Subject: **DRAFT - PHASE II ENVIRONMENTAL SITE ASSESSMENT REPORT**
1515 Walnut Grove Avenue
Rosemead, California
Converse Project No. 23-41-155-01

Mr. Crosby:

Converse Consultants (Converse) is pleased to submit the attached report that summarizes the activities and the results of a *Phase II Environmental Site Assessment (Phase II ESA)* that was conducted at the referenced property.

We appreciate the opportunity to be of service. Should you have any questions or comments regarding this report, please contact Michael Van Fleet at (909) 474-2843 or Laura Tanaka at (626) 930-1261.

1.0 Introduction

This report presents the results of the Converse Consultants (Converse) *Phase II Environmental Site Assessment* (*ESA*) that was performed at 1515 Walnut Grove Avenue, Rosemead, California, referred to as the Site in this Report. Converse was retained by Lewis Management Corporation (*User*) to conduct the *Phase II ESA* at the Site. The location of the Site is shown on **Figure 1**, Site Location. The scope of this *Phase II ESA* was completed in accordance with the proposal prepared by Converse dated August 18th, 2023, and approved by the User on February 14, 2024. The proposed scope of work was based on the findings presented in the Converse Phase I ESA dated January 15, 2024, in addition to the Lewis Policy Regarding Import Fill.

Converse generally followed the standard practices of the American Society for Testing Materials (ASTM) Designation: E1903-19 *Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process* (ASTM, E 1903-19. The purpose of conducting the *Phase II ESA* in accordance with ASTM E1903-19 is to acquire and evaluate information sufficient to achieve the objective(s) set forth in the "Statement of Objectives" developed by the *User* and Converse. The objectives of the assessment were to:

1. Evaluate environmental conditions related to historical Underground Storage Tanks (USTs) previously removed from the Site, historical use of a clarifier and interceptor, hazardous materials storage and operations at Site buildings.

2. Identify if potential target analytes are present at concentrations greater than a threshold criteria.

Copyright 2024 Converse Consultants

2.0 Background

2.1 Site Description and Features

2.1.1 Current Uses of the Site

The Site is currently owned by Southern California Edison and is currently an unoccupied office building campus.

2.1.2 Location and Legal Description

The Site is located at 1515 Walnut Grove Avenue in the City of Rosemead, Los Angeles County, California. The Site is located along the west side of Walnut Grove Avenue. The Site is located approximately 0.50-miles north of California State Route 60, and 1.75-miles south of Interstate 10.

The Site consists of one (1) parcel and is approximately 9.29-acres, with two (2) structures located on-site. The Los Angeles County Assessor's Parcel Number (APN) for the Site is 5279-027-001.

2.1.3 Site and Vicinity General Characteristics

The Site consists of one (1) parcel totaling approximately 9.29-acres. The Site slopes gradually from west to east/southeast. The eastern portion of the Site is developed with two (2) unoccupied buildings, with the main building housing office space. The main structure fronts along Walnut Grove Avenue. The second structure, which is the Central Plant operations, is located along the northern boundary line, at the northwest corner of the main building.

The western portion of the Site is occupied by a large parking area.

Commercial properties border the Site to the north, University of the West to the south, residential properties to the west, and Whittier Narrows Golf Course to the east.

2.2 Physical Setting

2.2.1 Topography

The Site is located approximately 234-feet above mean sea level with surface topography sloping towards the east/southeast.

2.2.2 Geology

Copyright 2024 Converse Consultants

The Site is underlain by unconsolidated and semi-consolidated alluvium, lake, playa, and terrace deposits.

Soil types across the Site generally consisted of brown sandy silt down to approximately 4 feet below ground surface (bgs), with increased clay content and a slightly grayer color down to around 8 feet bgs. Between 8 and 16 feet bgs the soil was generally a reddish brown colored clayey silt with varying amounts of fine grained sand. The majority of the soils encountered were slightly moist to moist.

2.2.3 Hydrogeology

Information regarding regional groundwater was researched on the Regional Water Quality Control Board (RWQCB) Geotracker website. According to the website, the closest property to the Site with recent groundwater information is located approximately 1,800-feet northeast of the Site. According to an August 2020 Site Assessment Report for that property, groundwater is expected to be present beginning at approximately 24 to 38 feet below ground surface. Groundwater flow direction was inferred to be in a general south-southeast direction (SCE, August 2020).

2.3 Site History and Land Use

As early as 1894, the Site and surrounding areas were vacant land to at least 1928 with a creek present on the Site. From 1928, a creek is present at the center of the Site, running from west to east, with two (2) structures surrounded by vegetation present south of the creek and two (2) structures along the northern border.

By 1952, the creek remains along with the two (2) structures located along the northern border, with the remaining areas appearing as agricultural land.

By 1964, two (2) additional structures appear along the northern border with the creek remaining and the other areas vacant.

By 1972, the Site appears vacant with one (1) structure at the southeast corner of the lot. Remnants that a creek was once present on the property remain. The Site remains unchanged up to 1981.

By 1983, the existing four-story commercial office building and Central Plant building were present. The Site has remained unchanged from 1983 to the present.

Copyright 2024 Converse Consultants

2.4 Adjacent Property Land Use

North: Commercial properties followed by Rush Street

South: University of the West campus and residential developments.
West: Residential properties.

East: Walnut Grove Avenue followed by Whittier Narrows Recreation Area and Rio Hondo River.

2.5 Summary of Previous Assessment Reports

The following Recognized Environmental Conditions (RECs) pertaining to the Site were identified in Converse's January 15, 2024 Phase I ESA Report:

- Historical pipe suction pumps for fuel oil supply and return located exterior to the northwest corner of the Site building.
- Historical underground oil storage and waste tanks located exterior to the northwest corner of the building.
- The historical creek traversing the Site potentially transporting agricultural chemicals (pesticides, herbicides) onto the Site.
- Two (2) historical 20,000 gallon underground storage tanks (USTs) exterior to the north and northwest corner of the Central Plant building and subsequent closure by regulatory agencies following removal of 330 tons of impacted soils, despite detectable concentrations of Total Petroleum Hydrocarbons in the diesel range (TPH-d) remaining in soil samples from 15 and 20 feet bgs.

Based on these findings, additional assessment appeared warranted and Converse recommended the following:

- Soil sampling in the vicinity of identified former USTs, inground sumps, and storage areas.
- Soil sampling across site to screen for potential presence of agricultural chemicals.
- Soil vapor sampling across the Site, including areas near UST and generator building.

Copyright 2024 Converse Consultants

3.0 Work Performed and Rationale

3.1 Scope of Assessment

A conceptual model was developed based on data obtained during the Phase I ESA conducted by Converse.

3.1.1 Target Analytes

Data obtained during the *Phase I ESA* indicated that pesticides, metals, hydrocarbons, and volatile organic compounds (VOCs) could be present in soil beneath the Site.

3.1.2 Target Analytes First Entered the Environment

Target analytes would have first entered the environment through spills and/or releases to the surface soils . Removal of Impacted soil was conducted as part of USTs closure activities in 1995, but TPH-d concentrations up to 2,300 mg/kg were noted to have been left in place.

3.1.3 Environmental Media and Locations Most Likely to Have the Highest Concentrations of Target Analytes

Data obtained during the *Phase I ESA* identified the presence of historical USTs in the northern portion of the Site, along with inground sump located in the southern portion of the Site. Soil and soil vapor are the media most likely to be affected.

The Lewis Policy Regarding Import Fill was also considered in developing the scope of work for this assessment.

Prior to advancing any borings a geophysical survey was conducted to evaluate for indications of potential USTs and/or backfilled excavations, as well as to clear proposed boring locations for potential utility conflicts.

The Soil Screening consisted of the following primary elements:

- Soil Sampling – Soil borings were advanced at 40 locations, with 12 borings (C1-C12) advanced to 25-feet bgs, and 28 borings (C17-C44) advanced to 15-feet bgs.

- Soil borings were advanced using direct push (Geoprobe®) drilling methods. Samples were collected in acetate sleeves, sealed with Teflon and capped with polyethylene caps. Portions of the soil samples were field screened with for the

Copyright 2024 Converse Consultants

presence of VOCs using a photo ionization detector (PID). Sub-samples for analysis of volatile compounds were collected in accordance with Environmental Protection Agency (EPA) Method 5035 using Encore sample containers. Samples were labelled and placed on ice for transport to a California-certified laboratory.

- Soil samples were submitted to Jones Environmental under chain of custody control for potential analysis of Total Petroleum Hydrocarbons as Carbon Chain (TPHcc), Title 22 Metals, VOCs, Organochlorine Pesticides (OCPs), Hexavalent Chromium, Polychlorinated Biphenyls (PCBs), Chlorinated Herbicides (CHs), Semi-Volatile Organic Compounds (SVOCs), Per- and Polyfluoroalkyl substances (PFAS), and/or Polychlorinated dibenzo-p-dioxins and dibenzo-furans (PCDD/F), utilizing EPA Methods 8015M, 6010B/7471A, 8260B, 8081, 7199, 8082, 8151, 8270, 537.1, and 8290A respectively.

Soil types across the Site generally consisted of brown sandy silt down to approximately 4 feet bgs, with increased clay content and a slightly grayer color down to around 8 feet bgs. Between 8 and 16 feet bgs the soil was generally a reddish brown colored clayey silt with varying amounts of fine grained sand. The majority of the soils encountered were slightly moist to moist.

The Soil Vapor Screening consisted of the following primary elements:

- Soil Vapor Screening – Temporary vapor probes were installed at depths of 5, 15, and 25-feet bgs in the deeper borings (C1-C12) and at depths of 5 and 15-feet bgs at the shallower borings (C17-C44).

- Prior to sample collection vapor probes were allowed to equilibrate for a minimum of two (2) hours, then purged of approximately 500 milliliters (mL of vapor.

- Samples were collected and analyzed on-site in mobile laboratories operated by Jones Environmental.

- Samples were analyzed for VOCs and TPH in the gasoline range (TPH-G) utilizing EPA Method 8260.

- Soil vapor samples were collected from 40 of the 92 probes, along with 3 replicate samples (43 total soil vapor samples). Samples were unable to be collected from 52 probes due to elevated vacuum conditions during purging.

3.2 Field Quality Assurance/Quality Control

The following are some of the quality assurance and quality control measures that were taken to evaluate the quality of the data generated:

Copyright 2024 Converse Consultants

- Standard EPA sample handling protocol, including chain-of-custody control was followed.

- The soil gas sampling was completed in general accordance with the *Advisory-Active Soil Gas Investigations* by the California Department of Toxic Substances Control (DTSC) and California Regional Water Quality Control Board (RWQCB), Los Angeles Region, dated January 26, 2015.

- New, dedicated sampling equipment was used for the collection of each soil sample, and the construction of soil vapor probes.

- Samples were extracted and analyzed by the laboratory within 48 hours of being collected.

Copyright 2024 Converse Consultants

4.0 Presentation and Evaluation of Results

4.1 Analytical Results

A summary of analytical results is provided below. Analytical results were compared to screening levels based on the DTSC Human Health Risk Assessment (HHRA) Note 3; the RWQCB's Environmental Screening Levels (ESLs); and/or EPA Regional Screening Levels (RSLs) for both residential (SLr) and commercial (SLc) land uses.

A copy of the laboratory analytical reports is included in Appendix A. Analytical results of the soil samples are summarized on Tables 1, 2, 3, and 4.

4.2.1 Soil Samples

Metals – A total of 12 metals were reported in one or more of the samples analyzed:

- Arsenic
- Barium
- Cadmium
- Chromium
- Cobalt
- Copper
- Lead
- Mercury
- Molybdenum
- Nickel
- Vanadium
- Zinc

The maximum reported arsenic concentration of 80 milligrams per kilogram (mg/kg) reported in sample C25-2 exceeds the background threshold of 12 mg/kg. All other reported arsenic concentrations (maximum of 6.2 mg/kg) are less than this threshold.

The maximum concentrations of all other reported metals are less than their respective SLr values.

Total Petroleum Hydrocarbons – A concentration of TPH in the gasoline range (TPH-g) was reported in one sample (C4-15) at 5.48 mg/kg which is below the SLr of 429 mg/kg.

Concentrations of TPH in the Diesel range (TPH-d) were reported in five samples, ranging in concentrations from 10.3 to 398 mg/kg. Two (2) samples (C4-15 and C34-2) exceeded the SLr of 255 mg/kg, but all concentrations were less than the SLc of 1,219 mg/kg.

Copyright 2024 Converse Consultants

Concentrations of TPH in the oil range (TPH-o) were reported in nine (9) samples, ranging in concentrations from 5.6 to 8,690 mg/kg, which are all below the SLr of 12,000 mg/kg.

Organochlorine Pesticides – 4,4'-DDT was reported in one sample (C17-2) at a concentration of 30.6 micrograms per kilogram (µg/kg), which is below the SLr of 1,900 µg/kg. No other OCPs were reported in any of the samples analyzed.

Volatile Organic Compounds – Trichloroethene (TCE) was reported in six (6) samples, ranging in concentrations from 1.2 to 3.3 µg/kg, which are all less than the SLr of 950 µg/kg. No other VOCs were reported in any of the samples analyzed.

Semi-Volatile Organic Compounds – Five SVOCs were reported in sample C27-2 (Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene, Fluoranthene, Phenanthene, and Pyrene. No SVOCs were reported in any of the other samples analyzed, including the sample from 4 feet bgs at location C27.

With the exception of Benzo(a)pyrene, the concentrations of all other reported analytes were less than their respective SLr values. The Benzon(a)pyrene concentration of 527 µg/kg is greater than the SLr of 110 µg/kg, but less than the SLc of 2,100 µg/kg.

Polychlorinated Biphenyls – PCBs were reported as non-detect in all soil samples analyzed.

Chlorinated Herbicides – Chlorinated herbicides were reported as non-detect in all soil samples analyzed.

Per- and Polyfluoroalkyl Substances – Two (2) PFAS were reported in the samples analyzed. Perfluorooctane sulfonate (PFOS) was reported in sample C3-2 at a concentration of 1.09 nanograms per gram (ng/g), which is less than the SLr of 130 ng/g.

Perfluorohexanoic Acid (PFHxA) was reported in sample C37-2 at a concentration of 0.682 ng/g, which is less than the SLr of 32,000 ng/g.

No other PFAS were reported in any of the soil samples analyzed.

Dioxins and Furans – Thirteen (13) dioxins and furans were reported in one or more of the soil samples analyzed. The lab also reported a 2,3,7,8-TCDF Toxicity Equivalent Factor (TEF) for each sample. This TEF was compared to the SLs for 2,3,7,8-TCDF. The maximum TEF of 1.49 picograms per gram (pg/g) is less than the SLr of 4.8 pg/g.

Copyright 2024 Converse Consultants

All reported concentrations of compounds in soil samples are less than hazardous waste disposal threshold values.

4.2.2 Soil Gas Samples

Seventeen (17) VOCs and TPH-G were detected in one or more of the soil vapor samples:

- Benzene
- Bromodichloromethane
- sec-Butylene
- Chloroform
- Freon 11
- Ethylbenzene
- 4-Isopropyltoluene
- Methylene Chloride
- N-Propylbenzene
- Styrene
- Tetrachloroethene (PCE)
- Trichloroethylene (TCE)
- 1,2,4-trimethylbenzene
- 1,3,5-Trimethylbenzene
- Toluene
- m,p-xylenes
- o-xylenes
- TPH-g

Analytical results of the soil vapor samples are summarized on Table 5.

- Benzene was reported in nine of the 43 samples analyzed, ranging in concentrations from 6 to 24 microgram per cubic meter (µg/m^3), with eight (8) samples exceeding SLr of 3 µg/m^3 and one (1) sample (C43-5) exceeding the SLc of 14 µg/m^3. Benzene was reported as non-detect in all other soil vapor samples analyzed.
- Bromodichloromethane was reported in three (3) samples, ranging in concentration from 4 to 8 µg/m^3, which all exceed the SLr of 2.5 µg/m^3 but are less than the SLc of 11 µg/m^3. Bromodichloromethane was reported as non-detect in all other soil vapor samples analyzed.
- Chloroform was reported in 19 samples, ranging in concentration from 4 to 404 µg/m^3. Seventeen (17) of the reported concentrations exceeded the SLr of 4.1 µg/m^3, with six (6) of these reported concentrations also exceeding the SLc 18 µg/m^3. Chloroform was reported as non-detect in all other soil vapor samples analyzed.
- Trichloroethylene (TCE) was reported in 10 samples, ranging in concentration from 5 to 54 µg/m^3. Concentrations in seven (7) samples exceed the SLr of 16 µg/m^3, but all are less than the SLc of 100 µg/m^3. TCE was reported as non-detect in all other soil vapor samples analyzed.
- TPH-g was reported in four (4) samples, ranging in concentrations from 3,870 to 147,000 µg/m^3. The concentration of 21,000 µg/m^3 in sample C2-5 exceeds the SLr of 19,864 µg/m^3, and 147,000 µg/m^3 in sample C4-15

Copyright 2024 Converse Consultants

exceeds the SLc of 83,429 µg/m^3. All other reported concentrations were less than the SLr.

The maximum concentrations of all other reported VOCs were less than their respective SLr values.

4.3 Data Quality Assurance/Quality Control

4.3.1 Hold Times

The soil and soil vapor samples were extracted and processed within the appropriate hold times.

4.3.2 Laboratory Quality Assurance

The laboratory provided data to estimate precision, accuracy, and bias. The laboratory reports indicate that the method blanks, laboratory spikes, and/or matrix spikes clearly met quality assurance objectives for soil and soil vapor.

4.3.3 Reporting Limits (RLs)

The RLs for the constituents analyzed for during this assessment are as follows:

- Metals in soils ranged from 0.5 to 5.0 mg/kg.
- Hexavalent Chromium in soils was 200 µg/kg.
- PCBs in soils was 50.0 µg/kg.
- OCPs in soils ranged from 10.0 to 20.0 µg/kg.
- CHs in soils ranged from 5.00 to 30.0 µg/kg.
- TPH in the diesel and oil ranges in soils was 10.0 mg/kg.
- VOCs in soils ranged from 1.0 to 50.0 µg/kg.
- SVOCs in soils was 200 µg/kg.
- PFAS in soils ranged from 0.500 to 4.00 ng/g.
- Dioxins in soils ranged from 0.494 to 4.94 pg/g.
- VOCs and TPH-g in soil vapor ranged from 4 to 1000 µg/m^3.

Copyright 2024 Converse Consultants

5.0 Interpretation and Conclusions

5.1 RECs and Potential Release Area(s)

- Historical pipe suction pumps for fuel oil supply and return located on exterior of the northwest corner of the Site building.
- Historical underground lube oil storage and waste tanks located exterior to the northwest corner of the building.
- The historical use of the clarifier and interceptor.
- The historical creek traversing the Site, potentially transporting agricultural chemicals (pesticides, herbicides) onto the Site.
- Soil impacted with TPH-d as a result of leaks from former USTs, of which some remained in place following UST removal and closure activities.

5.2 Conceptual Model Validation/Adequacy of Investigations

It is our opinion that the field and analytical data validated the conceptual model and the investigation adequately evaluated the identified objectives of the *Phase II ESA*.

5.3 Absence, Presence, Degree, Extent of Target Analytes

Soil Sampling Data

- **Metals** – Arsenic was reported at 80.0 mg/kg in soil sample C25-2, which exceeds screening level of 12 mg/kg. All other reported metal concentrations were below their respective residential and commercial screening levels.
- **Total Petroleum Hydrocarbons (TPH)** – TPH in the diesel range (TPH-d) was reported in soil samples C4-15 and C34-2 at concentration exceeding the SLr of 255 mg/kg, but less than the SLc of 1,219 mg/kg. All other reported TPH concentrations were below their respective residential and commercial screening levels. Impacts at location C4 are suspected to be related to the UST that was removed in 1995, as concentration of TPH-d were noted to have been left in place when case closure was granted.
- **Semi-Volatile Organic Compounds (SVOCs)** – Benzo(a)pyrene was reported in one sample (C27-1) at a concentration of 527 µg/kg, which exceeds SLr of 110 µg/kg. All other reported SVOCs were reported at concentrations below their respective screening levels, and no SOVCs were reported in any other soil samples.

Copyright 2024 Converse Consultants

All reported concentration of *VOCs, OCPs, PFAS*, and *Dioxins* were less than their respective residential and commercial screening level values.

No concentration of *PCBs* or *CHs* were reported in any of the soil samples analyzed.

Soil Vapor Sampling Data:

- Benzene was reported in excess of the SLr in nine (9) samples, with one reported concentration also exceeding the SLc. Concentrations were detected at various locations across the Site without a discernable pattern, but the majority of the exceedance were in samples from 5 feet bgs. It is therefore likely that minor leaks from automobiles, and/or asphalt, may be primary sources for the presence of benzene in soil vapor.
- Chloroform was reported in 19 samples analyzed, with 17 reported concentrations in excess of the SLr value, and 11 of these values also exceeding the SLc value. Bromodichloromethane was only reported in three (3) samples, and all reported concentrations were greater than the SLr value, but less than the SLc value. All reported bromodichloromethane concentrations were in samples that were also reported to have chloroform concentrations exceeding the SLc value. Both chloroform and bromodichloromethane are know to be byproducts related to the disinfection of municipally supplied water. Therefore, the presence of the compounds is likely related to leaky water lines, or infiltration of irrigation water.
- Trichloroethylene (TCE) was reported in 10 samples, with seven (7) concentrations exceeding the SLr value. The majority of the detections were from probes located within or around the Central Plant building, and all of the concentrations exceeding the SLr value were from depths of 15 or 25 feet bgs (none from 5 feet bgs). The primary source of the TCE detected at the Site may have been associated with a degreasing product used or stored in the Central Plant building.
- TPH in the Gasoline Range (TPH-g) was reported in four (4) samples, with two (2) concentrations exceeding the SLr value, and one (1) also exceeding the SLc value. Three (3) of the detections, including both that exceed the SLr value, were from locations in the vicinity of the former USTs. Although the USTs were reportedly used for the storage of TPH-d, it is suspected that these TPH-g detections are related to these former USTs.
- All other reported VOC concentrations were reported at maximum concentrations below their respective SLr and SLc values and are not considered to be of significant concern.
- The preliminary screening levels presented in this report are noted to be based on a very conservative attenuation factor of 0.03. It is noted that only two (2) detections of chloroform would exceed residential screening levels based on a less conservative attenuation factor of 0.001, with all other reported VOC

Copyright 2024 Converse Consultants

concentrations being less than their respective residential screening levels based on a 0.001 attenuation factor.

5.4 Other Concerns

5.4.1 Significant Assumptions

No significant assumptions were encountered during this assessment.

5.4.2 Limitations and Exceptions

Due to the fine-grained nature of the underlying soils (primarily sandy silt and clay silt) and several significant rain events in the week leading up to the sampling event, over half of the vapor probes installed were unable to be sampled due to elevated vacuum conditions and limited flow rates.

Refusal was encountered during the advancement of boring C4, and no soil samples were collected below a depth of 15 feet bgs. All other borings were completed to their proposed depths.

5.4.3 Special Terms and Conditions

No special terms or conditions need to be noted in this Phase II ESA report.

5.5 Conclusions/Objectives Met

Converse has performed a *Phase II ESA* at 1515 Walnut Grove Avenue, Rosemead, California in conformance with the scope and limitations of ASTM, E1903-19 and the following objectives:

1. Evaluate environmental conditions related to historical USTs previously removed from the Site, historical use of clarifier and interceptor, and hazardous materials storage and operations at Site buildings.

2. Identify if potential target analytes are present at concentrations greater than a threshold criteria.

Converse presents the following findings related to this investigation:

- Arsenic was reported in excess of the background screening level of 12 mg/kg in one (1) sample. The arsenic concentration of 80 mg/kg in sample C25-2 is isolated and considered to be anomalous as arsenic was not detected in any

Copyright 2024 Converse Consultants

of the surrounding borings, or in the deeper sample (C25-4) from the same location.

- TPH-d was reported in excess of the residential screening level (SLr) in two (2) of the 92 samples analyzed. The maximum reported concentration of 398 mg/kg in sample C4-15 are likely to be related to a UST that was formerly located in the vicinity of this location, since TPH-d was reportedly left in place at the time the UST was removed in 1995. TPH-d was not detected in either of the shallower samples analyzed from boring C4, and no deeper samples were available to be analyzed due to refusal encountered during drilling at this location. The elevated TPH-d at location C34 was in the sample from 2 feet bgs, and it is noted that TPH-d was not detected in the sample from 4 feet bgs at location C34.
- SVOCs were only detected in one (1) of the 21 samples analyzed. Of the eight (8) SVOCs reported in sample C27-2, only benzo(a)pyrene was reported in excess of its SLr value. The reported concentration is less than the SLc value. It is noted that no SVOCs were reported in the deeper sample from this location (C27-4).
- A limited number of OPCs, VOCs, PFAS, dioxins and furans were reported in soil samples, but the maximum concentrations of all were less than their respective SLr values.
- No concentrations of PCBs or CHs were reported in any of the soil samples analyzed.
- Soil vapor samples were unable to be collected from over half of the probes installed due to elevated vacuum conditions as a result of the fine grained (silty and clayey) soils present beneath the Site. Soil vapor screening levels presented in this assessment report are based on a very conservative attenuation factor of 0.03, which assumes that vapors are able to move through the soil with relative ease. However, given the difficulty in pulling samples from the soil, it appears that it may be more appropriate to assume that attenuation may occur at a less conservative rate.
- Five (5) of the 18 VOCs detected (including TPH-g) were reported at maximum concentrations that exceeded their respective SLr and/or SLc values: benzene, bromodichloromethane, chloroform, TCE, and TPH-G. However, it is noted that with the exception of two (2) reported concentrations of chloroform (C1-25 and C2-25), all other reported VOC concentrations in soil vapor samples would be less than their respective residential screening levels based on an attenuation factor of 0.001.
  - Elevated TPH-G concentrations were limited to the northern boundary of the Site in the vicinity of former USTs.
  - Elevated TCE concentrations were primarily detected in the vicinity of the Central Plant building and may be related to a degreasing products formerly used or stored in that building.

Copyright 2024 Converse Consultants

- Limited detections of benzene were reported across the Site, primarily in shallow samples. The source of the benzene is likely minor leaks from automobiles in the parking areas.
- Limited detections of both chloroform and bromodichloromethane were reported in samples from across the Site. Leaky water lines, and/or infiltration of irrigation water are suspected to be the primary source of these compounds.

It is our opinion that the objectives of the *Phase II ESA* were met, and no additional assessment is necessary to assess the objectives of the Phase II ESA.

6.0 Recommendations

Arsenic, benzo(a)pyrene, and TPH-d were reported at concentrations exceeding residential screening levels in the samples from 2 feet bgs at location C25, C27, and C34, respectively. The concentrations of these compounds in the deeper samples (4 feet bgs) at each of these locations were less than the residential screening levels. Therefore, the lateral and vertical extents of the impacts at each of these locations are considered to be very limited. It is understood that soils across the site are recommended to be over excavated and recompacted for geotechnical parameters to depths of at least 4 feet bgs as part of anticipated redevelopment activities. This recommendation should result in sufficiently blending these slightly impacted soils with surrounding non-impacted soils, such that all remaining maximum concentrations would be less than residential screening levels. Therefore, no further action appears warranted in these areas.

TPH-d was also reported in excess of the residential screening level in the sample from location C4 at 15 feet bgs. This exceedance appears to be related to releases from the former UST in this area. Since regulatory closure was granted for the removal of this UST, despite knowing that TPH-d concentrations remained at depths of 15 and 20 feet bgs, and since there is no significant exposure pathway to concentrations remaining at this depth, no further action appears to be warranted related to the TPH-d concentrations in this area.

Although several VOCs and TPH-g were reported at concentrations in excess of residential and/or commercial screening levels, the reported concentrations in the soil vapor samples are not considered to pose a significant risk to future Site occupants through vapor intrusion due to the fine grained soil types observed across the majority of the Site. Since all but two (2) reported VOC concentrations are less than screening levels based on an attenuation factor of 0.001, no further action is recommended with regard to vapor intrusion.

7.0 Reliance

This report is for the sole benefit and exclusive use of Lewis Management Corporation in accordance with the terms and conditions that are presented in our proposal dated August 18, 2023, under which these services have been provided. The preparation of this report has been in accordance with generally accepted environmental practices. No other warranty, either express or implied, is made. This report should not be regarded as a guarantee that no further contamination beyond that which could be detected within the scope of this assessment is present at the Site.

This report should not be regarded as a guarantee that no further contamination, beyond that which could be detected within the scope of this assessment, is present at the Property. Converse makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others. It is possible that information exists beyond the scope of this assessment. It is not possible to absolutely confirm that no hazardous materials and/or substances exist at the Property. If none are identified as part of a limited scope of work, such a conclusion should not be construed as a guaranteed absence of such materials, but merely the results of the evaluation of the property at the time of the assessment. Also, events may occur after the Property visit, which may result in contamination of the Property. Additional information, which was not found or available to Converse at the time of report preparation, may result in a modification of the conclusions and recommendations presented.

Any reliance on this report by Third Parties shall be at the Third Party's sole risk. Should Lewis Management Corporation wish to identify any additional relying parties not previously identified, a completed Application of Authorization to Use (see following page) must be submitted to Converse Consultants.

Notes and Definitions

ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
E	Estimated Concentration; concentration exceeds calibration ra
LCC	Leak Check Compound
MDL	Compound Reported to Method Detection Limit
1	Recovery outside of acceptable limits. LCS/LCSD recoveries and %RSD were within QC limits, therefore data was accepted.
SMS	Sample matrix prevented adequate surrogate recovery.
J	Value less then PQL but greater than MDL.
HHS	High hydrocarbon concentration in this sample prevented adequate surrogate recovery.
HHS	High hydrocarbon concentration in this sample prevented adequate surrogate recovery.
F	Sample was filtered in the lab before extraction.
HHTAR	High hydrocarbon concentration prevented in-range recovery of target analytes.
IHRPD	Target analyte recoveries were outside of range but accepted due to passing RPDs
AROL	Target analyte recovery exceeded recovery range but was accepted due to ND of that analyte in MB and sample(s).
ISO-H	Isomers could not be sufficiently chromatographically resolved according to method requirements due to hydrocarbon interference or other matrix effects. The isomers' reported individual concentrations were each calculated as the average of each of the individual isomers' concentrations.
2	Recovery outside of acceptable limits for either LCS or LCSD. CCV and LCS or LCSD recoveries were within limits; therefore data was accepted.
3	RPD outside of acceptable limits. Target analyte recoveries were within QC limits; therefore, data was accepted.
4	LCS and/or LCSD recoveries exceeded acceptability ranges. Target analyte recoveries were accepted due to passing CCV, in-range LCS/LCSD RPDs, and a clean MB in which all target analytes were < RL.

Benzo[b]fluoranthene and benzo[k]fluoranthene isomer peaks were not sufficiently resolved according to the criteria of EPA Method 8270C. As a result, the concentration of both isomers was reported as the average of the concentration of each individual isomer.

DETECTIONS SUMMARY

Sample ID: C12-5 **Laboratory ID:** J240393-072

Analyte	Result	Reporting Limit	Units	Method	Notes
Nickel, Ni	8.0	0.5	mg/kg	EPA 6010	
Vanadium, V	32.5	0.5	mg/kg	EPA 6010	
Zinc, Zn	30.1	0.5	mg/kg	EPA 6010	
Mercury, Hg	0.056	0.020	mg/kg	EPA 7471	

Sample ID: C12-15 **Laboratory ID:** J240393-074

Analyte	Result	Reporting Limit	Units	Method	Notes
Barium, Ba	104	0.5	mg/kg	EPA 6010	
Cadmium, Cd	2.0	0.5	mg/kg	EPA 6010	
Chromium, Cr	20.8	0.5	mg/kg	EPA 6010	
Cobalt, Co	9.4	0.5	mg/kg	EPA 6010	
Copper, Cu	19.0	1.0	mg/kg	EPA 6010	
Lead, Pb	4.7	0.5	mg/kg	EPA 6010	
Nickel, Ni	14.4	0.5	mg/kg	EPA 6010	
Vanadium, V	25.0	0.5	mg/kg	EPA 6010	
Zinc, Zn	39.8	0.5	mg/kg	EPA 6010	
Mercury, Hg	0.144	0.020	mg/kg	EPA 7471

Notes and Definitions

ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
E	Estimated Concentration; concentration exceeds calibration ra
LCC	Leak Check Compound
MDL	Compound Reported to Method Detection Limit
1	Recovery outside of acceptable limits. LCS/LCSD recoveries and %RSD were within QC limits, therefore data was accepted.
SMS	Sample matrix prevented adequate surrogate recovery.
J	Value less then PQL but greater than MDL.
HHS	High hydrocarbon concentration in this sample prevented adequate surrogate recovery.
HHS	High hydrocarbon concentration in this sample prevented adequate surrogate recovery.
F	Sample was filtered in the lab before extraction.
HHTAR	High hydrocarbon concentration prevented in-range recovery of target analytes.
IHRPD	Target analyte recoveries were outside of range but accepted due to passing RPDs
AROL	Target analyte recovery exceeded recovery range but was accepted due to ND of that analyte in MB and sample(s).
ISO-H	Isomers could not be sufficiently chromatographically resolved according to method requirements due to hydrocarbon interference or other matrix effects. The isomers' reported individual concentrations were each calculated as the average of each of the individual isomers' concentrations.
2	Recovery outside of acceptable limits for either LCS or LCSD. CCV and LCS or LCSD recoveries were within limits; therefore data was accepted.
3	RPD outside of acceptable limits. Target analyte recoveries were within QC limits; therefore, data was accepted.
4	LCS and/or LCSD recoveries exceeded acceptability ranges. Target analyte recoveries were accepted due to passing CCV, in-range LCS/LCSD RPDs, and a clean MB in which all target analytes were < RL.

SAMPLE CONDITION RECORD

1. Are the samples within correct temperature criteria? (0 - 6°C)	Yes
2. If not within temp. criteria, were samples received on ice?	Yes
3. If not within temp. criteria, were samples received chilled on same day of sampling?	N/A
4. Is the Chain of Custody (COC) received filled out completely?	N/A
5. Does the total number of containers received match COC?	Yes
6. Are the sample container label(s) consistent with COC?	Yes
7. Are the sample container(s) intact and in good condition?	Yes
8. Were the proper containers & sufficient volume for analyses requested on COC?	Yes
9. Was the proper preservative indicated on COC/container for analyses requested?	Yes
10. Are the containers for volatile analysis free of headspace? (EPA 8260 water)	N/A
EDF Requested	N/A

Subject: Re: Work order confirmation for J240440 (T240832)
Attachments: J240440 UPDATED COC 02212024-JC.pdf

Hi Steven,

We're adding more samples to this project. See attached updated COC.

We'll send the added samples along with the Cr+6 waters. Let me know if you have any questions,

Enthalpy Analytical - El Dorado Hills
Work Order No. 2403003

Mr. Juan Camacho
Jones Environmental, Inc.
11007 Forest Place
Santa Fe Springs, CA 90670

Dear Mr. Camacho,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on February 28, 2024 under your Project Name '23-41-155-01'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at kathy.zipp@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Kathy Zipp
Project Manager

Enthalpy Analytical - EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical - EDH .

Enthalpy Analytical - EDH Work Order No. 2403003
Case Narrative

Sample Condition on Receipt:

Seven soil samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the method temperature requirements. The samples were received in a clear plastic tube. Authorization to proceed with the analyses was received by email on March 1, 2024 .

Analytical Notes:

PFAS Isotope Dilution Method

The samples were extracted and analyzed for a selected list of PFAS using Enthalpy Analytical - EDH's Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The samples were extracted and analyzed within the hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above 1/2 the Reporting Limits (RL). The recovery of 11Cl-PF3OUdS and PFDoS were greater than 130% in the OPR. The recoveries of all other analytes were within the acceptance criteria.

The labeled standard recoveries outside the acceptance criteria are flagged with an "H" qualifier.

EPA Method 8290A

The samples were extracted and analyzed for tetra-through-octa chlorinated dioxins and furans by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria were met for these samples.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the

preparation batch. No analytes were detected in the Method Blank. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.
Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

Sample ID: OPR **PFAS Isotope Dilution Method**

RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.
Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

Sample ID: Method Blank **EPA Method 8290A**

EDL - Sample specifc estimated detection limit
EMPC - Estimated maximum possible concentration
RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection Limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
MDL	Method Detection Limit
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
RL	Reporting Limit
RL	For 537.1, the reported RLs are the MRLs.
TEQ	Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations.
TEQMax	TEQ calculation that uses the detection limit as the concentration for non-detects
TEQMin	TEQ calculation that uses zero as the concentration for non-detects
TEQRisk	TEQ calculation that uses ½ the detection limit as the concentration for non-detects
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

ANOMALY FORM

Work Order # 2403003

Initial/Date — The following checked issues were noted during sample receipt and login:

- ____ ☐ **1. The samples were received out of temperature at (WI-PHT):** ____
  Was Ice present: Yes No Melted Blue Ice
- ____ ☐ 2. The Chain-of-Custody (CoC) was not relinquished properly.
- ____ ☐ 3. The CoC did not include collection time(s). 00:00 will be used unless notified otherwise.
- ____ ☐ 4. The sample(s) did not include a sample collection time. All or Sample Name: ____
- ____ ☐ 5. A sample ID discrepancy was found. See the Reconciliation report.
  The CoC Sample ID will be used unless notified otherwise.
- ____ ☐ 6. A sample date and/or time discrepancy was found. See the Reconciliation report.
  The CoC Sample date/time will be used unless notified otherwise.
- ____ ☐ **7. The CoC did not include a sample matrix. The following sample matrix will be used:** ____
- ____ ☐ **8. Insufficent volume received for analysis. All or Sample Name:** ____
- ____ ☐ 9. The backup bottle was received broken. Sample Name: ____
- ____ ☐ **10. CoC not received, illegible or destroyed.**
- ____ ☐ **11. The sample(s) were received out of holding time. All or Sample Name:** ____
- ____ ☐ **12. The CoC did not include an analysis. All or Sample Name:** ____
- ____ ☐ **13. Sample(s) received without collection date. All or Sample Name:** ____
- ____ ☐ **14. Sample(s) not received. All or Sample Name:** ____
- ____ ☐ **15. Sample(s) received broken. All or Sample Name:** ____
- 03/01/24 ☑ **16. An incorrect container-type was used. All or Sample Name:** for the analysis 8290
- ____ ☐ 17. The Field Reagent Blank (FRB) preservative was from a different lot than the field samples.
  Will proceed with analysis and narrate unless notified otherwise.
- ____ ☐ 18. Other:

Resolution:

Okay to proceed with analysis

March 21, 2024

Enthalpy Analytical - El Dorado Hills
Work Order No. 2403004

Mr. Juan Camacho
Jones Environmental, Inc.
11007 Forest Place
Santa Fe Springs, CA 90670

Dear Mr. Camacho,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on February 28, 2024 under your Project Name '23-41-155-01'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at kathy.zipp@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Kathy Zipp
Project Manager

Enthalpy Analytical - EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical - EDH .

Enthalpy Analytical - EDH Work Order No. 2403004
Case Narrative

Sample Condition on Receipt:

Eight soil samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the method temperature requirements. A sampling date discrepancy was noted for sample "C31-2" between the container label and the Chain-of-Custody (CoC). The sampling date has been reported as listed on the container label. The samples were received in clear plastic tubes. Authorization to proceed with the analyses was received by email on March 1, 2024.

Analytical Notes:

PFAS Isotope Dilution Method

The samples were extracted and analyzed for a selected list of PFAS using Enthalpy Analytical - EDH's Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The samples were extracted and analyzed within the hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above 1/2 the Reporting Limits (RL). The recovery of 11Cl-PF3OUdS and PFDoS were greater than 130% in the OPR. The recoveries of all other analytes were within the acceptance criteria.

The labeled standard recoveries outside the acceptance criteria are flagged with an "H" qualifier.

EPA Method 8290A

The samples were extracted and analyzed for tetra-through-octa chlorinated dioxins and furans by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria were met for these samples.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank. The OPR recoveries were within the method acceptance criteria.

Labeled standard recoveries for all QC and field samples were within method acceptance criteria.

RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.
Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

EDL - Sample specifc estimated detection limit
EMPC - Estimated maximum possible concentration
RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection Limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
MDL	Method Detection Limit
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
RL	Reporting Limit
RL	For 537.1, the reported RLs are the MRLs.
TEQ	Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations.
TEQMax	TEQ calculation that uses the detection limit as the concentration for non-detects
TEQMin	TEQ calculation that uses zero as the concentration for non-detects
TEQRisk	TEQ calculation that uses ½ the detection limit as the concentration for non-detects
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

Enthalpy Analytical - El Dorado Hills
Work Order No. 2403036

Mr. Juan Camacho
Jones Environmental, Inc.
11007 Forest Place
Santa Fe Springs, CA 90670

Dear Mr. Camacho,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on March 05, 2024 under your Project Name 'Lewis-Rosemead / 23-41-155-01'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at kathy.zipp@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

Kathy Zipp
Project Manager

Enthalpy Analytical - EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical - EDH .

Enthalpy Analytical - EDH Work Order No. 2403036
Case Narrative

Sample Condition on Receipt:

Five soil samples were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the method temperature requirements. A sampling date discrepancy was noted for sample "C39-2", "C41-2" and "C43-2" between the container labels and the Chain-of-Custody (CoC). The sampling date has been reported as listed on the CoC. The samples were received in clear plastic tubes. Authorization to proceed with the analyses was received by email on March 6, 2024.

Analytical Notes:

PFAS Isotope Dilution Method

The samples were extracted and analyzed for a selected list of PFAS using Enthalpy Analytical - EDH's Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The samples were extracted and analyzed within the hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above 1/2 the Reporting Limits (RL). The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries outside the acceptance criteria are flagged with an "H" qualifier.

EPA Method 8290A

The samples were extracted and analyzed for tetra-through-octa chlorinated dioxins and furans by EPA Method 8290A using a ZB-DIOXIN GC column.

Holding Times

The method holding time criteria were met for these samples.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. OCDD was detected in the Method Blank above the sample quantitation limit. No other analytes were detected in the Method Blank above the sample quantitation limit. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries outside the acceptance criteria are flagged with an "H" qualifier.

RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.
Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

Sample ID: OPR **PFAS Isotope Dilution Method**

RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.
Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.
Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

EDL - Sample specifc estimated detection limit
EMPC - Estimated maximum possible concentration
RL - Reporting limit

The results are reported in dry weight.
The sample size is reported in wet weight.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection Limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
MDL	Method Detection Limit
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
RL	Reporting Limit
RL	For 537.1, the reported RLs are the MRLs.
TEQ	Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations.
TEQMax	TEQ calculation that uses the detection limit as the concentration for non-detects
TEQMin	TEQ calculation that uses zero as the concentration for non-detects
TEQRisk	TEQ calculation that uses ½ the detection limit as the concentration for non-detects
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

Report To: Michael Van Fleet
Sampler: Casey Ellis

Date: 2/29/2024
Client Project #: 23-41-155-01

Purge Number: □ 1P ☒ 3P □ 7P □ 10P
Shut-In Test: (Y) / N

Report Options: EDD ____ EDF* - 10% Surcharge____ *Global ID _____

Turn Around Requested:
□ Immediate Attention
□ Rush 24 Hours
□ Rush 48 Hours
□ Rush 72 Hours
□ Normal
☒ Mobile Lab

Tracer:
☒ n-pentane
☒ n-hexane
□ n-heptane
□ Isopropyl Alcohol
☒ Acetone
□ 1,1-DFA

Reporting Limits: □ Standard ☒ Low Level* □ Ultra-Low* *surcharge for these limits

Units: ug/m3

LAB USE ONLY
Jones Project #: J240524
Page 3 of 3
Sample Container: GASTIGHT GLASS SYRINGE
If different than above, see Notes.

Re: Lewis-Rosemead

Enclosed are the results of analyses for samples received by the laboratory on 02/29/24. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colby Wakeman
Lab Director

Soil-Gas Chain-of-Custody Record

Client: Converse Consultants
Project Name: Rosemead-Walnut Grove Ave
Project Address: 1515 Walnut Grove Ave, Rosemead, CA
Email:
Phone:
Report To: Michael Van Fleet
Sampler: Madison Jones

Date: 2/29/2024
Client Project #: 23-41-155-01

Purge Number: ☐ 1P ☒ 3P ☐ 7P ☐ 10P
Shut-In Test: (Y) / N

Report Options: EDD ____ EDF* - 10% Surcharge____ *Global ID _____

LAB USE ONLY
Jones Project # J240526

Page 2 of 3

Sample Container: GASTIGHT GLASS SYRINGE
If different than above, see Notes.

Turn Around Requested
- ☐ Immediate Attention
- ☐ Rush 24 Hours
- ☐ Rush 48 Hours
- ☐ Rush 72 Hours
- ☐ Normal
- ☑ Mobile Lab

Tracer
- ☑ n-pentane
- ☑ n-hexane
- ☐ n-heptane
- ☐ Isopropyl Alcohol
- ☑ Acetone
- ☐ 1,1-DFA

Reporting Limits
☐ Standard ☑ Low Level* ☐ Ultra-Low*
*surcharge for these limits

Units: ug/m3

Analysis Requested
