- - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   325 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =     59938.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    325 Source(s);       3 Source Group(s); and     825
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    325 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
```

```
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  21112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    74.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                 ;
Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.0 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   322 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =     59938.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    322 Source(s);       5 Source Group(s); and     825
Receptor(s)

                with:      1 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    321 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  21112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
```

Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   74.00 ; Decay
Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   4.7 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: MAVERIK HANFORD_OPS DPM.ERR

 **File for Summary of Results: C:\LAKES\AERMOD VIEW\PROJECTS\MAVERIK
HANFORD\MAVERIK HANFORD_OPS DPM\MAVERIK HANFORD_OPS DPM.SU

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for     1 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =     59938.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
```

```
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: TOG

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:      1 Source(s);       2 Source Group(s); and     825
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  21112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    74.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out
```

Maverik Hanford Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

3. Construction Emissions Details

3.1. Demolition (2026) - Unmitigated

3.3. Site Preparation (2026) - Unmitigated

3.5. Grading (2026) - Unmitigated

3.7. Building Construction (2026) - Unmitigated

3.9. Building Construction (2027) - Unmitigated

3.11. Paving (2026) - Unmitigated

3.13. Architectural Coating (2027) - Unmitigated

3.15. Off-site Infrastructure Improvement (2026) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Maverik Hanford
Construction Start Date	7/11/2026
Operational Year	2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.40
Precipitation (days)	23.0
Location	36.31743859243447, -119.67646601321842
County	Kings
City	Hanford
Air District	San Joaquin Valley APCD
Air Basin	San Joaquin Valley
TAZ	2612
EDFZ	9
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Convenience Market (24 hour)	5.98	1000sqft	0.14	5,982	0.00	—	—	—

Parking Lot	247	1000sqft	5.96	0.00	12,987	—	—	—
Other Asphalt Surfaces	52.3	1000sqft	1.20	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	31.2	annual days of extreme heat
Extreme Precipitation	0.65	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	0	0	N/A

Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	1	1	4
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	1	1	1	2
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	82.5
AQ-PM	99.0
AQ-DPM	71.7
Drinking Water	55.6

Subject: Biological Resources Assessment for the Maverik Development Project at 12th Avenue and Highway 198, Hanford, Kings County, California

Dear Mr. Jewell:

Rincon Consultants, Inc. (Rincon) prepared this Biological Resources Assessment (BRA) to provide Kimley-Horn with an assessment of the potential impacts to biological resources associated with implementation of the Maverik Development Project (project) in Hanford, Kings County, California. This report documents the existing conditions of the project site and evaluates the potential for impacts to special-status species, sensitive communities, critical habitat, jurisdictional waters, and locally protected resources such as native trees. The biological evaluation herein includes the results of a background literature review and site reconnaissance survey conducted by Rincon.

Project Location and Description

The 21.4-acre project site is located in the City of Hanford, Kings County, California (Attachment 1, Figure 1). The project site is located at the southwest corner of the intersection of 12th Avenue and Highway 198. The project is comprised of a single Assessor Parcel Number (APN) 011-010-013-000 (parcel). Attachment 1, Figure 1 shows the regional location of the project site and Attachment 1, Figure 2 shows the project site's location in its local context.

The proposed project consists of two components: a subdivision and development of a convenience store and fueling area. The proposed subdivision would subdivide the existing 21.4-acre parcel into two parcels. One parcel would be 5.95 acres and would be where the proposed convenience store and fueling station would be located. The remaining 15.45 acres would be left as an undeveloped parcel. No proposed uses or improvements on the 15.45-acre are proposed at this time. Approval of the subdivision requires approval of a Tentative Parcel Map.

The proposed convenience store and fueling area would be developed on approximately 5.95 acres of the 21.4-acre site. The store will be approximately 5,982 square feet with twelve (12) fuel dispensers and canopy in front of the store and five (5) additional dispensers and canopy for commercial fueling at the back of the store, for a total of 17 fueling positions on site. The development will provide fueling, packaged beer and wine sales, as well as fresh food items. Restroom facilities will be open to the public. The store will operate 24 hours a day, 7 days a week.

Site access will be from a proposed private drive aisle along the site's southern border (across from W Hayden Ave), with three (3) access driveways to the proposed development. Provided parking includes thirty-nine (39) standard stalls (9 feet by 20 feet), with four (4) being EV designated and seven (7) of the parking stalls listed as EV capable, and two (2) accessible stalls. Bike parking is available near the entrances of the convenience store.

Regulatory Background

Regulatory authority over biological resources is shared by Federal, State, and local authorities under a variety of statutes and guidelines. Primary authority for general biological resources lies within the land use control and planning authority of local jurisdictions (in this instance, the City of Hanford). The California Department of Fish and Wildlife (CDFW) is a trustee agency for biological resources throughout the State under CEQA and also has direct jurisdiction under the California Fish and Game Code (CFGC). Under the California and Federal Endangered Species Acts (CESA/ESA), CDFW and the U.S. Fish and Wildlife Service (USFWS) also have direct regulatory authority over species formally listed as Threatened or Endangered, as well as native bird species listed under the Federal Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act. The U.S. Army Corps of Engineers (USACE) has regulatory authority over specific biological resources, namely wetlands and waters of the United States, under Section 404 of the Federal Clean Water Act (CWA). CDFW and Regional Water Quality Control Boards (RWQCB) protect waters and streambeds at the State level. The analysis in this biological resources assessment is guided by the requirements of these laws, and by the operating standards of the implementing agencies. The project site is located within the City of Hanford General Plan area. A summary of applicable regulations and agency jurisdictions is provided in Attachment 5.

Methods

The biological resources assessment for the project consisted of a review of relevant literature and database query results, a field reconnaissance survey of the 21.4-acre project footprint to determine what sensitive biological resources do or may occur on the parcel, and an evaluation of the proposed activity in the context of potentially occurring biological resources to evaluate impact significance under the California Environmental Quality Act (CEQA). The potential presence of special-status species is based on the literature review and a field survey designed to assess habitat suitability for, and presence of target species. The potential for impacts to these species was evaluated based on these findings as well as the proposed project plan.

Literature Review

The literature review included database research on special-status biological resource occurrences within the *Hanford, California* U.S. Geological Survey (USGS) 7.5-minute quadrangle and surrounding eight quadrangles (*Remnoy, Guernsey, Waukena, Burris Park, Lemoore, Riverdale, Laton, and Stratford*). Sources included the CDFW California Natural Diversity Database (CNDDB) (CDFW 2026d), Biogeographic Information and Observation System (CDFW 2026b), Natural Communities List Arranged Alphabetically by Life Form (CDFW 2026c), USFWS National Wetlands Inventory (NWI) (USFWS 2026a), USFWS Information for Planning and Consultation (IPaC) (USWFS 2026b), and USFWS Critical Habitat Portal (USFWS 2026c). Other resources included the California Native Plant Society's (CNPS) online Inventory of Rare and Endangered Plants of California (CNPS 2026).

Aerial photographs, topographic maps, soil survey maps, geologic maps, and climatic data in the area were also examined. A review of the information contained within these databases supported by the expert opinion of Rincon's biologists resulted in a list of special-status species and other resources to be evaluated for their presence or potential to occur at the project site.

Field Survey

A reconnaissance-level field survey was conducted to assess the habitat suitability for special-status species, map vegetation communities and landcover types, document and map the presence of any sensitive biological resources, identify potential jurisdictional waters or wetlands, and record observations of plant and wildlife species. The survey area was consistent with the limits of the 21.4-acre parcel defined herein as the "Study Area" (Attachment 1, Figure 2). Rincon biologist Alana Garza conducted the site visit on December 24, 2024, between the times of 0640 and 0815. Weather conditions consisted of a temperature of 51 degrees Fahrenheit (°F), with winds ranging from zero to five miles per hour and cloudy skies. The entire Study Area was surveyed on foot, and all biological resources encountered in the Study Area were recorded. Representative photographs of the Study Area were taken (Attachment 4).

Natural and semi-natural vegetation communities were classified based on *A Manual of California Vegetation, Second Edition* (MCV2; Sawyer et al. 2009), which establishes systematic classifications and definitions of vegetation communities. Where applicable, habitat characterizations were also based on the classification system presented in *Preliminary Description of Terrestrial Natural Communities of California* (Holland 1986) but have been modified slightly to reflect existing site conditions accurately. Each vegetation mapping unit was analyzed for characteristics to define the applicable vegetation community, such as dominant or co-dominant plant species and community membership rules. Land cover, rather than vegetation communities, was characterized in areas that appeared to be altered by anthropogenic activities and were dominated by non-native or ornamental vegetation (e.g., developed, disturbed). Wildlife species were identified by direct observation, vocalization, or by sign (e.g., burrows). A list of all plant and wildlife species observed is included in Attachment 3.

Existing Setting

Topography and Soils

The Study Area consists of a rectangular flat parcel of recently disked fallowed agricultural land. The land surrounding the Study Area is dominated by developed and agricultural areas. To the north and east, Highway 198 and 12th Avenue consist of primarily ornamental landscaping plants commonly found along maintained transportation corridors. Residential development with ornamental landscaping also occurs to the south, and an active cultivated agricultural parcel is present to the west.

The Study Area lies within an area of Kings County where the soil is characterized as "alluvial fan surfaces" (City of Hanford 2017). These alluvial fan surfaces are mantled with very deep, well-drained, saline-alkali soils. Based on the most recent Natural Resources Conservation Service (NRCS) soil survey for Kings County, California, the Study Area is mapped entirely as Nord complex , 0 to 2 percent slopes (U.S. Department of Agriculture 2025a). Nord complex is classified as well drained soil derived from alluvium that is predominantly nonhydric (U.S. Department of Agriculture 2025b).

Vegetation and Other Land Cover Types

One vegetation community and one land cover type were observed within the Study Area as described below and depicted in Attachment 1, Figure 3.

The CDFW California Sensitive Natural Communities List identifies sensitive natural communities throughout California, based in part on global and State rarity ranks (CDFW 2026). Natural communities having a rank of 1 to 3 are generally classified as sensitive, though some communities with other ranks may also be sensitive. No CDFW sensitive vegetation communities were found within the Study Area.

Upland Mustards or Star Thistle Fields

Upland mustards (*Brassica nigra* Herbaceous Semi-Natural Alliance) are widespread and can be found in fallow fields, rangelands, grasslands, roadsides, levee slopes, disturbed coastal scrub, riparian areas, cleared roadsides, and waste places at elevations between up to 9,186 feet (2,800 meters) above mean sea level (amsl). Mustards and other non-native plant species make up over 80 percent of relative cover, and mustard species are dominant (Sawyer et al. 2009). This vegetation community is ranked GNASNA due to the dominance of non-native species and is not considered sensitive (CDFW 2023).

Most of the Study Area consists of fallowed agricultural land that had been recently disked prior to the reconnaissance survey, making it challenging to identify the exact species composition during the survey. However, based on field observations of young mustard and grasses growing in the disked parts of the Study Area and analysis of past satellite imagery (Google Earth 2026), the Upland Mustards vegetation community was determined to be representative of the Study Area (Attachment 1, Figure 3). Dominant species likely include black mustard (*Brassica nigra*) and other non-native grasses and forbs typical of disturbed, fallowed agricultural land.

Developed Land

Developed and disturbed land cover is present within the Study Area, primarily along the northern and eastern boundaries adjacent to Highway 198 and 12th Avenue (Attachment 1, Figure 3). This land cover type is not naturally occurring and is not described in either the Holland (1986) or Sawyer et al. (2009) classification systems. Developed portions of the Study Area include roads, sidewalks, buildings, and paved or compacted surfaces with little to no vegetation.

In addition to these developed areas, the northern and eastern boundaries contain landscaped areas that appear to have been established during road construction activities along Highway 198 and 12th Avenue (Google Earth 2026). These landscaped areas are vegetated with ornamental or non-native plant species commonly used for erosion control or aesthetic purposes. While these areas provide some vegetative cover, they offer limited ecological value and are not classified as a sensitive land cover type.

General Wildlife

The Study Area provides suitable habitat for wildlife species that commonly occur in semi-rural, agricultural areas, as well as species that commonly occur in high use residential and commercial areas. Common avian species observed within or adjacent to the Study Area included American crow (*Corvus brachyrhynchos*) and house sparrow (*Passer domesticus*). Other wildlife species observed included California valley coyote (*Canis latrans ochropus*).

Special-Status Biological Resources

This section discusses special-status biological resources observed in the Study Area and evaluates the potential for the Study Area to support other special-status biological resources.

Special-status Species

Local, State, and Federal agencies regulate special-status species and may require an assessment of their presence or potential presence to be conducted prior to the approval of a proposed project. Assessments for the potential occurrence of special-status species are based upon known ranges, habitat preferences for the species, species occurrence records from the CNDDB, species occurrence records from other sites in the vicinity of the Study Area, and previous reports for the Study Area. The

potential for each special-status species to occur in the Study Area was evaluated according to the following criteria:

- **Not Expected.** Habitat on and adjacent to the Study Area is clearly unsuitable for the species' requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, Study Area history, disturbance regime). Species is not present in the vicinity of the Study Area.
- **Low Potential.** Few of the habitat components meeting the species' requirements are present, and/or the majority of habitat on and adjacent to the Study Area is unsuitable or of very poor quality. The species may occur in the region but is not likely to be found within the Study Area.
- **Moderate Potential.** Some of the habitat components meeting the species' requirements are present, and/or only some of the habitat on or adjacent to the Study Area is unsuitable. The species is known to occur in the vicinity and has a moderate probability of being found within the Study Area.
- **High Potential.** All of the habitat components meeting the species' requirements are present and/or most of the habitat on or adjacent to the Study Area is highly suitable. The species has been recently documented in the vicinity and has a high probability of being found within the Study Area.
- **Present.** Species is observed within Study Area or has been recorded (e.g., CNDDB, other reports) within the Study Area recently (within the last 5 years).

For the purpose of this report, special-status species are those plants and animals listed, proposed for listing, or candidates for listing as threatened or endangered by the USFWS under the ESA; those listed or candidates for listing as Rare, threatened, or endangered under the CESA or Native Plant Protection Act; those identified as Fully Protected by the CFGC (Sections 3511, 4700, 5050, and 5515); those identified as species of special concern (SSC) by CDFW; and plants occurring on lists 1 and 2 of the CNPS California Rare Plant Rank (CRPR) system per the following definitions:

- **Rank 1A** = Plants presumed extinct in California
- **Rank 1B.1** = Rare or endangered in California and elsewhere; seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)
- **Rank 1B.2** = Rare or endangered in California and elsewhere; fairly endangered in California (20-80% occurrences threatened)
- **Rank 1B.3** = Rare or endangered in California and elsewhere, not very endangered in California (<20% of occurrences threatened or no current threats known)
- **Rank 2** = Rare, threatened or endangered in California, but more common elsewhere

Based on the CNDDB database and literature review, 10 special-status plant species and 19 special-status wildlife species are documented throughout the eight-quadrangle region surrounding the Study Area. All 29 sensitive species were evaluated for potential to occur within the Study Area (Attachment 2).

Special-Status Plant Species

Ten special-status plant species known to occur within the Hanford quadrangle and surrounding eight quadrangles (CNDDB/CNPS 9-quadangle search) were evaluated for their potential to occur in the Study Area (see Attachment 2). The Study Area consists mostly of recently disked, fallowed agricultural land with early growth mustard interspersed with annual grasses. Developed landscaped areas are present along the parcel's northern and easternmost boundaries and contain ornamental shrubs. Although no special-status plant species were observed within the Study Area, four special-status plant species have the potential to occur. These include Earlimart orache (*Atriplex cordulata var.* erecticaulis), brittlescale (*Atriplex depressa*), lesser saltscale (*Atriplex minuscula*), and subtle orache (*Atriplex subtilis*). The presence of suitable soils for these species throughout the Study Area suggests that there is low

potential for these species to occur on the parcel. However, the parcel is routinely disked, which is not conducive to sustained special-status *Atriplex* populations. Although a winter survey limits the ability to identify annual plants in the parcel, the routine disking of the project site indicates that these species are unlikely to be present. The remaining six special-status plant species evaluated are not expected to occur because the Study Area lacks the habitat features required such as vernal pools, marshes, swamps, or clay/gypsum soils.

No other special-status, Federal, or State listed plant species were observed or otherwise detected within the Study Area during the reconnaissance field survey. Attachment 2 provides a discussion of special-status plant species documented within the 9-quadrangle search surrounding the Study Area, their habitat requirements and potential for occurrence in the Study Area.

Special-Status Wildlife Species

Based on the CNDDB database and literature review, 19 special-status wildlife species have been recorded or have the potential to occur within the vicinity (9-quadrangle CNDDB search area) of the Study Area (Attachment 2). Of these species, one has a low potential to occur and two have a moderate potential to occur. The remaining 16 species are not expected to occur within the Study Area or immediate vicinity based on known distributions, habitat requirements, and existing site conditions. These three species were determined to have potential to occur based on their published ranges and the type, extent, and condition of habitat available within the Study Area and adjacent areas. Table 1 provides a summary of these species and a discussion of the three species with potential to occur within the Study Area is provided below.

No Federal or State listed species or sign were observed within the Study Area during the field reconnaissance survey.

Table 1 Special-Status Wildlife Species with Potential to Occur within the Study Area

Common Name	Scientific Name	Status	Potential to Occur
Crotch's bumble bee	*Bombus crotchii*	SCE	Moderate Potential
Hoary bat	*Lasiurus cinereus*	SSC	Moderate Potential
Swainson's hawk	*Buteo swainsoni*	ST	Low Potential

FE = Federally Endangered; FT = Federally Threatened; FP = Federally Protected; ST = State Threatened; SSC = California Department of Fish and Wildlife Species of Special Concern; SCE = State Candidate Endangered

Crotch's Bumble Bee

Crotch's bumble bee is a State candidate endangered species that inhabits open grassland and scrub areas, requiring a hotter and drier habitat than many other bumble bee species. This species nests underground, often in abandoned rodent dens. The species visits a wide range of host plants and is therefore considered a dietary generalist (Xerces Society 2026). There is one recent CNDDB recorded occurrence of the species within a 5-mile radius in 2024.

The Study Area consists of recently disked, fallowed agricultural land bounded by major roadways and development. During the survey, early growth mustard was observed interspersed with annual grasses, and additional ruderal flowering forbs are expected to be present as vegetation regrows. These plants, along with ornamental flowering plants present within the adjacent parcels, may provide suitable foraging resources. However, the Study Area was observed to be absent of suitable nesting habitat (small mammal burrows). Therefore, the species has a moderate potential to occur in the Study Area while foraging or transiting between foraging sites.

Hoary Bat

Hoary Bat is a CDFW species of special concern that typically roosts in both native and ornamental trees with dense foliage that provides cover during the day and may change roosting locations frequently. They forage at night over open habitats such as agricultural fields where flying insects are abundant and may travel long distances between roost sites and foraging areas (Pierson and Rainey 2008).

The southeastern corner of the Study Area contains ornamental trees that surround an existing residence and ornamental trees are present along the southern adjacent parcels associated with residential and agricultural properties. These trees may provide suitable roosting habitat and the open fallowed agricultural land of the Study Area may provide suitable foraging habitat. Although the Study Area lacks riparian or open water habitat, the Study Area and adjacent parcels may provide suitable roosting and foraging habitat. Therefore, the species has moderate potential to occur within the Study Area.

Swainson's Hawk

Swainson's hawk is a State threatened species that breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. The species requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations. Prey species include squirrels, mice, voles, rabbits, and insects. Nests are typically built in solitary trees or small groves of trees near streams (Cornell Lab of Ornithology 2025).

The Study Area primarily consists of recently disturbed, fallowed agricultural land that does not contain a significant amount of mature trees for nesting habitat or small mammal prey base. The ornamental trees present in the southeastern corner of the Study Area, and the trees present in adjacent residential parcels to the south may provide some nesting opportunities. However, these trees provide limited nesting suitability due to the limited extent of cover and their proximity to urban development and major roadways. The Study Area and adjacent agricultural fields may provide suitable foraging for transient individuals; however, the routine disking on the site limits the abundance of small mammal prey in the Study Area. Therefore the species has low potential to occur within the Study Area for foraging opportunities and is not expected to use the area for nesting.

Nesting Birds

The Study Area contains marginal habitat to support regulated nesting birds and raptors protected under the CFGC 3503, 3503.5, and 3513, and the MBTA (16 United States Code §§ 703-712). Ornamental shrubs along the northern and eastern margins of the Study Area in the landscaped areas adjacent to Highway 198 and 12th Avenue roadways, and ornamental trees present within the southeastern corner of the Study Area may provide nesting habitat for common bird species. The remainder of the Study Area consists of a recently disked, fallowed agricultural field with limited nesting habitat for tree or shrub nesters. However, some bird species adapted to open or disturbed habitats, such as killdeer (*Charadrius vociferus*) and red-winged blackbird (*Agelaius phoeniceus*), may nest on the ground or in dense stands of vegetation, such as mustard, if allowed to grow. Potential nesting habitat was also observed in areas adjacent to the Study Area, particularly within the residential areas to the south, where scattered trees and shrubs provide suitable nesting habitat. No inactive or active nests were observed within the Study Area during the field reconnaissance survey.

Sensitive Natural Communities and Critical Habitat

Sensitive Natural Communities

Plant communities are also considered sensitive biological resources if they have limited distributions, have high wildlife value, include sensitive species, or are particularly susceptible to disturbance. CDFW ranks sensitive communities as "threatened" or "very threatened" and keeps records of their occurrences in CNDDB. CNDDB vegetation alliances are ranked 1 through 5 based on NatureServe's (2010) methodology, with those alliances ranked globally (G) or Statewide (S) as 1 through 3 considered sensitive. Some alliances with the rank of 4 and 5 have also been included in the 2019 sensitive natural communities list under CDFW's revised ranking methodology (2019b).

No sensitive natural communities are present in the project site or Study Area.

Critical Habitat

Based on the IPaC review, no critical habitat is present within or adjacent to the Study Area.

Jurisdictional Waters and Wetlands

No potentially jurisdictional waters or wetlands exist within or adjacent to the Study Area.

Wildlife Movement

Wildlife movement corridors, or habitat linkages, are generally defined as connections between habitat patches that allow for physical and genetic exchange between otherwise isolated animal populations. Such linkages may serve a local purpose, such as providing a linkage between foraging and denning areas, or they may be regional in nature. Some habitat linkages may serve as migration corridors, wherein animals periodically move away from an area and then subsequently return. Other corridors may be important as dispersal corridors for young animals. A group of habitat linkages in an area can form a wildlife corridor network.

Habitats within a habitat linkage do not necessarily need to be identical to those habitats being linked. Rather, the linkage needs only to contain sufficient cover and forage to allow temporary utilization by species moving between core habitat areas. Habitat linkages are typically contiguous strips of natural areas, though dense plantings of landscape vegetation can be used by certain disturbance-tolerant species. Some species may require specific physical resources (such as rock outcroppings, vernal pools, or oak trees) within the habitat link for the linkage to serve as an effective movement corridor, while other more mobile or aerial species may only require discontinuous patches of suitable habitat to permit effective dispersal and/or migration. Wildlife movement corridors may occur at either large or small scales.

The Study Area consists of recently disked, fallowed agricultural land bounded by major roadways to the north and east and residential and agricultural land to the south and west. The use of the Study Area as a corridor is likely limited due to the surrounding fragmented landscape of agriculture and urban development which reduce habitat connectivity and movement to short distance opportunistic use. Although the Study Area does not provide a substantial movement corridor or habitat linkage, it may be used for local movement by common disturbance tolerant wildlife that travel through agricultural areas and along roadsides while foraging (e.g., small mammals and common birds). Therefore, the Study Area provides a minor local movement area for common wildlife, but it does not function as a significant wildlife corridor or regional habitat linkage.

Wildlife nursery sites (e.g., dens, burrows, or maternity roosts) were not observed during the reconnaissance survey. The Study Area primarily consists of disked agricultural land and contains limited structural habitat to support denning wildlife. Ornamental trees are present within and adjacent to the Study Area and may provide roosting habitat for bats. However, no evidence of bat maternity roosting was observed during the reconnaissance survey.

Local Policies and Ordinances

City of Hanford 2035 General Plan (2017)

The City of Hanford 2035 General Plan includes policies aimed at protecting biological resources and ensuring that future development considers habitat conservation (City of Hanford 2017). The General Plan emphasizes the preservation and enhancement of natural open space areas (Policy O31) and the establishment of permanent mechanisms to protect wetlands and riparian corridors where feasible (Policy O32). Additionally, vernal pools that may exist within the Planning Area are to be identified and protected (Policy O33).

To minimize the impacts of human activity on sensitive habitats, the General Plan includes policies to avoid disturbances from new recreational facilities and programs (Policy O34) and requires careful evaluation of potential biological resource impacts when considering development projects (Policy O35). The plan also promotes the management or elimination of nonnative invasive species on City owned properties (Policy O36), the preservation of mature trees (Policy O37), and the planting of native tree species and drought tolerant vegetation (Policy O38).

To protect wildlife and sensitive species, the General Plan establishes programs to protect endangered wildlife and their habitats through environmental review processes (Policy O39) and encourages collaboration with State, Federal, and local agencies to preserve sensitive wildlife species (Policy O40).

These policies reflect the City of Hanford's commitment to integrating biological resource conservation with future urban growth, ensuring that development projects consider and mitigate potential environmental impacts.

Impact Analysis and Recommendations

This section discusses the potential impacts and effects to biological resources that may occur from implementation of the proposed project.

Special-Status Species

The proposed project would have a significant effect on biological resources if it would:

a) *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.*

Special-Status Plants

Four special-status plants have low potential to occur within the Study Area based on regional database review, the presence of potentially suitable grassland habitat, and alkaline soil. The survey was conducted in the winter when special-status species may not have been detectable. Ground disturbances associated with project activities could result in direct impacts to special-status plants if they are present.

Implementation of BIO-4 would ensure that any special-status plants are identified before project activities and that avoidance/minimization measures are implemented if found within the Study Area. Therefore, impacts to special-status plants would be less than significant with implementation of BIO-4.

Special-Status Wildlife

Crotch's Bumble Bee

Crotch's bumble bee has moderate potential to occur within the Study Area while foraging due to the seasonal availability of ruderal flowering forbs (e.g., mustard) as vegetation regrows following disking of the Study Area. The landscaped portions of the Study Area and adjacent parcels may also provide flowering resources for the species. Project related ground disturbance and vegetation removal could result in direct impacts to individuals if present and the species can be indirectly impacted through removal of foraging resources. Avoidance and Minimization Measures BIO-2, BIO-5, and BIO-6 are recommended to reduce impacts to Crotch's bumble bee to less than-than-significant levels by requiring pre-construction surveys, conducting environmental training for all workers, and avoiding impacts to the species, if detected.

Hoary Bat

Hoary bat has moderate potential to occur in the Study Area due to the presence of onsite ornamental trees that may provide limited roosting habitat and the availability of nearby open foraging habitat. If project activities include removal or trimming of trees within or immediately adjacent to the project footprint, the project could result in direct impacts to roosting bats if present, and indirect impacts from disturbance within 100-feet of roost sites. Avoidance and Minimization Measures BIO-3, BIO-5, and BIO-6 are recommended to reduce impacts to special-status bats to less-than-significant by requiring pre-construction tree assessments and roost avoidance measures, conducting environmental training for all workers, and implementing general best management practices to avoid impacts if bats are detected.

Swainson's Hawk

Swainson's hawk has low potential to occur within the Study Area. The Study Area consists primarily of disturbed, disked agricultural land and does not provide substantial nesting habitat. Ornamental trees are present within the southeastern corner of the Study Area and in adjacent residential landscaping. These trees provide limited nesting suitability due to the ornamental setting and proximity to urban development and major roadways. Swainson's hawk may occur as a transient flyover or occasional forager over the Study Area and adjacent agricultural lands. Project implementation could result in direct or indirect impacts if an active nest were present within trees located in the Study Area or immediately adjacent parcels (e.g., disturbance from vegetation removal, noise, vibration, and human activity during the nesting season). Avoidance and Minimization Measures BIO-1, BIO-5, and BIO-6 are recommended to reduce impacts to Swainson's hawk to less-than-significant levels by requiring pre-construction nesting bird surveys and establishment of no-disturbance buffers, conducting environmental training for all workers, and implementing general best management practices to avoid impacts if the species is detected.

Nesting Birds

The Study Area does however contain habitat with the potential to support nesting birds protected under the CFGC and the MBTA. Therefore, the project could result in direct or indirect impacts to nesting birds. Direct impacts may include mortality from vehicle or equipment strikes as foraging birds move through the project site, and physical impacts to active nests within project site. Indirect impacts could result from noise, vibrations, and dust from construction activities throughout the project site. Noise, vibrations,

and dust can cause birds to flush out of cover and become exposed to predators or vehicle strikes. If construction activities occur during the nesting season (generally February 1 to August 31), noise, vibrations, and dust can also cause nest failures. Adults may not return to nests, predators may feed on eggs or chicks in unprotected nests, or vibrations could cause eggs to fall out of nests. Noise, dust, and vibrations may also cause avian species to leave regular foraging areas. Potential direct and indirect impacts to special-status avian species would be reduced to less than significant through implementation of recommendations BIO-1, BIO-5, and BIO-6.

Recommended Avoidance and Minimization Measures

BIO-1 Pre-construction Survey and Impact Avoidance for Raptors and Other Nesting Birds

To prevent the loss of active special-status and non-special-status bird nests, juveniles or adults, project activities including vegetation clearing shall be conducted outside of the breeding season (February 1 through August 31) to the extent feasible.

If project activities will occur between February 1 and August 31, a pre-construction nesting bird survey shall be conducted by a qualified biologist no more than 7 working days prior to the activity to survey for special-status and non-special-status bird and raptor nests. The survey area shall include the project footprint and a 100-foot buffer for passerine species, a 300-foot buffer for burrowing owls, and a 300-foot buffer for raptor species. Following the survey, the following shall be implemented:

- A nesting bird survey report shall be submitted prior to the initiation of project activities. The report shall detail the methods and results of the survey including identification of the location of any active nests and make a determination if ongoing monitoring should be conducted and/or no-disturbance buffers should be established.
- If active nests are identified during the survey and/or work is scheduled to take place within 100 feet of active passerine nests, or 300 feet of active raptor nests, a qualified biologist shall determine appropriate no-disturbance buffers. The buffer shall be the minimum distance required to avoid take of the nest and shall be determined based on the species identified, activities proposed, level of existing noise, and line of sight from the disturbance to the nest.
- A qualified biological monitor shall be present at the initiation of project activities occurring within 100 feet of active passerine nests, or 300-feet of active raptor nests, to ensure that project activities do not negatively affect the success of the nest. Duration and frequency of monitoring shall be determined at the discretion of the qualified biologist.
- If nesting bird monitoring is conducted, a nesting bird monitoring report shall be submitted to the City detailing the results of monitoring activities. The report shall be submitted within 30 days of the completion of the activities or nesting season.

BIO-2 Pre-Construction Survey and Impact Avoidance for Crotch's Bumble Bee

To avoid potential impacts to Crotch's bumble bee (*Bombus crotchii*), the following measures should be implemented:

- To the extent feasible, ground disturbance and vegetation removal should be conducted outside of the colony active period (April 1 through August 31).

- If ground-disturbing activities are scheduled to occur during the colony active period, a qualified biologist should conduct a pre-construction survey of the project footprint and within 100-feet of anticipated disturbance areas, no more than 14 days prior to ground disturbance to determine the presence of suitable floral resources and potential bumble bee activity.
- If Crotch's bumble bee individuals or nesting colonies are observed, a qualified biologist should establish appropriate no-disturbance buffers around occupied habitat areas. The size of the buffer should be determined by the qualified biologist based on site conditions and species behavior.
- If an active colony is identified and cannot be avoided, the qualified biologist in coordination with the applicant should coordinate with the California Department of Fish and Wildlife, as appropriate, and implement additional avoidance measures as necessary to avoid impacts.
- A pre-construction survey report should be submitted to the City following completion of the pre-construction survey.

BIO-3 Pre-Construction Survey and Impact Avoidance for Special-Status Bats

Although suitable bat roosting habitat is limited within the project footprint, special-status bats such as hoary bat (*Lasiurus cinereus*) may occur in adjacent areas. To avoid and minimize potential impacts, the following measures shall be implemented:

- If project activities include removal or trimming of trees within or immediately adjacent to the project footprint, a qualified biologist should conduct a pre-construction assessment of trees to identify potential bat roosting no more than 14 days prior to tree removal or trimming.
- If evidence of bat roosting is observed, the qualified biologist should establish appropriate no-disturbance buffers around the roost site until bats have vacated the area.
- To the extent feasible, tree removal should occur outside of the bat maternity season (April 1 through August 31).
- If bats are observed during construction activities and are in jeopardy of being directly impacted, work in the immediate vicinity should cease until a qualified biologist evaluates the situation and provides appropriate avoidance recommendations.

BIO-4 Pre-Construction Survey and Impact Avoidance for Special-Status Plants

The biological field survey for the project was conducted during the winter season when special-status plant species may not have been detectable. To avoid or minimize potential impacts to special-status plant species, the following measures shall be implemented:

- Within one year prior to the initiation of ground-disturbing activities, a qualified botanist should conduct a focused rare plant survey of the project footprint and within fifty feet of proposed disturbance areas.
- The focused rare plant survey should be conducted in accordance with the California Native Plant Society (CNPS) Botanical Survey Guidelines, be conducted during the appropriate blooming period for special-status plant species with potential to occur in the site (refer to Attachment 2), and should confirm the presence or absence of special-status plant species.
- If special-status plant species are identified, the qualified botanist should map the boundaries of the population. The biologist should work with the project design and/or contractor team to avoid the special-status plant occurrence(s), as mapped in the field by the botanist.

If complete avoidance of the special-status plant occurrence(s) is not feasible, the following mitigation measures should be implemented:

- If the identified species is listed under the CESA as candidate, threatened, or endangered, all project activities that could impact the occurrences should cease and the applicant should coordinate with the CDFW to determine the need for a 2081-Incidental Take Permit. Direct or indirect impacts to the occurrence(s) or within 50-feet of the occurrence(s) must be avoided unless the applicant obtains a 2081-Incidental Take Permit or other authorization from the CDFW.
- If the special-status plant species are not CESA-listed and are CNPS Rare Plant Rank 1 or 2 and/or listed under the Federal Endangered Species Act, the following should be implemented:
  - For annual and perennial species, the biologist will collect seed prior to project disturbance, store the seed in a cool and dry place, and redistribute the collected seed in suitable soil in the temporarily disturbed portions of the project area following completion of disturbance.
  - If seed is not available due to project timing, the applicant and the botanist should implement a soil seed bank salvage program to promote the continued existence of the species on the parcel. Soil from the project disturbance areas containing the special-status species seed should be collected and reapplied. To accomplish this, the upper 6 inches of soil located within the vicinity of occurrence(s) should be collected prior to grading activities. The collected soil should be distributed in the temporary disturbance areas following completion of the grading activities or in adjacent undisturbed areas on the parcel.
  - The broadcasted seed and/or salvaged soil distribution area should be monitored for two consecutive seasons to determine if the redistributed seed and/or soil supports germination of the targeted species. If germination is not observed, the applicant and their biologist should continue the seed collection and distribution efforts until germination is confirmed in the distribution areas.
- A rare plant survey report should be submitted to the City prior to initiation of ground-disturbing activities if focused surveys are conducted.

BIO-5 Worker Environmental Awareness Program (WEAP)

Prior to initiation of construction activities (including staging and mobilization), all personnel associated with project construction should attend a WEAP training, conducted and prepared by a qualified biologist, to aid workers in recognizing special-status species, native or nesting birds and other biological resources that may occur in the construction area. The specifics of this program will include identification and habitats of special-status species with potential to occur at the project site, a description of the regulatory status and general ecological characteristics of sensitive resources, a review of the limits of construction, and an explanation of the mitigation measures required to reduce impacts to biological resources within the work area. A fact sheet conveying this information shall also be prepared by the qualified biologist for distribution to all contractors, their employers, and other personnel involved with construction. All personnel shall sign a form provided by the trainer indicating they have attended the WEAP and understand the information presented to them.

BIO-6 General Best Management Practices

The following General BMPs would be implemented by project personnel:

- Prior to mobilization, the contractor would clearly delineate the project limits and prohibit any project-related work outside those boundaries.
- Project-related vehicles would observe a 5-mile-per-hour speed limit within the unpaved limits of the project.

- All food-related trash items such as wrappers, cans, bottles, and food scraps generated during the proposed project would be disposed of in closed containers only and removed daily from the project site.
- No deliberate feeding of wildlife would be allowed.
- No pets would be allowed on the project site.
- No firearms would be allowed on the project site.
- If vehicle or equipment maintenance is necessary, it would be performed in the designated staging areas.
- If project activities must occur at night (between dusk and dawn), all lighting would be shielded and directed downward to minimize the potential for glare or spillover onto adjacent properties and to reduce impacts on local wildlife.
- Heavy equipment would be operated in accordance with standard BMPs. Equipment used on-site would be properly maintained to avoid leaks of oil, fuel, or residues. Provisions would be in place to remediate any accidental spills.

Sensitive Plant Communities and Critical Habitat

The proposed project would have a significant effect on biological resources if it would:

b) Have a substantial adverse impact on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service.

No sensitive plant communities or riparian habitats are present within the Study Area. Therefore, there would be no impacts to sensitive natural communities.

Jurisdictional Waters and Wetlands

The proposed project would have a significant effect on biological resources if it would:

c) Have a substantial adverse effect on State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

There are no protected wetlands or waterways within the project site or Study Area. Therefore, there would be no impacts to jurisdictional waters and wetlands.

Wildlife Movement

The proposed project would have a significant effect on biological resources if it would:

d) Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors or impede the use of wildlife nursery sites.

The Study Area is a disturbed, recently disked agricultural field bounded by major roadways, surrounding development, and agriculture. Common disturbance tolerant wildlife may move through the Study Area for local travel and foraging. However, the Study Area does not connect larger habitat areas and movement in the general region is already constrained by Highway 198, 12th Avenue, and adjacent development. Therefore, the project would not substantially interfere with wildlife movement or established corridors. Wildlife nursery sites were not observed during the reconnaissance survey, and no evidence of bat maternity roosting was observed in trees present within or adjacent to the Study Area. Avoidance and Minimization Measures BIO-3, BIO-5, and BIO-6 are recommended to reduce impacts on

wildlife movement and nursery sites to less-than-significant levels by requiring pre-construction bat roost surveys if tree work is proposed, conducting environmental training for all workers, and implementing general best management practices.

Local Policies and Ordinance

The proposed project would have a significant effect on biological resources if it would:

e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance*

Ornamental trees are present within the southeastern corner of the Study Area near an existing residence, and landscaped shrubs occur along portions of the northern and eastern margins of the Study Area. Consistent with applicable local policies regarding preservation of mature trees and installation of drought-tolerant/native landscaping, project design should retain and avoid impacts to onsite trees to the extent feasible. If tree removal or trimming is required, the applicant should coordinate with the City to confirm applicability of local tree preservation requirements and obtain any required approvals prior to removal. landscaping associated with the project should be designed to comply with local policies by incorporating native and/or drought-tolerant plant species to the extent feasible. With implementation of these design considerations and adherence to applicable City requirements, the proposed project is not expected to conflict with local policies or ordinances protecting biological resources.

Habitat Conservation Plan

The proposed project would have a significant effect on biological resources if it would:

f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or State habitat conservation plan.*

The Study Area does not fall within the jurisdiction of any Habitat Conservation Plans (HCP). Therefore, there would be no conflicts with HCPs.

Conclusion

The Study Area consists of recently disked fallowed agricultural land with minimal vegetation and no sensitive natural communities, jurisdictional waters or wetlands, or designated critical habitat. Four special-status plant species have low potential to occur within the Study Area due to the presence of suitable alkaline soil and the potential presence of suitable grassland habitat. However, the winter reconnaissance survey conducted outside of the appropriate blooming season limited the ability to detect special-status plants. One special-status wildlife species, Swainson's hawk, was determined to have a low potential to occur within the Study Area and may occur as a transient flyover or use the area for foraging. Crotch's bumble bee and hoary bat have moderate potential to occur within the Study Area as foraging, roosting, or transient individuals associated with the ruderal flowering forbs and ornamental trees found within the Study Area. The Study Area also provides marginal habitat for nesting birds, and potential impacts to nesting birds protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFGC) could occur if vegetation removal or construction activities take place during the nesting season.

With implementation of the recommended Avoidance and Minimization Measures (BIO-1 through BIO-6), including pre-construction nesting bird surveys, focused rare plant surveys during the appropriate blooming period, pre-construction surveys and assessments for Crotch's bumble bee and bats, WEAP

training, and general best management practices, potential impacts to biological resources would be avoided or reduced to less-than-significant levels.

Thank you for the opportunity to work with you on this project. Please contact Caleb Yakel at cyakel@rinconconsultants.com or Travis Belt at tbelt@rinconconsultants.com if you have questions concerning the contents of this report.

Sincerely,
Rincon Consultants, Inc.

Special-Status Species Evaluation Tables

Special-Status Plant Species in the Regional Vicinity of the Study Area

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur	Rationale
Atriplex cordulata var. *erecticaulis* Earlimart orache	None/None GNRT1/S1 1B.2	Annual herb. Valley and foothill grassland. Elevations: 130-330ft. (40-100m.) Blooms Aug-Sep(Nov).	Low Potential	The survey was not conducted in the appropriate season to confirm the presence or absence of this species. The Study Area consists of recently disked, fallowed agricultural land with early growth mustard interspersed with annual grasses, which is not conducive to supporting special-status plants. Saline-alkali alluvial soil is mapped in the Study Area. Due to the appropriate soil being present in the Study Area, there is a low potential for the Study Area to support this species.
Atriplex depressa brittlescale	None/None G2/S2 1B.2	Annual herb. Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pools. Alkaline, clay. Elevations: 5-1050ft. (1-320m.) Blooms Apr-Oct.	Low Potential	The survey was not conducted in the appropriate season to confirm the presence or absence of this species. The Study Area consists of recently disked, fallowed agricultural land with early growth mustard interspersed with annual grasses, which is not conducive to supporting special-status plants. The Study Area is mapped as saline-alkali alluvial soils that may support *Atriplex spp.* Due to the appropriate soil being present in the Study Area, there is a low potential for the species to occur in the Study Area.
Atriplex minuscula lesser saltscale	None/None G2/S2 1B.1	Annual herb. Chenopod scrub, playas, valley and foothill grassland. Alkaline, sandy. Elevations: 50-655ft. (15-200m.) Blooms May-Oct.	Low Potential	The survey was conducted outside of the appropriate season required to confirm presence or absence of this species. The Study Area consists of recently disked, fallowed agricultural land with early growth mustard interspersed with annual grasses, conditions that are generally not suitable for special-status plant species Although saline-alkali alluvial soils are mapped within the Study Area, the disturbed agricultural setting provides limited habitat for the species. Therefore, the species has low potential to occur within the Study Area.
Atriplex subtilis subtle orache	None/None G1/S1 1B.2	Annual herb. Valley and foothill grassland. Alkaline. Elevations: 130-330ft. (40-100m.) Blooms (Apr)Jun-Sep(Oct).	Low Potential	The survey was not conducted in the appropriate season to confirm the presence or absence of this species. The Study Area consists of recently disked, fallowed agricultural land with early growth mustard interspersed with annual grasses, which is not conducive to supporting special-status plants. Saline-alkali alluvial soils are mapped within the Study Area. Although appropriate soils are present within the Study Area, there is a low potential for the Study Area to support this species due to frequent disturbance from agricultural activities and the lack of intact native vegetation.
Delphinium recurvatum recurved larkspur	None/None G2/S2 1B.2	Perennial herb. Chenopod scrub, cismontane woodland, valley and foothill grassland. Alkaline. Elevations: 10-2590ft. (3-790m.) Blooms Mar-Jun.	Not Expected	Chenopod scrub, woodland, and intact native valley grassland is lacking in the Study Area. The species is not expected to occur.
Lasthenia chrysantha alkali-sink goldfields	None/None G2/S2 1B.1	Annual herb. Vernal pools. Alkaline. Elevations: 0-655ft. (0-200m.) Blooms Feb-Apr.	Not Expected	The Study Area does not contain vernal pool habitat. The species is not expected to occur within the Study Area.
Lepidium jaredii ssp. *album* Panoche pepper-grass	None/None G2G3T2T3/S2S3 1B.2	Annual herb. Valley and foothill grassland. White or grey clay lenses on steep slopes; incidental in alluvial fans and washes. Clay and gypsum-rich soils. Elevations: 605-2445ft. (185-745m.) Blooms Feb-Jun.	Not Expected	The Study Area is outside of the species known elevation range and no suitable clay or gypsum rich soils are present within the Study Area. Therefore, the species is not expected to occur.
Nama stenocarpa mud nama	None/None G4G5/S1S2 2B.2	Annual/perennial herb. Marshes and swamps. Lake shores, river banks, intermittently wet areas. Elevations: 15-1640ft. (5-500m.) Blooms Jan-Jul.	Not Expected	No suitable marsh or swamp habitat occurs within the Study Area. The species is not expected to occur within the Study Area.
Puccinellia simplex California alkali grass	None/None G2/S2 1B.2	Annual herb. Chenopod scrub, meadows and seeps, valley and foothill grassland, vernal pools. Alkaline, vernally mesic. Sinks, flats, and lake margins. Elevations: 5-3050ft. (2-930m.) Blooms Mar-May.	Not Expected	There is no suitable chenopod scrub, meadow, vernal pool, or grassland habitat within the Study Area. The species is not expected to occur.
Sagittaria sanfordii Sanford's arrowhead	None/None G3/S3 1B.2	Perennial rhizomatous herb (emergent). Marshes and swamps. In standing or slow-moving freshwater ponds, marshes, and ditches. Elevations: 0-2135ft. (0-650m.) Blooms May-Oct(Nov).	Not Expected	No suitable marsh or swamp habitat occurs within the Study Area. The species is not expected to occur within the Study Area.

Regional Vicinity refers to within a 9-quad search radius of site.

Status (Federal/State)

FE = Federal Endangered
FT = Federal Threatened
FPE = Federal Proposed Endangered
FPT = Federal Proposed Threatened
FC = Federal Candidate
SE = State Endangered
ST = State Threatened
SCE = State Candidate Endangered
SCT = State Candidate Threatened
SR = State Rare
SSC = CDFW Species of Special Concern
FP = CDFW Fully Protected
WL = CDFW Watch List

Other Statuses

G1 or S1 Critically Imperiled Globally or Subnationally (state)
G2 or S2 Imperiled Globally or Subnationally (state)
G3 or S3 Vulnerable to extirpation or extinction Globally or Subnationally (state)
G4/5 or S4/5 Apparently secure, common and abundant
GH or SH Possibly Extirpated – missing; known from only historical occurrences but still some hope of rediscovery

CRPR (CNPS California Rare Plant Rank)

1A = Presumed extirpated in California, and rare or extinct elsewhere
1B = Rare, Threatened, or Endangered in California and elsewhere
2A = Presumed extirpated in California, but common elsewhere
2B= Rare, Threatened, or Endangered in California, but more common elsewhere

CRPR Threat Code Extension

.1 = Seriously endangered in California (>80% of occurrences threatened/high degree and immediacy of threat)
.2 = Moderately threatened in California (20-80% of occurrences threatened/moderate degree and immediacy of threat)
.3 = Not very endangered in California (<20% of occurrences threatened/low degree and immediacy of threat)

Additional notations may be provided as follows

T – Intraspecific Taxon (subspecies, varieties, and other designations below the level of species)
Q – Questionable taxonomy that may reduce conservation priority

Special-Status Animal Species in the Regional Vicinity of the Study Area

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur	Rationale
Invertebrates				
Bombus crotchii Crotch's bumble bee	None/SCE G2/S2	Coastal California east to the Sierra-Cascade crest and south into Mexico. Food plant genera include Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum.	Moderate Potential	The Study Area consists of fallowed ag land with early growth mustard interspersed with annual grasses. Ruderal flowering forbs such as mustard may provide as suitable foraging resources. The adjacent developed parcels may also provide ornamental flowering resources. Although small mammal burrows were observed absent from the Study Area, there is moderate potential for the species to occur.
Branchinecta lynchi vernal pool fairy shrimp	FT/None G3/S3	Endemic to the grasslands of the Central Valley, Central Coast mountains, and South Coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	Not Expected	No suitable aquatic habitat is present within the Study Area. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Danaus plexippus Monarch butterfly	FPT/None G4T1T2Q/S2	Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico. Roosts located in wind-protected tree stands and groves (eucalyptus, Monterey pine, cypress), with nectar and water sources nearby.	Not Expected	There are no suitable foraging opportunities for the species within the Study Area due to the lack of milkweed and other flowering plants. Additionally, there are no suitable roosting sites present within or near the Study Area. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). Therefore, the species is not expected to occur within the Study Area.
Desmocerus californicus dimorphus valley elderberry longhorn beetle	FT/None G3T3/S3	Occurs only in the Central Valley of California, in association with blue elderberry (Sambucus mexicana). Prefers to lay eggs in elderberries 2-8 inches in diameter; some preference shown for "stressed" elderberries.	Not Expected	Blue elderberry plants are absent within the Study Area and adjacent properties. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). Reconnaissance survey did not detect species. The species is not expected to occur within the Study Area.
Lepidurus packardi vernal pool tadpole shrimp	FE/None G3/S3	Inhabits vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass-bottomed swales of unplowed grasslands. Some pools are mud-bottomed and highly turbid.	Not Expected	Suitable vernal pool and swale habitat is absent within the Study Area. There is one recorded occurrence within 5 miles of the Study Area in 1990 (CDFW 2026a). The species is not expected to occur within the Study Area.
Amphibians				
Ambystoma californiense pop. 1 California tiger salamander - central California DPS	FT/ST G2G3T3/S3 WL	Lives in vacant or mammal-occupied burrows throughout most of the year; in grassland, savanna, or open woodland habitats. Need underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	Not Expected	No burrows were observed within the Study Area and no suitable vernal pool or other aquatic habitat is present. The species is not expected to occur within the Study Area.
Spea hammondii western spadefoot	FPT/None G2G3/S3S4 SSC	Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands. Vernal pools are essential for breeding and egg-laying.	Not Expected	Suitable aquatic habitat is absent within the Study Area and nearby areas. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Reptiles				
Actinemys marmorata northwestern pond turtle	FPT/None G2/SNR SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying. Occurs in northern California, south along the Sierra Nevada Mountains and the Coast Range down to Monterey and Kern Counties.	Not Expected	Suitable aquatic habitat is absent within the Study Area and nearby areas. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Arizona elegans occidentalis California glossy snake	None/None G5T2/S2 SSC	Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California. Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	Not Expected	The Study Area consists of recently disked fallowed agricultural land and lacks loose, friable soils and native vegetation required by the species. The surrounding developed land also isolates the Study Area to more suitable habitat. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). Therefore, the California glossy snake is not expected to occur within the Study Area.
Gambelia sila blunt-nosed leopard lizard	FE/SE G1/S2 FP	Resident of sparsely vegetated alkali and desert scrub habitats, in areas of low topographic relief. Seeks cover in mammal burrows, under shrubs or structures such as fence posts; they do not excavate their own burrows.	Not Expected	Suitable scrub habitat is absent within the Study Area and nearby areas. Small mammal burrows were not observed within the Study Area. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Birds				
Agelaius tricolor tricolored blackbird	None/ST G3/S2 SSC	Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	Not Expected	Suitable open water and nesting habitat is absent within the Study Area and its surrounding areas. Occurrence of the species is likely limited to fly overs. There are two recorded occurrences within 5 miles of the Study Area in 1936 and 2015 (CDFW 2026a).
Athene cunicularia burrowing owl	None/SCE G4/S2 SSC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Not Expected	No small mammal burrows or potential artificial burrows were observed within the Study Area during the reconnaissance survey. The recently disked fallowed agricultural land and surrounding developed land isolate the Study Area and likely reduce the species use of the area. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). Therefore, the species is not expected to occur within the Study Area.

Scientific Name Common Name	Status	Habitat Requirements	Potential to Occur	Rationale
Buteo swainsoni Swainson's hawk	None/ST G5/S4	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	Low potential	The southeastern corner of the Study Area contains ornamental trees potentially suitable for nesting. Trees were also observed along the adjacent residential area to the south which may also provide potential nesting opportunities. However, they areunlikely to provide suitable nesting habitat due to their proximity to urban development and human disturbance. The Study Area and adjacent ag parcels may provide suitable foraging habitat for transient individuals. While the Study Area may provide foraging opportunities, there is far better, and more expansive nesting and foraging habitat located outside of Hanford City limits. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). Therefore, there is low potential for nesting or foraging Swainson's hawk to occur within the Study Area.
Xanthocephalus xanthocephalus yellow-headed blackbird	None/None G5/S3 SSC	Nests in freshwater emergent wetlands with dense vegetation and deep water. Often along borders of lakes or ponds. Nests only where large insects such as Odonata are abundant, nesting timed with maximum emergence of aquatic insects.	Not Expected	Suitable aquatic and riparian habitat is absent within the Study Area and nearby areas. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Mammals				
Dipodomys nitratoides exilis Fresno kangaroo rat	FE/SE G2TH/SH	Alkali sink-open grassland habitats in western Fresno County. Bare alkaline clay-based soils subject to seasonal inundation, with more friable soil mounds around shrubs and grasses.	Not Expected	Intact alkali sink-open grassland habitat is absent from the Study Area. Suitable clay soil and burrow habitat is also absent from the Study Area. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Dipodomys nitratoides nitratoides Tipton kangaroo rat	FE/SE G2T1T2/S2	Found in saltbush scrub and sink scrub communities in the Tulare Lake Basin of the southern San Joaquin Valley. Needs soft friable soils for burrowing which do not experience seasonal flooding. Often digs burrows in elevated mounds, including the base of shrubs in densely vegetated areas.	Not Expected	Suitable scrub and burrowing habitat are absent within the Study Area. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Lasiurus cinereus *hoary bat*	None/None G3G4/S4 SSC	Typically roosts in trees in deciduous and coniferous forests and woodlands but occasionally roosts in rocks crevices. Forages in open areas, typically along riparian corridors or over water. Diet primarily consists of moths.	Moderate Potential	The southeastern corner of the Study Area and adjacent parcels contain ornamental trees that could provide suitable roosting habitat while the surrounding open areas may provide suitable foraging habitat. Although the Study Area lacks riparian habitat, there is moderate potential for the species to occur. There is one recorded occurrence of the species within 5 miles of the Study Area in 1991 (CDFW 2026a).
Sorex ornatus relictus Buena Vista Lake ornate shrew	FE/None G5T1/S1	Marshlands and riparian areas in the Tulare Basin. Prefers moist soil. Uses stumps, logs and litter for cover.	Not Expected	Suitable marshland and riparian habitat are absent within the Study Area and nearby areas. There are no recorded occurrences of the species within 5 miles of the Study Area (CDFW 2026a). The species is not expected to occur within the Study Area.
Vulpes macrotis mutica San Joaquin kit fox	FE/ST G4T2/S3	Annual grasslands or grassy open stages with scattered shrubby vegetation. Need loose-textured sandy soils for burrowing, and suitable prey base.	Not Expected	The Study Area consists of fallowed agricultural land that lacks the vegetative cover, prey availability, and burrows or dens required to support San Joaquin kit fox. The surrounding developed land also isolates the Study Area from more suitable habitat. While agricultural land to the west may provide some foraging potential, it is intensively managed and lacks connectivity to larger, contiguous natural areas. No dens, burrows, or sign of San Joaquin kit fox were observed during the reconnaissance survey. Therefore, San Joaquin kit fox is not expected to occur within the Study Area. There are four recorded occurrences of the species within 5 miles of the Study Area in 1971, 1975, 2000, and 2006 (CDFW 2026a).

Regional Vicinity refers to within a 9-quad search radius of site.

Status (Federal/State)

FE = Federal Endangered
FT = Federal Threatened
FPE = Federal Proposed Endangered
FPT = Federal Proposed Threatened
FC = Federal Candidate
SE = State Endangered
ST = State Threatened
SCE = State Candidate Endangered
SCT = State Candidate Threatened
SR = State Rare
SSC = CDFW Species of Special Concern
FP = CDFW Fully Protected
WL = CDFW Watch List

Other Statuses

G1 or S1	Critically Imperiled Globally or Subnationally (state)
G2 or S2	Imperiled Globally or Subnationally (state)
G3 or S3	Vulnerable to extirpation or extinction Globally or Subnationally (state)
G4/5 or S4/5	Apparently secure, common and abundant
GH or SH	Possibly Extirpated – missing; known from only historical occurrences but still some hope of rediscovery

CRPR (CNPS California Rare Plant Rank)

1A = Presumed extirpated in California, and rare or extinct elsewhere
1B = Rare, Threatened, or Endangered in California and elsewhere
2A = Presumed extirpated in California, but common elsewhere
2B= Rare, Threatened, or Endangered in California, but more common elsewhere

CRPR Threat Code Extension

.1 = Seriously endangered in California (>80% of occurrences threatened/high degree and immediacy of threat)
.2 = Moderately threatened in California (20-80% of occurrences threatened/moderate degree and immediacy of threat)
.3 = Not very endangered in California (<20% of occurrences threatened/low degree and immediacy of threat)

Additional notations may be provided as follows

T – Intraspecific Taxon (subspecies, varieties, and other designations below the level of species)
Q – Questionable taxonomy that may reduce conservation priority

Floral and Faunal Compendium

Plant Species Observed Within the Study Area on December 24, 2024

Scientific Name	Common Name	Status	Native or Introduced
Avena barbata	slender oat		Introduced
Brassicaceae spp.	mustard		Introduced
Erodium cicutarium	common stork's-bill		Introduced
Malva parviflora	cheeseweed		Introduced

Cal-IPC. The Cal-IPC Inventory. Accessed online at https://www.cal-ipc.org/plants/inventory/. February 2026.

California Native Plant Society. A Manual of California Vegetation Online. Accessed online at http://vegetation.cnps.org/. February 2026.

[1] Cal-IPC – Limited; these species are invasive with ecological amplitude and distribution being generally limited, but these species may be locally persistent and problematic.

[2] Cal-IPC – Moderate; these species have substantial and apparent-but generally not severe-ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal.

[3] Cal-IPC – High; These species have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment. Most are widely distributed ecologically.

Wildlife Species Observed Within the Study Area on December, 2024

Scientific Name	Common Name	Status	Native or Introduced
Birds			
Corvus brachyrhynchos	American crow		Native
Passer domesticus	house sparrow		Introduced
Streptopelia decaocto	Eurasian collared-dove		Introduced
Mammals			
Canis latrans	Coyote		Native

Regulatory Background

Regulatory Background

The following is a brief summary of the regulatory context under which biological resources are managed at the federal, state, and local levels. A number of federal and state statutes provide a regulatory structure that guides the protection of biological resources. Agencies with the responsibility for protection of biological resources that were considered in review of this project include the following:

- United States Army Corps of Engineers (USACE; wetlands and other waters of the United States [WOTUS])
- United States Fish and Wildlife Service (USFWS; federally listed species and migratory birds)
- Central Valley Regional Water Quality Control Board (RWQCB; waters of the State)
- California Department Fish and Wildlife (CDFW; riparian areas, streambeds, and lakes; state-listed species; nesting birds, marine resources)
- City of Hanford

United States Army Corps of Engineers

The USACE is responsible for administering several federal programs related to ensuring the quality and navigability of the nation's waters.

Clean Water Act Section 404

Congress enacted the Clean Water Act (CWA) "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." The CWA establishes the basic structure for regulating discharges of pollutants into the WOTUS and regulating quality standards for surface waters. The basis of the CWA was enacted in 1948 and was called the Federal Water Pollution Control Act, but the law was significantly reorganized and expanded in 1972. The "Clean Water Act" became the law's common name with amendments in 1972.

Section 404 of the CWA establishes a program to regulate the discharge of dredged or fill material into WOTUS, including wetlands. Section 404 of the CWA authorizes the Secretary of the Army, acting through the USACE, to issue permits regulating the discharge of dredged or fill materials into the "navigable waters at specified disposal sites." Section 404 requires that a permit be issued before dredged or fill material may be discharged into WOTUS unless the activity is exempt from regulation under Section 404 (e.g., certain farming and forestry activities).

Waters of the United States

The USACE and United States Environmental Protection Agency (USEPA) have undertaken several efforts to modernize their regulations defining "waters of the United States" (e.g., the 2015 Clean Water Rule and 2020 Navigable Waters Protection Rule), but these efforts have been frustrated by legal challenges which have invalidated the updated regulations. As a result of the Supreme Court ruling in *Sackett v. Environmental Protection Agency*, the USEPA and USACE issued a final rule that amends the "Revised Definition of 'Waters of the United States'" to conform key aspects of the regulatory text to the United States Supreme Court's decision (88 Federal Register 61964–61969, September 8, 2023).

Under the "Revised Definition of 'Waters of the United States'; Conforming" rule, the term "waters of the United States" is defined as follows (33 Code of Federal Regulations [CFR] 328.3[a]):

(1) Waters which are:
   (i) Currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
   (ii) The territorial seas; or
   (iii) Interstate waters;

(2) Impoundments of waters otherwise defined as waters of the United States under this definition, other than impoundments of waters identified under paragraph (a)(5) of this section;

(3) Tributaries of waters identified in paragraph (a)(1) or (2) of this section that are relatively permanent, standing or continuously flowing bodies of water;

(4) Wetlands adjacent to the following waters:
   (i) Waters identified in paragraph (a)(1) of this section; or
   (ii) Relatively permanent, standing or continuously flowing bodies of water identified in paragraph (a)(2) or (a)(3) of this section and with a continuous surface connection to those waters;

(5) Intrastate lakes and ponds not identified in paragraphs (a)(1) through (4) of this section that are relatively permanent, standing or continuously flowing bodies of water with a continuous surface connection to the waters identified in paragraph (a)(1) or (a)(3) of this section.

In addition, the amended regulations include eight types of excluded waters (33 CFR 328.3[b]) which are not "waters of the United States" even where they otherwise meet the terms of paragraphs (a)(2) through (5) of this section:

(1) Waste treatment systems, including treatment ponds or lagoons, designed to meet the requirements of the Clean Water Act;

(2) Prior converted cropland designated by the Secretary of Agriculture. The exclusion would cease upon a change of use, which means that the area is no longer available for the production of agricultural commodities. Notwithstanding the determination of an area's status as prior converted cropland by any other Federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA;

(3) Ditches (including roadside ditches) excavated wholly in and draining only dry land and that do not carry a relatively permanent flow of water;

(4) Artificially irrigated areas that would revert to dry land if the irrigation ceased;

(5) Artificial lakes or ponds created by excavating or diking dry land to collect and retain water and which are used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing;

(6) Artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating or diking dry land to retain water for primarily aesthetic reasons;

(7) Waterfilled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the United States; and

(8) Swales and erosional features (e.g., gullies, small washes) characterized by low volume, infrequent, or short duration flow.

The lateral limits of USACE jurisdiction in non-tidal waters is defined by the "ordinary high-water mark" (OHWM) unless adjacent wetlands are present. The OHWM is a line on the shore or edge of a channel established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed upon the bank, shelving, changes in the character of soil, destruction of vegetation, or the presence of debris (33 CFR 328.3[e]). As such, waters are recognized in the field by the presence of a defined watercourse with appropriate physical and topographic features. If wetlands occur within, or adjacent to, WOTUS, the lateral limits of USACE jurisdiction extend beyond the OHWM to the outer edge of the wetlands (33 CFR 328.4 [c]). The upstream limit of jurisdiction in the absence of adjacent wetlands is the point beyond which the OHWM is no longer perceptible (33 CFR 328.4; see also 51 Federal Register 41217).

Wetlands

The USACE defines *wetlands* as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3). Indicators of three wetland parameters (hydric soils, hydrophytic vegetation, and wetlands hydrology), as determined by site investigation, must be present at a site for USACE to classify the site as a wetland (Environmental Laboratory 1987).

Regional Water Quality Control Boards

The State Water Resources Control Board (SWRCB) and nine RWQCBs have jurisdiction over "waters of the State," which are defined as any surface water or groundwater, including saline waters, within the boundaries of the state (California Water Code Section 13050[e]). These agencies also have responsibilities for administering portions of the CWA.

Clean Water Act Section 401

Section 401 of the CWA requires an applicant requesting a federal license or permit for an activity that may result in any discharge into navigable waters (such as a Section 404 Permit) to provide state certification that the proposed activity will not violate state and federal water quality standards. In California, CWA Section 401 Water Quality Certification (Section 401 Certification) is issued by the RWQCBs and by the SWRCB for multiregion projects. The process begins when an applicant submits an application to the RWQCB and informs the USACE (or the applicable agency from which a license or permit was requested) that an application has been submitted. The USACE will then determine a "reasonable period of time" for the RWQCB to act on the application; this time period is typically 60 days for routine projects and longer for complex projects but may not exceed one year. When the period has elapsed, if the RWQCB has not either issued or denied the application for Section 401 Certification, the USACE may determine that Certification has been waived and issue the requested permit. If a Section 401 Certification is issued it may include binding conditions, imposed either through the Certification itself or through the requested federal license or permit.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Porter-Cologne Act) is the principal law governing water quality regulation in California. It establishes a comprehensive program to protect water quality and the beneficial uses of water. The Porter-Cologne Act applies to surface waters, wetlands, and ground water and to both point and nonpoint sources of pollution. Pursuant to the Porter-Cologne Act (California Water Code Section 13000 et seq.), the policy of the State of California is as follows:

- The quality of all the waters of the State shall be protected.
- All activities and factors affecting the quality of water shall be regulated to attain the highest water quality within reason.
- The State must be prepared to exercise its full power and jurisdiction to protect the quality of water in the State from degradation.

The Porter-Cologne Act established nine RWQCBs (based on watershed boundaries) and the SWRCB, which are charged with implementing its provisions and which have primary responsibility for protecting water quality in California. The SWRCB provides program guidance and oversight, allocates funds, and reviews RWQCB decisions. In addition, the SWRCB allocates rights to the use of surface water. The RWQCBs have primary responsibility for individual permitting, inspection, and enforcement actions within each of nine hydrologic regions. The SWRCB and RWQCBs have numerous nonpoint source related responsibilities, including monitoring and assessment, planning, financial assistance, and management.

Section 13260 of the Porter-Cologne Act requires any person discharging or proposing to discharge waste that could affect the quality of waters of the State to file a Report of Waste Discharge with the appropriate RWQCB. The RWQCB may then authorize the discharge, subject to conditions, by issuing Waste Discharge Requirements. While this requirement was historically applied primarily to outfalls and similar point source discharges, the SWRCB's *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (Procedures), effective May 2020, make it clear that the agency will apply the Porter-Cologne Act's requirements to discharges of dredge and fill material as well. The Procedures state that they are to be used in issuing CWA Section 401 Certifications and Waste Discharge Requirements, and largely mirror the existing review requirements for CWA Section 404 Permits and Section 401 Certifications, incorporating most elements of the USEPA's Section 404(b)(1) Guidelines. Following issuance of the Procedures, the SWRCB produced a consolidated application form for dredge/fill discharges that can be used to obtain a CWA Section 401 Water Quality Certification, Waste Discharge Requirements, or both.

Non-Wetland Waters of the State

The SWRCB and RWQCBs have not established regulations for field determinations of waters of the State except for wetlands currently. In many cases the RWQCBs interpret the limits of waters of the State to be bounded by the OHWM unless isolated conditions or ephemeral waters are present. However, in the absence of statewide guidance each RWQCB may interpret jurisdictional boundaries within their region and the SWRCB has encouraged applicants to confirm jurisdictional limits with their RWQCB before submitting applications. As determined by the RWQCB, waters of the State may include riparian areas or other locations outside the OHWM, leading to a larger jurisdictional area over a given water body compared to the USACE.

Wetland Waters of the State

The SWRCB's Procedures, including for defining wetland waters of the State, went into effect May 28, 2020. The SWRCB defines an "area as wetland" if it meets all three of the following criteria under normal circumstances:

(i) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both

(ii) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate

(iii) the area's vegetation is dominated by hydrophytes or the area lacks vegetation

The SWRCB's Implementation Guidance for the Wetland Definition and Procedures for Discharges of Dredge and Fill Material to Waters of the State (2020) states that waters of the United States and waters of the State should be delineated using the standard USACE delineation procedures, taking into consideration that the methods shall be modified only to allow for the fact that a lack of vegetation does not preclude an area from meeting the definition of a wetland.

United States Fish and Wildlife Service

The USFWS implements several laws protecting the nation's fish and wildlife resources, including the federal Endangered Species Act (ESA; 16 United States Code [USC] Sections 153 et seq.), Migratory Bird Treaty Act (MBTA; 16 USC Sections 703-711), and Bald and Golden Eagle Protection Act (16 USC Section 668).

Endangered Species Act

The USFWS and NMFS share responsibility for implementing the ESA. Generally, the USFWS implements the ESA for terrestrial and freshwater species, while the NMFS implements the ESA for marine and anadromous species. Projects that would result in take of any threatened or endangered wildlife species, or a threatened or endangered plant species if occurring on federal land, are required to obtain permits from the USFWS or NMFS through either Section 7 (interagency consultation with a federal nexus) or Section 10 (Habitat Conservation Plan) of the ESA, depending on the involvement by the federal government in funding, authorizing, or carrying out the project. The permitting process is used to determine if a project would jeopardize the continued existence of a listed species and what measures would be required to avoid jeopardizing the species. *Take* under federal definition means to harass, harm (which includes habitat modification), pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. Proposed or candidate species do not have the full protection of the ESA; however, the USFWS and NMFS advise project applicants that they could be elevated to listed status at any time.

Migratory Bird Treaty Act

The MBTA of 1918 implements four international conservation treaties that the United States entered into with Canada in 1916, Mexico in 1936, Japan in 1972, and Russia in 1976. It is intended to ensure the sustainability of populations of all protected migratory bird species. The law has been amended with the signing of each treaty, as well as when any of the treaties were amended, such as with Mexico in 1976 and Canada in 1995. The MBTA prohibits the take (including killing, capturing, selling, trading, and transport) of protected migratory bird species without prior authorization by the USFWS.

The list of migratory bird species protected by the law, in regulations at 50 CFR Part 10.13, is primarily based on bird families and species included in the four international treaties. A migratory bird species is included on the list if it meets one or more of the following criteria:

1. It occurs in the United States or United States territories as the result of natural biological or ecological processes and is currently, or was previously listed as, a species or part of a family protected by one of the four international treaties or their amendments
2. Revised taxonomy results in it being newly split from a species that was previously on the list, and the new species occurs in the United States or United States territories as the result of natural biological or ecological processes
3. New evidence exists for its natural occurrence in the United States or United States territories resulting from natural distributional changes and the species occurs in a protected family

In 2004, the Migratory Bird Treaty Reform Act limited the scope of the MBTA by stating that the MBTA applies only to migratory bird species that are native to the United States or United States territories, and that a native migratory bird species is one that is present as a result of natural biological or ecological processes. The Migratory Bird Treaty Reform Act requires that the USFWS publish a list of all nonnative, human-introduced bird species to which the MBTA does not apply, and an updated list was published in 2020. The 2020 update identifies species belonging to biological families referred to in treaties the MBTA implements but are not protected because their presence in the United States or United States territories is solely the result of intentional or unintentional human-assisted introductions.

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act prohibits anyone, without a permit issued by the USFWS, from taking bald or golden eagles, including their parts (including feathers), nests, or eggs. The Bald and Golden Eagle Protection Act provides criminal penalties for persons who "take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or any manner, any bald eagle...[or any golden eagle], alive or dead, or any part, nest, or egg thereof." The Act defines *take* as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb."

Disturb means "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior."

In addition to immediate impacts, this definition also covers impacts that result from human-induced alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle's return, such alterations agitate or bother an eagle to a degree that interferes with or interrupts normal breeding, feeding, or sheltering habits, and causes injury, death or nest abandonment.

California Department of Fish and Wildlife

The CDFW derives its authority from the Fish and Game Code of California and administers several State laws protecting fish and wildlife resources and the habitats upon which they depend.

California Endangered Species Act

The California Endangered Species Act (CESA) (Fish and Game Code Section 2050 et seq.) prohibits take of state listed threatened or endangered. *Take* under CESA is defined as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill" (Fish and Game Code Section 86). This definition does not prohibit indirect harm by way of habitat modification, except where such harm is the proximate cause of death of a listed species. Where incidental take would occur during construction or other lawful activities, CESA allows the CDFW to issue an Incidental Take Permit upon finding, among other requirements, that impacts to the species have been minimized and fully mitigated. Unlike the federal ESA, CESA's protections extend to candidate species during the period (typically one year) while the California Fish and Game Commission decides whether the species warrants CESA listing.

Native Plant Protection Act

The CDFW also has authority to administer the Native Plant Protection Act (NPPA) (Fish and Game Code Section 1900 et seq.). The NPPA requires the CDFW to establish criteria for determining if a species, subspecies, or variety of native plant is endangered or rare, and prohibits the take of listed plant species. Effective in 2015, CDFW promulgated regulations (14 California Code of Regulations [CCR] 786.9) under the authority of the NPPA, establishing that the CESA's permitting procedures would be applied to plants

listed under the NPPA as "Rare." With this change, there is little practical difference for the regulated public between plants listed under CESA and those listed under the NPPA.

Fully Protected Species Laws

The CDFW enforces Sections 3511, 4700, 5050, and 5515 of the Fish and Game Code, which prohibit take of species designated as Fully Protected. The CDFW is not allowed to issue an Incidental Take Permit for Fully Protected species; therefore, impacts to these species must be avoided. The exception is situations where a Natural Community Conservation Plan is in place that authorizes take of the Fully Protected species.

Avian Protection Laws

California Fish and Game Code Sections 3503, 3503.5, and 3513 describe unlawful take, possession, or destruction of native birds, nests, and eggs. Section 3503.5 of the Code protects all birds-of-prey and their eggs and nests against take, possession, or destruction of nests or eggs. Section 3513 makes it a State-level offense to take any bird in violation of the federal MBTA.

Protection of Lakes and Streambeds

California Fish and Game Code Section 1602 states that it is unlawful for any person to "substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake" without first notifying the CDFW of that activity. Thereafter, if CDFW determines and informs the entity that the activity will not substantially adversely affect any existing fish or wildlife resources, the entity may commence the activity. If, however, California Department of Fish and Game determines that the activity may substantially adversely affect an existing fish or wildlife resource, the entity may be required to obtain from CDFW a Lake and Streambed Alteration Agreement (LSAA), which will include reasonable measures necessary to protect the affected resource(s), before the entity may conduct the activity described in the notification. Upon receiving a complete Notification of LSAA, the CDFW has 60 days to present the entity with a Draft LSAA. Upon review of the Draft LSAA by the applicant, any problematic terms are negotiated with CDFW and a final LSAA is executed.

The CDFW has not defined the term *stream* for the purposes of implementing its regulatory program under Section 1602, and the agency has not promulgated regulations directing how jurisdictional streambeds may be identified, or how their limits should be delineated. However, four relevant sources of information offer insight as to the appropriate limits of CDFW jurisdiction as discussed below.

The plain language of Section 1602 of California Fish and Game Code establishes the following general concepts:

- References "river," "stream," and "lake"
- References "natural flow"
- References "bed," "bank," and "channel"

Applicable court decisions, in particular *Rutherford v. State of California* (188 Cal App. 3d 1276 (1987), which interpreted Section 1602's use of "stream" to be as defined in common law. The Court indicated that a "stream" is commonly understood to:

- Have a source and a terminus
- Have banks and a channel
- Convey flow at least periodically, but need not flow continuously and may at times appear outwardly dry

- Represent the depression between the banks worn by the regular and usual flow of the water
- Include the area between the opposing banks measured from the foot of the banks from the top of the water at its ordinary stage, including intervening sand bars
- Include the land that is covered by the water in its ordinary low stage
- Include lands below the OHWM

CDFW regulations defining "stream" for other purposes, including sport fishing (14 CCR 1.72) and streambed alterations associated with cannabis production (14 CCR 722[c][21]), which indicate that a stream:

- Flows at least periodically or intermittently
- Flows through a bed or channel having banks
- Supports fish or aquatic life
- Can be dry for a period of time
- Includes watercourses where surface or subsurface flow supports or has supported riparian vegetation

Guidance documents, including A Field Guide to Lake and Streambed Alteration Agreements (California Department of Fish and Game 1994) and Methods to Describe and Delineate Episodic Stream Processes on Arid Landscapes for Permitting Utility-Scale Solar Power Plants (Brady and Vyverberg 2013), which suggest the following:

- A stream may flow perennially or episodically
- A stream is defined by the course in which water currently flows, or has flowed during the historic hydrologic course regime (approximately the last 200 years)
- Width of a stream course can reasonably be identified by physical or biological indicators
- A stream may have one or more channels (single thread versus compound form)
- Features such as braided channels, low-flow channels, active channels, banks associated with secondary channels, floodplains, islands, and stream-associated vegetation, are interconnected parts of the watercourse
- Canals, aqueducts, irrigation ditches, and other means of water conveyance can be considered streams if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife
- Biologic components of a stream may include aquatic and riparian vegetation, all aquatic wildlife including fish, amphibians, reptiles, invertebrates, and terrestrial species which derive benefits from the stream system
- The lateral extent of a stream can be measured in different ways depending on the particular situation and the type of fish or wildlife resource at risk

The tenets listed above, among others, are applied to establish the boundaries of streambeds in various environments. Importance of each factor may be weighted based on site-specific considerations and the applicability of the indicators to the streambed at hand.

Local Jurisdiction

City of Hanford 2035 General Plan

The project site is located within the City of Hanford and is subject to the City's land use authority and local policies that implement protection of biological resources through discretionary approvals and

CEQA review. The City's 2035 General Plan Policy Document includes biological resource goals and policies within the Open Space, Conservation & Recreation element. These include Goal O4 (Protection of natural habitat and other biological resources) and policies addressing preservation of natural open space, protection of wetlands/riparian corridors and vernal pools (where present), evaluation of biological impacts during project review, and management of invasive species and trees.

- **Policy O31 (Provision of Open Space Areas):** Preserve and enhance natural open space areas.
- **Policy O32 (Wetland and Riparian Corridors):** Where appropriate and feasible, establish permanent mechanisms to protect wetlands and riparian corridors.
- **Policy O33 (Vernal Pools):** Identify and protect vernal pools that may be located in the Planning Area.
- **Policy O35 (Impacts from Development):** Ensure potential impacts to biological resources and sensitive habitat are carefully evaluated when considering development projects.
- **Policy O36 (Nonnative Invasive Species):** Manage or eliminate nonnative invasive species from City-owned property and open space.
- **Policy O37 (Mature Trees):** Promote the preservation of existing mature trees and encourage the planting of appropriate shade trees in new developments.
- **Policy O38 (Native Tree Species and Drought Tolerant Vegetation)**: Encourage the planting of native tree species and drought-tolerant vegetation.
- **Policy O39 (Endangered Wildlife and Habitat)**: Establish programs in connection with environmental review processes to protect endangered wildlife and their habitats.
- **Policy O40 (Sensitive Wildlife)**: Work with state, federal, and local agencies on the preservation of sensitive wildlife species in the City.

In addition to General Plan policy, the City's Municipal Code includes regulations protecting street trees and heritage trees (Title 12.12, "Street Trees and Shrubs"). The code requires disclosure of heritage trees during discretionary development review and may require preparation of a tree protection plan by a certified arborist for construction work within a specified radius of a designated protected/heritage tree, with fencing and construction restrictions to protect the tree's critical root zone. The code also includes tree removal permitting and replacement/reforestation requirements (including replacement ratios and/or in-lieu payment where replanting is not feasible).

APPENDIX D

CULTURAL RESOURCES STUDY

Cultural Resources Assessment
for the
Maverik Hanford Project,
City of Hanford, Kings County, California

January 13, 2026

Prepared By:

Jessica Mauck, MA, RPA

Cultural Resources Management

Kimley-Horn and Associates, Inc.

3801 University Ave, Suite 300

Riverside, CA 92501

Kimley»Horn

EXECUTIVE SUMMARY

Kimley-Horn and Associates, Inc. (Kimley-Horn) is under contract to complete a Cultural Resources Assessment for the proposed Maverik Hanford Project (Project) in the City of Hanford (City), Kings County, California. The proposed Project involves the subdivision of a 21.4-acre parcel into two parcels, including a 15.3-acre parcel that would remain undeveloped and a 6.1-acre parcel that would be developed with a convenience store and fueling station. The project is subject to environmental review and consideration pursuant to the California Environmental Quality Act (CEQA) with the City of Hanford acting as the Lead Agency. This report is intended to support the City's review and consideration of the Project and potential impacts it may have on the environment specifically as it relates to cultural resources.

Kimley-Horn staff requested a Sacred Lands File search through the Native American Heritage Commission, which came back negative. Kimley-Horn staff additionally requested a cultural resources records search through the Southern San Joaquin Valley Information Center for the Project area and 0.5-mile buffer. The results noted that two (2) cultural resources studies have been conducted that partially include the Project area. Both studies were conducted in support of the Highway 198 interchange development and, as such, focused on the right-of-way that intersects with the Project area along its northern and eastern edges. In addition, a total of nine (9) cultural resources studies have taken place within 0.5 miles of the Project area, resulting in the identification of two (2) cultural resources: P-16-000068 (historic ditch) and P-16-000122 (Southern Pacific Railroad). No prehistoric cultural resources were identified within the 0.5-mile record search buffer, and no prehistoric or historic cultural resources were identified within the Project area as a result of the records search. Staff also conducted a review the National Register of Historic Places, California Register of Historical Resources, National Historic Landmarks list, the Built Environment Resource Directory, and historic aerials. Though no listed resources were identified within the Project area, the review of historic aerials noted a single-family residence within the Project area that was initially erected on site prior to 1957. Finally, Kimley-Horn staff conducted a cultural resources survey of the Project area, which resulted in the identification and recordation of the historic-aged single-family residence. No other resources were identified as a result of this study.

Kimley-Horn evaluated the newly recorded cultural resource, KHA-HMA-2024-01, and recommended the resource as not eligible for listing in the California Register of Historical Resources (CRHR). As such, no known "historical resources" or "unique archaeological resources", as defined by CEQA, were identified within the Project area. It is recommended that mitigation measures or conditions of approval be included that outline the process for treatment of any cultural resources or human remains inadvertently discovered during Project implementation. With these mitigation measures in place, impacts to cultural resources as a result of the proposed Project would be less than significant.

INTRODUCTION

Kimley-Horn and Associates, Inc. (Kimley-Horn) is under contract to complete a Cultural Resources Assessment for the proposed Maverik Hanford Project (Project) in the City of Hanford (City), Kings County, California. The project is subject to environmental review and consideration pursuant to the California Environmental Quality Act (CEQA) with the City of Hanford acting as the Lead Agency. This report is intended to support the City's review and consideration of the Project and potential impacts it may have on the environment specifically as it relates to cultural resources. Efforts conducted for this assessment include a pedestrian survey of the Project area, cultural resources records search, Sacred Lands File search, literature review, review of cultural databases and repositories, and review of historic maps and imagery. This report presents the results of those efforts, as well as recommended mitigation measures for the Project.

PROJECT DESCRIPTION

The Project area is located at the southwest corner of 12th Avenue and Highway 198 in Hanford, Kings County, California (Figure 1). The Project area consists of approximately 21.4 acres of mostly undeveloped, but highly disturbed, land and a single-family residence in the southeastern corner of the parcel (Figure 2). The proposed Project involves the subdivision of a 21.4-acre parcel into two parcels, including a 15.3-acre parcel that would remain undeveloped and a 6.1-acre parcel that would be developed with a convenience store and fueling station. The store is approximately 5,982 square feet with eight (8) fuel dispensers and canopy in front of the store and five (5) additional dispensers and canopy for commercial fueling at the back of the store, for a total of 13 fueling positions on site. The development will provide fueling, packaged beer and wine sales, as well as fresh food items.

REGULATORY SETTING

California Environmental Quality Act

The California Environmental Quality Act (CEQA) applies to all discretionary projects undertaken or subject to approval by the state's public agencies (California Code of Regulations 14(3), § 15002(i)). Under CEQA, "A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment" (Cal. Code Regs. Tit. 14(3), § 15064.5(b)). Guidelines for Implementation of the California Environmental Quality Act (State CEQA Guidelines) section 15064.5(a) defines a "historical resource" as a resource that meets one or more of the following criteria:

- Listed in, or eligible for listing in, the California Register of Historical Resources (California Register)
- Listed in a local register of historical resources (as defined at Cal. Public Res. Code § 5020.1(k))
- Identified as significant in a historical resource survey meeting the requirements of § 5024.1(g) of the Cal. Public Res. Code
- Determined to be a historical resource by a project's lead agency (Cal. Code Regs. Tit. 14(3), § 15064.5(a))

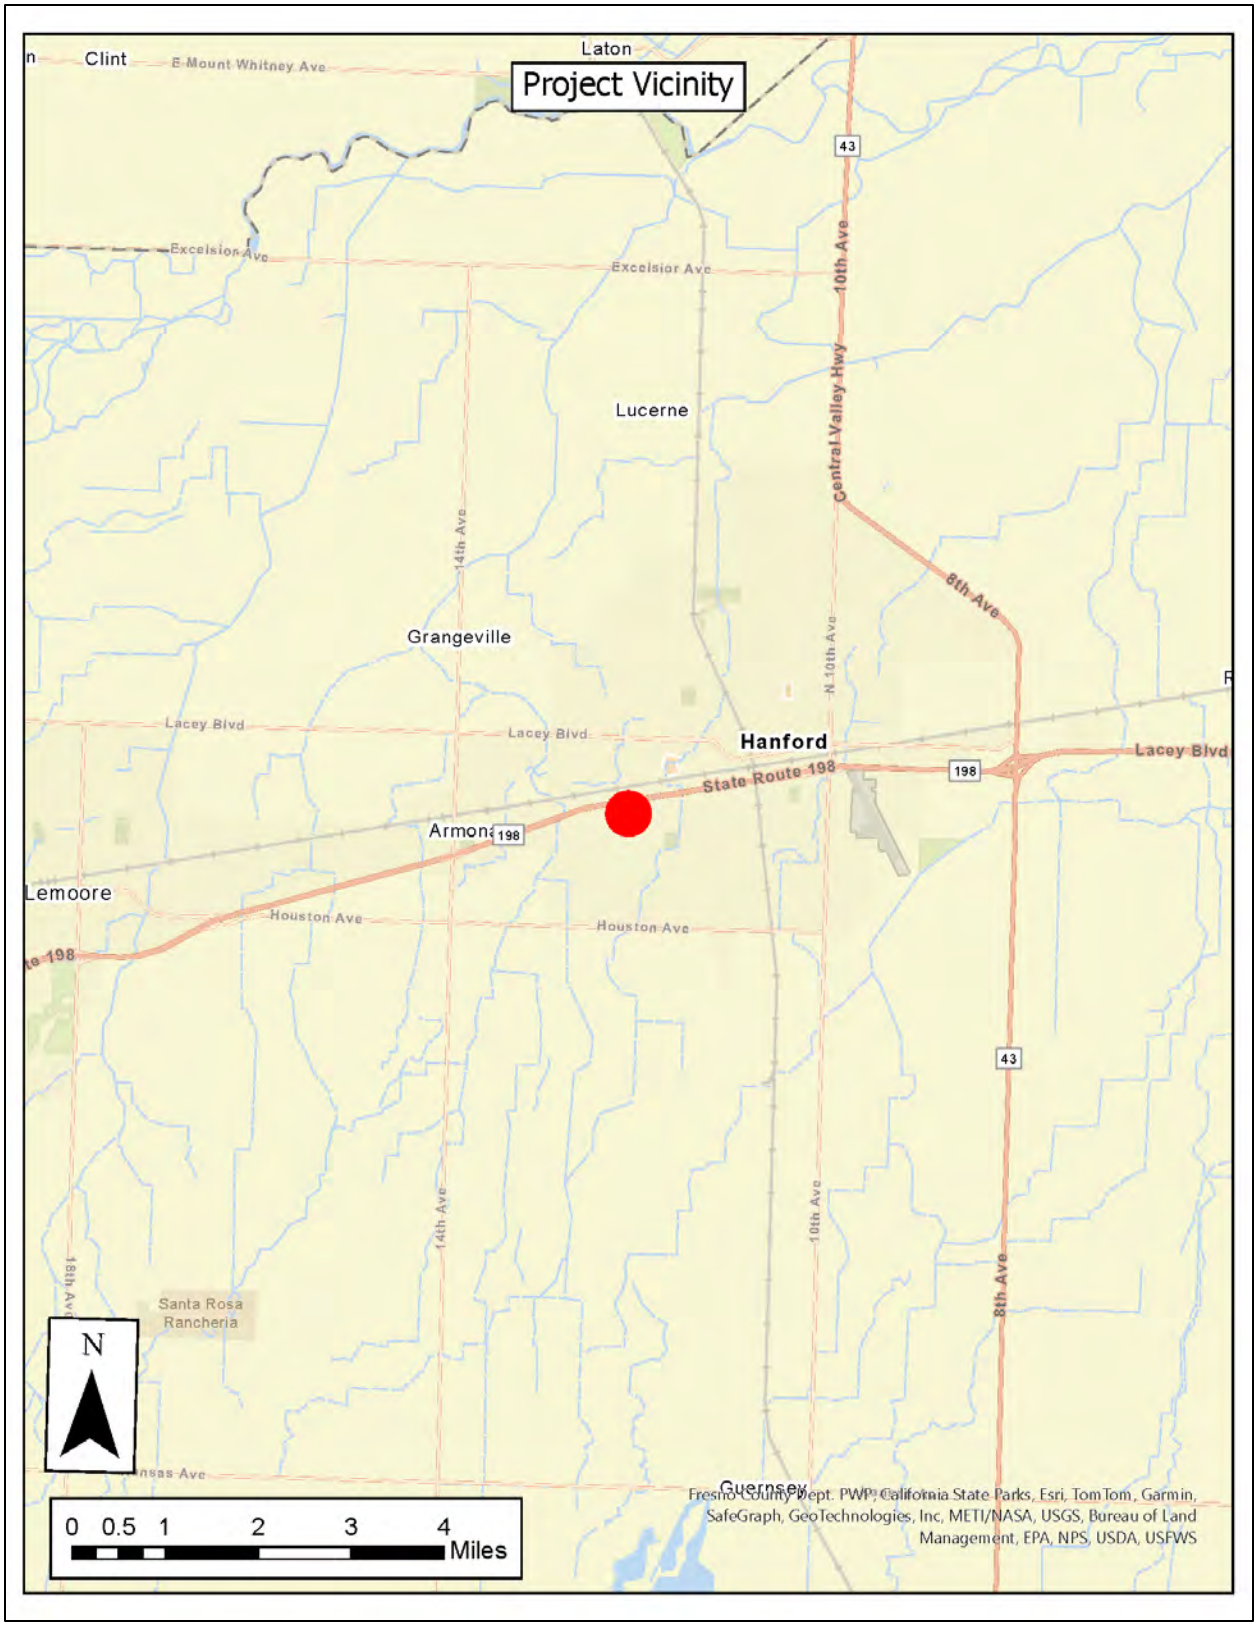

Figure 1: Project Vicinity Map

Figure 2: Project Area Map

A historical resource consists of "Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California… Generally, a resource shall be considered by the lead agency to be 'historically significant' if the resource meets the criteria for listing in the California Register of Historical Resources" (Cal. Code Regs. Tit. 14(3), § 15064.5(a)(3)). The significance of a historical resource is impaired when a project demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for the California Register. If an impact on a historical or archaeological resource is significant, CEQA requires feasible measures to minimize the impact (State CEQA Guidelines § 15126.4 (a)(1)). Mitigation of significant impacts must lessen or eliminate the physical impact that the project will have on the resource. Section 5024.1 of the Cal. Public Res. Code established the California Register. Generally, a resource is considered by the lead agency to be "historically significant" if the resource meets the criteria for listing in the California Register (Cal. Code Regs. tit. 14(3), § 15064.5(a)(3)).

Finally, CEQA requires that significant effects on unique archaeological resources be considered and addressed. CEQA defines a unique archaeological resource as any archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information.
- Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

CEQA Guidelines Section 15064.5 Appendix G includes significance criteria relative to archaeological and historical resources. These have been utilized as thresholds of significance here, and a project would have a significant environmental impact if it would:

- Cause a substantial adverse change in the significance of a historical resource as defined in section 10564.5;
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 10564.5;
- Disturb any human remains, include those interred outside of formal cemeteries.

California Public Resources Code

California Public Resources Code (PRC) § 5024.1 establishes the California Register of Historical Resources (CRHR). The register lists all California properties considered to be significant historical resources. The CRHR also includes all properties listed or determined eligible for listing in the NRHP, including properties evaluated and determined eligible under § 106.

California Public Resources Code (PRC) § 5020 to 5029.5 continued the former Historical Landmarks Advisory Committee as the State Historical Resources Commission. The commission oversees the administration of the California Register of Historical Resources and is responsible for designating State Historical Landmarks and Historical Points of Interest.

California Public Resources Code (PRC) § 5079 to 5079.65 define the functions and duties of the Office of Historic Preservation, which administers federal- and state-mandated historic preservation programs in California as well as the California Heritage Fund.

California Public Resources Code (PRC) § 5097.9 to 5097.991 provide protection to Native American historical and cultural resources and sacred sites; identify the powers and duties of the Native American Heritage Commission (NAHC); require that descendants be notified when Native American human remains are discovered; and provide for treatment and disposition of human remains and associated grave goods.

California Health and Safety Code

California Health and Safety Code § 7050.5-7055 govern the process for reporting inadvertent discoveries of human remains to the County Coroner; the process for the County Coroner to report human remains of Native American descent to the Native American Heritage Commission (NAHC); and the protections offered against removal or desecration of human remains.

California Code of Regulations

The California Code of Regulations govern the nomination of resources to the California Register of Historical Resources (CRHR) (14 California Code of Regulations [CCR] § 4850). The regulations set forth the criteria for eligibility as well as guidelines for assessing historical integrity and resources that have special considerations.

California Register of Historical Resources (CRHR)

The State Historical Resources Commission has designed this program for use by state and local agencies, private groups, and citizens to identify, evaluate, register, and protect California's historical resources. The California Register of Historic Resources (CRHR) is the authoritative guide to the state's significant historical and archeological resources.

The California Register of Historic Resources (CRHR) program encourages public recognition and protection of resources of architectural, historical, archeological, and cultural significance; identifies historical resources for state and local planning purposes; determines eligibility for state historic preservation grant funding; and affords certain protections under the California Environmental Quality Act (CEQA). To be eligible for listing in the CRHR, a resource must meet at least one of the following criteria:

- Is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- Is associated with the lives of persons important to local, California, or national history.

- Embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of a master; or possesses high artistic values.
- Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

In addition to having significance, resources must have integrity for the period of significance. The period of significance is the date or span of time within which significant events transpired or significant individuals made their important contributions. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics or historic fabric that existed during the resource's period of significance. Alterations to a resource or changes in its use over time may change its historical, cultural, or architectural significance. Simply, resources must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. A resource that has lost its historic character or appearance may still have sufficient integrity for the CRHR if, under Criterion 4, it maintains the potential to yield significant scientific or historical information or specific data.

Isolated finds, such as a single artifact with no other associated cultural materials, are generally considered to be ineligible for listing in the CRHR. However, the nature of the isolated resource and any available ethnographic data regarding affiliated Native American populations should be carefully considered during the evaluation process, particularly as it relates to potential eligibility under Criterion 4.

California Historical Landmarks

California Historical Landmarks are buildings, structures, sites, or places that have been determined to have statewide historical significance. The resource must be approved for designation by the County Board of Supervisors or the City/Town Council in whose jurisdiction it is located; be recommended by the State Historical Resources Commission; and be officially designated by the Director of California State Parks. A resource must meet at least one of these following criteria:

- Be the first, last, only, or most significant of its type in the state or within a large geographic region (Northern, Central, or Southern California).
- Be associated with an individual or group having a profound influence on the history of California.
- Be a prototype of, or an outstanding example of, a period, style, architectural movement or construction or is one of the more notable works or the best surviving work in a region of a pioneer architect, designer, or master builder.

California Points of Historical Interest

California Points of Historical Interest are sites, buildings, features, or events that are of local (city or county) significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. Points of Historical Interest designated after December 1997 and recommended by the State Historical Resources Commission are also listed in the CRHR. No historical resource may be designated as both a landmark and a point. If a point is subsequently

granted status as a landmark, the point designation is retired. To be eligible for designation as a Point of Historical Interest, a resource must meet at least one of the following criteria:

- Be the first, last, only, or most significant of its type within the local geographic region (city or county).
- Be associated with an individual or group having a profound influence on the history of the local area.
- Be a prototype of, or an outstanding example of, a period, style, architectural movement or construction or be one of the more notable works or the best surviving work in the local region of a pioneer architect, designer or master builder.

California Historic Building Code

The California Historic Building Code—California Code of Regulations, Title 24, Part 8—provides regulations for the preservation, restoration, rehabilitation, relocation, or reconstruction of buildings or properties designated as qualified historical buildings or properties. The California Historic Building Code is intended to provide solutions for the preservation of qualified historical buildings or properties, to promote sustainability, to provide access for persons with disabilities, to provide a cost-effective approach to preservation, and to provide for the reasonable safety of the occupants or users.

Kings County

The Conservation Element of the 2035 Kings County General Plan includes goals and policies related to the protection and preservation of cultural resources (Kings County 2010).

Goals:

- RC Goal 1: Preserve significant historical and archaeological sites and structures that represent the ethnic, cultural, and economic groups that have lived and worked in Kings County.

Policies:

- RC Policy 1.1.1: List historic sites and structures designated, or proposed for designation, as County landmarks in specific or area plans or local area development guidelines.
- RC Policy 1.1.2: Direct proposed developments that may affect proposed or designated historic sites or County landmarks to the Kings County Museum Advisory Committee or other similarly purposed advisory body under the Kings County Parks and Recreation Advisory Commission for review and comment.
- RC Policy 1.1.3: Encourage the protection of cultural and archaeological sites with potential for placement on the National Register of Historic Places and/or inclusion in the California Inventory of Historic Resources.
- RC Policy 1.1.4: Refer applications that involve the removal, destruction, or alteration of proposed or designated historic sites or County landmarks to the Kings County Museum Advisory Committee or its successor for recommended mitigation measures.
- RC Policy 1.2.1: Participate in and support efforts to identify significant cultural and archaeological resources and protect those resources in accordance to Public Resources Code 5097.9 and 5097.993.

- RC Policy 1.2.2: Continue to solicit input from local Native American communities in cases where development may result in disturbance to sites containing evidence of Native American Activity and/or to sites of cultural importance.
- RC Policy 1.2.3: Address archaeological and cultural resources in accordance with the California Environmental Quality Act (CEQA) for discretionary land use applications.
- RC Policy 1.2.4: The County will respectfully comply with Government Code §65352.3 (SB18) by conducting formal consultations with tribes as identified by the Native American Heritage Commission on all general plan and specific plan amendments.
- RC Policy 1.2.5: The County will respectfully comply with Government Code §6254.(r) and 6254.10 by protecting confidential information concerning Native American cultural resources. For example adopting internal procedures such as keeping confidential archaeological reports away from public view or discussion in public meetings.
- RC Policy 1.2.6: The County shall work in good faith with the Santa Rosa Rancheria Tachi Yokut Tribe ("Tribe"), the developer and other parties if the Tribe requests return of certain Native American artifacts from private development projects (e.g. for interpretive or educational value). The developer is expected to act in good faith when considering the Tribe's request for artifacts. Artifacts not desired by the Tribe shall be placed in a qualified repository as established by the California State Historical Resources Commission (see Guidelines for the Curation of Archaeological Collections, May 1993). If no facility is available, then all artifacts shall be donated to the Tribe.
- RC Policy 1.2.7: The County shall work with the developer of any "gated community" (i.e. not open to the public), to ensure that Native Americans are allowed future access, under reasonable conditions, to view/visit known sites within the "gated community." If a village site is identified within a gated community project, the developer shall be conditioned to allow future access by Native Americans to view/visit that village site.

City of Hanford

The City of Hanford does not maintain an extensive list of cultural and/or historical ordinances, nor has a large-scale Historic Context Statement been prepared by the City that identifies periods, areas, and resource types of potential local significance. However, the City's 2035 General Plan Policy Document prepared in 2017 highlights the cultural and historic significance of the City's downtown area. Notable historic resources within the City's downtown include the Hanford Carnegie Library, the Kings County Courthouse, the Taoist Temple, and China Alley.

ENVIRONMENTAL SETTING

The Project area is situated in the San Joaquin Valley, which is well-known for its rich, fertile soil that has made the region's a major hub of agricultural industry. The Project area is flat with 0-2% slope, and the elevation is 242 feet above mean sea level. Subsurface soil composition consists of Nord complex fine loamy sand and, at deeper levels, stratified sandy loam to loam (Web Soil Survey 2024). The Project area is mapped as an alluvial fan that maintains Pleistocene aged lake deposits. As many water sources were channelized during the historic era, the Project area does not maintain any active marsh-like environment,

and is located between the Last Chance Ditch and the New Deal Canal (Oliver and Robbins 1978; U.S. Geological Survey). The Project area is surrounded by vacant land to the west, a highway with car dealerships and hotels to the north and northeast, vacant land and a tractor supply to the east, and a care center to the south. The immediate area shows signs of recent development and redevelopment. The Project area is vacant, with the exception of a single-family residence on the southeastern corner facing 12th Avenue, with contains little vegetation.

PREHISTORIC AND HISTORIC SETTING

Ethnographic Setting

The Project area is within the ancestral territory of the Southern Valley Yokuts, a branch of the broader Yokuts people whose territory expanded a broad range in California's Central Valley (Kroeber 1925). Specifically, the numerous Yokut communities were divided into sub-regions and are now referenced as the Foothill Yokuts, Northern Valley Yokuts, and Southern Valley Yokuts. Southern Valley Yokuts occupied Buena Vista, Kern, and Tulare Lakes and adjacent valley areas, as well as lower Kaweah, Kern, Kings, and Tule rivers. The area of Hanford is associated with two ethnographic Yokut villages: *Gaiwashue* to the south and *Telweyit* (Summit Lake) to the west. Their territory maintained an abundance of water sources across various valley areas that contributed to their diverse diet of both land and water-based animals (i.e. fish, mussels, elk, deer, etc.). Due to their resource-rich environment, population sizes of Yokuts were large, with the local communities estimated to between 15,000 and 30,000 people prior to European contact (Wallace 1978). Yokuts hunted, fished, and gathered a variety of plant and animal resources for their subsistence, including deer, rabbit, squirrel, seeds, roots, trout, and shellfish, to name a few. The Yokuts were skilled basket weavers and used the baskets for cooking, gathering, and storage. Villages were established near permanent water sources and included oval-shaped dwellings that were covered with tule mats (Arkush 1993). Records show that the long history of European colonization and harmful displacement of Native Americans initially began in 1540 as a result of Hernando de Alarcon visiting the area during exploration, which was quickly followed by an expedition led by Juan Rodríguez Cabrillo to explore the California coast from 1542 to 1543. However, active colonization of the region by Spain did not begin until over 200 years later upon the arrival of Junipero Serra in 1769 (Garfinkel et al. 2019).

Prehistoric Setting

The archaeological record indicates that human occupation in central California extends to at least 5,000-7,000 years. The cultural sequence for the Central Valley was defined as the Central California Taxonomic System (CCTS). The classification scheme consists of three horizons (Early, Middle, and Late Horizon) and is still commonly used amongst archaeologists. Table 1 outlines the three horizons and is adapted from Moratto (1984).

Table 1: Cultural Sequence in Central California

Time	Sequence	Description
3000-500 B.C.	Early Horizon	Ancient lakes dry up as a result of climatic changes; milling stones found in abundance; plant food emphasis; use of the atlatl; little hunting; most artifacts manufactured from local materials
500 B.C.-900 A.D.	Middle Horizon	Diversification of economy; sedentism begins to develop, accompanied by population growth and expansion; emphasis on hunting; mortars and pestles are common; shell beads gain importance; increase in sociopolitical complexity; sites frequently contain ash and charcoal, FAR, and fish, bird and mammal and faunal remains
900-1800 A.D.	Late Horizon	Common site type; sites often contain rich, greasy midden with bone and FAR; use of the bow-and arrow; dietary emphasis on acorn and seed gathering; regularized exchange and clam disk bead money economy; well-established territories

Historic Setting

The Contact/Historic-era of California is generally divided into three periods: the Spanish or Mission Period (1769-1821), the Mexican or Rancho Period (1821-1848), and the American Period (1848 to present). Pedro Fages explored the San Joaquin Valley and encountered the Yokuts in 1772. The establishment of the mission system caused the displacement and disruption of many Native American communities across California due to forced labor and introduction of European diseases. In 1821, Mexico overthrew Spanish rule, and the Missions began to decline. By 1833, the Mexican government passed the Secularization Act and the Missions, reorganized as parish churches, lost their vast land holdings. Land throughout present-day California was organized into Mexican land grants, and these large pastoral estates conducted cattle ranching during the Mexican or Rancho Period (Bacich 2017).

The Treaty of Guadalupe Hidalgo in 1848 ended the Mexican-American War and the Mexican Rancho Period, triggering the start of the American Period (Del Castillo 1992). The southern San Joaquin Valley had remained largely uninhabited by non-Native populations until the start of the American Period, when the abundance of local resources brought an influx of farmers, settlers, traders, miners, and explorers. The Euro-American population greatly increased in California as a result of the Gold Rush. At this time, local Yokut communities began to see harsh impacts due to the introduction of new diseases and removal from their ancestral lands. After California achieved statehood in the U.S. in 1850, settlers began taking action to drain local stagnant bodies of water due to fear of disease, which only served to increase the settler population further. By the 1870s, the local region relied heavily on agriculture as the base of its economy and saw success with producing various nuts, citrus fruits, wheat, corn, rice, gourd vegetables, and cotton. By 1873, the Tule River Indian Reservation was established in the nearby Sierra Nevada Mountains, and very few Native Americans remained in the valley (Garfinkel et al. 2019).

The area of what would become Hanford saw its beginnings in 1877 with the establishment of the Southern Pacific Railway from Goshen to Coalinga and the presence of a Chinese shepherd's camp along its path. This camp was later established as a settlement named after the auditor of the railroad, James Madison Hanford, which quickly become a hub for trade and commerce in the region. While a townsite complete with a downtown area was established by 1887, the business district was destroyed by a fire. Though the idea of incorporation was initially avoided due to concerns about taxes, another devastating fire in 1891 that again destroyed Hanford's downtown led to recognition that the town required incorporation to ensure they had sufficient fire protection in the future (City of Hanford History). As such, the City of Hanford was incorporated in August of 1891, and became the seat of Kings County after its establishment in 1893. Following its earned Cityhood, Hanford established schools, churches, an opera house, and a civic center for the local community. The City continued to grow at a steady pace and to rely on agriculture as its main economy through the early 20th century (City of Hanford History).

METHODS

All efforts made for the completion of this report were completed pursuant to requirements set forth in the CEQA. This study is intended to identify whether cultural resources are located within the Project area, whether any cultural resources are potentially significant pursuant to the above-referenced regulations and standards, and to develop specific recommendations that will address potential impacts to existing or potential resources. Tasks completed include:

- A cultural resources records search through the Southern San Joaquin Valley Information Center (SSJVIC) to identify any studies conducted and/or cultural resources recorded within or adjacent to the Project area,
- A Sacred Lands File (SLF) search through the Native American Heritage Commission (NAHC),
- A pedestrian survey of the of the Project area and recordation of identified cultural resources,
- A review of cultural resource databases and historical maps, and
- Development of recommendations and/or mitigation measures for cultural resources identified or potentially unrecorded within the Project area.

RESULTS

Cultural Resources Record Search

Kimley-Horn archaeologists requested a cultural resources record search through the SSJVIC for the Project area and 0.5-mile buffer, the results for which were received on September 30, 2024 (Figure 3). The results noted that two (2) cultural resources studies from 1981 and 2007 have been conducted that partially include the Project area (Table 2). No cultural resources were identified in the Project area during the previous surveys. Both studies were conducted in support of the Highway 198 interchange development and, as such, focused on the right-of-way that intersects with the Project area along its northern and eastern edges. Therefore, most of the Project area has not been previously surveyed.

In addition, a total of nine (9) cultural resources studies have taken place within 0.5 miles of the Project area, resulting in the identification of two (2) cultural resources: P-16-000068 (historic ditch) and P-16-000122 (Southern Pacific Railroad). P-16-00068 was recorded as a historic-period earthen ditch with a

light scatter of debris, including concrete and brick fragments, glass shards, whiteware, pipe fragments, and porcelain. P-16-000122 is the San Joaquin Valley Railroad, which was constructed in the 1870s and operated as a branch of the Southern Pacific Railroad. The resources in the buffer will not be impacted by the Project. No prehistoric cultural resources were identified within the 0.5-mile record search buffer, and no prehistoric or historic cultural resources were identified within the Project area as a result of the records search (Appendix A).

Table 2: Previous Cultural Studies in the Project Area

Report No.	Author	Year	Title
KI-00042	O'Connor, Denise and Clayton, A.B.	1981	Archaeological Survey Report for an Interchange at 12th Avenue on Route 198, Kings County 06-KIN-198, R16.4/R17.4 06100-178200
KI-00192	Lanner, David and Wohlgemuth, Eric	2007	Archaeological Survey Report for the 12th Avenue Interchange on State Route 198, Hanford, Kings County, California

Additional Research

Staff conducted a review of the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), National Historic Landmarks list (NHL), and Built Environment Resource Directory (BERD), though no cultural resources identified in the Project area during the review of these databases. Staff additionally reviewed historic topographic maps and imagery of the Project area to identify its land use history to ascertain a) prior disturbances and their impact to the Project area's archaeological sensitivity, and b) if any built environment resources located within the Project area are historic in age and what physical changes have occurred to the historic built environment over time. The earliest historic aerial images of the Project area date to 1957 and show an agricultural field with a small structure in the southeast coroner (Figure 4). The Project's greater vicinity also consisted of agricultural land with sparse, rural residences. By 1984, the structure in the Project area is slightly larger in size. The nearby area had been developed with Highway 189 and dirt roads trending north-south that would ultimately become 12th Avenue (Figure 5). Several residential neighborhoods had been constructed in the vicinity by the 1980s. The rear of the structure shows some development in the late 1980s and early 1990s, such as shed and some other staging areas for farming equipment, though much of this appears to be gone by the early 2000s. In general, imagery showcases few changes to the Project area between 1984 and the present day (Figure 6; Historic Aerials 2024). In summary, one historic-period structure was identified in the southeast corner of the Project area during the historical research. There were no historical landscape-level features associated with the Project area identified in the vicinity.

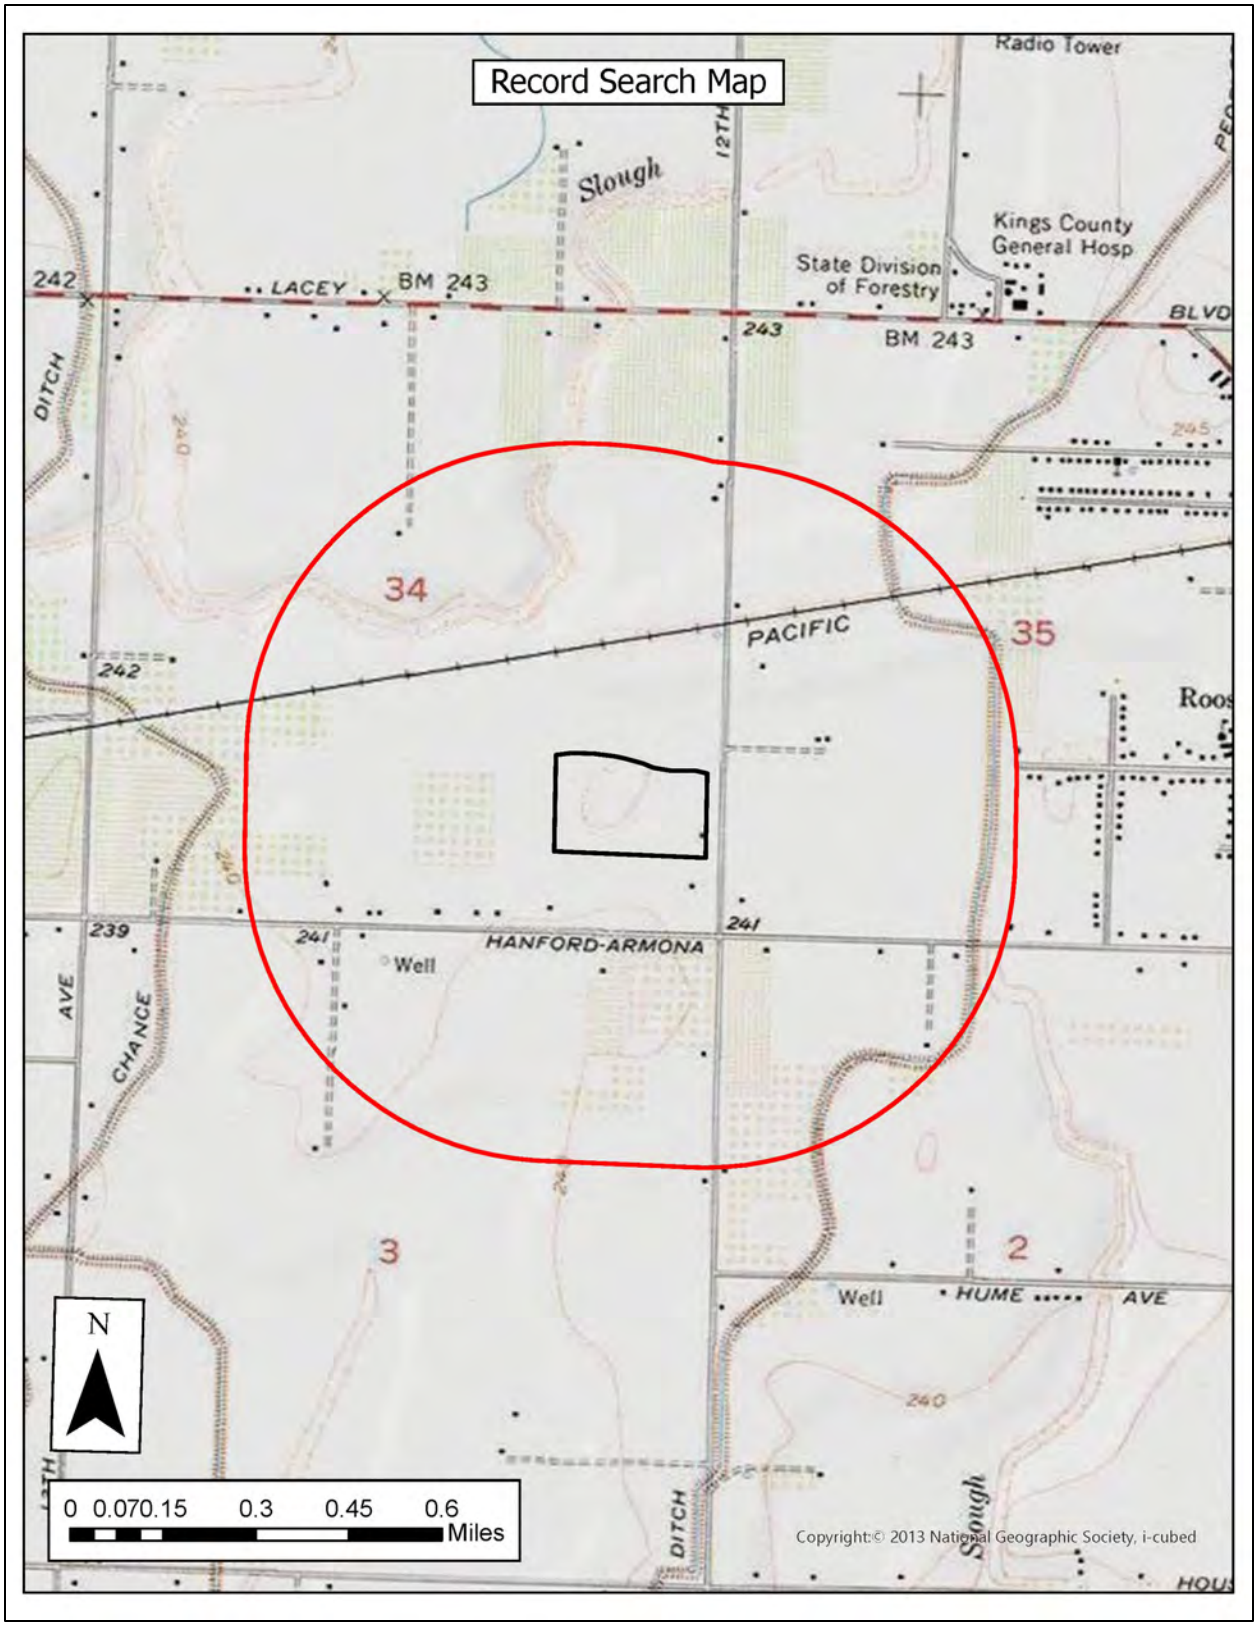

Figure 3: Record Search Map

Figure 4: Historic Aerial Image of Project Area (1957)

Figure 5: Historic Aerial Image of Project Area (1984)

Figure 6: Historic Aerial Image of Project Area (2022)

Sacred Lands File Search

The Native American Heritage Commission (NAHC) conducted a search of Sacred Lands Files (SLF) for the Project area and vicinity at the request of Kimley-Horn. The NAHC responded on September 24, 2024 and indicated that the results are negative for documented sacred lands in or near the Project area (Appendix B). As stated above, no previously recorded precontact Native American cultural resources were identified within 0.5 miles of the Project area. However, the NAHC also noted that the absence of listed site information in the SLF database does not indicate the absence of sacred lands. The City of Hanford will perform Assembly Bill (AB) 52 Consultation with the Native American Tribes. The results of the consultation are reported in the CEQA document for the Project.

Cultural Field Survey

Kimley-Horn Principal Investigator Jessica Mauck conducted an intensive-level pedestrian survey for the entire Project area on October 11, 2024 (Figure 7). The survey was conducted by walking parallel transects spaced approximately 15 meters apart outside of the area occupied by a residence. The residential area was surveyed via reconnaissance methods, as the property was occupied at the time of survey and had dogs on site. The entire Project area was included in the survey (see Figure 2). Due to prior clearing and grading, visibility was excellent (100%), and all surface exposures were carefully inspected for the presence of cultural resources (Figure 8). The survey conditions and weather were ideal, and no limitations were encountered. Digital photographs were taken at various points in the Project area. No archaeological resources were identified during the survey, though one historic-era single family residence was identified within the southeastern portion of the Project area and recorded as KHA-HMA-2024-01 (Appendix C).

SITE DESCRIPTION AND EVALUATION

A total of one (1) cultural resource was identified during the research and field efforts conducted for this study. The below section includes a description and evaluation of this resource, recorded as KHA-HMA-2024-01 (Appendix C).

KHA-HMA-2024-01

This site is a single-family residence that was initially developed prior to 1957 (Figure 9). However, City of Hanford parcel history information indicates the current building was re-developed in 1975 (Kings County Propery Information and Values Online). Research indicates the property was used as a residence associated with the agricultural uses of the remainder of the Project area, though no data related to the property's prior owners or relationship to the broader history of Hanford was uncovered. The structure is currently in fair condition, though has faced some deterioration/collapse on the southern exterior wall (Figure 10). The structure has a simple, rectangular design reminiscent of a 1960s/1970s Ranch Style House with a single roof over the primary residence on the north and an open carport with a single pole on the south. The roof is made of wood shakes while the exterior of the residence maintains vertical wood siding. Very little of the exterior seems to have been recently updated with the exception of white trimmed windows and rear sliding door. However, the north half of the property has a mixed material fence (brick columns with white vertical wood posts) that is aesthetically mis-matched to the structure and is not present in the 1984 aerial. In general, while the property exhibits some characteristics of its original use as a Ranch Style House, the structure does not strongly convey any particular style as a result of redevelopment in the 1970s and later modifications.

As a result of the research, survey, and information review conducted for this study, the below evaluation was conducted for KHA-HMA-2024-01:

- *Criterion 1:* Research was conducted as part of the study, and it was noted that this cultural resource is not associated with any important events. Therefore, it is recommended not eligible for the CRHR under Criterion 1.
- *Criterion 2:* Research has failed to indicate that the cultural resource is associated with the lives of persons important to our past, or that persons of significant regional or national stature can be linked to it. For these reasons, it is recommended not eligible for the CRHR under Criterion 2.
- *Criterion 3:* The resource is a single-family residence reconstructed in 1975 with later modifications. Though it retains some remnants of a Ranch Style House, it does not strongly convey any distinctive characteristics of a type, period, region, or method of construction, and does not represent the work of a master, possess high artistic values, or represent a significant or distinguishable entity whose components may lack individual distinction. For these reasons, it is recommended not eligible for the CRHR under Criterion 3.
- *Criterion 4:* This resource has not and is not likely to yield information important to the prehistory or history of the region. Therefore, it is recommended not eligible for the CRHR under Criterion 4.

As such, this cultural resource is not recommended eligible under any of the four criteria for listing on the CRHR, nor does the resource qualify as a "historical resource" under CEQA.

Figure 7: Project Area Overview

Figure 8: Example of Disturbed Soils in Project Area

Figure 9: Façade of KHA-HMA-2024-01

Figure 10: Deterioration/Collapse on Southern Exterior Wall

RECOMMENDATIONS

Kimley-Horn identified a total of one (1) cultural resource during the research and survey efforts conducted for this study: KHA-HMA-2024-01. Kimley-Horn conducted an evaluation for this resource and recommended it not eligible for listing in the CRHR. As such, no "historical resources" or "unique archaeological resources", as defined by CEQA, were identified within the Project area as a result of this study. However, though the likelihood of unidentified archaeological resources being present within the Project area is low, it is recommended that mitigation measures or conditions of approval be included that outline the process for the inadvertent discovery of cultural resources and/or human remains. With these mitigation measures in place, impacts to cultural resources would be less than significant. An example of such mitigation is included below:

- **CUL-1: Inadvertent Discoveries of Cultural Resources**
  In the event that cultural resources are discovered during Project implementation, all earthwork and ground-disturbing activities will halt within 50 feet of the discovery. An archaeologist meeting the Secretary of Interior's professional qualification standards (Qualified Archaeologist) will coordinate with the City of Hanford and identify whether the resource is potentially significant and if it requires further evaluation. If the cultural resources are Native American in origin, the Consulting Tribe(s), if any, must be immediately contacted and consulted regarding potential significance and treatment of the resource. For any potential significant cultural resources, the Qualified Archaeologist will make recommendations to the City to avoid or mitigate impacts to the resource.

  Preservation in place (i.e. avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery to excavate the resource along with subsequent laboratory processing and analysis. Disposition of significant Native American archaeological materials, such as reburial or curation by a qualified repository within Kings County, will be agreed upon by the City and Consulting Tribe(s). Any significant non-Native American archaeological material shall be curated at a public, non-profit institution with a research interest in the materials within Kings County, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

  All identified cultural resources will be recorded on appropriate CA DPR 523 series forms and evaluated for significance. All findings will be included within a Monitoring Report drafted by the Qualified Archaeologist and submitted to the City and Consulting Tribe(s) for review. Final copies of the Monitoring Report will be submitted to the City, Consulting Tribe(s), and Southern San Joaquin Valley Information Center (SSJVIC).

- **CUL-2: Inadvertent Discoveries of Human Remains**
  If human remains are encountered during the undertaking, California State Health and Safety Code Section 7050.5 states that excavation shall stop and no further disturbance shall occur

within 100 feet of the discovery until the County Coroner has made a determination of origin and disposition of the remains pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission (NAHC), who will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery within 48 hours of notification. If the NAHC is unable to identify an MLD, the MLD fails to make a recommendation, or the landowner or his/her authorized representative rejects the recommendation, the human remains and associated items will be interred on the property with appropriate dignity in a location that will not be subject to future disturbance.

It is important to note that this report does not include discussion related to the presence of Tribal Cultural Resources (TCR), as defined by CEQA, as this is determined via government-to-government consultation between the City of Hanford and Native American Tribes. As such, recommendations made within this report as it relates to cultural resources of Native American origin, to include applicable mitigation measures, should be considered alongside the results of Tribal consultation.

Preparer's Qualifications

Jessica Mauck has over 15 years of experience in cultural resources management and historic preservation. She is listed in the Register of Professional Archaeologists (RPA) and meets Secretary of Interior (SOI) Professional Qualifications for Archaeology, History, and Architectural History. Her background includes long-term contracting for Federal land management agencies (USFS, NPS, DoD, BLM, etc.), overseeing Cultural Resources Management programming within Tribal government, and serving on several historic preservation advisory groups for State and Federal agencies. She has extensive experience conducting all phases of archaeological and historic architectural fieldwork and reporting under applicable state and federal law, such as the NHPA, NEPA, and CEQA. She also has many years of experience managing process for inadvertent discoveries of human remains and the inventory/ repatriation of existing archaeological collections subject to State and Federal law, such as the Native American Graves Protection and Repatriation Act (NAGPRA) and California Health & Safety Code (Section 7050.5). A copy of Jessica's qualifications is included in Appendix D of this report.

Re: Maverik Hanford
Records Search File No.: 24-433

The Southern San Joaquin Valley Information Center received your record search request for the project area referenced above, located on Hanford USGS 7.5' quads. The following reflects the results of the records search for the project area and the 0.5 mile radius:

As indicated on the data request form, the locations of archaeological resources and reports are provided in the following format: ☐ custom GIS maps ☒ GIS data

Resources within project area:	None
Resources within 0.5 mile radius:	P-16-000068, 000122, 000246, 000310
Reports within project area:	KI-00042, 00192
Reports within 0.5 mile radius:	KI-00028, 00079, 00109, 00110, 00111, 00114, 00203, 00310, 00320

NOTE: Report location information was omitted, per the CHRIS Data Request Form.

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Invoices for Information Center services will be sent under separate cover from the California State University, Bakersfield Accounting Office.

Thank you for using the California Historical Resources Information System (CHRIS).

Sincerely,

Celeste M. Thomson
Coordinator

Re: Maverik Hanford Project, Kings County

Dear Mr. Bieber:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Cameron.vela@nahc.ca.gov.

Sincerely,

Cameron Vela

e. Other Locational Data: (e.g., parcel #, directions to resource, elevation, decimal degrees, etc., as appropriate)

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This resource is a single-family residence that was initially developed prior to 1957 and re-developed in 1975. The structure is currently in fair condition, though has some collapse on the southern exterior wall. The structure has a simple, rectangular design reminiscent of a 1960s/1970s Ranch Style House with a single roof over the primary residence on the north and an open carport with a single pole on the south. The roof is made of wood shakes while the exterior of the residence maintains vertical wood siding. Very little of the exterior seems to have been recently updated with the exception of white trimmed windows and rear sliding door. However, the north half of the property has a mixed material fence (brick columns with white vertical wood posts) that is aesthetically mis-matched to the structure and is not present in the 1984 aerial.

B1. Historic Name: N/A
B2. Common Name: N/A
B3. Original Use: Residential B4. Present Use: Residential ***B5. Architectural Style:** Ranch Style/Common Vernacular
***B6. Construction History:** (Construction date, alterations, and date of alterations)
County records note the residence was redevelopment in 1975. Windows and doors have been updated. In general, while the property exhibits some characteristics of its original use as a Ranch Style House, the structure does not strongly convey any particular style as a result of redevelopment in the 1970s and later modifications.

***B7. Moved?** ☒No ☐Yes ☐Unknown **Date:** N/A **Original Location:** N/A
***B8. Related Features:** Adjacent agricultural field
B9a. Architect: Unknown b. Builder: Unknown
***B10. Significance: Theme** N/A **Area** N/A
Period of Significance N/A **Property Type** N/A **Applicable Criteria** N/A (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Criterion 1: Research was conducted as part of the study, and it was noted that this cultural resource is not associated with any important events. Therefore, it is recommended not eligible for the CRHR under Criterion 1.
Criterion 2: Research has failed to indicate that the cultural resource is associated with the lives of persons important to our past, or that persons of significant regional or national stature can be linked to it. For these reasons, it is recommended not eligible for the CRHR under Criterion 2.
Criterion 3: The resource is a single-family residence reconstructed in 1975 with later modifications. Though it retains some remnants of a Ranch Style House, it does not strongly convey any distinctive characteristics of a type, period, region, or method of construction, and does not represent the work of a master, possess high artistic values, or represent a significant or distinguishable entity whose components may lack individual distinction. For these reasons, it is recommended not eligible for the CRHR under Criterion 3.
Criterion 4: This resource has not and is not likely to yield information important to the prehistory or history of the region. Therefore, it is recommended not eligible for the CRHR under Criterion 4.
As such, this cultural resource is not recommended eligible under any of the four criteria for listing on the CRHR.

B11. Additional Resource Attributes: (List attributes and codes) None

Preparer's Qualifications

Jessica Mauck, MA, RPA

Cultural Resources Management

Professional Credentials

- Master of Arts, Urban Conservation, University of Leicester, England (*expected 2026*)
- Master of Arts, Historical Archaeology, University of Leicester, England (*2015*)
- Bachelor of Arts, Anthropology, University of California, Los Angeles (*2011*)

Jessica has over 15 years of experience in cultural resources management and historic preservation. She is listed in the Register of Professional Archaeologists (RPA) and meets Secretary of Interior (SOI) Professional Qualifications for Archaeology, History, and Architectural History. Her background includes long-term contracting for Federal land management agencies (USFS, NPS, DoD, BLM, etc.), overseeing Cultural Resources Management programming within Tribal government, and serving on several historic preservation advisory groups for State and Federal agencies. She has extensive experience conducting all phases of archaeological and historic architectural fieldwork and reporting under applicable state and federal law, such as the NHPA, NEPA, and CEQA. She also has many years of experience managing process for inadvertent discoveries of human remains and the inventory/ repatriation of existing archaeological collections subject to State and Federal law, such as the Native American Graves Protection and Repatriation Act (NAGPRA) and California Health & Safety Code (Section 7050.5).

Recent Relevant Experience

- City of Hanford, Maverik Hanford Project, Hanford, CA – Cultural Resources Assessment (CEQA) – Principal Investigator/Sole Author
- City of Fresno, Fashion Fair Mall Project, Fresno, CA – Historical Resources Assessment (CEQA) – Principal Architectural Historian
- FAA/County of Kern, Kern Valley Airport Fence Project, Kernville, CA – Historic Property Inventory and Evaluation Report (NHPA/NEPA & CEQA) – Principal Investigator
- City of Tracy/HUD, Emergency Shelter, Tracy, CA – Cultural Resources Assessment (NHPA) – Principal Investigator/ Sole Author
- City of Hollister, Runway 6 Improvements, Hollister, CA – Cultural Resources Assessment/Tribal Consultation Support (NHPA/NEPA & CEQA) – Principal Investigator/Sole Author
- City of Turlock, Turlock Wastewater Treatment Plant, Turlock, CA – Environmental (Biological and Cultural) Constraints Memorandum – Principal Investigator/Co-Author
- County of Kern, Mojave Micro Mill EIR, Kern County, CA – Peer Review of the Cultural Resources Assessment

Truck Back-up Alarm Noise Levels

Metric	Exterior
L_{eq}	40.5

Parking/Fueling Noise

Number of Vehicles Per Hour[1]:	253
Hourly L_{eq} at 50 feet:	50.4

$L_{eq(h)} = SEL_{ref} + 10\log(NA/1{,}000) - 35.6$

Where:

$L_{eq(h)}$	=	50.4	hourly L_{eq} noise level at 50 feet
SEL_{ref}	=	92	reference noise level for stationary noise source represented in sound exposure level (SEL) at 50 feet
NA	=	253	number of automobiles per hour
35.6	=	35.6	Constant, calculated as 10 times the logarithm of the number of seconds in an hour

FTA's reference noise level is 92 dBA SEL at 50 feet from the noise source for a parking lot
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual* , September 2018.

1. Total vehicles per hour based on one-way peak hour trips from the Traffic Study.

Multi-family Residential

Coordinates	Noise Source	Reference Level (dBA Leq)	Reference Distance (feet)	Distance to Receptor (feet)[1]	Level at Receptor (dBA Leq)[4]

EXECUTIVE SUMMARY

This report documents the results of a local transportation assessment (LTA) and a CEQA/SB 743 assessment completed for the Maverik Hanford project (the "proposed project", or "project"). The LTA informs the reader regarding the project's anticipated operational effects on the local transportation network. The CEQA/SB 743 assessment informs the reader regarding the project's anticipated environmental effects regarding transportation (specifically Vehicle Miles Traveled (VMT)). The project proposes a Maverik Gas Station to be located along 12th Avenue at its intersection with Hayden Avenue, near the 12th Avenue interchange with Highway 198 (SR-198) in the City of Hanford, California (the "City"). The proposed Maverik Gas Station will provide 16 passenger car/non-truck fueling positions, 6 truck/heavy vehicle fueling positions, and a 5,982 square foot (SF) convenience store.

Access to the project site will be provided via one (1) proposed full access driveway, one (1) ingress only Heavy Vehicle driveway, and one (1) egress only Heavy Vehicle driveway along the proposed extension of Hayden Avenue.

This study was performed in accordance with the scope of work requested by the City of Hanford and Caltrans, and in a manner consistent with the *2035 General Plan Policy Document*. The following transportation facilities were included in this evaluation:

Intersections:

1. 12th Avenue @ WB Highway 198 Ramps
2. 12th Avenue @ EB Highway 198 Ramps
3. 12th Avenue @ Hayden Avenue
4. 12th Avenue at Hanford Armona Road
5. Hayden Avenue @ Full Access Driveway *(plus Project conditions only)*

This local transportation assessment was conducted for the study facilities for the Existing (2025), Existing (2025) plus Project, Cumulative (2045), and Cumulative (2045) plus Project scenarios.

Significant findings of this study include:

- The project is anticipated to generate up to 4,986 Daily trips, 468 AM peak-hour trips, and 378 PM peak-hour new primary trips.
- The addition of the project to the Existing (2025) analysis scenario results in level-of-service (LOS) deficiencies at Intersection #3 (12th Avenue at Hayden Avenue) during the AM and PM peak-hours. The deficiencies can be improved to within the City's LOS D threshold with the installation of a traffic signal at Intersection #3.
- The addition of the project to the Cumulative (2045) analysis scenario results in level-of-service (LOS) deficiencies at Intersection #3 (12th Avenue at Hayden Avenue) and Intersection #5 (Hayden Avenue at Full Access Driveway) during the AM and PM peak hours. These deficiencies can be improved to within the City's LOS D threshold by the installation of a traffic signal at Intersection #3.
- Intersection #3 (12th Avenue at Hayden Avenue) satisfies Caltrans Warrant 3 (Peak-Hour) for signalization during both the AM and PM peak hours under the Existing (2025) plus Project and Cumulative (2045) plus Project analysis scenarios. It is recommended that a traffic signal be installed at Intersection #3 to address the previously identified LOS deficiencies.
- The addition of the project results in a queueing deficiency for the southbound left-turn movement at Intersection #4 (12th Avenue at Hanford Armona Road) during the PM peak-hour under Existing (2025) plus Project, Cumulative (2045), and Cumulative (2045) plus Project analysis scenarios. The queue lengths in the Existing (2025) plus Project and Cumulative (2045) plus Project scenarios can be improved by retiming the intersection's traffic signal cycle length.

- Traffic Accident Surveillance and Analysis System (TASAS) ramp collision data provided by Caltrans reveals that the northbound Highway 198 Eastbound on-ramp from 12th Avenue and the Highway 198 Westbound off-ramp to 12th Avenue both exhibit actual facility collision rates higher than the statewide average for comparable facilities. The project is not expected to significantly alter the prevailing conditions.
- Transportation Injury Mapping System (TIMS) intersection collision data does not reveal instances of actual collision rates higher than the statewide average for comparable facilities for the study intersections included in this report. The project is not expected to significantly alter the prevailing conditions. Project improvements to Intersection #3 (12th Avenue at Hayden Road) are expected to improve safety for all roadway users.
- A qualitative CEQA/SB 743 assessment concludes that the project is not anticipated to result in a significant impact.

INTRODUCTION

This report documents the results of a local transportation assessment (LTA) and a CEQA/SB 743 assessment completed for the Maverik Hanford project (the "proposed project", or "project"). The LTA informs the reader regarding the project's anticipated operational effects on the local transportation network. The CEQA/SB 743 assessment informs the reader regarding the project's anticipated environmental effects regarding transportation (specifically Vehicle Miles Traveled (VMT)). The LTA was performed in a manner consistent with the City's *2035 General Plan Policy Document*[1].

PROJECT DESCRIPTION

The project proposes a Maverik Gas Station to be located along 12th Avenue at its intersection with Hayden Avenue, near the 12th Avenue interchange with Highway 198 (SR-198) in the City of Hanford, California (the "City"). The proposed Maverik Gas Station will provide 16 passenger car/non-truck fueling positions, 6 truck/heavy vehicle fueling positions, and a 5,982 square foot (SF) convenience store. Access to the project site will be provided via one (1) proposed full access driveway, one (1) ingress only Heavy Vehicle driveway, and one (1) egress only Heavy Vehicle driveway along the proposed extension of Hayden Avenue. The project location is shown in **Figure 1** and the project site plan is shown in **Figure 2**. The following transportation facilities are included in this evaluation:

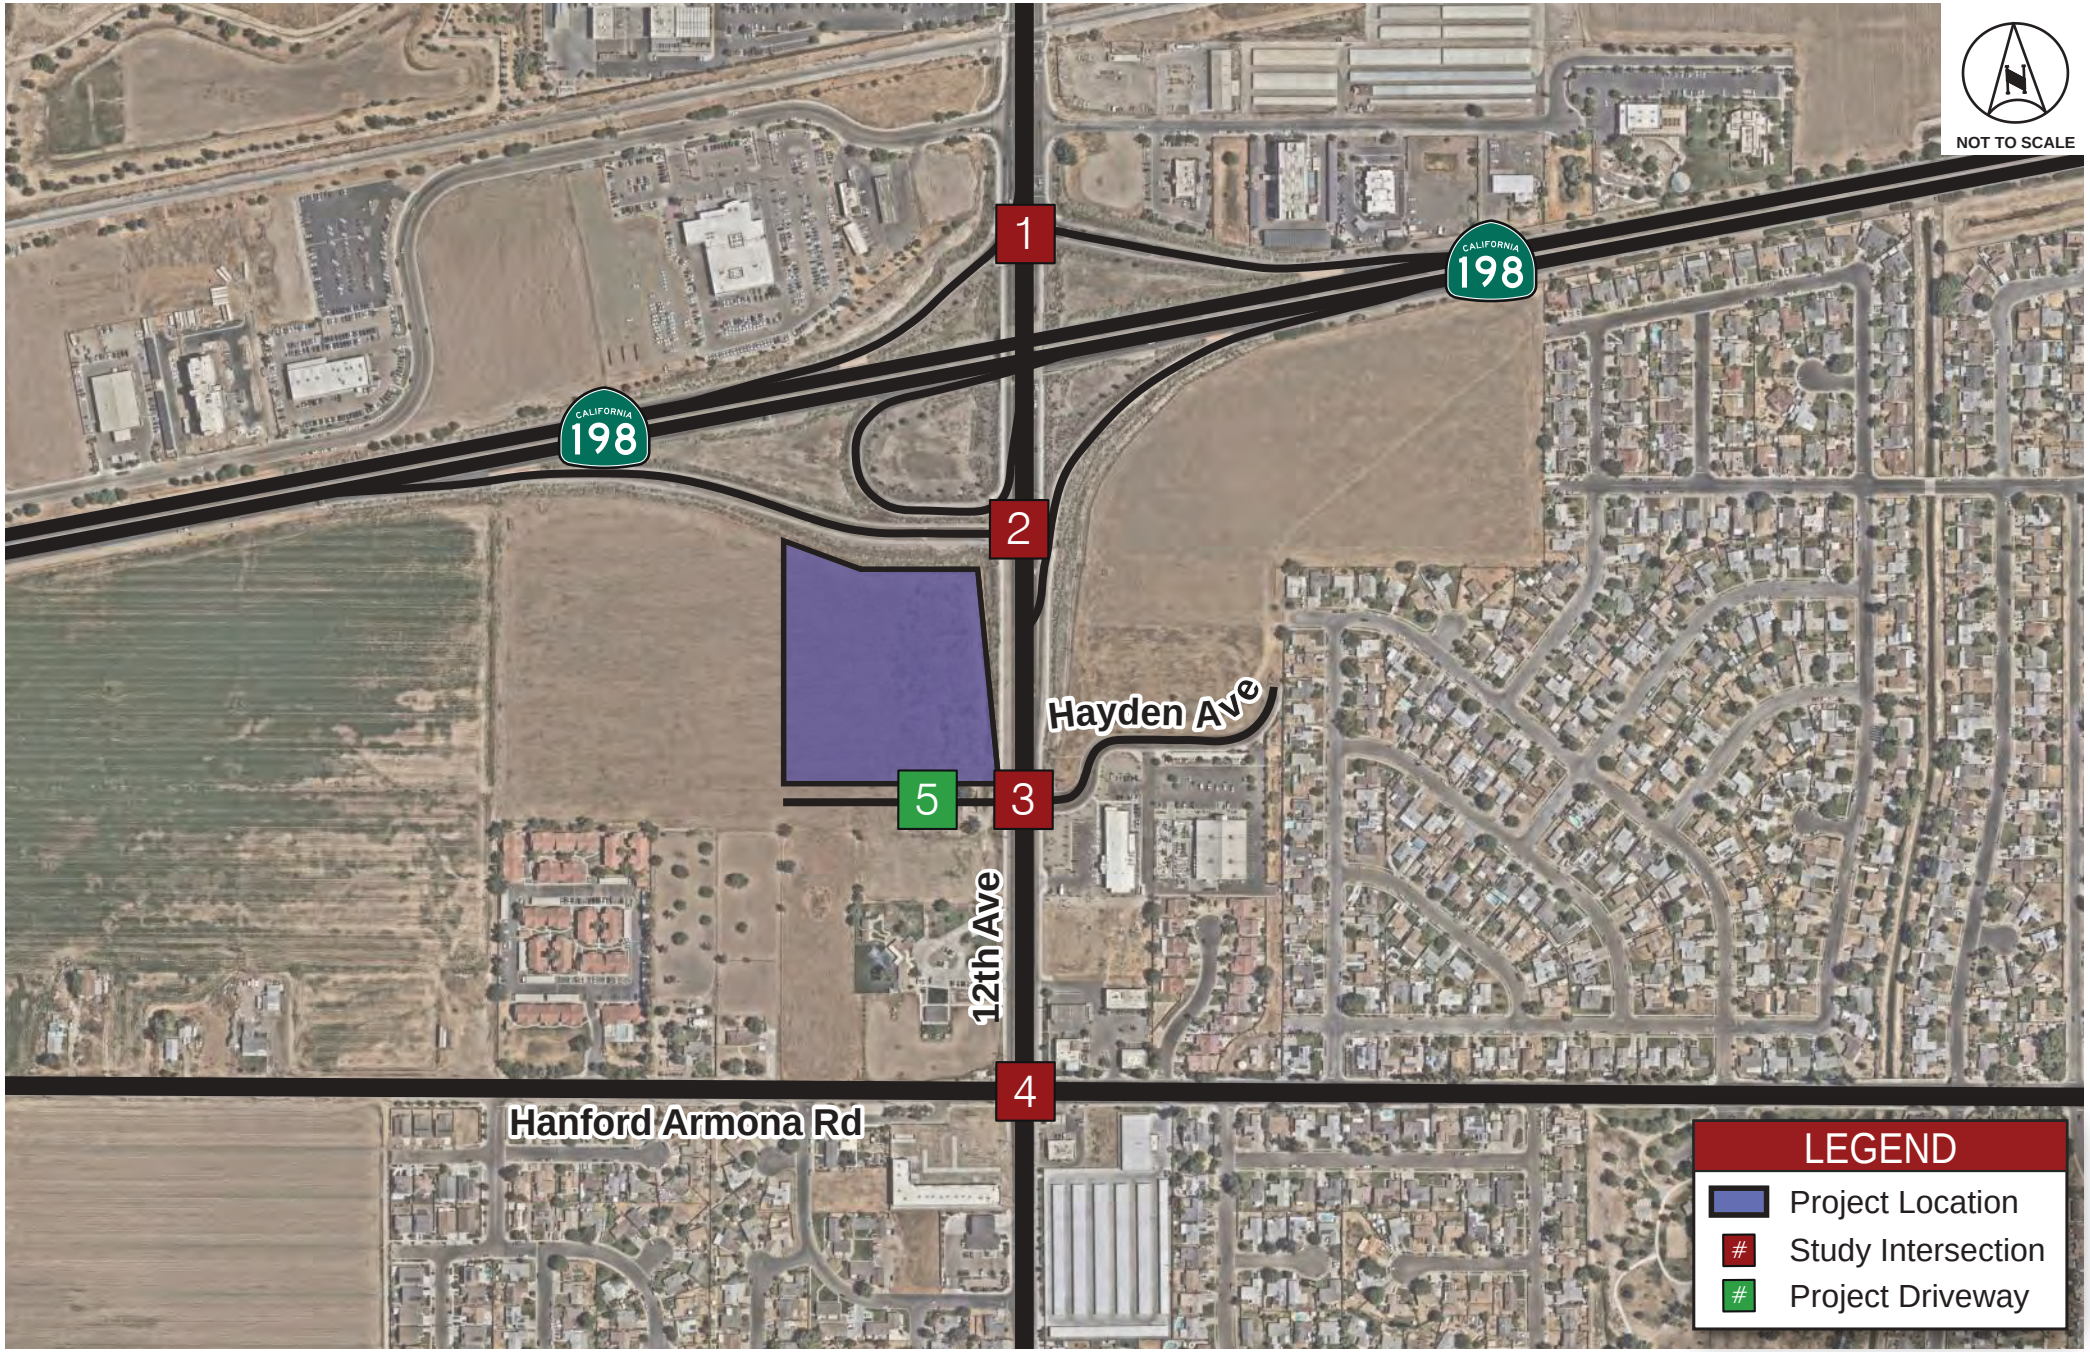
Intersections:

1. 12th Avenue at Highway 198 WB Ramps
2. 12th Avenue at Highway 198 EB Ramps
3. 12th Avenue at Hayden Avenue
4. 12th Avenue at Hanford Armona Road
5. *Hayden Avenue at Full Access Driveway (plus project only)*

This transportation impact study (TIS) was conducted for the selected study facilities for the Existing (2025), Existing (2025) plus Project, Cumulative (2045), and Cumulative (2045) plus Project scenarios.

PROJECT AREA ROADWAYS

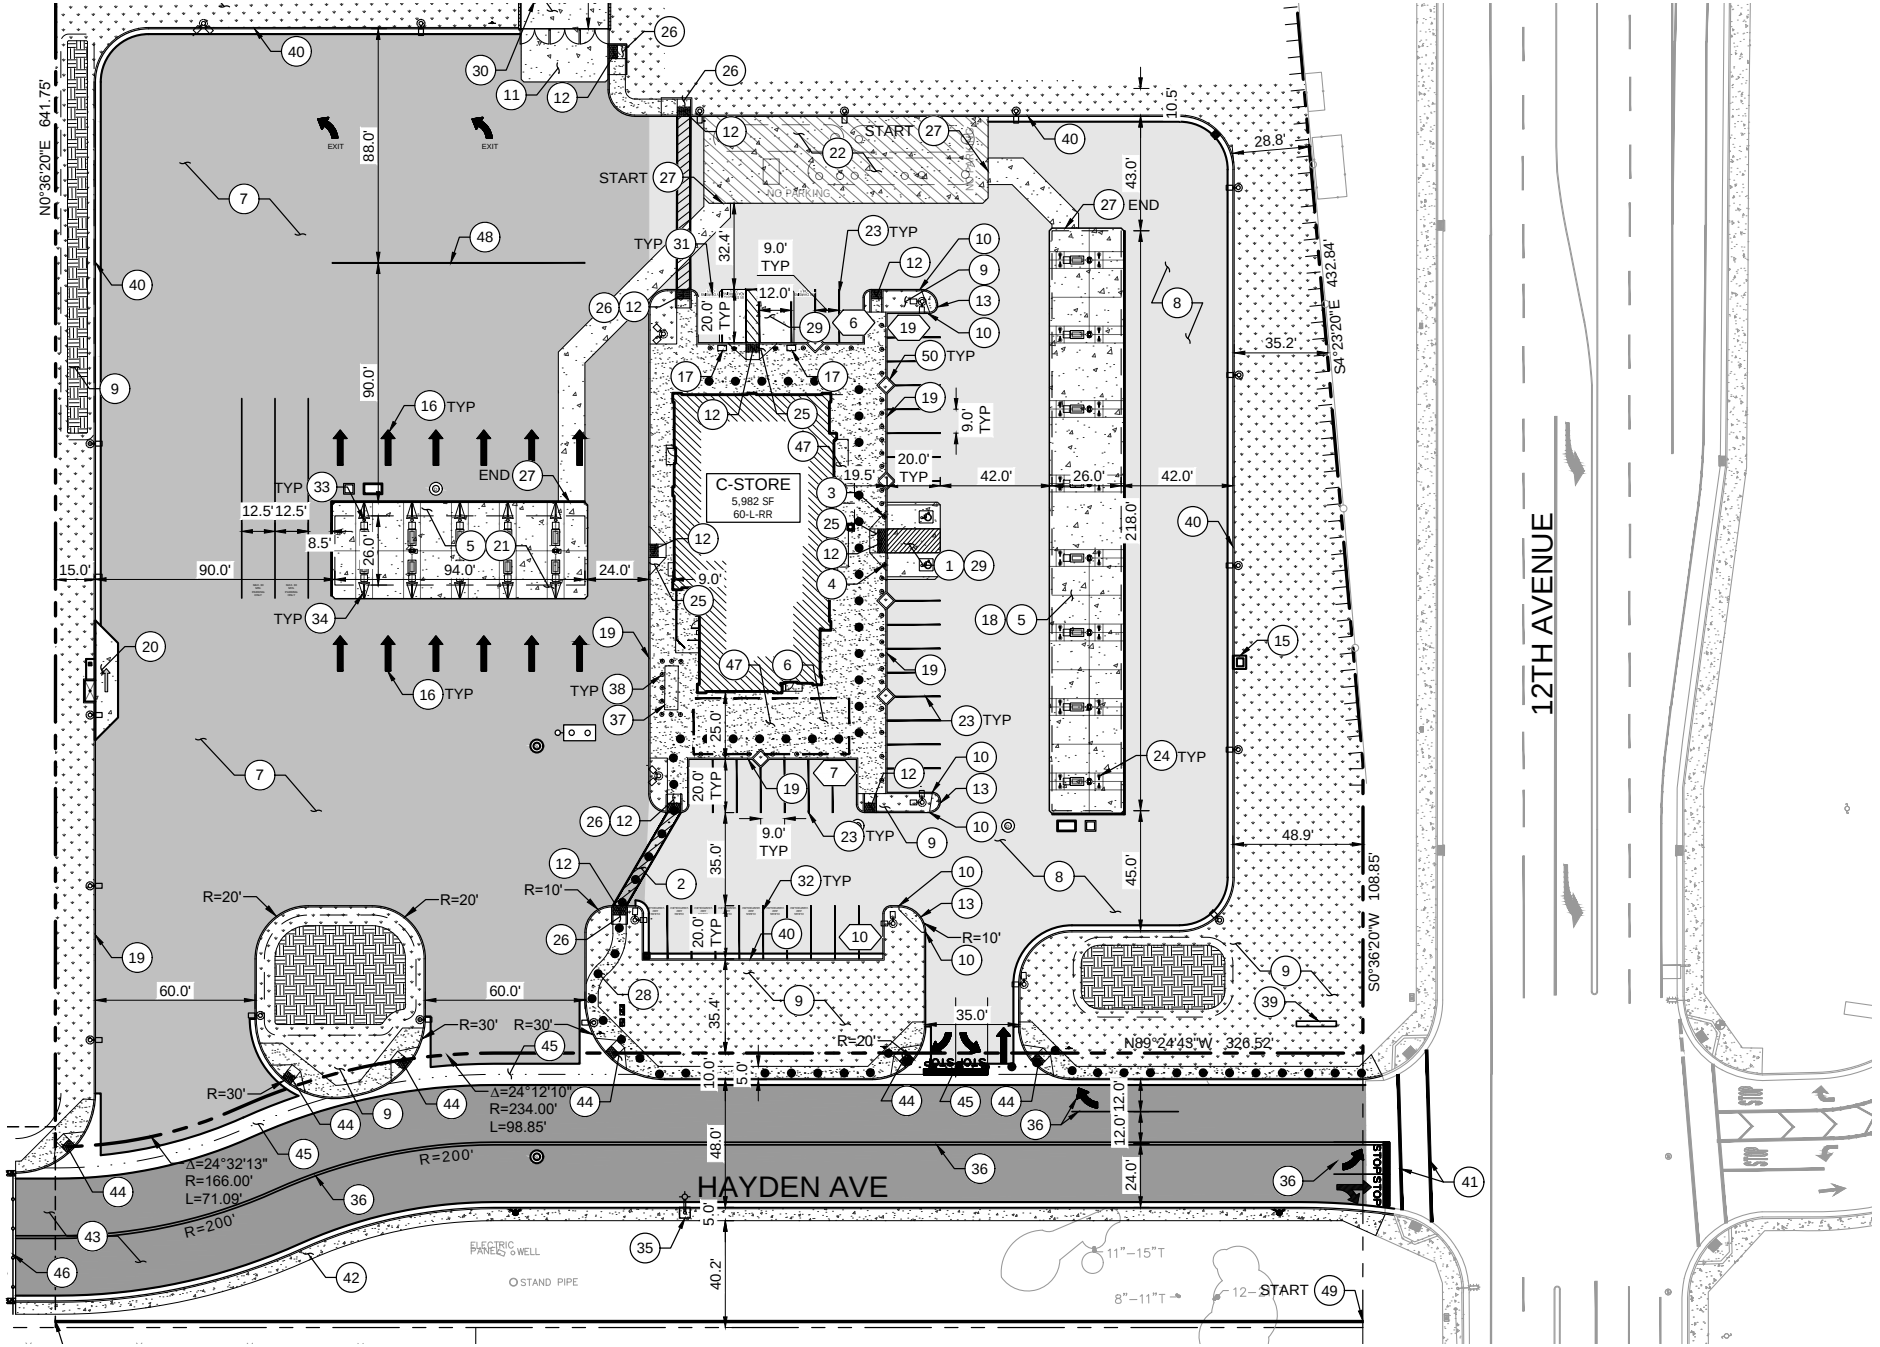
The following are descriptions of the primary roadways in the vicinity of the project:



Highway 198 (SR-198) is an east-west state freeway that connects U.S. Route 101 (US 101) south of King City to Sequoia National Park. SR-198 passes through the City of Hanford with interchanges located at Highway 43 (SR-43), 10th Avenue, 11th Avenue, 12th Avenue and 13th Avenue.

12th Avenue is a north-south Arterial Street within the city limits extending from Houston Avenue in the south to Flint Avenue in the north. The posted speed limit along 12th Avenue within the vicinity of the project is 40 miles per hour (MPH).

Hanford Armona Road is an east-west Arterial Street within the city limits extending from 13th Avenue in the west to 10th Avenue in the east. The posted speed limit along Hanford Armona Road within the vicinity of the project is 40 MPH.



Hayden Avenue is a partially constructed east-west local road that intersects 12th Avenue between Hanford Armona Road and SR-198. The existing eastern leg of Hayden Avenue serves existing businesses on the east side of 12th Avenue and terminates in a dead end. The proposed western leg of Hayden Avenue is anticipated to serve both the project and future commercial development.

ASSESSMENT OF PROPOSED PROJECT

Proposed Project Trip Generation and Assignment

The number of trips anticipated to be generated by the proposed project was approximated using data included in the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition*. The hourly distribution of Daily Trips is included in Appendix A. A pass-by trip reduction of 15-percent was applied to both the AM and PM peak-hour trips to provide a conservative assessment of the project, consistent with guidance historically provided by Caltrans[2]. Pass-by trips are those trips accessing the project that are already present on the roadway network adjacent to the project site and are therefore not included in the project's net new primary trips.

While the ITE *Trip Generation Manual, 11th Edition* provides data for project-generated vehicles (including heavy vehicles/trucks), additional transaction data was obtained from Maverik for similar projects to generate more accurate rates of daily heavy vehicle trips per heavy vehicle fuel pump. As shown in Table 1, the proposed project is anticipated to generate 4,986 new Daily trips, 468 new AM peak-hour trips, and 378 new PM peak-hour trips. The project is also anticipated to attract 76 and 65 Pass-by trips during the AM and PM peak-hours, respectively.

Table 1 – Proposed Project Trip Generation

Land Use (ITE Code)	Size	Daily Trips	Weekday AM Peak-Hour					Weekday PM Peak-Hour				
			Total Trips	In		Out		Total Trips	In		Out	
				%	Trips	%	Trips		%	Trips	%	Trips
Convenience Store/Gas Station - GFA (5.5-10k) (945)[1]	16 VFP	5,532	506	50%	253	50%	253	430	50%	215	50%	215
Heavy Vehicle Trips[2]	6 VFP	284	38	50%	19	50%	19	13	50%	7	50%	6
Subtotal (Driveway) Trips:		**5,816**	**544**		**272**		**272**	**443**		**222**		**221**
Pass-by Trips (15% cap per Caltrans)[3]		-830	-76		-38		-38	-65		-32		-32
Net New (Primary) Trips:		**4,986**	**468**		**234**		**234**	**378**		**190**		**189**

VFP = Vehicle Fueling Positions

TRANSPORTATION STUDY METHODOLOGY

This transportation study was performed in accordance with the City's *2035 General Plan Policy Document*[1].

Level of Service Definitions

The level of service (LOS) of a facility is a qualitative measure used to describe operational conditions. LOS ranges from A, which represents minimal delay, to F, which represents heavy delay and a facility that is operating at or near its functional capacity. LOS for this study was determined using methods defined in the *Highway Capacity Manual (HCM), 7th Edition* ("HCM7").

Intersection Analysis

The HCM includes procedures for analyzing side-street stop controlled (SSSC), all-way stop controlled (AWSC), and signalized intersections. The SSSC procedure defines LOS as a function of average control delay for each minor street approach movement. The AWSC and signalized intersection procedures define LOS as a function of average control delay for the intersection. Table 2 presents intersection LOS definitions as defined in the HCM.

Table 2 – Intersection Level of Service Criteria

Level of Service (LOS)	Un-Signalized	Signalized
	Average Control Delay* (sec/veh)	Average Control Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 – 15	> 10 – 20
C	> 15 – 25	> 20 – 35
D	> 25 – 35	> 35 – 55
E	> 35 – 50	> 55 – 80
F	> 50	> 80

Source: Highway Capacity Manual, 7th Edition

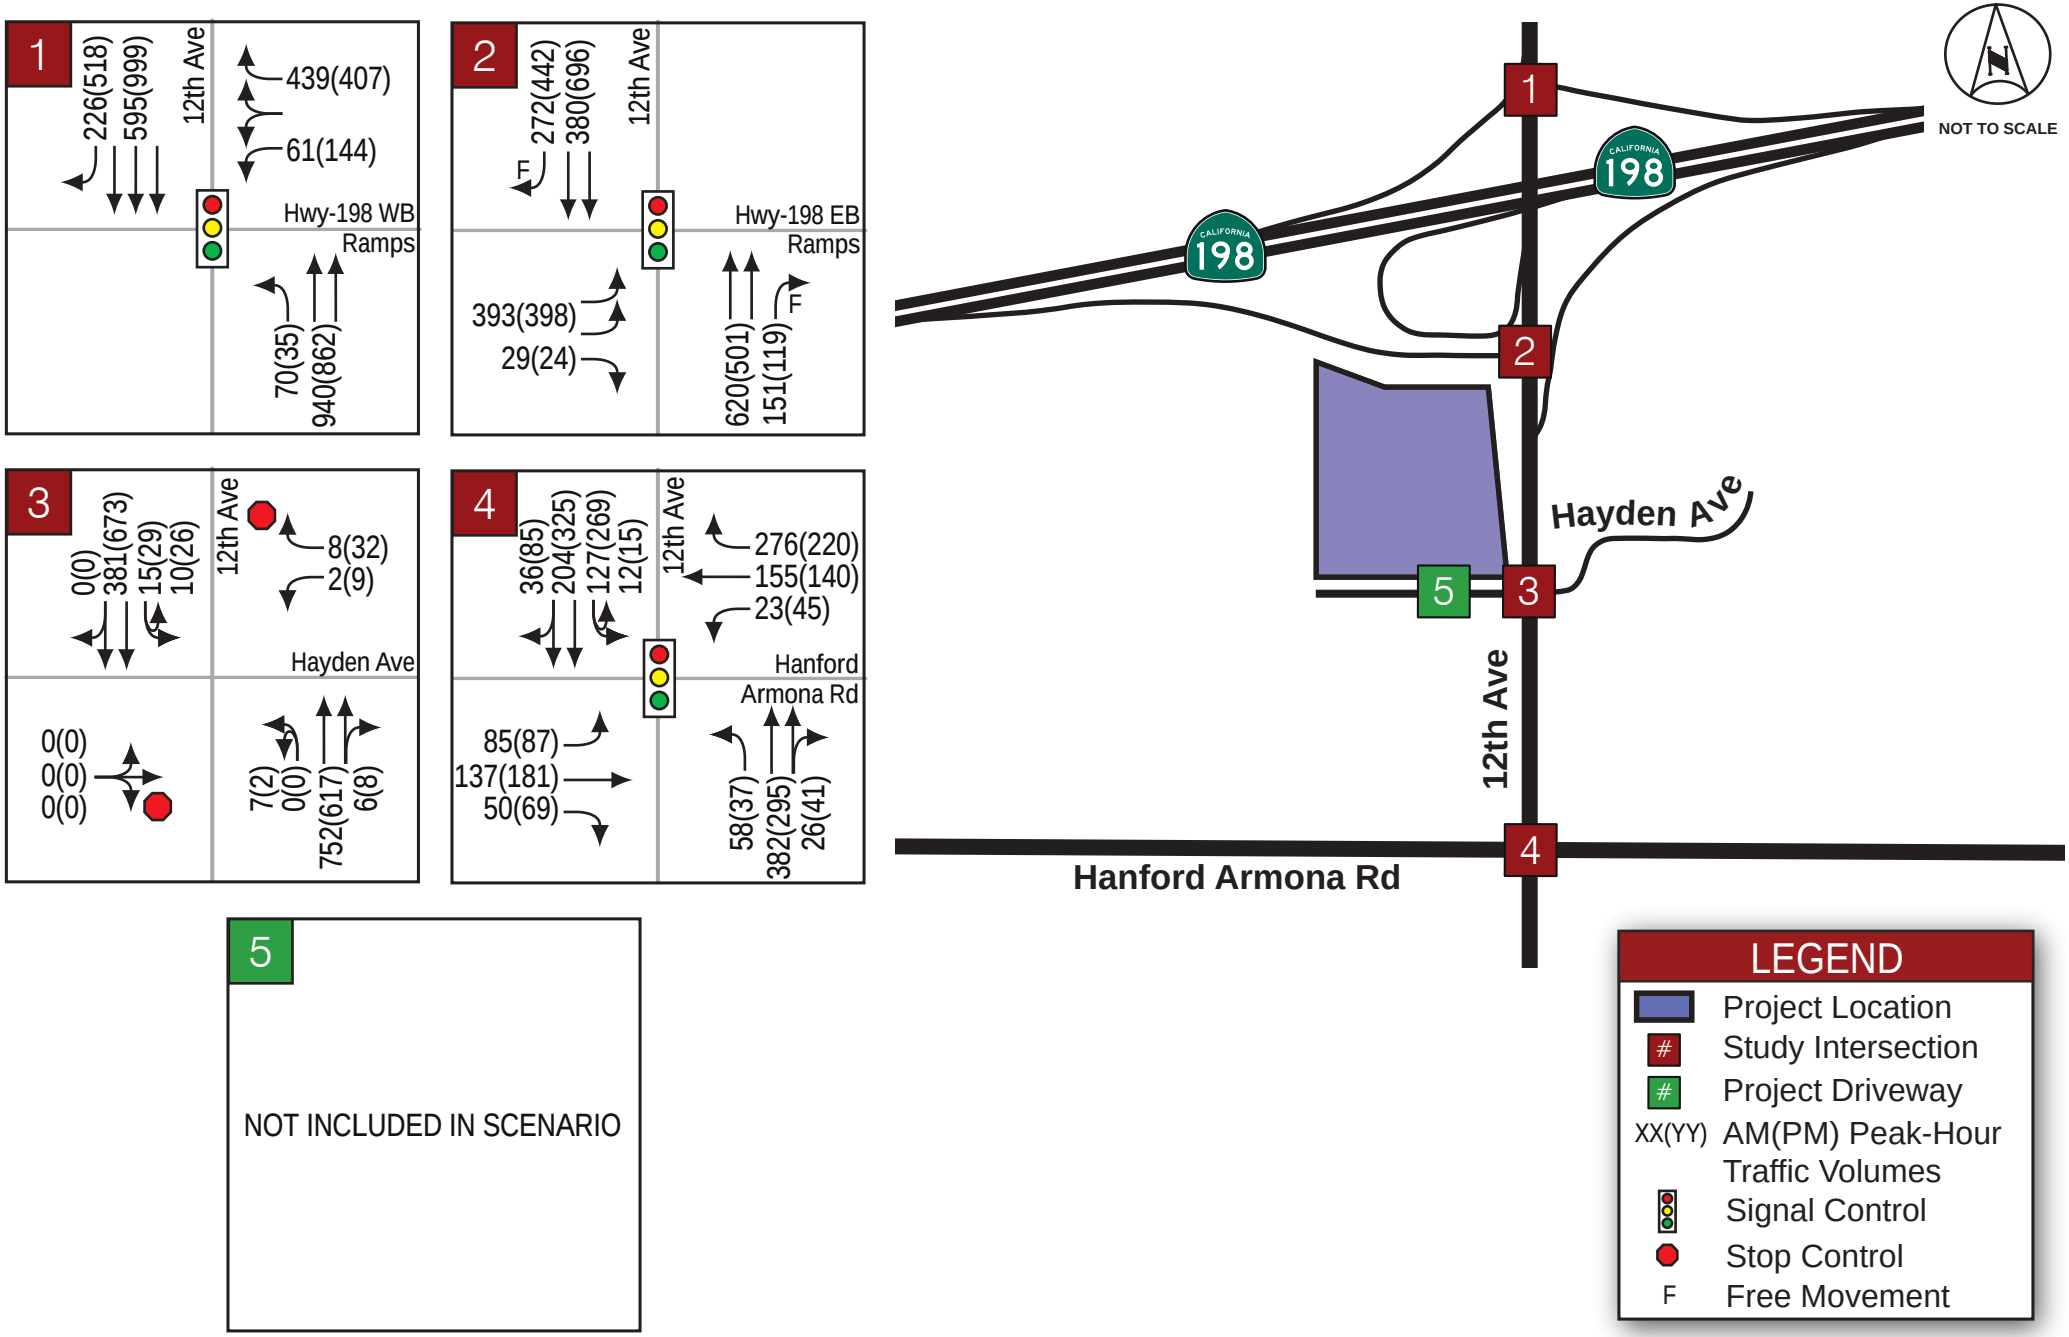
* Applied to the worst lane/lane group(s) for SSSC

LOS for the study intersections presented throughout this report was determined using microsimulation (SimTraffic® traffic analysis software). Microsimulation was used due to the spacing between study intersections. The results were subsequently compared against the HCM7 methodology thresholds to analyze intersection delay and LOS. The City's *2035 General Plan Policy Document*[1] establishes that the LOS threshold for the study intersections included in this analysis is LOS D or better.

Analysis Scenarios

As described in the following sections, the LOS analysis was conducted for the study intersections for the following scenarios: Existing (2025), Existing (2025) plus Project, Cumulative (2045), and Cumulative (2045) plus Project.

EXISTING (2025) CONDITIONS



Existing traffic counts were collected to establish the existing conditions of the study area intersections. Turning movement counts for the study intersections were collected on Thursday, February 6, 2025, between 7-9 AM and 4-6 PM. The traffic count data sheets are provided in Appendix B. Existing (2025) AM and PM peak-hour traffic volumes, traffic control, and lane geometry are presented in Figure 5. Analysis worksheets for the Existing (2025) scenario are included in Appendix C.

Table 3 presents the intersection operating conditions for the Existing (2025) scenario. As indicated in Table 3, the study intersections operate between LOS A and LOS C.

Table 3 – Existing (2025) Intersection Levels of Service

ID	Intersection	Peak Hour	LOS Threshold	Control	Existing (2025)	
					Delay (sec)	LOS
1	12th Ave at Hwy 198 WB Ramps	AM	D	Signal	19.6	B
		PM			16.2	B
2	12th Ave at Hwy 198 EB Ramps	AM	D	Signal	9.1	A
		PM			9.1	A
3	12th Ave at Hayden Ave	AM	D	SSSC	2.1(16.7 WBL)	A(C)
		PM			2.4(17.0 WBL)	A(C)
4	12th Ave at Hanford Armona Rd	AM	D	Signal	15.7	B
		PM			17.9	B
5	Hayden Ave at Full Access Dwy	AM	D	SSSC	-	-
		PM			-	-

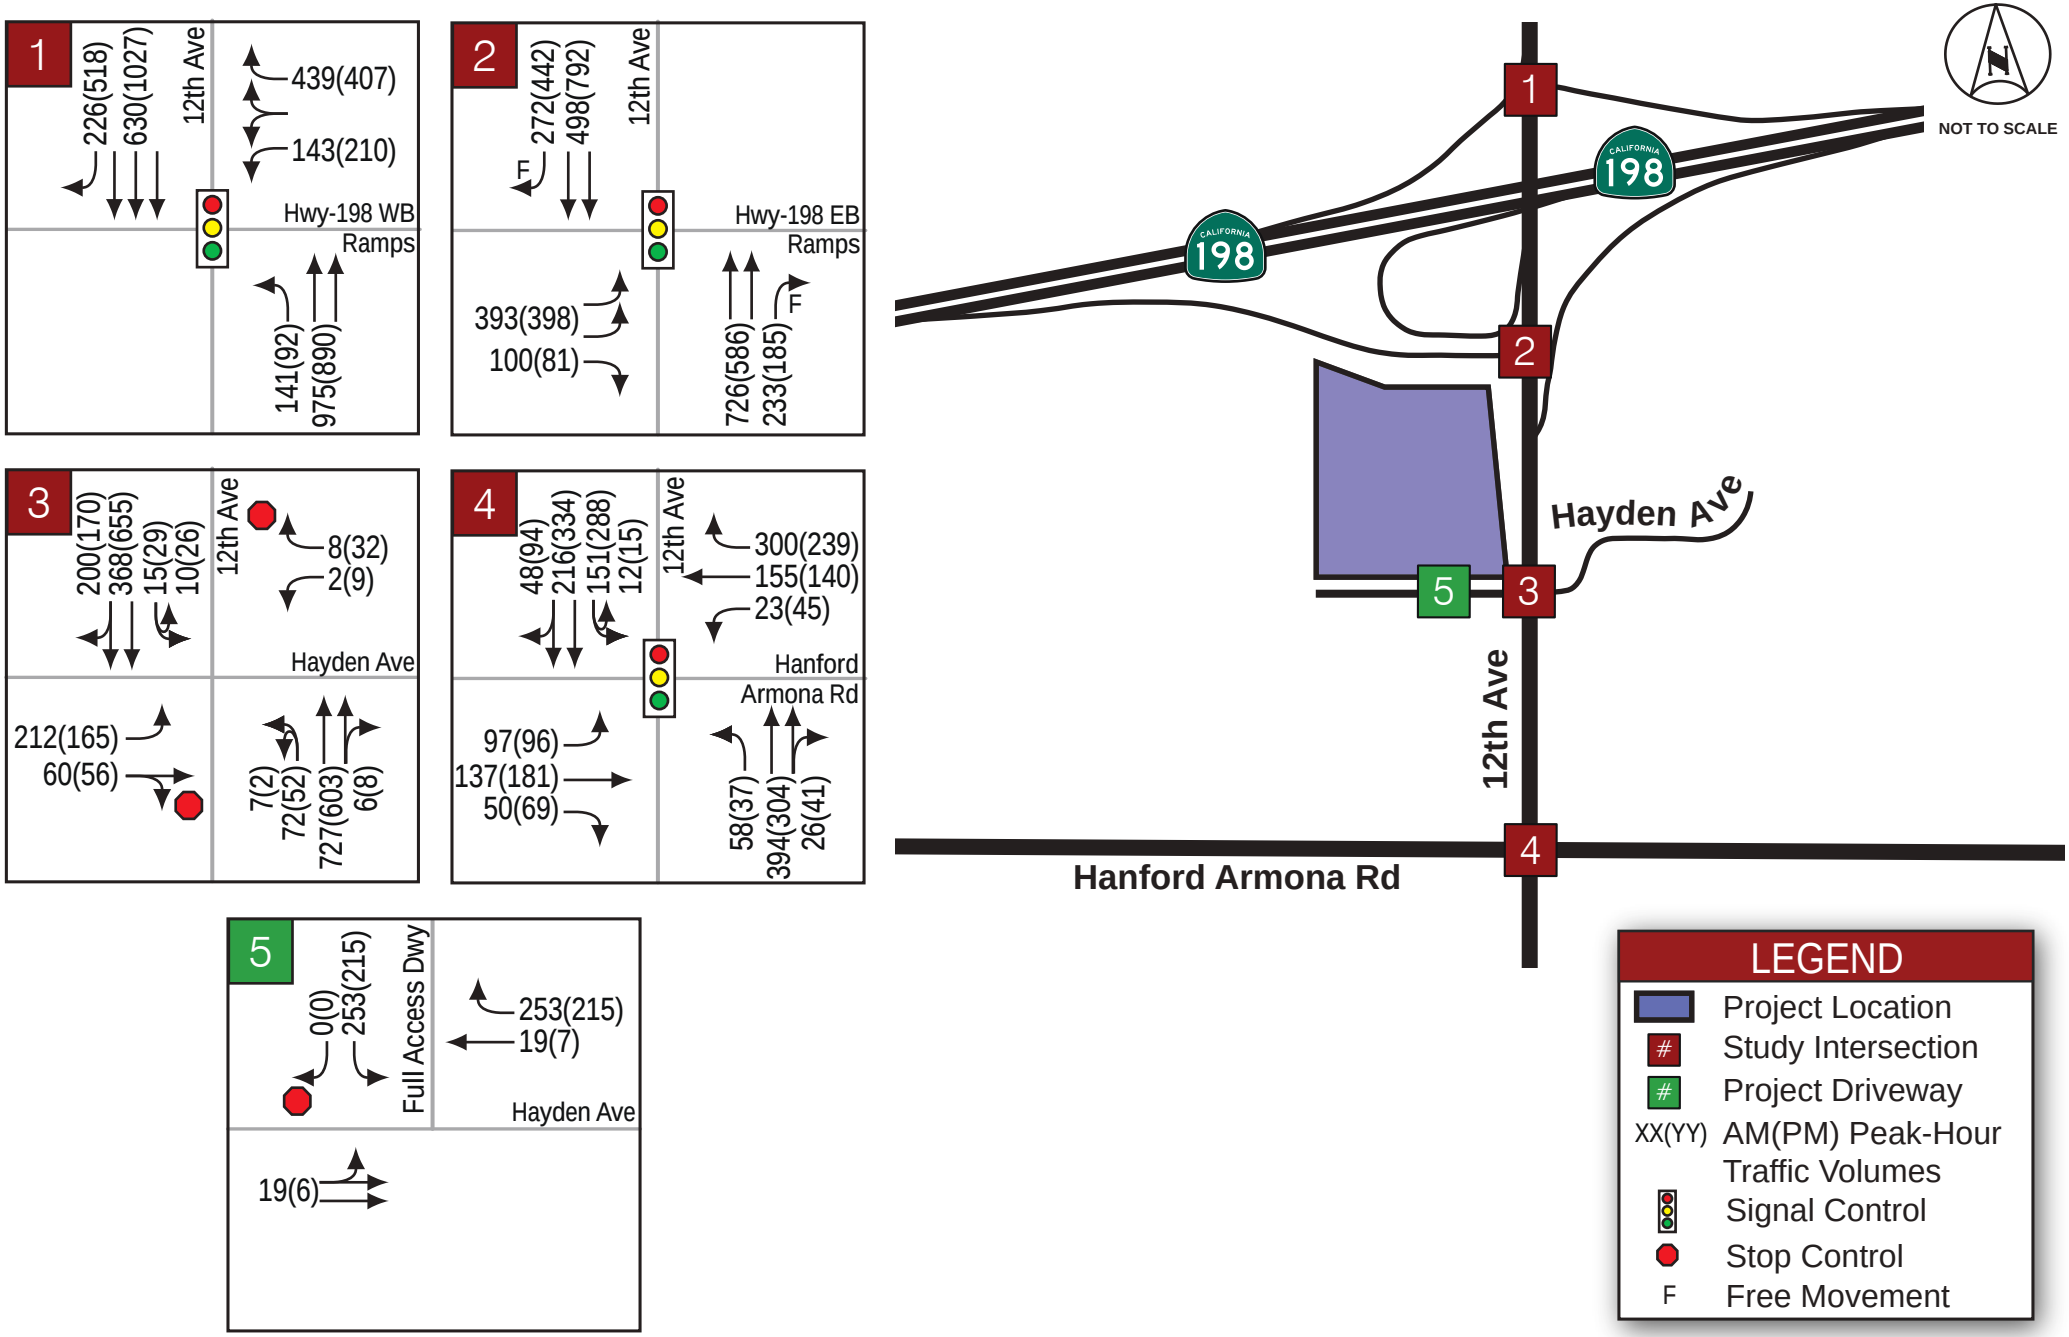
Notes: **Bold** represents deficient operations.
Side Street Stop Controlled (SSSC) reported as intersection delay followed by worst movement delay.

Kimley»Horn

Figure 5

Existing (2025) Peak-Hour Traffic Volumes, Traffic Control, and Lane Geometry

EXISTING (2025) PLUS PROJECT CONDITIONS



The number of trips anticipated to be generated by the proposed project was derived using data included in the *ITE Trip Generation Manual, 11th Edition* and additional data obtained from Maverik for similar projects. These trips were then assigned to the roadway network based on anticipated project site operations, project area roadway volumes, and engineering judgement. After assigning the project volumes in addition to the previously established Existing (2025) baseline condition, the LOS was determined at the study intersections. Existing (2025) plus Project peak-hour traffic volumes, traffic control, and lane geometry are presented in Figure 6. Analysis worksheets for the Existing (2025) plus Project scenario are included in Appendix D.

Table 4 presents the intersection operating conditions for this analysis scenario. As indicated in Table 4, the study intersections operate between LOS A and LOS F.

Table 4 – Existing (2025) plus Project Intersection Levels of Service

ID	Intersection	Peak Hour	LOS Threshold	Control	Existing (2025)		Existing (2025) plus Project	
					Delay (sec)	LOS	Delay (sec)	LOS
1	12th Ave at Hwy 198 WB Ramps	AM	D	Signal	19.6	B	22.0	C
		PM			16.2	B	20.1	C
2	12th Ave at Hwy 198 EB Ramps	AM	D	Signal	9.1	A	9.8	A
		PM			9.1	A	9.3	A
3	12th Ave at Hayden Ave	AM	D	SSSC	2.1(16.7 WBL)	A(C)	**9.1(52.4 EBL)**	**A(F)**
		PM			2.4(17.0 WBL)	A(C)	**8.3(54.1 EBL)**	**A(F)**
4	12th Ave at Hanford Armona Rd	AM	D	Signal	15.7	B	17.4	B
		PM			17.9	B	19.3	B
5	Hayden Ave at Full Access Dwy	AM	D	SSSC	-	-	9.2(19.5 SBL)	A(C)
		PM			-	-	7.8(15.3 SBL)	A(C)

Notes: **Bold** represents deficient operations. Shaded represents a project induced deficiency.
Side Street Stop Controlled (SSSC) reported as intersection delay followed by worst movement delay.

Kimley»Horn

Figure 6

Existing (2025) plus Project Peak-Hour Traffic Volumes, Traffic Control, and Lane Geometry

CUMULATIVE (2045) CONDITIONS

Cumulative (2045) traffic volumes were established using existing traffic counts and outputs from the Kings County Association of Governments (KCAG) Travel Demand Model (TDM)[3]. Volumes from TDM links and nodes for the Base Year (2024) and Future Year (2046) scenarios were used to develop annual growth rates at study intersection turning movements. These rates were subsequently used to "grow" the Existing (2025) counts and establish the Cumulative (2045) baseline condition. Cumulative (2045) AM and PM peak-hour traffic volumes, traffic control, and lane geometry are presented in Figure 7. Analysis worksheets for the Cumulative (2045) scenario are included in Appendix E.

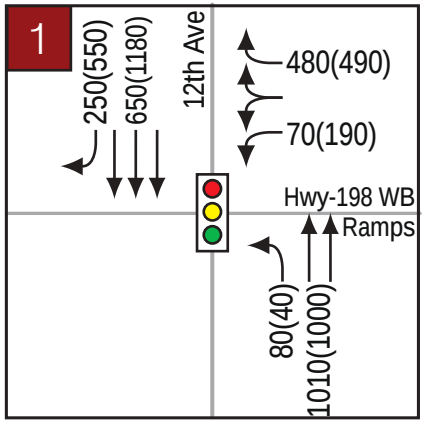


Table 5 presents the intersection operating conditions for the Cumulative (2045) scenario. As indicated in Table 5, the study intersections operate from LOS A to LOS C.

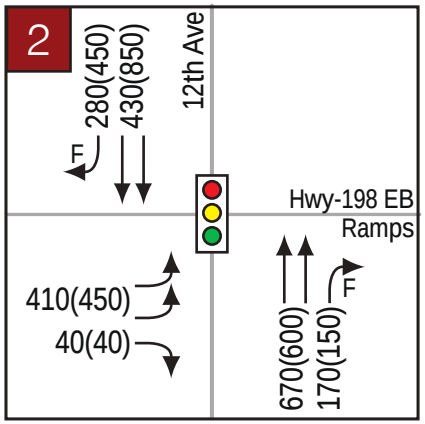

Table 5 – Cumulative (2045) Intersection Levels of Service

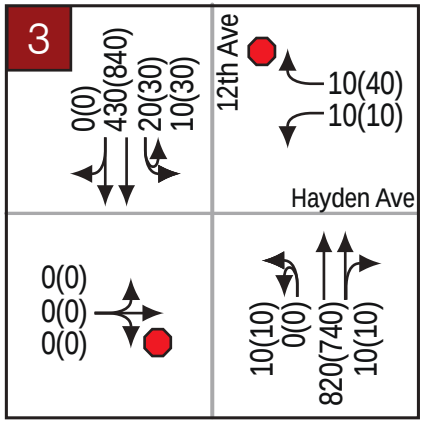
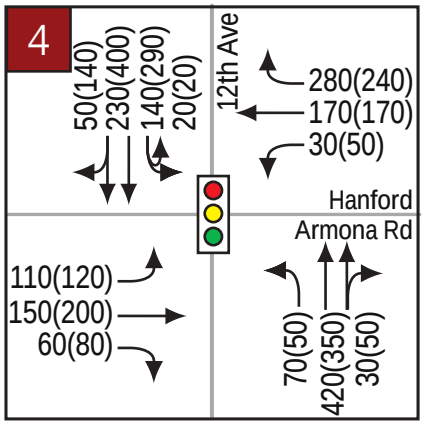


ID	Intersection	Peak Hour	LOS Threshold	Control	Cumulative (2045)	
					Delay (sec)	LOS
1	12th Ave at Hwy 198 WB Ramps	AM	D	Signal	17.5	B
		PM			18.8	B
2	12th Ave at Hwy 198 EB Ramps	AM	D	Signal	11.7	B
		PM			11.0	B
3	12th Ave at Hayden Ave	AM	D	SSSC	2.2(15.6 WBL)	A(C)
		PM			2.4(16.1 WBL)	A(C)
4	12th Ave at Hanford Armona Rd	AM	D	Signal	17.6	B
		PM			24.4	C
5	Hayden Ave at Full Access Dwy	AM	D	SSSC	-	-
		PM			-	-



Notes: **Bold** represents deficient operations.
Side Street Stop Controlled (SSSC) reported as intersection delay followed by worst movement delay.

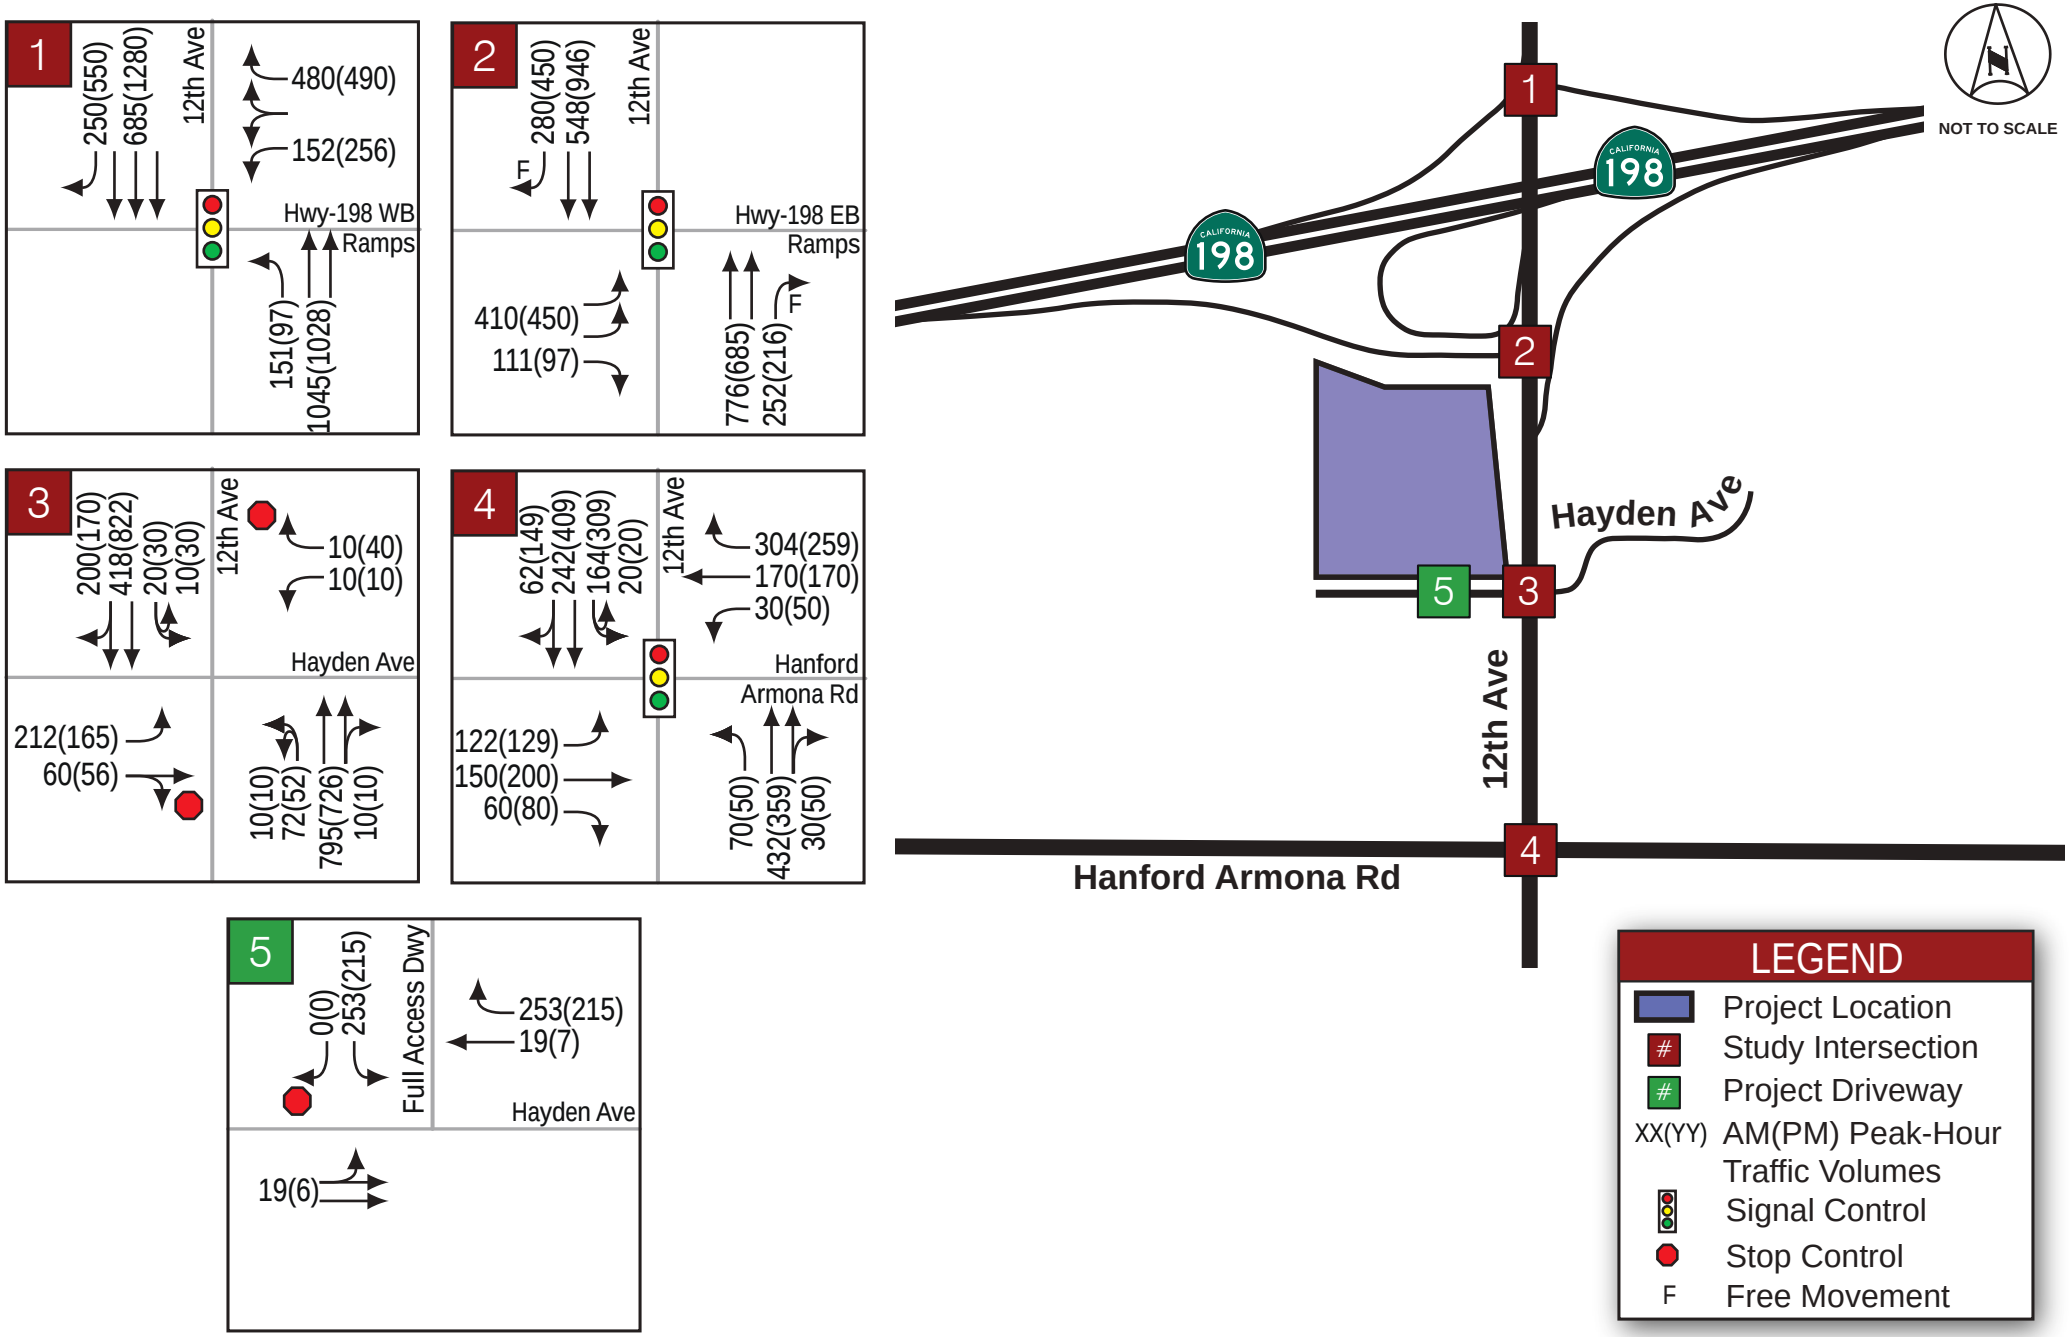
Figure 7

Cumulative (2045) Peak-Hour Traffic Volumes, Traffic Control, and Lane Geometry

CUMULATIVE (2045) PLUS PROJECT CONDITIONS



The number of trips anticipated to be generated by the proposed project was derived using data included in the *ITE Trip Generation Manual, 11th Edition*. These trips were then assigned to the roadway network based on the project site operations, project area roadway volumes, and engineering judgement. The project volumes were added to the previously established Cumulative (2045) baseline condition to determine the LOS at the study intersections. Cumulative (2045) plus Project peak-hour traffic volumes, traffic control, and lane geometry are presented in Figure 8. Analysis worksheets for the Cumulative (2045) plus Project scenario are included in Appendix F.

Table 6 presents the intersection operating conditions for the Cumulative (2045) plus Project analysis scenario. As indicated in Table 6, the study intersections operate from LOS B to LOS F.

Table 6 – Cumulative (2045) plus Project Intersection Levels of Service

Figure 8

Cumulative (2045) plus Project Peak-Hour Traffic Volumes, Traffic Control, and Lane Geometry

OTHER CONSIDERATIONS

Peak-Hour Traffic Signal Warrant Evaluation

A planning level assessment of the need for traffic signalization was performed for the unsignalized Intersection #3 (12th Avenue at Hayden Avenue). This evaluation was performed in a manner consistent with the peak-hour warrant methodologies noted in Section 4C of the *California Manual on Uniform Traffic Control Devices* (CAMUTCD)[4]. A summary of the Warrant 3 (Peak-Hour) results is presented in Table 7.

Table 7 – Traffic Signal Warrant 3 (Peak-Hour) Analysis Results

ID	Intersection	Analysis Scenario			
		Existing (2025)	Existing (2025) plus Project	Cumulative (2045)	Cumulative (2045) plus Project
3	12th Ave at Hayden Ave	No/No	Yes/Yes	No/No	Yes/Yes
Results are presented in **AM / PM format**, locations where a signal is warranted during a peak hour are shaded. Note: Peak-hour warrant is satisfied if Condition A or B is satisfied					

As shown in Table 7, the peak-hour signal warrant is satisfied under Existing (2025) plus Project and Cumulative (2045) plus Project scenarios at Intersection #3 (12th Avenue at Hayden Avenue). Analysis worksheets are presented in Appendix G. The CAMUTCD[4] states:

> *"The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."*

Intersection Queuing Evaluation

A queuing study was conducted to evaluate the capacity of the existing turn lanes at the study intersections. SimTraffic® reports were used to conduct the queuing analysis. The 95th percentile vehicle queues were compared against the existing vehicle storage lengths for select intersection movements. The evaluation was performed to determine if the queues exceed their available storage. Results of the queuing evaluation are presented in Table 8. Analysis sheets that include the anticipated vehicle queues for each study scenario presented in this report are included in Appendix C, Appendix D, Appendix E, and Appendix F.

As presented in Table 8, the addition of the proposed project generally contributes nominal amounts of additional queuing. Shaded cells in the table represent conditions where the reported queueing exceeds available vehicle storage capacity by more than one vehicle length (25-feet). The addition of the proposed project results in the following:

- The southbound left-turn queue at Intersection #4 (12th Avenue at Hanford Armona Road) will exceed the available storage capacity during the PM peak hour under Existing (2025) plus Project, Cumulative (2045), and Cumulative (2045) plus Project scenarios. The Existing (2025) plus Project queue can be contained within the available storage by retiming the intersection traffic signal cycle length. The Cumulative (2045) plus Project queue can be improved relative to the baseline Cumulative (2045) condition by retiming the intersection traffic signal cycle length.
- All other reported queues are shown to be contained within their existing available storage lengths.

[4]*Section 4C, California Manual on Uniform Traffic Control Devices (CAMUTCD) 2014 Edition Revision 8*, Caltrans, January 11, 2024.

Table 8 – Intersection Queuing Evaluation Results

Cumulative (2045) plus Project (Improved)			-	275

Notes: For approaches with dual left-turn lanes, the longest queue length is reported.
Shaded cell indicates queue exceeds available storage by > 25' (one vehicle length)

Collision Data Review

Traffic Accident Surveillance and Analysis System (TASAS) ramp collision data[5] provided by Caltrans-District 6 was evaluated for Intersection #1 (12th Avenue at Highway 198 WB Ramps) and Intersection #2 (12th Avenue at Highway 198 EB Ramps) as those study intersections include Caltrans facilities. Supplemental collision data[6] was evaluated for the study intersections. All collision data collected as part of this study was compared against available Caltrans data[7] for similar intersections. All collision data utilized in this evaluation is provided in Appendix H.

The TASAS ramp collision data rates for each SR-198 ramp at the 12th Avenue interchange are summarized relative to the statewide average for similar facilities in Table 9. Table 9 shows that two (2) ramps exhibit Actual collision rates higher than the Average for similar facilities. The data shows that Rear End collisions account for over 70% of all reported crashes within the evaluated five-year data set. 75% of the reported Rear End collisions occurred on the SR-198 Westbound off-ramp to 12th Avenue (part of Intersection #1).

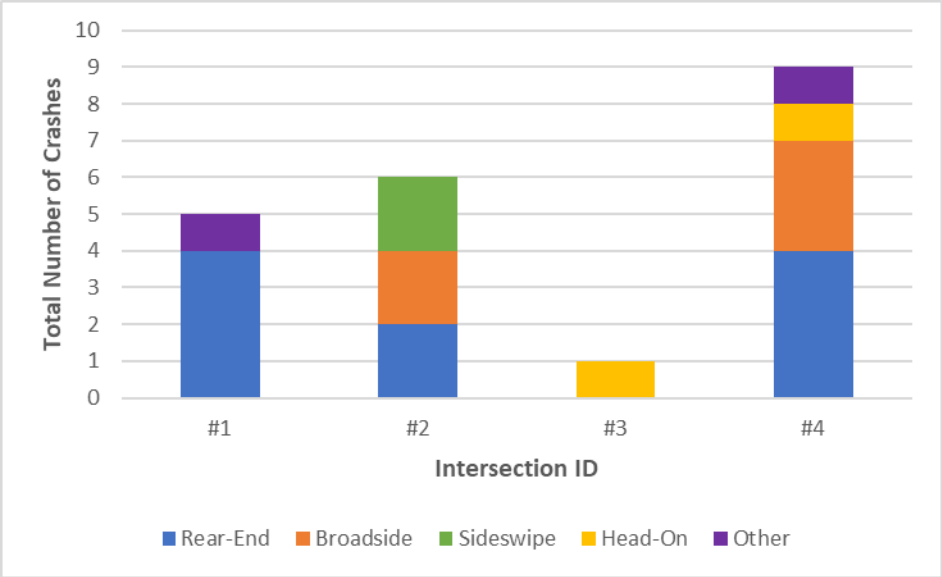
Table 9 – TASAS Five-Year Ramp Collision Summary (2019-2024)

ID	Facility	Statewide Average Collision Rate	Facility Actual Collision Rate
1	12th Ave at Highway 198 EB Off Ramp	1.04	0.87
2	12th Ave at Highway 198 WB On Ramp	0.63	0.40
3	SB 12th Ave at Highway 198 EB On Ramp	0.77	0.13
4	NB 12th Ave at Highway 198 EB On Ramp	0.70	2.28
5	12th Ave at Highway 198 WB Off Ramp	1.04	2.48

Shaded cell represents facility crash rate higher than the statewide average

Supplemental collision data from the Transportation Injury Mapping System (TIMS) for the study intersections is summarized relative to the statewide average for similar facilities in Table 10. Table 10 shows that no intersections exhibit collision rates higher than the statewide average for similar facilities.

Table 10 – TIMS Five-Year Intersection Collision Summary (2020-2024)



ID	Facility	Statewide Average Collision Rate	Facility Actual Collision Rate
1	12th Avenue at Highway 198 WB Ramps	0.55	0.09
2	12th Avenue at Highway 198 EB Ramps	0.55	0.15
3	12th Avenue at Hayden Avenue	0.36	0.04
4	12th Avenue at Hanford Armona Road	0.55	0.27

Shaded cell represents facility crash rate higher than the statewide average

The number and types of crashes at each study intersection are presented in Figure 9. The predominant crash types identified at the study intersections were Rear End and Broadside collisions. It is recommended that the City and Caltrans continue to monitor the number, type, and severity of crashes.

[6] *2020-2024 Crash Data - Transportation Injury Mapping System (TIMS),* Safe Transportation Research and Education Center, University of California, Berkeley, 2025.
[7] *2022 Crash Data on California State Highways*, Caltrans.

Figure 9 – Five-Year (2020-2024) Study Intersections Collision Summary

DEFICIENCIES AND IMPROVEMENTS

Standards of Deficiency

The City's *2035 General Plan Policy Document*[1] was referenced to identify deficiencies at the study area intersections. The following criteria was used:

> "*Policy T29 Maximum Level of Service*
>
> *Maintain a peak hour Level of Service E on streets and intersections within the area bounded by Highway 198, 10th Avenue, 11th Avenue, and Florinda Avenue, inclusive of these streets. Maintain a peak hour Level of Service D on all other streets and intersections with the Planned Growth Boundary*."

A peak-hour Level of Service D was used as the comparison threshold for the project study facilities.

Summary of Deficiencies and Improvements

Existing (2025) plus Project Conditions

As reflected in Table 4, one (1) intersection operates beyond the City of Hanford's identified LOS threshold. The addition of the project results in one (1) project induced deficiency as defined by the City of Hanford. The following is a discussion of each identified deficiency and its associated improvements. Analysis worksheets are provided in Appendix I.

Deficiencies:

D1. Intersection #3, 12th Avenue at Hayden Avenue
As shown in Table 4, Intersection #3 operates at LOS F during both the AM and PM peak hours with the addition of the project.

Improvements:

I1. Intersection #3, 12th Avenue at Hayden Avenue
It is recommended that a traffic signal be installed at Intersection #3 to address the identified deficiencies. As shown in Table 11, this improvement results in the intersection operating at LOS B with the addition of the project during both the AM and PM peak hours, respectively.

Table 11 – Existing (2025) plus Project Improved Conditions Intersection Levels of Service

ID	Intersection	Peak Hour	LOS Threshold	Control	Existing (2025)		Existing (2025) plus Project		Existing (2025) plus Project (Improved)	
					Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)	LOS
3	12th Ave at Hayden Ave	AM	D	Signal	2.1(16.7 WBL)	A(C)	**9.1(52.4 EBL)**	**A(F)**	10.0	B
		PM			2.4(17.0 WBL)	A(C)	**8.3(54.1 EBL)**	**A(F)**	10.9	B

Notes: **Bold** represents deficient operations. Shaded represents a project induced deficiency.
Side Street Stop Controlled (SSSC) reported as intersection delay followed by worst movement delay.

Cumulative (2045) plus Project Conditions

As reflected in Table 6, two (2) intersections operate beyond the City of Hanford's identified LOS threshold. The addition of the project results in two (2) project induced deficiencies as defined by the City of Hanford. The following is a discussion of each deficiency and its associated improvements. Analysis worksheets are provided in Appendix I.

Deficiencies:

D2. Intersection #3, 12th Avenue at Hayden Avenue

As shown in Table 6, Intersection #3 operates at LOS F during the AM and PM peak hours with the addition of the project.

D3. Intersection #5, Hayden Avenue at Full Access Driveway

As shown in Table 6, Intersection #5 operates at LOS F during the AM and PM peak hours with the addition of the project.

Improvements:

I2. Intersection #3, 12th Avenue at Hayden Avenue

Consistent with Improvement 1, it is recommended that a traffic signal be installed at Intersection #3 to address the identified deficiency. As shown in Table 12, this improvement results in the intersection operating at LOS B with the addition of the project during the AM and PM peak-hours.

I3. Intersection #5, Hayden Avenue at Full Access Driveway

Review of the SimTraffic® results shows that the southbound left turn delay at Intersection #5 is predominantly caused by eastbound left-turning vehicles at Intersection #3. As the eastbound left-turn queue builds up at the side-street stop control, those vehicles block available gaps for southbound left turns at Intersection #5. The previously identified Improvement 2 (installation of a traffic signal at Intersection #3) would improve operations at Intersection #5 by metering traffic flows and providing longer gaps for southbound left-turning vehicles at Intersection #5 egressing from the project. As shown in Table 12, this Improvement 2 results in Intersection #5 operating at LOS A with the addition of the project during the AM and PM peak-hours.

Table 12 – Cumulative (2045) plus Project Improved Conditions Intersection Levels of Service

ID	Intersection	Peak Hour	LOS Threshold	Control	Cumulative (2045)		Cumulative (2045) plus Project		Cumulative (2045) plus Project (Improved)	
					Delay (sec)	LOS	Delay (sec)	LOS	Delay (sec)	LOS
3	12th Ave at Hayden Ave	AM	D	Signal	2.2(15.6 WBL)	A(C)	**11.7(77.7 EBL)**	**B(F)**	10.5	B
		PM			2.4(16.1 WBL)	A(C)	**12.6(116.0 EBL)**	**B(F)**	11.2	B

CEQA/SB 743 ASSESSMENT

This section documents the Vehicle Miles Traveled (VMT) analysis which was completed for the purpose of determining Senate Bill 743 (SB 743) compliance for the proposed project. With the passage of SB 743, VMT has become an important indicator for determining if new development will result in a "significant transportation impact" as defined by the California Environmental Quality Act (CEQA).

Methodology and Purpose of Analysis

Passed in 2013, SB 743 changes the focus of transportation impact analysis in CEQA from "measuring impacts to drivers" to "measuring the impact of driving". This change has been made by replacing level-of-service (LOS) with Vehicle Miles of Travel (VMT). This shift in transportation impact focus is intended to better-align transportation impact analysis and mitigation outcomes with the State's goals to reduce greenhouse gas (GHG) emissions, encourage infill development, and improve public health through more active transportation. Level of service, or other delay metrics, may still be used to evaluate the impact of projects on drivers as part of land use entitlement review and impact fee programs, and was considered for the analysis of this project (as documented earlier in this report).

In January 2019, the Natural Resources Agency finalized updates to the CEQA Guidelines including the incorporation of SB 743 modifications. The Guidelines' changes were approved by the Office of Administrative Law and are now in effect. The provisions apply statewide as of July 1, 2020.

To help aid lead agencies with SB 743 implementation, the Governor's Office of Planning and Research (OPR) produced the Technical Advisory on Evaluating Transportation Impacts in CEQA[8] (December 2018) that provides guidance regarding the variety of implementation questions they face with respect to shifting to a VMT metric. Key guidance from this document includes:

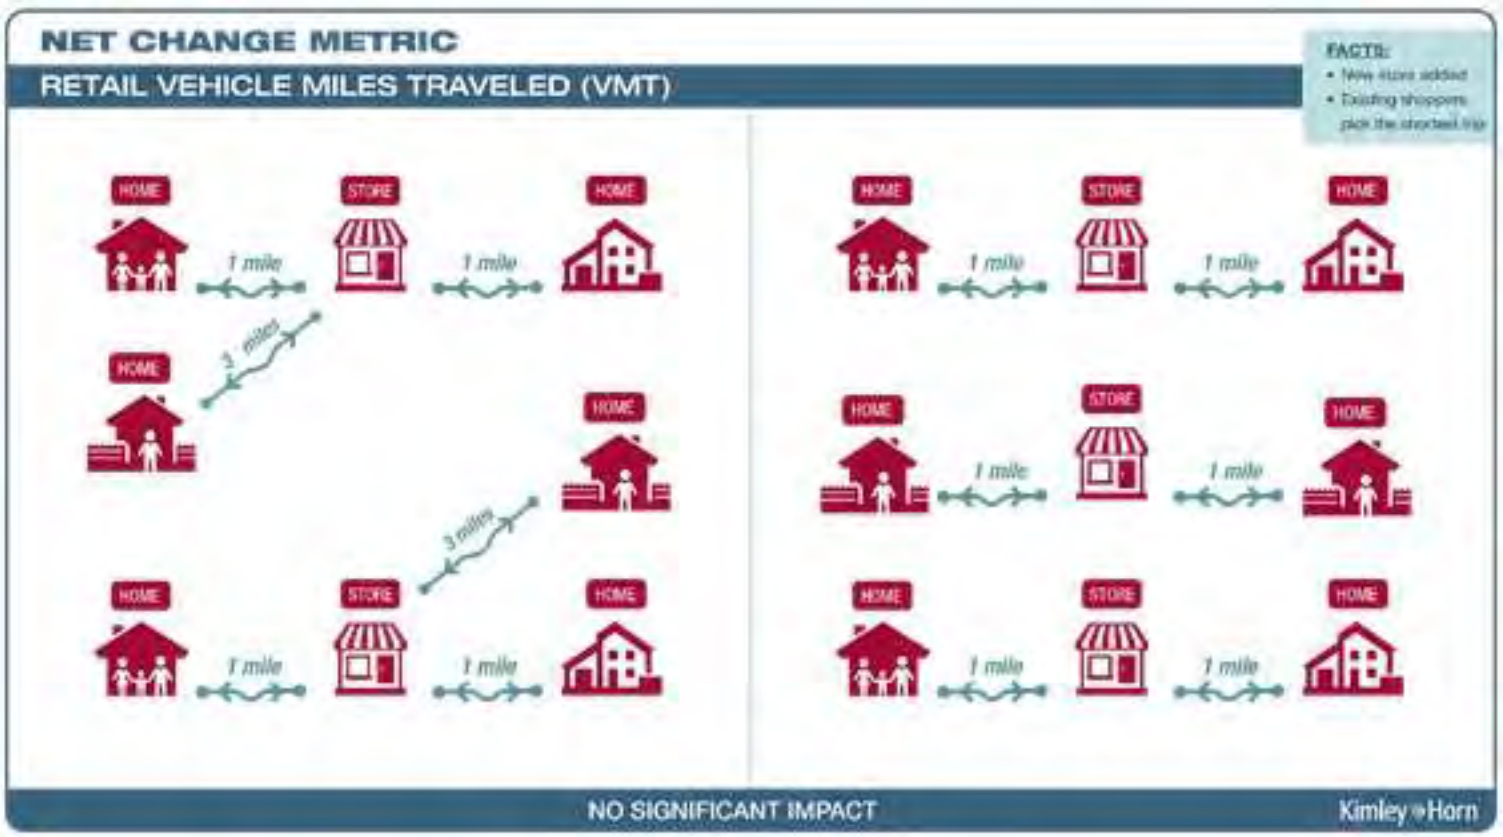
- VMT is the most appropriate metric to evaluate a project's transportation impact.
- OPR recommends tour- and trip-based travel models to estimate VMT, but ultimately defers to local agencies to determine the appropriate tools.
- OPR recommends measuring VMT for residential and office projects on a "per rate" basis.
- OPR recommends that a per capita or per employee VMT that is fifteen percent below that of existing development may be a reasonable threshold. In other words, an office project that generates VMT per employee that is more than 85 percent of the regional VMT per employee could result in a significant impact. OPR notes that this threshold is supported by evidence that connects this level of reduction to the State's emissions goals.
- OPR recommends that where a project replaces existing VMT-generating land uses, if the replacement leads to a net overall decrease in VMT, the project would lead to a less-than-significant transportation impact. If the project leads to a net overall increase in VMT, then the thresholds described above should apply.
- OPR states that by adding retail opportunities into the urban fabric and thereby improving retail destination proximity, local-serving retail development tends to shorten trips and reduce VMT. Generally, retail development including stores smaller than 50,000 square feet might be considered local serving.
- Lead agencies have the discretion to set or apply their own significance thresholds.

Based on the proposed project's land use information and for the purposes of completing this SB 743 analysis to identify transportation-related significant impacts, the project was analyzed as a "Retail" land use. Based on the nature of the land use description provided, the retail use was analyzed qualitatively. The City of Hanford has adopted SB 743 guidance and accompanying thresholds. The City's *Guidelines*[9] was used as the basis for the analysis documented herein.

[8] *Technical Advisory on Evaluating Transportation Impacts in CEQA.* Governor's Office of Planning and Research State of California. December 2018.
[9] *VMT Thresholds and Implementation Guidelines – City of Hanford*, LSA, November 2022.

Analysis

Page i of the *Guidelines* specifically addresses how local-serving retail should be evaluated in terms of its VMT impact. As described, the threshold for significance for retail projects is "a net increase." This threshold definition means that if a proposed facility produces one additional VMT, it will result in a finding of significance. However, page 6 of the document further explains that local retail stores can be determined to result in an overall VMT reduction. This finding is consistent with the desire to develop more sustainable communities that have fewer transportation impacts.



Local-serving retail (e.g., gas station/convenience market) primarily serves pre-existing needs (i.e. they do not generate new trips because they meet existing demand). Because of this dynamic, local-serving retail uses can be presumed to reduce trip lengths when a new use is proposed. Essentially, the assumption is that someone will travel to a newly constructed, local-serving establishment because of its proximity, rather than the proposed retail store fulfilling an unmet need (i.e. the person had an existing need that was met by the retail located farther away and is now traveling to the new use because it is closer to the person's origin location). This relationship results in a trip on the roadway network becoming shorter, rather than a new trip being added to the roadway network. Conversely, residential and office land uses often drive new trips given that they introduce new participants to the transportation system. The *Guidelines* provides a threshold of 55,000-square feet (sf) per establishment as an indicator as to whether a retail use can be considered local-serving or not. Based on the understanding that the building within the proposed project is approximately 6,000-sf, it is presumed that the project's proposed retail uses will not result in a significant impact.

Figure 10 is provided to visually demonstrate the basis of this finding. As shown in Figure 10, the introduction of a new retail use often has the effect of redistributing existing customer trips in a manner that reduces average trip lengths, thereby resulting in a VMT reduction (i.e. trip segments that were 3 miles prior to the new retail store are reduced to 1 mile with the addition of the new retail store).

In terms of employee trips, most often an important strategy for reducing VMT in a rural community is to improve the local jobs/housing balance by increasing the number of employment opportunities. As such, it is reasonable to expect that increasing local employment opportunities will reduce the average commuter trip lengths of residents, thereby resulting in a net decrease to regional net VMT.

OPR's *Technical Advisory* indicates that, although heavy vehicle traffic can be included for analysis convenience, the VMT analysis requirements are specific to passenger-vehicles and light duty trucks. It is generally understood that Interstate commerce and related heavy vehicle traffic are regulated by the Federal government as it relates to commerce. Irrespective of this guidance, it is reasonable to assume that the location of this project adjacent to SR-198 offers services for the traveling public and truck drivers that are already on the roadway system and need to stop for services. With the exception of employee commute trips, the trips for this type of use are generally pass-by or diverted link. Accordingly, it is reasonable to assume that the proposed Maverik would not generate new demand, rather it would satisfy existing demand that would therefore shorten the distance that customers would otherwise travel.

Figure 10 – Illustration of the VMT Reducing Effect of Local-Serving Retail

Other site-related trips, often the smallest number and shortest distance of trips for a facility such as the proposed project, include employee lunches offsite, maintenance teams for on-site infrastructure, supply deliveries, etc. As such, their impact to the overall VMT of the site is likely minimal and it is not likely that they are impactful to the local transportation system and are secondary to the other two trip types discussed above.

Finally, as noted above, while this facility is expected to provide additional jobs and some related trips to the area, the facility itself is not expected to be the principal catalyst for new trips. Rather, it is anticipated that these trips would most likely occur regardless of whether this location were developed. The proposed project is reasonably considered to be proposed in response to an existing demand for services for road users already on the roadway network. Accordingly, if this site were not developed, a similar site will be developed elsewhere to meet this demand and, as such, the alternative to this development would likely not eliminate any related VMT. In consideration of this and the other points discussed above, the project is not anticipated to result in a significant impact under CEQA pursuant to SB 743.

CONCLUSIONS

Significant findings of this study include:

- The project is anticipated to generate up to 4,986 Daily trips, 468 AM peak-hour trips, and 378 PM peak-hour new primary trips.
- The addition of the project to the Existing (2025) analysis scenario results in level-of-service (LOS) deficiencies at Intersection #3 (12th Avenue at Hayden Avenue) during the AM and PM peak-hours. The deficiencies can be improved to within the City's LOS D threshold with the installation of a traffic signal at Intersection #3.
- The addition of the project to the Cumulative (2045) analysis scenario results in level-of-service (LOS) deficiencies at Intersection #3 (12th Avenue at Hayden Avenue) and Intersection #5 (Hayden Avenue at Full Access Driveway) during the AM and PM peak hours. These deficiencies can be improved to within the City's LOS D threshold by the installation of a traffic signal at Intersection #3.
- Intersection #3 (12th Avenue at Hayden Avenue) satisfies Caltrans Warrant 3 (Peak-Hour) for signalization during both the AM and PM peak hours under the Existing (2025) plus Project and Cumulative (2045) plus Project analysis scenarios. It is recommended that a traffic signal be installed at Intersection #3 to address the previously identified LOS deficiencies.
- The addition of the project results in a queueing deficiency for the southbound left-turn movement at Intersection #4 (12th Avenue at Hanford Armona Road) during the PM peak-hour under Existing (2025) plus Project, Cumulative (2045), and Cumulative (2045) plus Project analysis scenarios. The queue lengths in the Existing (2025) plus Project and Cumulative (2045) plus Project scenarios can be improved by retiming the intersection's traffic signal cycle length.
- Traffic Accident Surveillance and Analysis System (TASAS) ramp collision data provided by Caltrans reveals that the northbound Highway 198 Eastbound on-ramp from 12th Avenue and the Highway 198 Westbound off-ramp to 12th Avenue both exhibit actual facility collision rates higher than the statewide average for comparable facilities. The project is not expected to significantly alter the prevailing conditions.
- Transportation Injury Mapping System (TIMS) intersection collision data does not reveal instances of actual collision rates higher than the statewide average for comparable facilities for the study intersections included in this report. The project is not expected to significantly alter the prevailing conditions. Project improvements to Intersection #3 (12th Avenue at Hayden Road) are expected to improve safety for all roadway users.
- A qualitative CEQA/SB 743 assessment concludes that the project is not anticipated to result in a significant impact.

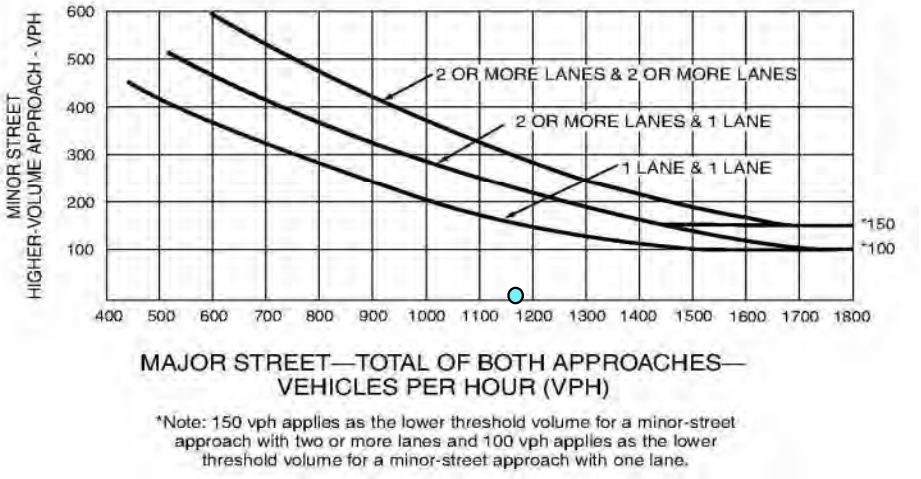
Traffic Signal Warrants Worksheet
Warrant 3: Peak Hour
Source: MUTCD 2014 California Supplement

Scenario: Existing (2025) AM Peak-Hour
Intersection: 12th Ave AND Hayden Ave
Comments:

	PART A or PART B	SATISFIED	**NO**

PART A
(All parts 1, 2, and 3 below must be satisfied) — SATISFIED **NO**



1.	The total delay experienced for traffic on one minor street approach controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach and five vehicle hours for a two-lane approach; AND	No
2.	The volume on the same minor street approach equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; AND	No
3.	The total entering volume serviced during the hour equals or exceeds 800 vph for intersection with four or more approaches or 650 vph for intersection with less than four approaches.	Yes

PART B — SATISFIED **No**

APPROACH LANES	One	2 or More
Both Approaches - Major Street		1171
Highest Approach - Minor Street		10

The plotted points for vehicles per hour on major streets (both approaches) and the corresponding per hour higher volume minor street approach (one direction only) for one hour (any consecutive 15 minute period) fall above applicable curves in MUTCD Figure 4C-3.

Figure 4C-3. Warrant 3, Peak Hour

*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

	PART A or PART B	SATISFIED	**YES**

PART A
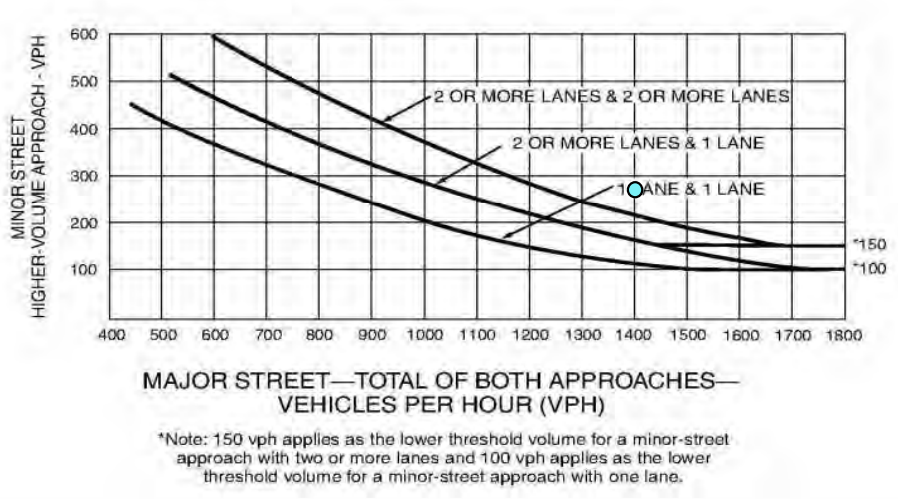
(All parts 1, 2, and 3 below must be satisfied) SATISFIED **YES**



1. The total delay experienced for traffic on one minor street approach controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach and five vehicle hours for a two-lane approach; AND — Yes
2. The volume on the same minor street approach equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; AND — Yes
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersection with four or more approaches or 650 vph for intersection with less than four approaches. — Yes

PART B SATISFIED **Yes**

APPROACH LANES	One	2 or More
Both Approaches - Major Street		1534
Highest Approach - Minor Street		272

The plotted points for vehicles per hour on major streets (both approaches) and the corresponding per hour higher volume minor street approach (one direction only) for one hour (any consecutive 15 minute period) fall above applicable curves in MUTCD Figure 4C-3.

Figure 4C-3. Warrant 3, Peak Hour

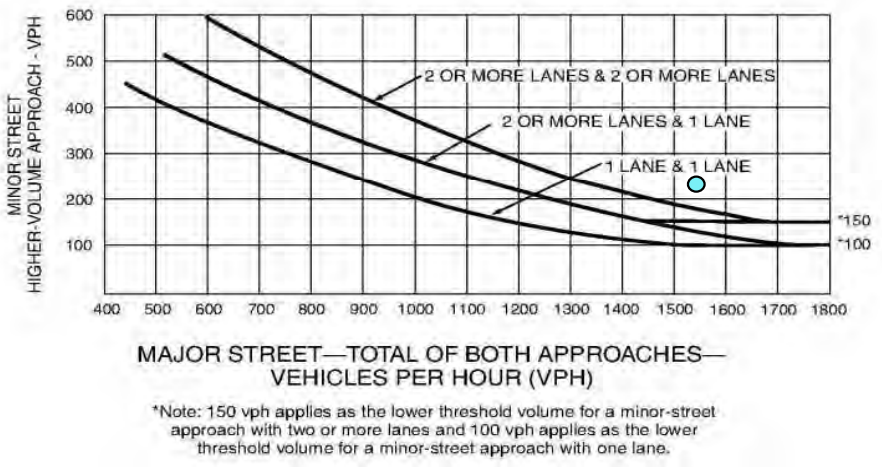
*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

Traffic Signal Warrants Worksheet
Warrant 3: Peak Hour
Source: MUTCD 2014 California Supplement

Scenario: Cumulative (2045) plus Project PM Peak-Hour
Intersection: 12th Ave AND Hayden Ave
Comments:

	PART A or PART B	SATISFIED	**YES**

PART A
(All parts 1, 2, and 3 below must be satisfied) SATISFIED **YES**



1.	The total delay experienced for traffic on one minor street approach controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach and five vehicle hours for a two-lane approach; AND	Yes
2.	The volume on the same minor street approach equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; AND	Yes
3.	The total entering volume serviced during the hour equals or exceeds 800 vph for intersection with four or more approaches or 650 vph for intersection with less than four approaches.	Yes

PART B SATISFIED **Yes**

APPROACH LANES	One	2 or More
Both Approaches - Major Street		1850
Highest Approach - Minor Street		221

The plotted points for vehicles per hour on major streets (both approaches) and the corresponding per hour higher volume minor street approach (one direction only) for one hour (any consecutive 15 minute period) fall above applicable curves in MUTCD Figure 4C-3.

Figure 4C-3. Warrant 3, Peak Hour

*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

Crash Data Reports

April 16, 2025
06-Kin-198
PM R016.510 to R017.210

Traffic Accident Surveillance and Analysis System (TASAS)
Collision Data Summary

The data provided is protected by 23 U.S.C. § 407, and shall not be subject to discovery, nor admitted as evidence in any applicable legal proceeding against the State of California. By allowing the release of this information, the State of California, Department of Transportation does not waive any rights it has under 23 U.S.C. § 407.

Protected by 23 U.S.C. § 407

SR 198 PM R016.510 to PM R017.210

Table 1 summarizes ramp collision rates along State Route 198 (SR 198) between PM R016.510 and PM R017.210 in the County of Kings. The Table B reports were generated on April 16, 2025, and they depict existing collision rates per million vehicles for the most recent 60-month period from July 1, 2019, to June 30, 2024, from the Traffic Accident Surveillance and Analysis System (TASAS).

Table 1
5-Year Collision Rates: Ramps

Location	TOTAL No. of Collisions	ACTUAL (per million vehicles)			AVERAGE (per million vehicles)		
		Fatal Collisions	Fatal + Injury Collisions	Total (1)	Fatal Collisions	Fatal + Injury Collisions	Total (1)
RAMPS AT 12th AVE							
PM R016.646 198/EB OFF TO 12th AVE	8	0.000	0.44	0.87	0.003	0.38	1.04
PM R016.820 198/WB ON FROM 12th AVE	5	0.000	0.16	0.40	0.002	0.23	0.63
PM R016.835 198/EB ON FROM SB 12th AVE	1	0.000	0.00	0.13	0.002	0.23	0.77
PM R017.007 198/EB ON FROM NB 12th AVE	6	0.000	0.38	2.28	0.004	0.23	0.70
PM R017.070 198/WB OFF TO 12th AVE	26	0.000	0.76	2.48	0.003	0.38	1.04

(1) All reported collisions (includes Property Damage Only (PDO) Collisions)

PM R016.646 198/EB OFF TO 12th AVE

Analysis of the TASAS Table B records shows a total of 8 collisions at PM R016.646 at the ramp of 198/EB off to 12th Ave within the study periods summarized above. Table 1 reflects that the Actual Fatal and Actual Total collision rates are below the average for similar facilities statewide. It also reflects that the Actual Fatal + Injury collision rates are above the average for similar facilities statewide.

Table 2
Highway Primary Collision Factors and Type of Collision

Primary Collision Factor	Type of Collision			
	Head On	Rear End	Broadside	Hit Object
Influence of Alcohol	1			
Improper Turn		1		
Speeding		3		1
Other Violation			2	
Total	**1**	**4**	**2**	**1**

Table 2 shown above indicates that the predominant collision type was Rear End (4), and the corresponding collision factor was Speeding (3). Other types of collisions that occurred on this segment were Head On (1), Broadside (2), and Hit Object (1). Other pertinent primary collision factors were Influence of Alcohol, Improper Turn, and Other Violation.

TASAS Table B shows that there was 1 Hit Object type of collisions. The Hit Object was a "Drainage Ditch".

PM R016.820 198/WB ON FROM 12th AVE

Analysis of the TASAS Table B records shows a total of 5 collisions at PM R016.820 at the ramp of 198/WB on from 12th Ave within the study periods summarized above. Table 1 reflects that the Actual Fatal, Actual Fatal + Injury, and Actual Total collision rates are below the average for similar facilities statewide.

Table 3
Highway Primary Collision Factors and Type of Collision

Primary Collision Factor	Type of Collision		
	Rear End	Hit Object	Overturn
Influence of Alcohol		1	
Following Too Close	1		
Improper Turn			1
Speeding	1		1
Total	**2**	**1**	**2**

Table 3 shown above indicates that the predominant collision types were Rear End (2) and Overturn (2), with the corresponding collision factors being Following Too Close (1), Improper Turn (1), and Speeding (1). Another type of collision that occurred on this segment was Hit Object (1). Another pertinent primary collision factor was Influence of Alcohol.

TASAS Table B shows that there was 1 Hit Object type of collisions. The Hit Object was a "Dike or Curb".

Protected by 23 U.S.C. § 407

PM R016.835 198/EB ON FROM SB 12th AVE

Analysis of the TASAS Table B records shows a total of 1 collision at PM R016.835 at the ramp of 198/EB on from SB 12th Ave within the study periods summarized above. Table 1 reflects that the Actual Fatal, Actual Fatal + Injury, and Actual Total collision rates are below the average for similar facilities statewide.

Table 4
Highway Primary Collision Factors and Type of Collision

Primary Collision Factor	Type of Collision
	Hit Object
Improper Turn	1
Total	**1**

Table 4 shown above indicates that the predominant collision type was Hit Object (1), and the corresponding collision factor was Improper Turn (1).

TASAS Table B shows that there was 1 Hit Object type of collisions. The Hit Objects were "Guardrail".

PM R017.007 198/EB ON FROM NB 12th AVE

Analysis of the TASAS Table B records shows a total of 6 collisions at PM R017.007 at the ramp of 198/EB on from NB 12th Ave within the study periods summarized above. Table 1 reflects that the Actual Fatal collision rates are below the average for similar facilities statewide. It also reflects that the Actual Fatal + Injury and Actual Total collision rates are above the average for similar facilities statewide.

Table 5
Highway Primary Collision Factors and Type of Collision

Primary Collision Factor	Type of Collision		
	Head On	Rear End	Hit Object
Following Too Close		2	
Speeding			1
Other Violation		2	
Not Stated	1		
Total	**1**	**4**	**1**

Table 5 shown above indicates that the predominant collision type was Rear End (4), with the corresponding collision factors being Following Too Close (2) and Other Violation (2). Other types of collisions that occurred on this segment were Head On (1) and Hit Object (1). Other pertinent primary collision factors were Speeding and Not Stated.

TASAS Table B shows that there was 1 Hit Object type of collisions. The Hit Object was a "Guardrail".

Protected by 23 U.S.C. § 407

PM R017.070 198/WB OFF TO 12th AVE

Analysis of the TASAS Table B records shows a total of 26 collisions at PM R017.070 at the ramp of 198/WB off to 12th Ave within the study periods summarized above. Table 1 reflects that the Actual Fatal collision rates are below the average for similar facilities statewide. It also reflects that the Actual Fatal + Injury and Actual Total collision rates are above the average for similar facilities statewide.

Table 6
Highway Primary Collision Factors and Type of Collision

Primary Collision Factor	Type of Collision	
	Side Swipe	Rear End
Speeding		16
Other Violation	3	7
Total	**3**	**23**

Table 6 shown above indicates that the predominant collision type was Rear End (23), and the corresponding collision factor was Speeding (16). Another type of collision that occurred on this segment was Side Swipe (3). Another pertinent primary collision factor was Other Violation.

TASAS Table B shows that there was 0 Hit Object type of collision.

End of summary.
