Subject: **Phase I Environmental Site Assessment**
Vacant land adjacent to the east of 6401 33rd Street
Jurupa Valley, California 92509
AEI Project No. 496865

Dear John Mitchell:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (949) 752-9300 or kbachrach@aeiconsultants.com.

Sincerely,

Ken Bachrach
Senior Vice President
AEI Consultants

PROJECT SUMMARY

Vacant land adjacent to the east of 6401 33rd Street, Jurupa Valley, Riverside County, California 92509
AEI Project No. 496865

Site Visit	August 2, 2024
Regulatory Database	July 29, 2024
Interview(s)	Property Owner: August 2, 2024 Key Site Manager: N/A
EP Declaration	August 12, 2024
Environmental Lien Search (if conducted by AEI)	N/A
Report Viability per ASTM E1527-21	January 25, 2024

The dates listed are required for Users who are using the report in connection with CERCLA liability protections. The User may have their own criteria when the report is being used for business risk purposes, and not CERCLA liability protections.

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by PACS to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at Vacant land adjacent to the east of 6401 33rd Street, Jurupa Valley, Riverside County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

Property Information	
Site Address(es)	Vacant land adjacent to the east of 6401 33rd Street, Jurupa Valley, Riverside County, California 92509
Property ID (APN or Block/Lot)	177-020-084
Location	South side of 30th Street
Site and Building Information	
Approximate Site Acreage/Source	4.81/Client provided
Number of Buildings	None
Building Construction Date(s)/Source	N/A/N/A
Building Square Footage (SF)/Source	N/A/N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	N/A
Additional Improvements	The subject property is unimproved.
Property Type	Vacant Land
On-site Occupant(s)	N/A
Current On-site Operations/Use	The subject property is unoccupied.
Current Use of Hazardous Substances	None identified
Regulatory Information	
Regulatory Database Listing(s)	None identified

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1896-1931	Vacant/fallow land	Topographic maps, aerial photographs
1938-1953	Agricultural land (largely orchard land on the western portion in 1948)	Aerial photographs
1954-1966	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs
1967-Present	Vacant land (in 1967 is a small area of disturbed land and rectangular feature on the northwestern portion likely associated with the recently developed medical building)	Aerial photographs

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Vacant Land (Portion of APN: 177-020-084)	None identified
East	Single Family Residences (3165-3237 Winter Park Avenue)	None identified
South	Vacant Parking/Storage Lot (6464 33rd Street)	Yes; refer to Section 5.1
West	Jurupa Hills Post Acute (6401 33rd Street)	Yes; refer to Section 5.1

FINDINGS AND OPINIONS

Significant Data Gap(s) is defined by the current ASTM Standard E1527 as a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

AEI did not identify significant data gaps which affected our ability to identify RECs.

Recognized Environmental Condition (REC) is defined by the current ASTM Standard E1527 as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the current ASTM Standard E1527 as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the current ASTM Standard E1527 as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- Based on a review of aerial photographs, there is potential that the subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The routine application of pesticides and fertilizers is not considered a release subject to CERCLA

response costs. No evidence of spilling, dumping, emitting, and/or mishandling of pesticides and/or fertilizers was identified, and thus the former agricultural uses do not represent a REC. AEI understands that the subject property is slated for redevelopment with a skilled nursing facility and a medical office building. Although past agricultural uses do not represent a REC per the ASTM E1527 definition, they may pose a threat to the health and safety of future occupants. The subject property was formerly part of a larger agricultural field that included the northern adjoining property. Based on soil sampling conducted on the northern adjoining property, elevated concentrations of pesticides, particularly dieldrin have been detected in shallow soils (see Section 6.3). Concentrations of metals were also detected but were below applicable screening levels and/or considered consistent with background concentrations. Based on the proximity of these detections and consistent historical agricultural uses noted on the subject property and northern adjoining property, it is considered likely that pesticides and metals are present in shallow soils at the subject property.

- According to historical topographic maps from 1967 to 2012, a water well was depicted on the subject property. AEI did not observe a water well during the site reconnaissance, however, due to the dense vegetation, it may have been obstructed by view. If a water well is encountered during redevelopment, it should be properly decommissioned in accordance with local/state regulations.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-21, of Vacant land adjacent to the east of 6401 33rd Street, Jurupa Valley, Riverside County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.This assessment has revealed no evidence of recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.

RECOMMENDATIONS

AEI recommends the following:

- Phase II Subsurface Investigation to determine if past agricultural uses have impacted the subject property

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at Vacant land adjacent to the east of 6401 33rd Street, Jurupa Valley, Riverside County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with the most current ASTM E1527 Standard associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by the current ASTM Standard E1527. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under the current ASTM Standard E1527.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. The current ASTM Standard E1527 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the current ASTM Standard E1527.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- The Riverside County Fire Department was contacted for information on the subject property in order to identify potential hazardous substance/petroleum product handling at the subject property. Due to the time frame of this assessment, records were not available for review. However, based on the quality of information obtained from other sources including prior reports and interviews, this limitation is not expected to significantly alter the findings of this assessment.
- A search of historical city directories was not conducted for the adjoining sites to the west (3165-3237 Winter Park Avenue). However, based on a review of other available historical sources, these sites appear to have historically been developed residentially. Therefore, this limiting condition is not expected to alter the findings of this assessment.
- Due to the size of the subject property, AEI performed a reconnaissance of the property utilizing a field technique of traversing the site in an attempt to provide an overlapping field of view. Due to the size of the property and the vegetation present on site, isolated areas of the site may have not been accessible for direct observation during AEI's field reconnaissance. Based on the vacant nature of the site, this limitation is not expected to significantly alter the findings of this assessment.

1.6 Data Failure and Data Gaps

According to the current ASTM Standard E1527, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to the current ASTM Standard E1527, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to the current ASTM Standard E1527, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant

to the current ASTM Standard E1527, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	As cited in Section 3.0, historical sources were not obtained at five-year intervals dating back to first developed use. However, based on consistent or presumed property uses cited in Section 3.0, this data failure is not expected to significantly alter the Findings of this assessment.
Information/Sources Consulted	Aerial photographs, city directories, historical topographic maps, agency records, previous reports, interviews

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of PACS. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with PACS and AEI's contract and Terms and Conditions dated July 26, 2024. The limitation of liability defined in the contracted terms is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

Property Information	
Site Address(es)	Vacant land adjacent to the east of 6401 33rd Street, Jurupa Valley, Riverside County, California 92509
Property ID (APN or Block/Lot)	177-020-084
Location	South side of 30th Street
Site and Building Information	
Approximate Site Acreage/Source	4.81/Client provided
Number of Buildings	None
Building Construction Date(s)/Source	N/A/N/A
Building Square Footage (SF)/Source	N/A/N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	N/A
Additional Improvements	The subject property is unimproved.
Property Type	Vacant Land
On-site Occupant(s)	N/A
Current On-site Operations/Use	The subject property is unoccupied.
Current Use of Hazardous Substances	None identified
Regulatory Information	
Regulatory Database Listing(s)	None identified

2.2 ON-SITE UTILITIES

The subject property is currently vacant land or lacks structures. Consequently, there are no on-site heating or cooling systems, or potable water or sewage disposal/treatment services.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a mixed use manufacturing and residential area of Jurupa Valley, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Vacant Land (Portion of APN: 177-020-084)	None identified
East	Single Family Residences (3165-3237 Winter Park Avenue)	None identified
South	Vacant Parking/Storage Lot (6464 33rd Street)	Yes; refer to Section 5.1
West	Jurupa Hills Post Acute (6401 33rd Street)	Yes; refer to Section 5.1

2.4 PHYSICAL SETTING

Geologic Unit	Qoa: Pleistocene, marine and nonmarine (continental) sedimentary rocks. Older alluvium, lake, playa, and terrace deposits Source: USGS and United States Department of the Interior
Soil Series	Greenfield Sandy Loam (GyC2): Soils from this series consist of sandy loam, fine sandy loam, loam, and stratified loamy sand to sandy loam. Soils from this series are well drained with low runoff and moderately rapid permeability

	Delhi Fine Sand (DaD2): Soils from this series consist of fine sand, sand, and fine sandy loam. Soils from this series are somewhat excessively drained with a very low runoff and low permeability Source: USDA Soil Survey
Groundwater Flow Direction	Southwest Source: Topographic map interpretation
Estimated Depth to Groundwater	89.62-113.50 feet bgs Source: Case Closure Summary for Former E-Z Service Station No. #100795 (AKA Harken Marketing) located approximately 0.58 miles south of the subject property
Surface waters on the subject property or adjoining sites	None
Additional Notes	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL RECORDS REVIEW

Reasonably ascertainable standard historical sources as outlined in the current ASTM Standard E1527 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, historical topographic maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1896-1931	Vacant/fallow land	Topographic maps, aerial photographs
1938-1953	Agricultural land (largely orchard land on the western portion in 1948)	Aerial photographs
1954-1966	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs
1967-Present	Vacant land (in 1967 is a small area of disturbed land and rectangular feature on the northwestern portion likely associated with the recently developed medical building)	Aerial photographs

Based on a review of aerial photographs, there is potential that the subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The routine application of pesticides and fertilizers is not considered a release subject to CERCLA response costs. No evidence of spilling, dumping, emitting, and/or mishandling of pesticides and/or fertilizers was identified, and thus the former agricultural uses do not represent a REC. AEI understands that the subject property is slated for redevelopment with a skilled nursing facility and a medical office building. Although past agricultural uses do not represent a REC per the ASTM E1527 definition, they may pose a threat to the health and safety of future occupants. The subject property was formerly part of a larger agricultural field that included the northern adjoining property. Based on soil sampling conducted on the northern adjoining property, elevated concentrations of pesticides, particularly dieldrin have been detected in shallow soils (see Section 6.3). Concentrations of metals were also detected but were below applicable screening levels and/or considered consistent with background concentrations. Based on the proximity of these detections and consistent historical agricultural uses noted on the subject property and northern adjoining property, it is considered likely that pesticides and metals are present in shallow soils at the subject property.

If available, copies of historical sources are provided in Appendix D.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years (1931-2020, non-inclusive):

Year(s)	Subject Property Description	Adjoining Site Descriptions
1931	Vacant/fallow land	NORTH: Vacant land EAST: Vacant land SOUTH: Vacant land WEST: Vacant land

Year(s)	Subject Property Description	Adjoining Site Descriptions
1938	Agricultural land	NORTH: Agricultural land EAST: Agricultural land SOUTH: Agricultural land WEST: Agricultural land
1948, 1953	Agricultural land (largely orchard land on the western portion in 1948)	NORTH: No significant changes EAST: No significant changes SOUTH: No significant changes WEST: No significant changes
1967	A small area of disturbed land and rectangular feature on the northwestern portion likely associated with the recently developed medical building	NORTH: Vacant land EAST: Vacant land SOUTH: Unimproved roadway followed by vacant land WEST: Current commercial building and asphalt paved parking lot
1975	Graded/vacant land	NORTH: No significant changes EAST: No significant changes SOUTH: Unimproved roadway followed by vacant land as well as an asphalt paved outdoor storage lot developed with five buildings WEST: No significant changes
1985, 1990, 1994	No significant changes	NORTH: No significant changes EAST: No significant changes SOUTH: Storage lot utilized for lumber storage WEST: No significant changes
2002, 2005	No significant changes	NORTH: No significant changes EAST: No significant changes SOUTH: Previously vacant parcel paved over with asphalt for use as part of the larger lumber yard WEST: No significant changes
2009	No significant changes	NORTH: No significant changes EAST: Additional building developed on the northwest corner of the property SOUTH: No significant changes WEST: No significant changes
2012	No significant changes	NORTH: No significant changes EAST: No significant changes SOUTH: All previous buildings remained. Lot was unoccupied. WEST: No significant changes
2016, 2020	No significant changes	NORTH: No significant changes EAST: No significant changes SOUTH: Prior storage lot utilized as an asphalt paved parking lot WEST: No significant changes

Subject property:

- Agricultural land - refer to Section 3.0

Adjoining Site(s):

- No potential environmental concerns identified

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. Directories were reviewed in approximate five-year increments from 1921-2020, non-inclusive. The first listing for the subject property appeared in 1981. City directory listings for the subject property all pertained to the site's use as a convalescent hospital, and refer to the site's west adjoining structure. Prior to 2019, the site subject property was under the same parcel as the west adjoining hospital and therefore shared the same address. No potential tenants of concern were identified based on AEI's review of the historical city directories.

The table below summarizes the search of historical city directories conducted for the adjoining sites. Refer to the appendices for a complete list of historical adjoining occupants identified during the review of city directories obtained from EDR.

Adjoining Sites

Direction	Address(es)	Potential Listings of Concern
North	N/A	N/A
East	3165-3237 Winter Park Avenue	N/A [address(es) not researched; see Section 1.5]
South	6464 33rd Street	6464 33rd Street - Las Plumas Riverside Division Shelter Products (1977-1986), Las Plumas Lumber - Riverside Division (1990-2002), Rexco (2014)
West	6401 33rd Street	None identified

Subject property:

- No potential environmental concerns identified

Adjoining Site(s):

- No potential environmental concerns identified

3.4 HISTORICAL TOPOGRAPHIC MAPS

AEI reviewed historical topographic maps of the subject property and surrounding area. A search was made of the EDR collection of topographic maps. Historical topographic maps were reviewed for the following years 1896-2022, non-inclusive:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1896, 1898	Vacant land bisected by a stream on the northeast corner of the property	NORTH: Vacant land bisected by a stream EAST: Roadway followed by no features; no features depicted SOUTH: No features depicted WEST: No features depicted
1901	No features depicted aside from topographic lines indicating the groundwater to flow to the southwest	NORTH: No features depicted EAST: No features depicted SOUTH: No significant changes WEST: No significant changes
1942, 1943, 1953, 1954	No significant changes	NORTH: No significant changes EAST: No features aside from a boundary marker for a Forest Service administrative area SOUTH: No significant changes WEST: No significant changes
1967	Well developed on the northwest corner of the subject property	NORTH: No significant changes EAST: No significant changes SOUTH: No significant changes WEST: Current building
1973, 1975	No significant changes	NORTH: No features depicted EAST: No significant changes SOUTH: Six buildings developed WEST: No significant changes
1980	No significant changes	NORTH: No significant changes EAST: No significant changes SOUTH: Additional building developed on the eastern portion of the property WEST: No significant changes
2012, 2015, 2018, 2021, 2022	No significant changes	NORTH: No significant changes EAST: No features depicted SOUTH: No features depicted WEST: No features depicted

Subject property:

- According to historical topographic maps from 1967 to 2012, a water well was depicted on the subject property. AEI did not observe a water well during the site reconnaissance, however, due to the dense vegetation, it may have been obstructed by view. If a water well is encountered during redevelopment, it should be properly decommissioned in accordance with local/state regulations.

Adjoining Site(s):

- No potential environmental concerns identified

3.5 CHAIN OF TITLE

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 Local Environmental Health Department and/or State Environmental Agency

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Riverside County Department of Environmental Health (RCoDEH)	July 30, 2024	Online	N/A	No records on file

4.2 Fire Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Riverside County Fire Department (RCoFD)	July 30, 2024	Online	N/A	Response pending, refer to Section 1.5

4.3 Building Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Jurupa Valley Building Department (JVBD)	July 30, 2024	Online	N/A	Records discussed below

Records Summary

Year(s)	Owner/Applicant	Description of Permit and Building Use
2019	N/A	Notification of Inspection - Unpermitted land use. North side of fence was disturbed and allowed a semi-truck to use the property for the purpose of parking/storage Vacant structures and land were observed to be unkempt

Evidence indicating current or prior use or storage of hazardous substances was not on file for the subject property with the JVBD.

4.4 Planning Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Jurupa Valley Planning Department (JVPD)	July 30, 2024	Online and via telephone	N/A	No evidence indicating the existence of AULs on file for the subject property

4.5 ASSESSOR'S OFFICE

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Riverside County Assessor's Office	July 30, 2024	Online	N/A	Information obtained is discussed below

Records Summary

APN	177-020-084
Acreage	14.61 acres for the entire parcel; acres for the southern portion was not provided
Construction Date	Not provided
Building Square Footage	Not provided
Current Owner	Not provided
Additional Information	According to the Riverside Assessor's Office, the subject property is identified as transitional agricultural land.

4.6 OTHER AGENCIES SEARCHED

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) GeoTracker	July 30, 2024	Online	N/A	No records on file
SWRCB GeoTracker Historical Hazardous Substance Storage Information	July 30, 2024	Online	N/A	No records on file
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	July 30, 2024	Online	N/A	No records on file
CA DTSC EnviroStor	July 30, 2024	Online	N/A	No records on file
CalEPA Regulated Site Portal	July 30, 2024	Online	N/A	No records on file
South Coast Air Quality Management District (AQMD)	July 30, 2024	Online	N/A	No records on file
PFAS Sites and Community Resources (PFAS Map)	July 30, 2024	Online	N/A	No records on file

No other agencies were contacted during the course of this assessment.

4.7 OIL AND GAS WELLS

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Geologic Energy Management Division (CalGEM)	July 30, 2024	CalGEM Map	No

4.8 Oil and Gas Pipelines

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	July 30, 2024	NPMS Public Map Viewer	No

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The minimum search distance from the federal and state environmental records database listings specified in the current ASTM Standard E1527 is included in Section 5.1. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below as well as the total number of sites identified, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion, if any, are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern
Federal NPL (Superfund) sites	1.0			
Federal Delisted NPL sites	0.5			
Federal CERCLA removals/orders sites	0.5			
Federal CERCLA sites with NFRAP	0.5			
Federal RCRA facilities undergoing Corrective Action	1.0			
Federal RCRA TSD facilities	0.5			
Federal RCRA generators (LQG, SQG, VSQG)	SP/ADJ			
Federal RCRA NonGen/NLR sites	SP/ADJ		✔	
Federal IC/EC sites	SP			
Federal ERNS sites	SP			
State/tribal "Superfund" equivalent sites	1.0			
State/tribal hazardous waste facilities	0.5			
State/tribal landfill and solid waste disposal facilities	0.5			
State/tribal leaking storage tanks	0.5			
State/tribal registered storage tanks	SP/ADJ			
State/tribal voluntary cleanup sites	0.5			

Database	Search Distance (Miles)	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern
State/tribal IC/EC registries	SP			
State/tribal brownfield sites	0.5			
Orphans	N/A			
Additional Environmental Record lists	SP/ADJ	✔		

Facility Name	Mt. Rubidoux Rehabilitation HO
Address	6401 33rd Street
Distance & Direction	Western adjoining property
Hydrologic Position	N/A
Databases Listed	EMI
Comments	Although the subject property address was listed, this listing is associated with the adjoing hospital that also shares the same address. The hospital was identified in the EMI database in 1987 and 1990. According to the regulatory listing, no pollutants were emitted into the south coast air basin (basin 33) during these years. AEI reviewed AQMD records for additional information (https://xappprod.aqmd.gov/find//facility/AQMDsearch?facilityID=15952). One administrative violation was issued in 2008, however, compliance was achieved in 2009. Based on the lack of a documented release and nature of the listing, the listing is not expected to represent a REC.

Facility Name	Las Plumas Lumber LLC, Las Plumas Lumber Co.
Address	6464 33rd Street
Distance & Direction	Adjoining to the south
Hydrologic Position	Down-gradient
Databases Listed	LUST (x2), CPS-SLIC (x2), WDS, CIWQS, CERS (x2), UST FINDER RELEASE, CORTESE, HIST CORTESE
Comments	This facility received regulatory closure on February 17, 1993 for a gasoline release to soil. According to a letter from the County of Riverside Department of Environmental Health, one 550-gallon waste oil underground storage tank (UST), one 5,000-gallon gasoline UST, and one 10,000-gallon diesel UST were removed on January 22, 1991. According to the Risk Assessment for Underground Storage Tanks Excavation prepared by Geraghty & Miller, Inc Environmental Services dated July 2, 1991, approximately 1,200 cubic yards of soil was excavated to a depth of 40 feet bgs. Soil samples were collected from 11 locations at the base of the excavation at a depth ranging from 19 to 50 feet bgs. In addition, one 10-15 degree angled boring was advanced on site. The maximum soil concentration of total petroleum hydrocarbons was 35,000 milligrams per kilogram (mg/kg). Toluene, xylenes, and ethylbenzene detections were reported at 4.6, 13, and 2.8 mg/kg, respectively. Benzene was not detected in the soil samples analyzed. No groundwater impact was noted. Given the regulatory status, media involved, and down-gradient nature, this facility does not represent a REC to the Subject Property and no further assessment appears to be warranted According to the regulatory database, this site is listed as a CIWQS site for a basic industrial storm water discharge permit which was issued on July 30, 2003 and expired on August 23, 2010. No violations are reported in association with this permit. The facility is listed within the WDS database as an active facility with a continuous or seasonal discharge that is monitored under waste discharge requirements. The facility is noted as an industrial site that treats

[redacted]	and/or disposes liquid or semisolid wastes during onsite processes. The facility is a minor threat to water quality and has no waste treatment systems. Based on the lack of reported violations, this listing is not considered evidence of a REC.

5.2 VAPOR MIGRATION

A vapor encroachment condition (VEC) is the presence or likely presence of Chemical(s) of Concern (COC) vapors in the vadose zone of the subject property caused by the release of vapors from contaminated soil and/or groundwater either on or near the subject property.

AEI conducted a limited screening for potential VECs that may affect the subject property. The VEC screening focused on the current and historical usage of the subject property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons.

Determination of AOC

To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by the current ASTM E2600 of 1,760 feet (1/3 mile) from the subject property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology:

Non-petroleum hydrocarbon COCs:

- 1,760 feet in the upgradient direction
- 365 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if Light, Non-Aqueous Phase Liquid, (LNAPL, i.e. floating product) is suspected:

- 528 feet in the upgradient direction
- 165 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if LNAPL is *not* suspected:

- 528 feet in the upgradient direction
- 95 feet in the cross-gradient direction
- 30 feet in the downgradient position

Additional adjustment of the AOC may be conducted based on AEI's professional judgment.

Conclusions

5.3 PER- AND POLYFLUOROALKYL SUBSTANCES (PFAS)

As defined in Section 3.2.36 of the current ASTM Standard E1527, hazardous substance means "those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts." Hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA are outside of the scope of the current ASTM Standard E1527.

On July 8, 2024, the Final EPA rule became effective that designates perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as CERCLA hazardous substances. Per the current ASTM Standard E1527, once this rule went into effect, these substances are evaluated within the scope of this standard, and a release or likely release of PFOA and/or PFOS is considered a REC.

Other than PFOA/PFOS, compounds classified as PFAS are not currently classified as hazardous substances under CERCLA, and thus the potential presence of PFAS (other than PFOA/PFOS) is outside of the scope of the current ASTM Standard E1527, and does not constitute a REC at this time. However, the report User should be aware that regulatory criteria and classifications are subject to change.

AEI's research of potential PFAS contamination focuses on the release/likely release of PFOA/PFOS. However, if additional information pertaining to other PFAS is identified, AEI will also assess/discuss these compounds, as deemed applicable/appropriate within the scope of this investigation.

It should be noted that AEI's screening of PFOA/PFOS and other PFAS is based solely on review of the resources cited within this report. Identification, or lack thereof, is not a warranty that PFOA/PFOS or other PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFOA/PFOS and other PFAS, additional sources of contamination may exist at the subject property, adjoining sites and/or other nearby sites that were not identified by the limited data and screening tools cited within this report.

5.3.1 PFAS-Related Regulatory Database Listings

As an initial screening tool for potential PFAS contamination, AEI reviewed PFAS-related database listings from EDR.

Location	PFAS Database Listing Identified	PFAS Database Listing Not Identified	Comments
Subject Property		✔	
Adjoining and/or Nearby Site(s)		✔	

5.3.2 Potential On-Site PFAS Sources/Concerns

AEI researched the standard historical and regulatory sources cited within this report to determine if a release or likely release of PFOA/PFOS has occurred at the subject property.

A voluntary industry phaseout of PFOA and PFOS was first implemented in the late 1990s and was fully implemented for PFOS by 2002 and PFOA by 2015. Although PFOA and PFOS have been generally phased out since 2015, studies have found that precursor PFAS in wastewater treatment systems may form PFOA and PFOS. As such, even after 2015, the presence of PFAS in wastewater discharges is considered a likely source of PFOA and PFOS contamination.

Potential Source	Yes	No
Past or present industrial operations that potentially included the use of PFAS (if "yes" see *Potential PFAS Sources from Industrial Uses* section/table below)		✔
The use or discharge of AFFF (if "yes" see *Potential Sources of AFFF* section/table below)		✔
Electroplating (1950s-present) NOTE: Electroplating (specifically hard chromium plating) is an industrial activity where PFAS-containing mist suppressants may have been used		✔
Agricultural uses, specifically 1970s-present that included application of biosolids/WWTP sludge that potentially contained PFAS		✔
Wastewater treatment plant (WWTP) (1960s-present)		✔
Landfill operations / waste disposal areas (1960s-present)		✔
Mining / quarrying / oil production		✔
Commercial carwash (1989-2010)		✔
Dry cleaner and/or commercial laundry (1970s-2010)		✔

AEI did not identify any obvious potential sources of PFAS contamination originating from on-site operations/sources.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to the current ASTM Standard E1527, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative	Mr. John Mitchell	August 2, 2024	Email	2019	Interviewed; see Interview Summary table below
Key Site Manager	N/A	N/A	N/A	N/A	No Key Site Manager identified

INTERVIEW SUMMARY

Question	Owner (Representative)/Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	No
Do you have any knowledge of previous environmental investigations conducted on site?	Yes; refer to Section 6.3
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/ or petroleum products?	No
Are you aware of any known plans for site redevelopment or change in site use?	No
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	No

According to Mr. John Mitchell, Chief Legal Officer, the subject property's parent parcel consists of vacant land that is planned to be redeveloped both residentially (northern adjoining portion) and as a healthcare institution (southern portion that consists of the subject property).

6.1.2 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to the current ASTM Standard E1527 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Information not provided
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Information not provided
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Information not provided
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Information not provided
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	Information not provided

Question	Response/ Comment
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	Information not provided

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI by the client during this assessment. A summary of this information follows:

Phase I and II Environmental Site Assessment for Approximately 9.8 Acres of Vacant Land - 30th Street and Heller Drive, Jurupa Valley, California 92509, prepared by Stantec (July 19, 2024)

The Stantec report was conducted on the northern adjoining property and was described as approximately 9.8 acres of vacant land in the northern portion of a larger 17.67-acre parcel (APN 177-020-084) that includes a nursing home (6401 33rd Street) and additional vacant land. Stantec concluded that the site was developed agriculturally between 1938 and 1948. Based on the historical agricultural use Stantec determined that organochlorine pesticides (OCPs) and or herbicides may have been utilized on the property and near-surface soils may have potentially contained these compounds. A shallow soil assessment was recommended prior to redevelopment of the area to determine if OCPs or the metals lead and arsenic (related to herbicide use) were present at levels of concern for residential use and/or off-site disposal issues.

Note: As the above documentation was not prepared by AEI, the information obtained was not verified for accuracy and a critique of the information contained therein is beyond the scope of this assessment.

A copy of the report that was provided to AEI is included in the appendices.

The previous report also included a review of the following previous assessment(s): 2024 *Phase II Subsurface Investigation Report*.

To address the aforementioned potential environmental concern (i.e. historical agricultural use), Stantec performed a Phase II ESA that consisted of the collection of shallow soil samples on the northern adjoining property on July 8, 2024. The scope of work performed included the advancement of eighteen (18) soil borings (SB-1 through SB-18) to approximately 3-foot below ground surface (bgs) across the Property. Soil samples were collected from 1.0-foot and 3.0-feet bgs from all soil borings. Soil samples from the 1.0-foot interval were submitted for analysis of OCPs by EPA Method 8081A; and arsenic and lead by EPA Method 6010B. Soil samples from the three (3) foot depth were held in the laboratory pending results from the one (1) foot depth.

The laboratory reported minor detections of 4,4'-DDE above laboratory reporting limits in four soil samples at concentrations between 0.0476 to 0.27 milligrams per kilogram (mg/kg) which are below the United States Environmental Protection Agency Regional Screening Level (RSL) for residential land use of 2.0 mg/kg and below the California hazardous waste level

of 1.0 mg/kg. Minor detections of 4,4'-DDT above laboratory reporting limits in three soil samples at concentrations between 0.0133 and 0.0486 mg/kg which are below the RSL for residential land use of 1.9 mg/kg and below the California hazardous waste level of 1.0 mg/kg. Additionally, there was one soil sample (SB-9-1.0) that had detections of alpha-Chlordane and gamma-Chlordane reported at 0.0440 and 0.0613 mg/kg, which is below the RSL of 36 mg/kg.

There were two samples (SB-2-1.0 and SB-9-1.0) that had detections of dieldrin at 0.115 and 0.376 mg/kg, respectively. These detections of dieldrin exceeded the RSL of 0.034 mg/kg. Therefore, the deeper soil samples from these locations (SB-2-3.0 and SB-9-3.0) were also analyzed for dieldrin. The soil sample SB-9-3.0 did not have any detection above the laboratory reporting limit (i.e. "non-detect"). The soil samples SB-2-3.0 did have a concentration of 0.074 mg/kg which remains above the RSL.

Lead was detected in all 18 borings at concentrations ranging from 2.04 to 22.8 mg/kg, which are below the regulatory thresholds for residential soil set at 80 mg/kg. Arsenic was reported in three soil samples analyzed at concentrations ranging from 5.1 to 5.3 mg/kg, which exceeded regulatory thresholds for residential soil set at 0.68 mg/kg. However, arsenic occurs naturally in California at levels up to 11 mg/kg, therefore exceeding the regulatory threshold based on naturally occurring conditions. The State of California uses the background level as the cleanup standard for arsenic. Therefore, the arsenic was
detected below the anticipated regulatory cleanup level.

Stantec recommended additional soil sampling around the vicinity of the SB-2 and SB-9 to further delineate the dieldrin impacts and to determine the volume of impacted soil that may require removal from the subject property.

6.4 Environmental Lien and AUL Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	August 2, 2024
AEI Site Assessor(s)	Breezy Carreno
Property Escort(s)/ Relationship(s) to Property	N/A
Units/Areas Observed	Buildings/Units/Suites: N/A Exterior areas: Due to the size of the subject property, AEI performed a reconnaissance of the property utilizing a field technique of traversing the site in an attempt to provide an overlapping field of view.
Area(s) not accessed and reason(s)	Buildings/Units/Suites/Sheds: N/A Exterior areas: Due to the size of the property and the vegetation present on site, isolated areas of the site may have not been accessible for direct observation during AEI's field reconnaissance. Refer to Section 1.5 for discussion of limiting condition(s)
Other Physical Constraints	• Large parcel Refer to Section 1.5 for discussion of limiting condition(s)
General Observations	The subject property consists of a large parcel of vacant land.

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use (including drums, totes, and intermediate bulk containers)		
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		✔
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids		✔
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers		✔
Pits, Ponds, and Lagoons		
Stained Soil or Pavement		✔
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems or Cesspools		
Biomedical Wastes		✔
Other		

7.1 Subject Property Reconnaissance Findings

During the site reconnaissance, AEI did not observe any of the items listed in the above Reconnaissance Findings Summary table.

7.2 Adjoining Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use

AEI observed a single 55-gallon drum on the south adjoining vacant lot. The drum was unlabeled and sealed. See appendix for photographs. No spills, staining, or leaks were observed on or around the drum. Based on the lack of staining and/or drains in the vicinity, the drum is not a REC.

7.2.2 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformer(s)

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Ten pole-mounted transformers were observed on the adjoining sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not a REC.

7.2.3 Drains, Sumps, and Clarifiers

Several storm drains were observed in the parking areas of the adjoining properties and adjoining roadways. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not considered evidence of a REC.

7.2.4 Stained Soil and Pavement

Minor amounts of oily surface staining were observed in the parking area. The staining appears to be from leaking vehicles and is surficial in nature. Based on the small size and the surficial nature of the staining, it is considered a de minimis condition.

7.2.5 BIOMEDICAL WASTES

Jurupa Hills Post-Acute: Home generates typical biohazardous waste such as syringes and gauze pads. According to the site's receptionist, the biohazardous waste is accumulated in biohazardous waste and sharps containers located throughout the building. This waste is then picked up periodically by a licensed transporter for proper disposal. Based on the small quantities of biohazardous waste and the off-site disposal, the storage and handling of this material is not considered a REC.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

The subject property is currently vacant land or lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

8.2 LEAD-BASED PAINT

The subject property is currently vacant land or lacks structures. Consequently, AEI did not observe building components likely to contain suspect LBP during the site reconnaissance.

8.3 NATURALLY-OCCURRING RADON

Radon is a naturally-occurring, odorless, and invisible radioactive gas. According to the United States EPA, radon is the second leading cause of lung cancer. Natural radon levels vary and are closely related to geologic formations, soils, and foundation construction. Radon may enter buildings through basement sumps or other openings such as cracks and other holes in foundations.

US EPA Map

In 1993 the United States EPA prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map identifies counties of the US with the greatest potential for elevated indoor radon levels based on indoor radon measurement data, geology, soil parameters, and foundation types. The map divides the country into three radon zones based on potential radon accumulation, but is not to be considered predictive of radon accumulation.

The 1993 EPA map identifies the following three radon zones:

- Zone 1 - Highest potential for radon accumulation; average indoor radon levels may be greater than 4 pCi/L
- Zone 2 - Moderate potential for radon accumulation; average indoor radon levels may be between 2 and 4 pCi/L
- Zone 3 - Low potential for radon accumulation; average indoor radon levels may be less than 2 pCi/L

It is important to note that elevated levels of radon can be found in all three zones, and the EPA and other agencies recommend site-specific testing to determine radon levels at a specific property. Therefore, while the map does give an indication of the propensity of radon gas accumulation in structures in a county, elevated radon levels may be found in all three radon zones.

It should also be noted that EPA's 1993 Map of Radon Zones, while useful, was based on limited data collected prior to 1993 and therefore may be supplemented with available state-developed or other data to further understand the radon potential for a specific area.

According to the US EPA, the radon zone level for the County is Zone 2, which has a moderate potential for radon accumulation.

California Department of Health Services Radon Database

According to additional data obtained from California Department of Health Services Radon Database, 14 tests conducted in the subject property zip code (92509) in 2016. All of these tests indicated that radon levels were below the action level of 4.0 pCi/L set forth by the United States EPA. Radon sampling would be necessary to determine site-specific radon conditions. Radon sampling was not requested as part of this assessment.

8.4 Suspect Mold or Microbial Growth Conditions

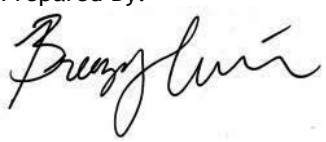

The subject property is currently vacant land or lacks structures. Consequently, suspect mold was not addressed as part of this assessment.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

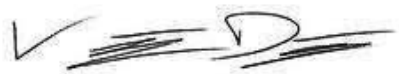

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal

Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/22/2024 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER RELEASE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
LAS PLUMAS LUMBER CO	6464 33RD ST	SW 0 - 1/8 (0.100 mi.)	B6	22

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 2 E MANIFEST sites within approximately 0.25 miles of the target property.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as

LAS PLUMAS LUMBER LLC (Continued) **S101541243**

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/22/2024
Date Data Arrived at EDR: 06/03/2024
Date Made Active in Reports: 06/26/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/22/2024
Date Data Arrived at EDR: 06/03/2024

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/25/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/03/2024

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/31/2023

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

Next Scheduled EDR Contact: 10/14/2024
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data
The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/05/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Version Date:	2012

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

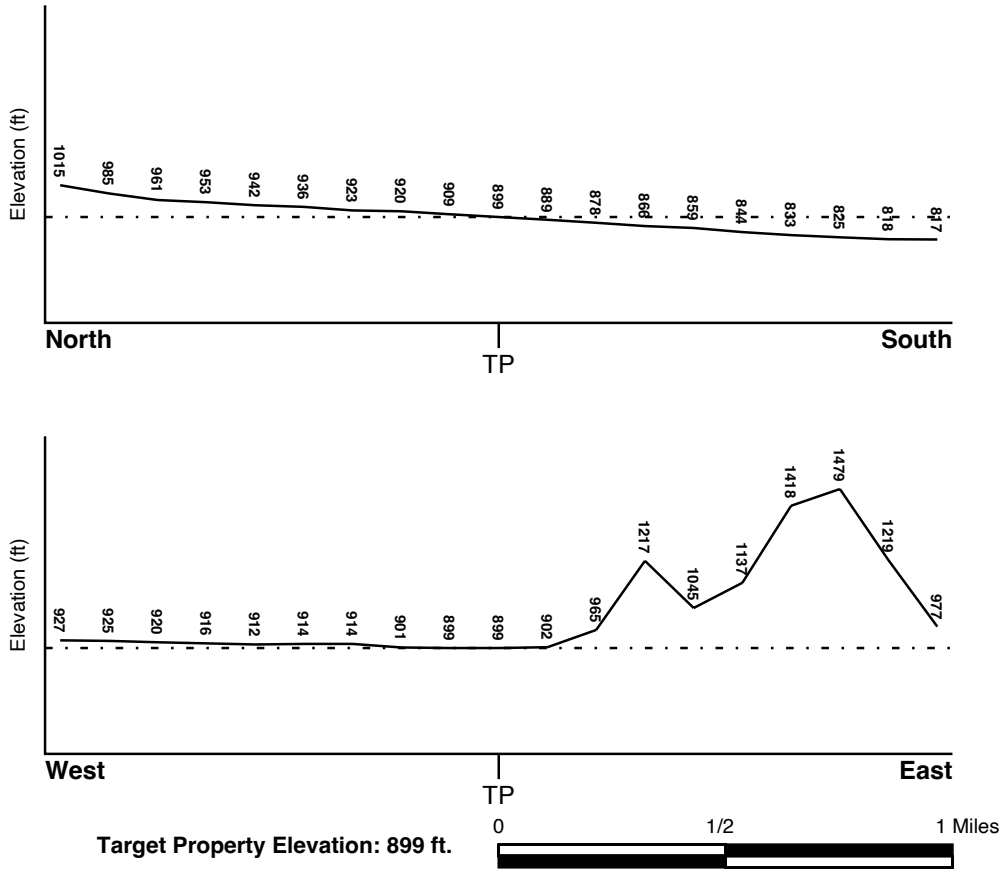

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0043G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06065C0706G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FONTANA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	9 inches	48 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
3	48 inches	59 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: GREENFIELD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
2	25 inches	42 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
3	42 inches	59 inches	loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
4	59 inches	72 inches	stratified loamy sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: QUARRIES

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 8DF8-4897-B7A3

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

AEI Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

BUILDING AND SAFETY/CODE ENFORCEMENT DEPARTMENT, 8930 LIMONITE AVENUE, JURUPA VALLEY, CALIFORNIA 92509-5183 (951) 332-6464

NOTIFICATION OF INSPECTION

6401 33RD STREET
1422 CLARKVIEW RD
BALTIMORE, MD 21209-2385

APN: 177-020-010
Case No: CE-19-1897

Date: August 28, 2019

Re: 6401 33RD ST

To 6401 33RD STREET,

A recent inspection of your property at 6401 33RD ST JURUPA VALLEY, CA 92509-1404 revealed that it contained conditions which violate the City of Jurupa Valley Municipal Code because of the following defects:

1. **Zone R-A** (Residential Agricultural)- Unpermitted Land Use - Jurupa Valley Municipal Code § 9.65.020
   Corrective Action Required: North side of dirt lot, along 30th Street adjacent to Donner Way. Fence gate is open allowing a semi-truck to back in onto your property for the purpose of parking/storage. Please secure the gate to prevent the truck from parking on your property.
2. **Vacant structures and land**. Vacant structures and premises thereof or vacant land shall be maintained in a clean, safe, secure and sanitary condition as provided herein so as not to cause a blighting problem or adversely affect the public health or safety. - International Property Maintenance Code 2015 § 301.3
   Corrective Action Required:
3. **Commercial Vehicles** - No person shall park or leave standing a commercial vehicle having a manufacturer's gross vehicle weight rating of more than ten thousand (10,000) pounds, or any commercial trailer or semi-trailer regardless of weight, on any street or highway within a residential district. - Jurupa Valley Municipal Code § 12.25.130
   Corrective Action Required:

This letter is a notification to allow you 30 days to check your property and take appropriate action. Failure to respond to this notification may result in a Notice of Substandard Property being recorded with the County Recorder and further action being taken by the City of Jurupa Valley.

The correction necessary for this violation may include construction work or modifications to an existing structure. To prevent unnecessary delays or expense, please contact your Code Enforcement Officer for suggestions prior to starting any work.

A Notice of Inspection can be administratively appealed to the Building Official. This notification is an attempt to inform you as to our intent to pursue a Declaration of Substandard Premises unless the items listed above are corrected AND a reinspection is arranged with your Code Enforcement Officer to verify compliance.

If we are unable to contact you and you do not contact us we will send notices by mail and posting on the property in accordance with the City of Jurupa Valley and the State of California Housing Code requirements. If you do NOT arrange for an inspection within the time limits given, we may seek an inspection warrant in accordance with State Law.

Please contact our office to arrange an inspection so we can resolve this issue for you as expeditiously as possible.

Once the property is declared "Substandard," the Notice is recorded with the Riverside County Recorder, code enforcement fees will begin to be charged to the property, and if not paid, will be assessed as a Special Tax Assessment against the property. Once the Notice and Order is issued you will be given three choices:

1. You can comply and correct all defects within the allotted time,
2. You can request a 30 day extension by written request and payment of $80.00 (eighty dollars) extension fee, or
3. Request an Appeal Hearing within the 30 day period with a written request and the payment of a $100.00 (One Hundred dollars) hearing fee.

Permits for repair, or demolition are required before starting the work and may be obtained at the City of Jurupa Valley Building & Safety office at 8930 Limonite Avenue, Jurupa Valley, California. Plans are required for corrective action. Submit plans to the Building & Safety Department. It IS necessary to bring this NOTICE with you when you apply for your permits. If you have any questions regarding this matter, please contact Ken Swank at (951) 332-6464 from 8:30 to 9:30 am, Monday through Friday.

Sincerely,

Ken Swank
Senior Code Enforcement Officer

EXHIBIT "A" - LEGAL DESCRIPTION
LOT LINE ADJUSTMENT NO. 20002

Parcel A:

That portion of Tract No. 1 of The Resubdivision of the lands formerly belonging to The A.C. Armstrong Estate, in the City of Jurupa Valley, County of Riverside, State of California, as shown by map on file in Book 6, Page 31 of Maps, Riverside County Records, and shown on Record of Survey on file in Book 6, Page 70 of Records of Survey, Riverside County Records, lying within Section 8, Township 2 South, Range 5 West, San Bernardino Meridian, described as follows:

That portion of the land described in Deed recorded July 21, 1955 in Book 1769, Page 431 of Official Records, Riverside County Records:

Beginning at the Southerly corner of Sunnyslope Heights Unit No. 3, as shown by map on file in Book 33, Pages 47 and 48 of Maps, Riverside County Records;

thence along the prolongation of the Southwesterly line of said Sunnyslope Heights Unit No. 3, South 58° 14' 57" East, a distance of 671.58 feet, more or less, to the most Easterly corner of the fourth exception described in the above mentioned Deed;

thence along the Southeasterly line of said fourth exception, South 20° 19' 33" West, a distance of 30.61 feet, more or less, said point being 30 feet Southwesterly measured at right angles from the first mentioned bearing, also being the Northwest corner of that certain land conveyed to Michael Butchko and Ruby Jo Butchko, husband and wife, as joint tenants, by Deed recorded June 19, 1973 as Instrument No. 79230, Official Records of said County;

thence along the Northerly line of said land, South 58° 14' 57" East, a distance of 6.57 feet, more or less, to the beginning of a tangent curve concave Northerly and having a radius of 330.00 feet;

thence continuing Easterly along said Northerly line and curve, through a central angle of 15° 02' 46", an arc distance of 86.66 feet, more or less, to a line parallel with the Southeasterly line of said Sunnyslope Heights Unit No. 3;

thence along said parallel line, North 32° 09' 36" East, a distance of 1,029.76 feet, to a point on the Southwesterly line of 30th Street (30-feet half width) as shown by map on file Book 33, Pages 47 and 48 of Maps, Riverside County Records, said point lying 779.99 feet thereon from the intersection of said Southwesterly line of 30th Street, and said Southeasterly line of Sunnyslope Heights Unit No. 3;

thence along said Southwesterly line, North 57° 49' 02" West, a distance of 779.99 feet, to said Southeasterly line;

thence along said Southeasterly line, South 32° 09' 36" West, a distance of 263.92 feet, to the Easterly corner of Lot 23 of Sunnyslope Heights Unit No. 3;

thence continuing along said Southeasterly line, South 24° 15' 13" West, a distance of 72.67 feet, to the Southerly corner of said Lot 23;

thence continuing along said Southeasterly line, South 32° 09' 36" West, a distance of 680.97 feet, to the **point of beginning.**

Except that portion of Tract No. 1 of The Resubdivision of the lands formerly belonging to The A.C. Armstrong Estate, as shown by map on file in Book 6, Page 31 of Maps, and as shown on record of survey on file in Book 6, Page 70 of Records of Survey, both records of Riverside County, State of California, described as follows:

Commencing at the Southerly corner of Sunnyslope Heights Unit No. 3, as shown by map on file in Book 33, Pages 47 and 48 of Maps, Riverside County Records;

thence along the prolongation of the Southwesterly line of said Sunnyslope Heights Unit No. 3, South 58° 14' 57" East, a distance of 300.00 feet;

thence at right angles, North 31° 45' 03" East, a distance of 30.00 feet, to the **point of beginning**;

thence continuing along said course, North 31° 45' 03" East, a distance of 10.00 feet, to a line parallel with and 40.00 feet Northeasterly of said Southwesterly line;

thence along said parallel line, North 58° 14' 57" West, a distance of 299.71 feet, to the Southeasterly line of said Sunnyslope Heights No. 3;

thence along said Southeasterly line, North 32° 09' 36" East, a distance of 433.67 feet;

thence leaving said Southeasterly line, South 57° 44' 01" East, a distance of 318.96 feet;

thence South 32° 17' 57" West, a distance of 440.81 feet, to a line parallel with and 30.00 feet Northeasterly of said Southwesterly line;

thence along said parallel line, North 58° 14' 57" West, a distance of 18.12 feet, to the **point of beginning**.

Also, **Except** that portion of Tract No. 1 of the Resubdivision of the lands formerly belonging to The A.C. Armstrong Estate, as shown by map on file in Book 6, Page 31 of Maps, Riverside County Records, described as follows:

Beginning at the Southerly corner of Sunnyslope Heights Unit No. 3, as shown by map on file in Book 33, Pages 47 and 48 of Maps, Riverside County Records;

thence along the prolongation of the Southwesterly line of said Sunnyslope Heights Unit No. 3, South 58° 14' 57" East, a distance of 300.00 feet;

thence at right angles, North 31° 45' 03" East, a distance of 40.00 feet, to a line parallel with and 40.00 feet Northeasterly of said Southwesterly line;

thence along said parallel line, North 58° 14' 57" West, a distance of 299.71 feet, to the Southeasterly line of said Sunnyslope Heights No. 3;

thence along said Southeasterly line, South 32° 09' 36" West, a distance of 40.00 feet, to the **point of beginning.**

Parcel "A" contains 14.61 acres, more or less.

Bearings and distances in the above description are based on the California Coordinate System 1983, Zone 6, Epoch 2017.50. Divide grid distances herein above by 0.99998656 to obtain ground level distances.

Parcel B:

That portion of Tract No. 1 of The Resubdivision of the lands formerly belonging to The A.C. Armstrong Estate, as shown by map on file in Book 6, Page 31 of Maps, and as shown on record of survey on file in Book 6, Page 70 of Records of Survey, both records of Riverside County, State of California, described as follows:

Commencing at the Southerly corner of Sunnyslope Heights Unit No. 3, as shown by map on file in Book 33, Pages 47 and 48 of Maps, Riverside County Records;

thence along the prolongation of the Southwesterly line of said Sunnyslope Heights Unit No. 3, South 58° 14' 57" East, a distance of 300.00 feet;

thence at right angles, North 31° 45' 03" East, a distance of 30.00 feet, to the **point of beginning**;

thence continuing along said course, North 31° 45' 03" East, a distance of 10.00 feet, to a line parallel with and 40.00 feet Northeasterly of said Southwesterly line;

thence along said parallel line, North 58° 14' 57" West, a distance of 299.71 feet, to the Southeasterly line of said Sunnyslope Heights No. 3;

thence along said Southeasterly line, North 32° 09' 36" East, a distance of 433.67 feet;

thence leaving said Southeasterly line, South 57° 44' 01" East, a distance of 318.96 feet;

thence South 32° 17' 57" West, a distance of 440.81 feet, to a line parallel with and 30.00 feet Northeasterly of said Southwesterly line;

thence along said parallel line, North 58° 14' 57" West, a distance of 18.12 feet, to the **point of beginning.**

Parcel "B" contains 3.16 acres, more or less.

Bearings and distances in the above description are based on the California Coordinate System 1983, Zone 6, Epoch 2017.50. Divide grid distances herein above by 0.99998656 to obtain ground level distances.

See "Exhibit B" attached hereto and made a part hereof, by this reference.

An interactive mapping project from the PFAS-REACH team
How to use this map:
• Click on a site to learn more about it.
• Click the layers button in the top right of the map to display the "Known Contamination" sites or Tribal Lands boundaries.
• To collapse or expand the legend, click the arrow on the right side of the map.
• Choose one of the buttons below to learn more about the layers shown on this map.
Details: The Presumptive Contamination map includes sites that are often sources of contamination, but where testing has not confirmed the presence of PFAS. Based on the "Presumptive PFAS Contamination" model we published in Environmental Science & Technology Letters (DOI: acs.estlett.2c00502), it includes:
1) fluorinated firefighting foam discharge sites,
(2) certain industrial facilities,
(3) sites related to PFAS-containing waste.
Other suspected sources of contamination, such as airplane and railroad crash sites, hydraulic fracking sites, and sewage sludge land application sites were not included on the map due to a lack of available nationwide data.

Sign-off Sheet and Signatures of Environmental Professionals

This document entitled Phase I and II Environmental Site Assessment (Report) was prepared by Stantec Consulting Services Inc. (“Stantec”) for the account of Warmington Residential (the “Client”). The conclusions in the Report are Stantec’s professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient’s own risk.

Stantec has assumed all information received from the “Client” and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec’s contract with the Client. While the Report may be provided to applicable authorities having jurisdiction and others for whom the Client is responsible, Stantec does not warrant the services to any third party. The report may not be relied upon by any other party without the express written consent of Stantec, which may be withheld at Stantec’s discretion.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of Title 40 of the Code of Federal Regulations, Part 312, (40 CFR 312). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 EXECUTIVE SUMMARY

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) report of approximately 9.8 acres of vacant land located at 30th Street and Heller Drive, in the city of Jurupa Valley, Riverside County, California (the "Subject Property"), on behalf of Warmington Residential (the "Client"). The work was performed according to Stantec's proposal and terms and conditions dated June 4, 2024. Warmington Residential (the "User") has been designated as the User of this report. The intended use of this Phase I ESA is for due diligence in support of potential redevelopment.

The Phase I ESA was conducted in conformance with the requirements of ASTM International (ASTM) Designation E1527-21, and All Appropriate Inquiries (AAI) as defined by the United States Environmental Protection Agency (EPA) in Title 40 of the Code of Federal Regulations, Part 312 (40 CFR 312), except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM or AAI practice are described in Section 2.3.

The Subject Property consists of approximately 9.8 acres of vacant land in the northern portion of a larger 17.67-acre parcel (APN 177-020-084) that includes a nursing home (6401 33rd Street) and additional vacant land. The nursing home and additional vacant parcel are not included in the Subject Property boundaries. Historical agricultural use was identified on the Subject Property between 1938 and 1948. Adjoining properties, as well as the nearby surrounding area, include primarily residential structures. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

During the Phase I ESA, Stantec identified and evaluated the following environmental concern:

- Historical agricultural use was identified on the Subject Property between 1938 and 1948. Based on the historical agricultural use, organochlorine pesticides (OCPs) and or herbicides may have been utilized on the Subject Property and near-surface soils may have potentially contained these compounds. A shallow soil assessment is recommended prior to redevelopment, to determine if OCPs or the metals lead and arsenic (related to herbicide use) are present at levels of concern for residential use and/or off-site disposal issues.

To address the aforementioned potential environmental concern (i.e. historical agricultural use), Stantec performed a Phase II ESA that consisted of the collection of shallow soil samples on the Subject Property on July 8, 2024. The scope of work performed included the advancement of eighteen (18) soil borings (SB-1 through SB-18) to approximately 3-foot below ground surface (bgs) across the Property as shown on Figure 2. Soil samples were collected from 1.0-foot and 3.0-feet bgs from all soil borings. Soil samples from the 1.0-foot interval were submitted for analysis of OCPs by EPA Method 8081A; and arsenic and lead by EPA Method 6010B. Soil samples from the three (3) foot depth were held in the laboratory pending results from the one (1) foot depth.

PHASE I AND II ENVIRONMENTAL SITE ASSESSMENT

ExecutIve Summary
July 19, 2024

The laboratory reported minor detections of 4,4'-DDE above laboratory reporting limits in four soil samples at concentrations between 0.0476 to 0.27 milligrams per kilogram (mg/kg) which are below the United States Environmental Protection Agency Regional Screening Level (RSL) for residential land use of 2.0 mg/kg and below the California hazardous waste level of 1.0 mg/kg. Minor detections of 4,4'-DDT above laboratory reporting limits in three soil samples at concentrations between 0.0133 and 0.0486 mg/kg which are below the RSL for residential land use of 1.9 mg/kg and below the California hazardous waste level of 1.0 mg/kg. Additionally, there was one soil sample (SB-9-1.0) that had detections of alpha-Chlordane and gamma-Chlordane reported at 0.0440 and 0.0613 mg/kg, which is below the RSL of 36 mg/kg.

There were two samples (SB-2-1.0 and SB-9-1.0) that had detections of dieldrin at 0.115 and 0.376 mg/kg, respectively. These detections of dieldrin exceeded the RSL of 0.034 mg/kg. Therefore, the deeper soil samples from these locations (SB-2-3.0 and SB-9-3.0) were also analyzed for dieldrin. The soil sample SB-9-3.0 did not have any detection above the laboratory reporting limit (i.e. "non-detect"). The soil samples SB-2-3.0 did have a concentration of 0.074 mg/kg which remains above the RSL.

Lead was detected in all 18 borings at concentrations ranging from 2.04 to 22.8 mg/kg, which are below the regulatory thresholds for residential soil set at 80 mg/kg. Arsenic was reported in three soil samples analyzed at concentrations ranging from 5.1 to 5.3 mg/kg, which exceeded regulatory thresholds for residential soil set at 0.68 mg/kg. However, arsenic occurs naturally in California at levels up to 11 mg/kg, therefore exceeding the regulatory threshold based on naturally occurring conditions. The State of California uses the background level as the cleanup standard for arsenic. Therefore, the arsenic was detected below the anticipated regulatory cleanup level.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the Subject Property. Any exceptions to, or deletions from, this practice are described Section 2.3 of this report. This assessment has revealed evidence of the following recognized environmental condition (REC) in connection with the Subject Property.

- Based on the shallow soil analytical results from this assessment, dieldrin was detected above the regulatory residential screening level in two boring locations (SB-2 and SB-9) which is considered a REC. The deeper soil sample from SB-9 did not have any concentrations above the laboratory reporting limit; however, the deeper soil sample from SB-2 still exceeded the RSL for dieldrin. Stantec recommends additional soil sampling around the vicinity of the SB-2 and SB-9 to provide further delineation of the dieldrin impacts to determine the volume of impacted soil that may require removal from the Property.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

2.0 INTRODUCTION

The objective of this Phase I ESA was to perform AAI into the past ownership and uses of the Subject Property consistent with good commercial or customary practice as outlined by ASTM International (ASTM) in "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," Designation E1527-21. "All Appropriate Inquiries" is the process for evaluating a property's environmental conditions for the purpose of qualifying for landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) following final rule of Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312). The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions ("RECs") of the Subject Property.

The ASTM E1527-21 standard indicates that the goal of the Phase I ESA is to identify RECs, as well as historical recognized environmental conditions ("HRECs") and controlled recognized environmental conditions ("CRECs") that may exist at a property. The term "recognized environmental conditions" is defined as:

1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment;

2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or

3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority and meets current unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., activity and use limitations or other property use limitations). A HREC is not considered a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., activity and use limitations, institutional controls, or engineering controls).

As defined by ASTM, RECs can include hazardous substances or petroleum products present under conditions in compliance with laws if that presence represents a material threat of future release. The release of hazardous substances or petroleum products is, however, not a REC if that presence is a *de minimis* condition. *De minimis* conditions are minor releases that generally do not present a material risk

to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies. ASTM also considers the potential for a business environmental risk (BER), defined as a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of the Subject Property, not necessarily limited to those environmental issues required to be investigated by the ASTM standard. Consideration of BERs may involve addressing one or more ASTM non-scope considerations.

This Phase I ESA was conducted in accordance with our proposal to Warmington Residential dated June 4, 2024. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Subject Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Subject Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform an independent evaluation of the purchase or lease price of the Subject Property and its relationship to current fair market value. The conclusions presented in this Phase I ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-21 notes that the availability of record information varies from source to source. The User or Environmental Professional (EP) is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. “Reasonably ascertainable” means:

1. Information that is publicly available;
2. Information that is obtainable from its source within reasonable time and cost constraints; and
3. Information that is practicably reviewable.

2.1 SUBJECT PROPERTY DESCRIPTION

The Subject Property consists of approximately 9.8 acres of vacant land in the northern portion of a larger 17.67-acre parcel (APN 177-020-084) that includes a nursing home (6401 33rd Street) and additional vacant land. The nursing home and additional vacant parcel are not included in the Subject Property boundaries. Adjoining properties, as well as the nearby surrounding area, include primarily residential structures. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

The Subject Property owner is identified as Jurupa Property LLC.

2.2 SPECIAL TERMS, CONDITIONS, AND ADDITIONAL ASSUMPTIONS

There were no special terms, conditions, or additional assumptions associated with this Phase I ESA.

2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the Subject Property.

This report provides an evaluation of selected environmental conditions associated with the Subject Property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information received from others.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the Subject Property's environmental condition.

Stantec did not obtain historical records that document the property history in 5-year intervals, and this resulted in data gaps. Although this represents data gaps, these data gaps are not considered to impact the EPs ability to identify RECs unless stated as such. Based on the information obtained during the course of this ESA and general knowledge of development at and near the Subject Property, the absence of this information did not affect the ability of the EPs to identify RECs, HRECs, CRECs, or *de minimis* conditions.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Project Specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures, are not guaranteed. Before starting site work, the exact location of all such utilities and structures must be confirmed by the client and the party performing the work, and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the conditions encountered at the Subject Property by Stantec at the time the work was conducted. Accordingly, additional studies and actions may be required.

As the purpose of this report is to identify Subject Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Subject Property is beyond the scope of this assessment.

The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Subject Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations, or policies of Federal, state, provincial or local governmental agencies.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

2.4 PERSONNEL QUALIFICATIONS

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an EP. The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

3.0 USER-PROVIDED INFORMATION

ASTM E1527-21 describe responsibilities of the User to complete certain tasks in connection with the performance of "All Appropriate Inquiries" into the Subject Property. The ASTM standard requires that the EP request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or *de minimis* conditions in connection with the Subject Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire and/or Interview	Yes	The User is not aware of any environmental issues or past use of the Subject Property.
Environmental Liens or Activity and Use Limitations (AUL)	N/A	No environmental liens and/or activity and use limitations were identified in the Preliminary Title Report prepared by First American Title dated May 3, 2024. No other Land title records, deeds, environmental liens, and activity and use limitation documentation were provided by the User, and public records were not searched by Stantec.
Previous Environmental Permits or Reports Provided by User	No	No previous reports or documents were provided by the User.
Purpose of the Phase I ESA	Yes	The intended use of the Phase I is for residential redevelopment.

User-provided documents are provided in Appendix C.

4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Subject Property and surrounding area and evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Subject Property. During the review of historical records, Stantec attempted to identify uses of the Subject Property from the present to the first developed use of the Subject Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

4.1 PHYSICAL SETTING

A summary of the physical setting of the Subject Property is provided in the table below with additional details in the following subsections:

Topography:	According to the United States Geologic Survey (USGS) Riverside West topographic map provided in the Environmental Data Resources Inc. (EDR) Physical Setting Source Addendum (Appendix D), the topographic gradient in the vicinity of the Subject Property is to the west-southwest and the Subject Property is located at approximately 901 feet above mean sea level (ft. amsl).
Soil/Bedrock Data:	The United States Department of Agriculture – Natural Resources Conservation Service (USDA-NRCS), Web Soil Survey identifies the soils beneath the Subject Property as DELHI fine sand, with somewhat excessively drained soils. Soil layers are generally comprised of coarse-grained soils fine sand (0-9 inches), sand (9-48 inches), and fine sandy loam (48-59 inches).
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	Site specific groundwater investigations were not conducted during this ESA; however, according to the Third Quarter 2023 Groundwater Monitoring Report for the Circle K Store located 6824 Valley Way, groundwater in the vicinity is approximately 37.54 feet below ground surface (bgs) with a flow direction to the east.
NOTE: Site-specific groundwater flow direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

4.1.1 Subject Property Topography and Surface Water Flow

The Subject Property is located at an elevation of approximately 901 ft amsl. Based on the topography and existing surface conditions, general surface water flow is to the west-southwest. As surface water

flows over the surface, the water is expected to infiltrate the ground surface or flow overland towards the west.

4.1.2 Regional and Subject Property Geology

The United States Department of Agriculture – Natural Resources Conservation Service (USDA-NRCS), Web Soil Survey identifies the soils beneath the Subject Property as DELHI fine sand, with somewhat excessively drained soils. Soil layers are generally comprised of coarse-grained soils fine sand (0-9 inches), sand (9-48 inches), and fine sandy loam (48-59 inches).

According to California DOC Earthquake Zone Map (Department of Conservation Map Server (ca.gov)), the Subject Property is not located within an Alquist-Priolo (AP) Earthquake Fault Zone boundary. The closest fault zone is located approximately 8 miles to the east of the Subject Property.

4.1.3 Regional and Subject Property Hydrogeology

The Subject Property is located with the Upper Santa Ana Valley Groundwater Basin, Riverside-Arlington Subbasin (8-002.03). The Riverside-Arlington Subbasin is bound by impermeable Box Springs Mountains to the southeast, the Arlington Mountains to the south, La Sierra Heights and Mount Rubidoux to the northwest, Jurupa Mountains to the north, and the Rialto-Colton fault to the northeast. The Santa Ana River is located over the northern part of the subbasin. Precipitation ranges from 10 to 14 inches per year. Predominant water-bearing materials are comprised of alluvial deposits from the Quaternary age that consist of sand, gravel, silt, and clay deposited by the Santa Ana River and associated tributaries. The Rialto-Colton fault is the main restrictive feature in the northeast, which is a barrier to groundwater and separates the Riverside-Arlington and Rialto-Colton Subbasins. Water recharge into the subbasin occurs through Santa Ana River percolation, underflow from the Rialto-Colton and Chino Subbasins, return irrigation flow, and deep percolation from precipitation (Department of Water Resources [DWR], 2004).

Site specific groundwater investigations were not conducted during this ESA; however, according to the Third Quarter 2023 Groundwater Monitoring Report for the Circle K Store located 6824 Valley Way, groundwater in the vicinity is approximately 37.54 feet below ground surface (bgs) with a flow direction to the east.

4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from EDR, a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Subject Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Subject

Property. As described in 4.1.3, the inferred shallow groundwater flow direction is likely to be to the east. Observations about the Subject Property and adjoining properties made during the Subject Property reconnaissance are provided in more detail in Section 5.

4.2.1 Listings for Subject Property

The Subject Property was not identified in the environmental database report.

4.2.2 Listings for Adjoining and Nearby Sites with Potential to Impact Subject Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on adjoining and nearby sites to pose a REC, CREC, or HREC for the Subject Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum products to migrate to the Subject Property from an adjoining or nearby site, including by vapor migration or encroachment (i.e., potential for a vapor encroachment condition [VEC]. ASTM E2600-22 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM, 2022) was used as the basis for a Tier I Vapor Encroachment Screen (VES) for the Subject Property. This included evaluation of release sites within 1/10 mile for Petroleum Hydrocarbon releases, and 1/3 mile for volatile and semi-volatile organic compound (VOC, SVOC), plus other potential vapor phase contaminants (such as mercury).

Listed Facility Name/Address	Database Listing	Distance/Direction from Subject Property	REC? (YES / NO)
Las Plumas Lumber LLC 6464 33RD Street Riverside, CA 92509	LUST; CPS-SLIC; WDS; CIWQS; CERS; Cortese; HIST Cortese; UST Finder Release	Approximately 542 feet to the southwest	No
This facility received regulatory closure on February 17, 1993 for a gasoline release to soil. According to a letter from the County of Riverside Department of Environmental Health, one 550-gallon waste oil underground storage tank (UST), one 5,000-gallon gasoline UST, and one 10,000-gallon diesel UST were removed on January 22, 1991. According to the Risk Assessment for Underground Storage Tanks Excavation prepared by Geraghty & Miller, Inc Environmental Services dated July 2, 1991, approximately 1,200 cubic yards of soil was excavated to a depth of 40 feet bgs. Soil samples were collected from 11 locations at the base of the excavation at a depth ranging from 19 to 50 feet bgs. In addition, one 10-15 degree angled boring was advanced on site. The maximum soil concentration of total petroleum hydrocarbons was 35,000 milligrams per kilogram (mg/kg). Toluene, xylenes, and ethylbenzene detections were reported at 4.6, 13, and 2.8 mg/kg, respectively. Benzene was not detected in the soil samples analyzed. No groundwater impact was noted. Given the regulatory status, media involved, and distance, this facility does not represent a REC to the Subject Property and no further assessment appears to be warranted.			

The remaining listings in the database search report, including listings of Orphan Sites provided in Appendix D do not constitute a potential REC for the Subject Property.

4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Subject Property use and/or indications of RECs in connection with the Subject Property:

4.3.1 Environmental Health Department

Agency Name Contact Information	Finding
Riverside County Department of Environmental Health (RCDEH) (951) 358-5055 Via online Date Submitted: June 13, 2024	A written request subject to the Freedom of Information Act (FOIA) was submitted to the RCDEH to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Subject Property. On June 18, 2024, RCDEH provided a response that there were no records available for the Subject Property or adjoining properties. Records were available Las Plumas Lumber (6464 33rd Street) which included hazardous materials management permits, hazardous materials handler inspection reports, and hazardous materials inventory. Given the regulatory status, media involved, and distance, this facility does not represent a REC to the Subject Property and no further assessment appears to be warranted.

4.3.2 Fire Department

Agency Name Contact Information	Findings
Custodian of Records Riverside County Fire Department Via online https://riversidecountyca.nextrequest.com/ Date Submitted: June 13, 2024	A written request subject to the FOIA was submitted to the Fire Department to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Subject Property. On June 14, 2024, the agency responded that they have no records for the Subject Property.

4.3.3 City and County Department Records

Agency Name Contact Information	Findings
Riverside County Department of Building and Safety Online database: Map My County v11.9 (countyofriverside.us) Date requested: June 13, 2024	Stantec researched the Riverside County Department of Building and Safety online database to evaluate if there are any records of environmental significance for the Subject Property. Building records available included tenant improvement permits. No records of environmental significance were observed.

4.3.4 State Department Records

Agency Name Contact Information	Finding
Custodian of Records Santa Ana Regional Water Quality Control Board (SARWQCB) Online database: GeoTracker (ca.gov) Accessed on June 13, 2024	Stantec researched Geotracker, the California Regional Water Quality Control Board public database, to evaluate if there are any reported releases at the Subject Property or on adjoining properties. There were no release sites listed for the Subject Property or adjoining properties; the Las Plumas Lumber site (6464 33rd Street) is described in Section 4.2.2 above.
Department of Toxic Substances Control (DTSC), Envirostor database Cypress Regional Office Online database: https://www.envirostor.dtsc.ca.gov/public/ Accessed on June 13, 2024	Stantec researched Envirostor, the DTSC public database, to evaluate if there are any reported releases at the Subject Property or on adjoining properties. There were no release sites listed for the Subject Property.
California Geologic Energy Management (CalGEM) Online database: https://maps.conservation.ca.gov/doggr/wellfinder Accessed: June 13, 2024	The California Department of Conservation Geologic Energy Management Division (CalGEM) database was searched to identify the potential existence of oil and gas production wells within the vicinity of the Subject Property. No oil or gas wells were located within the Subject Property boundaries. There are no oil or gas wells located within a one-mile radius of the Subject Property.

4.4 HISTORICAL RECORDS REVIEW

4.4.1 Land Title Records/Deeds

No environmental liens and/or activity and use limitations were identified in the Preliminary Title Report prepared by First American Title dated May 3, 2024. No other Land title records, deeds, environmental liens, and activity and use limitation documentation were provided by the User, and public records were not searched by Stantec.

4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs. Copies of the historical aerial photographs are provided in Appendix E.

Year	Scale	Observations of Subject Property and Adjoining/Nearby Properties
1931	1"=500'	The Subject Property and surrounding area appear to be vacant land. A north-south trending creek appears in the northeastern portion of the Subject property.
1938 1948	1"=500'	The Subject Property and surrounding area appear to be utilized for agricultural purposes. A roadway appears along the northern Subject Property boundary. A quarry appears approximately 500 feet to the east.
1953	1"=500'	The Subject Property and surrounding area appear to be vacant land. A quarry appears approximately 500 feet to the east.
1967 1975 1985	1"=500'	The Subject Property and adjoining land to the north, east, and southeast remain vacant land. Residential development appears adjacent to the west. A nursing home appears adjacent to the southwest. The quarry remains approximately 500 feet to the east.
1990 1994 2002 2005 2009	1"=500'	The Subject Property and adjoining land remain similar to the previous photographs. A concrete drainage channel appears to the north. Additional residential structures appear to the north.
2012 2016 2020	1"=500'	The Subject Property and adjoining land remain similar to the previous photographs. Additional residential development appears to the north.

Aerial photographs source: The EDR Aerial Photo Decade Package

Historical agricultural use was identified on the Subject Property between 1938 and 1948. Based on the historical agricultural use, organochlorine pesticides (OCPs) and or herbicides may have been utilized on the Subject Property and near-surface soils may have potentially contained these compounds. A shallow soil assessment is recommended prior to redevelopment, to determine if OCPs or the metals lead and arsenic (related to herbicide use) are present at levels of concern for residential use and/or off-site disposal issues.

4.4.3 City Directories

Stantec retained a third party to research available city directories for the Subject Property and adjoining and nearby properties, in approximately five-year intervals. Copies of the city directory listings are provided in Appendix E.

Stantec retained a third party to research available city directories for the Subject Property and adjoining and nearby properties, in approximately five-year intervals. The address associated with the Subject Property (6367 30TH Street) had multiple residential listings between 2014 and 2020. Adjoining properties are generally residential listings and a convalescent hospital.

4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Subject Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Subject Property and adjoining and nearby property uses.

Stantec requested fire insurance maps from EDR; however, no coverage exists for the Subject Property. The Sanborn® Map Search Report indicating “No Coverage” is presented in Appendix E.

4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute Topographic Maps of the Riverside West, Fontana, San Bernardino, and Riverside Vicinity, California Quadrangles (scale 1:24,000 and 1:31,680), and the historical USGS 15-minute Topographic Maps of the Riverside, California Quadrangles (scale 1:50,000 and 1:62,500), to help identify past Subject Property and adjoining and nearby property usage and areas of potential environmental concern. Copies of the historical maps are provided in Appendix E.

The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations of Subject Property and Adjoining/Nearby Properties
1896 1898 1901		The Subject Property and surrounding area appears largely undeveloped. A creek is located in the northeastern portion of the Subject Property. Roadways appear adjacent to the east and west.
1942/1943 1953 1954		The Subject Property is depicted as vacant land. A roadway appears adjacent to the north. A quarry appears with ¼ mile to the east.
1967 1973 1975 1980		The Subject Property remains depicted as vacant land. A well and small structure appear adjacent to the southwest. Residential structures appear adjacent to the west.
2012 2015 2018 2022		No structures are depicted on the map. Roadways appear in their current configuration.

Historical topographic maps source: The EDR Historical Topographic Map Report

Features identified in the historical topographic maps do not represent a REC to the Subject Property.

4.4.6 Other Historical Sources

No other historical sources were reviewed.

5.0 SITE RECONNAISSANCE

A visit to the Subject Property and its vicinity was conducted by Hiram Romero, Associate Geologist with Stantec, on June 13, 2024. Stantec was unaccompanied during the Subject Property visit. Figure 2 provides information about the Subject Property and adjoining sites and the location of potential areas of environmental concern. Detailed Subject Property features are shown on Figure 2. Photographs collected during the site reconnaissance are included in Appendix A.

5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Subject Property that may indicate the presence of RECs. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Subject Property boundary
- Traverse transects across the Subject Property

Weather conditions during the visit to the Subject Property were clear and sunny. There were no weather-related Subject Property access restrictions encountered during the reconnaissance visit.

5.2 GENERAL DESCRIPTION

Subject Property and Area Description:	The Subject Property is located at 30th Street and Heller Drive, in the city of Jurupa Valley, Riverside County, California. The surrounding area consists of a nursing home, residential structures, and vacant land.
Subject Property Operations:	Vacant land.
Structures, Roads, Other Improvements:	None observed.
Subject Property Size (acres):	9.8 acres
Estimated % of Subject Property Covered by Buildings and/or Pavement:	0%
Observed Current Subject Property Use/Operations:	None observed.
Observed Evidence of Past Subject Property Use(s):	None observed.

Sewage Disposal Method (and age):	None observed.
Potable Water Source:	Western Municipal Water District
Electric and Natural Gas Utilities:	Southern California Edison

5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Subject Property reconnaissance.

Observations	Description/Location
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14) with identified uses:	None observed.
Drums/Totes/Intermediate Bulk Containers (≥ 5 gallons):	A discarded 200-gallon empty tote was observed in the southwestern corner of the Subject Property. No staining or odor was observed on the ground surface near the empty tote
Strong, Pungent, or Noxious Odors:	None detected.
Pools of Liquid:	None observed.
Unidentified Substance Containers:	None observed.
Polychlorinated biphenyl (PCB)-Containing Equipment:	None observed.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	None observed.

5.4 INTERIOR OBSERVATIONS

Given there are no structures on the Subject Property this section is not applicable.

5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Subject Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
On-site Pits, Ponds, or Lagoons:	None.
Stained Soil or Pavement:	None.

Observations	Description
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	No areas indicative of waste streams nor waste collection areas were observed.
Solid Waste Disposal:	Miscellaneous household debris was observed throughout the Subject Property. Concrete and discarded furniture was observed along the southern boundary.
Potential Areas of Fill Placement:	No mounds, piles, or depressions suggesting the placement of fill material were observed on the Subject Property.
Wastewater:	No exterior wastewater discharge was observed.
Stormwater:	Storm water is expected to infiltrate the exposed dirt or flow towards the southwest.
Wells:	No evidence of wells was observed at the site.
Septic Systems:	No evidence of septic systems was observed at the site.
Other Exterior Observations:	None.

5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

Existing USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), which would indicate the presence of USTs, was discovered during the site reconnaissance.
Former USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the former presence of USTs was discovered during this Phase I ESA.
Other Underground Structures:	None observed.

5.7 ABOVEGROUND STORAGE TANKS

Existing ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), which would indicate the presence of ASTs, was discovered during the site reconnaissance.
Former ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), reports, or other evidence of the former presence of ASTs was discovered during this Phase I ESA.

5.8 ADJOINING PROPERTIES

5.8.1 Current Uses of Adjoining Properties

As viewed from the Subject Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining sites:

NORTH	30th Street followed by residential structures and a concrete drainage.
EAST	New residential development.
SOUTH	Nursing home and vacant land.
WEST	Residential/

5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining sites providing indications of past use and activities, if any, are described below.

NORTH	None observed.
EAST	None observed.
SOUTH	None observed.
WEST	None observed.

5.8.3 Pits, Ponds, or Lagoons on Adjoining Properties

As viewed from the Subject Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds, and lagoons on adjoining sites:

NORTH	None observed.
EAST	None observed.
SOUTH	None observed.
WEST	None observed.

5.9 OBSERVED PHYSICAL SETTING

Topography of the Subject Property and Surrounding Area:	The Subject Property and surrounding area are relatively flat.

6.0 PHASE II ENVIRONMENTAL ASSESSMENT

During the Phase I ESA, Stantec identified the following environmental concern associated with the Subject Property.

- Historical agricultural use was identified on the Subject Property between 1938 and 1948. Based on the historical agricultural use, organochlorine pesticides (OCPs) and or herbicides may have been utilized on the Subject Property and near-surface soils may have potentially contained these compounds. A shallow soil assessment is recommended prior to redevelopment, to determine if OCPs or the metals lead and arsenic (related to herbicide use) are present at levels of concern for residential use and/or off-site disposal issues.

The following scope of work was completed to address the potential REC.

6.1 PRE-DRILLING ACTIVITIES

Prior to the commencement of fieldwork activities Stantec made the following preparations:

- Stantec obtained an Underground Service Alert (USA) ticket number prior to commencement of drilling activities.

- In accordance with federal OSHA regulations (29 CFR, Section 1910.120), Stantec developed a site-specific Health and Safety Plan (HASP) for the Property. All Stantec personnel and subcontractors associated with the project were required to be familiar with, and comply with, all provisions of the HASP.

6.2 INVESTIGATION

To address the aforementioned potential environmental concern (i.e. historical agricultural use), Stantec performed a Phase II ESA that consisted of the collection of shallow soil samples on the Subject Property on July 8, 2024. The scope of work performed included the advancement of eighteen (18) soil borings (SB-1 through SB-18) to approximately 3-foot below ground surface (bgs) across the Property as shown on Figure 2. Soil samples were collected from 1.0-foot and 3.0-feet bgs from all soil borings. Soil samples from the 1.0-foot interval were submitted for analysis of OCPs by EPA Method 8081A; and arsenic and lead by EPA Method 6010B. Soil samples from the three (3) foot depth were held in the laboratory pending results from the one (1) foot depth.

6.3 LABORATORY TESTING PROGRAM

Soil samples collected from the 1-ft interval during this investigation were analyzed for OCPs by EPA Method 8081A; and the metals lead and arsenic by EPA Method 6010B by Jones Environmental Inc. (JEI), located in Santa Fe Springs, California. All samples collected during this investigation were transported under chain-of-custody protocols and analyzed by certified for hazardous waste testing by the

California State Water Resources Control Board Environmental Laboratory Accreditation Program (ELAP). Complete laboratory reports, including QA/QC documentation is included in Appendix G.

6.4 INVESTIGATION RESULTS

6.4.1 FIELD OBSERVATIONS

Soils encountered during the investigation consisted of silty sand to a maximum depth of 3-feet bgs. Groundwater was not encountered in any of the boreholes. No staining or odors were observed in any of the boreholes.

6.4.2 Soil Analytical Results

The laboratory reported minor detections of 4,4'-DDE above laboratory reporting limits in four soil samples at concentrations between 0.0476 to 0.27 milligrams per kilogram (mg/kg) which are below the United States Environmental Protection Agency Regional Screening Level (RSL) for residential land use of 2.0 mg/kg and below the California hazardous waste level of 1.0 mg/kg. Minor detections of 4,4'-DDT above laboratory reporting limits in three soil samples at concentrations between 0.0133 and 0.0486 mg/kg which are below the RSL for residential land use of 1.9 mg/kg and below the California hazardous waste level of 1.0 mg/kg. Additionally, there was one soil sample (SB-9-1.0) that had detections of alpha-Chlordane and gamma-Chlordane reported at 0.0440 and 0.0613 mg/kg, which is below the RSL of 36 mg/kg.

There were two samples (SB-2-1.0 and SB-9-1.0) that had detections of dieldrin at 0.115 and 0.376 mg/kg, respectively. These detections of dieldrin exceeded the RSL of 0.034 mg/kg. Therefore, the deeper soil samples from these locations (SB-2-3.0 and SB-9-3.0) were also analyzed for dieldrin. The soil sample SB-9-3.0 did not have any detection above the laboratory reporting limit (i.e. "non-detect"). The soil samples SB-2-3.0 did have a concentration of 0.074 mg/kg which remains above the RSL.

Lead was detected in all 18 borings at concentrations ranging from 2.0.4 to 22.8 mg/kg, which are below the regulatory thresholds for residential soil set at 80 mg/kg. Arsenic was reported in three soil samples analyzed at concentrations ranging from 5.1 to 5.3 mg/kg, which exceeded regulatory thresholds for residential soil set at 0.68 mg/kg. However, arsenic occurs naturally in California at levels up to 11 mg/kg, therefore exceeding the regulatory threshold based on naturally occurring conditions. The State of California uses the background level as the cleanup standard for arsenic. Therefore, the arsenic was detected below the anticipated regulatory cleanup level.

6.5 PHASE II ESA CONCLUSIONS AND RECOMMENDTAIONS

Based on the shallow soil analytical results from this assessment, dieldrin was detected above the regulatory residential screening level in two boring locations (SB-2 and SB-9) which is considered a REC. The deeper soil sample from SB-9 did not have any concentrations above the laboratory reporting limit; however, the deeper soil sample from SB-2 still exceeded the RSL for dieldrin. Stantec recommends additional soil sampling around the vicinity of the SB-2 and SB-9 to provide further delineation of the dieldrin impacts to determine the volume of impacted soil that may require removal from the Property. .

7.0 EVALUATION

This section provides a summary overview of or Findings, Opinions, and Conclusions.

7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data, and an inspection was evaluated to determine if RECs are present in connection with the Subject Property. Based on this information, Stantec made the following findings and developed the following opinions.

- The Subject Property consists of approximately 9.8 acres of vacant land in the northern portion of a larger 17.67-acre parcel (APN 177-020-084) that includes a nursing home (6401 33rd Street) and additional vacant land. The nursing home and additional vacant parcel are not included in the Subject Property boundaries. Historical agricultural use was identified on the Subject Property between 1938 and 1948.

  Based on the historical agricultural use, organochlorine pesticides (OCPs) and or herbicides may have been utilized on the Subject Property and near-surface soils may have potentially contained these compounds. A shallow soil assessment is recommended prior to redevelopment, to determine if OCPs or the metals lead and arsenic (related to herbicide use) are present at levels of concern for residential use and/or off-site disposal issues.

  To address the aforementioned potential environmental concern (i.e. historical agricultural use), Stantec performed a Phase II ESA that consisted of the collection of shallow soil samples on the Subject Property on July 8, 2024. The scope of work performed included the advancement of eighteen (18) soil borings (SB-1 through SB-18) to approximately 3-foot below ground surface (bgs) across the Property as shown on Figure 2. Soil samples were collected from 1.0-foot and 3.0-feet bgs from all soil borings. Soil samples from the 1.0-foot interval were submitted for analysis of OCPs by EPA Method 8081A; and arsenic and lead by EPA Method 6010B. Soil samples from the three (3) foot depth were held in the laboratory pending results from the one (1) foot depth.

  The laboratory reported minor detections of 4,4'-DDE above laboratory reporting limits in four soil samples at concentrations between 0.0476 to 0.27 milligrams per kilogram (mg/kg) which are below the United States Environmental Protection Agency Regional Screening Level (RSL) for residential land use of 2.0 mg/kg and below the California hazardous waste level of 1.0 mg/kg. Minor detections of 4,4'-DDT above laboratory reporting limits in three soil samples at concentrations between 0.0133 and 0.0486 mg/kg which are below the RSL for residential land use of 1.9 mg/kg and below the California hazardous waste level of 1.0 mg/kg. Additionally, there was one soil sample (SB-9-1.0) that had detections of alpha-Chlordane and gamma-Chlordane reported at 0.0440 and 0.0613 mg/kg, which is below the RSL of 36 mg/kg.

There were two samples (SB-2-1.0 and SB-9-1.0) that had detections of dieldrin at 0.115 and 0.376 mg/kg, respectively. These detections of dieldrin exceeded the RSL of 0.034 mg/kg. Therefore the deeper soil samples from these locations (SB-2-3.0 and SB-9-3.0) were also analyzed for dieldrin. The soil sample SB-9-3.0 did not have any detection above the labooratory reporting limit (i.e. "non-detect"). The soil samples SB-2-3.0 did have a concentration of 0.074 mg/kg which remains above the RSL.

Lead was detected in all 18 borings at concentrations ranging from 2.0.4 to 22.8 mg/kg, which are below the regulatory thresholds for residential soil set at 80 mg/kg. Arsenic was reported in three soil samples analyzed at concentrations ranging from 5.1 to 5.3 mg/kg, which exceeded regulatory thresholds for residential soil set at 0.68 mg/kg. However, arsenic occurs naturally in California at levels up to 11 mg/kg, therefore exceeding the regulatory threshold based on naturally occurring conditions. The State of California uses the background level as the cleanup standard for arsenic. Therefore, the arsenic was detected below the anticipated regulatory cleanup level.

Based on the shallow soil analytical results from this assessment, dieldrin was detected above the regulatory residential screening level in two boring locations (SB-2 and SB-9) which is considered a REC. The deeper soil sample from SB-9 did not have any concentrations above the laboratory reporting limit; however, the deeper soil sample from SB-2 still exceeded the RSL for dieldrin. Stantec recommends additional soil sampling around the vicinity of the SB-2 and SB-9 to provide further delineation of the dieldrin impacts to determine the volume of impacted soil that may require removal from the Property..

- An environmental records search was performed and identified sites within their respective ASTM E1527-21 search radii of the Subject Property that may represent RECs, CRECs, HRECs, or de minimis conditions.

  Based on one or more of the following reasons: distance from the Subject Property, position of sites with respect to assumed groundwater flow direction, the type of native soils, and regulatory status, none of the sites identified in the environmental records search report are expected to impact soil or groundwater quality at the Subject Property. The environmental records search identified no RECs, CRECs, HRECs or *de minimis* conditions at or near the Subject Property.

7.2 DATA GAPS

The federal AAI final rule [40 CFR 312.10(a)] and ASTM E1527-21 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the EP or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
Deletions or Exceptions from Scope of Work Referenced in Section 1.4:	None.

Gap	Discussion
Weather-Related Restrictions to Site Reconnaissance:	None.
Facility Access Restrictions to Site Reconnaissance:	None.
Other Site Reconnaissance Restrictions:	None.
Data Gaps from Environmental Records Review:	None.
Data Gaps from Historical Records Review:	Historical records for the Subject Property were not available in five-year increments. These are considered to be data gaps; however, based on available historical records and consistent land use, they do not appear to change the conclusions of this report.
Data Gaps from Interviews:	Given the Property consists of vacant land, no on-site interview was performed. However, based on historical documentation the lack of an on-site interview is not considered a significant data gap and does not impact the findings for this report.
Other Data Gaps:	None.

7.3 CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the Subject Property. Any exceptions to, or deletions from, this practice are described Section 2.3 of this report. This assessment has revealed evidence of the following recognized environmental condition (REC) in connection with the Subject Property.

- Based on the shallow soil analytical results from this assessment, dieldrin was detected above the regulatory residential screening level in two boring locations (SB-2 and SB-9) which is considered a REC. The deeper soil sample from SB-9 did not have any concentrations above the laboratory reporting limit; however, the deeper soil sample from SB-2 still exceeded the RSL for dieldrin. Stantec recommends additional soil sampling around the vicinity of the SB-2 and SB-9 to provide further delineation of the dieldrin impacts to determine the volume of impacted soil that may require removal from the Property.

8.0 NON-SCOPE CONSIDERATIONS

The following ASTM E1527-13 non-scope services were performed as part of this Phase I ESA:

8.1 RADON

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA on average indoor radon concentrations in the vicinity of the Property (http://www.epa.gov/radon/zonemap.html).

EPA Radon Zones (w/Average Measured Indoor Radon concentrations)		
Zone 1 – High (>4.0 pCi/L)	Zone 2 – Moderate (2 to 4 pCi/L)	Zone 3 – Low (<2 pCi/L)
	X	
Normally occupied sub grade areas present? (i.e., basement apartments, offices, stores, etc.)		
No subgrade areas currently present at the Property.		

The Subject Property is located in Zone 2 and is considered to have a moderate potential for radon. To determine Subject Property-specific radon levels, a radon survey would have to be conducted. However, because the Subject Property does not have any occupied subgrade areas and is planned for redevelopment, further investigation of indoor radon issues does not appear to be warranted.

8.2 FLOOD ZONES

According to the Physical Setting summary portion of the EDR report, the Subject Property is not located within a 0.2% Annual Chance Flood Hazard Zone.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 16, Aug 30, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 17, 2022—Jun 12, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

GyC2	Greenfield sandy loam, 2 to 8 percent slopes, eroded	2.2	59.0%
Totals for Area of Interest		**3.8**	**100.0%**

CALIFORNIA - EPA Map of Radon Zones

http://www.epa.gov/radon/zonemap.html

The purpose of this map is to assist National, State and local organizations to target their resources and to implement radon-resistant building codes.

This map is not intended to determine if a home in a given zone should be tested for radon. Homes with elevated levels of radon have been found in all three zones.

All homes should be tested, regardless of zone designation.

IMPORTANT: Consult the publication entitled "Preliminary Geologic Radon Potential Assessment of California" (USGS Open-file Report 93-292-I) before using this map. See http://energy.cr.usgs.gov/radon/grpinfo.html This document contains information on radon potential variations within counties. EPA also recommends that this map be supplemented with any available local data in order to further understand and predict the radon potential of a specific area.

This report displays the short-term indoor radon tests reported to CDPH. This data is provided for informational purposes only. Test results are reported to the California Department of Public Health Indoor Radon Program by

certified radon laboratories and measurement professionals. Data is not suitable for statistical or geospatial analysis. This report is not a substitute for testing for radon; the only way to know if a building has radon is to test. The California Department of Public Health recommends that you take action to reduce radon levels in your home if they are 4pCi/L or greater.

Visit the Indoor Radon Program at www.cdph.ca.gov/radon for more information.

Test. Fix. Save a Life.

SUBJECT: CLOSURE/NO FURTHER ACTION LETTER
FORMER EZ SERVE STATION NO. 100795
6310 MISSION BOULEVARD, RUBIDOUX

Dear Mr. and Mrs. Pooley:

This letter confirms the completion of site investigation and remedial action for the underground storage tanks (USTs) formerly located at the above-described location. A copy of the Case Closure Summary is enclosed. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former USTs are greatly appreciated.

Based on the information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at the above-referenced UST site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum releases(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Please be aware that claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund (Fund) more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims

beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

If you have any questions or concerns, please contact Kenneth R. Williams or Nancy Olson-Martin of my staff at (951) 782-4496 or 4497, respectively. You may also contact them via e-mail at ken.williams@waterboards.ca.gov and nancy.olson-martin@waterboards.ca.gov, respectively.

Sincerely,

for Kurt V. Berchtold
Executive Officer

Enclosure: Copy of the *Case Closure Summary*

NOM/EZ 100795_6310 Mission Blvd_Rubidoux_Closure Letter.032814

CASE CLOSURE SUMMARY

I. AGENCY INFORMATION

DATE: April 18, 2014

AGENCY NAME: California Regional Water Quality Control Board, Santa Ana Region	**ADDRESS:** 3737 Main Street, Suite 500
CITY/STATE/ZIP: Riverside, CA 92501-3348	**PHONE:** (951) 782-4497 or (951) 782-4130
STAFF: Nancy Olson-Martin	**TITLE:** Sanitary Engineering Associate

II. CASE INFORMATION

SITE NAME:	Former E-Z Serve Station No. #100795 (AKA Harken Marketing)
LOCATION:	6310 Mission Boulevard, Riverside, Riverside County, California
RB CASE #:	083301025T

CONTACT/BUSINESS NAME	ADDRESS	PHONE NUMBER
G. Clinton & Carma Pooley	5910 Courtyard Drive Riverside, CA 92506	(951) 684-9142

TANK ID #	SIZE IN GALLONS	CONTENTS	CLOSED IN-PLACE REMOVED?	DATE
#1	10,000-gallon	Super Gasoline	Removed	[1]April 13, 1990
#2	10,000-gallon	Unleaded Gasoline	Removed	[1]April 13, 1990
#3	10,000-gallon	Regular Gasoline	Removed	[1]April 13, 1990
#1	10,000-gallon, double-walled, fiberglass	Unleaded Gasoline	Removed	August 11, 2003
#2	10,000-gallon, double-walled, fiberglass	Unleaded Gasoline	Removed	August 11, 2003
#3	10,000-gallon, double-walled, fiberglass	Unleaded Gasoline	Removed	August 11, 2003

[1]According to the County of Riverside Department of Environmental Health, no acceptable report was submitted for the April 1990 UST removal activities.

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

CAUSE & TYPE OF RELEASE: In June 1989, a leak in the product line (located immediately south of the UST cluster) was noted. The product line and associated UST were put out of service.	In 2003, underground storage tanks (USTs) failed integrity tank tests and as the result, three (3) USTs, dispensers, and associated piping were removed in August 2003.
SITE CHARACTERIZATION COMPLETE: YES [X] NO [ ]	
MONITORING WELLS INSTALLED: Yes	**PROPER SCREENED INTERVAL:** YES [X] NO [ ] Note: many of the wells were dry over the past several years.
HIGHEST GW DEPTH BELOW GROUND SURFACE (BGS): 89.62 feet below the ground surface (bgs) - well MW2 in 1/04	**LOWEST DEPTH:** 113.50 feet bgs - well MW8 in 101/09

III. RELEASE AND SITE CHARACTERIZATION INFORMATION – continued:

FLOW DIRECTION: Variable/flat; north/northeast (recent years) and south/southeast (several years ago)	**NEAREST/AFFECTED SW NAME:** NA
MOST SENSITIVE CURRENT GW USE: MUN	**OFF-SITE BENEFICIAL USE IMPACTS:** NA
GROUNDWATER BASIN: Chino III	**REPORT(S) FILED:** California Regional Water Quality Control Board (Yes)
REPORT(S) ON FILE? Yes	3737 Main Street, Suite 500, Riverside, CA 92501-3348

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

MATERIAL	AMOUNT	ACTION TREATMENT OR DISPOSAL W/DESTINATION	DATE
TANKS/ PIPING	Three (3) USTs	Three (3) 10,000-gallon super gasoline, unleaded gasoline, and regular gasoline underground storage tanks (USTs) were removed	April 13, 1990
	Three (3) USTs, Dispensers, Associated Piping, and 500 Gallons (UST Liquid Waste)	Three (3) 10,000-gallon, double-walled, fiberglass, unleaded gasoline USTs, dispensers, and associated piping were removed. A total of nine (9) soil samples were collected. UST removal and soil sampling activities were witnessed by County of Riverside Department of Environmental Health (CRDEH) staff. The USTs were transported by John Guzman Crane Service, Inc., to the Able Environmental facility, for destruction. UST residual liquids were removed and transported to the Crosby and Overton facility located in Long Beach, California, for treatment and recycling.	August 1-11, 2003
SOIL/ GROUND WATER	7,349 Pounds	An eight-hour soil vapor extraction (SVE) test was conducted on wells VEW1 and MW2. A thermal oxidizer SVE system operated at the site under SCAQMD Permit No. G 7328, A/N 506141. The system was connected to wells MW1, MW2B, MW3, MW4, VSPR3, VEW1, VEW2, VEW3S, VEW3D, VEW4D, VEW5, VEW6, VEW7, VESP1, and VESP2.	January 2006 (Pilot Test) and April 9, 2010 through February 2013 (SVE Operation)
FREE PRODUCT	101 Gallons	Free product recovery was completed via manual bailing for wells MW1, MW2, and MW5. In March 22, 2004, a skimmer was installed in well MW1. In addition, sheens were noted periodically in wells MW4, MW6, MW9, and MW10.	October 20, 2003 – May 30, 2008
		Groundwater monitoring events were conducted at the site.	October 30, 2003 through May 16, 2013

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS – BEFORE & AFTER CLEANUP

CONTAMINANT	*SOIL - Maximum (mg/kg or ppm)*			*WATER – Maximum (µg/l or ppb)*

[1]The 1988 TPH-g results may not have been valid since the report was not signed by a State of California certified/registered professional. As a result, the report and findings were not acceptable to the CRDEH. Subsequent maximum soil samples collected from 1988 through 1995 were included.

[2]Maximum soil contaminant concentrations detected during the August 1996 site investigation.

[3]Maximum soil contaminant concentrations detected during the September 2003 UST and dispenser island removal and replacement activities.

[4]ND =constituent was not noted over the reportable detection limit or non-detectable (ND) and NA = constituent was not analyzed.

[5]Soil samples were analyzed for TPH-diesel during the January 2009 investigation; installation of deeper wells MW1B, MW2B, and MW3B.

[6]Maximum historical and latest contaminant concentrations detected for wells MW1 through MW10; screened 75-85 feet to 103-111 feet bgs in the shallow-zone.

[7]Maximum historical and latest contaminant concentrations detected for dual-nested wells VSPR1 through VSPR3; screened from 75-80 to 95 feet bgs and 108 to 110 feet bgs.

[8]Maximum historical and latest contaminant concentrations detected for deeper screened wells MW1B through MW3B; screened from 105 to 125 feet bgs.

[9]On May 16, 2013, wells MW1 through MW5, MW7, and MW10 had insufficient groundwater and were not sampled. Wells MW8, MW9, MW1B, MW2B, MW3B, VSPR2, and VSPR3 were sampled during the latest May 2013 sampling event.

[10]In July 2-3, 2013, grab water samples were collected from confirmation soil borings CB1and CB2. Groundwater was encountered between 113 and 115 feet bgs in borings CB1 and CB2, respectively.

[10]In July 2-3, 2013, grab water samples were collected from confirmation soil borings CB1and CB2. Groundwater was encountered between 113 and 115 feet bgs in borings CB1 and CB2, respectively.

[11]aximum concentrations of other volatile organic compounds (VOCs) that were detected in the soil or groundwater, but were not listed in the above table included:

1. Trichloroethene was detected up to 2.1 ppb (MW3B in 5/09 and 1/13).
2. Cis-1,2-dichloroethene was detected up to 0.73 ppb (MW3B in 1/09).
3. Tetrachloroethene was detected up to 0.47J ppb (MW1 in 1/09).
4. Bromomethane was detected up to 2.2 ppb (MW9in 5/08).
5. 2-chlorotoluene was detected in groundwater and soil up to 95 ppb (MW5 in 2/08) and 0.064 ppm (CB1-60').
6. Bromodichloromethane was detected up to 1.1 ppb (MW5 in 2/08).
7. 1,2,3-trichloropropane was detected up to 15 ppb (MW5 in 2/08).
8. 2,2,-dichloropropane was detected up to 1 ppb (MW5 in 2/08).
9. 1,1,2-trichloroethane was detected up to 21 ppb (MW5 in 2/08) in groundwater and 0.0015J ppm (CB1-75') in soil..
10. 1,1-dichloropropane was detected up to 1.4 ppb (MW5 in 2/08).
11. 1,1-dichloroethane was detected up to 0.65 ppb (MW6 in 2/08).
12. Vinyl chloride was detected up to 1.3 ppb (MW9-5/08).
13. Chloromethane was detected in the soil samples up to 0.0013J ppm (CB2-90').
14. Tert-butanol was detected in the soil samples up to 0.031J ppm (CB2-90).

[12]The source of the chlorinated VOCs shown on Footnote #5, above, is unknown. According to the consultant, the service station only dispensed fuel and did not conduct automobile repairs and therefore, the chlorinated solvent use on-site was not known or suspected.

IV. CLOSURE

Does completed corrective action protect beneficial uses per the regional board basin plan? YES [X] NO [ ]
Does the corrective action protect public health for current land use? YES [X] NO [ ]
SITE MANAGEMENT REQUIREMENTS
Should corrective action be reviewed if land use changes? YES [X] NO [ ] **NOTE**: This is an operating service station. Any future land use change to a more sensitive population use such as residence, day care, hospital, school, etc., will require a soil gas survey and/or human health risk assessment.

V. ADDITIONAL COMMENTS, DATA, ETC.

SITE

The present site owners include Clint and Carma Pooley. The Pooleys leased the site to White Oil several years ago. White Oil sold the business to Harken Marketing (dba E-Z Serve), which then leased the service station from the Pooleys. In the 1980s, Harken Marketing (dba E-Z Serve) removed the underground storage tanks (USTs) and installed new tanks. Currently, the service station operates as a Beacon Bay Service Station and a convenience store. Currently, the site includes two (2) 10,000-gallon double-walled USTs that contain unleaded gasoline, six (6) fuel dispensers, and associated piping.

The site is located in a mixed commercial and residential area. Opal Avenue is located to the east of the service station and a Circle K Gasoline Station operates across Opal Avenue to the east. Mission Boulevard and a residential neighborhood are located north of the site. A shopping center and a restaurant are located directly south and west of the site, respectively. Rustic Land Elementary School and Vista Pacifica Convalescent Home are located approximately 900 and 1,000 feet to the southwest and east of the site, respectively.

SITE ASSESSMENT

1988 - 1990

In September 1988, a site assessment was conducted at the site. A total of five (5) soil borings (B1 through B5) were completed at depths of 30 to 60 feet below the ground surface (bgs). Total petroleum hydrocarbons-gasoline (TPH-g), benzene, toluene, ethylbenzene, and total xylenes (BTEX) concentrations were detected in samples collected from borings B2 (40 and 45-foot samples) and B-3 (10-foot sample). Maximum TPH-g and BTEX concentrations were detected at 19,000 (B3-10'), 0.160 ppm (B2-45'), 210 ppm (B3-10'), 970 ppm (B3-10'), and 240 ppm (B3-10'), respectively. All of the results for borings B1, B4, and B5 were detected below the laboratory detection limits or non-detectable (ND). However, the assessment report was not signed by a State of California certified or registered geologist or engineer. The lack of documentation was not acceptable to the County of Riverside Department of Environmental Health (CRDEH).

In June 1989, a leak was noted from a product line located immediately south of the UST cluster. The product line and associated UST were put out of service. In April 1990, the subject facility underwent remodeling that included the replacement of gasoline USTs. Three (3) 10,000-gallon USTs (super, unleaded, and regular gasoline) were removed and three (3) new USTs were placed in the excavation that contained the former USTs.

On April 13, 1990, soil samples 1A, 1B, 1C, 2A, 2B, and 2C were collected beneath the former UST fill ends at depths of 2 and 6 feet bgs. Soil samples were only analyzed for TPH-g. TPH-g concentrations were detected in all six (6) of the soil samples and concentrations ranged from 4,240 ppm (2B) to 6,050 ppm (2C). Groundwater was not encountered during removal and sampling activities.

1991-1993

On July 24, 1991, three (3) soil borings B1, B2, and B3 were completed to depths of 20 feet bgs in the northwest corner, southwest corner, and south of the UST area, respectively. Soil samples were collected at 20 feet bgs and analyzed for TPH-g and BTXE. All of the results were ND.

On October 26, 1993, five (5) additional soil borings (SB1 through SB5) were drilled. Boring SB4 was slant-drilled beneath the UST cluster to a depth of 65 feet bgs. Borings SB1, SB2, SB3, and SB5 were drilled to depths of 40 feet bgs. Borings SB3 and SB4 were converted to nested soil vapor extraction (SVE) wells and screened from approximately 5 to 20 feet and 30 to 40 feet bgs. A slant, 2-inch vapor extraction well was constructed in SB-4 (VEW2) and a vertical 4-inch vapor extraction was constructed in boring SB3 (VEW1).

Soils consisted primarily of silty sand, coarse sand, sand, silty sand, and clayey sand. The borings were drilled in the following areas:

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

1. Boring SB1 was drilled north of the UST area.
2. Boring SB2 was drilled near the southwest corner of the UST area and south of the dispenser island area.
3. Boring SB3/VEW1 was drilled south of the UST area.
4. Boring SB4/VEW2 was drilled southeast of the UST area.
5. Boring SB5 was drilled south of wells VEW1 and VEW2.

Groundwater was not encountered during this investigation. Soil samples were collected at 15 feet (SB3), 20 feet (SB5), 35 feet (SB1 and SB2), and 43 feet (SB4) bgs. Maximum TPH-g and BTEX concentrations were only detected in sample SB1-35' at 89 ppm, 0.12 ppm, 0.02 ppm, 0.0016 ppm, and 0.0096 ppm, respectively. All of the results were ND for borings SB2 through SB5. In addition, samples were also analyzed for organic lead and all of the results were ND.

Findings revealed that low concentrations of petroleum hydrocarbons were detected on the north side of the UST cluster at a depth of 30 to 35 feet bgs.

1994-1996

In February 1995, two (2) additional soil borings (SB6 and SB7) were drilled adjacent to the southern portion of the UST cluster and adjacent to boring B3 to investigate the earlier 19,000 ppm detection (1988 data/report was not accepted by CRDEH), respectively. The borings were drilled at an angle of 30 degrees and to a depth of 61 feet and 52 feet bgs, respectively. No groundwater was encountered during this investigation.

A total of 12 soil samples were collected from borings SB6 and SB7 from 20 to 70 and 35 to 60 feet, respectively. TPH-g, toluene, ethylbenzene, and total xylenes concentrations were detected in samples collected from boring SB6-27' at 1,200 ppm, 32 ppm, 29 ppm, and 140 ppm, respectively. All other soil results, including benzene, for this boring were ND. A toluene detection of 0.160 ppm was detected in sample SB7-60'. All other soil results for boring SB7 were ND.

On August 1, 1996, one (1) additional soil boring (SB8) was drilled to 110 feet bgs. The boring was located between borings B1 and SB2 and between the dispenser islands and the market. Groundwater was detected at 85 feet bgs. Soil samples were collected from five-foot intervals from 5 to 110 feet bgs. Contaminant concentrations were detected in the soil samples collected from 35 to 110 feet bgs.

TPH-g concentrations were detected at the 85, 92.5, 94, and 100-foot depths and ranged from 22 ppm (85') to 4,267 ppm (94'). BTEX concentrations were detected from 35 to 100 feet and 107.5 to 110 feet bgs. Benzene concentrations ranged from 0.005 ppm (35') to 74.2 ppm (94'). Maximum toluene, ethylbenzene, and total xylenes concentrations were detected in sample SB8-94' at 287.8 ppm, 74.2 ppm, and 398.8 ppm, respectively. Sample SB8-94' was also analyzed for methyl tert-butyl ether (MTBE), which was detected at 0.242 ppm.

2000 – 2002

According to CRDEH files, no investigation or remediation was conducted during this time.

2003

On August 11, 2003, three (3) USTs were removed. These USTs were originally installed in February 1990 after the removal of the previous three (3) USTs. A total of nine (9) soil samples were collected beneath the UST (T1A, T1B, T1CB, T2A, T2B, T2C, T3A, T3B, and T3C) and nine (9) soil samples were collected from the dispensers and piping excavation (D11, D12, D13, D21, D22, D23, D31, D32, and D33.

Significant soil contamination was noted beneath the western end of the dispenser island and the northern UST areas. Two (2) new USTs (two-10,000-gallon, double-walled, steel USTs) for unleaded gasoline were installed in the former UST excavation, as well as piping and dispenser upgrades. Maximum TPH-g, BTEX, MTBE, and tert-butyl alcohol (TBA) concentrations were detected at 1,665.6 ppm (T1C), 0.007 ppm (T3A), 4.8 ppm (T1C), 14.2 ppm (T1C), 94.5 ppm (T1C), 6.9 ppm (D1-3), and 26.9 ppm (D2-2), respectively. In addition, two (2) samples were also analyzed for lead. Organic lead was detected at 6 ppm (D2-2') and 32 ppm (T1C-18').

In October 2003, three (3) 4-inch diameter wells (MW1 through MW3) were installed to 102 to 109 feet bgs. Wells MW1 through MW3 were screened from approximately 82 to 110 feet (MW1) and 78 to 103 feet (MW2 and MW3) bgs. Groundwater was encountered from 89.48 feet bgs (MW2) to 96.30 feet bgs (MW3). Free product was encountered in MW1 at 2.15 feet in thickness. A groundwater gradient direction flow to the south was established.

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

The wells were located in the following areas:

1. Well MW1 was drilled directly south of the dispenser island area.
2. Well MW2 was drilled south of the UST area.
3. Well MW2 was drilled west of the service station building.

Soil contamination was detected in borings MW1 and MW2 from 35-40 to 100 feet bgs. Maximum contaminant concentrations were generally detected in samples MW1-90' and MW1-105'. TPH-g and benzene concentrations ranged from 0.052 ppm (MW3-90') to 3,200 ppm (MW1-105') and 0.0057 (MW2-70') to 60 ppm (MW1-90'), respectively. MTBE concentrations ranged from 0.058 ppm (MW1-45') to 0.057 ppm (MW1-85'). Maximum toluene, ethylbenzene, and total xylenes concentrations were detected at MW1-90' at 350 ppm, 83 ppm, and 480 ppm, respectively.

In addition, maximum naphthalene, 1,2,4-trimethylbenzene (1,2,4-TMB), 1,3,5-trimethylbenzene (1,3,5-TMB), n-propylbenzene (n-PB), n-butylbenzene (n-BB), isopropylbenzene (IPB), chloroform, and sec-butylbenzene (sec-BB) concentrations were detected in borings B1/MW1 and B2/MW2 at 39 ppm, 170 ppm, 58 ppm, 33 ppm, 5.1 ppm, 6.1 ppm, 0.0066 ppm, and 0.010 ppm, respectively.

With respect to boring B3/MW3, only TPH-g and total xylenes concentrations were detected in the soil samples collected at the 85-foot depth (total xylenes at 0.0053 ppm), 90-foot depth (TPH-g at 0.0052 ppm), 95-foot depth (TPH-g at 0.100 ppm), and 100-foot depth (0.160 ppm).

The vertical extent of well MW1 was not defined since elevated TPH-g and BTEX concentrations were detected in sample MW1-105' at 3,200 ppm, 33 ppm, 130 ppm, 35 ppm, and 193 ppm, respectively. Also, trace TPH-g, benzene, total xylenes, naphthalene, 1,2,4-TMB, and 1,3,5-TMB concentrations were detected at the 100-foot depth sample. However, all of these concentrations were detected at less than 0.2 ppm.

Moderate contaminant concentrations were detected in the groundwater samples collected from wells MW2 and MW3. Maximum TPH-g, BTEX, and MTBE concentrations were detected in the samples collected from well MW2 at 2,700 ppb, 620 ppb, 29 ppb, 76 ppb, 354 ppb, and 45 ppb, respectively. Other VOCs were detected in the groundwater samples; however, all of these concentrations were below 0.2 ppb.

Free product recovery was implemented in October 2003 for well MW1.

2004

On April 30, 2004, free product was detected in wells MW1 and MW2 at 1.16 and 1.30 feet in thickness, respectively. On April 2004, free product recovery was also implemented for well MW2.

During July 26-28 and November 23-24, 2004, four (4) additional groundwater monitoring wells (MW4 through MW7) were completed to 106 feet bgs. The wells were screened from 75 to 105 feet bgs. Groundwater was encountered from 90 to 92 feet bgs. The groundwater gradient flow direction was to the east/northeast at 0.02 ft/ft.

The wells were located in the following areas of the site:

1. On-site well MW4 was located north of the UST area.
2. Off-site well MW5 was located east of the site and within the right-of-way of Opal Avenue.
3. Off-site well MW6 was located southeast of the site, south of well MW-5, and within the right-of way of Opal Avenue.
4. On-site well MW7 was located along the southern boundary of the site and west of well MW2.

Contaminant concentrations were detected in the samples collected from borings B4 and B5 at the 35 to 105-foot depths and the 40 and 80 to 90-foot depths, respectively. Also, contaminant concentrations were detected in the soil samples collected from borings B6 and B7 at the 90-foot depth and the 65 and 75 to 85-foot depths, respectively. Maximum TPH-g, BTEX, and MTBE concentrations were detected at 1,500 ppm (MW5-90'), 0.690 ppm (MW4-90), 14 (MW5-90'), 11 ppm (MW5-90'), 61 ppm (MW5-90'), and 0.035 ppm (MW4-70'). Also, other VOCs were detected in the soil samples. VOCs that exceeded 10 ppm included 1,2,3-TMB (14 and 30 ppm in samples MW4-90' and MW5-90, respectively), naphthalene (15 ppm in sample MW5-90'), and 1,3,5-TMB (17 ppm in sample MW5-90').

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

Elevated contaminant concentrations were only detected in the samples collected from sample MW5-90'. TPH-g, BTEX, and several other VOCs were detected at 1,500 ppm, 0.55 ppm, 14 ppm, 11 ppm, 61 ppm, and up to 30 ppm, respectively. Groundwater was encountered between 90-92 feet bgs during drilling activities.

Trace contaminant concentrations were detected in samples collected from well MW4 (toluene, ethylbenzene, and total xylenes were detected less than 0.02 ppm) from 95 to 105 feet bgs. Only a few trace to low-level contaminant concentrations were also detected in the samples collected from MW6 (85 to 100 feet bgs) and MW7 (75 to 90 feet bgs). However, all of the results were less than 1.0 ppm.

TPH-g, BTXE, and MTBE concentrations were in detected in the groundwater samples collected from all four (4) wells. Maximum TPH-g, BTXE, and MTBE concentrations were detected at 9,600 ppb (MW6), 1,100 ppb (MW4), 710 ppb, (MW6), 120 ppb (MW6), 1,500 ppb (MW4), and 250 ppb (MW7), respectively. In addition, several other VOCs were detected in the groundwater samples. VOCs that exceeded 100 ppb included 1,2,4-TMB and 1,3,5-TMB. Maximum 1,2,4-TMB and 1,3,5-TBM concentrations were detected in sample MW4 at 280 ppb and 100 ppb, respectively.

On September 22, 2004, free product was present in well MW1 at 0.17 feet in thickness.

2005-2006

On February 28, 2005, quarterly groundwater samples were collected and analyzed. No free product was detected in wells MW1 and MW2. Groundwater was encountered at 91.35 feet bgs. The groundwater gradient flow direction was to the south/southeast. Maximum TPH-g and BTEX concentrations were detected in the groundwater samples collected from MW1 at 140,000 ppb, 13,000 ppb, 11,000 ppb, 3,100 ppb, and 19,900 ppb, respectively. A maximum MTBE concentration of 150 ppb was detected in the samples collected from well MW4. In addition, several other VOCs were detected in the groundwater samples. VOCs that exceeded 100 ppb included naphthalene, n-PB, 1,2,4-TMB, and 1,3,5-TMB. Maximum concentrations of these VOCs were detected in the samples collected from well MW1 at 2,600 ppb, 4,700 ppb, 4,700 ppb, and 1,200 ppb, respectively.

In January 2006, an eight-hour soil vapor extraction (SVE) pilot study was conducted. Dual-screened vapor extraction well VEW1 and groundwater monitoring well MW2 were used as the extraction wells. Based on the results of the tests, radius of influences of 10 to 25 feet and 60 feet, respectively, were achieved. Up to 22,000 ppmv and 400,000 ppmv of TPH-g and benzene concentrations were detected in the vapor samples. During the pilot test, the SVE recovered a total of approximately 2.90 pounds of hydrocarbons. The Remedial Action Plan (RAP) proposed SVE at the site using existing wells MW1, MW2, MW4, VEW1, and VEW2, and four (4) proposed wells.

In May 2006, three (3) off-site wells (MW8 through MW10) were completed to 115 feet, 111 feet, and 106 feet bgs, respectively. The wells were screened from 85 to 115 feet, 81 to 111 feet, and 76 to 106 feet, respectively. Wells MW8 and MW9 were located along Mission Boulevard and well MW10 was located along Opal Avenue.

Soil contaminant concentrations were detected in well MW10 from 85 to 105 feet bgs. Maximum TPH-g, BTEX concentrations were detected in sample MW10-90' at 240 ppm, 0.086 ppm, 0.470 ppm, 4.2 ppm, and 23 ppm, respectively. In addition, 1,3,5-TMB, 1,2,4-TMB, naphthalene, IPB, and sec-BB concentrations were detected at the 85, 90, and 105-foot depths. However, all of these compounds were at, or less, than 10 ppm. All of the soil results for wells MW8 and MW9 were ND.

Groundwater samples collected from well MW10 revealed minor TPH-g, BTEX, naphthalene, 1,2,4-TMB, and 1,3,5-TMB concentrations at 1,600 ppb, 59 ppb, 49 ppb, 7.8 ppb, 310 ppb, 14 ppb, 70 ppb, and 23 ppb, respectively, All of the groundwater results for wells MW8 and MW9 were ND.

In December 2006, dual-nested SVE and air sparge (AS) wells VSPR1 through VSPR3 and SVE wells VEW3 and VEW4 were installed. Wells VSPR1 and VSPR2 were constructed to 111 feet bgs and screened from 80 to 95 and 108 to 110 feet bgs. Well VSPR3 was drilled to 111 feet and screened from 75 to 95 and 108 to 110 feet bgs. Dual-nested wells VEW3 and VEW4 were drilled to 76 feet and screened from 30 to 50 feet and 56 to 75 feet bgs. These wells were drilled in the following areas of the site:

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

1. Well VSPR1 was drilled in proximity to boring B2; directly south of the dispenser island area.
2. Well VSPR2 was drilled north of the UST area and east of the dispenser island area; adjacent to 1991 and 1988 borings B1 and B5, respectively.
3. Well VSPR3 was drilled near the eastern boundary of the site between wells VEW2 and MW2.
4. Well VEW3 was drilled north of the UST area and east of the dispenser island area; between well VSPR2 and boring SB1.
5. Well VEW4 was drilled within the eastern boundary of the dispenser island.

Soil contaminant concentrations were detected in samples collected from all five (5) soil borings. Elevated contaminant concentrations were detected in boring VEW3 from 20 to 75 feet bgs (vertical extent). Maximum TPH-g and BTEX concentrations were detected in sample VEW3-60' at 7,500 ppm, 27 ppm, 520 ppm, 180 ppm, and 950 ppm, respectively. Maximum MTBE concentration of 0.014 ppm was detected in sample VSPR2-90'. Elevated concentrations of other VOCs were also detected in the samples collected from boring VEW3 at the 50 and 60-foot depths.

The vertical extent of contamination was not fully defined for well VEW3 at the 75-foot depth. Also, trace contaminant concentrations (less than 1.0 ppm) were also detected in the last depth sampled for well VSPR2 (110'). The last sample collected for boring VSPR3 (110-foot sample) was ND.

2007

In January 2007, three (3) additional SVE wells VEW5 through VEW7 were drilled to 26 feet bgs. These wells were screened from 5 to 25 feet bgs. Elevated soil contaminant concentrations were detected in the soil samples collected from well VEW6 from 6 to 25 feet bgs. Maximum TPH-g and BTEX concentrations were detected in sample VEW6-25' at 5,800 ppm, 0.290 ppm, 360 ppm, 200 ppm, and 1,170 ppm, respectively. Other VOCs were also detected in the samples collected from VEW6.

All of the soil results for well VEW5 were ND from 6 to 25 feet bgs except for a detection of TPH-g (0.320J ppm) detected in sample VEW5-15'. All of the soil results for well VEW7 were ND except for TPH-g concentrations detected at the 15-foot (0.200J ppm) and 25-foot (0.240J ppm) depths.

2007-2008

The groundwater gradient flow direction varied over the year as well as the previous years. For the past five years, the groundwater gradient flow direction varied from south/southwest, east, east/southeast, variable, north/northeast, south, north, and north/northwest. The February 2008 gradient direction was to the north/northwest.

In February 2008, free product sheens were observed in wells MW1, MW2, MW4 through MW7, MW9, and MW10.

On May 20, 2008, wells MW1 and MW3 were dry and free product (0.03 feet thickness) was detected in well MW5. The groundwater gradient was to the north/northeast at 0.006 ft/ft.

2009

In January 2009, three (3) deeper wells (MW1B, MW2B, and MW3B) were installed in proximity to dry wells MW1 through MW3. The borings were drilled to total depths of 125 feet bgs. The wells were screened from approximately 105 to 125 feet bgs. Groundwater was encountered between 105 to 107 feet bgs during drilling activities. Soils consisted of alluvium that included sand, medium to fine sand, silty sand, and sand with trace of gravel.

Contaminants were detected in the soil samples collected from all three (3) wells. Generally, contaminant concentrations were detected from approximately 20 feet to 105 feet in the samples. Maximum TPH-g and BTXE concentrations were detected in sample MW1B-90' at 1,500 ppm, 0.730 ppm, 16 ppm, 10 ppm, and 57 ppm, respectively. Maximum TPH-d and MTBE concentrations were detected in sample MW1B-95 at 640 ppm and 0.014 ppm, respectively. Several other VOCs were also detected.

The soil samples collected from boring/well MW-3B only revealed detections of TPH-d at 1,1 ppm (40') and 1.2 ppm, (95'). No TPH-g or VOCs were noted above the detection limits in any of the soil samples collected from boring/well MW3B.

Groundwater samples revealed low-level contaminant concentrations detected in all of the groundwater samples collected from these three (3) deeper wells. Maximum TPH-g, TPH-d, BTEX, and MTBE concentrations were detected in samples collected from well MW1B. These constituents were detected at 1,100 ppb, 230 ppb, 17 ppb, 2.4 ppb, 3.1 ppb, 103 ppb, and 3.2 ppb, respectively. Several other VOCs were also detected in the groundwater samples collected from the wells. However, all of the results were less than 1.0 ppb.

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

In January 2009, groundwater monitoring revealed that the east/southeast gradient direction changed again to the northwest direction.

2010

On April 9, 2010, SVE remediation was implemented. A thermal oxidizer SVE system was connected to wells MW1, MW2B, MW3, MW4, VSPR3, VEW1, VEW2, VEW3S, VEW3D, VEW4D, VEW5, VEW6, VEW7, VESP1, and VESP2.

2011

Wells MW8 and MW9 were temporarily closed prior to the start of street construction activities by the County of Riverside. These wells were located within the Mission Boulevard right-of-way. After the completion of the road activities, the wells were reconstructed and resurveyed. In addition, groundwater samples were collected from the wells on July 22, 2011. All of the groundwater results for wells MW8 and MW9 were ND.

2012

The SVE system blower motor was repaired at the end of the second quarter 2012 and the SVE system was restarted on July 19, 2012. From July 19 through September 12, 2012, the SVE total influent results ranged from 124 ppmv (July 19, 2012) to 39 ppmv (September 12, 2012). As a result of the influent results, approval was granted by Regional Board staff to temporarily deactivate the SVE system.

2013

From April 2010 through February 2013, a total of 7,349 pounds of hydrocarbons were recovered. In February 2013, the SVE system was deactivated.

On May 16, 2013, wells MW1B, MW2B, MW3B, MW6, MW8, MW9, VSPR2, and VSPR3 were sampled for the last time. The results are summarized below:

1. TPH-g – All eight (8) groundwater samples were **ND<50 ppb**.
2. TPH-d – TPH-d concentrations were detected in all eight (8) samples and concentrations ranged from 70 ppb (MW6) to **1,100 ppb** (VSPR2).
3. Benzene – Benzene was only detected in sample VSPR2 at **1.3 ppb**.
4. Toluene – Toluene was only detected in sample VSPR2 at **2.9 ppb**.
5. Ethylbenzene – Ethylbenzene was only detected in sample VSPR2 at **0.4 ppb**.
6. Total Xylenes – Total Xylenes was only detected in sample VSPR2 at **2.82 ppb**.
7. Trichloroethene (TCE) – TCE was only detected in sample MW1B at **0.61 ppb**.
8. Dissolved Oxygen – Dissolved oxygen ranged from 3.19 ppm (MW2B) to **4.73 ppm** (MW3B).
9. Fuel Oxygenates, Methanol, Ethanol, and Other VOCs – All of these results were **ND** for all eight (8) wells.

On July 3, 2013, two (2) soil confirmation borings were drilled and sampled. Soil samples were collected from the following intervals from each boring:

1. Five-foot intervals from 5 to 20 feet below the ground surface (bgs).
2. Ten-foot intervals from 20 to 60 feet bgs.
3. Five-foot intervals from 65 to 130 feet bgs.

A total of 22 soil samples were collected and analyzed for each boring. All 44 soil samples were ND for all of the fuel oxygenates.

Boring locations and results are summarized below (Note: maximum compound concentrations as well as the 5 or 10-foot detections are highlighted in the **bold** font.):

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

CONFIRMATION SOIL BORING CB1 – Boring CB1 was drilled near the eastern area of the site and north of the underground storage tank (UST) area. This boring was also drilled in the vicinity of wells VSPR2 and VEW3 as well as former borings B1, B5, and SB1.

During drilling activities, groundwater was encountered at approximately 114 feet bgs. According to the boring log, slight diesel odors were observed in the 40, 60, and 65-foot depth samples. Soils consisted of sandy silt, silty sand, and trace/some gravel from approximately three (3) inches to 119 feet bgs. Trace clay and sand silt was noted from 120 to 130 feet bgs.

Soil contaminant concentrations were detected in all 22 soil samples. Total petroleum hydrocarbon-gasoline (TPH-g) concentrations were detected in eight (8) of the 22 samples at the 10, 30, 60 to 75, 95, and 125-foot depths. TPH-g concentrations ranged from 0.810J ppm (10') **to 480 ppm** (60'). Total petroleum hydrocarbon-diesel (TPH-d) concentrations were detected in all 22 soil samples. TPH-d concentrations ranged from 1.4 ppm (100 and 130-foot depths) to **920 ppm** (60-foot depth).

Benzene concentrations were detected in four (4) soil samples collected at the 50, 70, 85, and 105-foot depths. Benzene concentrations were all detected at or below **0.015 ppm.** Ethylbenzene concentrations were detected in five (5) soil samples collected at the 60 to 75 and 95-foot depths and a maximum concentration was detected at **0.0017J ppm** (95').

Toluene concentrations were detected in seven (7) soil samples collected at the 50 to 75, 85, and 95-foot depths. The maximum toluene concentration was detected at **0.0054 ppm** (70'). Total xylenes concentrations were detected in six (6) samples collected at the 50 to 75 and 95-foot depths. The maximum total xylenes concentration was detected at **0.085 ppm** (60').

Other VOCs were also detected in the samples collected at the 30, 60 to 80, 95, and 125-foot depths. Maximum concentrations of VOCs that exceeded 1.0 ppm included 1,2,4-TMB, 1,3,5-TMB, n-BB, and naphthalene. These maximum concentrations were detected at 60-foot depth at **11 ppm**, **3.9 ppm**, **4.4 ppm**, **and 72 ppm**, respectively.

Groundwater was encountered at approximately 112 feet bgs. Grab groundwater samples were collected from confirmation boring CB1. According to the results, TPH-d, TPH-g, toluene, ethylbenzene, and total xylenes concentrations were detected at **420 ppb**, **600 ppb**, **43 ppb**, **0.36 ppb**, and **5.2 ppb**, respectively. In addition, 1,2,4-TMB, 1,2-dichloroethane (1,2-DCA), 1,3,5-TMB, 4-Isopropyltoluene, n-BB, n-PB, naphthalene, and sec-BB concentrations were all detected **at or below 35 ppb**. All benzene results were **ND**.

Conclusion – Only trace to low level contaminant concentrations were detected in the soil samples collected from confirmation soil boring CB1. In the 5 and 10-foot depths, only trace to low-level TPH-g and TPH-d concentrations were detected. A TPH-d concentration of **8.6 ppm** was detected in the 10-foot depth. TPH-g and TPH-d concentrations were detected in the 10-foot depth sample at **0.810J ppm** and **17 ppm**, respectively.

All of the VOCs were ND from the 5 to 20-foot depths. Therefore, these residual contaminant concentrations detected in the 5 and 10-foot depth samples were all below the concentrations of petroleum constituents (benzene, ethylbenzene, and naphthalene) in soil that would have no significant risk of adversely affecting human health (residential, commercial/industrial, and utility worker) according to Table 1 in the *State Board's Low Threat Underground Storage Tank Case Closure Policy*.

Although the vertical extent was not fully defined below 130 feet bgs, all of the maximum TPH-g, TPH-d, benzene, 1,2,4-TMB, 1,3,5-TMB, n-BB, and naphthalene concentrations from 100 to 130 feet bgs were detected at or below **0.490 ppm** (125'), **2.3 ppm** (125'), **0.00093J ppm** (105'), **0.0037J ppm** (125'), **0.0013J ppm** (125'), **0.0019J ppm** (125') , and **0.0092 ppm**, respectively. Based on the trace concentrations, the vertical extent was satisfactorily defined.

CONFIRMATION SOIL BORING CB2 – Boring CB2 was drilled south of the dispenser island area. This boring was drilled in the vicinity of wells MW1, MW1B, VSPR1, and as well as former borings B2 and SB8.

Groundwater was encountered during drilling activities at approximately 115 feet bgs. According to the boring log, slight diesel odors were observed in the 90 and 95-foot depth samples. Soils consisted of silty sand and "trace/some" gravel from approximately two (2) feet to 119 feet bgs. Sand was encountered from approximately 120 feet to 130 feet bgs.

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

Soil contaminant concentrations were detected in all 22 soil samples. TPH-g concentrations were detected in five (5) samples at the 40 and 85 to 100-foot depths. TPH-g concentrations ranged from 0.0032J ppm (40') to **0.053 ppm** (90'). TPH-d concentrations were detected in all 22 soil samples. TPH-d concentrations ranged from 0.0014 ppm (10') to **0.780 ppm** (90-foot depth).

Benzene concentrations were detected in four (4) samples collected from the 5, 15, 60, and 90-foot depths. Benzene concentrations were all detected at or below **0.0013J ppm.** Ethylbenzene concentrations were detected in two (2) soil samples at 0.00092J ppm (100') and **0.055 ppm** (90').

Toluene concentrations were detected in six (6) samples collected at the 5, 60, 85, and 90 to 100-foot depths. The maximum toluene concentration was detected at **0.030 ppm** (90'). Total xylenes concentrations were detected in samples collected at the 85 to 100-foot depths. The maximum total xylenes concentration was detected at **4.0 ppm** (90').

Other VOCs were detected in samples collected at the 85 to 100 and 125-foot depths. Maximum concentrations that exceeded 1.0 ppm included 1,2,4-TMB, 1,3,5-TMB, n-BB, n-PB, naphthalene, and sec-BB. Maximum contaminant concentrations were detected in sample CB2-60' at **90 ppm**, **23 ppm**, **9.9 ppm**, **8.1 ppm**, **47 ppm**, and **1.6 ppm**, respectively.

Groundwater was encountered at approximately 115 feet bgs. Grab groundwater samples revealed TPH-g, TPH-g, and BTEX concentrations were detected at **640 ppb**, **1,800 ppb**, **0.28 ppb**, **15 ppb**, **0.95 ppb**, and **17.8 ppb**, respectively. In addition, several other VOCs were also detected. Naphthalene, 1,2,4-TMB, and 1,3,5-TMB concentrations were detected at **120 ppb**, **32 ppb**, and **80 ppb**, respectively. The other VOCs were all detected below 10 ppb.

Conclusion - Only trace to low level contaminant concentrations were detected in the soil samples collected from confirmation soil boring CB2. In the 5 and 10-foot depths, only trace to low-level TPH-d, benzene, and toluene concentrations were detected in the 5-foot depth sample, TPH-d, benzene, and toluene concentrations were detected at **0.0035 ppm**, **0.00092J ppm**, and **0.00070J ppm**, respectively. The 10-foot sample only revealed a TPH-d concentration of **0.0014 ppm.**

Therefore, these residual contaminant concentrations detected in the 5 and 10-foot depth samples were below the concentrations of petroleum constituents (benzene, ethylbenzene, and naphthalene) in soil that would have no significant risk of adversely affecting human health (residential, commercial/industrial, and utility worker) according to Table 1 in the *State Board's Low Threat Underground Storage Tank Case Closure Policy.*

Although the vertical extent was not fully defined below 130 feet bgs, TPH-d (detected from 105 to 130'), 1,2,4-TMB (125'), and naphthalene (125') were the only compounds detected from 105 to 130 feet bgs. The TPH-d, 1,2,4-TMB, and naphthalene concentrations were all detected at or below **0.0038 ppm**, **0.0015J ppm**, and **0.0023J ppm**, respectively. Based on the trace concentrations, the vertical extent was satisfactorily defined.

GEOLOGY AND GROUNDWATER

The site is underlain by Quaternary sediments of non-marine origin. The San Jacinto fault is located approximately eight (8) miles northeast of the site. The site is located in an alluvium-filled valley within the Santa Ana River drainage. Site investigations revealed that the alluvium consisted of the following:

- Surface to approximately 19 feet bgs, soils encountered were primarily silty sand.
- Approximately 5 to 40 feet bgs, soils encountered were primarily sand.
- Approximately 40 to 45 feet bgs, soils encountered were primarily silty sand.
- Approximately 45 to 110 feet bgs, soils encountered were primarily sand.
- Approximately 110 to 125 feet bgs, soils encountered were primarily sand and silty sand.

Depth to groundwater ranged from approximately 90 feet bgs (2003) to 105-107 feet bgs in 2012 and 112 to 115 feet bgs in July 2013. Six (6) and seven (7) of the 12 groundwater monitoring wells were dry in 2012 and 2013, respectively.

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

SENSITIVE RECEPTORS - The following sensitive receptors are located within a one-mile radius of the subject site:

1. **Surface Water** - The Santa Ana River is located approximately two (2) miles east and south of the site.

2. **Production Wells** - The following wells are identified:

    a. Western Municipal Water District (WMWD) operates a groundwater well located approximately ¼ mile southeast of the site (State Well No. 02S/05W-17A02). According to WMWD, depth to groundwater is measured at approximately 72 feet bgs in this well.

    b. A cluster of two (2) water supply wells areas are located approximately 1.2 miles (cluster of two wells) and 1.9 miles (cluster of 16 wells) southeast of the site, respectively. These wells are owned by the Jurupa Community SD, Rubidoux Community SD, Rancho Jurupa-Riverside County Parks, Reynolds Resorts-Oak Valley R.V., and United States Geological Survey (USGS).

3. **Schools** – Rustic Lane Elementary School is located approximately 900 feet to the southwest of the site.

4. **Hospitals and Convalescent Homes** – The Vista Pacifica Convalescent Home is located approximately 1,000 feet east of the site.

CLOSURE

Based on the following factors, closure is recommended:

- On April 13, 1990, three (3) 10,000-gallon super gasoline, unleaded gasoline, and regular gasoline USTs were removed from the site and replaced with three (3) 10,000-gasoline, double-walled, fiberglass, unleaded gasoline USTs.

- In August 2003, three (3) 10,000-gallon, double-walled, fiberglass, unleaded gasoline USTs, dispensers, and associated piping were removed. The USTs were transported by John Guzman Crane Service, Inc., to Able Environmental, for destruction. The UST residual liquids (approximately 500 gallons) were removed and transported to the Crosby and Overton facility located in Long Beach, California, for treatment and recycling.

- From October 30, 2003 through May 30, 2008, free product recovery was implemented via manual bailing for wells MW1, MW2, and MW5. In March 22, 2004, a skimmer was installed in well MW1. Also, periodical sheens were noted for wells MW4, MW6, MW9, and MW10. Approximately 101 gallons of free product were recovered. Free product was last encountered beneath this site in 2008.

- In January 2006, an eight-hour SVE pilot test was conducted on wells VEW1 and MW2. A total of 2.90 pounds of hydrocarbons were removed.

- From April 10, 2010 through February 2013, a SVE system operated at the site. A total of 7,346 pounds of hydrocarbons were recovered.

- In July 2013, the on-site vertical extent of contamination was satisfactorily defined by on-site confirmation soil borings CB1 and CB2 as well as earlier investigations. Confirmation soil sampling revealed only trace to low-level residual contaminant concentrations remain beneath the site.

V. ADDITIONAL COMMENTS, DATA, ETC. – continued:

All of the soil results for ethanol, methanol, and fuel oxygenates were ND. Maximum TPH-d, TPH-g, and BTEX concentrations were only detected up to **150 ppm** (CB1-65'), **920 ppm** (CB1-60'), **0.015 ppm** (CB1-85'), **0.030 ppm** (CB2-90'), **0.055 ppm** (CB2-90'), and **4 ppm** (CB2-90'), respectively. Although other VOCs were detected, all of these VOCs were detected below 1.0 ppm except for 14 detections (1,2,4-TMB, 1,3,5-TMB, n-BB, naphthalene, N-PB, and sec-BB) that ranged from 1.3 ppm to 93 ppm.

Based on the findings of the July 2013 soil confirmation borings CB1 and CB2 results, SVE remediation significantly reduced the soil contaminant concentrations in the areas of VSPR2, VEW3, MW1, and MW1B; historically, the most contaminated areas. Although the highest residual contaminant concentrations were generally detected from the 60 to 95-foot samples, these trace to low-level residual contaminant concentrations that remain beneath the site should not pose a threat to groundwater quality. Also, natural attenuation should further reduce these residual contaminant concentrations.

In addition, the CB1 results for the 5 to 20-foot depths were all ND for VOCs and the CB2 results for 5 to 10-foot results were below the concentrations of petroleum constituents (benzene, ethylbenzene, and naphthalene) in soil that would have no significant risk of adversely affecting human health (residential, commercial/industrial, and utility worker) according to Table 1 in the *State Board's Low Threat Underground Storage Tank Case Closure Policy*.

- The off-site vertical extent of groundwater contamination was satisfactorily defined by off-site wells MW6, MW8, and MW9 as well as on-site wells MW2, MW2B, MW3B, and MW7. Site investigations satisfactorily defined the vertical and lateral extent of the groundwater contaminant plume.

  The May 2013 groundwater sampling event as well as the July 2013 confirmation boring groundwater grab samples (groundwater encountered from 113 to 115 feet bgs) revealed low-level contaminant concentrations as summarized in the Table (pages 2-7) as well as page 13 of this summary. It also appears that the multi-nested SVE remediation wells and SVE remediation significantly decreased the groundwater contaminant concentrations beneath the site. Although low-level residual contaminant concentrations remain from 60 to 95 feet bgs, any change in the groundwater depth (from 115 feet to approximately 89-90 feet bgs) should not pose a threat to groundwater quality in this area. Also, natural attenuation should further reduce the residual groundwater contaminant concentrations.

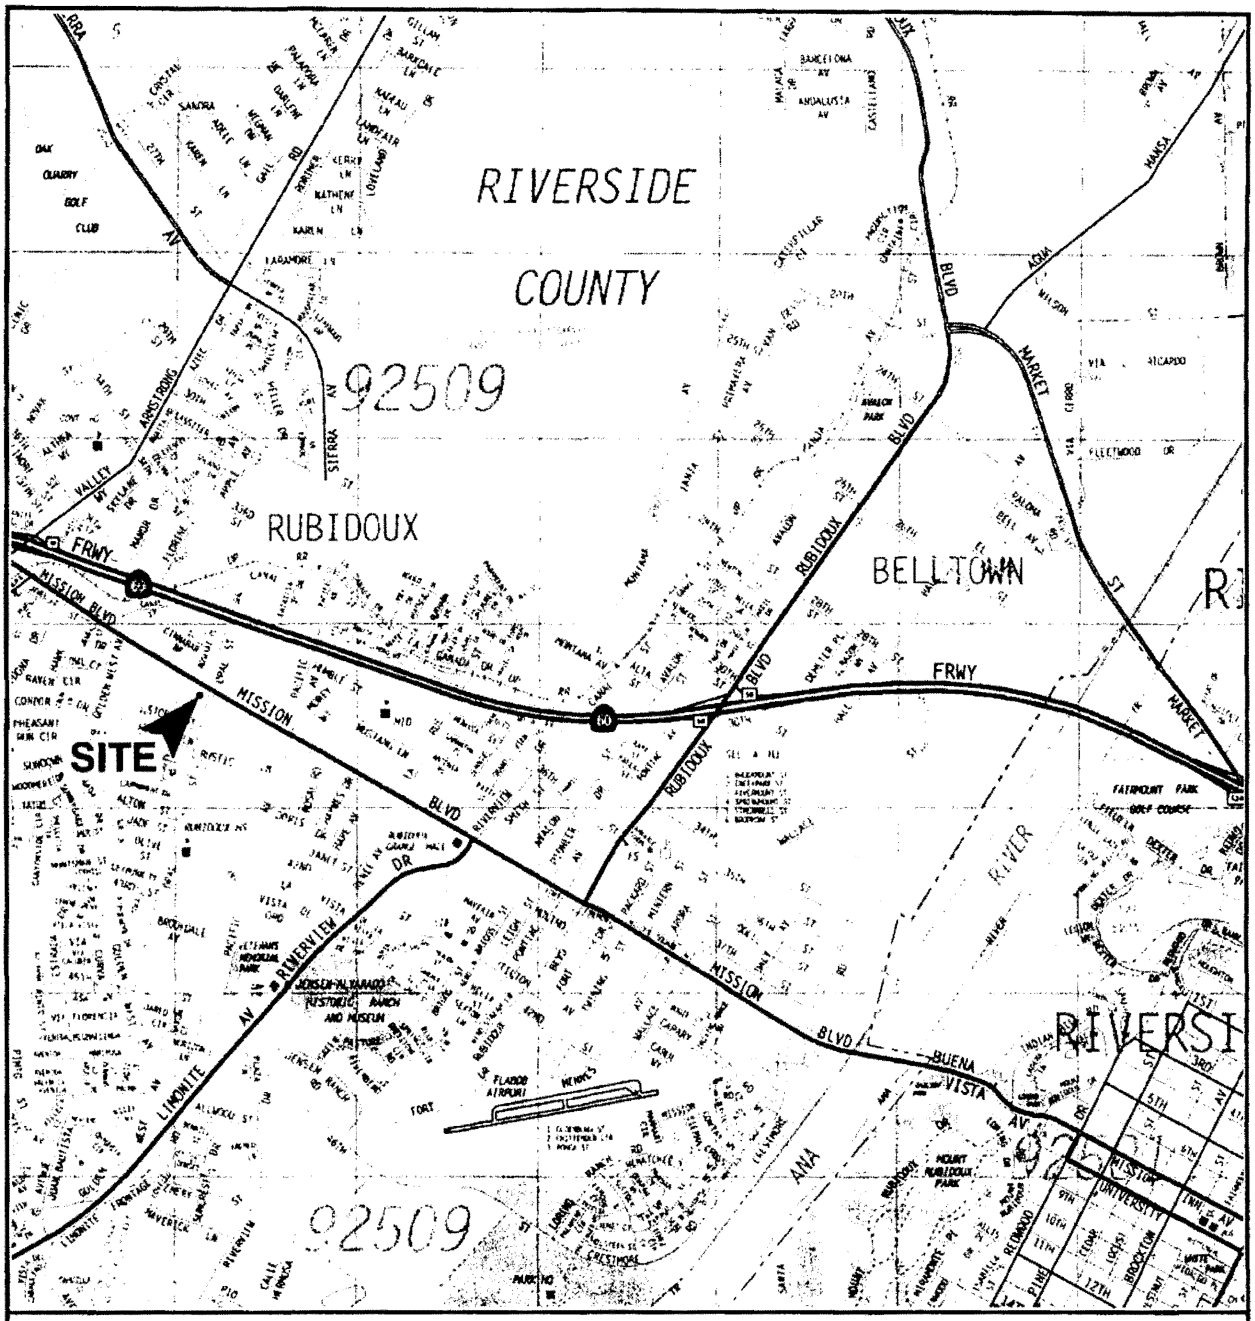

This closure summary does not include all of the data for this cleanup. It was prepared by the Santa Ana Regional Water Quality Control Board (Regional Board) for the purpose of providing a brief summary for case closure evaluation. All environmental reports pertaining to this cleanup site as well as the Regional Board case file should be reviewed in their entirety to obtain further details regarding this cleanup

COUNTY OF RIVERSIDE • HEALTH SERVICES AGENCY
DEPARTMENT OF ENVIRONMENTAL HEALTH

February 10, 1993 Site 91 094

Mr. Clark Taylor
Las Plumas Lumber
6464 33rd Street
Riverside CA 92509

Dear Mr. Taylor:

Subject: Underground Storage Tank Cleanup at Las Plumas Lumber - 6464 33rd Street - Riverside.

This letter confirms the completion of site investigation and remedial action for the underground storage tanks at the above site. Based on the assumption that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

The contents of these reports have also been discussed with staff of the Regional Water Quality Control Board (RWQCB). Based on the information submitted and current requirements, the RWQCB concurs with the determination of this agency that no further action is required at this time

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions regarding this matter, contact this office at (909) 358-5055.

Sincerely

Christine Jones

LAS PLUMAS LUMBER Site # 91094 Riverside

TYPE OF CONTAMINATION: Soil

DEPTH TO GROUNDWATER: approx. 165 feet

SITE SUMMARY:

1-22-91: Three tanks pulled: West side of shop: one 550 gallon waste oil tank removed; east side of shop: one 5000 gallon gasoline tank and one 10,000 gallon diesel tank removed. Contamination was found on the east end of the diesel tank. Soil was excavated to 43 feet (maximum reach of the equipment) and diesel contamination was approx. 35,000 ppm.

5-23-91: An angle boring was drilled to a total depth of 68 feet bgs (12 degree angle). ND (TPH and B) at 46 and 49 feet bgs.

6-91: Risk Assessment for inplace soil (10 - 20 cys).

7-17-91: Risk Assessment Supplemental.

7-30-91: Letter from S. Boltinghouse indicating "no further action" on the tank pit area would be required based on the Risk Assessment.

2-26-92: First sampling of soil in the biotreatment cell (600-800 cubic yards).

11-19-92: Confirmation sampling. Six samples were collected from each quadrant (24 total samples). Samples were composited in the lab such that two samples from each quadrant were analyzed using 8015m for diesel. Results are as follows:

NW 1-3:	770 ppm
NW 4-6:	460 ppm
NE 1-3:	400 ppm
NE 4-6:	540 ppm
SW 1-3:	1000 ppm
SW 4-6:	1100 ppm
SE 1-3:	330 ppm
SE 4-6:	1500 ppm

Benzene ?
B-H @ 44 - ND < 0.25 } left in place
B-H @ 45 - ND < 0.005
S-B @ 44 - TPH = 35,000 ppm

Planned use of treated soil is for use as fill in a low area as follows: existing clean soil to be removed and treated soil placed down (no more than 8 to 10 inches deep). Then approx. 600 cys of clean soil will be placed on top followed by 6 inches of roadbase and 3 inches of asphalt.

Approved for closure by LOP Support Group on 1-12-93

2-5-93, 4 45pm - approved for closure by Patricia Hannon, SARWQCB
Clark Taylor - 683-2211

Andy Crowder, Geraghty & Miller, was onsite to collect 24 confirmation samples. 16 samples will be collected from 4 quadrants. The ~~same~~ samples from each quadrant will be ~~Comb~~ Composited such that 2 samples will be analyzed for each quadrant. The lab will do the compositing. Results should be ready in about 2 weeks at which time they will submit a summary report & request for closure. Clark requested that, if possible, we ok the closure before the end of the year for budgeting purposes. I told him I didn't ~~Free~~ foresee any problems as long as the sample results are as expected.

Quad. are divided as NE, NW, SE, SW.

RE: Site #91-094, Las Plumas Lumber

Dear Mrs. Jones,

I am enclosing the test results from our November 9th soil samples. The numbers continue to trend down averaging 763 Mg/Kg for this sampling.

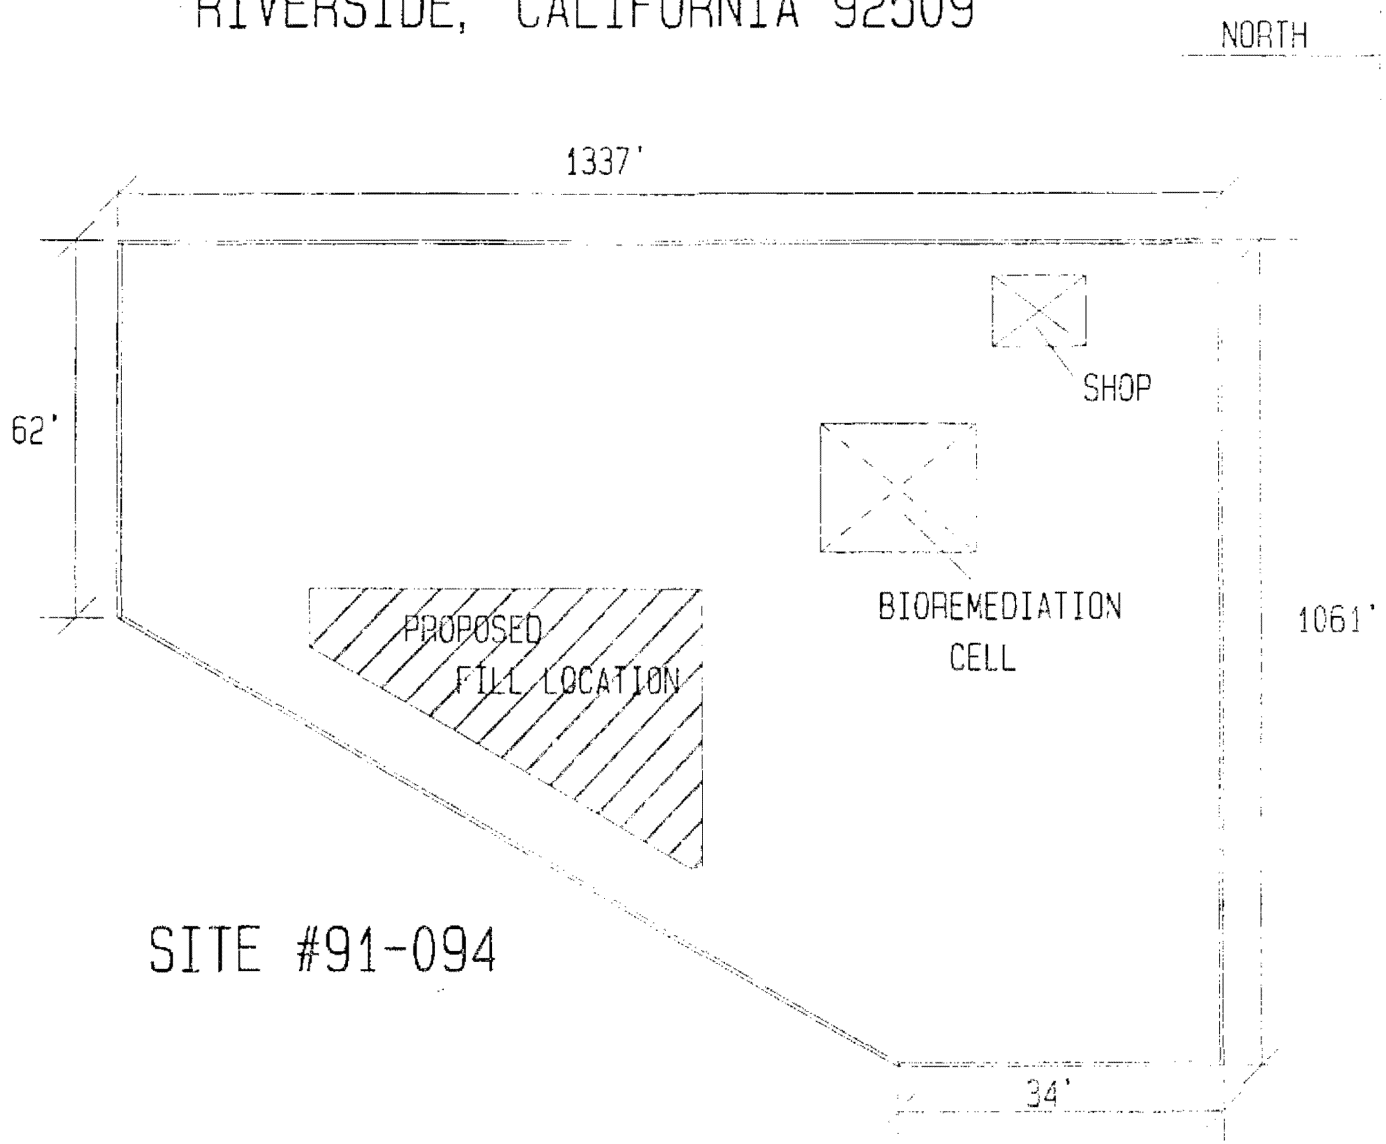

As we discussed at your visit to the site, I am going to use the approximately 600 cubic yards of soil to fill and regrade on our site (see attached drawing). The soil will be no more than 8"-10" deep when spread on a one to one and 1/2 acre area. The area will be compacted and base added as needed, then paved with a 3" asphalt aggregate. This will insure that the material will be contained on site, with no danger of leaching to groundwater which is at 150+ feet below ground level. The risk assessment we presented in June of 1991 should address any questions of exposure to, or migration of, diesel contaminants. It is also reasonable to conclude that the biological activity will continue after the soil is moved to its permanent location.

I would appreciate your prompt attention to this matter, as it would be advantageous to complete the project in this calendar year. If you need any further information please contact myself or Mr. Richard Wilkerson of Geraghty & Miller.

Thank You,

Clark D. Taylor

Met w/ Clark Taylor. Clark showed me the treatment cells & explained the sampling & treatment that's been occurring. He also showed me where they want to place the soil. They plan on removing existing soil then placing the 600 cy of treated soil + 600 ± yds of clean soil & then laying down ~6" of road base & 3" of asphalt. The soil is at ~1000 ppm in all 4 quadrants & does not appear to be reducing significantly. They would like to close the site. I told him to send me copies of all the lab data (The file is lacking lab data) and that possibly when he samples in November we can do confirmation sampling. Clark said he would send me the lab data today or tomorrow.

GERAGHTY & MILLER

Dear Richard:

The results of the microbiological evaluation for the Las Plumas Lumber site are enclosed. This report is for Geraghty & Miller Project No. CA11206.

Four samples were received and were composited in the laboratory. The composited samples consisted of subsamples from the northeast and northwest quadrants and the southeast and southwest quadrants. There was an active microbial population in both composites. A significant percentage of the microbes have adapted to degrade diesel fuel. The pH of the samples is within the optimal range for bioremediation. Nutrients are present and available to the microbes.

The results indicate that bioremediation is still occurring at the Las Plumas site. If you have any questions, please give me a call.

Sincerely,

GERAGHTY & MILLER TREATABILITY LABORATORY
Microbiological Evaluation
Las Plumas Lumber Site

Introduction

A treatability study was conducted to evaluate soil samples collected from the Las Plumas Lumber site. The evaluation was conducted to determine the microbial population of the soil and the percentage of those microbes which are capable of using diesel fuel as a carbon source.

The objectives of the study were as follows: (1) determine the number of aerobic microbes present in representative soils, (2) determine the percentage of the microbes that have adapted to degrade selected diesel fuel, (3) determine if the environmental conditions (pH and moisture content) are conducive to support microbes, and (4) determine if soluble inorganic nutrients (ammonia and ortho-phosphate) are present in sufficient quantities for bioremediation of the contaminants.

The evaluation was conducted on samples composited from the northwest and northeast quadrants and also from the southwest and southeast quadrants.

The evaluation indicated that there are large microbial populations and a significant percentage of the population has adapted to using diesel fuel as a carbon source. Environmental conditions, pH and moisture were within the optimal range.

Methodology

Total heterotrophic aerobic microbes were determined using Standard Methods Procedures 9215 C (1989) spread plate procedure. The samples were serially diluted in a mineral nutrient buffer solution and 0.1 ml of the diluted sample plated in duplicate on Standard Plate Count (SPC) agar plates. The plates were incubated in the dark at ambient temperature. The number of Colony Forming Units (CFU) were determined after five days of incubation.

Heterotrophic aerobic microbes capable of degrading diesel fuel were determined using a modification of the above procedure. The samples were serially diluted in a mineral nutrient buffer solution and 0.1 ml of the diluted sample was plated in duplicate onto carbon-free Noble agar. The plates were incubated in the dark at ambient temperature in a desiccator containing diesel fuel vapors and the colony forming units were counted after fourteen days of incubation.

Soil respiration was determined using a Micro Oxymax respirometer. The procedure was based on recommendations suggested by the manufacturer. Approximately 100 grams of sample as received was placed in a closed chamber. The concentration of oxygen and carbon dioxide in the chamber headspace was measured every hour for 24 hours. The

difference in oxygen and carbon dioxide concentrations were graphed and may be correlated with the rate of respiration.

The soil pH was determined using U.S. Environmental Protection Agency (USEPA) SW846 Method 9045 (1986). The soil moisture was determined using Standard Methods procedure 2540 G (1989). The Total Petroleum Hydrocarbons were determined using a modified USEPA Method 418.1.

The soluble ammonia and ortho-phosphate concentrations were determined using an aliquot from the sample extract used to determine the pH. Ammonia was analyzed using Hach Inc. Method 380 which is based on USEPA Method 350.2 colorimetric procedure, nitrogen-ammonia nesslerization. The ortho-phosphate was analyzed using Hach Inc. method 490 which is based on USEPA Method 365.2 colorimetric ascorbic acid, single reagent.

Results & Discussion

Table 1 presents the results of the total heterotrophic microbial and diesel fuel degrading microbial plating studies. Total heterotrophic microbial population values ranged from 7.8 X 10^5 CFU/g to 1.4 X 10^6 CFU/g. Diesel fuel degrading microbial population values ranged from 4.8 X 10^5 CFU/g to 5.4 X 10^5 CFU/g. The results show that samples collected at the Las Plumas site harbor a microbial population capable of using diesel fuel as a carbon source.

Microbial population in environmental samples are variable and can range from less than 1 x 10^2 to greater than 1 x 10^9 CFU/g. Typical soil populations range from 1 x 10^4 to 1 x 10^6 CFU/g. These values are interpreted broadly as they are numbers associated with viable microbes that have been extracted from the soil and are capable of growing on a general nutrient medium. There is no medium capable of supporting microbial growth of all potential microorganisms indigenous to soil. Microbial spores, if present, require a period of acclimation before growth will commence. Therefore, these numbers should be interpreted as a population minimum with true microbial numbers potentially one to two orders of magnitude greater.

Table 2 presents the results of the environmental conditions analyses including TPH, pH, percent moisture, soluble ammonia and o-phosphate. The TPH values ranged from 760 to 2000 mg/kg. The soil pH ranged from 7.5 to 7.9. The soil pH is within the optimal range of 6 to 8 for microbial growth. Relatively neutral soil pH is important for the microbial population to maintain biological processes. The moisture content ranged from 34 to 44 percent of the soil holding capacity. The suggested moisture content for optimal growth is between 30 to 70 percent of the soil holding capacity. This range is important to maintain cellular turgidity, transport nutrients, and maintain biological processes. The soluble ammonia values ranged from 1.2 mg/kg to 1.5 mg/kg. The soluble ortho-phosphate values ranged from 1.7 mg/kg to 3.7 mg/kg. These ions are present and are available to the microbial population.

The 24 hour respirometer study results are shown in Figures 1 and 2. The respirometer measures changes in oxygen and carbon dioxide in an enclosed chamber. During microbial respiration, oxygen is consumed and carbon dioxide is produced. Respiration is occurring in both samples. The rate of respiration is higher in the northeast - northwest indicating more bioactivity.

Samples collected at the Las Plumas site indicate that the microbial population is active and capable of using the diesel fuel as a carbon source.

SITE NAME: Las Plumas Lumber **SITE NUMBER:** 91094

SITE ADDRESS: 6464 33rd St, Riverside

DATE: 10-6-92 **TIME:** 3:40 pm

CORRESPONDENCE: [ ] MEETING [X] TELEPHONE [ ] OTHER

COUNTY EMPLOYEE: C. Jones

CONTACT PERSON: Clark Taylor

ORGANIZATION: Las Plumas Lumber

PHONE NUMBER: 681-2211

SUBJECT: Site Progress

SUMMARY:

Clark said that they have been bio-remediating. Samples taken on 9-25-92 had following results: 1100 ppm for 3 samples, 700 ppm for 1 sample. They want to use it as fill material + cover over with asphalt. A Risk Assessment was previously prepared that indicated higher values could be left in place. He would like me to come visit the site. He doesn't think they will get much below these concentrations + would like to close the site if possible.

Set up meeting for Thurs. Oct 15, 8:00 am.

RE: Las Plumas Lumber, 6464 33rd Street, Rubidoux, Calif.

Dear Mr. Taylor:

Effective immediately, I will no longer oversee the remediation of the above site. Christine Jones is now responsible for any questions and reports relating to the site or the program.

Should you have any further questions, please contact Ms. Jones or myself at (714) 358-5055.

Sincerely,

Doug Thompson
Hazardous Materials Specialist

Subject: Above-Ground Bioremediation
Treatment of Diesel-Affected Soil
Las Plumas Lumber
6464 33rd Street
Riverside, California

Dear Mr. Taylor:

Pursuant to your request, Geraghty & Miller, Inc., is providing this summary of laboratory and field activities conducted for the installation and operation of an above-ground biotreatment cell of diesel-affected soil at the subject site. The diesel-affected soil was the result of operation of a 10,000-gallon underground storage tank (UST) that previously contained diesel fuel No. 2. This tank and a 5,000-gallon tank that previously contained gasoline were removed from the site in January 1991. Analytical results for total petroleum hydrocarbons (TPH) by EPA Method 418.1 for soil samples beneath the diesel-UST ranged up to a maximum of 23,000 milligrams per kilogram (mg/kg). Based on these results, the County of Riverside - Environmental Health Department (EHD) requested that the diesel-affected soils should be remedied to meet the EHD action level of 100 mg/kg.

The scope of work conducted to meet the EHD remediation goal consisted of laboratory and field work that included a biologic treatability analysis, removal of the diesel-affected soil from the excavation, placement of this soil in an above-ground treatment cell, and a field test program. These activities are summarized below.

A biologic treatability study was conducted by Geraghty & Miller to evaluate if three soil samples collected from the diesel-affected soil area harbor a microbial population capable of using diesel fuel as a carbon source with the possibility of enhancing the population to remediate the source material. In summary, the total microbial plate count was high and the diesel fuel degrading microbe count was very high, comprising 65 to 93 percent of the total microbes. The soil pH was just above the optimal range of 6 to 8 and the soil moisture was low. Soluble nutrients were present at low levels and will be amended. These preliminary results indicated that the diesel-affected soil at the site could be a candidate for bioremediation.

Approximately 800 cubic yards of diesel-affected soil were removed in May 1991 from the UST excavation in an attempt to obtain site closure. This soil contained TPH levels ranging up to 35,000 mg/kg (EPA Method 8015 - diesel). Selected soil samples were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX) constituents. These constituents were not detected with the exception of toluene at 23 milligrams per kilogram in one sample. Organic vapor analyzer (OVA) readings obtained during the excavation process ranged from non-detect to 80 ppm. However, only two out of approximately 200 OVA readings registered above 80 ppm. These readings can be provided if requested. The diesel-affected soil was stockpiled on site and covered with plastic pending design and installation of the above-ground biotreatment cell.

Placement of the diesel-affected soil into the above-ground biotreatment cell was conducted by Petroleum Contracts, Inc., in June 1991, under the observation of Geraghty & Miller. The approximate location and design of the treatment cell are shown on Figures 1 and 2, respectively. During handling and placement of the diesel-affected soil, organic vapor readings were obtained using a photoionization detector (PID). These readings ranged from non-detect to a maximum of 330 ppm. Water was applied to the soil during installation. Following installation, the biotreatment cell was covered with plastic.

According to the South Coast Air Quality Management District (AQMD), above-ground bioremediation processes require a permit if the air emissions from the soil pile are measured at 50 ppm or greater using an OVA or PID. Because some of the second set of organic vapor readings recorded in June 1991 exceeded the AQMD action level of 50 ppm, Geraghty & Miller recommended that Las Plumas Lumber file a permit application with the AQMD.

To assess the extent of volatile emissions from the soil surface of the biotreatment cell, a field test program was conducted by Geraghty & Miller and Las Plumas Lumber in August 1991. For this a 25 x 25-foot area of the 125 x 135-foot full-size treatment cell was utilized. The field test program consisted of aerating the soil on two separate days using a tilling device. Organic vapor readings were collected using a PID. In addition, an air quality sample was collected in a canister on each test day in the area of the highest PID reading. The air quality samples were analyzed for TPH (diesel) and BTEX. On the first test day, PID readings ranged up to a maximum of 42 ppm. Following the addition of water, the maximum PID reading was 28 ppm with most of the readings ranging from non-detect to 16 ppm. The maximum readings on the second day prior to and following the addition of water were 30 and 16, ppm, respectively. The analytical results for TPH from the air samples were 12 ppm(v) on day one and 48 ppm(v) on day 2. Analytical results for BTEX were non-detect on both days with a detection limit of 1 ppm(v). The air quality laboratory reports are attached.

The air quality and field PID results from the field test program indicate that the above-ground treatment process of diesel-affected soil should remain below the AQMD action level.

In particular, benzene was not detected in soil or air samples. There may be, however, areas within the treatment cell that contain higher PID readings. Thus, it is recommended that field monitoring of organic vapor levels be continued during the treatment process, especially when the remainder of the treatment cell is aerated for the first time. Water will continue to be applied during the entire treatment process, thereby reducing any volatile emissions.

Should you have any questions regarding this letter, please call. The opportunity to be of service to Las Plumas Lumber is appreciated.

Respectfully submitted,

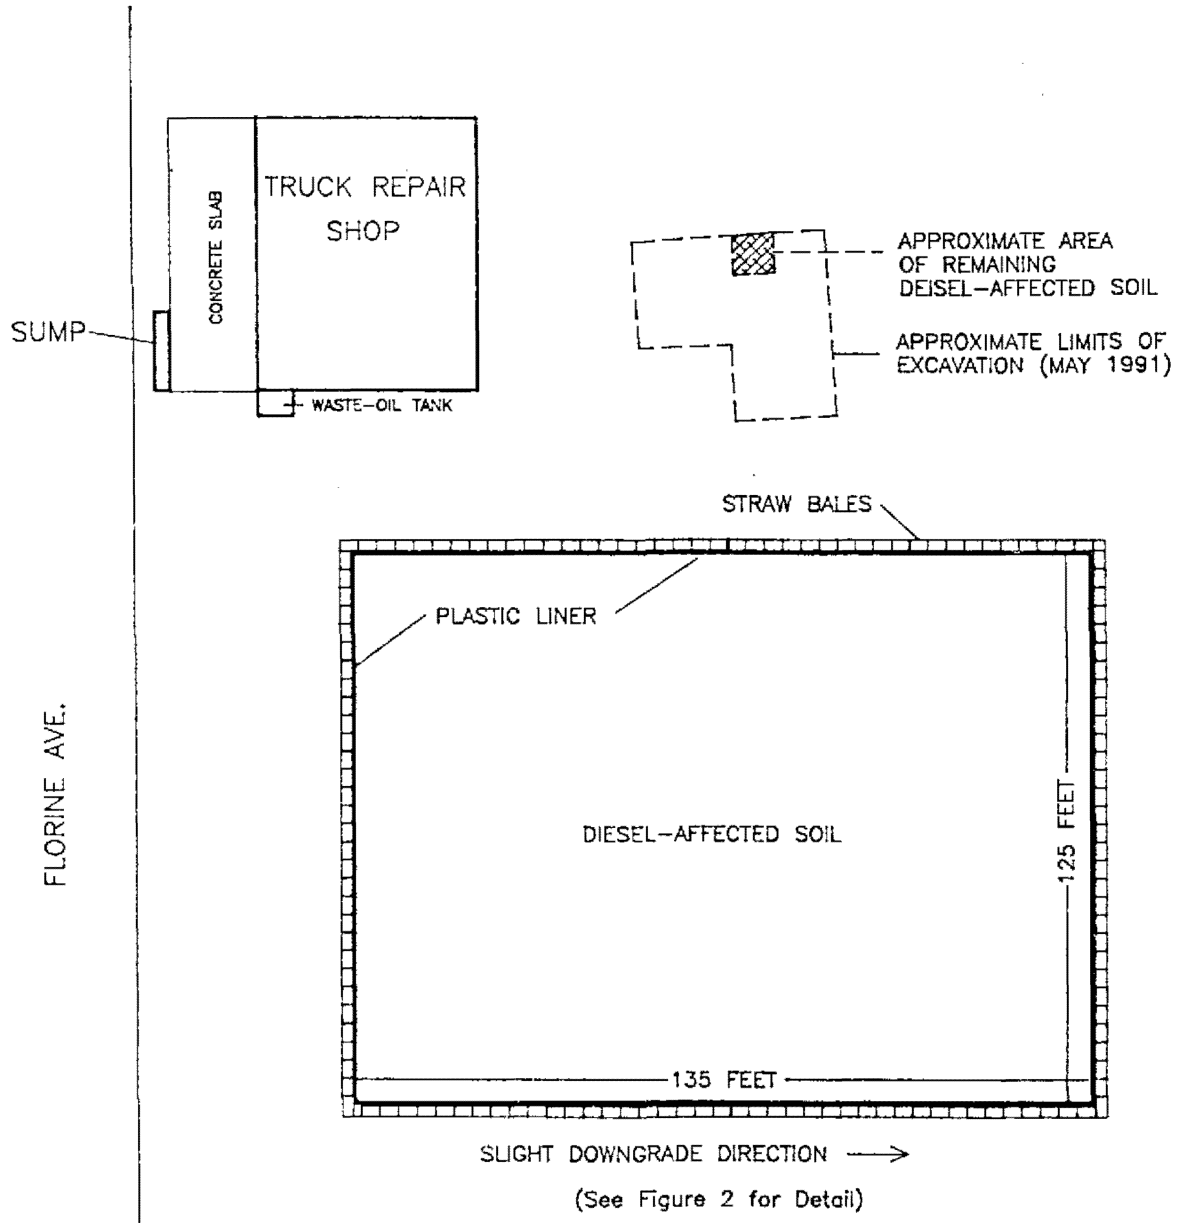

GERAGHTY & MILLER, INC.

APPENDIX
PPM(V) CALCULATION FORMULAS

The following condensed formula was used to calculate sample results in ppm(v).

$$\text{concentration ppm(v)} = \frac{(m)(10E3)(24.45)}{(V)(MW)}$$

where: m = mg of constituent detected in the air sample
v = volume in liters of sample injected
MW = molecular weight of constituent detected

The ppm(v) results are dependent on the molecular weight used in the above equation. To compare ppm(v) results that have different reference molecular weights the following relationship is used:

$$\text{ppm(v)} \propto 1/\text{MW}$$

Using this basic relationship the following equation can be derived:

$$\frac{ppm(v)a}{ppm(v)b} = \frac{MWb}{MWa}$$

The above equation can be used to compare the ppm(v) results of different constituents.

Notes:

1. Diesel fuel #1 was used as the TPH standard.

2. The molecular weight of $C_{16}H_{34}$, 226 g/mole was used in calculating the TPH result in ppm(v).

7-11-91 cont. reporting results & chain of custody, 3) Reporting info. for boring activities, 4) Estimate of volume of soil which is contaminated & still in-place.

7-22-91 10:30 Rec'd Clark Taylors call of earlier today. Clark wanted to make sure I rec'd latest addendum to Risk Assessment. I have rec'd it, & will get to it later this week.

8-6-91 9:00 Clark Taylor called to tell me that they will be backfilling tank pit starting Tomorrow (8-7-91). He thinks it will take ~ 3 days to complete. He also asked about letter in response to Risk Assessment Report. I checked file and I wrote a letter dated 7-30-91. I will fax it to him since he hasn't rec'd it yet.

10-28-91 [redacted] 3115 Clark called to say information I requested in letter dated Oct 22 '91 is in mail today. I guess they're still waiting to hear from AQMD before they can till bioremediating soil.

12-31-91 8:40 Clark Taylor called to ask about my charges which he will incur. I didn't give him any estimates He also said he's going to start disking bioremed. soil onsite next week. He will send me letter. AQMD permit still in air - once AQMD person receives it, they will cancel need for permit.

6-17-91 10:35 Ret'd Clark Taylor's call. He was asking about risk assessment that I was expecting. I told him that I'm concerned w/ G.W. contamination most importantly. W/ such a limited amt. of cont. soil, the risk doesn't seem that great w/ GW @ 160' BGS. They will, however, have to figure the 100 ppm soil which they plan to backfill with (bioremediated soil) the excavation with.

6-19-91 9:00 Ret'd Mike Bowery's call of Monday, he wanted to check up on my requirements of Risk Assessment. He also will forward plans for bioremediation of cont. soil. He + Clark will be splitting duties.

6-25-91 3:15 Clark called me to tell me that they are setting up remediation for Wed - Fri of this week. He'll get specifics of design this week.

7-9-91 2:15 Clark Taylor called to see that I rec'd Risk Assessment Report. I have. He also wanted to let me know that bio-remediation on hold for right now. I guess volatiles > 50 ppm + so they have pile covered. They are looking into AQMD permitting. The bio is occurring now, but the problem is digging it up + volatiles being emitted then. Clark should know in 2 weeks what they're going to be able to do.

7-11-91 11:15 Finished reviewing report (Risk Assessment) + called Clark Taylor to see if he can provide a few minor things to me: 1) Boring log, 2) copy of laboratory

91-094 Las Plumas

5-7,8,9-91 Excavation dug down to ~44' BGS. See field notes.

5-15-91 8:00 Clark Taylor - wants to drill on Fri. I told him he'll need a work plan. Have Mike Bowery call me.

8:15 Mike Bowery - will try to have wp to me thurs. a.m. for drilling on Fri.

2:45 Clark left message that drilling on Fri off. Will reschedule for next Wed (the 22nd) am.

5-23-91 On-site for drilling

6-3-91 11:20 Clark called to verbally pass along results: ND @ 46' & 49' BGS. which is 2-5' below where they excavated to. He wanted to know his next step - I told him to have Mike Bowery do a risk assessment. He is also planning to give me a work plan for bio-rem. on excavated soil.

6-4-91 10:45 Called Mike Bowery - talked about feasibility of risk assess. How I feel about it? - Not sure - I'm going to have to know how much soil they think is cont. down in hole. I personally don't think there's that much risk at leaving it there, but maybe a couple more borings are in order. Mike will talk w/ Clark & get back to me. I would also like to see lab data.

6-7-91 Mtg. @ Las Plumas w/ Mike Bowery & Bashar re: Risk Assessment. See field report

4-9-91 cont. with this number. He wants to get all together with Clark Taylor. Also run 8015 Mod. next time.

4-10-91 2:30 Clark Taylor called to schedule a meeting on Tues. April 16 @ 8:00 to talk about alternatives for remediation.

4-16-91 8:00 Meeting w/ Clark Taylor + Mike Bowery @ site. Discussed 100 ppm limit for TPH which I have specified. Mike didn't like this # + doesn't know basis for Riverside's decision to choose this #. Also, Mike is very against 418.1 analysis — He likes 8015 Mod better, even though 8015 M didn't match lab standards for this analysis. Anyway — we came to the conclusion that more digging is in order + more bottom samples will be run to see if we can get closer to 100 ppm. Clark will send a letter describing proposed digging + analysis and proposed date of work.

4-25-91 3:30 Mike Bowery called to get in touch. Thought we were still on for May 1. I told him we would need to re-schedule - evidently Clark didn't notify him.

4-25-91 4:20 Clark Taylor - schedule for dig on May 7 or 8. He will call Fri (tomorrow)

4-26-91 8:35 Clark called to set up digging on Tues. May 7 which is o.k. w/ my schedule. He also asked about bio-remediation techniques @ my opinion. He will try to get a proposal to set up bio-treatment area + move dirt directly there when excavated.

2-14-91 3:20 ret'd Clark Taylor's call of 2-13-91. Not in until 2/18/91
Clark Taylor 681-2211

2-20-91 2:45 Ret'd Clark Taylor's call of 9:43 am. He wanted to check-in w/ me & tell me what his consultant has verbally proposed. Consultant wants to excavate w/ backhoe to define vertical component of contamination & then come back w/ drill rig to define horizontal component. I told him to possibly consider digging w/ excavator to find horizontal extent; then he doesn't have to pay for rig, etc. I basically told him to be careful & ask questions. I also proposed the possibility of bioremediation for excavated soils. I told him to look into different options for remediating soil.

2-21-91 Clark called to schedule excavation for Tuesday March 5 at 8:00. I will be there sometime after this. Make sure Chain-of-Custody.

3-4-91 9:00 am Clark called to confirm apt. on Tues.

3-5-91 9:00 Sharon on-site for excavation see field notes.

4-3-91 2:00pm ret'd Clark Taylor's call of 11:45 am - His APCD permit expires on Friday. He's going to have his consultant extend the permit for 30 more days. He would still like to go in & dig soil out. He'll have PCI (consult.) submit another workplan to continue digging.

4-9-91 8:35 Mike Bowery of Geraghty & Miller (818) 965-4048 Ret'd his call of 4-8-91. Not in.
9:00 Ret'd my call - G.W. @ ~165' BGS. He wanted to know what #'s I was looking for. He wants to propose 1000 ppm as does LUFT - I told him I was not comfortable

* RPD (Relative Percent Difference) = (Sample Result - Duplicate Result) * 100/average result

APPENDIX
PPM(V) CALCULATION FORMULAS

The following condensed formula was used to calculate sample results in ppm(v).

$$\text{concentration ppm(v)} = \frac{(m)(10E3)(24.45)}{(V)(MW)}$$

where: m = mg of constituent detected in the air sample
v = volume in liters of sample injected
MW = molecular weight of constituent detected

The ppm(v) results are dependent on the molecular weight used in the above equation. To compare ppm(v) results that have different reference molecular weights the following relationship is used:

$$\text{ppm(v)} \propto 1/\text{MW}$$

Using this basic relationship the following equation can be derived:

$$\frac{ppm(v)a}{ppm(v)b} = \frac{MWb}{MWa}$$

The above equation can be used to compare the ppm(v) results of different constituents.

Notes:

1. Diesel fuel #1 was used as the TPH standard.

2. The molecular weight of $C_{16}H_{34}$, 226 g/mole was used in calculating the TPH results in ppm(v).

COUNTY EMPLOYEE: D. Thompson

CONTACT PERSON: Clark Taylor

ORGANIZATION: Las Plumas (RP)

PHONE NUMBER: 714 681 2211

SUBJECT: Quart Report.

SUMMARY:

Spoke with Mr Taylor about the 2nd quarterly report. Moisture analysis was <10%. He said that water has been doubled to 500 gal./day. He will send additional results after 10-5-92 on remediation process. He wants to talk about using the soil as road base in an area that will be covered by asphalt. What TPH ppm will the remediation be required before soil can be used as road base.

RE: Leaking Underground Storage Tank Site at
Las Plumas Lumber, 6464 33rd Street, Rubidoux, CA

Dear Mr. Taylor:

The purpose of this letter is to provide notification of your responsibility under the California Code of Regulations Title 23 Waters Section 2652 (d) to provide at a minimum, a quarterly status report to this department every three (3) months until site investigation and cleanup are complete. The owner or operator of a site shall submit to the local agency a quarterly status report detailing any investigative, remedial, or other action taken regarding the above referenced site.

The quarterly status reports should include at a minimum information listed on the sample quarterly status report enclosed with this letter. We request that you make copies of the enclosed sample report form for use each quarter. The quarterly status report shall be submitted within 15 days of the end of each quarter.

Quarter 1 - January thru March ..... Submit by April 15
Quarter 2 - April thru June ..... Submit by July 15
Quarter 3 - July thru September .... Submit by October 15
Quarter 4 - October thru December .. Submit by January 15

If status reports are currently being sent to our office, please continue to submit them according to the time schedule listed above. You may continue to use your existing format as long as the required information on the enclosed form is included.

Failure to provide quarterly status reports in a timely manner may cause the responsible party to be placed in a recalcitrant status due to non-compliance. Recalcitrant responsible parties are not eligible for California Leaking Underground Fuel Tank Clean-Up Funds and may be subject to enforcement action.

If you have any questions regarding the quarterly status reporting requirements, you may telephone me at (714) 358-5055.

Sincerely,

Doug Thompson

Re: Bioremediation Project

Dear Sharon,

We were unable to aerate the soil during much of February and March due to the rain. Since the last week of March we have been able to turn the soil twice weekly. We will continue or increase this frequency until completion.

Our most recent soil tests, taken April 6, 1992, ranged from a low of 71MG/KG to a high of 1800 MG/KG. This is a significant decrease from last years starting point. We are very encouraged and hope to complete the project this summer. We will be sampling again in early May and will report the results by mid month.

Thank you,

Clark D. Taylor
General Manager

Dear Sharon,

Our application for the AQMD Permit to operate a bio-remediation cell has been returned. No permit is required since our OVA readings are so low.

Due to the recent rains we have not started the aeration of the soil. We will proceed as soon as the material dries sufficiently.

Thank you,

Clark D. Taylor

Dear Ms. Boltinghouse,

This is to notify you of the current status of our tank removal project. Our application to the SCAQMD was returned for additional information and fees. We have corrected it and resubmitted. However, I have discussed the application with Mr. John Eyee in engineering at AQMD and he has stated we will not need a permit due to the low OVA readings during our testing. He will return the application as soon as it reaches him so we can proceed.

Hopefully, we will be actively working the bioremediation pile by the first of the year.

Thank you,

Clark D. Taylor

Dear Mr. Taylor:

This office has received and accepted the Risk Assessment for the Underground Storage Tanks Excavation and the Transmittal of Supplemental Data for the Risk Assessment (Geraghty & Miller, Inc., July 2 and July 17, 1991). According to these reports, there is approximately 10 to 20 cubic yards of contaminated soil located approximately 40 feet below ground surface which remains in-place. Assuming that this is the only contaminated soil located in the subsurface of your site which is related to the tank pit area, we feel that the tank pit area has been satisfactorily remediated and will require no further remedial action.

The Environmental Health Department, Hazardous Materials Branch anticipates effective soil remediation of the excavated soil in a timely manner. Please keep us notified as to the progress of the bioremediation activities on-site.

If you have any questions, please call me at (714) 358-5055.

Sincerely,

Sharon Boltinghouse

Subject: Transmittal of Supplemental Data
Risk Assessment for Underground Storage Tank Excavation
Las Plumas Lumber
6464 33rd Street
Riverside, California

Dear Ms. Boltinghouse:

Based on your request to Mr. Clark Taylor of Las Plumas Lumber, Geraghty & Miller, Inc., is pleased to provide supplemental data in support of the risk assessment for closure of an underground storage tank excavation at the subject site. This supplemental data consists of laboratory analytical reports, the boring log for soil boring B-H, and an estimate of the volume of diesel-affected soil remaining in the excavation. The laboratory reports and boring log are provided in Attachments A and B, respectively.

A conservative estimate of the volume of diesel-affected soil remaining in the excavation is approximately 10 to 20 cubic yards. This volume is small in comparison to the 700 cubic yards of diesel-affected soil removed from the excavation. This estimate is based on visual observation of diesel-stained soil in the excavation during the excavation process and the locations and analytical results of the soil samples obtained during excavation. These results indicated that diesel-affected soil was present only on the floor of the northwest corner of the excavation. Soil samples from angle boring B-H, drilled in a southerly direction beneath the northwest corner, indicated that the vertical extent of diesel-affected soil was 2 feet or less. Further discussion of this supplemental data is presented in the Risk Assessment for the Underground Storage Tanks Excavation at the Las Plumas Lumber Company, Riverside, California, dated June 1991.

Puente Hills Business Center, Suite 175 • 17800 Castleton Street • City of Industry, California 91748 • (818) 965-4048 • FAX (818) 964-3702

Please do not hesitate to call should you have any questions regarding this supplemental data. We trust your review of this data will result in closure of the underground storage tank excavation.

Respectfully submitted,

Project Manager: Michael Bowery

On May 10, 1991 Analytical Technologies, Inc. Mobile Laboratory received four soil samples for the above-mentioned project. The samples were analyzed with EPA methodology or equivalent methods as specified in the attached analytical schedule. The samples were analyzed in the mobile laboratory.

The results of these analyses and the quality control data are enclosed.

Enclosed with this letter is the report on the chemical and physical analyses on the samples from ANALYSIS NO: L-9114811-001/002 shown above.

The samples were received by CRL in a chilled state, intact and with the chain-of-custody record attached.

Note that ND() means not detected at the reporting limit expressed within the parentheses.

Solid samples are reported on "as received" basis.

Preliminary results were faxed to Mike Bowery on 5/30/91 at 2:10 p.m.

EXECUTIVE SUMMARY

Leaks in underground storage tanks at Las Plumas Lumber Co. in Riverside, California have resulted in past release of total petroleum hydrocarbons (TPH) including the aromatic hydrocarbons benzene, toluene, xylene, and ethylbenzene (BTXE). In the analysis of soil samples for BTXE compounds, benzene was not detected above the detection limit. However, to ensure protection of public health and the environment, benzene was included in the risk evaluation at a concentration of half the detection limit in accordance with the U.S. Environmental Protection Agency (USEPA) guidelines. Remediation activities have been conducted at the site including proper removal of the underground storage tanks and soils exhibiting high levels of contamination. After excavation, the pit was securely fenced. A risk assessment was prepared to determine if constituent concentrations remaining in the soil following remediation pose a risk to public health or the environment, thereby warranting additional remediation. Based on the following factors, it is determined that additional remediation is not necessary in the excavation site to protect public health or the environment and closure is warranted.

The facility is underlain by fine-textured soils and depth to ground water is approximately 165 feet. TPH are strongly sorbed to clays and organic matter in soils and have a very low potential for leaching. Computer simulations of leaching of the TPH and BTXE through the fine-textured soils provide evidence that the TPH and BTXE will not leach to the ground water. Using maximum detected concentrations and assuming a continuous source of TPH and BTXE (extreme overestimate), the maximum leaching depth was less than half the distance to the ground-water table. Thus, based on highly conservative modeling of leaching, neither the TPH nor the BTXE will leach to the ground water.

The only potential exposure pathway identified at the facility is exposure to subsurface soils at an excavated site in the future. Hypothetical dermal contact, ingestion, and vapor exposure of a worker at the excavation site at the facility was modeled. Potential exposure doses resulted in an excess lifetime cancer risk of 7×10^{-9} and a threshold (non-carcinogenic) hazard index of 0.0065. In accordance with the State of California Department of Health Services -

Toxic Substances Control Program (DHS-TSCP) risk characterization guidance document (DHS, 1990a), a total site cancer risk of 10^{-7} and total site threshold risk with a Hazard Index (HI) of less than 1.0 are deemed acceptable exposure levels. Exposure to constituents remaining in the subsurface soils of the excavation site are below the current established USEPA guidelines; therefore, leaving these concentrations in place would not pose a hazard to public health and environment.

Migration of the constituents is unlikely. The TPH and BTXE detected at the site are not highly bioaccumulated or magnified in food chains. Constituent concentrations remaining in the subsurface do not pose a hazard to the terrestrial or aquatic ecosystem.

Therefore, based on the low potential for transport, rapid degradation rates, and low toxicity to humans and the environment, the TPH and BTXE detected in the storage tanks area of the excavation site would not present a risk to humans or the environment if the constituents were left in place and the excavation site was backfilled. Further remediation of constituents at the site is not warranted. As a result, backfill and closure of the excavation site is warranted.

1.0 INTRODUCTION

Past activities at the Las Plumas Lumber Company in Riverside, California may have resulted in the release of diesel fuel hydrocarbons from the previously existing underground storage tanks. The underground storage tanks were used to fuel distribution trucks that carry lumber. Investigative activities have identified diesel fuel hydrocarbons (carbon range C7 to C22) in soil samples obtained from various soil depths underneath the previously existing underground storage tanks.

The underground storage tanks were cleaned and removed leaving an existing hole approximately 810 square feet and approximately 40 feet deep. The excavated hole is secured with perimeter fencing. Soil samples, collected at various depths beneath the base of excavation were analyzed for total petroleum hydrocarbons (TPH) and benzene, toluene, xylene, and ethylbenzene (BTXE) in accordance with the State of California Leaking Underground Fuel Tank Field Manual (LUFT, 1989).

1.1 OBJECTIVE

The purpose of this risk assessment is to evaluate whether the concentrations remaining in the soils at the former underground storage tanks area of the Las Plumas Lumber Co. facility pose a risk to public health or the environment. At the present time, there are constituents present in the subsurface soils. In order to present a risk to public health or the environment, it will be necessary to evaluate the potential for the remaining constituents to migrate to identified points of exposure. Information from this risk assessment will be used to determine if additional excavation is needed prior to closure of the excavation site.

This risk assessment was conducted in accordance with the underground storage tank regulations for tank closure [23 California Code of Regulations (CCR), Section 2672(d)(3)], the California Site Mitigation Decision Tree Document (DHS, 1986), and the LUFT manual (LUFT, 1989) prepared by the Department of Health Services (DHS) and State Water Resources Control

Board (SWRCB). Current and reasonably foreseeable future exposure was used to calculate total site cancer and non-cancer (threshold) risks. In accordance with the State of California Department of Health Services - Toxic Substances Control Program (DHS-TSCP) risk characterization guidance document (DHS, 1990a), a total site cancer risk of 10^{-7} and total site threshold risks with a Hazard Index (HI) of less than 1.0 are deemed acceptable exposure levels. The DHS-TSCP risk characterization guidelines are consistent with the U.S. Environmental Protection Agency's guidance document (USEPA, 1989a).

2.0 SITE CHARACTERIZATION

2.1 SITE DESCRIPTION

Las Plumas Lumber Co. is located off CA Route 60 on 33rd Street in Riverside, California (Figure 1). As part of their operations, they have maintained, on-site, a 10,000 gallon diesel and a 500 gallon unleaded underground storage tanks. These tanks were completely removed and the excavated soil stockpiled on-site ready for bioremediation. Constituents remaining in subsurface soils at the former underground storage tank area are the focus of this risk assessment.

The property of Las Plumas Lumber Co. covers approximately 21.5 acres. The area surrounding the lumber facility include many residential and commercial properties. Generally, the surrounding terrain is slightly rolling hills.

The potential for constituents in the subsurface soils to leach to ground water and possible effects on ground-water supplies were considered in this risk assessment. The well logs for the nearest irrigation water-supply well indicate that water is taken from a deep stratum. This well (State Well No. 25/5W 86) is located in the southeast corner of 30th and Florine Streets near the Las Plumas Lumber Co. facility (Figures 1 and 2). This well is no longer used for public water supply because it was found to have high nitrate levels. The well draws water from a depth of approximately 300 feet and is cased to that depth. The water table is approximately at 165 feet below land surface.

G.W. 165' BGS

Soils in the area of the Las Plumas Lumber Co. are generally of fine texture that tend to hold water. The soils below the surface, described during the construction of the state irrigation well 25/5W 86 and during recent excavation activities of the underground storage tanks, are gray and dark yellowish brown, very firm fine-textured soil. The soil uncovered

during recent site excavations was relatively impervious, allowing little seepage of water into the excavation. In addition, the drought in Southern California has resulted in minimal percolation of water into the ground.

2.2 HISTORY

Las Plumas Lumber Co. has been undertaking a state-lead closure. As part of the closure activities, the underground storage tanks were removed, and 1,200 cubic yards of the surrounding soil were excavated to a depth of approximately 40 feet. Soil samples were taken in 11 locations at the base of the excavation. Soil samples were obtained at a depth ranging from 19 to 50 feet. In addition, one soil boring was drilled at an angle of approximately 10 to 15 degrees from vertical, and TPH and BTXE analyses of soil samples were conducted. Soil sample locations were determined in the field by a County of Riverside-Environmental Health Services Division (EHSD) inspector. The locations were purposefully selected in order to determine the extent of constituents remaining in the soil.

The excavated tanks were in good condition, with no indication of leakage from the 500 gallon unleaded tank or the piping, and only minor leakage from the diesel fuel tank. The tanks were properly removed and the excavated pit securely fenced.

3.0 CONSTITUENT CHARACTERIZATION

Constituents detected at the former underground storage tanks area in the property of Las Plumas Co. include TPH and BTXE. In accordance with the LUFT manual, fuels have been adequately studied to justify limiting the analysis to TPH and BTXE. The sampling data are summarized in this section and the inherent characteristics as they relate to migration, persistence, and toxicity are discussed.

3.1 OCCURRENCE

The analytical data collected after excavation, in the March and May 1991 soil borings have been used to characterize the extent of past releases at the former underground storage tanks area of the Las Plumas Lumber Co. Figure 2 shows the locations of the soil samples. At the underground storage tank area, 11 samples were collected at the base of the excavation following removal of the underground tanks. These samples were labelled S-1 through S-11 (Figure 2).

Four additional soil samples were collected during the drilling of a soil boring at an angle of approximately 10 to 15 degrees from vertical. These samples were collected at soil depths 44, 45, 47, and 50 feet and were labeled B-H samples @ 44, 45, 47, and 50, respectively (Figure 2). Soil samples B-H @ 44 and 45 were analyzed for BTXE and samples B-H @ 47 and 50 for TPH.

The results of these analyses are presented in Tables 1 and 2. Table 1 represents the analytical results of TPH analysis in soil samples S1 through S11, B-H @ 47, and B-H @ 50. It also shows the arithmetic mean and the 95 percent upper confidence limit (UCL) on the arithmatic mean for all the samples using half the detection limits when the analysis results are below the detection limits. Table 2 shows the analytical results of BTXE analysis in soil samples B-H @ 44 and 45 obtained from the angle boring.

Organic constituents that were reported in soil samples S1 through S11, B-H @ 47, and B-H @ 50 were total petroleum hydrocarbons (C7 to C22) using USEPA test method 418.1. The maximum soil concentration of TPH was 35,000 mg/kg and the minimum was below the detection limit of 10 mg/kg (Table 1). Mean soil concentrations of TPH was 7,171 mg/kg and the 95 percent UCL was 12,600 mg/kg (Table 1).

Soil sample B-H @ 44 showed benzene below the detection limit and toluene, xylenes, and ethylbenzne at 4.6, 13, and 2.8 mg/kg, respectively (Table 2). Toluene was detected in soil sample B-H @ 45 at 0.023 mg/kg; benzene, xylenes and ethylbenzene were below the detection limits (Table 2).

Total petroleum hydrocarbons are the organic constituents that were detected most frequently and at the highest concentrations. These organic constituents are most representative of organic releases to the soils. However, as the most conservative assessment of potential health risks all constituents detected in the soil samples are assessed at maximum detected concentrations. Benzene, was included in the risk calculations at concentrations of half the detection limit as recommended by the USEPA guidelines.

3.2 APPLICABLE STANDARDS AND CRITERIA

Standards for the constituents detected in subsoil at the former underground storage tank area are those media-specific state or federal standards or criteria governing acceptable concentrations. There are no available state or federal standards applicable for soil. There are health-based soil criteria listed in the U.S. Environmental Protection Agency (USEPA) RCRA Facility Investigation Guidance Manual (USEPA, 1989b). There are also soil ingestion screening values for the State of California listed in the document: Interim Guidance for Preparation of a Preliminary Endangerment Assessment Report (DHS, 1990b). These soil screening values are listed in Tables 1 and 2, along with the concentrations detected in the soil samples. Maximum concentrations of the constituents that were detected in soil samples did not exceed the soil screening values. All the constituents reported in the soil samples will be

assessed in the following sections to ensure a highly conservative approach that is highly protective of public health and the environment. In this way, it is unlikely that potential risks at the former underground storage tank area of Las Plumas Lumber Co. were under-estimated.

3.3 PHYSICAL AND CHEMICAL PROPERTIES AFFECTING FATE AND TRANSPORT

The fate and transport of chemical constituents are affected by their physical and chemical properties. Table 3 lists some of these properties for the following constituents: TPH (C7 to C22), benzene, toluene, xylenes and ethylbenzene.

The physical and chemical properties considered in this report include: water solubility, specific gravity, vapor pressure, Henry's Law Constant, organic carbon distribution coefficient (K_{OC}), octanol-water partition coefficient (K_{OW}), fish bioconcentration factor, and soil half-life. Water solubility is the maximum or saturated concentration of a chemical in pure water at a specific temperature. Specific gravity is the ratio of the density of a chemical to the density of water. Vapor pressure is a property of a chemical in its pure state and is an important indication of the volatility of a chemical. Henry's Law Constant is the air/water partition coefficient of a chemical which relates its concentration in the gas phase to its concentration in the water phase. Henry's Law Constant can be used to calculate the rate of evaporation of a chemical from water. K_{OC} is a measure of the tendency for organic chemicals to be adsorbed by soil and sediment; K_{OW} is a measure of the distribution of a chemical, at equilibrium, between octanol and water. The fish bioconcentration factor (BCF) is a measure of the tendency for a chemical in water to concentrate in fish tissue. The half-life (T 1/2) is the time required for the concentration of a chemical to be reduced by a factor of two.

The relative significance of each fate and transport mechanism for constituents is summarized in Table 4. Fate and transport mechanisms are discussed for each of the constituents.

3.3.1 Total Petroleum Hydrocarbons (TPH)

The TPH detected in soil samples collected at the excavation site were of straight-chain hydrocarbons (alkenes and alkanes) ranging in length from C7 to C22. These hydrocarbons originated from traces of diesel fuel number 2.

The C7 and C22 hydrocarbons are relatively insoluble in water (solubility 1.0 mg/L at 20°C [Verschueren, 1983]) and are less volatile than the aromatic hydrocarbons (i.e., BTXE). The C7 to C22 hydrocarbons have a lower density than water, therefore, when present as a separate phase, they will tend to float. Because of their very low water solubility, the C7 to C22 hydrocarbons are usually not transported in water, but are rather transported as a separate phase. Adsorption to soils and organic matter retards the transport of C7 to C22 hydrocarbons, limiting the potential for leaching or transport in the ground water.

Biodegradation of C7 to C22 hydrocarbons is a major removal process from the soil. The bacteria degrading there hydrocarbons exist in large numbers at the excavation site as shown by the microbial enumeration experiments conducted by the Geraghty & Miller, Inc. Treatability Laboratory. The microbial enumeration data from the treatability studies conducted in soil samples collected from the excavated soil at Las Plumas Lumber Co. showed total heterotrophic microbe population in the range of 3.4×10^6 to 14×10^6 per gram of dry soil. Most of these microbes were diesel (C7 to C22 hydrocarbons) degrading with microbial populations ranging from 2.2×10^6 to 13×10^6 per gram dry soil.

TPH is easily biodegradable (American Petroleum Institute, 1989; Kostecki and Calabrese, 1989; Kotecki, et al., 1989; 1990; 1991). The half-life values reported in the literature for various TPH compounds vary significantly ranging from as low as 7 days to as much as 23 days. (Block et al., 1990).

3.3.2 BTXE

Analysis of gasoline components is represented by benzene, toluene, xylenes, and ethylbenzene (BTXE) because: 1) they are readily adaptable to gas chromatographic detection; 2) they pose a threat to human health; 3) they have the potential to move through soil and reach ground water; and 4) their vapors are flammable (LUFT, 1989). In the following sections the fate and transport of BTXE are discussed.

3.3.2.1 Benzene

Volatilization is the major transport process of benzene from soil to the ambient air where photo-oxidative destruction in the troposphere is relatively rapid and complete (USEPA, 1985); the half-life of benzene in the atmosphere range from 2.4 to 50 hours (Darnall, et al., 1976). Degradation of benzene by microorganisms has been reported under both aerobic and anaerobic conditions, although anaerobic biodegradation is somewhat slower (Wilson, et al., 1986).

Benzene was not detected in soil samples analyzed. However, to ensure a conservative risk assessment and protection of human health and the environment, benzene at half the detection limit is assumed for the risk assessment in accordance with the USEPA guidance.

3.3.2.2 Toluene

Sorption of toluene to soil and particulate matter is an important fate process, but to a lesser extent than ethylbenzene and TPH (Table 4). The extent to which adsorption to subsurface clay and organic material may interfere with volatilization is unknown. Toluene is known to be degraded by microorganisms in water and soil systems (Claus and Walker, 1964). It can be detoxified and excreted by mammals (USEPA, 1985).

Volatilization is the major route of removal of toluene from surface soil and atmospheric reactions of toluene is the main fate process (USEPA, 1979). Photooxidation of toluene in the atmosphere produces benzaldehyde. Subsequent precipitation or dry deposition can deposit toluene and its oxidation products into soil and water systems. Hydrolysis of toluene in soil water are deemed not important (Table 4).

3.3.2.3 Xylenes

Volatilization is the dominant transport mechanism for xylenes from surface soils. Xylenes released to soils will ultimately partition into the atmosphere. The major transformation process in the atmosphere is photooxidation by hydroxyl radicals (Jori et al., 1986). Hydrolysis of xylenes in the soil water environment are not substantial (Table 4). Sorption is more important in soils and sediments with high organic matter content. Xylenes biodegrade in both soil and water (Davis et al., 1968; Gibson et al., 1974).

3.3.2.4 Ethylbenzene

Volatilization from surface soil is the primary transport mechanism of ethylbenzene; in the atmosphere, it undergoes photochemical degradation by hydroxyl radicals with a half-life ranging from 0.5 hour to 2 days (Howard, 1989). Ethylbenzene may also be sorbed by organic matter as indicated by its relatively high organic carbon partition coefficient (Table 3). However no specific environmental sorption studies were found in the reviewed literature to establish sorption quantitatively.

Some species of bacteria in the soil are capable of biodegrading ethylbenzene. The biodegradation mechanisms is the hydroxylation of the aromatic ring to 2,3-dihydroxy-1-ethylbenzene (Gibson, et al., 1973).

3.4 TOXICITY ASSESSMENT

Inherent toxicological properties of the constituents are addressed in this section. A distinction is made between carcinogenic and non-carcinogenic effects, and two general criteria are used to describe risk: excess lifetime cancer risk (for constituents which are thought to be potential human carcinogens) and the hazard quotient (HQ) (for all constituents). For potential carcinogens, the current regulatory guidelines use an extremely conservative approach in which it is assumed that any level of exposure to a carcinogen could hypothetically cause cancer. This is contrary to the traditional approach to toxic chemicals, in which finite thresholds are said to exist, below which the toxic effect will not occur. This traditional approach is still applied to non-carcinogenic chemicals. Because of these differing approaches to calculating risk, the risks associated with carcinogenic effects are generally much higher than those associated with non-carcinogenic effects.

3.4.1 Carcinogenic Effects

Cancer is thought to be the end result of a multistage process in which a large number of biological and environmental factors interact, simultaneously or in sequence, to disrupt normal cell growth and division. The first stage, called initiation, involves the creation of errors in the genetic coding. Because the effects of initiation are thought to occur at the molecular level, current regulatory policy assumes that there is no finite dose below which the initiation effect cannot occur. In other words, at any dose there is some finite probability associated with the occurrence of the initiation event.

Once a cell is initiated, many other processes affect the development of cancer; any one of these processes can also block the development of cancer. Therefore, the frequency of cancer occurrence is very low in comparison to the hypothetical frequency of initiation events. Further, many chemicals which are classified as "carcinogens" probably do not actually initiate cancer, but rather act at a later stage on cells which were already initiated. Although these chemicals are treated as if one molecule could cause significant damage, this almost certainly is not true.

Identification of constituents which are included in the carcinogen category is based on a USEPA classification scheme in which chemicals are systematically evaluated for their ability to cause cancer in mammalian species, and conclusions are reached about the potential to cause cancer in humans. The USEPA classification scheme contains six categories based on the weight of available evidence: A (human carcinogen); B1 (probable human carcinogen -- limited evidence in humans); B2 (probable human carcinogen -- inadequate evidence in humans); C (possible human carcinogen); D (inadequate evidence to classify); and E (no evidence of carcinogenicity). Categories A, B1, B2, and C are included in this assessment as potential human carcinogens.

Much of the USEPA's evaluation is based on laboratory animal studies. In order to limit the number of animals required for testing, very high doses of chemicals are used in laboratory studies. For chemicals which seem to cause or increase cancer, the results of these high-dose animal studies are extrapolated to the low-dose human exposure situation using mathematical models which do not depict biological reality.

A variety of mathematical models are available for extrapolating from high to low doses; however, the USEPA currently favors a linearized multistage model which provides a 95 percent upper-bound estimate of cancer incidence at a given dose. The slope of the extrapolated curve, called the cancer slope factor, is used to calculate the probability of cancer associated with an exposure dose. The probability of developing cancer as a result of exposure to constituents associated with the facility is called the excess lifetime cancer risk and is the product of the exposure dose and cancer slope factor. Excess lifetime cancer risk is expressed in terms of the predicted number of cancer cases occurring above background incidence per number of individuals exposed (i.e., one in a million or 1×10^{-6}).

The excess lifetime cancer risk is an estimate of the increased risk of cancer which results from exposure to constituents associated with this site. The risk values calculated are an indication of the increased risk, above that applying to the general population. The actual cancer risk is unknown and could be anywhere between zero (no risk of cancer) and the value that is

provided, but it is not likely to exceed the estimate derived in this risk assessment. Excess lifetime cancer risk can be summed across routes of exposure and constituents. However, for this site, no carcinogen was detected above the detection limit; benzene, a carcinogen, was detected below the detection limit. Half the detection limit was used for benzene in the risk calculations in compliance with the regulatory guidelines.

An excess lifetime cancer risk of greater than 10^{-4} is generally considered unacceptable. Excess lifetime cancer risks in the range of 10^{-4} to 10^{-6} are potentially acceptable (50 FR 219). The state of California Department of Health has identified an excess lifetime cancer risk of less than 10^{-7} as acceptable (DHS, 1990a). A range of 10^{-4} to 10^{-6} is the common USEPA target for remediation activities.

3.4.2 Non-Carcinogenic Effects

A finite dose (threshold), below which adverse effects will not occur, is believed to exist for non-carcinogenic effects. These include birth defects, organ damage, death, and many other health impacts. A single compound might elicit several adverse effects depending on the dose, the route and the duration of exposure. For a given chemical, the dose which elicits no effect when evaluating the most sensitive response (the adverse effect which occurs at the lowest dose) in the most sensitive species is used to establish an acceptable dose for non-carcinogenic effects. Acceptable doses which are sanctioned by the USEPA, are called verified reference doses (RfDs) (Integrated Risk Information [IRIS], 1991). It is the most sensitive response in the most sensitive species which is the determinant of whether exposure is acceptable.

The potential for non-cancer effects is evaluated using the ratio of the exposure dose and acceptable dose or reference dose; this ratio is termed the hazard quotient (HQ) for individual constituents and hazard index (HI) for the sum total risk for all non-carcinogenic risks. An HQ greater than one is an indication that exposure is too high; it means that, for a given constituent, exposure exceeds acceptable levels for protection against non-cancer effects. Although an HQ of less than one suggests that non-cancer health effects would not occur, many agencies prefer

that the HQ be less than 0.2; this preference is based on the realization that people may be exposed to these same constituents from sources unrelated to a specific site.

3.4.3 Toxicity Summary

A brief summary of the potential health effects of the constituents of concern considered in this report is provided in Table 5. Discussions of the primary health effects of the constituents are provided below.

3.4.3.1 TPH

TPH detected at the site were C7 to C22 hydrocarbons. Very little toxicity data exist for the C7 to C22 hydrocarbons. These compounds are not believed to be carcinogenic or mutagenic. Skin and eye irritation, dermatitis, CNS depression, and chemical pneumonia can result from high-dose exposures (Sittig, 1985). Klaassen et al., (1986) found that oral exposure to petroleum hydrocarbon distillates can cause irritation of the mucous membranes, vomiting, and depression of the CNS. In general, toxicity is correlated with the number of carbon atoms. Toxicity generally increases with carbon number of up to C8 and then declines (USEPA, 1985). Threshold limit values designed to protect workers from inhalation exposures have been established at 1,450 and 1,050 mg/m^3 for octane and nonane, respectively (American Conference of Governmental Industrial Hygienists [ACGIH], 1989). However, n-hexane was used to represent TPH in this risk assessment in an effort to present the reasonable worst-case exposure scenario. The hydrocarbon n-hexane is a short-chain petroleum hydrocarbon which is more toxic than longer-chain petroleum hydrocarbons.

There is considerable evidence that inhalation of n-hexane is neurotoxic to humans (IRIS, 1991). The basis of this neurotoxicity is from occupational studies where workers were exposed to n-hexane alone. Clinical neurological examinations of motor and sensory systems, cranial nerves, reflexes, coordination, and gait showed that neurophysiological abnormalities involving motor nerve conduction are present. Long-term exposure to n-hexane primarily causes

sensorimotor polyneuropathy, although cranial neuropathy, blurred vision, and abnormal color vision are also possible. Subchronic inhalation exposure studies with laboratory mice (strain B6C3F1) showed no effect on survival; however, decreases in body weight, olfactory lesions, and some swelling in the tibial nerve were all evident.

The basis for neurotoxic action is the biotransformation of n-hexane to 2-hexanol and further to 2,5-hexanediol by cytochrome P-450 mixed function oxidases. 2,5-Hexanediol may be oxidized to 2,5-hexadione, the major metabolite of n-hexane in humans (Klaassen et al., 1986).

3.4.3.2 BTXE

Exposure to BTXE may occur through ingestion, dermal contact, and inhalation of vapors. Central nervous system (CNS) effects (dizziness, exhilaration, headache, staggering, loss of balance, etc.) are associated with acute exposure to the BTXE. These symptoms disappear after exposure stops. Chronic exposure to toluene vapors has been reported to cause cerebral and cerebellar dysfunction as well as liver and kidney changes in humans. Long-term (chronic) exposure to benzene may affect normal blood production, resulting in marked decreases in the various cells of the circulating blood. In addition, there are human data indicating that benzene is toxic to the body's natural defense system (immune system), increasing the chance for infections and impairing defence against tumors (USEPA, 1985). Leukemia has been reported in workers exposed to high levels of benzene over a longer period of time. Benzene is classified as a human carcinogen (Class A) by the USEPA.

3.4.4 Toxicity Values

The TPH data evaluated in this assessment were obtained using USEPA test method 418.1. The parameter of petroleum hydrocarbons detected is defined by the test method used. Method 418.1 quantifies aliphatic hydrocarbons as TPHs.

TPH from diesel fuel consists primarily of straight-chain hydrocarbons (alkenes and alkanes) ranging in length from C10 to C23. Carbon chain lengths of C16 and C17 predominate in the mixture; those TPH compositions approximate a bell-shaped curve with C16 and C17 as the mean. Diesel fuel may also contain some aromatic constituents (depending on the source and refining process), including benzene. But these are minor components usually accounting for less than 0.1 percent of the total product (LUFT, 1989).

Toxicity values are not available for straight-chain hydrocarbons. As a result, it is proposed that n-hexane, a comparatively toxic, short-chain (C-6) hydrocarbon, be used as a surrogate compound to represent all aliphatic hydrocarbons (an overestimation of TPH-associated risks).

In general, cancer slope factors (SFs), carcinogenicity classifications and reference dose (RfDs) (separated by exposure route) were taken from either USEPA's Health Effects Assessment Summary Tables (1990) or the Integrated Risk Information System (IRIS) (an EPA-approved computer data base). Three routes of exposure were considered: dermal (skin), inhalation, and ingestion. Whenever possible, route-specific values were used. Because acceptable levels for dermal exposure are virtually never available, oral values are used in their place. When inhalation values were not available, oral values were substituted in their place, unless compound-specific information clearly indicates that this would have been inappropriate. RfDs, cancer classifications, and SFs for constituents detected in the soils at the former underground storage tanks area in the property of Las Plumas Co. are listed in Table 6.

4.0 EXPOSURE CHARACTERIZATION

The risks associated with exposure to constituents detected at the excavation site are a function of the inherent toxicity (hazard) of the constituents and the exposure dose. In order for risk to exist, there must be the potential for a receptor to be exposed to released chemicals. Exposure can only occur if there is a source of chemical release, a mechanism of transport to an exposure point, and a population in contact with the exposure point. This section addresses the potential for exposure to constituents remaining in the subsurface soils after excavation at the former underground storage tank site, Las Plumas Lumber Co., Riverside, California.

4.1 RELEASE/SOURCE ANALYSIS

Elevated constituent concentrations remaining at the former underground storage tanks site are located in the subsurface soils. The original source of these constituents (underground storage tanks) have been removed as have the initially identified contaminated soils (approximately 1,200 yd^3).

In general, volatilization may result in the release of organics from the subsurface soils in the long-term. However, the rate and magnitude of release are not expected to result in detectable concentrations in the ambient air at the site because of low vapor pressures and low Henry's Law Constants for the TPH, toluene, xylenes, and ethylbenzene detected above the detection limits in soil at the excavation base (Table 3).

Other than excavation of soils and short-term exposure to the constituents in the soils at the excavation site, the only other possible pathway of migration for the constituents in the subsurface soils is leaching to the ground water. The following sub-sections address the potential leaching of constituents from soil to ground water at the site. A vadose zone contaminant transport model (Van Genuchten and Alves, 1982) is used to predict possible leaching of constituents from soil to ground water. In addition, the soil contamination risk

appraisal model for the protection of ground water (i.e. Risk on a Disk Model) was also used to further determine possible leaching of constituents to ground water in accordance with the California LUFT Manual (LUFT, 1989).

4.1.1 Transport Mechanisms

Chemicals are transported through soil principally by three mechanisms: 1) mass flow of dissolved chemical within moving soil solution; 2) liquid diffusion within soil solution; and 3) gaseous diffusion within soil air-filled voids. The first mechanism, mass flow, refers to the passive transport of dissolved solute within moving soil water. For a first approximation, the solute within an arbitrary volume element of moving soil water is assumed to be uniformly distributed, and hence the mass flux of chemical is given by the product of the volume flux of water times the dissolved solute concentration expressed in units of mass of solute per volume of water. Liquid diffusion refers to the transport of the dissolved solutes by diffusion in response to molecular-scale collisions. The effect of large numbers of these collisions is to move dissolved solutes from regions of higher solute density to lower solute density; thus, the diffusion flux is proportional to the density or concentration gradient. The coefficient of proportionality between the diffusion flux and the concentration gradient is called the liquid diffusion coefficient. Chemical vapor molecules within the soil air spaces also undergo molecular collisions and spread out by vapor diffusion. As in the case of liquid diffusion, the flux of vapor molecules is proportional to the density or concentration gradient. The coefficient of proportionality is called the vapor diffusion coefficient.

4.1.1.1 Vadose Zone Solute Transport Model

Constituent migration from the former underground storage tanks area was evaluated using an analytical solution of the vadose zone transport model (Van Genuchten and Alves, 1982). This model allows for designation of a single average water velocity along a vertical flow path. The application of the model for the former underground storage tanks site incorporated the following assumptions:

1. No constituent is present in the soil prior to input from the source;

2. The input concentration at the surface is continuous and constant as C_o;

3. A semi-infinite soil depth is assumed with a zero concentration gradient at the bottom, i.e., $(\partial/\partial X)\ C\ (\infty,t) = 0$, where X is the soil depth, t is the time span and ∞ denotes infinite soil depth; and

4. Homogeneous and isotropic soil conditions exist through the soil depth.

As water from rain percolates through the soil containing organic compounds in the unsaturated zone, the water is assumed to mobilize and transport the compounds downward toward the saturated zone and ground water. The model here estimates the concentration of each organic compound in the leachate migrating through the unsaturated zone at a specified soil depth.

Basically, this model assumes that the organic chemicals are in a dynamic equilibrium between the water phase and the soil phase in the unsaturated zone. The distribution coefficients (K_ds) for the constituents detected at the site (Table 8) control the water and the soil phases. Depending on site-specific and chemical-specific values, the concentration of an organic constituent in the aqueous leachate generally declines as soil depth increases. Thus, the concentration in the leachate depends on the relative relationships of the mass and characteristics of the constituent present, the characteristics of the vadose zone, and the infiltration rate.

An important factor controlling the potential release of constituents from soil to ground water at the former underground storage tanks site is the rate at which infiltration occurs through the soil. The average annual infiltration is estimated as follows:

$$INF = P - ET - DR$$

where:

INF = Infiltration and recharge (inch/yr);

P = Precipitation (inch/yr);

ET = Evapotranspiration (inch/yr); and

DR = Direct surface runoff (inch/yr).

Precipitation in the form of rainfall is estimated to average 4.37 inches/yr, which is the level recorded at the Riverside Citrus Experimental Station located in close proximity to the Las Plumas Lumber Co. facility (NOAA, 1990). Evapotranspiration in the area commonly exceeds 50 percent. Evapotranspiration for the area is approximately 1.46 inches/yr assuming a conservative value of 33 percent of potential evapotranspiration. The average annual runoff for the area is estimated at zero at a conservative value.

The infiltration or surface recharge is calculated by solving the above equation using the estimated conservative values for the water budget in the area, as follows:

$$
\begin{aligned}
q &= INF = P - ET - DR \\
&= P - 1/3\ P - 0 \\
&= 2/3\ P \\
&= 2/3\ (4.37) = 2.91 \text{ inches/year} \\
&= 0.02 \text{ cm/day}
\end{aligned}
$$

The vadose zone solute transport model is a one-dimensional model which calculates the position of chemical fronts as they descend through the vadose zone. The volumetric water flux is assumed to be steady and constant. The assumption of steady and constant water flux is an overestimation of constituent transport and leads to conservative risk evaluation to ensure protection of public health and the environment.

In reality this flux is intermittent and will be mitigated by increased runoff and evapotranspiration. This model is used for assessing concentrations of chemicals with different retardation factors. The resulting concentrations at soil depth (X) can be used to evaluate

exposure and any additive health effects. The vadose zone solute transport model components are shown in Appendix A. Some model input parameters were estimated and listed in Table 7. Other parameters were calculated.

It is known that an organic compound in solution would be subject to attack by microorganisms indigenous to the soil-water system and the solubilized compound would disappear after approximately 10 half-lifes. An estimate of time (t) in the vadose zone transport model is considered to represent the longest half-life of a constituent among all constituents detected in media at the site multiplied by a safety factor of 10 to ensure ground-water protection. The upper range half-life values for the constituents were used to ensure the conservative evaluation of the transport processes. The largest half-life was 56 days for xylenes. Accordingly, t is calculated to be 560 days.

Adsorption can bind constituents to the solid phase and retard transport. Adsorption of dissolved organic compounds is often controlled by the amount of organic material in the solid phases. The distribution coefficient (K_d) is typically used to quantify the tendency of an organic species to partition between the liquid and solid phase. The retarding effect on the velocity of the plume's center of mass relative to the average velocity of water is represented by:

$$R_f = 1 + (B/f)\ (K_d);\ K_d = (f_{oc})\ (K_{oc})$$

where:

B = bulk density (Table 7);

f = volumetric water content or effective porosity (Table 7);

R_f = retardation coefficient (the ratio of the water velocity to the chemical velocity);

f_{oc} = fraction of organic carbon (a conservative value of 0.005 is assumed); and

K_{oc} = organic carbon partition coefficient (values obtained from Table 3).

Chemical reactions and biologically-mediated reactions can transform the species in the soil. This phenomenon is known as degradation. The result of degradation is the decrease of the concentration of chemicals. The degradation rate coefficient for each constituent was calculated from:

$$k = \ln 2/T_{1/2} = 0.693/T_{1/2}$$

where:

k = degradation rate constant (day^{-1}); and

$T_{1/2}$ = constituent half-life (day); obtained from Table 3.

As listed below, the constituent concentrations used in the model were the maximum concentrations detected in soil samples for TPH and BTXE and half the detection limit was used for the non-detectable benzene:

TPH	35,000 mg/kg
Benzene	0.125 mg/kg
Toluene	4.6 mg/kg
Xylene	13 mg/kg
Ethylbenzene	2.8 mg/kg

Use of the maximum detected concentration for TPH and BTXE (half the detection limit for the non-detectable benzene) is a worst-case assumption that is likely to overestimate the level of leaching. Actual magnitude of leaching is probably less, but would not be greater than the levels estimated by this simulation.

4.1.1.2 Model Results

The results of the solute transport model are presented in Table 8. Graphical representations of these data for TPH and BTXE are shown in Figures 3 and 4, respectively. The constituent concentrations were estimated at the following soil depths: 44, 74, 104, 134, and

164 feet; i.e., 30 feet increments starting from the base of the excavation pit at 44 feet. The model results show predicted concentrations for each constituent at the five soil depths. The estimated concentrations from the vadose zone solute transport model showed decreased values with soil depths. Table 8 and Figure 3 show that TPH concentrations in soil solution decreased from 986 mg/L at 44 feet below land surface to essentially zero at 104 feet below land surface. Concentrations of BTXE compounds also decreased to essentially zero at 104 feet below land surface (Table 8 and Figure 4). Model results shows that the remobilization of TPH and BTXE compounds would not reach a depth of 104 feet below land surface at any case. The ground water in the area is at approximately 165 feet below land surface. Figures 3 and 4 and Table 8 show that constituents would not reach this depth.

In the vadose zone solute transport model, the input concentration of each constituent was assumed to be the maximum concentration in soils (as listed in the previous section) and to be continuous and constant. This appraisal is the most conservative one and represents a "worst-case" scenario, and as such is evaluated in the risk assessment. Yet, the migration front of all constituents did not move beyond 104 feet below land surface. Under the most conservative conditions which assume enhanced solute migration, the solute migration fronts for the constituents do not travel more than 104 feet.

The solute transport model discussed herein is hypothetical and the estimated migration of constituents from the underground storage tanks area is subject to the inherent variations associated with numerous model input parameters. The objective of this analysis, however, is to evaluate potential migration of identified constituents from soil to ground water. In this regard, the conservative model assumptions discussed previously have been applied to evaluate potential impact to the ground water. As shown in Table 8 and in Figures 3 and 4, the estimated concentrations of all constituents in water are zeros at approximately 104 feet below land surface. This implies that the identified constituents in soil would be depleted, when mobilized, prior to reaching the ground water.

The constituents detected in subsurface soils at the former underground storage tanks area on the property of Las Plumas Lumber Co. are not expected to leach beyond 104 feet below land surface based on worst-case assumptions. Ground water beneath the facility is approximately at 165 feet below land surface. Therefore, concentrations of constituents detected in the subsurface soils would not migrate to the ground water and they pose no threat to existing or future potable wells that might be located in the vicinity of the former underground storage tanks area.

4.1.2 Soil Contamination Risk Appraisal Model

This model was obtained from State (California) Water Resources Control Board. It is a computer program version of the Leaking Underground Fuel Tank (LUFT) field manual's general risk appraisal. The model evaluates the risk to ground water from soil contaminated with fuel.

The model calculations are based on soil concentrations of a constituent which could produce concentrations in the ground water equivalent to its specified water-quality limit. The revised water-quality limits used were: DHS, Sanitary Engineering Branch, drinking water supply action level of 100 ppb (parts per billion) of toluene; and federal Maximum Contaminant Level (MCL) regulatory thresholds of 1.0 ppb of benzene, 1,750 ppb of xylene, and 680 ppb of ethylbenzene. (See Section 6444.5, Article 5.5, Division 4, Title 22 CCR.)

The model runs for BTXE compounds at maximum detected concentrations are shown in Appendix B. The model recommends: no remediation for BTXE-affected soil; cleanup levels of 100, 80, 40, and 40 mg/kg for benzene, toluene, xylenes, and ethylbenzene, respectively; and an acceptable level of 1,000 mg/kg for BTXE compounds (Appendix B). As a result, the maximum concentrations of BTXE remaining in the soil do not pose a risk to ground water.

4.2 EXPOSURE PATHWAY ANALYSIS

Current land use at the site and surrounding area is primarily residential and commercial. Foreseeable future land use is not expected to change from the residential/commercial applications. There is no evidence that the constituents that had been released to the subsurface soils at the facility have migrated beyond the property boundaries.

The irrigation well (state well No. 25/5W 86) located in the proximity of the underground storage tank area (Figure 1) is the closest point of exposure to the ground water. The potential source of contamination, the underground storage tanks were properly removed and the affected soil excavated. As discussed in the previous section, based on a computer simulation of leaching through the vadose zone, the maximum concentrations of TPH and BTXE detected in the subsurface soils would not leach into the ground water beneath the site. There is no potential for TPH and BTXE detected in the soils to be transported to the ground water. Thus, there is no potential for exposure via the ground water.

The most highly contaminated soil detected in the underground storage tanks area has been removed. Based on the soil sampling data some constituents are remaining at the site in the subsurface soils. Given the relatively low concentrations remaining, the release of TPH and BTXE from the subsurface soils to the surface is expected to be relatively low.

The most probable pathway of exposure to the constituents in the subsurface soils is associated with a worker at an excavation site. Excavation to install new utility lines, repair old lines, or any construction activity that would result in an excavation pit in the area where constituents were detected in the subsurface soils could result in exposure of the worker. Most excavation work is of relatively short duration, 30 days or less. Reported half-lives for TPH and BTXE in soils exposed to the atmosphere are only a few days (Howard et al., 1991). Therefore, exposure of a worker to constituents detected in the subsurface soils for 30 days or less is the most probable yet conservative exposure scenario. There are no other identifiable pathways of exposure to constituents detected at the excavated site.

4.3 EXPOSURE DOSE CALCULATIONS

Exposure Doses (ExDs) are average daily intakes resulting from exposure to constituents at a site. ExDs for the excavated site were calculated for the constituents detected using standard conservative assumptions (USEPA, 1988; 1989c and 1990) and professional judgement. As dictated by standard methodology, cancer effect doses were averaged over a lifetime and non-cancer effect doses were averaged over the exposure period.

4.3.1 Ground Water

The potential for current or future exposure to ground water downgradient of the excavated site was assessed. A simulation of leaching of the constituents detected in the soils was conducted to estimate a concentration in the ground water. Assuming there are no vertical conduits beneath the underground storage tank area, the simulation indicates that the constituents will not reach the ground water. Therefore, in the absence of constituents in the ground water there is no potential for exposure to the constituents via the ground water.

4.3.2 Soils

Based on the past remediation activities at the underground storage tank area in the facility of Las Plumas Lumber Co., surficial soils that had been impacted have been removed and piled on-site with a secure plastic cover awaiting bioremediation. There are no current pathways of exposure to the subsurface soils; the excavated pit is securely fenced. Assessed exposure doses are for future exposure to the soils at an excavation site.

Standard assumptions used in the soil exposure scenario are as follows:

1) Dermal absorption factor of 0.25 for TPH and BTXE;

2) Absorption matrix factor of 0.15 (Hawley, 1985);

3) Contact rate with soil of 1.45 mg/cm^2/day (USEPA, 1988);

4) Pore gas velocity of 1.63 x 10^{-5} meters per second (Hwang and Falco, 1986);

5) Inhalation of vapors; and

6) Average lifetime is 75 years (27,375 days) (USEPA, 1989c).

The equation used to calculate soil exposure doses is shown in Table 9.

Assuming the site continues to be used as a commercial property in the foreseeable future, exposure to subsurface soils would most likely be limited to excavation workers. Exposure dose calculations and risks for future excavation worker exposure are based on the following assumptions:

1) Body weight of 70 kg (USEPA, 1989c);

2) Breathing rate of 2.1 m^3/hour (USEPA, 1989c);

3) Exposure duration of 8 hours/day;

4) Exposure period of 30 days (5 days/week for 6 weeks of construction);

5) Incidental soil ingestion rate of 100 mg/day (USEPA, 1988); and

6) Exposed skin surface area of 2,940 cm^2 (adult wearing a short-sleeved open-necked shirt, pants and shoes with no gloves or hat (USEPA, 1989c).

The hypothetical future soil ExDs for an excavation worker are shown in Table 10.

5.0 RISK CHARACTERIZATION

This section evaluates the risk to public health for the exposure scenarios described in the previous section, and outlines the uncertainties in the risk assessment process.

5.1 PUBLIC HEALTH RISK

As described in Sections 3.4.1 and 3.4.2, public health risks are evaluated separately for carcinogenic and non-carcinogenic effects. Risks presented below are believed to be conservative estimates (i.e., overestimates) of actual site risks.

5.1.1 Ground Water

Assuming there are no vertical conduits beneath the underground storage tank area, ground water does not present current or future risks at the Las Plumas Lumber Co. facility because the constituents will not leach into the ground water. Therefore, the ground water is not a medium of potential exposure and there are no risks associated with ground water.

5.1.2 Soils

Excess lifetime cancer risks and hazard quotients for exposure of an excavation worker to the constituents detected in the subsurface soils is listed in Table 10. Among the chemicals of concern in the subsurface soil, benzene is the only potentially carcinogenic compound, and the excess lifetime cancer risk is 7.15×10^{-9}. This risk level is below the USEPA acceptable value of 10^{-6} and potentially acceptable range of 10^{-4} to 10^{-6}. It is also below the California Department of Health acceptable guideline of 10^{-7}. The sum total of the HQ, termed the hazard indices (HI) is 0.00649, which is well below the acceptable guideline of 1.00. Potential future exposure of an excavation worker at the facility to constituent remaining in the subsurface soils would be below guidelines for acceptable exposure.

There are no identifiable pathways of exposure at the former underground storage tank area that would result in risk levels above the USEPA guidelines for levels protective of public health. Concentrations of constituents detected at the former underground storage tank area at Las Plumas Lumber Co. do not pose a significant risk to public health.

5.2 ENVIRONMENTAL RISKS

Las Plumas Lumber Co. is a facility located in an area of commercial and residential development. As such, the site and surrounding area do not support a complex terrestrial ecosystem. The local land use is not expected to change in the foreseeable future. Constituents detected in the soil are not highly bioaccumulated. They are efficiently metabolized by most organisms. In addition, constituents detected in the soil do not migrate through the subsurface soil to ground water or surface water. Therefore, biomagnification or foodchain exposure is not a hazard. The detected concentrations in the subsurface soils are not expected to result in significant exposures to terrestrial organisms.

Migration of the constituents to an aquatic ecosystem is unlikely. The constituents are not expected to leach to the ground water. The constituents are not expected to reach any aquatic system, therefore, there is no risk to aquatic organisms.

5.3 UNCERTAINTIES IN THE RISK ASSESSMENT

The procedures and inputs used to assess potential human health risks in this and similar evaluations are subject to a wide variety of uncertainties. In general, there are four main sources of uncertainty:

- Sampling and analysis;
- Fate and transport estimation;

- o Exposure estimation; and
- o Toxicological data and dose-response extrapolations.

Uncertainty associated with sampling and analysis include the inherent uncertainty in the analysis, representativeness of the samples, sampling errors, and heterogeneity of the sample matrix. While the quality assurance/quality control programs used in the investigations serve to reduce these uncertainties, they cannot eliminate all errors associated with sampling and analysis. This assessment also made simplifying assumptions about the environmental fate and transport of constituents.

The estimation of exposure required numerous assumptions to describe potential exposure situations. There are a number of uncertainties regarding the likelihood of exposure, frequency of contact with affected media, the constituent concentrations at exposure points, and the duration of exposure. These tend to simplify actual site conditions. Hypothetical reasonable worst-case exposure assumptions were used so that potential approximation of uncertainties are on the side of safety.

The toxicity values and other toxicologic (health effects) information used in this report are associated with significant uncertainty. Most health effects information has been developed using laboratory animals exposed to high doses. Although species differences in absorption, distribution, metabolism, excretion, and target organ sensitivity are well documented, available data are not sufficient to allow compensation for these differences.

There is also considerable uncertainty associated with the toxicity of mixtures. For the most part, data about the toxicity of chemical mixtures are unavailable. Rather, toxicity studies are generally performed using a single chemical. Chemicals present in a mixture can interact to yield a new chemical or one chemical can interfere with the absorption, distribution, metabolism, or excretion of another. Chemicals may also act by the same mechanism at the same target organ or can act completely independently. This risk assessment assumes that

toxicity is additive; the excess lifetime cancer risks and HQs were each summed across chemicals. This assumes that the mixture of chemicals present in the soils has neither synergistic nor antagonistic interactions.

This risk assessment used specific assumptions and standardized values. The major assumptions used in this assessment are:

- Constituent concentrations remain constant over the exposure period;
- Exposure remains constant over time;
- Exposed populations remain constant over the exposure period; and
- Risks are additive.

Because of the conservative assumptions used in the exposure scenarios and the built-in conservatism of the toxicity values, this risk assessment is believed to provide an overestimate of the risks which may be associated with exposure to constituents in soils at the excavated site.

6.0 FINDINGS AND CONCLUSIONS

1. TPH and BTXE except benzene were detected above the detection limits in samples of soil collected from the area of former underground storage tanks. Soils containing high concentrations of TPH or BTXE (approximately 1,200 yd^3) were excavated.

2. Current and foreseeable future land use in the vicinity of the Las Plumas Lumber Co. is commercial and residential.

3. The closest ground-water exposure point is the state well No. 25/5W 86 located in the proximity of the lumber facility.

4. The facility is underlain by approximately 165 feet of fine textured soils. These soils separate the constituents detected in the soils from the potential potable aquifer.

5. Simulations were run of the potential leaching of the maximum concentrations of the constituents detected in the soils. No constituents leached into the ground water. The concentrations detected in the soils are too low to result in ground-water contamination based on the characteristics of the constituents and the hydrogeologic characteristics of the area. In addition, using the computer model of the LUFT manual's general risk appraisal has shown that the maximum concentrations of BTXE compounds remaining in the soil do not pose a risk to ground water.

6. Potential future human exposure to the constituents at the site is limited to exposure to the subsurface soils at a hypothetical excavation site.

7. Calculated excess lifetime cancer risk for the excavation worker is 7.15×10^{-9}, well below the USEPA acceptable guideline of 10^{-6} and the State of California DHS acceptable guideline of 10^{-7}.

8. The hazard index (HI)(non-cancer risks) for exposure to constituents detected in the soils was 0.00649 which is well below the USEPA and California DHS acceptable guideline of 1.0.

9. Exposure to constituents detected at the facility would result in risk levels below acceptable guidelines defined for protection of public health.

LPTBLSW.128

Table 5. Toxicity Summaries for Potential Constituents of Concern, Former Underground Storage Tanks Area, Las Plumas Lumber Co., Riverside, California

Constituent	Acute Toxicity Summary	Chronic Toxicity Summary	Carcinogenic Potential	Other Effects
TPH	Skin and eye irritation, CNS depression, and chemical pneumonia.	Very little data available. May cause dermatitis with prolonged exposure.	No evidence.	No evidence of mutagenic or reproductive effects.
Benzene	Primarily CNS effects, such as: dizziness, exhilaration, nausea, vomiting, headache, staggering, los of balance, narcosis, coma, and death. Effects are rapidly reversible and concentration-dependent. Oral LD_{50} (rats) of 3,800 mg/kg.	Hematological poison causing aplastic anemia, immune system depression, and susceptibility to tuberclosis and pneumonia. Terminal event in severe benzene toxicity is often acute overwhelming infection.	Benzene has produced both solid tumors and leukemia in rats orally dosed. Epidemiologic evidence of increased cancer incidence following inhalation exposure.	Low levels of benzene do not elicit CNS effects no matter how long the exposure.
Toluene	CNS effects such as: fatigue, weakness, confusion, euphoria, dizziness, headache, insomnia, muscular weakness, and incoordination. Oral LD_{50} (rats) 5,000 mg/kg.	Chronic exposure to vapors at 200 to 800 ppm is associated with disturbances in memory, thinking, psycho-motor skills, visual accuracy, and sensorimotor skills. Cerebral and cerebellar dysfunction reported in chronic abusers of toluene, as well as hepatic and renal function changes.	No evidence in carcinogenicity.	Not genotoxic in various assays by many investigators. No reports of teratoneic effects.
Xylenes	CNS disturbances and irritation of mucous membranes. Oral LD_{50} (rats) of about 1,800 mg/kg.	Chronic inhalation exposure of rats at 3,500 mg/m^3 resulted in slight renal tubular degeneration. Xylenes are not teratogenic but have caused fetotoxicity in rats and mice.	Oral NTP study in rats, while not finalized, xylenes do not appear to be carcinogenic in rats.	Mutagenic in the Ames test or other short-term in vitro assays.
Ethyl-benzene	No effects in humans at inhalation concentrations of 100 ppm. Exposure to higher levels caused sleepiness, fatigue, headache, and mild eye and respiratory irritation. Oral LD_{50} (rats) of 3,500 mg/kg.	Increased liver and kidney weights and cloudiness and swelling of hepatocytes and renal tubular epithelium of rats orally dosed for six months.	No data available yet from NCI bioassay.	Not mutagenic in assays using Salmonella typhimurium and Saccharomyces cereyisiae.

CNS - Central nervous system.
LD_{50} - Lethal dose killing 50 percent of the population.

Table 6. Reference Doses (RfDs), Cancer Slope Factors (SFs), and Cancer Classifications for Potential Constituents of Concern, Former Underground Storage Tanks Area, Las Plumas Lumber Co., Riverside, California.

Constituent	RfD[a] (mg/kg/day)		SF[b] (mg/kg/day)$^{-1}$		EPA Cancer Classification
	Oral	Inhalation	Oral	Inhalation	
TPH	0.6[d]	0.057[d]	--	--	D
Benzene	0.0007[b]	(0.0007)	0.029[c]	0.029[c]	A
Toluene	0.2[c]	0.57[a]	--	--	D
Xylenes	2.0[c]	0.09[a]	--	--	D
Ethylbenzene	0.1[c]	(0.1)	--	--	D

Data in parenthesis indicate inhalation value; when inhalation value is not available oral value was used.

a - Health Effects Assessment Summary Tables (USEPA, 1990).
b - ATSDR Toxicological Profile.
c - IRIS (1991).
d - Values are for n-hexane; n-hexane is used as a surrogate for TPH.
NA - Not applicable.

Table 7. Input Parameters for Vadose Zone Solute Transport Model, Former Underground Storage Tanks Area, Las Plumas Lumber Co., Riverside, California

Parameter[a]	Value[b] (Unit)	Reference
Volumetric flux per unit area (q)[c]	0.02 (cm/day)	Site-specific value
Bulk density (B)	1.4 (g/cm^3)	Morris and Johnson (1967); Baes and Sharp (1983)
Fraction of organic carbon (f_{oc})	0.005 (unitless)	Lyman, et al (1982)
Volumetric water content (f)	0.3 (unitless)	Donigian, et al (1983)
Dispersion coefficient (D)	0.01 cm^2/s	Kirda, et al (1973; Scheidigger (1974)

a - Other parameters used in the transport model are described in the text.
b - These values represent mean conservative estimates for fine-textured materials.
c - Note that 1 (gallon per day per square foot) = 4.07 (cm/day).
cm/day - centimeters per day.
cm^2/s - square centimeters per second.
m - meters.

LPTBLS.128

Table 8. Predicted Concentrations (mg/L) of TPH and BTXE in Water at Various Soil Depths (Results of Vadose Zone Solute Transport Model), Former Underground Storage Tanks Area, Las Plumas Lumber Co., Riverside, California

Constituent	C_s (mg/kg)	K_d (ml/g)	Depth from Soil Surface (feet)				
			44	74	104	134	164
TPH	35,000	35.5	986	11	0.000318	1.24E-11	5.31E-22
Benzene	0.125	0.5	0.25	0.001987	7.23E-19	7.24E-51	1.28E-99
Toluene	4.6	1.5	3.1	0.532115	0.001154	1.03E-08	2.94E-16
Xylenes	13	1.0	13	2.09	0.002531	6.74E-09	3.07E-17
Ethylbenzene	2.8	5.5	0.51	0.113816	0.001589	6.42E-07	6.18E-12

Cs - Maximum detected concentrations in subsurface soil.
K_d - Distribution coefficient; K_d was calculated by multiplying the K_{oc} values in Table 3 by 0.005 assuming 0.5% soil organic matter.

LPTBLS.128

Table 9. Soil Exposure Dose (SExD) Equation and Example Calculation. Former Underground Storage Tanks Area, Las Plumas Lumber Co., Riverside, California

---

Equation Definition

$$SExD_o = \frac{C_s \times (SSA \times DA \times DAF \times SMF + IR \times SMF) \times EP}{BW \times AP \times UC1}$$

$$SExD_I = \frac{C_s \times BR \times ED \times H \times PGV \times UC2 \times UC3 \times EP}{BW \times K_d \times W \times AP \times UC4}$$

$$HQ = \frac{SExD_o}{RfD_o} + \frac{SExD_I}{RfD_I}$$

$$CR = SExD_o \times SF_o + SExD_I \times SF_I$$

where:

AP	Averaging period (27,375 days/lifetime [75 years] for carcinogens, exposure period for threshold effects) (USEPA, 1989c).
BR	Breathing rate (2.1 m^3/hr) (USEPA, 1989c).
BW	Body weight (70 kg) (USEPA, 1989c).
CR	Cancer risk.
C_s	Soil concentration (mg/kg).
DA	Dust adherence (1.45 mg/cm^2-day) (USEPA, 1988).
DAF	Dermal absorption factor (0.25 for TPH and BTXE) (USEPA, 1988).
ED	Exposure duration (8 hrs/day).
EP	Exposure period (30 days/lifetime).
H	Henry's Law Constant (atm-m^3/mol) (see Table 3).
HQ	Hazard quotient.
IR	Ingestion rate (100 mg/day) (USEPA, 1988).
K_d	Partition coefficient (cm^3/g) K_{oc} in Table 3 multiplied by 0.005.
PGV	Pore gas velocity (1.63 x 10^{-5} m/sec) (Hwang and Falco, 1986).
SF_o	Cancer slope factor; oral $(mg/kg/day)^{-1}$ (see Table 6).
SF_I	Cancer slope factor; inhalation $(mg/kg/day)^{-1}$ (see Table 6).
RfD_I	Reference dose; inhalation (mg/kg/day) (see Table 6).
RfD_o	Reference dose; oral (mg/kg/day) (see Table 6).
$SExD_I$	Soil exposure dose-inhalation (mg/kg/day).
$SExD_o$	Soil exposure dose-oral and dermal (mg/kg/day).
SMF	Soil matrix factor (0.15) (Hawley, 1985).
SSA	Skin surface area exposed (2,940 cm^2 [short-sleeved open-necked shirt, pants and shoes with no hat or gloves] USEPA, 1989c).
UC1	Unit conversion 1 (10^6 mg/kg).
UC2	Unit conversion 2 (41 mol/atm-m^3) (Hwang and Falco, 1986).
UC3	Unit conversion 3 (10^6 cm^3/m^3).
UC4	Unit conversion 4 (10^3 g/kg).
W	Wind speed (1.0 m/sec).

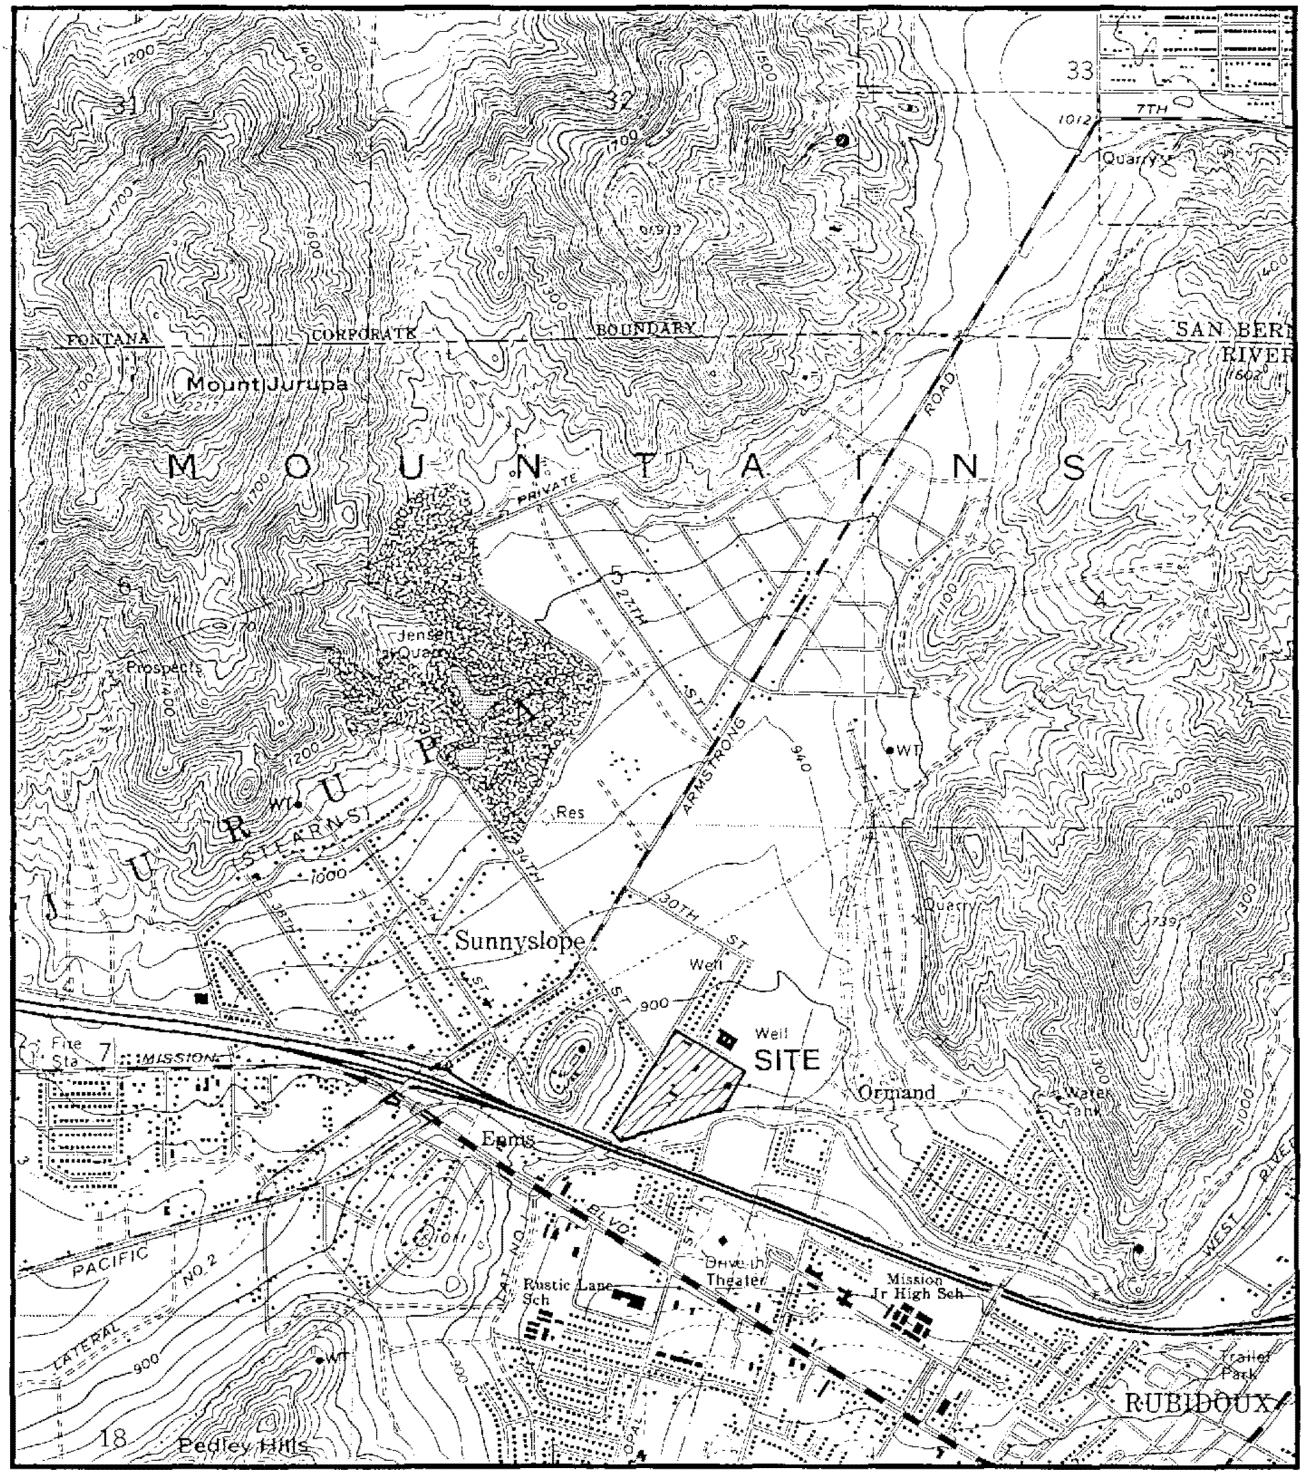

LPTBLS.128

Table 10. Soil Exposure Doses (SExD), Hazard Quotients and Excess Lifetime Cancer Risks for Excavation Site Exposure, Former Underground Storage Tanks Area, Las Plumas Lumber Co., Riverside, California

Constituent	C_s[a]	$SExD_o$[b]	$SExD_i$[c]	HQ[d]	CR[e]
TPH	35,000	9.58E-05	0.000329	0.0059	
Benzene	0.125	3.42E-10	2.46E-07	0.00035	7.2E-09
Toluene	4.6	1.26E-08	3.43E-06	6.1E-06	
Xylenes	13	3.56E-08	1.69E-05	0.00019	
Ethylbenzene	2.8	7.67E-09	7.55E-07	7.6E-06	
			TOTAL	0.0065	7.2-09

a - C_s - Maximum concentration in subsurface soils (mg/kg/day).
b - $SExD_o$ - Oral soil exposure dose (mg/kg/day).
c - $SExD_i$ - Inhalation soil exposure dose (mg/kg/day).
d - HQ - Hazard Quotient.
e - CR - Excess lifetime cancer risk.

APPENDIX A

TRANSPORT IN THE VADOSE ZONE (VAN GENUCHTEN AND ALVES, 1982)

The model involves analytical solution to the following equation:

$$C(X,t) = (C_o)\ [1/2\ (e^{A}1\ \text{erfc}(A_2) + e^{B}1\ \text{erfc}(B_2))]$$

where:

$C(X,t)$	=	The concentration of a chemical at X centimeters depth, t days (mg/L);
C_o	=	Initial concentration of a chemical (input concentration) (mg/L);
A_1	=	$(X/2D^*)\ (U_p^*-(U_p^{*2}+4D^*k^*)^{1/2})$;
A_2	=	$[X-t(U_p^{*2}+4D^*k^*)^{1/2}]\ /\ (4D^*t)^{1/2}$;
B_1	=	$(X/2D^*)\ (U_p^*+(U_p^{*2}+4D^*K^*)^{1/2})$;
B_2	=	$[X+t(U_p^{*2}+4D^*k^*)^{1/2}]\ /\ (4D^*t)^{1/2}$;
erfc	=	The complementary error function;
X	=	Distance from the source (cm);
Up*	=	U_p/R_f;
D^*	=	D/R_f;
k^*	=	k/R_f;
U_p	=	Average interstitial pore water velocity (cm/day);
D	=	Dispersion coefficient;
k	=	Degradation rate coefficient (1/day);
t	=	time (days);
U_p	=	q/f;
q	=	Volumetric flux per unity area (cm/day);

f	=	Volumetric water content for the unsaturated zone (unitless);
R_f	=	$1 = (B/f)K_d$; R_f is the retardation factor defined as the ratio of the water velocity to the chemical velocity (unitless);
B	=	Soil bulk density (g/cm^3);
K_d	=	Partition coefficient of a chemical between soil and water, (ml/g);

The term A1 is independent of time and represents the steady state concentration at X, whereas A2 is time dependent and corrects for the moving pollutant front. For large values of X and/or t, erfc (B2) approaches zero and the solution becomes:

$$C(X,t) = (C_o)\ [1/2\ (e^{A}1\ \text{erfc}\ (A_2))]$$

APPENDIX B

RISK ON A DISK:
SOIL CONTAMINATION RISK APPRAISAL
FOR PROTECTION OF GROUND WATER
(LUFT, 1989)

INSTRUCTIONS FOR THE USE OF:
RISK ON A DISK:
SOIL CONTAMINATION RISK APPRAISAL
FOR THE PROTECTION OF GROUND WATER

WAYNE HUBBARD
CALIFORNIA STATE WATER RESOURCES CONTROL BOARD
(916) 445-7769

I. Hardware Required
   A. IBM XT, AT, or compatible computers, 512k RAM minimum
   B. 360k floppy disk drive
   C. Printer (optional)

II. Software Required
   A. Lotus 123 (release 2 or later)

III. Lotus characteristics
   A. The worksheet is a grid made up of columns and rows. Each intersection of a row and a column forms a cell, which can contain information or data.
   B. The row number identifies a row in the worksheet. It appears on the left border of the worksheet.
   C. The column letter identifies a column in the worksheet. It appears on the top border of the worksheet.
   D. Each cell has a unique address that consists of its column letter and row number.
   E. The cell pointer is a small shaded rectangle which is used to highlight the current working position on the worksheet.
      1. The movement of the cell pointer is controlled by the cursor control keys (left arrow, right arrow, up arrow and down arrow). The num lock function must be off.
   F. The menu highlighter is also a small shaded rectangle which is used to highlight selections from lotus menus.
      1. The movement of the menu highlighter is controlled by the cursor control keys (left arrow, right arrow)
   G. The cursor is a blinking underscore character which is used to indicate where the next character you type will appear. This cursor is either displayed within the cell pointer before key board input has begun or in the upper left corner during key board input.
   H. The risk appraisal spreadsheet programs treat all empty cells, used for data input, as containing the numerical value of 0 until other information is placed in that cell.
   I. When the program is in the middle of a task, key board input is stored in a buffer; when the program finishes the task it accepts the key board input. Typing while the disk drive is in operation may cause errors in program execution.
   J. Lotus menus consist of a top line containing a list of commands and a

bottom line containing a description of the highlighted command. Menus are displayed in the upper left corner above the worksheet.

1. The cursor control keys are used to highlight a command from the top line.
2. A brief description of the highlighted command will appear on the line below.
3. Typing the enter key will execute the highlighted command.
4. Typing the first letter of a command, without typing the enter key, will also execute that command.

IV. Starting Out

A. Run the Lotus 123 program.
B. Type the slash mark (/) to display the main command menu.
C. Select the "FILE" command (type F).
D. Select the "RETRIEVE" command (type R).
E. Insert the risk appraisal disk into drive A.
F. Type the escape key twice to change directories.
G. Type in the file name A:RISK and type the enter key.
H. The checklist program will load first.

V. Using The Checklist Program

A. Select the "RUN" command from the menu (type R) to run the checklist program.
   1. A checklist will appear and the cell pointer will highlight the space following the first question. The cursor will appear in the upper left corner.
   2. Answer the first question with a YES, NO or UNKNOWN (Y/N/U). Each typed character is displayed in the upper left corner. You may delete and retype characters before typing the enter key.
   3. Type the enter key and note that your answer is entered on the worksheet and that the cell pointer highlights the space following the next question.
   4. Answer all questions using the above instructions.
   5. After the last question is answered the module will advance to the select program (see VI) if the answers do not affect the validity of the results.
   6. If the responses to the checklist questions indicate that the validity of the risk appraisal results will be affected, the program will display a brief message before advancing to the select program.

B. Select the "QUIT" command from the menu (type Q) if you wish to end the program and exit Lotus 123.
C. If a disk error occurs, the program will restart following a brief message.

VI. Using The Select Program

A. Select a command from the menu at the top left.
   1. Selecting a fuel constituent will run the risk appraisal program for that fuel constituent. There are four constituents: benzene, toluene, xylene and ethylbenzene. A risk appraisal should be performed for each of these constituents.
   2. Selecting the "Return" command will run the checklist program.

3. Selecting the "Quit" command will exit Lotus 123.

B. If a disk error occurs the program will automatically restart. Error messages are not displayed.

VII. Fuel Constituent Risk Appraisal Programs

A. Inputing data

1. There are two sections for data input. (see VII,B). The program begins with the first input section. Use the options menu, by typing the escape key, when you wish to change input sections (see VII,C "Using The Options Menu").
2. The program places the cell pointer at the top of each input section for data entry at that cell. Use the cursor control keys when you wish to move the cell pointer to another cell within that section for data entry. The cell pointer will roll over from top to bottom and visa-versa when you attempt to move it beyond the vertical boundaries of the input section.
3. As you enter data, they appear in the upper left corner followed by the blinking cursor. You may delete characters or escape before typing the enter key.
4. Type the enter key, or up or down cursor control arrows, to input the data (there is a brief wait while the computer recalculates).
5. To make any data changes, simply enter the new data in place of the old data.
6. Typing the enter key before typing in any data or typing the escape key activates the options menu.
7. Use the options menu to return and select another constituent, delete data, make a printed copy or leave the program (see VII,C).

B. Using the data input sections

1. First input section: Column A, Rows 4-6
   a. Average annual precipitation (inches) (A-4)
   b. Distance from surface to ground water (feet) (A-5)
      (1) "Surface" means the natural soil surface undisturbed by excavation.
      (2) The distance from the surface to the last contaminated sample must be less than the distance from the surface to ground water or it is invalid.
   c. Number of samples to be used (A-6)
      (1) The number of samples should equal the number of sampling intervals. Only one sample out of all the borings is used for each sampling interval.
      (2) Do not count any samples with concentrations below the detection limit if all deeper samples are also below the detection limit.
      (3) Up to 32 samples can be used.
2. Second input section: Column B-C, Rows 13-45
   a. Depth in feet: Column B, Rows 13-45
      (1) This is the distance from the natural surface to the sampling point in feet.

(2) When sampling intervals exceed 6 feet, they are "invalid". Normal sampling intervals are 5 feet; an extra foot is allowed for variations in stratigraphy.

b. Concentrations: Column C, Rows 13-45

(1) To be measured in parts per million fuel constituent in soil (ppm).

(2) A minimum of three borings should be used to collect samples.

(3) Only one sample out of all the borings should be used for each interval of depth.

(4) The boring sample with the highest concentration at a particular depth should be used to represent the concentration at that depth.

(5) The last sample used in the calculation of cumulative contamination must be at or above the detection limit (0.3 ppm); do not include bottom samples which are below the detection limit.

(6) See the LUFT manual for collecting and analyzing soil samples.

C. Using the options menu (activated by typing the escape key or making a blank entry)

1. Selecting the "Input 1" option
   a. Places the cell pointer at the top of the first input section (A-4) for entering data.
2. Selecting the "Input 2" option
   a. Places the cell pointer at the top of the second input section (B-13) for entering data.
3. Selecting the "Delete" option
   a. Erases data, one entry (cell) at a time.
   b. Enter the row number (displayed at the far left side of the worksheet) of the data to be deleted.
   c. Scroll lock must be off.
4. Selecting the "Erase" option
   a. Erases ALL input data.
5. Selecting the "Print" option
   a. Prints all of the main worksheet.
   b. 72 X 53 characters
6. Selecting the "Return" option
   a. Runs the select program (see VI). Use the Return option when you wish to select another fuel constituent.
7. Selecting the "Quit" option
   a. Exits the spreadsheet program and Lotus 123.

D. Descriptions of other worksheet columns

1. SAMPLE #
   (1) Order of samples from top to bottom
   (2) Determined by number of samples.
2. OPTIONS (for remedial action)
   a. A REMOVE LAYER
      (1) Displays "YES" if the layer of soil represented by

each sample, should be removed to meet acceptable levels and "NO" if it can be left in place.

(2) Displays "YES" for any layer of soil with a concentration above the saturation limits for that chemical.

(3) Examines highest cumulative contaminations, lowest acceptable levels and saturation levels.

(4) Progressively removes contaminated layers from top to bottom to achieve acceptable levels.

(5) No information will be displayed in this column until a numerical value other than zero is given for the concentration of the first sample.

b. B CLEANUP TO:

(1) Determines the highest acceptable cleanup level for all contaminated soil to be treated and left at the site.

(2) Displays the same cleanup level number for each layer.

(3) Calculated using the lowest acceptable level and the number of layers.

(4) Concentrations expressed in ppm.

3. CUMULATIVE CONTAMINATION

a. W/O OPTION (without using options A or B)

(1) Progressively adds fuel constituent concentrations as entered in the concentrations input column (C13-C45).

b. WITH A (Remove layer option)

(1) Progressively adds fuel constituent concentrations as entered in the concentrations input column (C13-C45) for samples that do not have to be removed.

c. WITH B (Cleanup to: option)

(1) Progressively adds computed cleanup concentrations.

d. ACCEPTABLE LEVEL

(1) Calculates the maximum cumulative contamination in soil which would not cause ground water concentrations to exceed water quality levels.

(2) Based on precipitation and distances to ground water.

(3) Uses results from interactive models and applicable water quality levels; does not directly use modeling code.

E. Disk Errors

1. When disk errors occur, the error and the command that caused it are ignored and the program continues.

Mike Bowery > Geraghty & Miller
Bashar Alhajjar

Clark would like to do a risk assessment to o.k. leaving soil in place. Bashar will stress the risk of further migration of contaminants possibly to G.W. Not stress human risks - don~~t~~ once covered / backfilled anyone will not be in contact w/ soil. If Bashar has any other questions, he will call me.

Mike will continue working on above - ground remediation of cont. soil using bio-remediation techniques.

3:50 Mtg. over.

Riverside, California

Dear Ms. Boltinghouse:

Based on your request, Geraghty & Miller, Inc., is pleased to transmit this work plan for additional site assessment activities at the above-referenced site. The work plan includes the background, objective, technical approach, and scope of work involved in completing one soil boring. The purpose of this soil boring is to assess the vertical extent of diesel-affected soil at the subject site.

Should you have any questions regarding this work plan please contact the undersigned. We would appreciate your timely review and approval of this work plan so that we may meet our scheduled drilling date of May 23, 1991. Please address any response correspondence to Mr. Clark Taylor of Las Plumas Lumber.

Respectfully submitted,

GERAGHTY & MILLER, INC.

A Site Health and Safety Plan

INTRODUCTION

Las Plumas Lumber Company (LPL) retained Geraghty & Miller, Inc., on May 15, 1991, to prepare a work plan for additional site assessment activities at the LPL facility in Riverside, California. The work plan is being required by the Riverside County Environmental Health Services Division (EHSD) in response to the LPL notification of the presence of diesel-affected soil in a former underground storage tank (UST) excavation. The purpose of this work plan is to outline tasks that will delineate the vertical extent of diesel-affected soil at the site, since previous excavation and sampling activities have delineated the lateral extent of diesel-affected soil. This work plan presents the background, objectives, scope of work, schedule, and reporting.

BACKGROUND

The subject site is the LPL facility located in a residential/commercial area at 6464 33rd Street, Riverside, California, as shown on Figure 1. The site functions as a wholesale lumber storage, and distribution facility.

Three USTs, one 10,000-gallon diesel, one 5,000-gallon gasoline, and one 500-gallon waste oil, were removed from the site in January 1991. Soil samples were obtained from beneath the USTs in January, March, and May 1991. Total petroleum hydrocarbons (TPH) were reported up to a maximum of 35,000 milligrams per kilogram (mg/kg) at a depth of 44 feet below ground surface (ft-bgs).

Following excavation activities in May 1991, the approximate area of diesel-affected soil remaining in the excavation at 43 to 45 ft-bgs is shown on Figure 2. These excavation activities included the use of a Gradall™ excavator to remove the diesel-affected soil. The maximum depth the Gradall was able to reach was 44 ft-bgs. Because diesel-affected soil was still present at 44 ft-bgs in excess of the EHSD action level of 100 mg/kg, additional site assessment activities are necessary to delineate the vertical extent of diesel-affected soil.

OBJECTIVE

The objective of the site assessment activities is to assess the vertical extent of diesel-affected soil. In addition, the need for further site assessment activities will be determined.

TECHNICAL APPROACH

The technical approach to meet the objective will consist of drilling and sampling one soil boring. The boring will be advanced to a minimum of 10 feet beyond the lowest point of observable diesel-affected soil based on field observations and photoionization detector (PID) measurements. Because the excavation is still open, the soil boring will be drilled at an angle. It is anticipated that this angle will be 10 to 15 degrees from vertical, although the exact angle will depend on where the soil boring is sited with respect to the edge of the excavation.

SCOPE OF WORK

The scope of work includes field activities such as soil borings and sampling field analysis, and laboratory analysis, and reporting deliverables. These tasks are discussed below.

TASK 1 - SOIL BORING AND SAMPLING

One angle soil boring will be installed using hollow-stem auger (HSA) drilling equipment at the proposed location shown on Figure 2. This location may change depending on site conditions. It is anticipated that the boring will extend to approximately 60 to 70 ft-bgs.

Soil samples will be obtained at a minimum of 5-foot intervals using a modified California split-spoon sampler with three, 2-inch by 6-inch brass inserts. The sampler will be driven into the soil ahead of the augers thus providing an 18-inch soil sample to the total depth of the boring.

The first brass sample tube (lowest 6 inches of the 18-inch sample) will be extracted and sealed at the ends with aluminum foil or Teflon tape and tight plastic caps. The sample will be labelled according to boring number and depth, packaged, and refrigerated for transport to the designated analytical laboratory. The second sample tube will be used to perform field testing for organic vapor detection.

TASK 2 - FIELD ANALYSIS

The drilling program will be supervised by a California registered geologist. An experienced field geologist will maintain a detailed log of activities and collect field data. Soils will be classified using the Unified Soils Classification System (USCS). The on-site geologist will produce a detailed geologic log of the boring, conduct field analyses of soil samples, and properly package and label samples for laboratory analysis. At each sampling interval, the middle sample will be screened with the PID. The instrument to be used is an HNu Model P101, or equivalent, portable photoionization detector which will detect all compounds with an ionization potential below 10.2 eV. This detector provides non-discriminatory indication of the presence of a variety of volatile organic compounds (VOCs) and can be used for relative qualification for these compounds. With this capability, the detector serves as a useful tool in the screening of soil samples in the field.

Decontamination of drilling equipment will be conducted between each boring to prevent potential cross-contamination between boreholes. Fluid generated during decontamination will be drummed.

Soil material removed from the borings will not be reintroduced to prevent the potential of cross-contamination between different strata within the borings. Waste soils generated during the drilling of the borings will be stored on site pending receipt of analytical results. Borings will be backfilled following completion of drilling with a clean, low-permeable material, such as a cement slurry.

TASK 3 - LABORATORY ANALYSIS

A maximum of two samples will be submitted for chemical analysis to a State certified laboratory. Each sample will be analyzed for TPH (diesel) by EPA Method 8015 and may be analyzed for BTEX by EPA Method 8020. The data will be reviewed by the Quality Assurance personnel to ensure the data meet the project data quality objectives of precision, accuracy, representativeness, completeness, and comparability.

TASK 4 - REPORTING

Reporting deliverables include a health and safety (H&S) plan and site assessment report. A brief discussion of each deliverable is presented below.

Health and Safety Plan

A H&S plan is included in the work plan in Appendix A. The H&S plan addresses physical and environmental concerns at the site. Geraghty & Miller personnel will be required to read and understand the H&S Plan prior to initiation of site activities. It is assumed that the field activities can be conducted under Level D. If during drilling or sampling it becomes necessary to upgrade the H&S Plan, Geraghty & Miller will immediately report to LPL of these changes.

Site Assessment Report

The results and methodology of the investigation will be presented in a site assessment report. Significant findings and conclusions will be discussed, including the need for further site assessment and/or remediation.

SCHEDULE

Following regulatory approval of this work plan, it is anticipated that the field activities including soil borings and sampling and field analysis should require one day to complete. Laboratory analysis should be completed within one week. The site assessment report should be completed by the end of the third week.

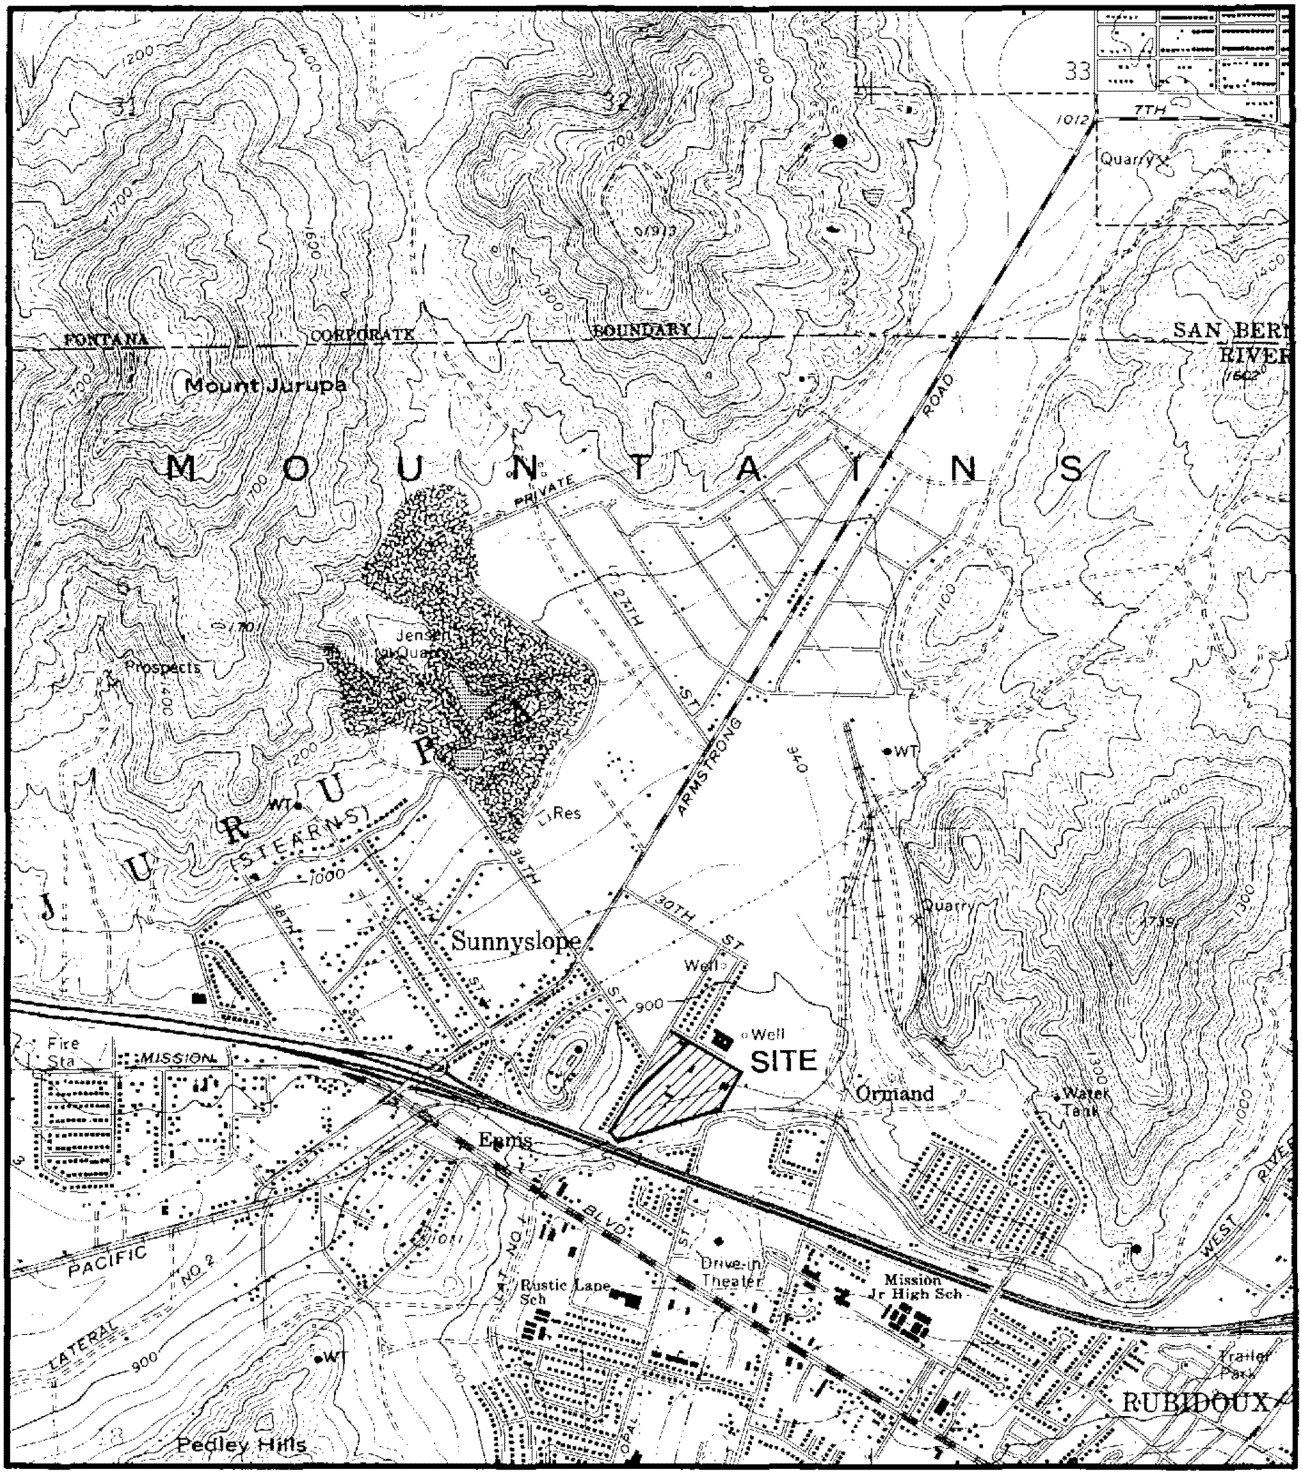

Respectfully submitted,

SITE HEALTH & SAFETY PLAN

Effective Dates: May 17, 1991 through December 31, 1991

PROJECT NAME:	Las Plumas Lumber
PROJECT NUMBER:	CA11203
DESCRIPTION OF WORK:	Site Subsurface Investigation
PROJECT CLIENT:	Las Plumas Lumber 6464 33rd Street Riverside, California 92509
CLIENT CONTACTS:	Clark Taylor
PROJECT SITE LOCATION:	Las Plumas Lumber 6464 33rd Street Riverside, California 92509
PROJECT SITE CONTACT(S):	Clark Taylor (714) 681-2211
PRIME CONTRACTOR:	Geraghty & Miller, Inc. 17800 Castleton Street, Suite 175 City of Industry, California 91748 (818) 965-4048
PROJECT MANAGER:	Michael H. Bowery
G&M HEALTH & SAFETY COORDINATOR:	Richard J. Smith
ON-SITE HEALTH & SAFETY COORDINATOR:	Kenji D. Shintaku (Geraghty & Miller, Inc., City of Industry, California)

WORK SCHEDULE: Work is scheduled for May 23, 1991.

SITE DESCRIPTION: The subject site is a wholesale lumber distribution facility that is located in Riverside County in a residential neighborhood (Figure 1). The site is active and handles waste oil, solvents, and motor oil.

The underground storage tanks (USTs) were removed to comply with County of Riverside, Environmental Health Services Division (EHSD) regulations. Analytical results from soil

samples indicated that diesel-affected soil was present to a depth of at least 44 feet below ground surface. Total petroleum hydrocarbon concentrations ranged up to a maximum of 35,000 milligrams per kilogram.

PLANNED SITE ACTIVITIES:

1. Drill one (1) soil boring to a depth of approximately 70 feet at an angle of 10 to 15 degrees from vertical.

2. Collect drive samples at 5-foot intervals, using hollow-stem-auger drilling equipment.

3. Backfill borings with cement/bentonite grout or equivalent.

KNOWN CHEMICAL HAZARDS:

COMPONENT	LOCATION	MEDIA	TLV* TWA (ppm)	STEL** (ppm)
Gasoline	All site	S,W,A	300	500
Diesel	All site	S,W,A	NV	NV
Waste Oil	All site	S,W,A	NV	NV
Benzene	All site	S,W,A	1	5
Toluene	All site	S,W,A	100	150
Xylene	All site	S,W,A	100	150
Ethylbenzene	All site	S,W,A	100	125

Values per American Conference of Governmental Industrial Hygienists or, 29 CFR 1910 (OSHA) whichever is most stringent.
NV = No value established
S = soil
W = water
A = air

* The Threshold Limit Value (TLV) is the time weighted average concentration for a normal eight-hour day and a forty-hour work week, to which all workers may be repeatedly exposed, day after day, without adverse effect.

** The Short-Term Exposure Limit (STEL) is the concentration at which workers can be exposed continuously for a short period of time. Exposures at the STEL should not be longer than 15 minutes and should not be repeated more than four times in an eight-hour period. There should be at least one hour between each 15 minute exposure at the STEL.

OTHER SUSPECTED CHEMICAL HAZARDS: Gasoline additives.

REQUIRED HEALTH AND SAFETY PROCEDURES AND APPAREL: Work will be done under Level D safety procedures, unless site conditions indicate otherwise. No smoking will be allowed on site except in designated areas. Explosion proof or intrinsically safe equipment must be used in areas designated as hazardous (potentially explosive). At least one class ABC fire extinguisher will be placed in a safe area. One first aid kit will be placed in a safe area. Access to the work area will be restricted except to essential personnel. A safe distance will be maintained between the work area and public roads and appropriate traffic control will be implemented, as appropriate.

CONCENTRATION MEASUREMENT METHODS:

ACTIVITY	LOCATION	DETECTOR*	SURVEY METHOD**
Soil Sampling	All Sites	OVA-FID or PID	Work area breathing zone and, near potential vapor source (excavation)

* Instruments to be calibrated daily.
** Readings to be taken and recorded at a minimum of one per hour in the breathing zone and more frequently in more contaminated areas.

ACTION LEVELS:

ACTIVITY	LOCATION	**ACTION LEVEL	PRECAUTION
All On-Site	All Sites	PID or OVA 5 ppm above background for greater than 15 minutes	Cease operation until level decrease; potential upgrade to Level C
		Explosimeter $\geq$20% LEL*	Cease operations until levels decrease

* LEL = Lower Explosion Limit

REQUIRED HEALTH AND SAFETY PROCEDURES AND APPAREL: Protective equipment to be used during well installation, sampling, and testing operations are to include:

Level D

1. Hard hat
2. Safety glasses
3. Protective nitrile gloves
4. Boots (steel toes required)
5. Sleeved shirts and pants, or coveralls, or tyvec suit (if free product exposure to skin is likely)

Level C

1. All of the above plus full or half-face air purifying respirator equipped with the appropriate cartridge.

Personnel involved in the following should be aware that skin contact and/or splash hazard is high and should check protective items 1-5 above before undertaking these actions:

1. Substantial contact with grossly contaminated soils such as when collecting soil samples from split-spoons.

CONTINGENCY PLANS: If the vapor levels in the general work area are found to meet or exceed any of the action levels, then work will be discontinued and the work site evacuated as directed by the site safety coordinator (G&M site representative). The work area periphery will be monitored by the site safety coordinator and work will resume when the vapor levels drop below the action level. If vapor levels continue to meet or exceed action levels, work will cease and the work location will be secured and evacuated. Work shall not continue until the health and safety plan is appropriately revised to meet the new conditions.

Should persistent safety hazards, accident, or fire occur, take appropriate immediate action if required (e.g., extinguish the fire, give first aid, etc.) and contact emergency personnel immediately and then contact the G&M Health and Safety Coordinator.

This plan does not override any existing client Health & Safety Plan. This plan should be considered supplementary to any existing plan the client may deem appropriate. **Subcontractors are required to submit health and safety plans applicable to their prescribed activities.**

EMERGENCY CONTACTS AND PROCEDURES: Should any situation or unplanned occurrence require outside or support services, the appropriate contact from the following list should be made.

AGENCY	PERSON TO CONTACT	TELEPHONE
Fire and Rescue:	Emergency Dispatcher	911
Police:	Emergency Dispatcher	911
Hospital: Riverside Community Hospital	Receptionist	(714) 788-3000
Underground Utilities: Underground Service Alert	Underground Service Alert Receptionist	(800) 422-4133
G&M Health & Safety Coordinator:	Richard J. Smith	(818) 965-4048

HOSPITAL ROUTE TO COASTAL COMMUNITIES HOSPITAL: The Riverside Community Hospital is located at 4445 Magnolia Avenue approximately 5.5 miles southeast of the site in Riverside. The location and recommended route is shown on Figure 1, included in the Health and Safety Plan.

SPECIAL PROCEDURES AND PRECAUTIONS: The nature of the work is such that certain potential accidental risks should be further noted. These are: fire, explosion, heavy equipment operations accidents, accidents resulting from operations in areas of public vehicular traffic, and skin or eye contact with hydrocarbons. Care should be taken when working near heavy equipment and such equipment should only be operated by authorized and qualified operators. Skin or eye contact with hydrocarbons should be immediately treated by washing the contacted area with soap and water and providing appropriate medical attention, if necessary.

Mr. Clark Taylor
Las Plumas Lumber Co.
6464 33rd Street
Riverside, CA 92509

Dear Mr. Taylor:

It has come to the attention of this office that an unauthorized release has occurred from underground storage tanks under your control. The resulting soil and/or groundwater contamination must be handled accordingly.

You are requested to conduct a subsurface investigation of the contamination and submit these results in a technical report to this office. This report must contain, at a minimum, the following information:

1. The delineation of the vertical and lateral extent of the contamination in the soil and as the impact on groundwater.

2. The hydrogeologic characterization of the soil and unconsolidated materials underlying and adjacent to the site.

3. The technical report must be prepared by a qualified professional who is registered as a civil engineer or certified as a geologist in the State of California.

4. Prior to any work starting at the site, a work plan must be submitted and approved by this office.

CERTIFIED MAIL

Mr. Clark Taylor
Las Plumas Lumber Company
6464 33rd Street
Riverside, CA 92509

Dear Mr. Taylor:

The purpose of this letter is to inform you that County of Riverside, Department of Health, Environmental Health Services Division, Hazardous Materials Management Branch has entered into an agreement with the State of California Water Resources Control Board to oversee the cleanup and mitigation of contaminated sites resulting from the unauthorized release of hazardous substances from underground storage tanks. The cleanup of these sites is necessary to protect the public from exposure from hazardous chemicals.

The oversight program developed by the State and administered by the County is funded by State and Federal monies and is subject to reimbursement by the responsible parties for each specific site. The County will account for time and materials expended at each cleanup site. On a routine basis, the State will be provided with the amounts detailing the time and expenses. The State will then invoice the responsible party for all direct and indirect costs associated with the cleanup of the site.

Enclosed you will find the Notice of Reimbursement. This is the formal notification concerning the reimbursement requirements for the responsible party. If any of the information is incorrect or if you should have any questions, contact this office as soon as possible at (714) 358-5055.

Sincerely,

Sharon Boltinghouse

INSTRUCTIONS

EMERGENCY
Indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

LOCAL AGENCY ONLY
To avoid duplicate notification pursuant to Health and Safety Code Section 25180.7, a designated government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety, only that notification procedures have been followed if required.

REPORTED BY
Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

RESPONSIBLE PARTY
Enter name, telephone number, contact person, and address of the party responsible for the leak. The responsible party would normally be the tank owner.

SITE LOCATION
Enter information regarding the tank facility and surrounding area. At a minimum, you must provide the facility name and full address.

IMPLEMENTING AGENCIES
Enter names of the local agency and Regional Water Quality Control Board involved.

SUBSTANCES INVOLVED
Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT
Provide information regarding the discovery and abatement of the leak.

SOURCE/CAUSE
Indicate source(s) of leak. Provide details on tank age; capacity and material if known. Check box(es) indicating cause of leak.

CASE TYPE
Indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS
Indicate the category which best describes the current status of the case. Check one box only. The response should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil.

IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION
Indicate which actions have been used to cleanup or remediate the leak. Descriptions of options follow:

Cap Site - install horizontal impermeable layer to reduce rainfall infiltration.
Containment Barrier - install vertical dike to block horizontal movement of contaminant.
Excavate and Dispose - remove contaminated soil and dispose in approved site.
Excavate and Treat - remove contaminated soil and treat (includes spreading or land farming).
Remove Free Product - remove floating product from water table.
Pump and Treat Groundwater - generally employed to remove dissolved contaminants.
Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of contaminants.
Replace Supply - provide alternative water supply to affected parties.
Treatment at Hookup - install water treatment devices at each dwelling or other place of use.
No Action Required - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident.
SIGNATURE - Sign the form in the space provided.
DISTRIBUTION

If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies in tact to your local tank permitting agency for distribution.
1. Original - Local Tank Permitting Agency
2. State Water Resources Control Board, Division of Water Quality, Underground Tank Program, P. O. Box 100, Sacramento, CA 95801
3. Regional Water Quality Control Board
4. County Board of Supervisors or designee to receive Proposition 65 notifications.
5. Owner/responsible party.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF JURUPA VALLEY IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL 1:
THAT PORTION OF TRACT NO. 1 OF THE RESUBDIVISION OF THE LANDS FORMERLY BELONGING TO THE A.C. ARMSTRONG ESTATE, IN THE CITY OF JURUPA VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AS SHOWN BY MAP ON FILE IN BOOK 6, PAGE 31 OF MAPS, RIVERSIDE COUNTY RECORDS, AND SHOWN ON RECORD OF SURVEY ON FILE IN BOOK 6, PAGE 70 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS, LYING WITHIN SECTION 8, TOWNSHIP 2 SOUTH, RANGE 5 WEST, SAN BERNARDINO MERIDIAN.

APN 177-020-084

PARCEL 2:
THAT PORTION OF TRACT NO. 1 OF THE RESUBDIVISION OF THE LANDS FORMERLY BELONGING TO THE A.C. ARMSTRONG ESTATE, CITY OF JURUPA VALLEY, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AS SHOWN BY MAP ON FILE IN BOOK 6, PAGE 31 OF MAPS, AND AS SHOWN ON RECORD OF SURVEY ON FILE IN BOOK 6, PAGE 70 OF RECORDS OF SURVEY, BOTH RECORDS OF RIVERSIDE COUNTY, STATE OF CALIFORNIA.

APN 177-020-085

BASIS OF BEARINGS:
THE BEARING OF NORTH 57°49'20" WEST SHOWN ON THE CENTERLINE OF 30TH STREET AS SHOWN ON TRACT NO. 37470 FILED IN BOOK 482 PAGES 42 TO 45, OF MAPS, RECORDS OF RIVERSIDE COUNTY, WAS USED AS THE BASIS OF BEARINGS FOR THIS SURVEY.

BENCHMARK:
BENCH MARK NUMBER: ML 9-3 RESET 2004
DATUM: NAVD 1929
YEAR OF RECORD: RESET 2004
ELEVATION (FEET): 901.243'

DESCRIPTION: FLUSH ON 11 INCH CURB, 36 FEET EASTERLY OF EASTERLY RAIL, 53.5 FEET WESTERLY OF BCR IN SOUTHWESTERLY QUADRANT OF MISSION BOULEVARD AND JURUPA ROAD INTERSECTION. 73 FEET RIGHT AT STATION 399+57.00 OF CENTERLINE MISSION BOULEVARD.

APPENDIX H

QUALIFICATIONS

Breezy Carreño

Project Manager, Due Diligence

EDUCATION

- B.S. – Environmental Science (minor in Conservation Biology), University of California, Los Angeles

SUMMARY OF PROFESSIONAL EXPERIENCE

Ms. Carreno provides expertise in environmental project management, consulting, and due diligence services to ensure ASTM compliance and satisfaction of client requirements for Phase I ESAs, Environmental Transaction Screens, Regulatory Database and Historical Records Reviews for large- and small-scale industrial, commercial, multi-tenant residential, and rural properties.

PROJECT EXPERIENCE

Project experience for Ms. Carreño includes:

- Phase I ESAs
- Limited Environmental Site Assessments (LESAs)
- Environmental Transaction Screens (ETSs)
- Records Research with Risk Assessments (RSRAs)
- Regulatory Database Reviews
- Historical Records Reviews

As a Due Diligence Project Manager, Ms. Carreno provides project management and technical expertise to ensure ASTM compliance and satisfaction of client requirements.

In addition, prior to joining the environmental consulting industry, Ms. Carreño spent four years studying a diverse range of environmental disciplines including: environmental health, ecology, conservation biology, environmental law and policy, international conservation policy, and science communications.

Victor T. DeTroy

National Practice Leader, Due Diligence

EDUCATION

- BA - Earth and Environmental Science, Columbia University, Cum Laude

CERTIFICATIONS

- Registered Environmental Property Assessor (REPA)
- ASTM International E50 Committee Member, Various Task Groups

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. DeTroy has worked the environmental service industry since 2007 and provides project management to ensure compliance and satisfaction of client requirements for Phase I ESAs, Transaction Screens, limited due diligence assessments, Phase II and Phase III subsurface investigations, and quarterly groundwater monitoring events. He has successfully completed assessments on a variety of residential, commercial, and complex industrial sites. Mr. DeTroy is accustomed to all aspects of due diligence property assessments and the needs and requirements of a variety of reporting standards, including ASTM, EPA's All Appropriate Inquiry (AAI), Freddie Mac, Fannie Mae, HUD, and customized client formats.

PROJECT EXPERIENCE

Project experience for Mr. DeTroy includes:

- Phase I ESAs
- Telecommunication Phase I ESAs
- Environmental Transaction Screens
- Limited Environmental Site Assessments
- Regulatory Database Reviews
- Historical Records Reviews
- Project coordination and setup
- Due diligence portfolio management
- Design and implementation of Phase II soil and groundwater investigations and Phase III subsurface characterizations for a variety of suspected contaminants for due diligence and liability purposes

Subsurface investigations have included extensive soil and groundwater testing, identification of petroleum hydrocarbons and volatile organic compounds contamination in near surface soils, and contaminant plume delineation in soil vapor, soil, and groundwater. Mr. DeTroy's management and technical experience has allowed AEI's projects to be performed in a cost effective and timely manner to the satisfaction of AEI's clients and regulatory agencies.

APPENDIX I

COMMONLY USED ACRONYMS & ABBREVIATIONS

Units	
µg/L	Micrograms per Liter
mg/kg	Milligrams per Kilogram
mg/L	Milligrams per Liter

Units	
pCi/L	PicoCuries per Liter
ppb	Parts per Billion
ppm	Parts per Million

Acronyms & Abbreviations	
AACEI	Association for the Advancement of Cost Engineering International
AC	Air Conditioner, or Acre
ACM	Asbestos-Containing Material
ADA	The Americans with Disabilities Act
ADAAG	ADA Accessibility Guidelines
ADJ	Adjoining Site
ADU	Accessory Dwelling Unit
AEI	AEI Consultants
AFUE	Annual Fuel Utilization Efficiency
AHERA	Asbestos Hazard Emergency Response Act
AHU	Air Handling Unit
AIA	American Institute of Architects
Allow	Allowance
ALTA	American Land Title Association
Amp	Amperage, or Ampere
APN	Assessor Parcel Number
ASCE	American Society of Civil Engineers
ASHRAE	American Society of Heating, Refrigerating and Air-Conditioning Engineers
AST	Aboveground Storage Tank
ASTM	ASTM International
AUL	Activity and Use Limitation
bgs	Below Ground Surface
BOMA	Building Owners & Managers Association
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes
BTU	British Thermal Unit (measurement of heat)
BTUH	British Thermal Units per Hour
BUR	Built-up Roof System
CERCLA	Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	Comprehensive Environmental Response Compensation and Liability Information System
CESQG	Conditionally Exempt Small Quantity Generator
CH	Clubhouse
CO	Certificate of Occupancy
COC	Contaminant of Concern, or Chemical of Concern
COP	Coefficient of Performance
CRA	Construction Risk Assessment
CREC	Controlled Recognized Environmental Condition
CUP	Conditional Use Permit
CWH	Compact Water Heater, or Cold Water Heater
DHW	Domestic Hot Water
DWV	Drainage, Waste, Ventilation
EA	Each
EC	Engineering Controls
ECM	Energy Conservation Measure
EDR	Environmental Data Resources, Inc.
EEM	Energy Efficiency Measures
EER	Energy Efficiency Ratio

Acronyms & Abbreviations	
LBP	Lead-Based Paint
LCP	Lead-Containing Paint
LED	Light Emitting Diode
LEED	Leadership in Energy and Environmental Design
LFCA	Limited Facility Condition Assessment
LLP	Landowner Liability Protection
LQG	Large Quantity Generator
LS	Lump Sum
LUST	Leaking Underground Storage Tank
M	Model
MAP	Multifamily Accelerated Processing
MBH	1,000 BTUs per Hour
MCL	Maximum Contaminant Level
MDP	Main Distribution Panel
MEP	Mechanical, Electrical and Plumbing
MHP	Mobile Home Park
MMI	Modified Mercalli Intensity
MPH	Miles per Hour
MRL	Machine Room-Less
MTBE	Methyl Tertiary Butyl Ether
MTCO2e	Metric Tons of Carbon Dioxide Equivalent
NA or N/A	Not Applicable
ND	None Detected
NESHAP	National Emission Standards for Hazardous Air Pollutants
NFA	No Further Action
NFPA	National Fire Protection Association
NFRAP	No Further Remedial Action Planned
NLR	No Longer Regulated
NOV	Notice of Violation
NPL	National Priorities List
NPV	Net Present Value
NRA	Net Rentable Area
NRI	National Risk Index
O	Occupied
O&M	Operations and Maintenance
OEC	Other Environmental Consideration
OFC	Office
OH&PR / OH&P	Overhead and Profit
OPC	Opinion of Probable Cost
OSHA	Occupational Safety and Health Administration
PCA	Property Condition Assessment
PCB	Polychlorinated Biphenyl
PCE / PERC	Perchloroethylene, or Tetrachloroethylene, or Tetrachloroethene
PCR	Property Condition Report
PE	Professional Engineer
PFAS	Per- and Polyfluoroalkyl Substances

Acronyms & Abbreviations	
EFF AGE	Effective Age
EIFS	Exterior Insulation Finishing Systems
EMF	Electro Magnetic Fields
EMS	Energy Management System
EPA	Environmental Protection Agency
EPDM	Ethylene Propylene Diene Monomer (rubber membrane roof)
ERNS	Emergency Response Notification System
ESA	Environmental Site Assessment
ESG	Environmental, Social and Governance
EUI	Energy Use Intensity
EUL	Estimated Useful Life
EWEM	Energy and Water Efficiency Measure
F	Fahrenheit
FAR	Floor Area Ratio
FCA	Facility Condition Assessment
FCU	Fan Coil Unit
FEMA	Federal Emergency Management Agency
FF&E	Furniture, Fixtures and Equipment
FFHA	Federal Fair Housing Act
FHA	Forced Hot Air, or Fair Housing Act, or Fair Housing Adminitration
FHW	Forced Hot Water
FIRM	Flood Insurance Rate Map
FLS	Fire and Life Safety
FM	Factory Mutual
FOIA	US Freedom of Information Act
FOIL	Freedom of Information Law
FRP	Fiber Reinforced Plastic
FRT	Fire Retardant Treated
FTRP	Fire Retardant Treated Plywood
Gal	Gallon
GFA	Gross Floor Area
GFCI	Ground Fault Circuit Interrupter
GFI	Ground Fault Interrupt (circuit)
GHG	Greenhouse Gas
GIS	Geographic Information System
GPF	Gallons per Flush
GPM	Gallons per Minute
GPNA	Green Physical Needs Assessment
GPR	Ground-Penetrating Radar
GSF	Gross Square Footage
GWB	Gypsum Wall Board
HID	High Intensity Discharge
HREC	Historical Recognized Environmental Condition
HSPF	Heating Seasonal Performance Factor
HUD	Department of Housing and Urban Development
HVAC	Heating, Ventilation and Air Conditioning
IAQ	Indoor Air Quality
IBC	International Building Code
IC	Institutional Control
IM / IR	Immediate Repair
IRR	Internal Rate of Return
ISR	Impervious Surface Ratio
kBTU	Kilo-British Thermal Unit
kGal	Kilogallon
kW	Kilowatt
kWh	Kilowatt Hour

Acronyms & Abbreviations	
PGA	Peak Ground Acceleration
PML	Probable Maximum Loss
POC	Point of Contact
PSF	Pounds per Square Foot
PSQ	Pre-Survey Questionnaire
PTAC	Packaged Through-Wall Air Conditioning (Unit)
PVC	Polyvinyl Chloride
R&M	Repair and Maintain - Routine Maintenance
RCRA	Resource Conservation and Recovery Act
REC	Recognized Environmental Condition
RM	Room
ROI	Return On Investment
ROW	Right-of-Way
RP	Responsible Party
RR	Replacement Reserve
RTU	Rooftop Unit
RUL	Remaining Useful Life
SDS	Safety Data Sheet
SEDI	Statement of Energy Design Intent
SEER	Seasonal Energy Efficiency Ratio
SEL	Scenario Estimated Loss
SEMS	Superfund Enterprise Management System
SEP	Statement of Energy Performance
SF	Square Footage, or Square Feet
SIR	Savings to Investment Ratio
SL	Scenario Loss
SP	Subject Property
SQG	Small Quantity Generator
SRA	Seismic Risk Assessment
ST	Short Term
SUL	Scenario Upper Loss
SUP	Special Use Permit
SVOC	Semi-Volatile Organic Compound
SY	Square Yard
TCE	Trichloroethylene, or Trichloroethene
TE	Thermal Efficiency
TPH	Total Petroleum Hydrocarbons
TPHd / TPH-d	Total Petroleum Hydrocarbons (diesel range)
TPHg / TPH-g	Total Petroleum Hydrocarbons (gasoline range)
TPHo / TPH-o	Total Petroleum Hydrocarbons (oil range)
TPO	Thermoplastic Polyolefin Roof Membrane
TRPH	Total Recoverable Petroleum Hydrocarbons
TSD	Treatment, Storage, and Disposal
UBC	Uniform Building Code
USDA	United States Department of Agriculture
USGS	United States Geological Survey
UST	Underground Storage Tank
V	Vacant
VAV	Variable Air Volume Box
VCP	Voluntary Cleanup Program
VOC	Volatile Organic Compound
VSQG	Very Small Quantity Generator
WDO	Wood Destroying Organism
ZAR	Zoning Analysis Report
