPH-d) on a biennial basis (every two years) using USEPA Method 8015B Modified. The biennial sampling was implemented following a September 18, 2012 meeting among the Regional Board, Honeywell and CH2M HILL. The next monitoring event for TPH is scheduled for April 2016. Honeywell has not requested to change to TPH sampling schedule at this time. ExxonMobil wells are monitored on a semiannual basis and analyzed for the following parameters: VOCs, including MTBE, by USEPA Method 8260B; TPH-g, TPH-d, and TPH as kerosene (TPH-k) by USEPA Method 8015B Modified; and Lead by USEPA Method 6010B ICP Metals (URS-01 only)

Quarterly Update: RCRA FACILITY ASSESSMENT: Northrop Corporation K3 facility is located in Torrance, California. The plant operations involved aircraft and parts manufacturing. Hazardous wastes generated as a result of these operations consisted of methyl ethyl ketone and resin wastes containing 1-chloro-2, 3-epoxypropane, toluene, and xylene. These hazardous wastes were stored in approved containers within a protected storage area. A permit for the above operations was issued on December 30, 1983. Northrop submitted a Closure Plan on December 16, 1987 and a Closure Certification report dated October 1992. DTSC is currently investigating the facility's history to determine regulatory status.

Completed Date: 06/30/1995
Comments: The Department reviewed the PEA Report prepared for the Jones Chemicals, Inc. site. The PEA Report recommended additional investigation be conducted at the site and pro- posed two removal actions. The site was referred to U.S. EPA due to it's proximity to the Montrose Chemical Superfund site.

Quarterly Update:	Jones Chemical manufactured & repackaged chemicals used in waste treatment plants and swimming pools for distribution. Permitting files are very limited for this site. Per April 28, 1989 inspection report, Jones Chemical submitted a Part A application to EPA on 11/18/80. On 2/10/81, EPA returned the Part A application for errors on the application. On 2/19/81, facility resubmitted the corrected Part A application. Again, EPA returned the Part A application stating that "applicant did not demonstrate that the facility is one which is required to have a permit under section 3005 of RCRA." Part A application could not be found in file. It looks as if no ISD was issued for this facility. No Part B application was ever submitted for this facility. The facility per 2/3/82 letter was confirmed to have variance from obtaining a permit. On 8/14/89, a consent order (88/89-009) was issued to Jones Chemical. The order required Jones Chemical to initiate PEA with the site mitigation program. Additionally, it required Jones to obtain PBR or submit Part A & B application. Looks like Site Mitigation conducted investigation/clean up for this site. PEA report produced on 6/28/95 recommended further investiagations. No further corrective action information could be found. Site Mit database states the site was referred to USEPA. It looks like this facility never had ISD and facility unit may have transferred to PRB. Facility cleanup was conducted under Site Mit. Therefore, this facility does not belong in RCRA universe.

Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS will be issuing a remedial action order or entering into an enforceable agreement with the responsible parties (RPs). DHS has budgeted $50,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff Costs and overhead releated to the project. The RPs will pay all costs associated with remedial investigation and cleanup activities.
Site Description:	This 7.3 acre site is located on both sides of Royal Boulevard between 209th and 210th Streets in Torrance. It was a landfill operated by National Supply Company, a division of Armco from 1956 through 1985.
Hazardous Waste Desc:	During the preparation of the environmental audit and closure plan for the National Supply Company's Torrance facility, it was discovered that foundry sand and baghouse dust may have been disposed of at the Royal Boulevard site. The foundry sand andbaghouse dust waste may contain heavy metals.
Threat To Public Health & Env:	This site is bordered by single-family residential units on the north, east, and south. There is potential for windblown dispersal of foundry sand. There is surface contamination, and offsite migration may result from storm water runoff. Depending on the form of contamination there is some potential for migration to ground water.
Site Activity Status:	On July 16, 1986, the preliminary characterization plan was submitted to the Department and has been approved. The owner of the site, National Supply Company, a division of Armco, Inc., has conducted a limited remedial investigation.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	EPA is currenlty conducting the RI/FS, which is funded by CERCLA. The site has been proposed for listing on the NPL. It is uncertain at this time as to whether the RP, Montrose Chemical Corporation, will fund the RAP development and implementation. For the purpose of preparing this Plan, DHS is assuming that the RP will develop the ROD/RAP and fund the selected remedy. DHS has budgeted $50,000 for its oversight and monitoring costs. DHS will seek cost recovery of its direct costs plus staff costs and overhead related to the project.
Site Description:	Montrose Chemical Corporation operated a dichlorodiphenyltrichloroethane (DDT) manufacturing plant from 1947 to 1982 at this location. The 13 acre facility was closed and subsequently dismantled in 1985. The soil is contaminated with DDT as a resultof facility operations and disposal of wastes into a pond onsite.
Hazardous Waste Desc:	Montrose Chemical's sampling results showed onsite soils containing 300 to 400 tons of DDT throughout the facility. EPA studies have found DDT to exist in surface water runoff and sediments leaving the Montrose property. High concentrations of DDT have also been identified in sewers that received Montrose wastes before 1972. Other substances of concern that were also found in the investigation include chlorobenzene (MCB), dichlorobenzene (and isomers), chloroform, acetone, benzene hexachloride (BHC and isomers) and benzene.BHC and isomers) and benzene.
Threat To Public Health & Env:	The site is located in a light industrial and residential area with about 3,000 people living within a quarter mile of the property. Evidence suggests that DDT has been released from the Montrose site into the surrounding environment. Prior to asphalt capping, DDT-contaminated dust was transported into the nearby residences. Ground water and soils beneath the site are contaminated and may be threatening usable aquifers.
Site Activity Status:	EPA completed offsite surface water, offsite soil, onsite ground water, and onsite soil sampling in November, 1986. Further soils and ground water sampling took place during 1987 and more is scheduled for 1988-89. An investigation of DDT contamination of local sewers was completed in September, 1987. A feasibility study is being performed by the responsible party under EPA oversight to evaluate the possible cleanup options. Based upon the findings of the feasibility study, a ROD/RAP will be developed and implemented.

Background Info: Montrose Chemical Corporation operated a dichlorodiphenyl-trichloroethane (DDT) manufacturing plant from 1947 to 1982 at this location near the city of Torrance. The 13-acre facility was closed and subsequently dismantled in 1985. The soil is highly contaminated with DDT as a result of facility operations and disposal of wastes into an onsite unlined pond. The pond was lined with concrete in 1970.
Not reported
Montrose's sampling results showed onsite soils with 300 to 400 tons of DDT throughout the facility. U.S. EPA studies have found DDT to exist in surface water runoff and sediments leaving the Montrose property. High concentrations of DDT have also been identified in sewers that received Montrose wastes before 1971.
Not reported
Other substances of concern that were found in the soil and groundwater investigations include chlorobenzene (MCB), dichlorobenzene (and isomers), chloroform, acetone, benzene hexachloride (BHC and isomers), and benzene.
Not reported
The site is located in a light industrial and residential area with about 3,000 people living within a quarter-mile of the property. Evidence suggests that DDT has been released from the Montrose site into the surrounding environment. In 1988, Montrose placed an asphalt cover over the areas immediately surrounding the former manufacturing facility.
Not reported
Under a Consent Order with U.S. EPA, Montrose conducted offsite surface water, offsite soil, onsite groundwater, and onsite soil sampling. Further soil and groundwater sampling took place. Groundwater and soils beneath the site are contaminated and may be threatening usable aquifers; however, the three aquifers found to be contaminated are not currently used as drinking water sources. The closest drinking water well is two miles southeast of the site and draws from the deepest aquifer.
Not reported
The site has been split into operable units. The Soils and DNAPL, the groundwater, surface water pathway, sewers, and neighborhood study area.
Not reported
U.S. EPA approved the dual site groundwater ROD on 3/30/1999 for both the Montrose and Del Amo sites. This ROD addresses the dissovled Monochlorobenzene plume emanating from the Montrose site to approximately Torrance Blvd. to the south. It also addresses the dissolved benzene groundwater plume emanating from the Del Amo site to just south of the Del Amo Pits. The plumes from both sites overlap each other to the east of Montrose and to the west of Del Amo, approximately around Normandie Avenue. These dissolved plumes are referred to as "GW1" in this report. The Montrose remedy consists of a pump and treat system with reinjection of treated water

MONTROSE CHEMICAL CORP (Continued) **S101272760**

into the groundwater aquifer. The Del Amo remedy consists of intrinsic bioremediation with pumping for containment from the lower unit and subsequent discharge. The LNAPL at the Del Amo site will be dealt with along with the soils remedy, and is noted in this report as the Study Area. The DNAPL at the Montrose site will be evaluated separately and is noted as "GW2" in this report.

Comments: a historic low lying area had been filled with DDT contaminated
Comments Date: 07241994
Comments: material which extended beyond the two homes. The "fill" area
Comments Date: 07241994
Comments: has now been defined to include 1055, 1051, and 1043 1/2 West
Comments Date: 07241994
Comments: 204th Street.
Comments Date: 07251991
Comments: DDT manufacturing facility. Contaminants include DDT in soil and
Comments Date: 07251991
Comments: MCB in groundwater in addition to benzene, chloroform, acetone,
Comments Date: 07251991
Comments: BHC, and dichlorobenzene.
Comments Date: 07312002
Comments: Removal action of DDT-contaminated soils from residential
Comments Date: 07312002
Comments: front yards on Kenwood Avenue, in Los Angeles, adjacent to
Comments Date: 07312002
Comments: Torrance. A total of 22 properties were excavated.
Comments Date: 08262002
Comments: Amendment to Consent Decree for past costs lodged and approved.
Comments Date: 09011987
Comments: An investigation of DDT contamination of local sewers was
Comments Date: 09011987
Comments: completed in September 1987.
Comments Date: 12012001
Comments: A DDT removal along Kenwood Avenue (along the former Kenwood
Comments Date: 12012001
Comments: ditch) has been underway since July 2001. It is expected to
Comments Date: 12012001
Comments: be completed this month.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/19/2024
Date Data Arrived at EDR: 01/02/2025
Date Made Active in Reports: 01/21/2025
Number of Days to Update: 19

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024
Date Data Arrived at EDR: 01/02/2025
Date Made Active in Reports: 01/21/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/19/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Next Scheduled EDR Contact: 04/14/2025
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/04/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Longitude (West):	118.309847 - 118° 18' 35.45''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	378801.2
UTM Y (Meters):	3744669.2
Elevation:	50 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50004929 TORRANCE, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

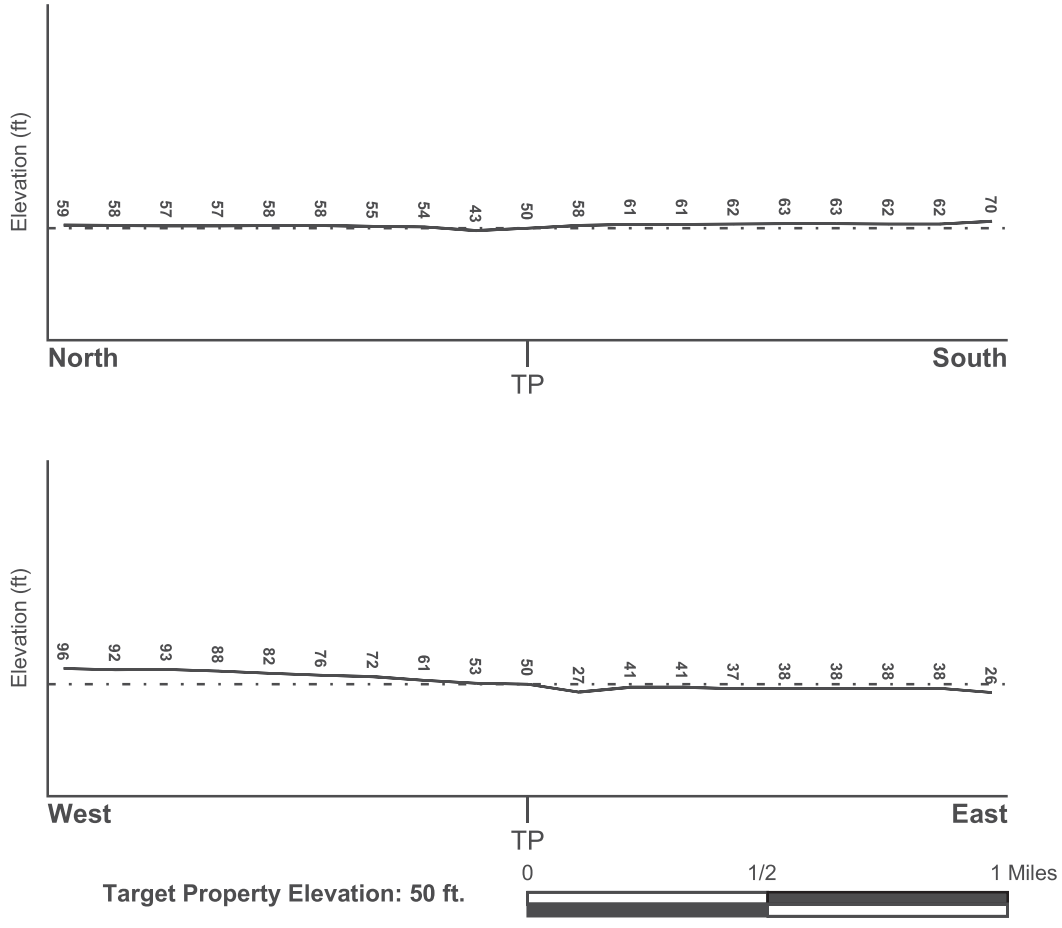
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1935F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1930F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
TORRANCE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand

sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Thornburgh Consulting, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

Re: OIL AND WATER SEEPAGE ONTO TORRANCE CENTER I PROPERTY

Dear Mr. Ross:

On behalf of the City of Torrance and the Redevelopment Agency of the City of Torrance, we wish to thank you for your attendance at last Thursday's meeting in the City concerning the Torrance Center I Construction site located at 1739 West 213th Street in Torrance.

We believe that a number of directives and decisions were made at the meeting which will not only help to resolve the present problem at the site, but also facilitate coordination of the activities of the many parties involved with the site under the lead of your agency.

This letter is therefore to memorialize and confirm the directives and conclusions reached as a result of last Thursday's meeting. It is our understanding that the following is to take place:

1. That the Torrance Center I developer (Gascon Mar Ltd.) is to continue its present pumping operation and will maintain the appropriate monitoring of said pumping activities which monitoring will be done through and coordinated with the City of Torrance.

2. That the City of Torrance will immediately identify and notify the appropriate utilities in the event that further off-site bore holes and/or trenching are required within Torrance's right-of-way.

3. That the Regional Water Quality Control Board will provide the appropriate directives after sufficient pumping has taken place with respect to the need and location of further trenching and/or boring in terms of the source of the seeping and any other site assessment action which is necessary.

4. That the Torrance I developer will be required to classify the present material stored on-site, both liquids and contaminated soils, and to either treat on-site and/or remove said material to appropriate disposal facilities.

5. That the City of Los Angeles will immediately identify and notify utilities in the right-of-ways under its jurisdiction in the event that further bore holes and/or trenching are required off-site.

6. That the Regional Water Quality Control Board will investigate any available source of funds at the State level to provide for payment or reimbursement of work required in connection with the present seeping problem, particularly should the source of the seepage fail to be determined.

It was your feeling that another week to ten days of pumping would be required to determine if in fact the source of oil and water would dry up. In addition, you also discussed the installation of a long-term monitoring well with respect to any further activity in the event the liquid dried up. We hope that this correctly summarizes the points and directives that were discussed at the meeting between the Developer, officials from the City of Los Angeles and yourself.

Finally, it was agreed upon that another meeting would be arranged between the necessary parties in approximately two weeks for a further update and report with respect to the present situation at the Torrance Center I construction site.

Sincerely,

David S. Ferren
Deputy Executive Director

MEMO TO FILE 10/29

City Torrance - Western Ave Cleanup

Mobil Oil Pot holed their Lines along West edge of Western Ave Vicinity of "SITE".
No Evidence of leaks in any of 3 holes. Junk material found at 7' feet (hole 1). Junk found in hole 3 at 11½ feet and free oil (Looks Like Crude) found at 12 feet/entering trench from both sides.
Reviewed old photos on Armco property belonging to owner. Maps clearly show old (early 1900's) levee along true East Canal. Alignment follows roughly Cleanup Limit on Site (AA). This Canal bottom appears to cross the area now occupied by Western ave. (outline Area)
More Recent photo Shows all this outline area filled in and trees removed up to Pole Line along western edge of Western Ave. A small triangle area remained on Site (outlined in Blue)
No Known Source of Crude in the area.
D.O.G. indicates a well was drilled but found no oil & was abandoned (NE Cor. of Western & 213th)
Tests of Crude taken from Pothole No. 3 & Sample to be analyzed by developer.
Mobil already Identified material on Site as Crude of unknown origin.
This Site reseambles an abandoned land fill.

Attn: Mr. James Ross
Water Resource Control Engineer

Dear Mr. Ross:

As you know, a liquid oily substance was discovered seeping onto the Torrance Center I construction site (located at 1739 W. 213th Street, Torrance) on Monday, October 13, 1986. The contamination enters the site along the Western Avenue right-of-way.

To immediately contain seepage onto the site, the construction contractor (Lusardi Construction) installed and activated three on-site water extraction wells and will soon complete an impervious clay barrier across the contamination's entry path. The base of the barrier will be keyed/locked into a thick layer of naturally occurring impervious clay which underlies the site. In addition, more than 20,000 gallons of liquid and more than 8,000 cubic yards of fill material saturated with the liquid, have been collected by the developer.

To investigate the source and extent of contamination, the following actions have been taken:

1. A research of city records that disclosed a number of pipelines in the Western Avenue right-of-way (see Attachment 1)

2. Contacted the Divison of Oil and Gas (DOG) for a records check that indicated an abandoned oil well is located at the northeast corner of Western Avenue and 213th Street. That well (R-K Drilling Co., Inc. #1) was apparently drilled to a depth of 4150 feet below grade and then abandoned in 1923.

3. Sampled and chemically analyzed both the liquid itself and the soil. Preliminary tests indicate that the contamination is a crude oil or perhaps bunker type fuel. It has some characteristics that are different from those of local crude. In addition, the liquid was found to be quite a bit warmer than the soil. Both of these characteristics indicate a pipeline as the most likely source. Water entering the site has been tested and found to have more than 2,000 ppm TDS and to be free of chloramines. Thus, it seems probably that it did not come from the MWD's water supply line. Dye was poured into the City sewer line on October 16, 1986, well upstream of the area where the sewerline comes closest to the seepage. To date, none of the dye has appeared in the water/oil mixture entering the construction site.

4. We have contacted Mobil Oil officials and requested specifications for and samples of the products they ship in their pipe lines under Western Avenue and dates, times and results from the most recent pressure testing of the Mobil lines.

5. The Torrance Center I developer (Gascon Mar Ltd.,) has retained Meredith, Boli & Associates to determine the nature and source of the contamination and to recommend and supervise the conduct of appropriate remedial actions in concert with the Redevelopment Agency and State/County agencies.

We hope that the above information will assist you in your search for the source and extent of the contamination. We would also appreciate your keeping us involved in your plans for containment and identification of the source and generator of the contamination. If any new data becomes available to us, we will contact you immediately.

If you have any questions or we can be of any further assistance, please contact myself or Jane Hasselbach at 618-5990.

Sincerely,

David S. Ferren

Data Reporting Qualifiers

Value – If the result is a value greater than or equal to the Detection Limit (DL), the value is reported

ND – Indicates that the compound was analyzed for but not detected. The minimum DL for the sample is reported based on necessary concentration or dilution actions.

TR – Indicates an estimated value. This flag is used when the mass spectral data indicates the presence of a compound that meets the identification criteria but the result is less than the specified DL but greater than zero

Re: Torrance Center I Located on the Southwest Corner of Torrance Boulevard and Western Avenue in Torrance, California

Dear Walter:

As discussed, our consultants, Meredith, Boli & Associates (M/B & A) have now completed the testing and analysis of the materials contaminated by oil flowing from Western Avenue, and we wish to receive the County's concurrence to our proposed actions. This letter is organized by the following major sections:

- Background.
- Sample collections and analysis.
- Analytical results.
- Proposed plan.

BACKGROUND

The referenced property formerly was owned and operated by Torrance Tubing and Conduit Company. The 12-acre site was used for tube milling, galvanizing, electroplating, and warehousing of tubing and conduit. Operations at the facility were terminated in November 1984. Subsequent to this date, Torrance Tubing retained BCL Associates, Inc., Long Beach, California, to prepare a Site Characterization and Remedial Action Plan (RAP) for the site. The RAP was approved by the Los Angeles County Health Department (LACHD) on February 18, 1986.

We purchased the property from Torrance Tubing on June 7, 1986, and assumed the responsibility of implementing the approved RAP in conjunction with site demolition efforts. Remedial actions and verification sampling and testing efforts commenced in June and were completed in

August 1986. Certification that the remedial actions were conducted in accordance with the approved RAP was issued by the LACHD on October 2, 1986.

Grading and construction activities at the site commenced in September 1986. On October 13, 1986, an oily substance was encountered while grading operations were being performed in a series of trenches that were dug along the property line adjacent to Western Avenue. It was apparent that this liquid was flowing into the property from Western Avenue. Ultimately, the on-site limits of the oily soil were delineated after the excavation of additional trenches near the discovered contamination, and it became apparent that the area contaminated by the liquid was that which had already been cleaned up as part of our original remedial work, since it had been identified as a Buried Solid Waste area in BCL's original report. The City of Torrance Building and Safety Department was notified of the situation immediately. The City in turn notified other potentially interested agencies, including RWQCB, the Los Angeles County Department of Health Services, and the California Division of Oil and Gas.

Following several meetings on-site with the involved parties, our building contractor proposed a plan of action to prevent further infiltration of the oily substance beneath the site and to allow grading and building operations to continue. The plan, which was approved verbally by the RWQCB and the City, included the following major actions:

- Installing three (3) dewatering-wells along the property line adjacent to Western Avenue.
- Pumping the wells to capture the infiltrating oily substance and conveying the material via an above-ground pipeline to Baker tanks located on-site, hence to approved treatment sites.
- Excavating soil in the impacted area, some of which contained the oily substance, and stockpiling it at another location on-site pending development of a plan for its future management. It has been covered with a synthetic tarpaulin.
- Constructing a clay barrier (certified by soils engineers) along the property boundary adjacent to Western Avenue to prevent the further infiltration of the oily substance.
- Filling in the excavation with clay fill material obtained from another location on-site.

- Removing the three (3) wells and terminating pumping of the oily substance.

Currently, construction of the proposed development at the site is near completion.

ANALYSIS OF THE SOIL AND OILY SUBSTANCE

One discrete sample of oily soil stockpiled at the referenced facility was collected by M/B & A field personnel on October 30, 1986. The sample was delivered on the same day to James Montgomery Laboratory in Pasadena, California.

The following physical, chemical and biological analyses were performed:

- Ignitability (Flashpoint).
- Corrosivity (pH).
- Reactivity (cyanide/sulfide screen).
- Volatile organics analysis + 10 peaks.
- Base/neutral and acid extractables + 10 peaks.
- Persistent and bioaccumulative toxic inorganics (i.e., metals).
- Persistent and bioaccumulative toxic organics (i.e., pesticides, herbicides, and PCBs).
- Total hydrocarbons.
- 96-hour LC_{50} bioassay.

The analyses listed above were selected to evaluate the stockpiled soil pursuant to the criteria used by the California Department of Health Services to identify hazardous wastes, as presented in Article 11, Title 22 of the California Administrative Code.

In addition to the soil sample, three samples of the "raw" oily substance encountered at the site were collected by M/B & A field personnel on October 16, October 22, and November 14, 1986, respectively. The first two samples were delivered to the West Coast Analytical Service, Inc., in Santa Fe Springs, California. The third sample was delivered

to Global Geochemistry Corporation in Canoga Park, California. The analyses performed on these samples (see tabular presentation below) were selected to determine whether the oily substance was a crude or a waste refined product, and, if a crude, to determine its source.

Sample Date	Sample Material	Analytical Technique
October 16	Oil/water mixture	Nonhalogenated volatile organics
October 22	Oil/water mixture	Volatile halogenated organics Volatile aromatics Metals
November 14	Liquid hydrocarbon	Compositional analyses (e.g., API gravity, sulfur content, saturate and aromatic fractions, etc.)

ANALYTICAL RESULTS

Complete sets of the analytical test results for the one (1) soil sample and the three (3) oily substance samples are presented in Appendices A and B hereto, respectively. A summary discussion of these results follows:

- Based on the flashpoint (i.e., > 140°F), the pH (i.e., 7.8), and the cyanide/sulfide screen (i.e., negative) results of the soil sample, it is concluded that the oily soil is not ignitable, corrosive, or reactive.

- Total petroleum hydrocarbon concentration was 5% in the soil sample. Based on the analyses performed for volatile and semi-volatile organics, the compounds comprising this 5% concentration consists of high molecular weight complexes.

- Regulated pesticides and polychlorinated biphenyls (PCBs) were not detected in the soil sample.

- The reported metal concentrations for the soil sample are significantly less than the respective Total Threshold Limit Concentrations (TTLCs) established at 22 CAC, Chapter 30, and confirms the findings in BCL's verification sampling of the Buried Solid Waste area contained in their report to you of

August 7, 1986.

- Based on the results of the 96-hour LC_{50} bioassay and the calculated oral and dermal LD_{50}s (see Appendix C hereto) performed on the soil sample, it is concluded that the oily soil is not toxic.

- No chlorinated (or halogenated) hydrocarbons were present in the oily substance samples, but a cumulative concentration of 13 ppm of aromatic compounds (e.g., benzene, toluene, xylene) was measured.

- Based on the results of the compositional analyses performed on the liquid hydrocarbon (i.e., oily substance) sample, it is concluded that the material is highly degraded, that the aromatic and saturate fractions in the sample are high in molecular weight (usually indicative of crude oil), that the sample has chemical and physical properties that are similar to asphatic crude oil, and that the analytical data are consistent with those obtained from analyses of local Los Angeles Basin crude oil.

PROPOSED ACTION PLAN

The proposed plan for managing the stockpiled soil is to use the material as subbase for on-site parking areas and roadways (which material is routinely treated with oil anyway). As such, the material will be covered with asphalt pavement, which combined with site drainage structures will minimize precipitation from infiltrating through it. The supporting bases for this action include:

- The oily soil was removed from an area (i.e., Buried Solid Waste) that was addressed in the County-approved RAP. Based on the analytical results of verification sampling conducted by B&L Associates, the County confirmed that previous remedial measures undertaken in this area conformed to the RAP.

- The analytical test results for the sample collected by M/B & A are consistent with the verification sample results previously accepted by the Country for this on-site area.

- Based on the analytical test for the oily substance, the soil is impregnated with an asphaltic crude, consistent with crude oil found naturally in the Torrance area.

I look forward to discussing this with you further and viewing the material, if necessary.

Very truly yours,

GASCON MAR LTD.

LABORATORY REPORT

Samples: One (1) oil water sample
Date Received: 10-16-86
Purchase Order No: Verbal/C.W. Hass

The sample was analyzed by gas chromatography according to EPA method 8015. The top layer of the sample appears to be a crude oil with a boiling point range of 180° C to 450° C. The approximate hydrocarbon distribution is as follows.

LABORATORY REPORT

Samples: One (1) oily water sample
Date Received: 10-22-86
Purchase Order No.: W.C. Hass/Verbal

The sample was analyzed for volatile organic compounds by EPA Methods 601 and 602. These results are reported on the enclosed Organics Analysis Data Results forms.

The sample was also analyzed for metals using ICPMS. These results are reported on the enclosed Quantitative Analysis Report.

Data Reporting Qualifiers

Value - If the result is a value greater than or equal to the Detection Limit (DL), the value is reported

ND - Indicates that the compound was analyzed for but not detected. The minimum DL for the sample is reported based on necessary concentration or dilution actions.

TR - Indicates an estimated value. This flag is used when the mass spectral data indicates the presence of a compound that meets the identification criteria but the result is less than the specified DL but greater than zero.

LABORATORY REPORT

Samples: One (1) Oil Sample
Date Received: 10-29-86
Purchase Order No: Verbal

The sample was analyzed by gas chromatography according to EPA Method 8015 with the following results.

Hydrocarbon Distribution	Area Percent Oil *
C11	0.01
C12	0.15
C13	2.24
C14	3.85
C15	10.6
C16	7.20
C17	8.71
C18	10.1
C19	7.91
C20	49.1

The chromotograms are enclosed for your review

* This oil sample is different from the previous sample (JN#4308) in that the light ends are not present, thus concentrating the heavy ends.

Beverly Hills, CA. 90211

Dear Doug,

This is to confirm our conversation of December 4, 1986 regarding Global's interpretation of the results of analyses made on the liquid hydrocarbon sample you submitted (received Nov. 17, 1986). I have enclosed the analytical results for the work done to date, along with an invoice.

The first objective of the analytical scheme is to determine whether your sample is a crude oil or a refined petroleum waste product. This determination cannot be made with certainty on a single sample, which could be a mixture of crude and refined petroleum. The certainty of this determination on your particular sample is further diminished by the fact that it is highly degraded (as evidenced by the diminished n-alkane content and virtual absence of resolved peaks beyond phytane, in the saturate fraction chromatogram). Despite these difficulties, the analytical results given on Tables 1 and 2 and in the capillary GC data are consistent with results we have obtained from the analyses of highly degraded, asphaltic crude oils. The relatively high aromatic content, coupled with a wide volatility range in both the saturate and aromatic fractions, in particular, is indicative of a crude product. (The range of the saturate chromatogram is C11 to C35. Although no peaks are identified in the aromatic chromatogram, it represents about the same volatility range).

The second analytical objective, if your sample is a crude oil, is to determine the source (local or not). This objective has not been specifically addressed, however, the data acquired so far are consistent with data we have obtained from the analyses of local LA

Basin crude oils. More definitive identification of such a badly degraded oil is only possible by GCMS identification of the biomarkers (which are relatively unaffected by bacterial alteration) and correlation to the biomarker profile of a sample of known source.

If you have any questions, please do not hesitate to call

Sincerely,

David E. Meredith

RECORD OF COMMUNICATION

☐ Phone Call ☐ Discussion ☐ Field Trip
☐ Conference ☐ Other (specify)

TO: Josh Workman	FROM: Elijah Hill	DATE: 10/16/86
SUBJECT: Torrance Blvd. & Western Ave. - Site Subsurface Contamination by Oil/Water		FILE NO: B II 6

SUMMARY OF COMMUNICATION:

In response to a telephone call from Jerry Tillman, the Dept. on 10/14/86 I investigated a complaint at the above site, formerly Torrance Tubing Company located at the S/W corner of Torrance Blvd. & Western Avenue. (See attached map) I met with Paul Nelson, the construction superintendent at the site. Mr. Nelson said that he was [illegible] and that a tractor operator was excavating at a location near the eastern fence line. The oil & water flowed readily into the excavation & [illegible] were dug around the perimeter of the excavation into which the oil & water flowed. Several pits paralleling the fence line were found to contain oil and initial appearances indicated that it might be flowing from under Western Avenue. It was discussed that Tidal Oil Co. (Crusader Oil) might be responsible but could not be contacted. Mr. Nelson pointed out the line. An Oil Well was identified (shown on the map) at the N/E corner of 213th St. & Western Avenue. Torrance Fire Department also reported that an 8" water line is located on Western Avenue.

CONCLUSIONS, ACTION TAKEN OR REQUIRED: (OVER)

✓ Underground storage tanks inspector, recommend referring this case for follow up to Groundwater Regulatory Section.

Referred to your Reg. Section

Jerry

INFORMATION COPIES TO:

The well at the N/E corner of 213th St and Hoskins Rd
[illegible] jar described as Uncompleted abandoned.
The site has an insufficient gravel building currently located
on it.
Capt. Hess stated Mobil Oil was contacted about the
pipeline oil visible within the metal [illegible] and
[illegible] transported through the pipeline.

[illegible] 18 Sept, a recorder of site was to obtain a sample
of the water from the [illegible]. The metal box
did appear to be partially filled with water, but upon
[illegible] there was a thin layer of water.
The excavation revealed that the site was a former [illegible]
of some type. Field TDS of the water sample is 21000ppm.

Because the material is extremely [illegible], it appears
[illegible] injected at the site during the time period.
The stained soils are being removed and will be [illegible]
being stored at Baker Lanes for disposal.

Los Angeles Regional Water Quality Control Board

October 25, 2018

Mr. Ron Berke
Berke Enterprises, LTD L.P.
16654 Donmetz Street
Granada Hills, CA 91344

SUBJECT: Transmittal of Closure Letter for Former Gas Station, 21138 South Western Avenue, Los Angeles, Case No. 905010234

Dear Mr. Berke:

Attached please find the closure letter for the subject site. The current record fee title owners were notified of the proposed closure in accordance with Section 25296.20 of Chapter 6.7 of the Health and Safety Code. The Regional Board sent a public notification of the proposed case closure to interested parties, which included a 60-day public comment period. No comments were received. All three monitoring wells and all seven remediation wells were destroyed in September 2018, and all wastes were removed, as reported in the "Well Abandonment Report" from KCE Matrix dated October 5, 2018.

Based on the site-specific information and data available in GeoTracker and the Regional Water Board's case file, we conclude that this case meets all the criteria of the State Water Board's Low-Threat Underground Storage Tank Case Closure Policy and that a case closure determination is appropriate.

Site data indicate that there may be residual petroleum hydrocarbons in soil, groundwater, and/or soil vapor at this site that could pose an unacceptable risk as a result of future construction/redevelopment activities, such as on or off-site excavations, the installation of water wells at or near the site, or change to a more sensitive land use from commercial use. Responsible parties, land owners, and contractors performing subsurface activities at the site should be prepared to encounter soil, groundwater, and/or vapor contaminated with petroleum hydrocarbons. Appropriate health and safety equipment and protocols should be used, and any encountered pollution should be managed properly to avoid threats to human health or the environment.

Please contact Mr. Dave Bjostad at (213) 576-6712 or by email at dave.bjostad@waterboards.ca.gov if you have any questions regarding this matter.

Sincerely,

Deborah J. Smith
Executive Officer

Underground Storage Tank Program – Case Closure
Former Gas Station
21138 Western Avenue South, Los Angeles
(UST File No. 905010234) (Priority C-1 Site)

Dear Mr. Berke:

This letter confirms the completion of a site investigation and corrective action for petroleum hydrocarbons for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

If you have any questions regarding this matter, please contact Mr. Dave Bjostad at (213) 576-6712 or dave.bjostad@waterboards.ca.gov.

Sincerely,

Deborah J. Smith
Executive Officer

V. FREE PRODUCT

Was free product encountered? No	Has free product been totally recovered? N/A
	When was free product recovery project completed? N/A

VI. SOIL REMEDIATION

Method: Soil Vapor Extraction (SVE)	Duration of remediation: March 17 to October 27, 2017 (4,756 hours)
Waste manifest document: N/A	Mass removal: 19,013 pounds

VII. GROUNDWATER REMEDIATION

Method: None	Duration of remediation: N/A Mass removal: N/A

VIII. COMMENTS AND JUSTIFICATION FOR RECOMMENDED ACTION

Site Use and Surrounding Land Use

The site currently contains an auto repair and smog check facility in the center of the site, as well as commercial/retail stores (mostly vacant currently) in the eastern portion of the site. Three gasoline USTs were abandoned in place around 1970. In 1986, two 6,000-gallon gasoline USTs, three 5,000-gallon gasoline USTs, and one 500-gallon waste oil UST were removed. The RP/property owner reportedly intends to redevelop the property, but it will retain its commercial land use.

The land use of the neighboring properties is a mix of residential, commercial, and industrial use.

Site History

- In 1954 or 1958, the site began use as a fueling station.
- Around 1970, three USTs were abandoned in place.
- In September 1986, 6 USTs were reportedly removed. There is no report available in the case files or from the RP.
- In August 1996, borings GP-1 through GP-4 were drilled and soil samples were reportedly collected, but no soil data or figures showing locations are available in the case files or from the RP. Historical report text indicates that borings GP-2 through GP-4 were reportedly drilled near the former USTs and that elevated concentrations of petroleum constituents were found.
- In September 1996, five borings (B-1 through B-5) were drilled.
- In February 1997, groundwater grab sample "Test hole 1 @ 60 feet" was collected. No figure is available showing its location, but it reportedly may have been located to the southwest of the site's northern building.
- In October 2014, soil borings B1 through B6 were drilled. Soil vapor probes were installed and soil vapor samples were collected at 5 and 15 feet bgs, but samples were not analyzed for oxygen.
- In November 2014, soil borings MW-1 through MW-3 were drilled and converted into monitoring wells MW-1 through MW-3.
- In December 2014, groundwater samples were collected from MW-1 through MW-3.
- In February 2015, the case was referred from the City of Los Angeles Fire Department to the Regional Board.
- In June 2015, six soil vapor samples from probes B1 through B6 were collected and analyzed for oxygen.
- In September 2015, KCE Matrix replaced HVN Environmental as consultant for the RP.
- In November 2015, the 2nd round of groundwater monitoring was performed.
- In May 2016, the 3rd round of groundwater monitoring was performed.
- In September 2016, borings EB-1 and EB-2 were drilled to 50 feet bgs near historical borings B4 and B5, and soil samples were collected from 20 to 50 feet bgs, because borings B4 and B5 had only been drilled to 20 feet bgs. Groundwater grab samples were collected at EB-1 and EB-2. Soil vapor probes VP-7 through VP-9 were installed with sampling screens at 5 and 15 feet bgs.
- In October-November 2016, soil vapor samples were collected at seven locations, VP-B1, VP-B3, VP-B4, VP-B5, VP-7, VP-8, and VP-9 (but not at VP-B2 or VP-B6).
- In November 2016, the 4th round of groundwater monitoring was performed.
- In January 2017, SVE wells VEW-1 through VEW-7 were installed.
- In March 2017, SVE started.
- In April 2017, the Regional Board approved installation of the SVE wells and SVE operation.
- On October 27, 2017, SVE was discontinued.
- On November 1, 2017, post-SVE soil vapor samples were collected at five locations (VP-B1, VP-B3, VP-B4, VP-B5, and VP-B9), 4 days after SVE had ceased.
- In November 2017, the 5th round of groundwater monitoring was performed.
- In April 2018, soil vapor samples were re-collected at the Regional Board's request because the 4-day SVE rebound test was not considered adequate by the Regional Board. Seven soil vapor samples VP-B1(5), B2-5, VP-B3(5), VP-

B4(5), VP-B5(5), B6-5, and VP-9(5) were collected, while the 15 feet bgs probes were not sampled, and probes VP-7 and VP-8 away from the source areas were not sampled.

Soil Data Summary

Soil sampling occurred in 1996, 2014, and 2016. The exact locations of the former USTs is unclear, but is suspected to be near B6/MW-3 or B2/MW-1. Soil sample data maximum concentrations detected are summarized below:

in mg/kg	1996 max. (5 to 25 ft bgs)	2014 max. (5 to 20 ft bgs)	2016 max (20 to 50 feet bgs)	vs LTCP criteria Max @ 5 or 10 ft bgs
TPH_G	2,100 @20 ft bgs	13,200 @20 ft bgs	6.15 @20 ft bgs	
Benzene	5.4 @20 ft bgs	60.3 @20 ft bgs	0.594 @30 ft bgs	0.608@10 ft bgs, GP-4, 1996 < LTCP
Toluene	30 @20 ft bgs	373 @20 ft bgs	0.708 @20 ft bgs	
Ethylbenzene	18 @20 ft bgs	180 @20 ft bgs	0.183 @30 ft bgs	41.5@10 ft bgs, B5, 2014 < LTCP
Xylenes	120 @20 ft bgs	1,020 @20 ft bgs	0.544 @20 ft bgs	
MTBE	NA	ND	ND	
TBA	NA	0.063	0.167 @30 ft bgs	
Naphthalene	NA	88.6 @20 ft bgs	0.084 @30 ft bgs	
		49.4 @10 ft bgs		49.4@10 ft bgs, B5, 2014 > LTCP

Soil sampling in 1996 at 4 borings (GP-1 through GP-4) showed highest concentrations at 20 feet bgs. It appears that GP-2 through GP-4 may have been drilled near the USTs and dispensers based on proposed boring locations (no figure is available in the case files for actual completed locations), while GP-1 may have been located on the property parcel to the south offsite.

Soil sampling in 2014 at 6 borings (B1 through B6) indicated that the highest concentrations detected were at 20 feet bgs (e.g., TPH_G 13,200 mg/kg B4 at 20 feet bgs, middle dispenser area), although elevated concentrations at 10 feet bgs at boring B-5 (north dispenser area) were also identified (e.g., TPH_G at 1,830 mg/kg, and naphthalene 49.4 mg/kg which exceeds the Low Threat Closure Policy (LTCP) Table 1 volatilization to outdoor air criteria of 45 mg/kg). Soil concentrations in 2014 were roughly ten times higher than found in 1996.

Spatial distribution of soil impacts are not depicted clearly on figures in reports, but the highest soil impacts were reported at B1, B4, and B5 in the former dispenser areas. Naphthalene at 49.4 mg/kg at 10 feet bgs at boring B5 (NW dispenser area) in 2014 exceeded the LTCP direct contact criteria of 45 mg/kg, and TPH_G in this sample was 1,830 mg/kg, but the lateral extent was not delineated to the north and west of B5. TPH_G at 7,700 mg/kg at 20 feet bgs in boring B4 (SW dispenser area) in 2014 was not delineated to the west or south of B3. However, sidewalks and streets are located approximately 30 feet away from B5 to the west and north, so it is likely that soil impacts do not extend more than 30 feet north/west of B5 and west/south of B3.

No confirmation soil borings were conducted following discontinuation of SVE in November 2017. Naphthalene detected at 49.4 mg/kg at 10 feet bgs in boring B5 in 2014 exceeded the LTCP criteria of 45 mg/kg for direct contact and outdoor air exposure, but no post-SVE soil samples were collected to confirm whether SVE reduced this concentration to below LTCP criteria. However, 1) naphthalene was not detected above LTCP criteria in 5 of 6 borings so the extent was limited, 2) post-SVE soil vapor samples indicate that soil vapor concentrations were reduced significantly, so it is likely that soil concentrations were reduced by 2018, 3) the depth of 10 feet bgs limits potential contact by humans, and 4) the site pavement also limits potential contact. Therefore, residual risks of direct contact and outdoor air exposure are considered low.

Soil samples analyzed in 2016 for borings EB-1 and EB-2 from 20 to 50 feet bgs detected only one chlorinated VOC (1,2-DCA), at a maximum of 0.047 mg/kg. TCE and PCE were not detected and 1,2-DCA was not detected in any groundwater samples.

Lithology - According to the boring logs, the subject site is underlain primarily by sands, silts, and some clays. No boring logs were provided for MW-1 through MW-3, but boring logs from 1996 and 2016 indicate a sandy clay or silt zone around 15 to 20 feet bgs exists.

Remediation Summary

Soil vapor extraction (SVE) from seven SVE wells was performed from March 17 through October 12, 2017, followed by a 4.8 hour rebound test on October 27, 2017. SVE reportedly removed approximately 19,013 pounds of hydrocarbons from beneath the site, over 4,756 hours of SVE operation. The initial total influent vapor concentration of TPH_G (using laboratory analytical data) of 1,020 ppmv increased to a peak of 8,720 ppmv on April 19, then decreased an order of magnitude in the eight subsequent samples (ranging from 144 to 563 ppmv). The final total influent concentration of TPH_G was 200 ppmv. Field FID measurements (approximately weekly) showed peak concentrations (all individual wells > 50,000 ppmv) in March 2017, rather than April 2017 as lab analysis showed, followed by a significant decrease in concentrations as SVE progressed. The final field FID readings for each of the seven individual SVE wells showed TPH_G concentrations between 10 and 281 ppmv.

The mass removal rate during the final month of SVE operation was 13 pounds per day. The vapor phase cumulative mass removal graph indicates that asymptotic conditions were close to being achieved when the SVE system was turned off.

An SVE well was not installed near soil vapor probe VP-B1 where an October 2014 soil vapor sample indicated elevated concentrations, as requested by the Regional Board work plan approval letter in April 2017; however, the estimated radius of influence for SVE VEW-5 figure indicates that soil vapor at VP-B1 was within the radius of influence of the SVE system, and soil vapor samples VP-7 and VP-8 situated to the east indicate the extent of soil vapor impacts was limited to the former UST and dispenser area.

Soil Vapor Data Summary

Soil vapor samples were collected in October 2014, in October/November 2016 prior to SVE, in November 2017, just 4 days following the end of SVE (insufficient equilibration time), and in April 2018 (following sufficient equilibration time). Nine soil vapor probes have been installed onsite, at depths of 5 and 15 feet bgs. The full set of soil vapor probes were not sampled each time. Oxygen was not analyzed for in 2014, while only in some samples subsequently. Probes 1 through 6 and 9 were in the source areas, while 7 & 8 are further east onsite near the commercial store buildings. Soil vapor data maximum concentrations detected during each event are summarized below:

Shallow Soil Vapor (5 feet bgs)

in µg/m³	2014	2016	*2017*	Nov 2017*	Apr 2018
no. samples:	6 samples	7 samples	*SVE*	5 samples	7 samples
	B1 – B6	B1, B3-B5, B7-B9		B1,B3-B5, B9	B1-B6, B9 *(all meet LTCP criteria)*
TPH_G	NA	97,800,000	*SVE*	16,800	ND<20

Benzene	470,000	3,860,000	*SVE*	13,400	NA
Ethylbenzene	32,000	1,450,000	*SVE*	31,100	NA
Naphthalene	NA	ND<20	*SVE*	ND<20	NA
PCE	2,000	57.2	*SVE*	NA	NA
Oxygen (%)	NA	1,42, 4,59 (UST area)	*SVE*	NA	NA

** Sampling Nov 1, 2017, just 4 days after SVE stopped, so possibly not representative since short equilibration time*

The highest soil vapor concentrations in 2014 and 2016 were detected at locations B4, B5, and B1 in the source areas (western portion of the site). Because TPH_G concentrations were elevated and concentrations of benzene and ethylbenzene exceeded LTCP vapor intrusion criteria, SVE was performed from March 17 to October 27, 2017. Approximately 19,013 pounds of hydrocarbons were removed from beneath the site by SVE.

Soil vapor samples collected on November 1, 2017, had deficiencies for the following reasons: 1) Samples may not be representative because insufficient time (only 4 days) was allowed for equilibration following cessation of SVE (typically 2 to 4 weeks following cessation of SVE would be considered sufficient), 2) vapor samples were not collected from vapor probes B2 and B6, 3) only three samples were analyzed for oxygen, so a bioattenuation zone could not be adequately demonstrated, 4) tracer compounds (n-pentane, n-hexane, and n-heptane) were detected in sample B5(5) so it failed the leak check test, and 5) samples were not analyzed for chlorinated VOCs. Therefore, the Regional Board required re-sampling in April 2018.

April 2018 soil vapor re-sampling did not identify any detections of petroleum constituents.

PCE was detected at a concentration of 731 µg/m^3 (above its CHHSL screening level of 600 µg/m^3) in 2016 at B5 at 5 feet bgs, but was not detected above the CHHSL in the other 6 samples in 2016, and PCE was not detected in any post-SVE soil vapor samples collected in April 2018.

The Regional Board work plan approval letter dated April 14, 2017, requested that SVE well VEW-3 near soil vapor probe VP-9 be moved to near soil vapor probe VP-B1, but the RP did not do this. However, the figure showing the SVE radius of influence (ROI) indicates that soil vapor at the VP-B1 location was within the zone of capture of SVE well VEW-5.

The Regional Board work plan approval letter dated April 14, 2017, noted that it was not clear that soil vapor impacts to the northeast of VP-B4 (highest soil vapor concentrations) had been delineated. No further delineation was performed by the RP. However, the SVE ROI figure indicates that soil vapor 25 feet to the northeast was remediated by SVE wells VEW-5 and VEW-7.

Groundwater Data Summary

Depth to first groundwater is approximately 45 feet bgs and the flow direction is toward the southwest.

Maximum groundwater concentrations are summarized below:

in µg/L	1997 (one sample)	Nov 2014 max. (3 MWs)	Sep 2016 max. (2 GW grabs)	Nov 2017 > MCL (3 MWs)
TPH_G	ND	1,520	ND	ND
Benzene	ND	12	ND	ND
Toluene	ND	19	ND	ND
Ethylbenzene	ND	5	ND	ND
Xylenes	ND	42	ND	ND
MTBE	NA	ND	ND	ND
TBA	NA	ND	ND	ND

1997 - The groundwater sample collected in 1997 at 60 feet bgs did not detect TPH_G or BTEX.

2014 - Groundwater samples collected in 2014 from three monitoring wells identified petroleum constituents, but at relatively low concentrations as summarized above. Benzene was detected, but in only 1 of 3 monitoring wells and at a concentration of 12 µg/L that only slightly exceeded the MCL.

2016 – Two groundwater grab samples (EB-1 and EB-2) were collected in the area of the former fuel dispensers, at the Regional Board's request, because soil impacts were found in 2014 at borings B4 and B5 (middle and northern dispenser areas) but monitoring wells MW-1 through MW-3 were located away from B4 and B5. No petroleum constituents were detected in these two groundwater grab samples.

2017 - Petroleum hydrocarbons have not been detected in any of the groundwater samples collected during the past three monitoring events (May 2016, November 2016, and November 2017).

CVOCs - Groundwater sample analysis for chlorinated VOCs have shown detections only in November 2014 in MW-1, where cis-1,2-DCE was detected at a concentration of 185 µg/L and 1,2-dichlorobenzene was detected at a concentration of 2 µg/L. However, chlorinated VOCs were not detected in any monitoring well in the subsequent four monitoring events from 2015 through 2017.

Low Threat UST Closure Policy Criteria Evaluation

General Criteria

The site meets all a-h general criteria of the Low Threat Closure Policy as follows:

a. The unauthorized release is located within the service area of a public water system (City of Los Angeles, Department of Water & Power).
b. The unauthorized release from the USTs consists of petroleum only.
c. The unauthorized ("primary") release from the UST system has been stopped (USTs were removed in 1986).
d. Free product was not encountered in monitoring wells at the site.
e. Elements of a conceptual site model can be found in historical reports and plans.
f. The secondary source has been removed somewhat by SVE, as demonstrated by soil vapor concentrations that decreased during SVE and by the end of SVE operation, but post-SVE soil sampling was not conducted to more clearly demonstrate secondary source removal. However, groundwater concentrations do not exceed Low Threat Closure Policy criteria and April 2018 soil vapor data indicate that LTCP vapor intrusion criteria were met, so the secondary source appears to have been adequately removed.
g. Soil and groundwater have been tested for MTBE.
h. No known nuisances currently exist at the site.

Groundwater

The site meets the groundwater-specific criteria (1) a through d as follows:

Generally stable or decreasing, and:
a. The contaminant plume is <100 feet.
b. There is no free product.
c. The nearest existing water supply well is >250 feet away (over 4,000 feet from the defined plume boundary).

Vapor Intrusion to Indoor Air

The soil vapor concentrations at this site exceeded the LTCP screening criteria for benzene and ethylbenzene in 2014 and 2016, but following SVE that was performed in 2017, the April 2018 soil vapor sample results did not exceed LTCP VI Scenario 4 criteria.

In November 2014, benzene and ethylbenzene in soil vapor samples collected at 5 feet bgs from 3 of 6 locations (B1, B4, and B5) exceeded LTCP criteria for potential vapor intrusion concerns. The maximum concentrations were 45,000 µg/m^3 benzene and 15,000 µg/m^3 ethylbenzene, which exceeded LTCP no bioattenuation zone criteria (since no oxygen analysis was performed) of 280 µg/m^3 (benzene) and 3,100 µg/m^3 (ethylbenzene).

In October/November 2016, benzene and ethylbenzene in soil vapor samples collected at 5 feet bgs from 3 of 6 locations (B1, B4, and B5) exceeded LTCP criteria for potential vapor intrusion concerns. The maximum concentrations were 77,600 µg/m^3 benzene and 4,630,000 µg/m^3 ethylbenzene, which exceeded LTCP no bioattenuation zone (since oxygen analysis was performed for only two samples, not most samples) criteria of 280 µg/m^3 (benzene) and 3,100 µg/m^3 (ethylbenzene).

In November 2017, only 5 soil vapor samples were collected (out of 9 existing probes) and these samples were collected only 4 days after SVE ceased operation, which would likely not allow sufficient time for equilibrium conditions to be established, so the Regional Board did not consider these data representative of static conditions.

In April 2018, after the Regional Board required re-sampling, all seven soil vapor samples collected at 5 feet bgs showed non-detect results for all petroleum constituents.

PCE was detected most recently (2016) in 1 of 7 samples at a concentration of 57.2 µg/m^3, which is below the CHHSL of 600 µg/m^3.

Direct Contact and Outdoor Air Exposure

The site satisfies the media-specific criteria 3.a for Direct Contact and Outdoor Air Exposure under the commercial land use scenario as follows:

a) Residual benzene in soil does not exceed 8.2 mg/kg (maximum residual ≤ 10 ft bgs = 0.023 mg/kg in B3 in 2014).

b) Residual ethylbenzene in soil does not exceed 89 mg/kg (maximum residual of 41.5 mg/kg in B5 in 2014).
c) Residual naphthalene in exceeds 45 mg/kg (maximum residual of 49.4 mg/kg at B5 at 10 feet bgs in 2014);

Maximum Soil Sample Concentration Results (mg/kg) - Max residual at site within 10 feet bgs (2014):		Commercial/Industrial (0 to 5 ft bgs)	Commercial/Industrial Volatilization to outdoor air (5 to 10 ft bgs)	Utility Worker (0 to 10 ft bgs)
Benzene	0.023 (10 ft bgs)	8.2	12	14
Ethylbenzene	41.5(10 ft bgs)	89	134	314
Naphthalene	**49.4 (B5@10 ft bgs)**	45	45	219
PAH	NA	0.68	NA	4.5

However, risks from direct contact and outdoor air exposure are considered low for the following reasons: 1) naphthalene was not detected above LTCP criteria in 5 of 6 borings, so the extent was limited, 2) post-SVE soil vapor samples indicate that soil vapor concentrations were reduced significantly, so it is likely that soil concentrations were reduced by 2018, 3) the depth of 10 feet bgs limits potential contact by humans, and 4) the site pavement also limits potential contact.

Factors Supporting Low Risk Closure

Based on the above assessment, staff recommends to grant a low-risk closure for the site for the following reasons:

- No free product has been observed in the monitoring wells.
- The extent of soil and groundwater contamination has been adequately defined.
- Groundwater concentrations during the three monitoring events in 2016 and 2017 indicated no detection of any petroleum constituents, so results do not exceed Low Threat Closure Policy criteria for groundwater.
- Although residual soil impacts exist, groundwater does not show impacts, suggesting that residual soil impacts (primarily around 20 feet bgs) have not caused groundwater impacts to exceed Low Threat Closure Policy criteria.
- The most recent concentrations (November 2017) of benzene in groundwater were non-detect.
- The most recent concentrations (November 2017) of MTBE in groundwater were non-detect.
- The most recent concentrations (November 2017) of TBA in groundwater were non-detect.
- The General Criteria a-h, Groundwater Specific Criteria, Vapor Intrusion Criteria and the Direct Contact and Outdoor Air Exposure of the Low-Threat Closure policy were met.
- The nearest production well is over 4,700 feet away.

IX. MTBE FATE & TRANSPORT PLUME LENGTH MODELING ANALYSIS

MTBE modeling was not performed because MTBE was not detected in groundwater.

X. ELECTRONIC DELIVERABLE FORMAT (EDF) SUBMISSION

Has electronic data reporting requirement been met? Yes.

XI. AB 681 REQUIREMENT (Land Owner Notification)

Verify property ownership http://assessor.lacounty.gov/extranet/DataMaps/Pais.aspx (date): 5/30/2018
Have landowner or impacted site notification requirements been met? Yes
Fee Title Holder Information – **Berke Enterprises, Ltd.**, 16654 Donmetz Street, Granada Hills, CA 91344-4227, Attn: Ron Berke

- TPH = Total petroleum hydrocarbons.
- BTEX = benzene, toluene, ethylbenzene, and xylenes, respectively. MTBE = methyl tertiary butyl ether.
- Respective MCLs (ppm): B=0.001, T=0.15, E=0.3, X=1.75, MTBE=0.013.
- BTEX screening concentrations determined per the attenuation factor method as described in RWQCB Guidance for VOC Impacted Sites (March 1996), with a natural degradation factor of 11 for BTEX and of 3 for MTBE. Table values can be linearly interpolated between distance above groundwater and are proportional to fraction of each lithological thickness.
- Values in Table 4-1 are for soils above drinking water aquifers. All groundwaters are considered as drinking water resources unless exempted by one of the criteria as defined under SWRCB Resolution 88-63 (TDS>3000 mg/L, or deliverability <200 gal/day, or existing contamination that cannot be reasonably treated). Regional Board staff will make a determination of potential water use at a particular site considering water quality objectives and beneficial uses. For non-drinking water aquifers, regardless of depth, TPH for ">150 feet" category in the table should be used;
- Distance above groundwater must be measured from the highest anticipated water level. Lithology is based on the USCS scale.
- In areas of naturally-occurring hydrocarbons, Regional Board staff will make determinations on TPH levels.

With regard to groundwater, and based on the analytical results of the groundwater samples collected during the most recent groundwater monitoring and sampling event (November of 2017), petroleum hydrocarbon constituents (including TPH-GRO, BTEX, MTBE and Ethanol) were not detected in any of the three groundwater samples collected from wells MW-1, MW-2 and MW-3. In addition, petroleum hydrocarbon constituents were not detected in the groundwater samples collected from the three wells during the three previous monitoring and sampling events that were performed in November of 2015, May of 2016 and November of 2016 (with the exception of 1 ug/L of Toluene in well MW-3 during the November of 2015 sampling event). As such, based on the analytical results of the groundwater samples collected in November of 2015, May of 2016, November of 2016 and November of 2017, KCE Matrix

Other Data

NOTIFICATION OF UNDERGROUND TANK ABANDONMENT

1986 UST removal

Sept. 4, 1986
(Date)

City of Los Angeles Fire Department
Fire Prevention Bureau
200 North Main Street, Room 920
Los Angeles, California 90012

Attention: Records Office

Gentlemen:

This letter is to comply with Fire Department regulations regarding underground tank abandonment. (57.31.16).

The tank(s) are/were located from two property lines as follows:

21138 So. Western Ave.

(Show sketch on reverse side).

The number of tank(s) 6 and total capacity in gallons each 5000, 5000 5000 1000 1000 500 Six USTs

WHEN REMOVED:

The label numbers (or other tank designation numbers) were as follows: D500 - AE 172098 2) 1000 E 107362 3) Tk w/o #

The tank(s), prior to transporting were degassed, using 500 pounds of carbon dioxide (dry ice). (One pound CO_2 per hundred gallons capacity of tank).

The tank(s) were removed to: 9435 Slauson Ave
Pico Rivera

WHEN FILLED:

ANNUAL WATER QUALITY REPORT

Reporting Year 2023

Presented By

City of Torrance

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

PWS ID#: CA1910213

Our Commitment

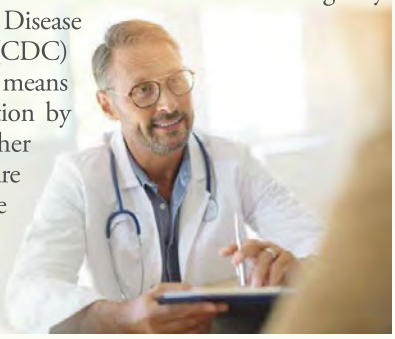
We are pleased to present to you this year's annual water quality report. This report is a snapshot of last year's water quality covering all testing performed between January 1 and December 31, 2023. Included are details about your sources of water, what it contains, and how it compares to standards set by regulatory agencies. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water and providing you with this information because informed customers are our best allies.

Source Water Assessment

An assessment of the drinking water sources for the city was completed in May 2015. This study was done in compliance with the SWRCB Division of Drinking Water's assessment program, the goal of which is to determine the water system's vulnerability to possible sources of contamination. The assessment determined that our groundwater is most vulnerable to historic gas stations and underground storage tanks. For a copy of the complete assessment, contact the City of Torrance Public Works Department at (310) 781-6900 or visit torranceca.gov/home/showdocument?id=16939.

> **"When the well is dry, we know the worth of water."**
>
> *—Benjamin Franklin*

Where Does My Water Come From?



The City of Torrance Municipal Water Utility serves approximately 107,000 residents. In 2023 the Municipal Water Utility distributed approximately 17,565 acre-feet, or approximately 5.7 billion gallons, of drinking water to its customers. (One acre-foot of water is equivalent to 325,900 gallons, or an acre of land covered with one foot of water).

Torrance purchased 75 percent of its total potable water supply from the Metropolitan Water District of Southern California (MWD), a regional wholesaler of imported surface water. This water originates from two sources: the Colorado River, via the 242-mile Colorado River Aqueduct, and Northern California, via the 441-mile California Aqueduct. MWD performs advanced multistage treatment of imported water in five regional treatment plants.

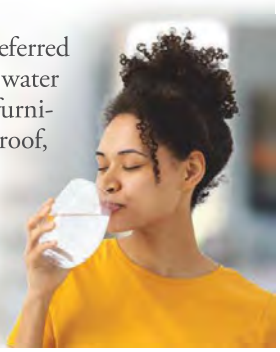
The remaining 25 percent of the municipal potable water supply came from one operating well pumping from the West Coast Groundwater Basin and a groundwater desalination project.

Important Health Information

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants may be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The U.S. Environmental Protection Agency (U.S. EPA)/Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by *cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at (800) 426-4791 or water.epa.gov/drink/hotline.

Public Meetings

The Torrance Water Commission meets the fourth Wednesday of each month at 6:30 p.m. in the West Annex of City Hall, 3031 Torrance Boulevard. You are invited to participate in our public forum and voice your concerns about your drinking water.



The Benefits of Fluoridation

Our water system treats your water by adding fluoride to the naturally occurring level to help prevent dental caries in consumers. State regulations require the fluoride levels in the treated water be maintained within a range of 0.6 to 1.2 parts per million (ppm), with an optimum dose of 0.7 ppm. Our monitoring showed that the fluoride levels in the treated water ranged from 0.65 to 0.92 ppm, with an average of 0.72 ppm. Information about fluoridation, oral health, and current issues is available from swrcb.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.shtml.

Questions?

For more information about this report, or for any questions relating to your drinking water, please call Andy Darlak, Water Operations Manager, at (310) 781-6900.

Notification Regarding PFOA/PFOS Substances

PFOA and PFOS are manmade fluorinated organic chemicals that are part of a larger group of chemicals referred to as per- and poly-fluoroalkyl substances (PFASs). These substances have been highly synthesized for water and lipid resistance and have been used extensively in consumer products such as carpets, clothing, fabrics for furniture, paper packaging for food, and other materials (e.g., cookware) and other products designed to be waterproof, stain-resistant or non-stick surfaces. Exposure to PFOA and PFOS over certain levels may result in adverse health effects, including developmental effects to fetuses during pregnancy or to breast-fed infants, accelerated puberty, cancer, immune effects, and thyroid and liver issues. To date, PPSA substances have not been detected in Torrance Municipal Water supplies. For information on PFOA, PFOS, and other PFAS, including possible health outcomes, you may visit these websites: https://www.epa.gov/pfas.

Substances That Could Be in Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material and can pick up substances resulting from the presence of animals or from human activity.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Water Resources Control Board (SWRCB) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

Contaminants that may be present in source water include:

Microbial Contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;

Inorganic Contaminants, such as salts and metals, that can be naturally occurring or can result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming;

Pesticides and Herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;

Organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and which can also come from gas stations, urban stormwater runoff, agricultural applications, and septic systems;

Radioactive Contaminants that can be naturally occurring or can be the result of oil and gas production and mining activities.

More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline at (800) 426-4791.

Lead in Home Plumbing

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high-quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. (If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants.) If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at (800) 426-4791 or epa.gov/safewater/lead.

Test Results

Our water is monitored for many different kinds of substances on a very strict sampling schedule, and the water we deliver must meet specific health standards. Here, we only show those substances that were detected in our water (a complete list of all our analytical results is available upon request). Remember that detecting a substance does not mean the water is unsafe to drink; our goal is to keep all detects below their respective maximum allowed levels.

The state recommends monitoring for certain substances less than once per year because the concentrations of these substances do not change frequently. In these cases, the most recent sample data are included, along with the year in which the sample was taken.

We participated in the fifth stage of the U.S. EPA's Unregulated Contaminant Monitoring Rule (UCMR5) program by performing additional tests on our drinking water. UCMR5 sampling benefits the environment and public health by providing the U.S. EPA with data on the occurrence of contaminants suspected to be in drinking water to determine if it needs to introduce new regulatory standards to improve drinking water quality. Unregulated contaminant monitoring data is available to the public, so please feel free to contact us if you are interested in obtaining that information. If you would like more information on the U.S. EPA's Unregulated Contaminant Monitoring Rule, please call the Safe Drinking Water Hotline at (800) 426-4791.

The Safe Drinking Water Act requires the Environmental Protection Agency (EPA) to identify unregulated contaminants for potential regulations. Every five years, EPA identifies a list of unregulated contaminants to be monitored for by the nation's water utilities over a three year period. This is occurring in 2023-2025 with the fifth UCMR (UCMR-5). In 2023, the City of Torrance began monitoring for a total of 30 chemical contaminants from its wells along with a corresponding sampling from the distribution system reflecting water from each well. Once EPA has obtained this occurrence data nationally, they are required to determine if there is a meaningful opportunity for increased health protection of drinking water by regulating these contaminants. The findings from this monitoring are reported in this year's Consumer Confidence Report.

REGULATED SUBSTANCES

			City of Torrance Groundwater		MWD Surface Water		Distribution System			
SUBSTANCE (UNIT OF MEASURE)	MCL [MRDL]	PHG (MCLG) [MRDLG]	AMOUNT DETECTED	RANGE LOW-HIGH	AMOUNT DETECTED	RANGE LOW-HIGH	AMOUNT DETECTED	RANGE LOW-HIGH	VIOLATION	TYPICAL SOURCE

Turbidity (NTU)	5	NS	0.4	ND–0.9	ND	NA	NA	NA	No	Soil runoff

UNREGULATED SUBSTANCES [3]

City of Torrance Groundwater

SUBSTANCE (UNIT OF MEASURE)	AMOUNT DETECTED	RANGE LOW-HIGH	TYPICAL SOURCE
Lithium (ug/l)	15.9	ND–58	Naturally-occurring metal that may concentrate in brine waters; lithium salts are used as pharmaceuticals, used in eletrochemical cells, batteries, and in organic syntheses.

[1] Gross alpha particle activity standard also includes the radium 226 standard.

[2] The SWRCB considers 50 pCi/L to be the level of concern for beta particles.

[3] Unregulated contaminant monitoring helps the U.S. EPA and the SWRCB determine where certain contaminants occur and whether the contaminants need to be regulated.

Definitions

90th %ile: The levels reported for lead and copper represent the 90th percentile of the total number of sites tested. The 90th percentile is equal to or greater than 90% of our lead and copper detections.

AL (Regulatory Action Level): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

MCL (Maximum Contaminant Level): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs (SMCLs) are set to protect the odor, taste, and appearance of drinking water.

MCLG (Maximum Contaminant Level Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. EPA.

MRDL (Maximum Residual Disinfectant Level): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG (Maximum Residual Disinfectant Level Goal): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

NA: Not applicable.

ND (Not detected): Indicates that the substance was not found by laboratory analysis.

NS: No standard.

NTU (Nephelometric Turbidity Units): Measurement of the clarity, or turbidity, of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

pCi/L (picocuries per liter): A measure of radioactivity.

PDWS (Primary Drinking Water Standard): MCLs and MRDLs for contaminants that affect health, along with their monitoring and reporting requirements and water treatment requirements.

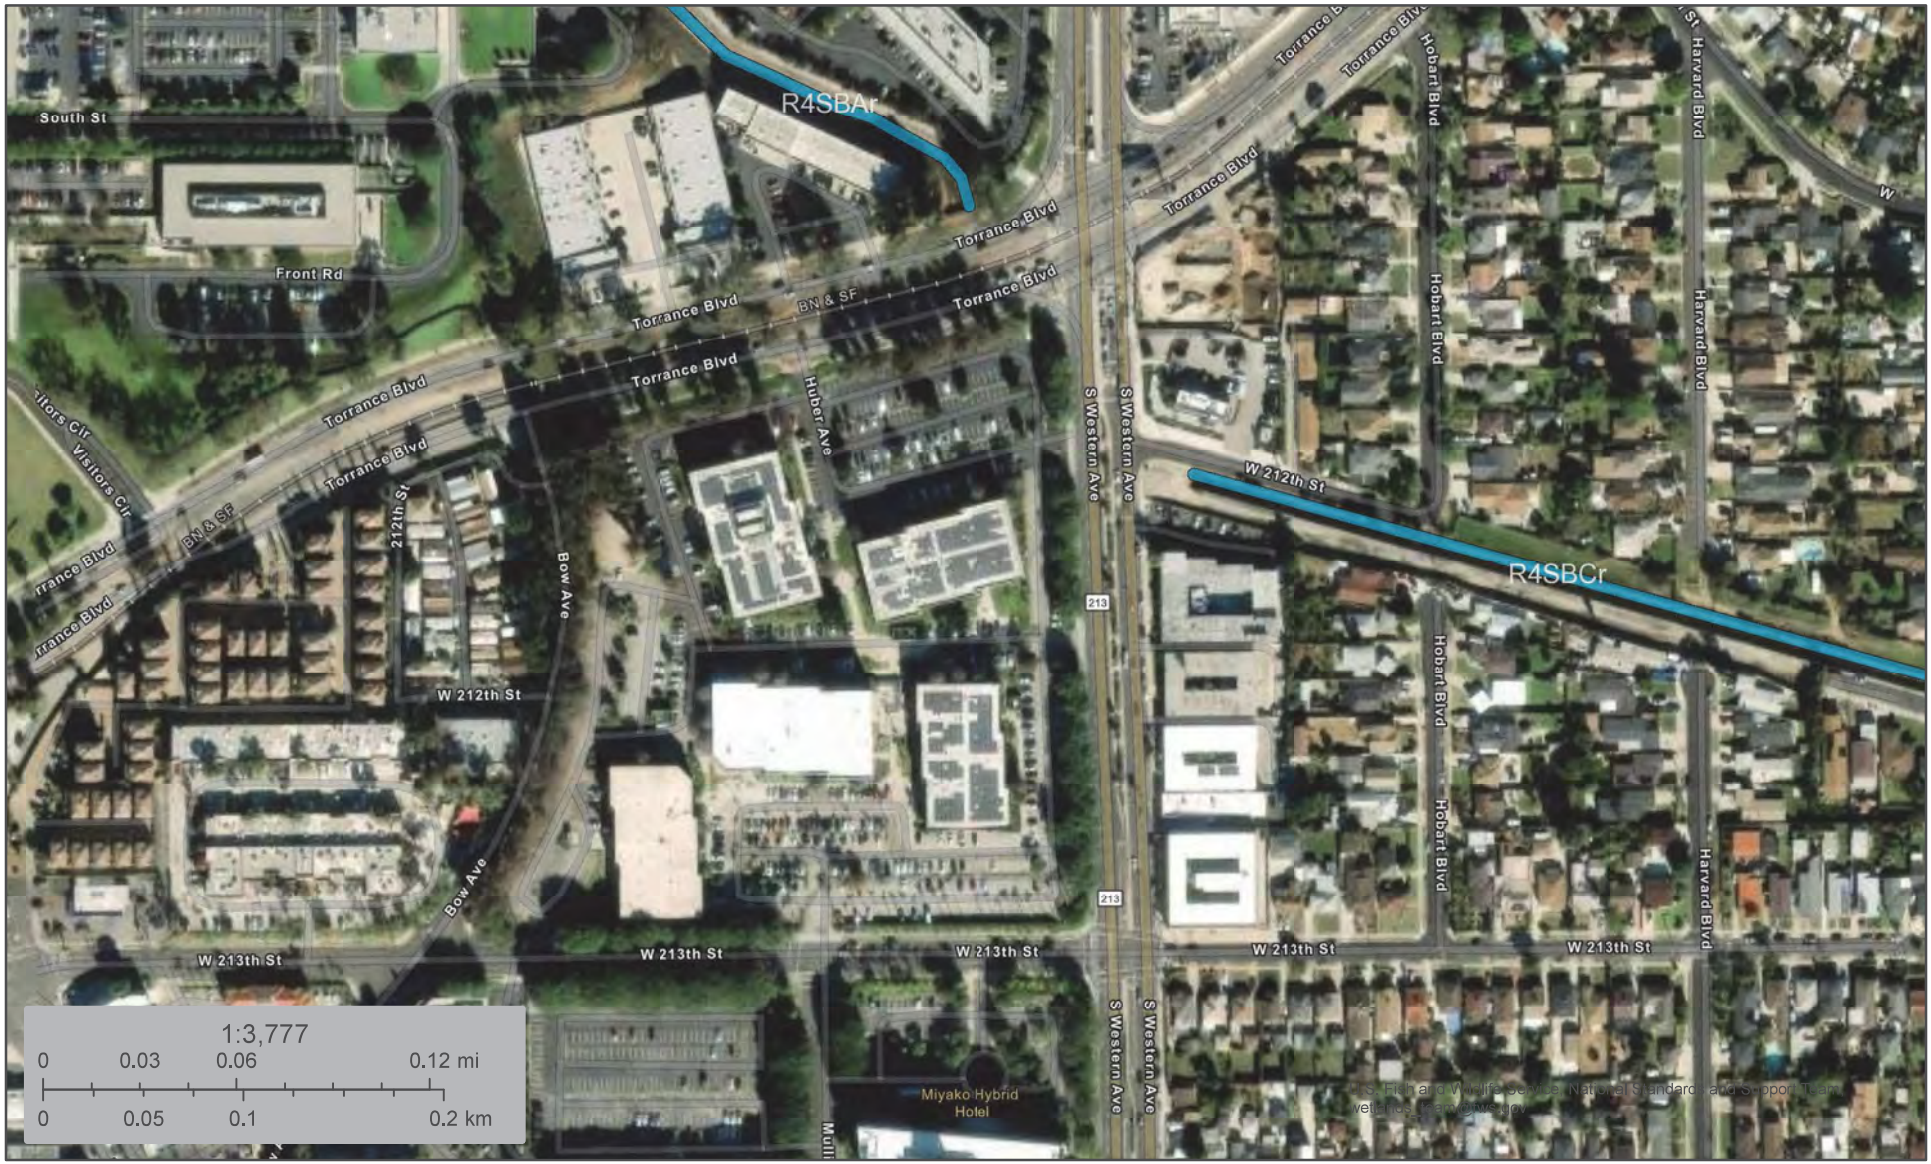
PHG (Public Health Goal): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California EPA.

ppb (parts per billion): One part substance per billion parts water (or micrograms per liter).

ppm (parts per million): One part substance per million parts water (or milligrams per liter).

TON (Threshold Odor Number): A measure of odor in water.

TT (Treatment Technique): A required process intended to reduce the level of a contaminant in drinking water.



µS/cm (microsiemens per centimeter): A unit expressing the amount of electrical conductivity of a solution.

Supplemental Documents

Note: Please use the above button for attaching additional documents that will help define your public records request.
Also Note: You MUST press the "Submit Your Public Records Request" button to complete this form otherwise the form will be automatically deleted!

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, please fill out the form completely. Requests may also be submitted by phone at (909) 396-3700, by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.

2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. The District is not required to create a new record in response to a request. The District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Documents will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

-- a) Facility Name, Address, or Identification Number

-- b) Facility Application Number, or Permit to Operate Number; or

-- c) Facility Notice of Violation/Notice to Comply Number.

4. You will be notified within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In some cases, the District may need an additional 14 days to respond. If so, you will be notified in writing. You will also be provided an estimated date of when the records will be made available.

5. Communications regarding your request, and any records, will be provided by email, unless specified otherwise.

6. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

7. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's Trade Secret process.

8. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

9. The charge for the direct cost of duplication is as follows: Paper Copies, $0.15/page each over 10 pages (first 10 pages are free); Copied CD's or flash drives, no charge; and Copied Audio Tapes, $5.00 each. After a preliminary estimate, advance payment may be required.

10. If the request is for information in an electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record, when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD, DVD or flash drive typically costs $10.00 each. An invoice will accompany your records when completed.

Note: For further information, please refer to the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.

Note: If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, (909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.

APPENDIX G

PROJECT PERSONNEL QUALIFICATIONS

Davis Tang
