Notes and Definitions

Item	Definition
D	RPD was not within control limits. The sample data was reported without further clarification.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Laboratories, Inc. Project: P807020

Date Received: 07/23/18 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 2.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 3.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 07/23/18

Change Order Report

Langan
32 Executive Park, Suite 130
Irvine, CA 92614-4721

Re: DTSC Riverside
Project No. : Agua Mansa
Work Order: P807020

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 7/21/2018. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Laboratories, Inc. Project: P807020

Date Received: 07/23/18 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 2.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 3.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 07/23/18

Agua Mansa Additional TPH Samples

Klara Perkins <kperkins@langan.com>

Mon 8/6/2018 5:21 PM

To: Marycarol Valenzuela <mvalenzuela@pali-labs.com>;

Cc: Brad Mccardell <bmccardell@langan.com>;

Hi Marycarol,

As discussed in the call with Brad this afternoon, we'd like to run samples MAP-LT-2-5' and MAP-LT-2-10' for TPH (Carbon chain 8015) please. They were originally in the report P807020 and the sample date is listed as 7/20/2018.

Thanks,
Klara

Re: DTSC Riverside

Project No. : Agua Mansa

Work Order: P807022

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 7/24/2018. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Notes and Definitions

Item	Definition
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

Re: DTSC Riverside

Project No. : Agua Mansa

Work Order: P807022

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 7/24/2018. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: P807022

Date Received: 7/25/18 Sampler's Name Present: ☐ Yes ☒ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.0 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 07/25/18

Irvine, CA 92614-4721

Re: DTSC Riverside
Project No. : Agua Mansa
Work Order: P807022

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 7/24/2018. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: P807022

Date Received: 7/25/18 Sampler's Name Present: ☐ Yes ☒ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.0 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 07/25/18

Re: DTSC Riverside

Project No. : Agua Mansa

Work Order: P807022

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 7/24/2018. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: P807022

Date Received: 7/25/18 Sampler's Name Present: ☐ Yes ☒ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.0 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 07/25/18

MONTROSE ENVIRONMENTAL

Client: Performance Analytical Laboratories, Inc.
Address: 2702 E. Willow Street
Signal Hill, CA 90755

Attn: Marycarol Valenzuela

Comments: P807022

See attached report for EPA 8290 results.

Lab Request: 404862
Report Date: 08/10/2018
Date Received: 07/24/2018
Client ID: 15509

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
404862-001	P807022-01
404862-002	P807022-02
404862-003	P807022-03
404862-004	P807022-05
404862-005	P807022-06
404862-006	P807022-07

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Ranjit K. K. Clarke

Report Review performed by: Ranjit Clarke, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 60 days from date received.

The reports of the Enthalpy Analytical, Inc. are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: P807022

Date Received: 7/25/18 Sampler's Name Present: ☐ Yes ☒ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.0 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 07/25/18

I certify that to the best of my knowledge all analytical data presented in this report:

- Have been checked for completeness
- Are accurate, error-free, and legible
- Have been conducted in accordance with approved protocol, and that all deviations and analytical problems are summarized in the appropriate narrative(s)

This analytical report was prepared in Portable Document Format (.PDF) and contains __23__ pages.

Enthalpy Analytical Narrative Summary

Company	Enthalpy Orange	**Client #**	404862
Analyst	Laura Boivin	**Job #**	J130
Parameters	Dioxins and Furans	**# Samples**	6

Custody	Enthalpy Analytical, Inc. Wilmington, NC office received the sample (via FedEx) by Robin Appelle on 7/27/2018. The sample was received having a temperature of 0.9 ºC, in good condition. Prior to, during, and after analysis, the samples were stored in the laboratory with access only by authorized personnel of Enthalpy Analytical, Inc.
Analysis	The samples were analyzed by EPA Method 8290 for PCDD/PCDFs by HRGC/HRMS. The analysis was done using the following instrumentation; High-Resolution-GC - Agilent Tech Model# 6890, AutoSampler – CTC A200 and High-Resolution Mass-Spec. – Waters (Gandalf). The samples were spiked with ES (extraction standard) and then extracted by soxhlet (with toluene), spiked with AS (alternate standard) after solvent exchange, then the samples were split (½ split for archive) ½ split went through our cleanup procedure, then transferred final extract to an autosampler vial and spiked then spiked with 20 µL of JS (injection standard solution) prior to analysis.
Calibration	The analytes and labeled standards in the initial calibration exhibited RSDs less than 20%. All compounds in the continuing calibration tests met acceptance criteria.
QC Notes	The HRMS system displayed mass resolving power of at least 10,000 during the analysis. Labeled and sampling (surrogate) standard recoveries were acceptable. The samples were extracted within the 30-day from collection holding time and analyzed within the 45-day from extraction to analysis holding time required by the method.
Reporting Notes	The TEQ was calculated and reported to the client using the I-TEFs and the WHO-2005 TEF, calculated several different ways. We also reported Totals and Detection Limits. The results presented in this report are representative of the samples as provided to the laboratory. The samples, calibrations and standards for the data presented in this report were analyzed at 2714 Exchange Drive, Wilmington, NC 28405.

General Reporting Notes – Data Qualifiers

The following are general reporting notes that are applicable to all Enthalpy Analytical, Inc.-Wilmington, NC data reports, unless specifically noted otherwise.

General Data Qualifiers / Data Attributes

- B – The analyte was found in the method blank, at a concentration that was at least 10% of the concentration in the sample.
- C – Two or more congeners co-elute. In EDDs, C denotes the lowest IUPAC congener in a co-elution group and additional co-eluters for the group are shown with the number of the lowest IUPAC co-eluter**.**
- E – The reported concentration exceeds the calibration range (upper point of the calibration curve).
- EMPC – Represents an estimated maximum possible concentration. EMPCs arise in cases where the signal/noise ratio is not sufficient for peak identification (the determined ion-abundance ratio is outside the allowed theoretical range), or where there is a co-eluting interference.
- J – Indicates that an analyte has a concentration below the reporting limit (lowest point of the calibration curve).
- ND – Indicates a non-detect.
- NR – Indicates a value that is not reportable.
- PR – Due to interference, the associated congener is poorly resolved.
- DI – Indicates the presence of a quantitative interference.
- SI – Denotes “Single Ion Mode” and is utilized for PCBs where the secondary ion trace has a significantly elevated noise level due to background PFK. Responses for such peaks are calculated using an EMPC approach based solely on the primary ion area(s) and may be considered estimates.
- U – The analyte was not detected. The Estimated Detection Limit (EDL) may be reported for this analyte.
- V – The labeled standard recovery was found to be outside of the method control limits.

DRBC/TMDL Specific Data Qualifiers / Data Attributes

- J – The reported result is an estimate. The value is less than the minimum calibration level but greater than the Estimated Detection Limit (EDL).
- U – The analyte was not detected in the sample at the Estimated Detection Limit (EDL).
- E – The reported concentration is an estimate. The value exceeds the upper calibration range (upper point of the calibration curve).

- D – Dilution Data. Result was obtained from the analysis of a dilution.
- B – Analyte found in the sample and associated method blank.
- Cxx – Co-elutes with the indicated congener, data is reported under the lowest IUPAC congener. 'xx' denotes the IUPAC number with the lowest numerical designated congener.
- NR – Analyte is not reportable because of problems in sample preparation or analysis.
- V – Labeled standard recovery is not within method control limits.
- X – Results from re-injection/repeat/second-column analysis.
- EMPC – Estimated Maximum Possible Concentration. Indicates that a peak is identified but did not meet the method specified ion-abundance ratio.

Lab Identifiers

- AR – Indicates use of the archived portion of the sample extract.
- CU – Indicates a sample that required additional clean-up prior to HRMS injection/processing.
- D – Indicates a dilution of the sample extract. The number that follows the "D" indicates the dilution factor.
- DE – Indicates a dilution performed with the addition of ES (Extraction Standard) solution.
- DUP – Designation for a duplicate sample.
- MS – Designation for a matrix spike.
- MSD – Designation for a matrix spike duplicate.
- RJ – Indicates a reinjection of the sample extract.
- S – Indicates a sample split. The number that follows the "S" indicates the split factor.

ENTHALPY ANALYTICAL

Analytical Summary

EU Job #: J130	**Report Due Date:** 10-Aug-18
Client Project #: 404862	**Turn-Around Time:** 10 business days
Client PO #:	**EU Project Manager:** Lindsay Boone

Client Information

Company Name:	Ethalpy-Orange
Send Report to:	Ranjit Clarke
Email(s):	ranjit.clarke@enthalpy.com
Address:	1 Park Plaza Suite 1000
	Irvine, CA 92614
Phone:	714 771-6900

Job Specific Details

Analysis/Methods Requested:	Method 8290
Matrix:	Solid
Qty. of Samples for Analysis:	6
Samples on Hold:	0
Sample Storage Location:	R-1
Sample Condition:	Good
Sample Temperatures (°C):	0.9
Sample Collection Date:	23-Jul-18
Date Samples Received:	27-Jul-18

Re: Work Plan – Environmental Assessment
Southern California Edison Substation
Agua Mansa Commerce Park
1500 Rubidoux Boulevard, Riverside, CA 92509
Langan Project No.: 721013501

Dear Dr. Zhai:

Langan Engineering & Environmental Services Inc. (Langan) has prepared this Work Plan to conduct a subsurface soil sampling investigation in and around the Southern California Edison (SCE) substation within the former Riverside Cement Plant (RCP). The objective of the subsurface soil sampling is to determine the potential presence of chemicals of concern (COCs) associated with the substation.

This work plan presents our pre-field activities and sampling methodology. It also presents the chemical analyses to be performed as part of the field program.

A site visit was conducted on 20 September 2018 with representatives from SCE, Department of Toxic Substance Control (DTSC), Martin Marietta, and Crestmore Redevelopment LLC to discuss the proposed investigation activities, field equipment to be used, logistics/requirements for working in and around the SCE substation, and schedule for implementing the field work.

Based on discussions with the DTSC during the site visit on 20 September 2018, Langan and DTSC agreed to conduct a subsurface sampling event that will include fourteen (14) shallow soil borings to a maximum of five (5) feet below ground surface (bgs).

However, based on discussions with SCE representatives, SCE has an internal protocol for substation decommissioning, which requires sampling on 10 feet by 10 feet grid of the entire footprint of the substation. This grid spacing increased the total number of soil sampling locations to forty-eight (48). SCE requires the borings to be initially advanced to five (5) feet bgs and field-assessed to determine whether borings need to be drilled deeper than 5 feet (see Figure 1). All 14 of the original DTSC shallow soil borings will be collected and analyzed for all the constituents listed below. Additionally, asphalt and concrete at the site will be sampled in accordance with EPA Region 1 Standard Operating Procedures for Sampling of Porous Surfaces for Polychlorinated Biphenyls (EPA Region 1 SOP).

During the site meeting, the SCE representatives informed the group that their substations typically have a grounding grid buried beneath the substation footprint at approximately 12 – 18 inches below the ground surface. The grounding grid is typically installed with a 1 foot by 1 foot spacing throughout the substations. Due to the age of this substation (built in the 1960s), SCE indicated they did not have as-built drawings showing the substation layout and the grounding grid system; therefore, they are not certain as to the presence and/or configuration of the grid system. An Underground Utility Locator firm will be used to identify where the grounding grid system is located to avoid contacting the grounding grid during installation of the soil borings. As part of their requirements for investigating substations, SCE indicated that the upper 12-inches of material/soil will be removed using hand tools such as a trowel and/or shovel to expose the grounding grid prior to advancing drilling equipment. Samples will be collected in the upper 12-inches as indicated below.

During drilling, soil samples will be collected from 0.25-feet, 0.5-feet, 2-feet, and 5-feet bgs. The samples will be analyzed for total petroleum hydrocarbons (TPH) using EPA Method 8015M (carbon chain), Title 22 metals using EPA Method 6000/7000 series, Polychlorinated Biphenyls (PCBs) using EPA Method 8082B, and hexavalent chromium using EPA Method 7199. The samples at 0.25-feet bgs will be analyzed for PCBs using EPA Method 8082B only. The sample at 0.25-feet bgs is being collected as a shallow soil sample since the source of the oil would be from spills or leaks from the aboveground oil-filled equipment. In the experience of SCE working with the EPA, the EPA would be most interested in the uppermost soil sample collected at 0.25-feet. If PCBs in the soil is less than 1 mg/kg in that shallow sample, EPA has stated that the source oil would not be greater than 50 mg/kg, and the Site would not meet the threshold for the application of Toxic Substances Control Act (TSCA) assessment and management of material with PCBs. Two of the DTSC samples, SCE-13 and SCE-27, will also be sampled for semivolatile organic compounds (SVOCs) using EPA Method 8270C and polycyclic aromatic hydrocarbons (PAHs) using EPA Method 8270C-SIM due to potential staining that was observed during the site visit. Further details of the sampling program are presented below.

WORK PLAN

- Pre-Field Activities – The substation and associated RCP infrastructure is still in place and active. Prior to commencing the field activities, Langan will coordinate with SCE and other stakeholders who are supplied power from the substation to properly de-energize the system prior to conducting field activities. In addition, prior to conducting field activities, Underground Services Alert (USA) will be contacted a minimum of 48-hours in advance to locate and mark known subsurface utilities within the proposed investigation area. In addition, a private geophysical locating firm will be contracted to clear the proposed borehole locations of potential underground utilities using ground penetrating radar (GPR) and other subsurface utility location techniques. Langan will mark the proposed borehole locations in advance of the utility clearance. During the mark-out, Langan will coordinate with an onsite RCP representative and the SCE representative who is familiar with the substation area to confirm that each of the proposed boring

locations is free of known subsurface utilities. Prior to field work activities, Langan will attempt to identify and expose the grounding grid using hand tools as discussed above.

- The field work will be conducted under an existing Health and Safety Plan that was prepared for previous site investigations on site (refer to Appendix C of the Site Assessment Work Plan (SAWP), Agua Mansa Commerce Park, Jurupa Valley, Riverside County, California dated 1 June 2018). In addition, a job safety assessment will be prepared to address the potential electrical hazards for the proposed investigation including the development and implementation of a lock-out / tag-out procedure.

- Field Sampling Activities – The field activities will be observed on a full-time basis by a degreed, experienced Langan engineer, geologist or scientist under the supervision of a licensed professional geologist or engineer. In addition, an SCE representative will be onsite to assist in locating the grounding grid, render repairs to the grounding grid if damage occurs, and observe the field activities. At no time will field activities be conducted without an SCE representative present on site. Field observations will be recorded on field data sheets. Sampling tools, drilling equipment and other equipment coming into contact with soils will be decontaminated prior to use at each investigation location using a non-phosphate detergent such as Alconox or equivalent and rinsed with clean water and/or a wire-brush to remove soil and debris from the tools. All field activities will be completed wearing fire retardant clothing (FRC), as required by SCE.

- The boreholes will be advanced using a direct push drill rig. A shovel and/or hand auger will be used to initially advance the boreholes to a depth of at least 1 foot bgs. After 1 foot bgs, the boreholes will be advanced using the direct-push drill rig to a total depth of 5 feet bgs. Soil samples will be collected at 0.25-feet, 0.5-feet, 2-feet, and 5-feet bgs. The samples collected at 0.25-feet and 0.5-feet bgs will be collected using the hand auger or trowel. The samples collected at 2-feet and 5-feet bgs will be collected using the direct-push rig equipped with a core barrel lined with an acetate sleeve. The soil samples will be screened in the field using a photoionization detector (PID), visually examined for staining and/or odors, and classified in the field in accordance with the Unified Soil Classification System (USCS). The soil samples collected from 0.25-feet, 0.5-feet, 2-feet, and 5-feet bgs will be transferred to laboratory supplied sample containers for the analytical testing, labeled, stored on ice, and transferred to a State-certified analytical laboratory under chain-of-custody protocol. The soil samples collected from 0.5-feet and 2-feet bgs will be analyzed for the constituents listed below. The soil samples collected from 0.25-feet bgs will be analyzed for PCBs only. The soil samples collected from 5-feet bgs will be placed on hold pending results from the 0.25-feet, 0.5-feet, and 2-feet bgs soil samples. DTSC samples SCE-13 and SCE-27 from 0.5-feet and 2-feet bgs will be analyzed for SVOCs and PAHs in addition to the constituents below due to staining that was observed during the site visit. In addition, any other stained or discolored soils observed during the sampling event will be analyzed for the constituents listed below.

- There are four (4) concrete pads on the site, located underneath the 4 transformers. Concrete chip samples will be collected from the four corners of each transformer pad

in accordance with the EPA Region 1 SOP. Should evidence of oil spills be observed (i.e., dark colored stains, light discolored areas) during the sampling event, additional concrete samples will be taken. The concrete chip samples will be transferred to laboratory supplied sample containers for the analytical testing, labeled, stored on ice, and transferred to a State-certified analytical laboratory under chain-of-custody protocol. The concrete chip samples will be analyzed for PCBs.

- Soil and concrete chip samples will be separated into composite groups based on their proximity to each other. Soil samples will be separated into composite groups of six (6) soil samples, and concrete samples will be separated into composite groups of four (4) concrete chip samples. Samples collected from each depth interval will be lab-composited within the composite group to create one representative sample from that depth. All of the soil composite groups will have two discrete samples (0.5-feet and 2-feet bgs) analyzed for TPH, hexavalent chromium, and Title 22 metals and three composite samples (0.25-feet, 0.5-feet, and 2-feet bgs) analyzed for PCBs to satisfy SCE sampling and analysis requirements. All of the concrete composite groups will have one composite sample analyzed for PCBs to satisfy SCE sampling requirements.

- The 14 DTSC soil sampling locations will be analyzed for Title 22 metals, hexavalent chromium, TPH, and PCBs from the same depth intervals described above regardless of their composite groups. If only one DTSC soil sample is located within a composite group, then that sample will be selected as the discrete sample for TPH, hexavalent chromium, and Title 22 metals. If more than one DTSC soil sample is located within a composite group, then multiple discrete samples will be analyzed for TPH, hexavalent chromium, and Title 22 metals. All 14 DTSC soil samples will be analyzed as discrete samples for PCBs. In addition, two DTSC soil samples (SCE-13 and SCE-27) will also be analyzed for SVOCs and PAHs for the 0.5-feet and 2-feet bgs depth intervals due to soil staining.

- Decontamination - To reduce the potential for cross contamination, drilling and sampling equipment used during the investigation activities will be thoroughly cleaned, before and after each use with a non-phosphate detergent such as Alconox or equivalent and rinsed with clean water or a wire-brush to remove soil and debris from the tools.

- Waste Management – The boreholes will be backfilled with a bentonite/grout and soil cuttings mixture.

- Analytical Testing – Samples will be analyzed in accordance with the DTSC and SCE agreed-upon sampling and analysis plan. To manage analytical costs, soil samples will be separated into composite groups of six (6) soil samples and concrete samples will be separated into composite groups of four (4) concrete chip samples. Depending on the analysis, either the samples from the composite groups will be lab-composited and analyzed or one discrete sample from each composite group will be selected and analyzed. Where there are composite samples obtained, laboratory reporting limits (RLs) will need to be less than the screening level divided by the number of samples in the composite. The samples will be analyzed for the following:

- PCBs by EPA by EPA Method 8082 (56 samples)
- Title 22 Metals by EPA Method 6010/7000 (28 samples)
- Hexavalent chromium by EPA Method 7199 (28 samples)
- TPH-carbon chain by EPA Method 8015 modified (28 samples)
- SVOCs by EPA Method 8270C (4 samples)
- PAHs by EPA Method 8270C-SIM (4 samples)

Table 1 summarizes the sample locations, depths, and analytical testing. The samples will be analyzed on a five day or shorter turnaround basis.

- Report Preparation – Upon completion of the field activities and analytical testing Langan will prepare a report summarizing our field observations and results of the analytical testing. We will provide a draft copy of the report to Crestmore Redevelopment LLC for review and comment. Upon receipt of Crestmore Redevelopment LLC comments, Langan will prepare a final report for submittal to DTSC and SCE for their review and comments. Comments received from DTSC and SCE will be reviewed and incorporated into the Final Report, as necessary, and will be submitted to appropriate stakeholders.

If you have questions related to this Work Plan, please do not hesitate to contact Mr. Brad A. McCardell, PG or the undersigned.

Sincerely,

Neil Shukla

EXECUTIVE SUMMARY

Langan Engineering and Environmental Services, Inc., (Langan) was retained by Crestmore Redevelopment LLC, a Colorado LLC to prepare this update to the previous Phase I Environmental Site Assessment (ESA) prepared by Langan for the Rubidoux / Agua Mansa Open Space (Subject Property), dated March 23, 2017. The Subject Property consists of approximately 79 acres located along the southern portion of the former Riverside Cement Plant (RCP) and includes Assessor's Parcel Number (APN) 175-180-001, the southern portion of APN 175-170-041, 175-170-043, and 175-170-026. The Subject Property excludes the Empire Water Property (APN 175-170-042) and the West Riverside Water Company Canal (APNs 175-170-002 and 175-170-007). Figure 1 depicts the approximate location of the Subject Property and the RCP.

The Subject Property is bound to the west by Rubidoux Boulevard, to the north by the RCP, to the south by Agua Mansa Road, and to the east by industrial development. As shown on Figure 2, the eastern half of the Subject Property contains the Commercial Quarry, unpaved roads, and Cement Kiln Dust (CKD)-containing soil areas. The western half contains the flooded Crestmore Quarry, seven buildings that supported the mine/quarry operations, a mine shaft, two mine vents, and an area of former Kaolin clay storage. The Union Pacific Railroad (UPRR) track runs along the western portion of the Subject Property. Two groundwater monitoring wells are located on the Subject Property, which include MW-3 (southern boundary) and MW-4, which is located southwest of the seven buildings on the Subject Property. In addition, a septic system is located southwest of the seven buildings and north of MW-4 (western portion of the Subject Property). The septic system has been included in this Phase I ESA update as part of the Subject Property as it supported both the RCP and the mine operations (i.e., seven buildings) on the Subject Property (Figure 2).

This Phase I ESA update was conducted using the guidelines of the American Society for Testing and Materials (ASTM) Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process), and the United States Environmental Protection Agency's (USEPA) 2006 All Appropriate Inquiry (AAI) Rule (40 CFR Part 312). The objectives of this Phase I ESA update was to review the information presented in the previous Phase I ESA and to conduct updated listing searches and a site visit relative to the potential presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a Recognized Environmental Condition (REC).

- REC 1: Cement Kiln Dust (CKD) – Based on information provided in Langan's Phase I Environmental Site Assessment for Riverside Cement Plant dated June 10, 2016, Crestmore Redevelopment, LLC, and Preliminary Environmental Assessment Report for Agua Mansa Commerce Park, dated December 20, 2017, CKD may have been placed with soil at the Subject Property. According to RCP management, an estimated 250,000 tons of CKD was generated by the former RCP site operations between approximately 1955 and 1979 (ERM, Technical Evaluation 9/30/90 EPA FIT Report, Riverside Cement Company Crestmore Plant, dated November 1991). The majority of the CKD was placed with approximately 48 yds^3 of refractory (basic) bricks, soils, and other materials primarily in the Wet Weather Quarry to the north of the Subject Property. However, historical documentation indicates that some of the CKD was placed on the Subject Property in the Commercial Quarry and an area southwest of the Commercial Quarry (ERM, Technical Evaluation 9/30/90 EPA FIT Report, Riverside Cement Company Crestmore Plant, dated November 1991). Although historical documents indicate that the majority of CKD at the Commercial Quarry was removed and recovered by the late 1980s for mill or kiln feed supplement (ERM EPA FIT Report, 1991), visual observations from site visits on February 28, 2017 and May 11, 2018 identified the potential presence of CKD containing soils in an area southwest of the Commercial Quarry. Historical documents also suggest that the CKD may have been placed along the southern portion of the Subject Property north of groundwater monitoring well MW-3 along with refractory brick which may contain hexavalent chromium. The limits of the suspected CKD containing soil areas are shown in Figure 2.

- REC 2: Mine Shaft and Mine Vents – According to RWQCB records referenced in a 2009 DTSC site screening assessment for the former RCP site, old mine shafts were reportedly used to place various materials. Specifics regarding the nature of these materials are unavailable, and it is unknown whether the mine shaft on the Subject Property was used for this purpose.
- REC 3: Former Blacksmith Shop (demolished) – Although details regarding operations at the Blacksmith Shop are unknown, it is likely that operations utilized quenching fluids

such as oils or brines. The location of the former Blacksmith Shop, now demolished, is shown on Figure 2.

- REC 4: AST - One 1,500 – 2,000 gallon open top AST was observed near the northwestern boundary of the Commercial Quarry. A viscous oil substance was observed at the valve and a small area (approximately 2'x2') on the ground directly below the valve beneath the tank was observed to be stained.

- REC 5: Hydraulic Fluid Reservoir – One 250 gallon hydraulic fluid reservoir with a pump was observed on the western side of the Technical Services – Material Testing Lab. The hydraulic pump inside the reservoir appeared to be in good condition with no obvious leakage and/or staining. The reservoir appeared to have a below-ground concrete secondary containment with hoses that ran underground and appeared to connect to the concrete breaker inside the Material Testing Lab, which was adjacent to the vault.

- REC 6: Septic Tanks – Two septic tanks are mapped on the adjacent parcel (APN 175-170-041) which has been included in the Subject Property for the purposes of this Phase I ESA.

- REC 7: Transformers – On the exterior eastern side of the Research Furnace building, two pole-mounted transformers that were identified in Langan's previous Phase I ESA, dated 23 March 2017, were removed. According to Pat Crites (RCP Site Manager), these transformers were removed approximately six to eight months ago and were tested for PCBs. No PCBs were detected and the transformers were moved to the Packhouse, awaiting off-site disposal. Prior to their removal, the transformers were described as being in poor condition and corroded.

The following *de minimis* condition was identified at the Subject Property:

- Staining below an overhead crane was observed inside the Welding Shop. This staining is considered a *de minimis* condition at the Subject Property.

Recent groundwater monitoring activities indicate that the hexavalent chromium groundwater concentrations have remained stable over the past twenty years and that concentrations are in the same range as the data from regional groundwater wells in the SWRCB's GAMA Program. Based on the most recent groundwater monitoring activities from November/December 2016,

March 2017, and May 2017 on the Subject Property, groundwater is not considered a REC at the Subject Property.

No Historical RECs (HRECs), Controlled Recognized Environmental Concerns (CRECs), or non-ASTM environmental concerns were identified during this Phase I ESA update.

INTRODUCTION

Langan Engineering and Environmental Services, Inc., (Langan) was retained by Crestmore Redevelopment LLC, a Colorado LLC to prepare this update to the previous Phase I Environmental Site Assessment (ESA) for the Rubidoux / Agua Mansa Open Space (Subject Property), dated March 23, 2017. The Subject Property consists of approximately 79 acres located along the southern portion of the former Riverside Cement Plant (RCP) and includes Assessor's Parcel Number (APN) 175-180-001, the southern portion of APN 175-170-041, 175-170-043, and 175-170-026. The Subject Property excludes the Empire Water Property (APN 175-170-042) and the West Riverside Water Company Canal (APNs 175-170-002 and 175-170-007). Figure 1 depicts the approximate location of the Subject Property and the RCP.

The purpose of this Phase I ESA update is to verify and/or modify previously identified Recognized Environmental Conditions (RECs) and to identify potential new RECs since Langan's last Phase I ESA, dated March 23, 2017, in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." De minimis conditions are not considered RECs. De minimis conditions are further defined as conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies.

1.1 Scope of the Phase I ESA Update

The Phase I ESA update was conducted using a standard of good commercial / customary practice and the local standard of care with a scope of services that is generally consistent with American Society for Testing and Materials (ASTM) E1527-13. Significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 are noted in Section 8.0 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Subject Property and adjacent properties; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Subject Property and

adjacent properties; and conducting a site inspection. The specific scope of this assessment included the following:

1. A site reconnaissance to attempt to characterize conditions and assess the Subject Property's location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of surrounding properties from public rights-of-way to identify obvious potential environmental conditions on neighboring properties. The site reconnaissance focused on the spatial extent of the Subject Property and then progressed to adjacent and surrounding properties. Photographs taken as part of the site reconnaissance are provided in Appendix A.

2. Questionnaires were provided to the User and site owner to obtain updated information, as applicable, related to the Subject Property. Copies of the completed questionnaires are provided in Appendix B.

3. A review of available previous environmental reports completed for the Subject Property and adjacent properties provided and obtained by the User. These reports were provided in Appendix C of Langan's *Phase I Environmental Site Assessment for Riverside Cement Plant* dated June 10, 2016.

4. A review of environmental databases maintained by the United States Environmental Protection Agency (USEPA), state, and local agencies within the approximate minimum search distance. Environmental Data Resources, Inc. (EDR) prepared the environmental database report, which is included in Appendix C.

5. An evaluation of sites that may result in a vapor encroachment at the Subject Property. EDR's Vapor Encroachment Screen report is included in Appendix D.

6. Freedom of Information Act (FOIA) requests were sent to federal, state, and local agencies. Any FOIA responses received that alter the conclusions made in this report will be documented in an addendum to this report, as necessary. Copies of the FOIA requests are included in Appendix E.

7. Physical characteristics of the Subject Property were determined through referenced sources for topographic, geologic, soils, and hydrologic data.

8. A review and interpretation of aerial photographs, Sanborn Fire Insurance Maps (Sanborn Maps), historical topographic maps, and city directories to identify previous

activities on and in the vicinity of the Subject Property. Copies are included in Appendices F, G, H, and I, respectively.

1.2 Assumptions, Limitations, and Exceptions

This Phase I ESA update report was prepared for the User for the Subject Property located at the address specified in Section 1.0 of this report. This report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Subject Property addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, described in Section 1.1, was limited to that agreed with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort are generally consistent with ASTM Standard E1527-13. Intrusive sampling (e.g., soil borings and groundwater sampling) was not performed as part of this Phase I ESA update.

This Phase I ESA update is not intended to be a definitive investigation of possible environmental impacts at the Subject Property. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs at the Subject Property. It should be understood that even the most comprehensive Phase I ESA update may fail to detect environmental liabilities at a particular Subject Property. Therefore, Langan cannot "insure" or "certify" that the Subject Property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions and opinions provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-13 and are intended exclusively for the purpose stated herein, at the specified Subject Property as it existed at the time of our site visit.

1.0 SUBJECT PROPERTY DESCRIPTION

1.1 Location and Description

The Subject Property is approximately 79 acres and located in Jurupa Valley, California and along the southern portion of the former RCP, and includes Assessor's Parcel Number (APN) 175-180-001, the southern portion of APN 175-170-041, 175-170-043, and 175-170-026.

The Subject Property is bound to the west by Rubidoux Boulevard, to the north by the former RCP, to the south by Agua Mansa Road, and to the east by industrial development. As shown on Figure 1, the eastern half of the Subject Property contains the Commercial Quarry, unpaved roads, and mapped CKD containing soil areas. The western half contains the flooded Crestmore Quarry, seven (7) buildings that supported the mine/quarry operations, a mine shaft, and several mine vents. The Union Pacific Railroad (UPRR) tracks run along the western portion of the Subject Property. Two groundwater monitoring wells are located on the Subject Property, which include MW-3 (southern boundary) and MW-4, which is located southwest of the seven buildings on the Subject Property. In addition, a spectic system is located southwest of the seven buildings and north of MW-4 (Adjacent Parcel). The septic system has been included in this Phase I ESA update as part of the Subject Property as it supported both the RCP and the mine operations (i.e., seven buildings) on the Subject Property (Figure 2).

Based on visual observations of the surrounding area made during the site reconnaissance, the Subject Property is located in a suburban area primarily characterized by commercial, industrial properties, undeveloped parcels, and residential properties. Surrounding property uses are summarized in the following table.

Direction	Adjoining Properties		Surrounding Properties
	Address	Description	
North	1500 Rubidoux Blvd.	RCP followed by El Rivino Road and an undeveloped parcel of land.	Single-family residences, undeveloped land parcel
West	1995 Agua Mansa Road	Rubidoux Blvd, commerical industrial business park.	Single-family residences, undeveloped land and single-story commercial / industrial buildings.
South	1850 Agua Mansa Road 1780 Agua Mansa Road	Agua Mansa Road followed by commercial / industrial property (Household Hazardous Waste Facility and Tri-County Rubbish Garbage Collection Service).	Single-story commercial / industrial buildings.
East	1725 Agua Mansa Road	Commercial / industrial property (Earthworks Soil Amendments).	Single-story commercial / industrial buildings.

1.2 Description of Subject Property Improvements

Improvements at the Subject Property are summarized in the following table:

SUBJECT PROPERTY IMPROVEMENTS	
Size of the Subject Property	Approximately 79 acres
Buildings/Spaces/Structures	Seven one-story commercial / industrial buildings related to mining and cement manufacturing plant operations. Several areas of undeveloped land, storage areas and an open quarry.
Surface Water	The flooded Crestmore Quarry is located in the central portion of the Subject Property and is often referred to as Crestmore Lake.
Potable Water Source	None.
Sanitary and Sewer Utilities	On-site sewer lines / off-site septic system
Storm Drain Utilities	City of Jurupa Valley
Electrical Utilities	Southern California Edison
Construction Completion Date	RCP buildings dating back to early 1900's
General Construction Type	Concrete block or metal frame with pitched roof
Cooling and Ventilation System Type	None.
Heating System Type	None.
Emergency Power	None.

1.3 Physical Setting

1.3.1 Topography

According to the USGS Fontana, CA Quadrangle 7.5-minute Series Topographic Map, the elevation of the Subject Property is approximately 982 feet above mean sea level (amsl). The Subject Property and surrounding area slope gently to the east and south.

1.3.2 Geology

Regional Geologic Setting

The Subject Property is in the Peninsular Ranges Province of Southern California, dominated by granitic rocks of Mesozoic age that intruded pre-existing sedimentary strata. Tertiary strata was deposited west of the eroded granitic rocks, and as the area was uplifted, some of these strata formed upland coastal plains. The Subject Property is located east of the coastal plains in an area dominated by granitic rocks that are mainly quartz diorite. The Subject Property was used for mining activities because of two steeply dipping limestone formations approximately 200 to 300 feet thick in the north end of the Subject Property. The limestone formations are roughly parallel with an upper and lower formation, the upper formation known as Sky Blue Hill and the lower formation known as Chino Limestone. Thin, poorly developed soils and minor sedimentary strata locally cover the bedrock on the Subject Property (Geomatrix, 1991).

As stated above, the Subject Property is located within the fault-bounded, northwest-southeast trending Perris Block within the Peninsular Ranges geomorphic province of California. The Perris Block is bounded in the east by the San Jacinto Fault Zone, the north by Cucamonga Fault Zone, and the west by Elsinore Fault Zone. According to the USGS maps (USGS 2006), the Perris Block is underlain by lithologically diverse prebatholithic metasedimentary rocks intruded by plutons of the Cretaceous age Peninsular Ranges batholith. Erosional depositional surfaces are developed on the Perris Block and thin to relatively thick sections of Quaternary age non-marine sediments discontinuously cover the basement rock.

Local Geologic Setting

The Subject Property is located in the eastern end of the Jurupa Mountains on the south side of the San Bernardino Valley. The Santa Ana River drains the San Bernardino Valley towards the southwest and is located approximately one-half mile east of the Site.

Based on a review of published geologic reports, maps and referenced geologic information, the Subject Property is underlain by two geologic units consisting of artificial fill and intermixed

tonalite marble and schist. The artificial fill (Qaf) reportedly consists of uncompacted and undocumented fill from mining operations, CKD and unconsolidated talus deposits. The intermixed tonalite, marble, and schist (KtPzms) are Cretaceous and Paleozoic age and consist of intermixed biotite-hornblende tonalite and coarse grained marble containing lesser amounts of biotite-quartz schist.

Based on the information reviewed, quarrying and subsurface mining activities were initiated in 1906 to mine the limestone within the Subject Property. Prior to quarrying, the limestone was present as two generally irregular, roughly parallel, lenticular limestone bodies dipping primarily east-northeast. The upper (shallower) and lower (deeper) limestone bodies are referred to as Sky Blue and Chino Limestones, respectively and were mineralogically similar. The limestone is coarsely crystalline, associated with metamorphosed sediments, enveloped and cut by intrusive igneous rocks and contact metamorphic minerals, including large masses of intrusive microcrystalline quartz monzonite porphyry and quartz monzonite pegmatites. Country rock within the boundaries of the Subject Property consists of Perris quartz-biotite diorite that becomes granodiorite. Quartz monzonite pegmatites occur commonly as dikes in the porphyry and country rock and extended generally less than 2 or 3 feet into the limestone. The most widespread contact rock is composed generally of grossularite garnet with and without diopside.

The shallower, Sky Blue limestone was an arcuate shaped body, enveloped and intruded by quartz diorite and intruded by quartz monzonite porphyry. The body was up to several hundred feet thick and dipped primarily east or northeast. Where the body was thinnest, the limestone was converted to contact rock. Two (2) facies were present within the limestone; a white limestone with localized yellow predazzite beds and a sky blue colored limestone present closer to the intrusive quartz monzonite porphyry and associated pegmatites.

The deeper, Chino limestone was generally composed of alternating bands of yellowish predazzite and white crystalline limestone with widely disseminated graphite flakes. The unit dipped up to 45 degrees east, was at least 2,000 feet long, and had irregular upper and lower surfaces. Banding ranged from few inches to a few feet thick.

Local Faulting

Langan reviewed the following publications and report as part of our geologic review regarding local faulting within the Site:

- Daly, John W., (1931), The Geology and Mineralogy of the Limestone Deposits at Crestmore, Riverside County, California, dated 1931 (Daly, 1931).

- Woodford, A. O., Crippen, R. A., and Garner, K. B., (1941), Section Across Commercial Quarry, Crestmore, California, American Mineralogist, Volume 26, pages 351-381 (Woodford et al, 1941).

- ERM-West, Inc., (1991), Technical Evaluation 9/30/90 EPA FIT Report, Riverside Cement Company, Crestmore Plant, dated November 1991 (ERM-West Report).

Plate 1 included in the Daly, 1931 report shows a northeast-southwest trending fault segment between the Commercial Quarry in the northeast and southwestern portion of the Crestmore Quarry to the southwest. The corresponding report text does not elaborate on this fault and alleges Daly (i) identified only a few small faults of which have no particular significance regarding the major geologic structure of the Site and (ii) did not find any large faults in the area mapped west of the quarries.

The Woodford, et al, 1941 report refers to "a prominent fault (?) running N50^{o}E 70^{o}SE" that extends into bedrock at Station 15 of Woodford, et al's Figure 3-Section Across the Commercial Quarry, 1940'. Additional information of this fault was not provided in this report.

Figures 2-1, 2-2, 2-5, and 3-2 included in the ERM-West Report shows a generally northwest-southeast trending fault in southwestern portion of the Crestmore Quarry. The corresponding report text does not elaborate on the nature or source of this fault.

USGS, CGS and Dibblee maps were also reviewed. No other local faults were mapped on the Site. Based on our review of the referenced publications it is our opinion active faulting (Holocene or younger) is not present within the Site.

The Subject Property is located in the eastern end of the Jurupa Mountains on the south side of the San Bernardino Valley. The Santa Ana River drains the San Bernardino Valley towards the southwest and is approximately one-half mile east of the Subject Property. The ground surface elevations vary between approximately 820 feet amsl to approximately 1150 feet amsl. Groundwater is at a depth of approximately 85-90 feet (804-809 feet amsl) on the southern portion of the Subject Property (Langan, 2017a).

1.3.3 Hydrology

The site is located in the eastern end of the Jurupa Mountains on the south side of the San Bernardino Valley. The Santa Ana River drains the San Bernardino Valley towards the southwest and is approximately one-half mile east of the site. The ground surface elevations vary between approximately 820 feet above mean sea level (amsl) on the southern portion of the site to approximately 1150 feet amsl on the northern portion of the site.

Based on a review of historical site documents, groundwater occurs in three distinct hydrologic units at the site. They are the Chino Limestone (referred to the lowe limestone unit), the Wet Weather, and the Sky Blue (referred to the Commercial unit in historical documents) Limestone units (referred to upper limestone unit), and the Santa Ana River alluvium (ERM-West, August 1991). According to the ERM-West 1991 report, geologic and dewatering feastibility studies were conducted in 1928 and 1950 by W.P. Rowe in the Chino limestone, where the Crestmore quarry is currently located. These studies indicated that the granite layers above and below the Chino limestone act as confined layers. The report states that the Chino limestone water originates mostly from percolation from rainwater at the mine and an influx of water from somewhere below the Santa Ana River to the east.

Pumping wells installed during the 1928 study were screened in the Blue Sky and Wet Weather formations, and displayed a flow consistent with groundwater migration in the river alluvium, prior to dewatering the wells The ERM-West report refers to the Wet Weather and Blue Sky Limestone units as being a continuous unit, and that upper limestone was hydraulically connected to the alluvium east of the original surface outcrops of granite. Figure 1-4 in the ERM-West report show groundwater gradients in the alluvium flow south-southwest in the eastern part of the site and flows west in the southwestern part of the site. ERM-West's report also states that inference of the hydraulic connection in the lower limestone and alluvium were very strong, also evident in Figure 1-4.

According to ERM-West report, the production wells on-site, Well 88-1 and Well 60-1, are screened in the Chino limestone and alluvium, respecitviely, and groundwater from the Chino limestone migrates toards the production wells. The report also explains water consumption at the site, during the time of the report (mid-1980s- early 1990s) , was from precipitation, the northern Chino limestone contact with river alluvium, water from within the Chino limestone aquifer deeper to the east, and the drift to the Wet Weather limesone at 220 feet above sea level. According to the ERM-West report, this was most likely due to the mine drift not being

completely sealed between the limestone units when it was cut in 1985.

Concurent with historical documents (discussed in later sections of this report), and the results of the recent investigation, groundwater flow in the shallow alluvial aquifer is likely towards the Santa Ana River, or towards the south to southeast. Groundwater was measured in the wells onsite at depths between 60 and 135 feet below ground surface (bgs).

2.0 USER PROVIDED INFORMATION

2.1 User/Owner Questionnaires

Per ASTM E1527-13, a User and Owner Questionnaire were provided to the User and Owner to update previous information regarding specialized information related to the Subject Property. William Lynott of Crestmore Redevelopment LLC, a Colorado LLC, completed the User Questionnaire and Mr. John Gillan with Martin Marrieta completed the Owner Questionnaire. Based on the completed questionnaires, Mr. Lynott and Mr. Gillan indicated there were no changes and/or updates since the previous Phase I ESA was completed in March 2017. The completed User and Owner Questionnaires are included in Appendix B.

2.2 Previous Environmental Reports

The following is a summary of the previous environmental reports pertaining to the former RCP Site (Northern Parcel) and/or the Subject Property (Southern Parcel) that were reviewed by Langan:

Related Parcel	Document	Summary
Northern and Southern Parcels	September 30, 1990 – Environmental Protection Agency, Hazardous Site Evaluation Division - Field investigation Team Zone 2 - Ecology and Environment, Inc.	The Environmental Protection Agency requested Ecology and Environment Inc. to conduct a Screening Site Inspection under CERCLA and Superfund Amendments and Reauthorization Act (SARA) of 1980. The focus of the investigation consisted of basic brick containing hexavalent chromium and CKD possibly disposed of at or near the historical groundwater elevation. The report noted the following: • The Riverside Cement Company is listed as a generator in the Resource Conservation and Recovery Act (RCRA) database due to generation of basic brick, asbestos insulation from plant refurbishing, and PCB containing transformers. • The report states that approximately 250,000 tons of CKD had been generated at the RCP and the Subject Property from 1955 to 1979 but was often fed back into the kilns for reprocessing since the kilns were a closed loop system. From 1955 to 1979, approximately 48 yd^3 of brick containing approximately 10 percent hexavalent chromium was placed in the CKD disposal areas. Two soil samples were collected from a suspected CKD disposal area. The soil samples were analyzed for metals. Chromium was detected with a maximum concentration of 4.6 mg/kg and lead was detected with a maximum concentration of 106 mg/kg. A soil sample was also analyzed for California Waste Extraction Test and no metal concentrations exceeded the soluble threshold limit concentration limit. • Groundwater samples were collected from the Yeager Construction Company (YCC) well near the southwest boundary of the Subject Property, and the El Rivino Country Club (ERCC) well approximately 4,500 feet to the north of the RCP. Groundwater samples were collected to determine if the CKD disposal areas had leached metals into the groundwater. The conclusion was that disposal of the CKD material was ongoing and groundwater samples indicated that an observed release into groundwater has occurred.
Northern and	November 1991 - Technical Evaluation 9/30/90 EPA Fit Report	The Technical Evaluation was performed in response to the 1990 report by Ecology and Environment. The Technical

Related Parcel	Document	Summary
Southern Parcels	Riverside Cement Company, Crestmore Plant – ERM-West, Inc.	Evaluation sought to demonstrate that disposal operations at the RCP had no significant impact on groundwater. The report noted the following: • CKD thickness in the Wet Weather Quarry (RCP) reportedly ranges from 2 to greater than 60 feet and was last used for disposal in 1990. The Commercial Quarry (Subject Property) was a secondary disposal area during the 1960's and it was reported that the majority of CKD was removed and recovered in the late 1980s for mill or kiln feed supplement. The north side of the Crestmore Quarry was not designated as a disposal area for CKD. Trucks transporting CKD may have spilled or temporarily stored CKD, which resulted in some CKD on the slopes of the Crestmore Quarry. • ERM-West installed and sampled two monitoring wells in alluvium: MW-1 located north of the Wet Weather Quarry (RCP) and MW-3 located southeast of the Commercial Quarry (Subject Property). Samples from wells 60-1, 88-1, the ERCC, and YCC were collected for comparison. Groundwater test results indicated that total chromium concentrations were equal to or less than 13 micrograms per liter (µg/L). The report noted that well 60-1 and the ERCC well were installed in alluvium while the well 88-1 was installed in the lower Chino Limestone.
Northern and Southern Parcels	June 22, 1994 - Site Inspection Prioritization - Bechtel Environmental, Inc.	This report reviewed the September 1990 and November 1991 reports by Ecology and Environment and ERM-West, respectively. The report noted the following: • The report suggests that an apparent release of metals to groundwater is established based on the data presented in the September 1990 report, where concentrations of aluminum (155 µg/L), chromium (19.4 µg/L), and manganese (34.4 µg/L) were detected in the YCC well (down gradient or to the south) and compared to groundwater samples collected from the ERCC well (up gradient), where concentrations of aluminum (26.9 µg/L), chromium (3.8 µg/L), and manganese(< 1µg/L) were detected. The report mentioned the analytical results from wells YCC and ERCC by ERM-West, Inc. in November 1991 as further proof that a release of chromium and manganese had occurred to groundwater.
Northern and Southern Parcels	October 7, 1994 – SUBJECT: Technical review of EPA Site Inspection Prioritization Report - ERM-West, Inc.	The report re-evaluates the September 1990 and November 1991 reports and disputes the conclusion developed by Bechtel Environmental in the June 1994 report.

Related Parcel	Document	Summary
Northern and Southern Parcels	January 25, 2001 – Draft Technical Memorandum No. 1, Records Review for the CKD Areas at the RCC Crestmore Plant - SECOR	The Technical Memorandum summarizes the findings for records reviewed regarding the CKD disposal areas for Riverside Cement Company. The memorandum noted the following: • In 1960 - The Regional Water Quality Control Board (RWQCB) adopted Waste Discharge Requirements (WDRs) Order No. 60-17 for the RCP, limiting discharge shall not cause groundwater to contain hexavalent chromium in excess of 0.05 mg/L. • June 24 1966 - the RWQCB revised the WDRs to address the discharge of CKD due to a citizen complaint. • July 20, 1966 – RWQCB sent a letter to interested parties that discharge of CKD into the quarry areas containing groundwater had ceased. • January 30, 1968 - RCC informs RWQCB that CKD is recycled through the plant and no longer discharged into the quarry areas. • August 1, 1973 – Hexavalent chromium was detected within wastewater discharge into on-site percolation pond with a concentration of 0.55 mg/L. Cooling water was inadvertently discharged to the wastewater system. • 1976 - WDRs (Order No. 76-78) revised by RWQCB and addressed the discharge of: 1) groundwater pumped from the limestone quarry area to nearby surface water bodies, 2) boiler blowdown water to a lined facility, and 3) septic wastes to on-site leaching systems. • WDRs (Order No. 78-27) were revised to prohibit the discharge of untreated industrial and domestic wastes to subsurface leaching system and approve of a proposed design for treatment of domestic wastes. • August 13, 1991- RCC submitted a Closure Plan to the RWQCB for the CKD area and the boiler blowdown Pond. This closure plan was not available in the RWQCB file records. • March 8, 1993 – County of Riverside submitted a letter to RCC indicating CKD disposal areas are exempt from California Integrated Waste Management Board Requirements. • 1998 - WDRs (Order No. 98-77) for the Site were rescinded by RWQCB.
Southern Parcel	March 23, 2017 – Phase I Environmental Site Assessment for Rubidoux/Agua Mansa Open Space – Langan	The purpose of this Phase I ESA was to idenitify the presence or likely presence, use, or release of hazardous substances or petroleum products. The following RECs were identified: • REC 1: Cement Kiln Dust (CKD) • REC 2: Mine Shafts

Related Parcel	Document	Summary
		• REC 3: Transformers • REC 4: Groundwater • REC 5: Blacksmith Shop • REC 6: AST (One 1,500-2,000 gallon)
Northern and Southern Parcels	May 3, 2017 - First Quarter 2017 Groundwater and Surface Water Monitoring Report – Langan	Langan conducted groundwater sampling on 28 March 2017 for MW-3, MW-4 (west of Subject Property), and the Northern Well (RCP), and collected two surface water samples from the southern and western portion of Crestmore Lake. The groundwater and surface water samples were analyzed for metals, dissolved hexavalent chromium, anions, pH, and total dissolved solids (TDS). The results indicated that only MW-3 contained hexavalent chromium concentrations (17 µg/L) above the hexavalent chromium MCL of 10 µg/L. Concentrations of hexavalent chromium in surface water did not exceed the hexavalent chromium MCL; however, they do exceed the RWQCB's ingestion cancer risk Environmental Screening Level (ESL) of 0.05 µg/L, as well as the dermal contact cancer risk ESL of 0.11 µg/L (RWQCB, 2016).
Northern and Southern Parcels	August 8, 2017 – Groundwater Monitoring Summary Letter – Langan	Langan provided a groundwater monitoring summary letter to the Santa Ana Regional Water Quality Control Board (SARWQCB) to support a no further action (NFA) determination by the SARWQCB with respect to environmental assessment, remediation, and groundwater monitoring at the Subject Property. Langan conducted sampling events in November/December 2016, March 2017, and May 2017 where groundwater samples were collected from MW-3, MW-4, and the Northern Monitoring Well. The November/December 2016 and March 2017 have been summarized above. The May 2017 groundwater sampling results indicated that hexavalent chromium was detected in MW-3 at 16 µg/L, above the California MCL (10 µg/L) and no metals were detected above current California MCLs during the sampling event. No VOCs were detected in wells during the May 2017 samping event. Langan requested an NFA determination for the Site since the recent groundwater analytical data indicated that groundwater concentrations have remained stable for approximately 20 years and hexavalent chromium concentrations are in the same range as the data from regional groundwater wells in the SWRCB's GAMA Program.

3.0 RECORDS REVIEW

3.1 Environmental Records

A copy of regulatory database information was provided by EDR and is included in Appendix C. The EDR report is a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM Standard Practice for E1527-13. Langan reviewed each environmental database to determine if certain sites identified in the report are suspected to represent a potential impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan sites are those sites that could not be mapped due to inadequate address information. Orphan sites that were identified by Langan within the ASTM search radii, either during the Subject Property reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below. All distances to adjacent properties are measured from the perimeter of the Subject Property.

The following table lists the number of sites by database within the prescribed search radius appearing in the EDR Report.

Database Record Summary			
Database Reviewed (Date of government version)	**Minimum Search Area**	**Subject Property listed**	**Number of Sites Within Minimum Search Area**
USEPA DATABASES			
National Priorities List (NPL) (12/11/2017)	1 Mile Radius	No	0
Delisted NPL (12/11/2017)	1 Mile Radius	No	0
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) (11/07/2016)	1/2 Mile Radius	Yes	1
CERCLIS No Further Remediation Action Planned (NFRAP) (01/09/2018)	1/2 Mile Radius	No	0
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (12/11/2017)	1 Mile Radius	No	0
Federal RCRA non-CORRACTS Treatment, Storage, and Disposal Facilities (TSDF) List (12/11/2017)	1/2 Mile Radius	No	0
Federal RCRA generators List (LQG, SQG) (12/11/2017)	1/4 Mile Radius	No	6

Database Record Summary			
Database Reviewed (Date of government version)	**Minimum Search Area**	**Subject Property listed**	**Number of Sites Within Minimum Search Area**

NA - Not Applicable; databases with a "Not Applicable" Minimum Search Radius are databases reviewed as part of the Phase I ESA but not required as per ASTM E1527-13.

A description of the reviewed databases is provided in the EDR Report (Appendix C). A summary of Subject Property database listings and other sites identified within the prescribed search area is presented below.

4.1.1 Federal Agency Database Findings

The Subject Property was listed in the following Federal Agency database: CERCLIS SEMS. The Subject Property database listing is discussed below. Based on distance, topographically cross-gradient or down-gradient position relative to the Subject Property, and non-violation status, none of the adjacent and surrounding sites listed in Federal Agency databases are expected to have a potential impact on the Subject Property.

Riverside Cement Co Crestmore PLT, 1500 Rubidoux Boulevard

The RCP is listed under the SEMS database. According to the SEMS database listing, the RCP is not listed in the National Priority List (NPL) and is listed as state-lead cleanup. Sites listed in the NPL are evaluated by the Superfund Program.

4.1.2 State Agency Database Findings

The Subject Property was listed under the ENVIROSTOR, LUST, and AST databases. No sites that were identified within the designated search radii, which are likely to have current or former releases of hazardous substances, have the potential to migrate to the Subject Property. The RCP was identified on State Agency databases and is discussed below.

Riverside Cement Company – Crestmore Facility, 1500 Rubidoux Boulevard

The RCP is listed under the ENVIROSTOR, LUST and AST databases. According to the ENVIROSTOR database, the RCP is referred to the RWQCB with the lead agency as the USEPA. Potential Chemicals of Concern (COCs) are listed as PCBs and hexavalent chromium, confirmed COCs are not specified. The LUST database lists the RCP status as completed - case closed as of November 5, 1991. The lead agency is listed as Riverside County Local Oversight Program (LOP) with potential COCs listed as heating oil/ fuel oil. According the AST database, the certified unified program agencies is listed as Riverside, the owner is listed as Riverside Cement Company and the total gallons is listed as 5,000. These listings are not considered a REC for the Subject Property.

4.1.3 Other Ascertainable Records

The RCP was listed in the WMUDS/SWAT, SWEEPS UST, HIST UST, CA FID UST, CHMIRS, LDS, TSCA, US AIRS, FINDS, EMI, HAZNET, HIST CORTESE, NPDES, WDS, EDR Hist Auto, ECHO and RGA LUST databases. Sites within the respective minimum search distances were listed in the following databases: WMUDS/SWAT, SWRCY, HIST Cal-Sites, SWEEPS UST, HIST UST, CA FID UST, HIST CORTESE, HWP, MINES, and PROC. Based on distance, topographically cross-gradient or down-gradient position relative to the Subject Property, and non-violation status, none of the adjacent and surrounding sites listed in these databases are likely to have current or former releases of hazardous substances with the potential to migrate to the Subject Property.

4.1.4 Vapor Encroachment Screen

A vapor encroachment screen was conducted for the Subject Property to assess the presence of vapor encroachment conditions (VECs), defined in ASTM E2600-10 as "the presence or likely presence of [chemical of concern (COC)] vapors in the sub-surface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater either on or near the TP." No VECs or likely VECs were identified surrounding the Subject Property. A copy of the vapor encroachment screen is included in Appendix D.

4.1.5 Local Regulatory Agency Findings

Freedom of Information Act (FOIA) Requests

FOIA requests were submitted to the state and local agencies listed below:

- South Coast Air Quality Management District (AQMD). AQMD indicated that records are available for review and consist of site inspection reports. The site inspection reports detail Title V inspections and equipment lists from October 1990 to March 2016, generally pertaining to the former RCP operations to the north of the Subject Property. The inspections noted that emissions (dust) generated were in compliance with the permit held by the former RCP.

- California Environmental Protection Agency Department of Toxic Substances Control (DTSC) Cypress, CA. The DTSC indicated that records are available for review. According to the records reviewed:

  July 27, 1973, RWQCB notified Riverside Cement Company that the sample results for waste discharge had a concentration of hexavalent chromium of 0.55 mg/L. A re-sample was requested to determine if any significant chromate was detected.

  August 1, 1973, Riverside Cement Company notified RWQCB that re-sampling of plant wastewater determined that the concentration of hexavalent chromium was equal to 0.5 parts per million (ppm). The letter states that a pump failure caused treated cooling water be dumped into storm water effluent during the sampling period. A standby pump will be installed in case the circulating pump fails, and water treatment for cooling water will be changed to reduce or eliminate the use of chromate.

  June 6, 1994 – Riverside Cement Company requested from RWQCB concurrence of closure for the CKD disposal area.

December 4, 1996, ERM-West, Inc. provided Riverside Cement Company with an annual groundwater monitoring report summarizing the depth to groundwater in wells MW-1 and MW-3 and the laboratory results for groundwater samples. Groundwater depths were measured to be 107 to 110 feet below the top of casing for MW-1 and 74 to 76 feet below the top of casing for MW-3. Groundwater samples were analyzed for metals, total dissolved solids, turbidity, alkalinity, chloride, color, fluoride, nitrate (NO_3), odor, pH, specific conductance, sulfate, and MBAS (surfactants). Groundwater sample results were compared to USEPA and State of California drinking water maximum contaminant levels.

May 4, 2009 – DTSC prepared a site screening assessment to evaluate potential hazardous material usage / releases from the RCP. The conclusions of the report noted that, according to RWQCB records, old mine shafts were used to dispose of various wastes.

- California Department of Conservation Division of Oil, Gas, and Geothermal Resource (DOGGR). The DOGGR indicated that records are available for review and consist of annual reports and surface mining inspection reports. The surface mining reports indicate that mining activities had not yet started under the approved permit in 1993, and no mining activities were permitted and in operation in 1996 and 1997.

- Riverside County Department of Environmental Health (RCDEH). RCDEH indicated that records are available for review. All of the records reviewed pertained to historical removal, assessment, or remediation of USTs or pipelines at the RCP. None of the former USTs or pipelines mentioned in this document were located on the Subject Property.

- Riverside County Planning Department. The Riverside County Planning Department indicated that records were available for the RCP and the Subject Property. Records consisted of several versions of Environmental Impact Reports and Mining and Reclamation Plans. The Environmental Impact Reports accompanied a renewal application for Surface Mining Permit 180. The board of supervisors approved the application for renewal to Surface Mining Permit 180 in September 1, 1992. Riverside Cement Company proposed to begin surface mining in 1992. The Mining and Reclamation Plan summarizes Geology, Hydrogeology, Minerals and Mining Operations proposed for the RCP and the Subject Property. The Mining and Reclamation Plan summarized the three phases for reclamation of the surface mines at the RCP and the Subject Property. Reclamation consisted of landscaping and sloping the sides of the surface mines at a ratio of 1.5 to 1 (horizontal to vertical).

- Regional Water Quality Control Board. The Santa Ana Regional Water Quality Control Board indicated that records were available for the RCP and the Subject Property. Records consisted of annual storm-water discharge reports from 2007 to 2013. The annual storm-water discharge reports summarizes the laboratory results for storm-water samples that are discharged from the RCP. Riverside Cement Company received a failure-to-comply notice in August 2008 for not submitting an annual report by July 1. Riverside Cement Company submitted the annual storm-water discharge report on September 2008.

Copies of the FOIA requests are included in Appendix E.

California Department of Conservation Division of Oil, Gas, and Geothermal Resources (DOGGR) Well Finder

On May 2, 2018, Langan searched for the Subject Property on the DOGGR online Well Finder database (http://maps.conservation.ca.gov/doggr/index.html#close). The Subject Property is not located within a mapped oil or gas field. There are no oil wells located on the Subject Property. The closest oil well is located approximately 1.7 miles northeast of the Subject Property and is listed as plugged.

State Water Resources Control Board (SWRCB) GeoTracker Site

On May 2, 2018 Langan searched for the Subject Property on the SWRCB GeoTracker online database (http://geotracker.waterboards.ca.gov). The RCP is listed on GeoTracker, but the Subject Property is not. The RCP and nearby listed sites were evaluated as part of the environmental records review summarized in Section 4.1.

DTSC EnviroStor Site

On May 2, 2018, Langan searched for the Subject Property on the DTSC EnviroStor online database (http://www.envirostor.dtsc.ca.gov). The RCP is listed on EnviroStor, but the Subject Property is not. The RCP and nearby listed sites were evaluated as part of the environmental records review summarized in Section 4.1.

4.0 HISTORICAL USE INFORMATION

Langan reviewed available historic resources (including aerial photographs, topographic maps, and city directories) dated 1896 to 2014. Findings of the reviews are presented below.

4.1 Aerial Photographs

Langan reviewed aerial photographs for the Subject Property and surrounding areas for the years 1931, 1938, 1948, 1953, 1959, 1966, 1968, 1975, 1985, 1989, 1990, 1994, 2005, 2010, and 2014. The property to the north of the Subject Property was occupied by the RCP in 1931 and 1938 and surface mining/excavation is apparent on the western half of the Subject Property. The northwestern portion of the Subject Property is occupied by seven structures. Agua Mansa Road can be seen south and Rubidoux Boulevard west of the Subject Property. The 1948 aerial photograph depicts a depression with liquid, which is believed to be the Wet Weather Quarry just north of the northerneastern limits of the Subject Property. The topography shown in the 1953 through 1975 aerial photographs remains similar to that in the 1948 photograph, suggesting that no substantial surface mining/excavation had been conducted on the Subject Property during this time. The 1985 photograph shows that mining/excavation had been conducted in the Commercial Quarry on the eastern side of the Subject Property, and the Commercial Quarry appears to be partially flooded. The 1989 and 1990 photographs show that the Crestmore Quarry had flooded, although the Commercial and Wet Weather Quarries appear to be dry. The Subject Property appears relatively unchanged in the 1994, 2005, 2010, and 2014 aerial photographs.

Surrounding properties consist of agricultural land from 1931 to 1966. Industrial development is depicted south of the Subject Property beginning in 1966, which continues in the southwest of the Subject Property beginning in 1974, and in the southeast and east of the Subject Property beginning in 2005. Surrounding properties are characterized by residential use to the west and northeast. Langan's review of aerial photographs did not indicate RECs at the Subject Property or surrounding areas. Copies of the historical aerial photographs are included in Appendix F.

4.2 Sanborn Fire Insurance Maps

Langan requested historical Sanborn fire insurance maps from EDR. EDR indicated that fire insurance maps covering the Subject Property were not found. A copy of the EDR Certified Sanborn Map Report in included as Appendix G.

4.3 Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Subject Property and surrounding areas for the years 1896, 1898, 1901, 1942, 1943, 1953, 1954, 1967, 1973, 1980, and 2012. The 1896 and 1898 topographic maps depict the Subject Property and immediate vicinity as undeveloped land, the Subject Property is seen with two elevated areas of approximately 1100 feet and 1150 feet amsl. Three

streets surround the Subject Property and appear to be El Rivino Road on the north, Agua Mansa Road on the south, and Rubidoux Boulevard on the west. The Subject Property remained undeveloped in the 1901 topographic map with the exception of new street additions in the south. The 1942 topographic map indicate that the Subject Property was a quarry or open pit mine. The 1943 to 2012 topographic maps note the property to the north as a "cement plant." In the 1953 topographic map and later years, the term "Quarry" or "Quarries" is a descriptor used for the Subject Property, and two railroads in the south and southeast of the Subject Property are described as "Pacific Electric" and "Union Pacific," respectively. The 1954, 1967, 1973, and 1980 topographic maps depict increasing residential and industrial developments in the surrounding vicinity. The 2012 topographic map depicts the Subject Property in its current configuration. Copies of the topographic maps are provided in Appendix H.

4.4 City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1921 through 2013. The following listings were provided for the Subject Property:

- 1970: American Cement Corp, Land Paul B, Riverside Cement Co, Riverside Cement Transportation Department
- 1990: CDK Contracting, Crestmore Federal Credit Union
- 1996: California Cattle Feeders
- 2001: Budcr 11 DS, Crestmorediv, MKTG Dept TXIRiversdcement, Purchasing, Transloading CCF, TX IRIV 0 SD Cement
- 2002: ORO Grande Federal Credit Union

Commercial, industrial, and light manufacturing businesses were listed at adjoining and surrounding properties. A copy of the City Directory Abstract is provided in Appendix I.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance focused on the spatial extent of the Subject Property and then progressed to the adjacent and surrounding properties. The assessment of the adjacent and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or adjacent structures.

5.1.1 Date and Time of Site Visits

The site reconnaissance was performed at 7:30 AM on May 11, 2018 by Kathleen Lo, Brad McCardell, and Neil Shukla of Langan. The owner's site contact was Pat Crites (Mr. Crites) and he accompanied the Langan personnel during the site reconnaisance. The weather at the time of the inspections was overcast and approximately 70° F.

5.1.2 General Subject Property Setting and Reconnaissance Observations

The Subject Property occupies an area of approximately 79 acres and contains several buildings associated with the RCP, the Commercial Quarry, and Crestmore Lake (former Crestmore Quarry). Areas observed during the site reconnaissance included the following:

- The eastern half of the Subject Property contains the former Commercial Quarry and an unpaved access road that runs along the property boundary from the east to the west. Visual observations indicate that CKD material is present to the southwest of the former Commercial Quarry.
- The central portion of the Subject Property contains Crestmore Lake, which resulted from the flooding of the former Crestmore Quarry in the mid 1980's. There is an unpaved access road (former access route to the Crestmore Mine entrance) along the western edge of the lake that allows access from the northern end of the Subject Property to the shoreline, where a dock is situated. According to Mr. Crites, the dock was used by RCP personnel for fishing tournaments. Some debris was observed embedded in the slope to the north of the lake. Mr. Crites noted that a tunnel with a beltway was present to the north of Crestmore Lake, but that the tunnel had collapsed.
- Langan observed two mine vents along the unpaved access road on the western edge of the Crestmore Lake.
- In the northwest portion of the Subject Property, there are seven buildings that supported operations at the RCP. Based on the site reconnaissance, these buildings

were described by Mr. Crites as the Compressor Building (Compressor), Welding Shop (Mine Warehouse), Change House (White Plant Office), Technical Services – Concrete Testing Lab (Carpenters Shop), Pilot Plant (Research Furnace), Mine Superintendent Office (Mine Office) and former Electrical Building. The Change House includes the Engineering-Mineral-Research Library (Library), Technical Services – Material Testing Lab and other mine supervisor offices. A description of each building's function and Langan's observations are provided in the table below:

Building Name	Function	Observations
Compressor Building	Post mine operations: Storage room for white kiln brick or "fire brick" and compressors. Minor repair operations to large equipment and compressors.	White kiln brick stored inside. One dry type transformer at the northern end.
Welding Shop	Former Welding operations of various equipment from early 1900s to 1960s. Minor equipment repairs utilizing overhead crane from 1960s to plant shutdown. Welding operations used welding tables and acetylene as fuel source.	Staining was observed below an overhead crane. An outdoor loading dock and vacant storage room was also observed.
Change House	Includes the library, mine supervisor offices, and material testing lab, which tested materials in response to customer complaints. Also formerly used by mine workers to change into and out of their work clothes prior to their work shifts	Lab contained a concrete breaker which was used to test concrete sample (i.e. cylinders) strengths. A hydraulic fluid reservoir and pump was observed outside the building and appeared to power the concrete breaker.
Technical Services - Concrete Testing Lab	Testing the quality of the cment in the 1960s. Minor quantities of raw material was staged outside at the north end of the lab and inside the lab.	Langan observed humidifier rooms, grinders, mixers, and screener equipment for concrete testing purposes. A concrete-filled catch basin was also observed.
Pilot Plant	1960s: Part of the Technical Services - Concrete Testing Lab to test for cement quality by mimicking the cement making process with raw materials, furnace, and small-scale kiln.	A concrete pad was observed on the north and south ends of the building. A small-scale kiln (decommissioned and removed) was located on the south side. A former furnace was observed inside the building.
Mine Superintendent Office	Office space for mine superintendents and then white cement plant production	Not accessible during the site reconnaissance.

Electrical Building	Contained electrical systems/components. Has been dcommissioned with the equipment removed since the RCP shut down.	Vacant.

- A plugged mine shaft was observed north of the Compressor Building. Mr. Crites informed Langan that this mine shaft was the main shaft for the mine and quarrying operations.
- The area just south of the Compressor Building and southeast of the Change House was described by Mr. Crites as a former boneyard. No equipment/debris or other artifacts were observed in this area. The area appeared covered with concrete that was partially concealed with soils/sediment. This area also was formerly occupied by the Mine Repair shop and Blacksmith Shop, which were demolished before the 1960s. No evidence of staining was observed in the area.
- A locked steel vault was observed on the west side of the Change House, connected to the Technical Services – Material Testing Lab. The lock was cut by Mr. Crites and Langan observed an approximate 250 gallon hydraulic fluid reservoir and pump. The hydraulic pump inside the reservoir appeared to be in good condition with no obvious leakage and/or staining. The reservoir appeared to have a below-ground concrete secondary containment with hoses that ran underground and appeared to connect to the concrete breaker inside the Material Testing Lab, which was adjacent to the vault.
- Staining on the concrete floor below an overhead crane in the Welding Shop was observed.
- The western end of the Subject Property appears to be largely unaffected by previous mining and quarrying operations. A concrete pad, was observed at the western end of the Subject Property. According to Mr. Crites, this area was was used to stage Kaolin clay. This area was not accessible due to fence securing this part of the Subject Property. The UPRR runs along the western boundary of the Subject Property.
- One 1,500 – 2,000 gallon open top AST was observed near the northwestern boundary of the Commercial Quarry. A viscous oil substance was observed at the valve and on the ground underneath the tank.

A map of Subject Property features is provided in Figure 2.

Pits, Ponds, Lagoons

Crestmore Lake was observed in the central portion of the Subject Property. The Commercial Quarry was observed in the eastern portion of the Subject Property.

Pools of Liquid

No pools of liquid were observed at the time of the site reconnaissance.

Storm Drains, Wells, and Cisterns

MW-3 is located on the southern boundary of the Subject Property. MW-4 is located near the southwest corner of the Subject Property. The location of MW-3 and MW-4 is shown on Figure 2.

PCB Transformers and Suspect Equipment

A transformer with a placard indicating "dry type transformer" with a date of 5/1988 was observed inside the Compressor Building. There was no evidence of staining or leakage was observed around the transformer. The transformer is currently being used to power the RCP's AQMD air monitoring system.

Storage Containers and Drums

No storage containers or drums were observed at the Subject Property.

Waste Generation, Storage, and Disposal

Wooden crates/containers used to store cylinders of cored limestone for testing were observed in the former boneyard area. In addition, numerous small cores of limestone were observed in and around the wooden crates/containers. Other than this material, there was no other evidence of waste generation, storage, or disposal on the Subject Property.

Air Emissions or Wastewater Discharges

No air emissions or wastewater discharges were observed at the Subject Property.

Sewage Ejector Pits and Sumps

Two septic tanks are located on the western portion of the Subject Property on APN 175-170-041. There was no visual evidence of impacts in and around the septic tanks. They will need to be decommissioned and removed prior to development on the Subject Property. The tanks

will need to undergo a permitting and inspection process under the oversight of the County of Riverside – Department of Environmental Health.

USTs or ASTs

One 1,500 – 2,000 gallon open top AST was observed near the northwestern boundary of the Commercial Quarry. A viscous oil substance was observed at the valve and a small area (approximately 2'x2') on the ground directly below the valve beneath the tank was observed to be stained.

Monitoring Wells or Remedial Activities

Two groundwater monitoring wells are located on the Subject Property, which include MW-3 (southern boundary) and MW-4, which is located southwest of the seven buildings on the Subject Property. The location of the groundwater monitoring wells are shown on Figure 2.

Stained or Discolored Soils

Stained or discolored soil was not observed at the Subject Property.

Leachate or Seeps

Leachate or seeps was not observed at the Subject Property.

Adjoining and Surrounding Property Uses

The Subject Property is bounded on the west by the UPRR railroad. To the west of the railroad is undeveloped land, a sewer leach field, and Commercial property owned by Skanska, followed by Rubidoux Blvd. The Subject Property is bounded on the north by the RCP. The Subject Property is bounded on the east by Hall Avenue followed by commercial property operated by Earthworks Soil Amendment. Aqua Mansa Road bounds the Subject Property to the southeast, followed by commercial property including the County of Riverside Household Hazardous Waste Facility and Burrtec Waste Industries.

5.2 Interviews

5.2.1 Subject Property Owner

An interview with the Subject Property Owner was not conducted for this Phase I ESA update.

5.2.2 Subject Property Occupants

The Subject Property is currently occupied by RCP which is owned by Martin Marietta at the time of this Phase I ESA update. No previous Subject Property occupants were available for interview as part of this Phase I ESA update.

5.2.3 Owners/Tenants of Adjacent Properties

Owners/tenants of adjacent properties were not available for interview as part of this Phase I ESA update.

6.0 DEVIATIONS AND DATA GAPS

6.1 Deviations

Langan has performed an updated Phase I ESA of the Subject Property using a standard of good commercial and customary practice that is generally consistent with the ASTM E1527-13. Significant deviations were not made to the above referenced standards.

6.2 Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to ASTM E 1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA update was completed without data gaps, with the following exception: Records or approval letters detailing suspected CKD disposal operations were not located.

Sufficient information has been provided from other data sources to render conclusions regarding the presence of RECs at the Subject Property. Thus, these data gaps are not expected to affect the overall findings and opinions of the Phase I ESA. If additional information provided in the FOIA responses alters the conclusions of this Phase I ESA, we will issue an addendum to this report.

7.0 FINDINGS AND OPINIONS

This Phase I ESA update was conducted in general accordance with the ASTM Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process), which also satisfies the USEPA AAI Rule needed to qualify for the bona fide prospective purchaser liability protections available under the CERCLA. The objective of this Phase I ESA update was to verify the information presented in the previous Phase I ESA and to identify potential new concerns regarding the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC. Based on the results of the Phase I update efforts, the following RECs were identified:

- REC 1: Cement Kiln Dust (CKD) – Based on information provided in Langan's *Phase I Environmental Site Assessment for Riverside Cement Plant* dated June 10, 2016, Crestmore Redevelopment, LLC, and Preliminary Environmental Assessment Report for Agua Mansa Commerce Park, dated 20 December 2017, CKD may have been placed with soil at the Subject Property. According to RCP management, an estimated 250,000 tons of CKD was generated by the former RCP site operations between approximately 1955 and 1979 (ERM, Technical Evaluation 9/30/90 EPA FIT Report, Riverside Cement Company Crestmore Plant, dated November 1991). The majority of the CKD was placed with approximately 48 yds^3 of refractory (basic) bricks, soils, and other materials primarily in the Wet Weather Quarry to the north of the Subject Property. However, historical documentation indicates that some of the CKD was placed on the Subject Property in the Commercial Quarry and an area southwest of the Commercial Quarry (ERM, Technical Evaluation 9/30/90 EPA FIT Report, Riverside Cement Company Crestmore Plant, dated November 1991). Although historical documents indicate that the majority of CKD at the Commercial Quarry was removed and recovered in the late 1980s for mill or kiln feed supplement (ERM EPA FIT Report, 1991), visual observations from site visits on February 28, 2017 and May 11, 2018 identified the potential presence of CKD containing soils in an area southwest of the Commercial Quarry. Historical documents also suggest that the CKD may have been placed along the southern portion of the Subject Property north of groundwater monitoring well MW-3 along with refractory brick which may contain hexavalent chromium. The limits of the suspected CKD containing soil areas are shown in Figure 2.

- REC 2: Mine Shaft and Mine Vents – According to RWQCB records referenced in a 2009 DTSC site screening assessment for the former RCP site, old mine shafts were reportedly used to place various materials. Specifics regarding the nature of these materials are unavailable, and it is unknown whether the mine shaft on the Subject Property was used for this purpose.
- REC 3: Former Blacksmith Shop (demolished) – Although details regarding operations at the Blacksmith Shop are unknown, it is likely that operations utilized quenching fluids such as oils or brines. The location of the former Blacksmith Shop, now demolished, is shown on Figure 2.

- REC 4: AST - One 1,500 – 2,000 gallon open top AST was observed near the northwestern boundary of the Commercial Quarry. A viscous oil substance was observed at the valve and a small area (approximately 2'x2') on the ground directly below the valve beneath the tank was observed to be stained.

- REC 5: Hydraulic Fluid Reservoir – One 250 gallon hydraulic fluid reservoir with a pump was observed on the western side of the Technical Services – Material Testing Lab. The hydraulic pump inside the reservoir appeared to be in good condition with no obvious leakage and/or staining. The reservoir appeared to have a below-ground concrete secondary containment with hoses that ran underground and appeared to connect to the concrete breaker inside the Material Testing Lab, which was adjacent to the vault.

- REC 6: Septic Tanks – Two septic tanks are mapped as being located on the adjacent parcel (APN 175-170-041) which has been included in the Subject Property for the purposes of this Phase I ESA.

- REC 7: Transformers – On the exterior eastern side of the Research Furnace building, two pole-mounted transformers that were identified in Langan's previous Phase I ESA, dated 23 March 2017, were removed. According to Pat Crites (RCP Site Manager), these transformers were removed approximately six to eight months ago and were tested for PCBs. No PCBs were detected and the transformers were moved to the Packhouse, awaiting off-site disposal. Prior to their removal, the transformers were described as being in poor condition and corroded.

The following *de minimis* condition was identified at the Subject Property:

- Staining below an overhead crane was observed inside the Welding Shop. This staining is considered a *de minimis* condition at the Subject Property.

Recent groundwater monitoring activities indicate that the hexavalent chromium groundwater concentrations have remained stable over the past twenty years and that concentrations are in the same range as the data from regional groundwater wells in the SWRCB's GAMA Program. Based on the most recent groundwater monitoring activities from November/December 2016, March 2017, and May 2017 on the Subject Property, groundwater is not considered a REC at the Subject Property.

No Historical RECs (HRECs), Controlled Recognized Environmental Concerns (CRECs), or non-ASTM environmental concerns were identified during this Phase I ESA update.

9.0 STATEMENT OF QUALIFICATIONS

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA update meet the definition of Environmental Professional as defined in Subsection 312 10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. They have developed and performed the Phase I ESA update in conformance with the standards and practices set forth in ASTM Practice E1527, which also satisfies the USEPA AAI Rule.

LANGAN

LANGAN

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering and Environmental Services Inc.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the *Landowner Liability Protections* offered under CERCLA. Missing or incomplete information could result in a determination that "all appropriate inquiry" is not complete.

General Information

User/Client Name (s): Willian Lynott

Property Name: Gestraie

Address: 1500 Rubidoux

Property Type: industrial

Type of Property Transaction:

- [x] Purchase of property
- [ ] Financing of property
- [ ] Sale of property
- [ ] Ground Lease
- [ ] Build to Suit Lease
- [ ] Other_____

Reason Why Phase I ESA is required: due diligence for aquisition

Site Contact (s): William Brown

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

(1.) Environmental cleanup liens that are filed or recorded against the *property* (40 CFR 312.25).

Yes ☐ No ☒

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the Phase I ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any environmental liens and to report these liens to the environmental professional conducting a Phase I ESA.]

Note 1 – In certain jurisdictions, federal, tribal, state or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

LANGAN

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

(2.) Activity and use limitations that are in place on the site or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)).

	Yes	No
Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? [Please note, unless specifically delegated in the Scope of Work for the ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any activity and use limitations and to report these limitations to the environmental professional conducting a Phase I Environmental Site Assessment.]	☐	☒

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

	Yes	No
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐	☒

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

		Yes	No
(a.)	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Parts 4a and 4b.]	☐	☒
(b.)	If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	☒	☐
(c.)	Identify an explanation for the lower price and provide a written record of such explanation as an attachment. Known environmental issues (CKD landfills)		

(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).

		Yes	No
	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,	☒	☐
(a.)	Do you know the past uses of the property? Concrete crushing & mining for limestone	☐	☒
(b.)	Do you know of specific chemicals that are present or once were present at the property?	☐	☐
(c.)	Do you know of spills or other chemical releases that have taken place at the property?	☐	☒
(d.)	Do you know of any environmental cleanups that have taken place at the property? Report provided summarizing tank removals + Chemical disposal	☒	☐

(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

	Yes	No
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property? + potential CKD dust	☒	☐

ASTM E-1527-13, Section 10.9

	Yes	No
Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	☒	☐
Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	☒	☐

LANGAN

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? Yes ☐ No ☒

ASTM E-1527-13, Section 10.8

Are you aware if any of the documents listed below exists and if so, whether copies can and will be provided to the Consultant performing the ESA?

	Unaware	Document Exists	Copy will be provided
Environmental site assessment reports	☐	☒	☒
Environmental compliance audit reports	☒	☐	☐
Environmental permits (such as solid waste disposal permits, hazardous waste disposal permits, NPDES permits, wastewater permits, underground injection permits)	☒	☐	☐
Registrations for underground and aboveground storage tanks	☒	☐	☐
Material safety data sheets	☒	☐	☐
Community-right-to-know plan	☒	☐	☐
Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control plans, facility response plans, etc.	☒	☐	☐
Reports regarding hydrogeologic conditions on the property or surrounding area	☐	☒	☒
Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property	☒	☐	☐
Hazardous waste generator notices or reports	☒	☐	☐
Geotechnical studies	☒	☐	☐
Risk Assessments	☐	☒	☒
Recorded Activity and Use Limitations	☒	☐	☐
Environmental Cleanup Reports	☐	☒	☒

Do you have contact information for the prior owner of the property? Yes ☐ No ☒
If yes, please provide information below:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1

RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AGUA MANSA MRF, LLC	***1830 AGUA MANSA ROAD***	***SSW 0 - 1/8 (0.052 mi.)***	***B20***	***84***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

CLUB CAR LLC	***1203 HALL AVE***	***NE 1/8 - 1/4 (0.220 mi.)***	***35***	***117***
CAN FIBRE	***1755 BROWN AVENUE***	***ESE 1/8 - 1/4 (0.244 mi.)***	***F39***	***122***

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FLEETWOOD VIA RICARDO (Continued) **S106387361**

RB Case Number: Not reported
Local Agency: RIVERSIDE COUNTY LOP
File Location: Local Agency
Local Case Number: 200420231
Potential Media Affect: Soil
Potential Contaminants of Concern: Gasoline
Site History: Site History/Release Information Two 2,000 gallon gasoline USTs were removed along with associated piping and fuel dispensers in November 2003. Soil samples were collected beneath the dispensers at 2 feet and 5 feet bgs, beneath piping, adjacent to and west of the USTs at 6 feet bgs, and within the UST cavity at 2 feet and 6 feet bgs. Maximum concentrations were 3780 ppm TPHg (T2-6), 520 ppb B (T2-6), 52600 ppb T (T2-6), 20000 ppb E (T2-6), 522000 ppb X (T2-6), 46 ppb MTBE (LED2), ND<4000 ppb TBA (T2-6), 9.45 ppm lead (T2-6). Samples were analyzed for TPHg, BTEX and oxygenates. The site was placed into LOP on October 23, 2003 for further assessment. Assessment Two soil borings (SB-1 and SB-2) were advanced to groundwater (approximately 76 feet bgs) in the vicinity of the former USTs on April 16, 2004. Soil samples from SB-1 and SB-2 were collected at five-foot intervals to a maximum explored depth of 76.5 feet bgs. The highest concentrations were observed from soil samples collected from soil boring SB-1 (UST cavity) at the 15 and 20 foot depths. Maximum concentrations: 350 ppm TPHg (SB-1 at 20 feet bgs), 0.13 ppm B (SB-1 at 20 feet bgs), 5.6 ppm T (SB-1 at 20 feet bgs), 3.8 ppm E (SB-1 at 20 feet bgs), 35 ppm X (SB-1 at 20 feet bgs), 0.53 ppm MTBE (SB-1 at 15 feet bgs), 0.36 ppm tert-Butylbenzene (SB-1 at 20 feet bgs), 1.2 ppm Naphthalene (SB-1 at 20 feet bgs), 5.6 ppm 1,2,4-Trimethylbenzene (SB-1 at 20 feet bgs), 2.7 ppm 1,3,5-Trimethylbenzene (SB-1 at 20 feet bgs), ND<0.50 ppm Ethanol and Methanol. SVE Pilot Testing One vapor extraction well (VE-1) was installed on July 8, 2006 near the southeast corner of the former UST location. SVE well VE-1 was installed to 30 feet bgs and screened between 15 and 30 feet bgs. Soil samples were collected at 5 foot intervals and select samples were analyzed for gasoline and VOCs by EPA Method 8260B. Soil samples collected at 10, 20 and 30 feet bgs were analyzed and were ND for all constituents tested. A SVE pilot test was conducted July 12th through 14th, 2006. The SVE test was proposed for 5-days but was terminated after 48 hours due to a VOC breakthrough. PID readings reported during the SVE test were between 92 to >9999 ppmV and were believed to be erroneous. The consultant stated that laboratory analysis results for vapor samples were at relatively low levels and were inconsistent with field PID readings and more consistent with soil data. The overall mass of vapor phase gasoline recovered over the 48-hour duration of system operation was estimated at 34 lbs (average of 0.7 lbs per hour). Flow rates at VE-1 fluctuated between 50 and 75 cfm. Maximum vapor concentrations were: 740 ppmV TPHg (VE1-3), 2.5 ppmV B (VE1-3), 110 ppmV T (VE1-3), 23 ppmV E (VE1-3), 149 ppmV X (VE1-3), ND MTBE, 11 ppmV 1,2,4 TMB (VE1-3), 5.5 ppmV 1,3,5, TMB (VE1-3). Closure was requested based on the results of the pilot test and five quarters of groundwater monitoring RCDEH denied closure and required the 5-day SVE test to be repeated since vapor concentrations increased over time and the test was terminated after two days. A 5-day SVE pilot test using VE-1 was performed February 17th through 23rd, 2009. Flow rates at VE-1 were erroneously reported to fluctuate between 98 and 269.5 cfm and later corrected to range from 84 to 146 cfm. PID readings throughout the SVE test ranged from 40.4 to >15,000 ppmV. The ROI was calculated to include the entire footprint of the

FLEETWOOD VIA RICARDO (Continued) **S106387361**

former UST cavity and dispensers. MW-1 is screened from 60 to 95 feet bgs and VE-1 is screened between 15 to 30 feet bgs. The overall mass of vapor phase gasoline recovered over the 143-hr duration of system operation was estimated at 233 lbs (avg of 1.6 lbs/hr). Maximum vapor concentrations were: 1100 ppmV TPHg, 0.97 ppmV B, 80 ppmV T, 20 ppmV E, 176 ppmV X, ND<0.28 ppmV MTBE, 0.94 ppmV isopropylbenzene, 2.4 ppmV n-propylbenzene, 0.24 ppmV PCE, 0.20 ppmV sec-butylbenzene, 11 ppmV 1,2,4-TMB, 5.7 ppmV 1,3,5-TMB. Ending vapor concentrations for most constituents detected were higher at the end of the 5-day SVE pilot test than at the beginning of the test. Based on the elevated vapor concentrations detected and mass of vapor phase gasoline recovered during the 5-day SVE pilot test, a 30-day SVE test was required by RCDEH to clearly demonstrate that vapor recovery has reached the point of diminishing returns (asymptotic levels). Soil Excavation Excavation of contaminated soil was proposed in lieu of performing additional SVE testing to expedite site cleanup. Approximately 3200 tons of impacted soil was excavated March 1st through March 23rd, 2010. Twelve (12) confirmation soil samples were collected at the bottom and side walls of the approximately 8192 square feet excavation pit. All soil samples were non-detect for all constituents tested except for 0.006 ppm Xylene and 0.006 ppm 1,2,4 TMB detected in the deep soil sample collected at the west wall of the excavation pit (X24 Deep Wall-W@ approximately 30 feet bgs). Groundwater Monitoring To assess the potential for groundwater impact near the UST, one groundwater monitoring well (MW-1) was installed on July 19, 2004 approximately 20 feet southeast of the former UST cavity that is believed to be downgradient. Soil samples were analyzed at 5 foot intervals from 5 feet to 75 feet bgs. MW-1 was advanced to a depth of 95.5 feet bgs and screened from 56 to 95 feet bgs. Groundwater was encountered at 75 feet bgs. Analytical results for the groundwater sample collected from MW-1 were non-detect for all constituents tested. Maximum soil concentrations were at 65 feet bgs: ND<0.5 ppm TPHg, ND<0.001 ppm B, 0.004 ppm T, 0.002 ppm E, 0.012 ppm X, 0.011 ppm MTBE, ND<0.002 ppm tert-BBNZ, ND<0.002 ppm Napthalene, ND<0.001 ppm 1,2,4-TMB, ND<0.001 ppm 1,3,5-TMB. Five groundwater sampling events were conducted from August 2004 through October 2007. Maximum groundwater concentrations: ND<0.50 ppm TPHg, ND<0.5 ppb B, 0.6 ppb T (10/17/07), ND<1.0 ppb E, ND<1.0 ppb X, ND<5.0 ppb MTBE, 7.6 ppb Naphthalene (9/19/05). Water levels have fluctuated from 73.20 to 78.66 feet bgs. Anticipated groundwater flow direction is to the southeast towards the Santa Ana River. The closest domestic water supply well (Well 04 Old Skotty) is located approximately 1049 feet west of the site and according to the well report on Geotracker, VOCs have not been detected in this well. Regional Board concurred with closure on 5/13/2010 and the no further action/closure letter was issued 6/14/2010

CERTAINTEED CORP (Continued) **1000395862**

Registry ID: 110002144581

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

Registry ID: 110055672106

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and

INLAND CONCRETE ENTERPRISES (Continued) **1006837231**

disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Number of Fatalities:	Not reported
#1 Pipeline:	Not reported
#2 Pipeline:	Not reported
#3 Pipeline:	Not reported
#1 Vessel >= 300 Tons:	Not reported
#2 Vessel >= 300 Tons:	Not reported
#3 Vessel >= 300 Tons:	Not reported
Evacs:	Not reported
Injuries:	Not reported
Fatals:	Not reported
Comments:	Not reported
Description:	RP states that a pump seal failed causing the release of cooling tower water to a drainage swale. The storm drain system would discharge into the Santa Ana River. However, the water has not been detected any further than 100' into the drainage swale. The estimated amount of the release is in excess of 10,000 gallons.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Northeast Map:	5620416 SAN BERNARDINO SOUTH, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

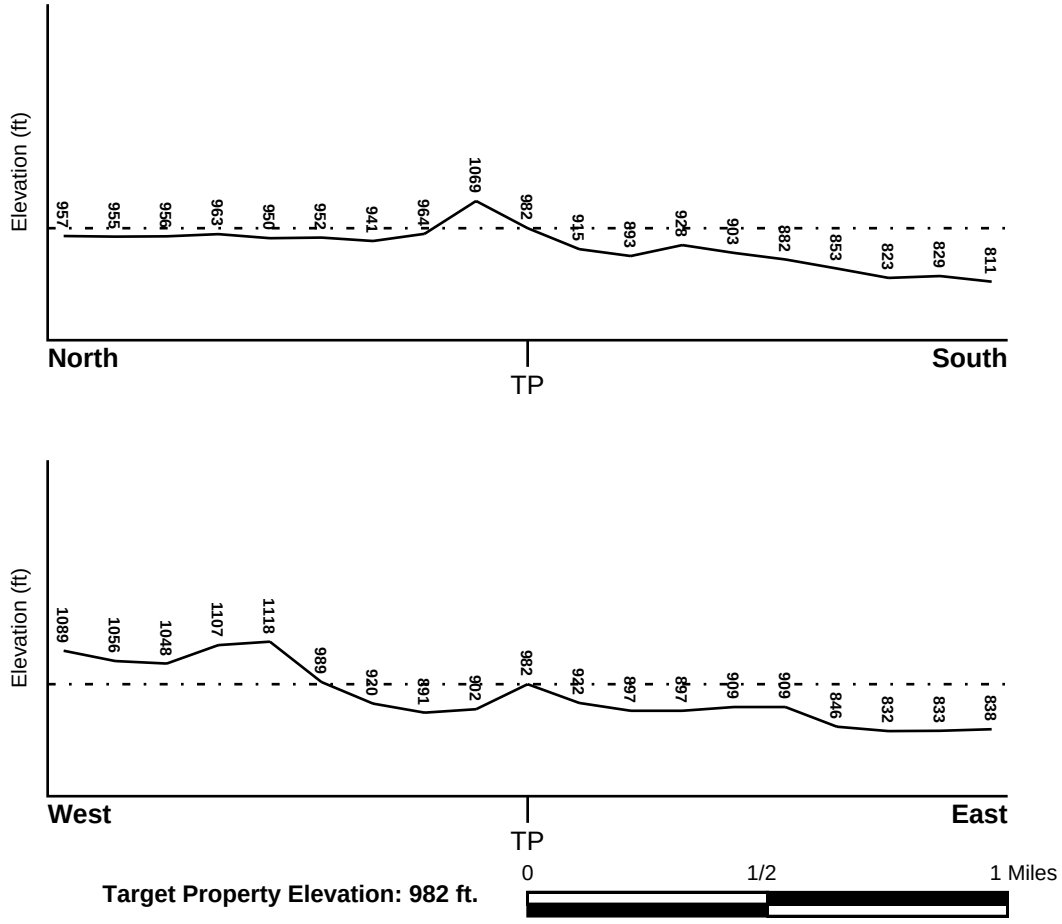
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0045G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C0065G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FONTANA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile WNW
Site Name:	Riverside Cement Co Crestmore Plt
Site EPA ID Number:	CAD063844443
Groundwater Flow Direction:	SW ON A REGIONAL BASIS.
Measured Depth to Water:	not available, but a well 2,000 feet east of the site had a water level of 800 feet above mean sea level.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/4 - 1/2 Mile WNW	Varies
1G	1/4 - 1/2 Mile WNW	Varies

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

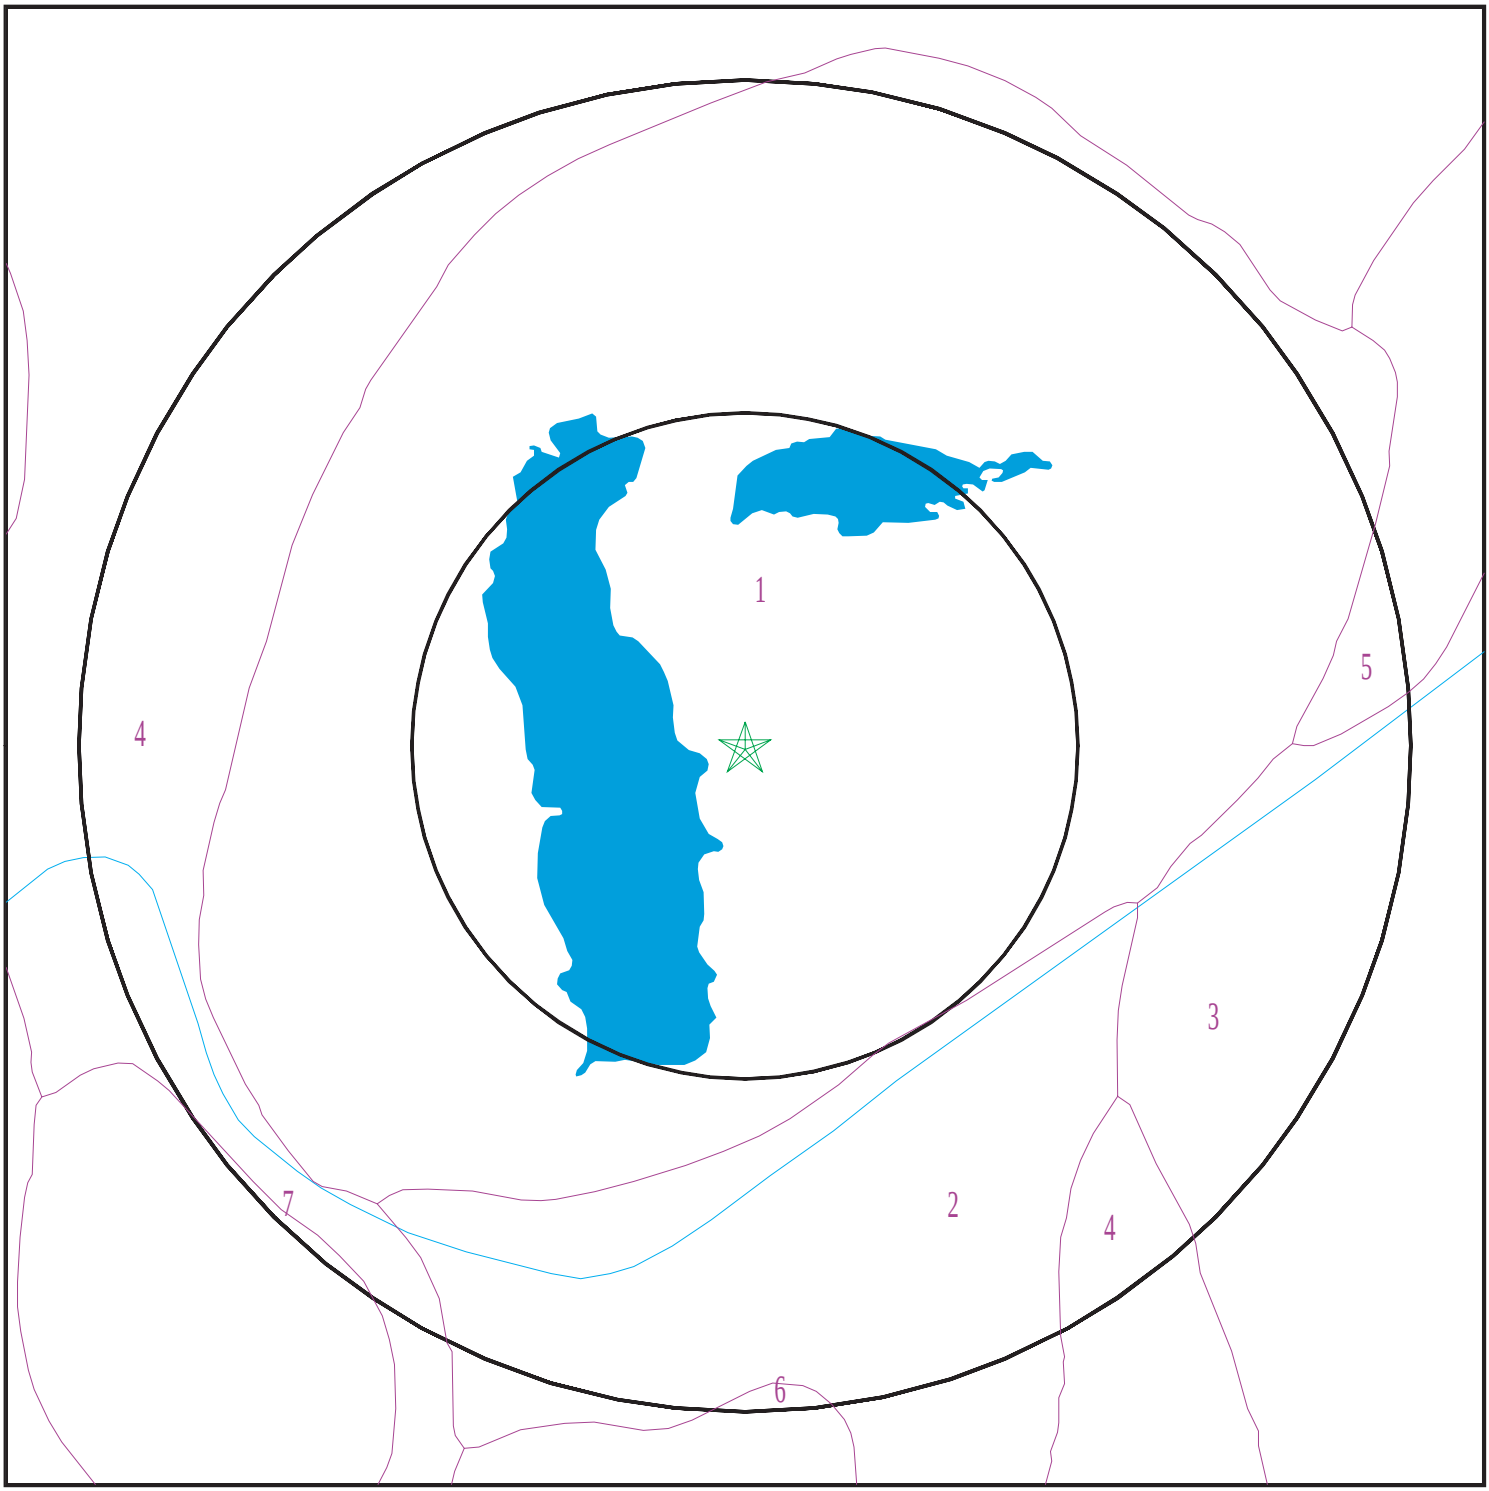
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Paleozoic

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: QUARRIES

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: GREENFIELD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	25 inches	42 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
3	42 inches	59 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 6.1
4	59 inches	72 inches	stratified loamy sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

Soil Map ID: 3

Soil Component Name: RAMONA

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information

Water System Information:

Prime Station Code:	02S/05W-11C03 S	User ID:	WAT
FRDS Number:	3310044006	County:	Riverside
District Number:	14	Station Type:	WELL/AMBNT/MUN/INTAKE
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	340103.0 1172230.0	Precision:	100 Feet (one Second)
Source Name:	WELL 06 - NEW SKOTTY		
System Number:	3310044		
System Name:	Rubidoux Community SD		
Organization That Operates System:			
	P.O. Box 3098		
	Rubidoux, CA 92519		
Pop Served:	25000	Connections:	6554
Area Served:	RUBIDOUX		
Sample Collected:	16-MAY-12	Findings:	7.5
Chemical:	PH, LABORATORY		
Sample Collected:	16-MAY-12	Findings:	59. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	16-MAY-12	Findings:	8.1 UG/L

Water System Information:

Prime Station Code:	02S/05W-11C02 S	User ID:	WAT
FRDS Number:	3310044004	County:	Riverside
District Number:	14	Station Type:	WELL/AMBNT
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	340102.0 1172231.0	Precision:	100 Feet (one Second)
Source Name:	WELL 04 - OLD SKOTTY		
System Number:	3310044		
System Name:	Rubidoux Community SD		
Organization That Operates System:			
	P.O. Box 3098		
	Rubidoux, CA 92519		
Pop Served:	25000	Connections:	6554
Area Served:	RUBIDOUX		
Sample Collected:	01-JUN-17	Findings:	8.1
Chemical:	PH, LABORATORY		

Sample Collected:	01-JUN-17	Findings:	12. MG/L
Chemical:	NITRATE (AS N)		
Sample Collected:	01-JUN-17	Findings:	5.7 UG/L
Chemical:	PERCHLORATE		
Sample Collected:	04-APR-12	Findings:	7.5
Chemical:	PH, LABORATORY		
Sample Collected:	04-APR-12	Findings:	57. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	08-MAY-12	Findings:	7.5
Chemical:	PH, LABORATORY		
Sample Collected:	08-MAY-12	Findings:	55. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	01-JUN-12	Findings:	7.4
Chemical:	PH, LABORATORY		
Sample Collected:	01-JUN-12	Findings:	54. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	06-JUN-12	Findings:	8.2 UG/L
Chemical:	PERCHLORATE		
Sample Collected:	03-JUL-12	Findings:	7.6
Chemical:	PH, LABORATORY		
Sample Collected:	03-JUL-12	Findings:	54. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	05-JUL-12	Findings:	7.1 UG/L
Chemical:	PERCHLORATE		
Sample Collected:	01-AUG-12	Findings:	7.6
Chemical:	PH, LABORATORY		
Sample Collected:	01-AUG-12	Findings:	57. MG/L

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

▲ A1	Target Property 982 ft. Above Sea Level	Other Ascertainable Records

Worksheet:

FINDS: Other Ascertainable Records

Registry ID: 110001199587

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Subject: Public Records Request - Riverside Cement Plant

Hello,

I would like to review any environmental records you have pertaining to the following address for the purposes of a Phase I Site Assessment:

1500 Rubidoux Boulevard
Riverside, CA 92509

Thank you,

We moved our office. Please note our new address and contact information.

PUBLIC RECORDS REQUEST FORM

PRU Office Use Only
CONTROL NUMBER

ATTENTION REQUESTOR: To expedite your request for District records, please fill out this form completely, and identify specifically the type of records you are requesting. Please limit your request to one facility or one site address for each request form filed, and three requested items per form. Additional forms or pages can be used if requesting information for more than one facility or for records not identified on this form. Requests should reasonably describe identifiable records prepared, owned, used, or retained by the District. Public Records Unit staff is available to assist you in identifying those records in the District's possession. The District is not required by law to create a new record or list from an existing record.

TIME PERIOD OF DOCUMENTS REQUESTED From: 1800s To: Present

REQUESTED FACILITY INFORMATION (If Applicable)

FACILITY NAME: Riverside Cement Plant		
FACILITY ADDRESS: 1500 Rubidoux Boulevard		
CITY: Jurupa Valley	STATE: CA	ZIP CODE: 92509
FACILITY I.D. NO. (if known):	APPL. AND/OR PERMIT NO. (if known):	

***Direct cost of duplication**: $.15 per page for paper copies (first 10 pages free) and $5.00 per copied audio tape. No charge for copied Diskettes or CDs. Transfer of gathered electronic records onto CD or Diskette typically costs $10.00 each, but costs will vary (see Instructions for Requesting Records).*

X I wish to inspect the requested records, where applicable, or receive the requested records electronically at no charge. I do not want copies produced at this time.

☐ I request that the SCAQMD contact me prior to copying the requested records if the cost exceeds $20.00.

☐ I would like copies of the requested records and I hereby agree to reimburse the SCAQMD for the direct cost of duplication in accordance with Gov. Code Sec. 6253(b).

Signature of Requestor

Note: After a preliminary estimate, advance payment may be required.

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, requests for records should be in writing. Requests will be processed in the order in which they are received. A Public Records Request Form can be faxed to you by calling (909) 396-3700 and following the menu options. A form is also available on the A.Q.M.D.'s web page at *http://*www.aqmd.gov. Select the "Contact Us" menu, followed by the "Public Records" menu. Requests may be submitted by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.

2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. If necessary, the District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Copies will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

   Facility Name, Address, or Identification Number;

   Facility Application Number, or Permit to Operate Number; or

   Facility Notice of Violation/Notice to Comply Number.

4. You will be notified by mail within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In most cases, your request will be completed within 3-4 weeks.

5. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

6. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

7. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

8. The charge for the direct cost of duplication is as follows: Paper Copies, $0.15/page each over 10 pages (first 10 pages are free); Copied CD's or Copied Diskettes, no charge; and Copied Audio Tapes, $5.00 each. When records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD or Diskette typically cost $10.00 each. An invoice will accompany your records when completed.

9. For further clarification please refer to the California Public Records Act (California Gov. Code Sec. 6250 et seq.) and/or the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, **(909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.**

REQUEST FOR RECORDS

Requests for review of records are processed on a first come, first serve basis and the processing time is approximately 2-4 weeks. As required by California Public Records Act Section 6250 et seq., a response will be given within ten (10) business days to confirm receipt of your request.

Pursuant to California Government Code, Section 6254 (f), records of pending investigations and informant's names, addresses, and telephone numbers, will not be released.

For access to electronic records available online, visit the Public Information section at www.rivcoeh.org for more details.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

1.0 INTRODUCTION

Langan Engineering and Environmental Services, Inc. (Langan) has prepared this Site Assessment Work Plan (SAWP) for the Business Park, Open Space and the proposed Recreational Park (hereinafter referred to as the "Site") on the southern portion of the former Riverside Cement Plant (RCP), located at 1500 Rubidoux Boulevard in Jurupa Valley, California (Figure 1). The Site has been divided into four (4) lots (Lots A through D), with each lot having a separate California Land Reuse and Revitalization Act (CLRRA) agreement with the Department of Toxic Substance Control (DTSC). The CLRRA agreements were executed on 9 August 2018. The total acreage of the Site consists of 75.27 acres. The lot sizes and associated assessor parcel numbers (APN) for each lot are presented in the table below. Figure 2 presents the layout of the lots. The Site excludes the Empire Water Property (APN 175-170-042) and the West Riverside Water Company Canal (APNs 175-170-002 and 175-170-007) because these parcels are not part of the property and are owned by other entities. Please note that the property boundary shown is adjusted from what was presented in Langan's Updated Phase I Environmental Site Assessment, dated 24 May 2018, based on a property lot line survey performed to address other owners near the Site.

Lot Sizes and APN

Lot Designation	Lot Acreage	APN
A	5.09	Portion of 175-170-041
B	65.87	Portions of 175-180-001 & 175-170-041
C	1.06	Portion of 175-170-041
D	3.25	175-170-043

The proposed development for the Site will consist of both business park parcels and the open space and recreational areas. The majority of the area will be undeveloped and closed off to the public, including the water feature (i.e., Crestmore Lake) and Commercial Quarry located on the

central and eastern portions of the Site. Development will be focused on the area on the western portion of the Site (Lot A) where the former mine buildings and administration offices were located. Lot A will remain a commercial/industrial area and will contain a parking lot, visitors center, museum/interpretive center, and other paved features. Lot B will be redeveloped into recreational park and contain fenced-off trails, and view points. In addition, a pedestrian hiking/biking trail, including rest areas and benches, will be developed that will traverse the western portion of Lot B and will also extend along the southern and eastern portion of Lot B within the Site. The trail will be fenced off and have placards along it to restrict human access to the trails and viewpoints. Lots C and D will not be part of the recreational park development. However, Lot C will remain undeveloped land and Lot D may potentially be used for commercial/industrial purposes in the future.

Based on the results of the implementation of this SAWP, a Response Plan will be developed to outline the proposed remedy to address any identified potential impacts encountered during the Site redevelopment. As part of the redevelopment program, the onsite structures (mine offices, administration buildings, and various structures) will be decontaminated and demolished prior to Site redevelopment. The decontamination and demolition phase will occur concurrently with decontamination and demolition activities on the northern portion (Agua Mansa Commerce Park development) of the RCP. Any additional sampling of areas previously inaccessible due to onsite structures will be conducted during the demolition phase. After the demolition and additional sampling, regrading and redevelopment of the Site will take place. The proposed development is shown on Figure 3.

1.1 OBJECTIVES

The purpose of this SAWP is to investigate the Recognized Environmental Conditions (RECs) that were presented in Langan's updated Phase I Environmental Site Assessment (ESA) for the Rubidoux/Aqua Mansa Open Space, Jurupa Valley, California, dated 24 May 2018. The proposed Site assessment and data collection activities will provide information to evaluate current site conditions relative to potential impacts associated with the RECs identified in the updated Phase I ESA and affects from past mine operations, particularly from the potential distribution of cement kiln dust (CKD).

The three data quality objectives (DQO) for the SAWP are:

- DQO-1: Determine and evaluate chemicals of potential concern (COPCs) and the

lateral and vertical extents of COPCs in former known or suspected source areas to support an ecological and human health risk evaluation, as required, and the Response Plan.

- DQO-2: Identify hexavalent chromium (Cr^{VI}), and metals (i.e., arsenic, cadmium, and lead) containing materials that have a potential to generate dusts/emissions especially during grading or demolition activities.

- DQO-3: Evaluate metals and hexavalent chromium in groundwater.

1.2 SITE BACKGROUND

1.2.1 Site Description

The Site is 75.25 acres located at 1500 Rubidoux Boulevard. The approximate location is shown on Figure 1. The Site includes four (4) lots in Jurupa Valley, California.

The Site is bound to the west by Rubidoux Boulevard, to the north by the RCP, to the south by Agua Mansa Road, and to the east by industrial development. As shown on Figure 4, the eastern half of the Site contains the Commercial Quarry, unpaved roads, and Cement Kiln Dust (CKD)-containing soil areas. The western half contains the flooded Crestmore Quarry, seven buildings that supported the mine/quarry operations, three mine vents, and an area of former Kaolin clay storage. The Union Pacific Railroad (UPRR) tracks run along the western portion of the Site. Two groundwater monitoring wells are located on the Site, which include MW-3 (southern boundary) and MW-4, located southwest of the seven buildings on the Site. In addition, a septic system is located southwest of the seven buildings and north of MW-4 (western portion of the Site). These features are represented on Figure 4.

2.0 HISTORICAL SITE ACTIVITIES

The paragrahs in this section are intended to provide the reader with the overall general understanding of the cement plant operations and includes discussions related to the cement manfucturing operations that occurred on the northern portion of the property that is handled under a separate investigation and CLRRA agreements independent of this Site. The purpose of the information presented in this section is to provide background information on the adjacent northern property since it was part of the overall cement manufacturing operations. Background

information on historical operations that occurred on the Site are discussed in Section 4.0.

The Site was in operation from the early 1900s until 2014. Operations on Site were divided into either the cement manufacturing operations, or the Crestmore mine where mining of limestone and quarrying activities were conducted. The Crestmore mine was an underground mine, and the four quarries were designated as the Wet Weather, the Chino, the Commercial, and the Lone Star quarries. The Commercial Quarry and flooded Crestmore Quarry are located within the Site boundary and are discussed further in Section 4.0 below, while the other quarries are located to the north within the proposed Agua Mansa Commerce Park of the Site (Figure 1) which is not part of this SAWP. In addition, the Site includes various support facilities, heavy machinery, and administrative buildings that were related to the cement manufacturing plant and limestone quarrying and mining operations.

The RCP facility underwent three major redevelopment phases over the life of its operation. From the early 1900s to the 1950s, the cement plant was located in the southwestern portion of the northern portion of the RCP, just north of the present day White Cement Plant, which is north of the seven buildings within the Site. The former RCP facility at that time was operated using petroleum-based fuels (i.e., Bunker C) stored in fuel tanks. As the cement manufacturing process evolved through the use of updated technology and other changes in the industry, the former RCP facility went through an expansion and redevelopment phase from the late 1950's through early 1960's, which included conveyor belt systems and compress air, development of raw material storage areas, and upgrades to processing of raw materials to manufacture cement product, which were all located north of the Site.

During the second renovation phase, the former RCP facility was operated using both coal and petroleum-based fuels. By the 1960's, the original plant had been demolished and the present day facility was constructed that generated both grey and white cement product. The current facility was operated until it was shutdown in 2014.

In 1909, limestone and silicate rock quarrying activities began at the Site. In 1930, underground mining commenced at the Crestmore mine, which furnished most of the plant's requirements until 1939. The Wet Weather quarry was deepened and extended between 1940 and 1954. From 1930 to 1954, the block caving method was used, which was a process that allows for bulk mining of large, relatively lower-grade materials. The room and pillar underground mining method was used between 1954 and 1986. Mining of limestone at the Site ceased in the late 1980s

when mining operations penetrated the underlying aquifer eventually flooding the mine vents. The resulting flood created the present day Crestmore Lake located in the western portion of the Site.

Cement manufacturing operations began in 1914 and continued through 2008. The limestone obtained from the onsite quarries/mines was mixed with raw sand and clay materials imported from off-site sources, and heated in rotary kilns to manufacture cement clinker. Cement Kiln Dust (CKD) was one of the primary by-products generated during the manufacturing process, and it exhibits a slight pinkish hue. When hydrated, CKD becomes dense and relatively impermeable to water, but does not form a cemented mass.

Prior to the 1970s, CKD was hauled from the kilns using end-dump trucks and reportedly placed with fill soils/mine spoils at several locations throughout the Site (Figure 1). The placement of CKD material primarily occurred from 1955 to 1979, and the primary location was the Wet Weather Quarry, located north of the Site and not included in this SAWP. Due to the advancement in the cement manufacturing process during the 1970's, previously discarded CKD material was reclaimed and used as feedstock in the cement making process. Also during the 1950s and early 1960s, the cement manufacturing process developed a closed-loop system with the incorporation of bag houses to capture CKD and other particulate materials generated during the cement manufacturing process. The CKD material was reclaimed beginning in the early 1970s until the operations were shutdown in 2014.

Implementation of a SAWP on the northern portion of the RCP was conducted from 11 July 2018 to 26 July 2018. The site-wide COPCs that were analyzed for in soil samples were total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), Title 22 metals, polychlorinated biphenyls (PCBs), dioxins, and hexavalent chromium (Cr^{VI}). The compounds that were identified above their respective screening levels (SLs) during this investigation were lead, Cr^{VI}, arsenic, and cadmium. Soil gas samples were taken and analyzed for TPH and VOCs; there were no detections above their respective reporting limits.

3.0 GEOLOGY AND HYDROGEOLOGY

3.1 GEOLOGY

3.1.1 Regional Geologic Setting

The Site is located in the Peninsular Ranges Province of Southern California, dominated by granitic rocks of Mesozoic age that intruded into pre-existing sedimentary strata. Tertiary strata were deposited west of the eroded granitic rocks, and as the area was uplifted, some of these strata formed upland coastal plains. The Site is also located east of the coastal plains in an area dominated by granitic rocks that are mainly quartz diorite.

As discussed above, specific areas of the Site were used for mining activities due to the presence of two steeply dipping limestone formations approximately 200 to 300 feet thick. The limestone formations are roughly parallel, with an upper and lower formation; the upper formation is known as the Sky Blue Hill Limestone and the lower formation is known as the Chino Limestone. Thin, poorly developed soils and minor sedimentary strata are mapped as locally covering the bedrock on the Site.

As stated above, the Site is located within the fault-bounded, northwest-southeast trending Perris Block within the Peninsular Ranges geomorphic province of California. The Perris Block is bounded in the east by the San Jacinto Fault Zone, the north by Cucamonga Fault Zone, and the west by Elsinore Fault Zone. According to the United States Geologic Survey (USGS) maps, the Perris Block is underlain by lithologically diverse prebatholithic metasedimentary rocks intruded by plutons of the Cretaceous age Peninsular Ranges batholith. Erosional depositional surfaces are developed on the Perris Block and thin to relatively thick sections of Quaternary age non-marine sediments discontinuously cover the basement rock.

3.1.2 Local Geologic Setting

The Site is located in the eastern end of the Jurupa Mountains on the south side of the San Bernardino Valley. The Santa Ana River drains the San Bernardino Valley towards the southwest and is located approximately one-half mile east of the Site.

Based on a review of published geologic reports, maps and referenced geologic information, the

Site is mapped as being underlain by two geologic units consisting of surficial soils (artificial fill, alluvium, Aeolian sands) and intermixed tonalite marble and schist. The artificial fill (Qaf) reportedly consists of uncompacted and undocumented fill from mining operations, soil containing CKD and unconsolidated talus deposits. The intermixed tonalite, marble, and schist (KtPzms) are Cretaceous and Paleozoic age and consist of intermixed biotite-hornblende tonalite and coarse grained marble containing lesser amounts of biotite-quartz schist.

Based on the information reviewed, quarrying and subsurface mining activities were initiated in 1906 to mine the limestone located on or in the vicinity of the Site. Prior to quarrying, the limestone was present as two generally irregular, roughly parallel, lenticular limestone bodies dipping primarily east-northeast. As discussed above, the upper (shallower) Sky Blue Limestone and the lower (deeper) Chino limestone are mineralogically similar. The limestone is coarsely crystalline, associated with metamorphosed sediments, enveloped and cut by intrusive igneous rocks and contact metamorphic minerals, including large masses of intrusive microcrystalline quartz monzonite porphyry and quartz monzonite pegmatites. Country rock within the boundaries of the Site consists of Perris quartz-biotite diorite that becomes granodiorite. Quartz monzonite pegmatites occur commonly as dikes in the porphyry and country rock and extended generally less than 2 or 3 feet into the limestone. The widespread contact rock is composed generally of grossularite garnet with and without diopside.

The shallower, Sky Blue Limestone is an arcuate shaped body, enveloped and intruded by quartz diorite and intruded by quartz monzonite porphyry. The body (prior to mining) was up to several hundred feet thick and dipped primarily east or northeast. Where the body was thinnest, the limestone was converted to contact rock. Two (2) facies were present within the limestone; a white limestone with localized yellow predazzite beds and a sky blue colored limestone present closer to the intrusive quartz monzonite porphyry and associated pegmatites.

The deeper, Chino Limestone is generally composed of alternating bands of yellowish predazzite and white crystalline limestone with widely disseminated graphite flakes. The unit dipped up to 45 degrees east, was at least 2,000 feet long, and had irregular upper and lower surfaces. Banding ranged from few inches to a few feet thick.

3.2 Hydrogeology

The Site is located in the eastern end of the Jurupa Mountains on the south side of the San Bernardino Valley. The Santa Ana River drains the San Bernardino Valley towards the southwest

and is approximately one-half mile east of the Site. The ground surface elevations vary between approximately 820 feet above mean sea level (amsl) on the southern portion of the Site to approximately 1150 feet amsl on the northern portion of the Site.

Based on a review of historical Site documents, groundwater occurs in three distinct hydrologic units at the Site. They are the Chino Limestone (referred to as the Lowe limestone unit), the Wet Weather, the Sky Blue (referred to as the Commercial unit in historical documents), Limestone units (referred to as upper limestone unit), and the Santa Ana River alluvium (ERM-West, August 1991). According to the ERM-West 1991 report, geologic and dewatering feasibility studies were conducted in 1928 and 1950 by W.P. Rowe in the Chino limestone, where the Crestmore quarry is currently located. These studies indicated that the granite layers above and below the Chino limestone act as confining layers. The report states that the Chino limestone water originates mostly from percolation from rainwater at the mine and an influx of water from somewhere below the Santa Ana River to the east.

Pumping wells installed during the 1928 study were screened in the Blue Sky and Wet Weather formations, and displayed a flow consistent with groundwater migration in the river alluvium, prior to dewatering the wells. The ERM-West report refers to the Wet Weather and Blue Sky Limestone units as being a continuous unit, and that upper limestone was hydraulically connected to the alluvium east of the original surface outcrops of granite. Figure 1-4 in the ERM-West report show groundwater gradients in the alluvium flow south-southwest in the eastern part of the Site and flows west in the southwestern part of the Site. ERM-West's report also states that inference of the hydraulic connection in the lower limestone and alluvium were very strong.

According to ERM-West report, the onsite production wells, Well 88-1 and Well 60-1, are screened in the Chino limestone and alluvium, respectively. The report also indicates that groundwater recharge to Well 88-1 which draws groundwater from the Chino Limestone is from several sources that include, direct precipitation, alluvial river deposits in direct contact with the northern Chino limestone, water from the Chino limestone aquifer, and the drift that was cut across the deeper portion of the Chino Limestone.

Langan installed monitoring well MW-4 in November 2016. The purpose of this well was to evaluate groundwater conditions in the area of the septic tank system operations. Langan conducted monitoring and groundwater sampling events in November/December 2016, March 2017, and May 2017. During each of these events, groundwater levels were measured and

samples were collected from monitoring wells MW-3, MW-4, and the Northern Monitoring well.that is located on the northern parcels of the proposed Agua Mansa Commerce Park development.

Concurrent with historical documents (discussed in later sections of this report), and the results of the recent investigation, groundwater flow in the shallow alluvial aquifer is likely towards the Santa Ana River, or towards the south to southeast. This flow direction is generally similar to the regional groundwater flow. Groundwater was measured in the wells onsite at depths between 60 and 135 feet below ground surface (bgs).

4.0 STUDY AREAS

The Site has been subdivided into four (4) study areas for site investigation purposes based on the pre-designated lots (A through D, see Section 1.0). A description of each study area, features in each study area, and tabular summary of each study area is provided below:

Former Operations Area

This area corresponds to Lot A (See Section 1.0) and is approximately 5 acres. It includes three mine vents, a CKD containing soils area, and seven (7) buildings that supported the original mine/quarry operations. Most of the buildings were constructed in the early 1900s when the plant and mining operations began. The buildings/structures included Kaolin storage, a pilot plant (i.e. kiln), a concrete testing lab, a material testing lab, a mine repair shop (converted to a boneyard following demolition of the building), a change house, library, electrical operations, compressor, welding operations, and administrative offices. The Former Operations area is proposed to be redeveloped into a parking lot, administrative offices, cultural/museum center, and walking and view points as part of the recreational park.

According to RWQCB records referenced in a 2009 DTSC site screening assessment for the former RCP site, old mine vents were reportedly used to place various waste materials, however, there has been no conclusive evidence to corroborate this claim or document specific types of waste materials. Subsequent discussions with the site manager during a site visit with DTSC on 28 November 2018 indicated that there was no placement of materials within the mine vents; it was deterioration of the mine vent. The three mine vents are located at the northeastern portion of this study area (See Figure 4). A structure with a platform near the road to Crestmore Lake was observed during the site visit on 28 November 2018 and determined to be a mine vent. A small old shack was observed to the west of Crestmore Lake and was determined to be a radio transmitter tower/building. This building was observed during the site visit on 28 November 2018.

The features of interest contained within the buildings include a former transformer, a 250-gallon hydraulic fluid reservoir, and a demolished former blacksmith shop. A detailed list of features located within this study area is listed below in Table 2.

Table 2: Former Operations Area Features

BUILDING/STRUCTURE	FEATURE	AGE OF OPERATION	USAGE	DESCRIPTION/DIMENSIONS OF FEATURE
Pilot Plant	Former Small-scale Kiln (removed)	Approximately 1960s – 2016	Processed raw material into clinker product	Approximately 60' x 130', 5' deep
	Former Furnace	Approximately 1960s – 2016	Processed raw material into clinker product	
Concrete Testing Lab	Former Transformers (2) (removed) (REC-7)	Early 1900s – 2017	--	Corroded and in poor condition before removal, no PCBs detected, currently in Packhouse
Demolished Mine Repair/Boneyard	Demolished Mine Blacksmith Shop (REC-3)	early 1900s – 1950s ("demoed before 1960s")	Repair of mining tools/machinery	30' x 25', 3' deep (foundation), likely used quenching fluids such as oils or brines
Material Testing Lab, Change House, Library, Admin Offices	250-Gallon Hydraulic Reservoir, Pump, Hoses (REC-5)	Early 1900s-2000s	Held system fluid (likely oil) in hydraulic system	250 gallon volume, 5' x 5'?, connected to concrete breaker in Material lab
East of Welding Shop	Mine Vents (2) (REC-2)	Early 1900s – late 1980s	Provided airflow to Crestmore mine	Unknown
South of Former Electrical Building				
North of Compressor Building	Mine Vent (REC-2)	Early 1900s – late 1980s	Transported ores and minerals from Crestmore mine, potential waste disposal	Unknown

Quarry Area

This area corresponds to Lot B (See Section 1.0) and is approximately 66 acres. It includes the former Commercial Quarry, unpaved roads, estimated mapped CKD containing soil areas, the flooded former Crestmore mine (now Crestmore Lake), an unknown well, overflow standpipe,and Union Pacific Railroad tracks that traverse the western boundary of this area. The former Commercial Quarry was used for mining limestone for the former RCP operations. The Crestmore mine served as a mine for RCP operations until the underlying aquifer was encountered in the mid-1980s and the mine vents were flooded. The existing lake is not considered a feature of interest as part of this SAWP since there will be engineering controls such as fencing and warning placards, implemented as part of the proposed development to restrict access to the lake. In addition, prior sampling efforts conducted at nearby groundwater wells (MW-3 and MW-4) and within the surface water body indicate groundwater underlying the Site appears to be consistent with regional concentrations of COPCs.

The proposed development plan for this lot (Quarry Area) is to create walking and hiking trails along the southern and eastern portions of the Quarry Area along the existing unpaved roads, various viewpoints and shade areas overlooking the Crestmore Lake, and open space (Figure 4).

According to RCP management, an estimated 250,000 tons of CKD was generated by the former site operations between approximately 1955 and 1979 (ERM, Technical Evaluation 9/30/90 EPA FIT Report, Riverside Cement Company Crestmore Plant, dated November 1991). Historical documentation indicates that some of the CKD was placed on the Site in the Commercial Quarry and an area southwest of the Commercial Quarry (ERM, Technical Evaluation 9/30/90 EPA FIT Report, Riverside Cement Company Crestmore Plant, dated November 1991). Although historical documents indicate that the majority of the CKD at the Commercial Quarry was removed and recovered in the late 1980s for mill or kiln feed supplement (ERM EPA FIT Report, 1991), visual observations from site visits on February 28, 2017 and May 11, 2018 identified the potential presence of CKD containing soils in an area southwest of the Commercial Quarry. The Commercial Quarry was also historically used to contain water from the mining operations until the underlying aquifer of the Crestmore mine was encountered in the mid-1980s and the water from the Commercial Quarry drained into the existing lake.

Historical documents (referenced in Langan's Preliminary Environmental Assessment report, dated 20 December 2017) also suggest that the CKD and refractory brick may have been placed along the southern portion of the Site north of groundwater monitoring well MW-3. The limits of the suspected CKD containing soil areas are shown in Figure 4. A 1,500 to 2,000-gallon above-ground storage tank (AST) is located on the northern edge of the Commercial Quarry. A groundwater monitoring well (MW-3) is located along the southern border of area Lot B. A list of features located within this study area boundaries are presented in Table 3 on the following page.

Table 3: Quarry Area Features

BUILDING/STRUCTURE	FEATURE	AGE OF OPERATION	USAGE	DESCRIPTION/DIMENSIONS
Commercial Quarry and south of Quarry	CKD Containing Soil, refractory brick (REC-1)	Approximately 1955-1979	Mining and staging of CKD soils and materials	Visual observations identified potential presence of CKD with possible refractory brick.
	1,500-2,000-gallon AST (REC-4)	Early 1900s – 2000s?	Fuel source	Large tank located on northern border of Quarry, viscous oil and staining observed below valve
	Water Monitoring Well (MW-3)	1993 - present	Monitors alluvial groundwater	4-inch PVC monitoring well Total depth of 89 feet bgs
Crestmore Mine	Crestmore Lake	Mining operations from early 1900s – mid 1980s, Flooded and lake formation late 1980s	Mining of limestone materials	Approximately 6 acres. Not included in this SAWP
Northwest of Commercial Quarry	Unkonwn Well	Unkown	Unkown	Visual observation of a 12-inch pipe with a metal cover welled on top and pipelines laying near it.
	Overflow Standpipe			
Unpaved roads	Unpaved roads	Early 1900s – present-day	Hauling of mined materials, transportation of equipment and personnel	Unpaved road (7 to 10 feet wide) along the southern and eastern boundary of the Site. To be redeveloped into hiking and biking paths using potential crushed aggregate material.

Vacant Land Area

The vacant land area is approximately one (1) acre and corresponds to Lot C (see Section 1). This area consists of a natural flood control drainage channel which connects to the 84-inch storm drain system to the west. Lot C also contains two storm manways. The UPRR track runs along the north and eastern portion of the Lot C.

Septic Tanks/Piping Area

The septic tank/piping area is approximately 3.25 acres and corresponds to Lot D (Section 1.0). Historic sewer and leachfield lines potentially could be located on Lot C as well. This area potentially contains the former septic tanks, associated sewer and leachfield lines that were used for the former RCP site. A groundwater monitoring well (MW-4) is located within the central portion of this Septic Tank Lot area. A list of the features located within this study area is listed below.

Table 4: Septic Tanks/Piping Area Features

BUILDING/STRUCTURE	FEATURE	AGE OF OPERATION	USAGE	DESCRIPTION/DIMENSIONS
Central Area	Water Monitoring Well (MW-4)	Since November 2016	Groundwater Monitoring	4-inch PVC well completed at 65 feet bgs to monitor shallow alluvial groundwater conditions
Septic Area	Septic Tanks (REC-6)	Since approximately 1960s to present day	Wastewater operations	Approximately 12' wide by 36' long and 15' wide by 27' long. Will be removed during the redevelopment phase.
	Septic Tanks Piping	Since approximately 1960s to present day	Wastewater operations	Vitrified Clay Pipe (VCP) and concrete pipe. Will be removed during the redevelopment phase.

5.0 REVIEW OF PREVIOUS REGULATORY INVOLVEMENT

The following agencies have been involved at the Open Space portion of the RCP:

- South Coast Air Quality Control District (SCAQMD)
- Santa Ana Regional Water Quality Control Board (SARWQCB)
- Department of Toxic Substances Control (DTSC)

The primary agencies involved with the RCP have been the SCAQMD, SARWQCB, and DTSC. The northern portion of the RCP (not included in this SAWP) was primarily governed by waste discharge requirements (WDRs) overseen by the SARWQCB and air quality emissions from the cement manufacturing process overseen by the SCAQMD. The SARWQCB has also been involved with the groundwater sampling, analysis, and reporting events for the onsite groundwater monitoring wells, which have been summarized in Langan's Preliminary Environmental Assessment (PEA) Report, Agua Mansa Commerce Park, Jurupa Valley, Riverside County, California dated 20 December 2017. On July 13, 2017, DTSC became the lead oversight agency of the former RCP for environmental assessments through the proposed redevelopment. The SCAQMD has continued to oversee the potential for air quality impacts that will continue through the decommissioning and grading phases of the proposed redevelopment under Rule 1156. Riverside County has been involved with the RCP previously, before the property was divided into the northern and southern portions, for the closeout of underground storage tank (UST) and above ground storage tank (AST) releases. There were no documented USTs or ASTs within the southern Open Space parcels. A summary of prior agency engagement with the former RCP is provided in Table 5 below.

Table 5: Prior Agency Engagement

Agency	Timeframe	Relevant Inspections/Permits	Function	Status
SCAQMD	1970s - 2018	Rule 1156	Monitor air quality of cement manufacturing process	Ongoing
DTSC	2006 - 2018	Environmental Site Assessments, decontamination, decommissioning, site grading	Environmental Assessment	Ongoing
SARWQCB	1973 - 2017	Waste discharge requirements Order 78-27 and 98-77, boiler blowdown pond closure	Regulate RCP waste discharge, oversee the closure of the boiler blowdown pond	Closed

Agency	Timeframe	Relevant Inspections/Permits	Function	Status
DOGGR	1993-present	Annual reports, surface mining inspection reports	Mine operations	Closed
SARWQCB	1990 – 2000s	Potential groundwater impacts from CKD containing soil	Oversight of groundwater impacts lead by the RWQCB.	Closed
Riverside County	1990s	Workplans, well installation reports, UST Closure Inspection Reports, UST Permits for Closure, UST Closure/Abandonment Applications	Closeout of UST and AST releases	Closed

6.0 PREVIOUS SITE INVESTIGATIONS

Quarry Area

In December 1996, investigations including the installation and sampling of groundwater monitoring well, MW-3 by ERM-West, Inc. An annual groundwater monitoring report summarized the depth to groundwater in MW-3 and the laboratory results for the groundwater samples. Groundwater depth was measured at 74 feet to 76 feet below the top of casing. Groundwater samples were analyzed for metals, total dissolved solids, turbidity, alkalinity, chloride, color, fluoride, nitrate (NO_3), odor, pH, specific conductance, sulfate, and MBAS (surfactants). Groundwater sample results were compared to USEPA and State of California drinking water maximum contaminant levels (MCLs).

Additional groundwater sampling of monitoring wells MW-3 and MW-4 was conducted by Langan in November/December 2016 and March and May 2017. Cr^{VI} was detected at MW-3 during these events at 19 µg/L, 17 µg/L, and 16 µg/L respectively, which was below the current California MCL (50 µg/L). Cr^{VI} concentrations have remained below the Cr^{VI} MCL at MW-4 during the three sampling events. With the exception of trans-1,2-dichloroethene (t-1,2-DCE), no volatile organic compounds (VOCs) have been detected in groundwater samples collected from MW-3 and MW-4. During the November 2016 sampling event, t-1,2-DCE was detected below the MCL (10 µg/L) in MW-3 (0.43 µg/L) and MW-4 (0.66 µg/L). T-1,2-DCE was not detected in MW-3 or MW-4 during the December 2016 sampling event. Surface water samples were also collected from the Crestmore Lake during the 28 March 2017 groundwater sampling event. No metals were detected above their respective California MCLs in the surface water samples. The full results of these sampling events are detailed in Langan's PEA report dated 20 December 2017.

Langan completed a Phase I Environmental Site Assessment (Phase I ESA) in March 2017 and updated the Phase I ESA in May 2018 to document potential recognized environmental

conditions (RECs) and historical operations. The results of this assessment were presented in Langan's updated Phase I Environmental Site Assessment for Rubidoux/Agua Mansa Open Sapce, Jurupa Valley, California dated 24 May 2018. Three RECs were identified in the Langan Phase I ESAs (23 March 2017 & 24 May 2018) report. The RECs include the CKD containing soil and the 1,500 to 2,000-gallon AST in the study quarry area. No Historical RECs (HRECs), Controlled Recognized Environmental Concerns (CRECs), or non-ASTM environmental concerns were identified during this Phase I ESA update.

Former Operations Area

SARWCB annual storm-water discharge reports from 2007 to 2013 summarize the laboratory results for storm-water samples that are discharged from the RCP. Riverside Cement Company received a failure-to-comply notice in August 2008 for not submitting an annual report by 1 July 2008. Riverside Cement Company submitted the annual storm-water discharge report on September 2008.

In May 2009, a site screening assessment prepared by DTSC to evaluate hazardous materials usage/releases from the former RCP noted that, according to RWQCB records, old mine shafts were used to dispose of various wastes.

As indicated above, Langan completed a Phase I ESA for the Open Space to document potential RECs and historical operations. The RECs identified included CKD containing soil, mine vents, transformers, former blacksmith shop, and the 250-gallon hydraulic fluid reservoir in the study area. According to Pat Crites, the RCP Site Manager, the transformers (REC-7) had been tested for PCBs in late 2017. No PCBs were detected and the transformers were moved to the Packhouse, awaiting off-site disposal. Martin Marietta have the full PCB analysis details and results; a copy of the analytical results has been requested but has not yet been received. No Historical RECs (HRECs), Controlled Recognized Environmental Concerns (CRECs), or non-ASTM environmental concerns were identified during this Phase I ESA update.

Septic Tanks/Piping Area

Langan installed groundwater monitoring well MW-4 to evaluate groundwater conditions in this area. The information generated from this activity was presented in Langan's PEA dated 20 December 2017.

Vacant Area

No historical investigations were conducted in this study area.

Other Activities

Hexavalent Chromium Soil Sampling

On 21 March 2018, Langan personnel collected a total of five (5) soil samples (CKDSP-1 through CKDSP-5) from specific areas of the Site where there is suspected CKD containing soils to determine the chemical composition of the material. The locations of the samples are shown on Figure 4.

The soil samples were collected by hand using a standard shovel. At each location, an approximately 8-inch to 12-inch small pit was dug and the soil was placed in two, 8-oz. laboratory supplied glass jars and sealed with a screw cap. The shovel was cleaned prior to sampling and between sample locations using a wire brush to remove soil from the end of the shovel. The sample containers were placed in an ice chest, recorded on a chain of custody (COC) and relinquished to SunStar Laboratories, Inc. (Lake Forest, California) for chemical analyses. The samples were analyzed for Title 22 Metals and Hexavalent Chromium (Cr^{VI}) using EPA Methods 6010/7000 series and EPA Method 7199, respectively, on a normal turnaround basis. The analytical results were compared to the Department of Toxic Substance Control (DTSC) industrial Screening Levels (SLs), dated February 2018, and Environmental Protection Agency (EPA) Regional Screening Levels (RSLs) for industrial soil, dated November 2017.

According to the results, two samples (CKDSP-4 and CKDSP-5) exceeded the commercial/industrial screening levels (SLs) for arsenic. The reported concentrations (6.6 mg/kg and 6.8 mg/kg) for arsenic are within the range of background concentrations that are reported in the region (Bradford, 1996 and Chernoff, 2008). Cadmium was reported above the DTSC commercial/industrial SL of 7.3 mg/kg in one sample, CKDSP-5 (21 mg/kg). Lead was reported above the RWQCB environmental screening level (ESL) and DTSC SL in one sample, CKDSP–5 (540 mg/kg). Hexavalent chromium was reported below the reported commercial/industrial SLs of 6.3 mg/kg in all five soil samples analyzed. A summary table of the results is provided in Appendix A.

Groundwater Sampling Report

Langan submitted a groundwater monitoring summary report to the SARWQCB to support a no further action (NFA) determination with respect to environmental assessment, remediation, and groundwater monitoring at the Site. The letter was submitted to the SARWQCB prior to the establishment of the CLRRA agreement with the DTSC. The SARWQCB was informed of the DTSC becoming the lead agency on the project and has transferred the project to DTSC in regards to the surface water and groundwater for the Site. As indicated above, Langan conducted sampling events in November/December 2016 and March 2017 and May 2017 where groundwater samples were collected from MW-3, MW-4, and the Northern Monitoring Well. These results were summarized in Langan's PEA dated 20 December 2017. .

7.0 PROPOSED INVESTIGATION PLANS

Based on the results of the Phase I ESA, historical cement plant operations, site visits and discussions with DTSC, the following present a proposed site assessment program to evaluate the identified RECs, COPCs, and potential presence and extent of CKD containing soil to satisfy DQO-1, DQO-2, and DQO-3. In addition, the layout of the sample locations and analytical testing has been developed to provide data to evaluate the potential for human health exposure concerns during redevelopment and post-redevelopment phases.

Also, a biological evaluation has been conducted for inclusion into the Draft Environmental Impact Report (DEIR) that is currently being prepared as part of the overall project. The biological evaluation identified various species that have been observed onsite, in the vicinity of the Site, and potential to occur at the Site. The sampling program that is presented in more detail below has been designed to collect representative data to provide an empirical evaluation of potential impacts to these potential sensitive receptors.

The approach to the evaluations for human health and biological exposure is to initially use published information as a screeing tool to assess potential concerns and evaluate whether a comprehensive risk assessment is warranted. As part of the proposed development, engineering controls are proposed to restrict access to certain portions of the Site that will include Crestmore Lake and the quarries.

The proposed site assessment will consist of excavating and sampling fourteen (14) trenches (OS-1 through OS-14) to address the RECs identified during Langan's Phase I ESA, twenty (20) composite sample locations grouped into four (4) sets (OSG-1-1 through OSG-1-5; OSG-2-1 through OSG-2-5; OSG-3-1 through OSG-3-5; and OSG-4-1 through OSG-4-5) to sample the topsoil above a granite outcrop, two (2) composite sample locations (CL-1 and CL-2) of a cementitious coating over the soils west of the Crestmore Lake, five (5) composite sample locations (VP-1 through VP-5) to evaluate areas in and around the viewing areas for the proposed development, nineteen (19) composite sample locations grouped into four (4) sets (TL-1-1 through TL-1-5; TL-2-1 through TL-2-5; TL-3-1 through TL-3-5; and TL-4-1 through TL-4-4) to evaluate shallow soil conditions along the proposed hiking/biking trail, two (2) trenches (WC-1 and WC-2) to sample white cementitious material identified during the site visit on 28 November, 2018, five (5) sample locations (CKDSP5-SO1 through CKDSP5-SO5) to evaluate the cadmium and lead exceedances at CKDSP-5, and three sets of composite samples (SW-1, SW-2 and SW-3) to evaluate soil conditions around the Commercial Quarry and septic tank system areas. Three (3) deeper hand auger borings (CQ-1 through CQ-3) will be advanced within the Commercial Quarry area to evaluate fill material above and below the water table; a groundwater sample is proposed in addition to the soil samples taken from each boring. Samples TL-2-1 through TL-2-5 and TL-3-1 through TL-3-5 will also be used to evaluate soils in the vicinity of two unknown structures identified in the 1931 aerial photograph of the Site.

There are bench rest points located along the trails of the proposed redevelopment. One discrete sample location will be targeted for each of the twenty-one (21) proposed bench rest points. Some of these bench rest points are within or close to areas already proposed for sampling; the additional bench rest points will require additional soil samples (BP-1 through BP-7). Two Geoprobe soil gas samples are proposed at OS-1 and OS-2 within the septic tank area to evaluate potential VOCs.

The data collected from this sampling program will be used to develop a Response Plan as well as evaluate potential impacts to onsite receptors and human health exposure during post site development. All samples will include 0.5 and 2 feet depth intervals for metals and hexavalent

chromium, except samples that do not extend to 2 feet bgs, to evaluate for ecological risk. The samples proposed in the area of the Commercial Quarry will be collected with hand augers to minimize the disruption to the habitat that is present in that area. It should be recognized that buildings/structures located on Lot B are still in place and therefore soil beneath these structures will not be evaluated during this phase. If necessary, evaluation of the soils beneath these buildings/structure can be evaluated following demolition activities. The proposed sampling locations are shown on Figure 4. The sample locations, except for the hand auger locations, will be excavated using a standard backhoe and/or excavator.

Prior to conducting subsurface activities, Underground Services Alert (USA) will be contacted a minimum of 48-hours prior to commencing field activities. In addition, a private geophysical locating firm will be contracted to attempt to clear certain areas of potential underground utilities using ground penetrating radar (GPR) and other subsurface utility location techniques. Langan will mark the proposed hand auger and test pit locations in advance of the utility clearance. During the mark-out, Langan will coordinate with an onsite representative who is familiar with the former RCP to confirm that each of the proposed boring and test pit locations are free of known subsurface utilities.

The field work will be conducted under the previously prepared Health and Safety Plan for the investigation conducted on the northern portion of the Site (i.e. Agua Mansa Commerce Park). Details of the sampling methodology and quality assurance/quality controls will conducted in accordance with the previously prepared Sampling Analysis Plan (SAP) and Quality Assurance and Quality Control Plan (QAPP) for the investigation conducted for the Agua Mansa Commerce Park.

Field activities will be observed on a full time basis by a degreed, experienced Langan engineer, geologist or scientist under the supervision of a licensed professional geologist or engineer. Field observations will be recorded on field data sheets. Sampling tools, drilling equipment and other equipment coming into contact with soils will be decontaminated prior to use at each investigation location using a non-phosphate detergent such as Alconox or equivalent and rinsed

with clean water and/or a wire-brush to remove soil and debris from the tools.

Composite Sampling

Composite samples will be collected from the VP, TL, OSG, CL, and SW locations, as well as OS-3. Table 1 presents the details for each of these sample locations. For the VP and TL locations, samples will be collected at 0.5 feet, 2 feet, and 5 feet below ground surface (bgs). Each depth interval (i.e., two feet) will be composited to create one representative sample from that depth interval at each of the locations. Only like material will be composited; CKD-containing soil will not be composited with non-CKD-bearing soil, and only soils with similar colors and grain sizes will be mixed. The same process will be conducted for samples collected at the other three depth intervals. A total of 75 discrete samples at VP-1 through VP-5, 57 discrete samples at TL-1-1 through TL-4-4, 40 discrete samples at OSG-1-1 through OSG-4-5, and 10 discrete samples at CL-1 and CL-2 will be collected for composite sampling. OSG-1-1 through OSG-4-5 will be advanced to 1 foot bgs or refusal, which ever occurs first, since they are located on top of a weathered granitic surface. CL-1 and CL-2 will be surficial samples collected from cementitious coatings over the soil with a sampling depth of less than 0.5 feet bgs.

For the SW locations, samples will be collected at 0.5, 2, and 5 feet bgs and composited at each depth interval to create one representative sample. SW-1 and 2 will be collected from potentially CKD-containing soils in the Commercial Quarry area; the individual sampling locations will be field-chosen based on observations of CKD material. The sampling area for SW-3 was determined based on a potentially oiled road surface identified in a 1968 aerial photograph. A total of three (3) samples will be collected from each depth interval (0.5, 2, and 5 feet bgs) for SW-1, and a total of five (5) samples will be collected for each depth interval for SW-2 and SW-3. A total of 44 discrete samples will be collected for the SW locations. Should field conditions warrant, discrete samples will be taken in lieu of composite samples.

The area around sample OS-3 was linked with CKD production due to the former pilot kiln and furnace. Contamination in this area would be expected to be due to aerial deposition or surficial discharges. As such, sample OS-3 will be a five-point composite sample of the surface and shallow subsurface (0.5 and 2 feet bgs) of this area.

The composite samples will be created by placing the soils from each depth interval per location into a stainless-steel bucket and mixed until homogeneous. The mixing will consist of using either hand tools (i.e., trowel) or power tools (i.e. drill with mixing paddle) that are of stainless steel

construction. The composite samples for each depth interval for chemical analysis will be placed in laboratory supplied glass jars, labeled, stored on ice, and transferred to a State-certified analytical laboratory under chain-of-custody protocol. The laboratory will retain the received discrete samples from VP, TL, CKDSP5-SO, and SW sample locations for potential future analyses if elevated concentrations are detected in the composite samples.

The trowels, mixing paddles, hand augers, and any other equipment coming into contact with soils will be decontaminated prior to use at each location using a non-phosphate detergent such as Alconox or equivalent and rinsed with clean water or a wire-brush to remove soil and debris from the tools. An additional detergent wash and final rinse should follow dry decontamination with a wire-brush.

Test Pits

Eighteen (18) test pits (OS-4 through OS-14, WC-1 and WC-2, and CKDSP5-SO1 through CKDSP5-SO5) will be excavated at locations marked and cleared for subsurface utilities. The OS test pits will be excavated to a depth of up to 20 feet bgs, except OS-12, OS-13, and OS-14, at the discretion of Langan field personnel by a subcontractor using an excavator or similar equipment. Test pit OS-12 will be excavated to a depth of approximately 15 feet bgs and test pits OS-13 and OS-14 to approximately 5 feet bgs unless refusal occurs due to subsurface conditions. The WC-1 and WC-2 test pits will be excavated to a depth of 5 feet bgs. CKDSP5-SO1 through CKDSP5-SO5 will be taken approximately 20 feet apart around identified impacts detected in CKDSP-5, and samples will be collected from 0.5, 2, and 5 feet bgs. There is the potential for refractory brick to be encountered in the vicinity of the CKDSP5-SO samples; if refractory brick is encountered, it will be removed as practical.

The soil will be screened using a photoionization detector (PID), visually examined, and classified in the field in accordance with the Unified Soil Classification System (USCS). Excavated soils will be stockpiled at least five feet from the edge of the excavation for further characterization and sampling, as necessary. Soil samples will be collected from the initially exposed side walls or pit floors to ensure slough material is not co-mingled with the samples.

Following completion of field observation and sampling activities, the test pits will be backfilled with excavated soils and partially compacted using the excavator bucket. Soil with suspected impacts based on PID readings will be segregated, wrapped in visqueen and analyzed. All test pit locations will be staked or marked to allow subsequent surveying of coordinates by Langan personnel for preparation of as-built drawings, as necessary.

Periodic dry decontamination of the excavator bucket will be conducted and if suspected

contamination is encountered. This process will include removal of debris/soil that may be attached to the bucket using shovels and/or brushes. If necessary, the bucket will be cleaned with a pressure washer.

Geoprobe Soil Borings

Two (2) locations (OS-1 and OS-2) will be advanced using Geoprobe drilling equipment. The locations will be drilled to ten (10) feet below the bottom of the septic tank feature. Samples will be collected at 0.5, 1, 2, and 5 feet bgs and then at 5 foot intervals to the termination depth or refusal.

The soil will be screened using a PID, visually examined, and classified in the field in accordance with the USCS. Soil samples exhibiting characteristics that may be indicative of potential environmental concerns (including staining, odors, VOC impacts, or evidence of non-native materials such as CKD) will be submitted to a California state-certified analytical laboratory for chemical analysis. Soil samples selected for laboratory analysis will be transferred to laboratory supplied sample containers for the appropriate testing, labeled, stored on ice, and transferred to a State-certified analytical laboratory under chain-of-custody protocol.

The trowels, mixing paddles, Geoprobe equipment, and any other equipment coming into contact with soils will be decontaminated prior to use at each location using a non-phosphate detergent such as Alconox or equivalent and rinsed with clean water or a wire-brush to remove soil and debris from the tools. An additional detergent wash and final rinse will follow dry decontamination with a wire-brush.

Hand Auger Soil Borings

Three (3) locations (CQ-1 through CQ-3) will be advanced using hand auger equipment. CQ-1 through CQ-3 will be advanced until the water table is encountered or it becomes impractical to continue, whichever is first. Samples will be taken at 0.5, 2, and 5 feet bgs and then after every 5 feet until groundwater is encountered. If groundwater is encountered, all the soil depth intervals will be analyzed.

The soil will be screened using a PID, visually examined, and classified in the field in accordance with the USCS. Soil samples exhibiting characteristics that may be indicative of potential environmental concerns (including staining, odors, VOC impacts, or evidence of non-native materials such as CKD) will be submitted to a California state-certified analytical laboratory for chemical analysis. Soil samples selected for laboratory analysis will be transferred to laboratory supplied sample containers for the appropriate testing, labeled, stored on ice, and transferred to

a State-certified analytical laboratory under chain-of-custody protocol.

The trowels, mixing paddles, hand augers, and any other equipment coming into contact with soils will be decontaminated prior to use at each location using a non-phosphate detergent such as Alconox or equivalent and rinsed with clean water or a wire-brush to remove soil and debris from the tools. An additional detergent wash and final rinse will follow dry decontamination with a wire-brush.

Soil Gas Vapor Probes

The borings for the temporary soil gas vapor points at OS-1 and OS-2 will be advanced as discussed above. The soil gas vapor points will be nested at each location at five (5) and fifteen (15) feet bgs. Soil gas vapor installation and sampling will be conducted in accordance with California EPA and Department of Toxic Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance) dated October 2011. Soil gas samples will be collected at a minimum of 48 hours following installation of the soil gas vapor probes. At least two rounds of soil gas samples will be collected from each of the soil gas vapor points.

Analytical Testing

The proposed analytical testing for the sample locations is presented in Table 1. As indicated in Table 1, the samples will be analyzed for several compounds relative to location (i.e. REC, feature, previous operation, etc.) and will include hexavalent chromium using EPA method 7199, total metals using EPA method 6020, total petroleum hydrocarbons (TPH, carbon chain) using EPA method 8015M, volatile organic compounds (VOCs) using EPA method 8260B, semi-volatile organic compounds (SVOCs) and polycyclic aromatic hydrocarbons (PAH) using EPA method 8270C, dioxins using EPA method 1613, and polychlorinated biphenyls (PCBs). Should groundwater be encountered at CQ-1 through CQ-3, the grab groundwater sample(s) taken will be analyzed for total hexavalent chromium and metals using EPA method 7199 and dissolved hexavalent chromium and metals using EPA ethod 6010/207.7. Soil gas samples will be analyzed for VOCs and TPH using EPA method 8260B. The proposed analytical testing is based on the historical operations at different locations on the Site and the COPCs idenfitied through the investigation on the northern portion of the RCP.

8.0 REPORTING

Upon completion of field investigation and receipt of laboratory analytical results, a Summary of Findings report will be generated. In general the Summary of Findings Report will consist of the following:

- Executive Summary
- Introduction
- Summary of Site Background
    - Site Description and Location
    - Site HIstory
- Sampling Activities and Results
    - Summary of Activities
    - Boring Clearance and Geophysical Survey
    - Soil Sample Collection Procedures
    - Soil Matrix Analytical Results
        - Volatile Organic Compounds (VOCs)
        - Total Petroleum Hydrocarbons (TPHs)
        - Metals and Hexavalent Chromium (Cr^{VI})
        - Other Organics (PCBs, Dioxins, PAHs, SVOCs)
- Deviations from the SAWP
- Evaluation of Results
- Conclusions and Recommendations

DRAFT SUMMARY OF FINDINGS FOR PARK/OPEN SPACE

EXECUTIVE SUMMARY

Langan Engineering and Environmental Services, Inc. (Langan) implemented the Site Assessment Work Plan (SAWP) for the Agua Mansa Recreational Park/Open Space, approved by the California Department of Toxic Substances Control (DTSC) on 14 January 2019. The Site investigation activities were conducted from 9 January 2019 to 8 February 2019. The Site has been divided into four (4) lots (Lots A through D) shown on Figure 1, with each lot having a separate California Land Reuse and Revitalization Act (CLRRA) agreement with the DTSC. The CLRRA agreements were executed on 9 August 2018. The total acreage of the Site consists of approximately 75 acres.

The proposed development for the Site will consist of both business park parcels and the open space and recreational areas. Development will be focused in the area on the western portion of the Site (Lot A) where the former mine buildings and administration offices were located. Lot A will remain developed and will include a parking lot, visitors center, museum/interpretive center, and other paved features.

Lot B may be redeveloped with a potential range of uses, such as a recreational park with fenced-off trails and viewpoints. Under that scenario, a pedestrian hiking/biking trail, including rest areas and benches, would be developed to traverse the western portion of Lot B and extend along the southern and eastern portion of Lot B within the Site. The trail would be fenced off and have placards along it to restrict access to the trails and viewpoints. Alternatively, Lot B may be retained as an open space/conservation area, which would be secured to restrict public access. Lots C and D will not be part of the recreational park development. Lot C will remain undeveloped land and Lot D may potentially be used for limited commercial/industrial purposes in the future.

The investigation included the excavation and soil sampling of fifteen (15) shallow test pits for composite sampling, seventeen (17) shallow test pits for discrete sampling, nine (9) deep excavations, two (2) samples of cementitious coatings, six (6) hand auger soil borings, the installation of two dual-nested soil vapor probes, and the collection of soil gas samples. A total of 146 soil samples were collected. The soil samples were collected from the trenches and soil borings and analyzed for one or more of the following: total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), Title 22 metals, polychlorinated biphenyls (PCBs), dioxins, and

hexavalent chromium (Cr^{VI}). The laboratory analytical reports are provided in Attachment A.

Soil vapor samples collected from two (2) soil vapor probe locations were analyzed for VOCs and TPH, and methane. The results indicated that VOCs, TPH, and methane were not detected above their respective reporting limits. Therefore, no further soil gas investigation is recommended.

The following constituents were not reported above their respective DTSC screening levels (SLs) and/or EPA regional screening levels (RSLs) in the soil samples analyzed: VOCs, SVOCs, PAHs, PCBs, and dioxins. Dioxins were reported below the DTSC Residential SL of 50 parts per trillion (ppt) in the four (4) samples collected and analyzed at the Site. No further investigation is recommended for the above compounds.

A total of twenty-seven (27) soil samples were collected and analyzed for TPH. The maximum TPH concentration reported was 118 milligrams per kilogram (mg/kg) within the motor oil to heavy fuel oil range (C_{28}-C_{33}). No further investigation is recommended for these compounds.

A total of 128 soil samples were collected and analyzed for Title 22 metals and Cr^{VI}. The results of the sampling is outlined below:

- Arsenic was reported above the DTSC SL site-wide (69 samples). Arsenic was reported at concentrations ranging from 4.4 mg/kg to 94 mg/kg, which is consistent with previous investigations on the northern portion of the former RCP. Published literature indicates that arsenic is a metal commonly measured in soils throughout California.

- Thallium was reported above the EPA Industrial RSL of 1.2 mg/kg in three samples. These samples were collected from an area of white cementitious material. The other 125 samples analyzed for thallium were below the RSL of 1.2 mg/kg. This material is visually distinguishable and will be managed during the implementation of the Soil Management Plan, if needed. Based on this information, no further investigation is recommended for thallium.

- Cr^{VI} was reported above the EPA Industrial RSL of 6.3 mg/kg in one sample. This sample was collected from the white cementitious material. This material is visually distinguishable and will be managed during the implementation of the Soil Management Plan, if needed. The other 127 samples analyzed for Cr^{VI} were below the RSL of 6.3 mg/kg.

DRAFT

Based on this information, no further investigation is recommended for Cr^{VI}.

- Mercury was detected in four samples above the DTSC commercial/industrial standards of RSL 4.4 mg/kg. The mercury concentrations ranged from 8.0 mg/kg to 30 mg/kg. Mercury was initially identified as a COPC through comparison to elemental mercury (Hg[0]) screening levels; however the most prevalent valence states for mercury in soil are Hg(1) and Hg(2). Mercury can exist in either the monovalent or divalent forms as inorganic compounds, such as mercuric chloride. Consequently, maximum total mercury concentrations were compared to the mercuric chloride residential RSL (23 mg/kg) and mercury was eliminated as a COPC in Lots B and D. The sample locations are in Lot D. The mercury will be further addressed in the Response Plan and Soil Management Plan.

In accordance with preliminary discussion regarding the summary of findings with DTSC, the proposed mitigation measures described in the remedial summary overview are adequate to address the potential COCs at the site.

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901016

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 1/16/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
B	Analyte was present in an associated method blank.
D	RPD was not within control limits. The sample data was reported without further clarification.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
QB-01	The method blank contains analyte at a concentration above the MRL; however, concentration is less than 10% of the sample result, which is negligible according to method criteria.
QM-07	The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901017

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 1/16/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
B	Analyte was present in an associated method blank.
D	RPD was not within control limits. The sample data was reported without further clarification.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
QB-01	The method blank contains analyte at a concentration above the MRL; however, concentration is less than 10% of the sample result, which is negligible according to method criteria.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901022

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 1/19/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
B	Analyte was present in an associated method blank.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
QB-01	The method blank contains analyte at a concentration above the MRL; however, concentration is less than 10% of the sample result, which is negligible according to method criteria.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
QM-07	The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

SAMPLE RECEIVING REVIEW SHEET

Batch/Work Order #: T190154

Client Name: Performance Analytical Project: P901022

Delivered by: ☐ Client ☒ SunStar Courier ☐ GSO ☐ FedEx ☐ Other

If Courier, Received by: ali Date/Time Courier Received: 01/21/19 10:53

Lab Received by: Sunny Date/Time Lab Received: 01/21/19 11:37

Total number of coolers received:

Temperature: Cooler #1	0.1 °C +/- the CF (1.2°C)	=	1.3	°C corrected temperature
Temperature: Cooler #2	°C +/- the CF (1.2°C)	=		°C corrected temperature
Temperature: Cooler #3	°C +/- the CF (1.2°C)	=		°C corrected temperature

Temperature criteria = ≤ 6°C (no frozen containers) Within criteria? ☑ **Yes** ☐ **No**

If NO:

Samples received on ice? ☐ Yes ☐ **No → Complete Non-Conformance Sheet**

If on ice, samples received same day collected? ☐ Yes → Acceptable ☐ **No → Complete Non-Conformance Sheet**

Custody seals intact on cooler/sample	☐ Yes	☐ No*	☑ N/A
Sample containers intact	☑ Yes	☐ No*	
Sample labels match Chain of Custody IDs	☑ Yes	☐ No*	
Total number of containers received match COC	☑ Yes	☐ No*	
Proper containers received for analyses requested on COC	☑ Yes	☐ No*	
Proper preservative indicated on COC/containers for analyses requested	☐ Yes	☐ No*	☑ N/A
Complete shipment received in good condition with correct temperatures, containers, labels, volumes preservatives and within method specified holding times	☑ **Yes**	☐ **No***	

* Complete Non-Conformance Receiving Sheet if checked

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: P901022

Date Received: 1/21/19 Sampler's Name Present: ☐ Yes ☒ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 2.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901033

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 1/29/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
QM-07	The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

SAMPLE RECEIVING REVIEW SHEET

Batch/Work Order #: T190225

Client Name: PAL

Project: DTSC RIVERSIDE

Delivered by: ☐ Client ☒ SunStar Courier ☐ GSO ☐ FedEx ☐ Other

If Courier, Received by: KEITH

Date/Time Courier Received: 1/29/19 14:48

Lab Received by: BRIAN

Date/Time Lab Received: 1/29/19 15:42

Total number of coolers received: 0

Temperature: Cooler #1 0.0	°C +/- the CF (1.2°C) = 1.2	°C corrected temperature	
Temperature: Cooler #2	°C +/- the CF (1.2°C) =	°C corrected temperature	
Temperature: Cooler #3	°C +/- the CF (1.2°C) =	°C corrected temperature	
Temperature criteria = ≤ 6°C (no frozen containers)	Within criteria?	☒ **Yes** ☐ **No**	
If NO:			
Samples received on ice?	☐ Yes	☐ **No → Complete Non-Conformance Sheet**	
If on ice, samples received same day collected?	☐ Yes → Acceptable	☐ **No → Complete Non-Conformance Sheet**	

Custody seals intact on cooler/sample	☐ Yes	☐ No*	☑ N/A
Sample containers intact	☒ Yes	☐ No*	
Sample labels match Chain of Custody IDs	☒ Yes	☐ No*	
Total number of containers received match COC	☑ Yes	☐ No*	
Proper containers received for analyses requested on COC	☑ Yes	☐ No*	
Proper preservative indicated on COC/containers for analyses requested	☐ Yes	☐ No*	☒ N/A
Complete shipment received in good condition with correct temperatures, containers, labels, volumes preservatives and within method specified holding times	☒ **Yes**	☐ **No***	

* Complete Non-Conformance Receiving Sheet if checked

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901025

Dear Brad McCardell

Enclosed are the results of analyses for samples received by our laboratory on 1/22/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S-01	The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference's.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: _____

Date Received: 1/23/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 4.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901027

Dear Brad McCardell

Enclosed are the results of analyses for samples received by our laboratory on 1/23/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: _____

Date Received: 1/23/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 4.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901022

Dear Brad McCardell

Enclosed are the results of analyses for samples received by our laboratory on 1/19/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
B	Analyte was present in an associated method blank.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
QB-01	The method blank contains analyte at a concentration above the MRL; however, concentration is less than 10% of the sample result, which is negligible according to method criteria.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
QM-07	The spike recovery and or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: P901022

Date Received: 1/21/19 Sampler's Name Present: ☐ Yes ☒ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 2.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901016

Dear Neil Shukla

Enclosed are the results of analyses for samples received by our laboratory on 1/16/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

SAMPLE RECEIVING REVIEW SHEET

Batch/Work Order #: T190115

Client Name: PAL Project: DTSC RIVERSIDE

Delivered by: ☐ Client ☒ SunStar Courier ☐ GSO ☐ FedEx ☐ Other

If Courier, Received by: PAUL Date/Time Courier Received: 1-16-19 1307

Lab Received by: DAN Date/Time Lab Received: 1-16-19 1408

Total number of coolers received:

Temperature: Cooler #1 3.5	°C +/- the CF (1.2°C) = 4.7	°C corrected temperature	
Temperature: Cooler #2	°C +/- the CF (1.2°C) =	°C corrected temperature	
Temperature: Cooler #3	°C +/- the CF (1.2°C) =	°C corrected temperature	
Temperature criteria = ≤ 6°C (no frozen containers)	Within criteria?	☒ **Yes**	☐ **No**
If NO:			
Samples received on ice?	☐ Yes	☐ **No → Complete Non-Conformance Sheet**	
If on ice, samples received same day collected?	☐ Yes → Acceptable	☐ **No → Complete Non-Conformance Sheet**	

Custody seals intact on cooler/sample	☐ Yes	☐ No*	☒ N/A
Sample containers intact	☒ Yes	☐ No*	
Sample labels match Chain of Custody IDs	☒ Yes	☐ No*	
Total number of containers received match COC	☒ Yes	☐ No*	
Proper containers received for analyses requested on COC	☒ Yes	☐ No*	
Proper preservative indicated on COC/containers for analyses requested	☐ Yes	☐ No*	☒ N/A
Complete shipment received in good condition with correct temperatures, containers, labels, volumes preservatives and within method specified holding times	☒ **Yes**	☐ **No***	

* Complete Non-Conformance Receiving Sheet if checked

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901024

Dear Brad McCardell

Enclosed are the results of analyses for samples received by our laboratory on 1/22/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

Notes and Definitions

Item	Definition
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
QM-PS	The percent recovery and/or RPD are outside acceptance criteria. Results accepted based upon percent recovery results in the post spike and/or serial dilution.
QR-04	The pecent recovery and/or RPD was outside acceptance criteria. Results accepted based upon percent recovery results in duplicate QC sample and the CCV and CCB results.
Dry	Sample results reported on a dry weight basis.
ND	Analyte NOT DETECTED at or above the reporting limit.
RPD	Relative Percent Difference
%REC	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
(R)	Re-run for dilution or confirmation.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: _____

Date Received: 1/23/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 4.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901022

Dear Brad McCardell

Enclosed are the results of analyses for samples received by our laboratory on 1/19/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: P901022

Date Received: 1/21/19 Sampler's Name Present: ☐ Yes ☒ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 2.6 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓

Comments: P901022

Supplemental Report 1 - Results for Dioxins/Furans only.

Lab Request: 411366
Report Date: 02/07/2019
Date Received: 01/21/2019
Client ID: 15509

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
411366-003	SW-1-0.5'
411366-004	SW-1-2'

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Report Review performed by: Ranjit Clarke, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 45 days from date received.

The reports of the Enthalpy Analytical, Inc. are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

Enthalpy - Orange

1 Park Plaza, Suite 1000
Irvine, CA 92614

Samples Received: 1/23/19
Client Project # 411366

Analytical Report
(0119-719)

Method 8290
PCDD/PCDF

I certify that to the best of my knowledge all analytical data presented in this report:

- Have been checked for completeness
- Are accurate, error-free, and legible
- Have been conducted in accordance with approved protocol, and that all deviations and analytical problems are summarized in the appropriate narrative(s)

This analytical report was prepared in Portable Document Format (.PDF) and contains 19 pages.

Enthalpy Analytical Narrative Summary

Company	Enthalpy – Orange
Analyst	L. Boivin
Parameters	PCDD/PCDF

Client #	411366
Job #	0119-719
# Samples	2

Custody

Enthalpy Analytical Wilmington received the samples (via FedEx) by Robin Appelle, 1/23/19, on ice at 2.4°C in good condition.

Prior to, during, and after analysis, the samples were stored in the laboratory with access only by authorized personnel of Enthalpy Analytical, LLC.

Analysis

The samples were analyzed by EPA Method 8290 for PCDD/PCDF by HRGC/HRMS. The analysis was done using the following instrumentation; High-Resolution-GC - Agilent Tech Model# 6890, AutoSampler – CTC A200 and High-Resolution Mass-Spec. – Waters (Galadriel).

After sampling by the client, the laboratory spiked the samples with ES (extraction standard), extracted by liquid-liquid extraction (with methylene chloride), and spiked with AS (alternate standard) after solvent exchange. The extracts were processed via the cleanup procedure. The final extract was transferred to an autosampler vial and spiked with 20 µL of JS (injection standard solution) prior to analysis.

Calibration

The analytes and labeled standards in the initial calibration exhibited RSDs less than 20%. The continuing calibration met the 20% criteria for native analytes, and met the 30% criterion for the labeled standards. The OPR met the 40-130% criterion for ES recoveries with the exception of CS 37Cl-2378-TCDD, which fell outside the upper limits.

QC Notes

The Method Blank did not detect any analytes above the LOQ and met the 40-130% criterion for ES recoveries with the exception of CS 37Cl-2378-TCDD, which fell outside the upper limits.

The HRMS system displayed mass resolving power of at least 10,000 during the analysis.

The QC injections passed all method criteria.

Labeled and sampling (surrogate) standard recoveries were acceptable.

The samples were extracted well within the 30-day from collection holding time and analyzed within the 45-day from extraction to analysis holding time required by the method.

Reporting Notes	The samples met the 40-130% criterion for ES recoveries with the exception of CS 37Cl-2378-TCDD, which fell outside the upper limits. The TEQ was calculated and reported to the client using the I-TEFs and the WHO-2005 TEF, calculated several different ways. We also reported Totals and Detection Limits. These analyses met the requirements of the TNI Standard. Any deviations from the requirements of the reference method or TNI Standard have been stated above. The results presented in this report are representative of the samples as provided to the laboratory. The samples, calibrations and standards for the data presented in this report were analyzed at 2714 Exchange Drive, Wilmington, NC 28405.

General Reporting Notes – Data Qualifiers

The following are general reporting notes that are applicable to all Enthalpy Analytical, Inc.-Wilmington, NC data reports, unless specifically noted otherwise.

General Data Qualifiers / Data Attributes

- B – The analyte was found in the method blank, at a concentration that was at least 10% of the concentration in the sample.
- C – Two or more congeners co-elute. In EDDs, C denotes the lowest IUPAC congener in a co-elution group and additional co-eluters for the group are shown with the number of the lowest IUPAC co-eluter.
- E – The reported concentration exceeds the calibration range (upper point of the calibration curve).
- EMPC – Represents an estimated maximum possible concentration. EMPCs arise in cases where the signal/noise ratio is not sufficient for peak identification (the determined ion-abundance ratio is outside the allowed theoretical range), or where there is a co-eluting interference.
- J – Indicates that an analyte has a concentration below the reporting limit (lowest point of the calibration curve).
- ND – Indicates a non-detect.
- NR – Indicates a value that is not reportable.
- PR – Due to interference, the associated congener is poorly resolved.
- DI – Indicates the presence of a quantitative interference.
- SI – Denotes "Single Ion Mode" and is utilized for PCBs where the secondary ion trace has a significantly elevated noise level due to background PFK. Responses for such peaks are calculated using an EMPC approach based solely on the primary ion area(s) and may be considered estimates.
- U – The analyte was not detected. The Estimated Detection Limit (EDL) may be reported for this analyte.
- V – The labeled standard recovery was found to be outside of the method control limits.

DRBC/TMDL Specific Data Qualifiers / Data Attributes

- J – The reported result is an estimate. The value is less than the minimum calibration level but greater than the Estimated Detection Limit (EDL).
- U – The analyte was not detected in the sample at the Estimated Detection Limit (EDL).
- E – The reported concentration is an estimate. The value exceeds the upper calibration range (upper point of the calibration curve).

- D – Dilution Data. Result was obtained from the analysis of a dilution.
- B – Analyte found in the sample and associated method blank.
- Cxx – Co-elutes with the indicated congener, data is reported under the lowest IUPAC congener. 'xx' denotes the IUPAC number with the lowest numerical designated congener.
- NR – Analyte is not reportable because of problems in sample preparation or analysis.
- V – Labeled standard recovery is not within method control limits.
- X – Results from re-injection/repeat/second-column analysis.
- EMPC – Estimated Maximum Possible Concentration. Indicates that a peak is identified but did not meet the method specified ion-abundance ratio.

Lab Identifiers

- AR – Indicates use of the archived portion of the sample extract.
- CU – Indicates a sample that required additional clean-up prior to HRMS injection/processing.
- D – Indicates a dilution of the sample extract. The number that follows the "D" indicates the dilution factor.
- DE – Indicates a dilution performed with the addition of ES (Extraction Standard) solution.
- DUP – Designation for a duplicate sample.
- MS – Designation for a matrix spike.
- MSD – Designation for a matrix spike duplicate.
- RJ – Indicates a reinjection of the sample extract.
- S – Indicates a sample split. The number that follows the "S" indicates the split factor.

Re: DTSC Riverside

Project No. : DTSC Riverside

Work Order: P901017

Dear Brad McCardell

Enclosed are the results of analyses for samples received by our laboratory on 1/16/2019. The contents of this report apply to the sample(s) analyzed in accordance with the chain-of-custody document supplied with the sample(s).

No duplication of this report is allowed, except in its entirety. Please do not hesitate to call if you have any questions and thank you very much for using Performance Analytical Laboratories for your analytical needs.

Regards,

Marycarol Valenzuela
Project Manager

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Performance Analytical Project: _____

Date Received: 1/16/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 7.4 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 3.8 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 1/16/17

Signal Hill, CA 90755

Attn: Marycarol Valenzuela

Comments: P901017

Supplemental Report 1 - Dioxins/Furans results only.

Lab Request: 411122
Report Date: 02/01/2019
Date Received: 01/16/2019
Client ID: 15509

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
411122-001	OS-3-0.5'
411122-002	OS-3-2'

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Report Review performed by: Ranjit Clarke, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 45 days from date received.

The reports of the Enthalpy Analytical, Inc. are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

Enthalpy Analytical Narrative Summary

Company	Enthalpy – Orange
Analyst	L. Boivin
Parameters	PCDD/PCDF

Client #	411122
Job #	0119-716
# Samples	2

Custody

Enthalpy Analytical Wilmington received the samples (via FedEx) by Robin Appelle, 1/18/19, on ice at 0.4°C in good condition.

Prior to, during, and after analysis, the samples were stored in the laboratory with access only by authorized personnel of Enthalpy Analytical, LLC.

Analysis

The samples were analyzed by EPA Method 8290 for PCDD/PCDF by HRGC/HRMS. The analysis was done using the following instrumentation; High-Resolution-GC - Agilent Tech Model# 6890, AutoSampler – CTC A200 and High-Resolution Mass-Spec. – Waters (Galadriel).

After sampling by the client, the laboratory spiked the samples with ES (extraction standard), extracted by liquid-liquid extraction (with methylene chloride), and spiked with AS (alternate standard) after solvent exchange. The extracts were processed via the cleanup procedure. The final extract was transferred to an autosampler vial and spiked with 20 µL of JS (injection standard solution) prior to analysis.

Calibration

The analytes and labeled standards in the initial calibration exhibited RSDs less than 20%. The continuing calibration met the 20% criteria for native analytes, and met the 30% criterion for the labeled standards. The OPR met the 40-130% criterion for ES recoveries with the exception of CS 37Cl-2378-TCDD, which fell outside the upper limits.

QC Notes

The Method Blank did not detect any analytes above the LOQ and met the 40-130% criterion for ES recoveries with the exception of CS 37Cl-2378-TCDD, which fell outside the upper limits.

The HRMS system displayed mass resolving power of at least 10,000 during the analysis.

The QC injections passed all method criteria.

Labeled and sampling (surrogate) standard recoveries were acceptable.

The samples were extracted well within the 30-day from collection holding time and analyzed within the 45-day from extraction to analysis holding time required by the method.

Reporting Notes	The samples met the 40-130% criterion for ES recoveries with the exception of CS 37Cl-2378-TCDD, which fell outside the upper limits. The TEQ was calculated and reported to the client using the I-TEFs and the WHO-2005 TEF, calculated several different ways. We also reported Totals and Detection Limits. These analyses met the requirements of the TNI Standard. Any deviations from the requirements of the reference method or TNI Standard have been stated above. The results presented in this report are representative of the samples as provided to the laboratory. The samples, calibrations and standards for the data presented in this report were analyzed at 2714 Exchange Drive, Wilmington, NC 28405.

General Reporting Notes – Data Qualifiers

The following are general reporting notes that are applicable to all Enthalpy Analytical, Inc.-Wilmington, NC data reports, unless specifically noted otherwise.

General Data Qualifiers / Data Attributes

- B – The analyte was found in the method blank, at a concentration that was at least 10% of the concentration in the sample.
- C – Two or more congeners co-elute. In EDDs, C denotes the lowest IUPAC congener in a co-elution group and additional co-eluters for the group are shown with the number of the lowest IUPAC co-eluter.
- E – The reported concentration exceeds the calibration range (upper point of the calibration curve).
- EMPC – Represents an estimated maximum possible concentration. EMPCs arise in cases where the signal/noise ratio is not sufficient for peak identification (the determined ion-abundance ratio is outside the allowed theoretical range), or where there is a co-eluting interference.
- J – Indicates that an analyte has a concentration below the reporting limit (lowest point of the calibration curve).
- ND – Indicates a non-detect.
- NR – Indicates a value that is not reportable.
- PR – Due to interference, the associated congener is poorly resolved.
- DI – Indicates the presence of a quantitative interference.
- SI – Denotes "Single Ion Mode" and is utilized for PCBs where the secondary ion trace has a significantly elevated noise level due to background PFK. Responses for such peaks are calculated using an EMPC approach based solely on the primary ion area(s) and may be considered estimates.
- U – The analyte was not detected. The Estimated Detection Limit (EDL) may be reported for this analyte.
- V – The labeled standard recovery was found to be outside of the method control limits.

DRBC/TMDL Specific Data Qualifiers / Data Attributes

- J – The reported result is an estimate. The value is less than the minimum calibration level but greater than the Estimated Detection Limit (EDL).
- U – The analyte was not detected in the sample at the Estimated Detection Limit (EDL).
- E – The reported concentration is an estimate. The value exceeds the upper calibration range (upper point of the calibration curve).

- D – Dilution Data. Result was obtained from the analysis of a dilution.
- B – Analyte found in the sample and associated method blank.
- Cxx – Co-elutes with the indicated congener, data is reported under the lowest IUPAC congener. 'xx' denotes the IUPAC number with the lowest numerical designated congener.
- NR – Analyte is not reportable because of problems in sample preparation or analysis.
- V – Labeled standard recovery is not within method control limits.
- X – Results from re-injection/repeat/second-column analysis.
- EMPC – Estimated Maximum Possible Concentration. Indicates that a peak is identified but did not meet the method specified ion-abundance ratio.

Lab Identifiers

- AR – Indicates use of the archived portion of the sample extract.
- CU – Indicates a sample that required additional clean-up prior to HRMS injection/processing.
- D – Indicates a dilution of the sample extract. The number that follows the "D" indicates the dilution factor.
- DE – Indicates a dilution performed with the addition of ES (Extraction Standard) solution.
- DUP – Designation for a duplicate sample.
- MS – Designation for a matrix spike.
- MSD – Designation for a matrix spike duplicate.
- RJ – Indicates a reinjection of the sample extract.
- S – Indicates a sample split. The number that follows the "S" indicates the split factor.

JONES ENVIRONMENTAL LABORATORY RESULTS

Client:	Langan	**Report date:**	2/11/2019
Client Address:	32 Executive Park, Ste 130 Irvine, CA 92614	**Jones Ref. No.:**	E-0959
Attn:	Brad McCardell	**Date Sampled:**	2/8/2019
		Date Received:	2/8/2019
Project:	Riverside Cement Plant	**Date Analyzed:**	2/8/2019
Project Address:	1500 Rubidoux Blvd Riverside, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates/Gasoline Range Organics

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval: 

Angela Haar, Ph. D.
Mobile Lab Manager

Client Address:	32 Executive Park, Ste 130 Irvine, CA 92614	**JEL Ref. No.:**	ST-13309
Attn:	Brad McCardell	**Date Sampled:**	2/8/2019
		Date Received:	2/8/2019
Project Name:	Riverside Cement Plant	**Date Analyzed:**	2/8/2019
Project Address:	1500 Rubidoux Blvd. Riverside, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. ASTM D1946 – Methane

Analytical – Soil Gas samples were analyzed using ASTM D1946 by GC/TCD. All samples were injected into the GC/MS system within 6 hours of sampling.
