Report No.: 1608152
Project Name: Sacramento & Bay, Los Angeles, CA / 04-16129AB

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 17, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Report No.: 1608235
Project Name: Sacramento & Bay, Los Angeles, CA / 04-16129AB 1

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 25, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Report No.: 1608248
Project Name: Sacramento & Bay, Los Angeles, CA / 04-16129AB

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 29, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Project Manager

Dear Mr. Clark:

At the request of the County of Los Angeles Fire Department – Health Hazardous Materials Division (LACFD), Ramboll Environ US Corporation (Ramboll Environ), on behalf of Sacramento Street Property, LP (Owner), has prepared this Source Area Removal Report to present the results of source area removal activities completed at 2145-2161 Sacramento Street and 2136 and 2159 Bay Street, Los Angeles, California (the Site, See Figures 1 and 2). The source area removal was completed as a first step in securing a No Further Action (NFA) designation for the Site under a commercial/industrial land use scenario.

This report discusses the activities that were implemented at the Site as part of the Source Area Removal Work Plan (Work Plan), which was submitted by Ramboll Environ to the LACFD on June 15, 2017, and approved by the LACFD on August 22, 2017. A standalone report of the source area removal was specifically requested by the LACFD in its approval letter. A site-wide closure report incorporating all environmental investigations and remediation performed to date will be submitted under separate cover and in which an NFA request will be made for the Site.

BACKGROUND

Based on analytical results of soil vapor, soil, and groundwater sampling previously conducted at the Site, which were detailed in the Work Plan, a source area of total petroleum hydrocarbon (TPH) and volatile organic compound (VOC) impacted soil and soil vapor was identified in the vicinity of Borings B-23 and B-35 (Figure 3). The source area is relatively well defined to the west and northwest by Borings B-32 and B-27/GW-1, to the east by Boring B-35, and to the south by Borings B-36 and B-37 (see Figure 3). The highest concentrations of TPH and VOCs were detected in soil from a depth of approximately 11 to 12 feet below ground surface (bgs). In most borings, decreasing concentrations were reported in samples from the depths of approximately 15 and 16 feet bgs. In Boring B-34, decreased concentrations were reported at a depth of approximately 30 feet bgs.

SOURCE AREA REMOVAL

Given the soil conditions (sands and sands with gravel), the locations of nearby buildings and utility lines (i.e. electric and fiber optic), the need to minimize disruption to the Site tenants, and evaluation of cost-effectiveness, the selected remedial alternative for the source area was large diameter auger (LDA) excavation. LDA excavation is performed by an excavator with a solid stem auger to bore large diameter holes to depth. As the auger advances, the soil is removed and managed at the ground surface. LDA excavation requires the borehole to remain open during and immediately after excavation until the borehole can be backfilled. Boreholes are backfilled with two-sack slurry using a cement truck from the bottom of the borehole to the ground surface. LDA excavation effectively removes the source area contaminants and does not generally require shoring or benching. Impacted soil is removed to the proposed depth, staged on-site, and loaded into trucks for off-site disposal to an approved landfill.

Removal of the source area contaminants to depths of approximately 15 to 30 feet bgs by LDA was recommended to remove the potential for TPH and/or VOC impacts migration to groundwater. Residual VOC and TPH concentrations in soil located beyond the source area are significantly lower and do not appear to be a continuing significant risk to regional groundwater quality uses. In addition, the area is currently covered by asphalt which provides a “cap” over the soil to further limit infiltration of surface water minimizing leaching potential of contaminants to groundwater. Prior to LDA excavation, Ramboll Environ used pre-existing sample location data to define the excavation area. Excavation limits were based on previously completed boring locations that define the lateral and vertical limits based on data known to be less than applicable remediation standards[1]. Based on historical data, Ramboll Environ targeted an area of approximately 150 square feet (ft^2) to be excavated. At this time, all LDA excavation activities have been completed in general accordance with the Work Plan.

LDA Excavation

On September 23 through 27, 2017, Ramboll Environ retained Innovative Construction Solutions, Inc. (ICS) of Santa Ana, California to conduct the LDA excavation. In turn, ICS retained Barney’s Hole Digging Service, Inc. (Barney’s) of Long Beach, California to advance the LDA boreholes. A total of five boreholes were advanced using a 6-foot diameter auger (designated as Boreholes 1 through 4 and Borehole 6); four to the depth of approximately 15 feet bgs and one to the depth of approximately 30 feet bgs. One borehole (Borehole 5) was advanced using a 3-foot diameter auger to a depth of approximately 15 feet bgs. In total, six boreholes were advanced to depth and covered an area of approximately 150 ft^2. The proposed depths of each borehole was selected based on previous analytical data. Figure 3 depicts the layout of the excavation boreholes along with the previous data.

During LDA excavation, soil brought to the surface was monitored using visual and olfactory cues as well as photoionization detector (PID) monitoring for evidence of impacted soil. In addition, measures were taken to manage visible emissions in accordance with South Coast Air Quality Management District (SCAQMD) Rule 401, fugitive dust in accordance with SCAQMD Rule 403, and VOC emissions in accordance with ICS’ Various Locations SCAQMD Rule 1166 Plan (Attachment A). Protocols for implementing Rule 1166 included monitoring of soil brought to the ground surface every 15 minutes with a PID during LDA excavation. As the

[1] 2017 United States Environmental Protection Agency Regional Screening Levels for Chemical Contaminants at Superfund Sites (industrial soils) and/or 1996 Los Angeles Regional Water Quality Control Board Interim Site Assessment & Cleanup Guidebook Attenuation Factor Method.

soil was brought to the surface, Ramboll Environ monitored the soil with a PID at approximately two to three inches above the soil. VOC readings were recorded on Rule 1166 soil monitoring record sheets as appropriate. During LDA excavation, PID readings ranged from 0.2 to 29.6 parts per million by volume (ppmv) and did not exceed Rule 1166 thresholds. As with previous borings and exploratory excavations in this area, debris such as metal, concrete and brick were encountered in the soil cuttings, along with some staining and odors. Photographs of the excavation activities are included as Attachment B.

On September 23, 2017, an area of asphalt approximately 10 feet by 15 feet was cut, removed, and stockpiled on-site for subsequent disposal at an approved disposal facility. The location of the asphalt cut was based on the actual field locations of previous borings, which had been identified in the Work Plan for excavation. Following asphalt removal, the first of the six-foot diameter boreholes was advanced in the vicinity of Boring B-34 to a depth of approximately 30 feet bgs (Borehole 1). Once the borehole was advanced to the target depth, it was immediately backfilled directly from a cement truck from bottom to top with two-sack cement slurry. A total of approximately 40 cubic yards (yds^3) of slurry was backfilled into the borehole and allowed to set overnight. Soil from Borehole 1 was stockpiled, staged, and covered with plastic in a designated on-site location for subsequent disposal.

On September 24, 2017, two six-foot diameter boreholes were advanced to a depth of approximately 15 feet bgs. One borehole was advanced immediately east of Boring B-34 (Borehole 2). The borehole was advanced so that the location overlapped with Borehole 1 drilled the previous day by approximately two feet. Borehole 3 was advanced in the southern corner of the proposed excavation area. Once the boreholes were advanced to the target depth, they were immediately backfilled directly from a cement truck from bottom to top with two-sack cement slurry. A total of approximately 60 yds^3 of slurry was backfilled into the boreholes and allowed to set overnight. Soil from Boreholes 2 and 3 was placed on plastic, inspected for visual and olfactory cues, and monitored with a PID. Soil from Boreholes 2 and 3 was stockpiled, staged, and covered with plastic in a designated on-site location for subsequent disposal.

On September 25, 2017, prior to borehole advancement, approximately 90 yds^3 of soil from Boreholes 1 through 3 was loaded and transported off-site to Chiquita Canyon Landfill, in Castaic, California (Chiquita Canyon) as non-hazardous waste. Following soil stockpile removal, one six-foot diameter borehole and one three-foot diameter borehole were advanced to a depth of approximately 15 feet bgs (Boreholes 4 and 5, respectively). Borehole 4 was advanced between Boreholes 1 and 3 so that the location overlapped with each existing borehole by approximately 1.5 feet. Borehole 5 was advanced east and adjacent of Borehole 3 in the southeastern corner of the proposed excavation area. Once the boreholes were advanced to the target depth, they were immediately backfilled directly from a cement truck from bottom to top with two-sack cement slurry. A total of approximately 30 yds^3 of slurry was backfilled into the boreholes and allowed to set overnight. Soil from Boreholes 4 and 5 was placed on plastic, inspected for visual and olfactory cues, and monitored with a PID. Stockpiled soil was staged in a designated location on-site and covered for subsequent disposal.

On September 26, 2017, one six-foot diameter borehole (Borehole 6) was advanced south of Borehole 2, east of Borehole 4, and north of Borehole 5 to a depth of approximately 15 feet bgs. Borehole 6 was placed such that the location overlapped with Boreholes 2 through 5 to cover the remaining proposed excavation area. Once the borehole was advanced to the target depth, it was immediately backfilled directly from a cement truck from bottom to top with two-sack cement slurry. In total, approximately 20 yds^3 of slurry was

backfilled into Borehole 6 and allowed to set overnight. Soil from Borehole 6 was placed on plastic, inspected for visual and olfactory cues, and monitored with a PID. Stockpiled soil was staged in a designated location on-site and covered for subsequent disposal.

On September 27, 2017, approximately 50 yds^3 of soil from Boreholes 4 through 6 was loaded and transported off-site to Chiquita Canyon as non-hazardous waste. New clean cuts were made to the asphalt along the southern and eastern sides due to damage during excavation. The Site was re-paved to match the existing surface by Allstar Paving Company Inc. of Santa Ana, California.

Waste Management

In total, approximately 207.83 tons of soil were transported to Chiquita Canyon Landfill for disposal as non-hazardous waste. All asphalt removed from the excavation area was transported off-site to Waste Management – Azusa Land Reclamation in Azusa, California. Wash water from site cleanup activities was collected in five 55-gallon drums and transported as non-hazardous waste to DeMenno Kerdoon in Compton, California. Waste manifest forms for the soil and wash water are included as Attachment C.

CONCLUSIONS

This Source Area Removal Report in the first step to obtaining an NFA designation for the Site under a commercial/industrial land use scenario. Based on the LDA excavation completed, the source area has been removed as described in the Work Plan. Ramboll Environ will prepare a Site-wide closure report and NFA request to document the remedial action as well as evaluate residual chemicals reported at the Site as they relate to appropriate agency screening levels for the protection of human health and the environment. A soil management plan (SMP) will also be prepared to guide future earthwork activities at the Site including those completed by tenants.

Please contact the undersigned if you have any questions.

Sincerely,

Eddie Arslanian, PE

ATTACHMENT A
ICS' VARIOUS LOCATIONS
SCAQMD RULE 1166 PLAN

South Coast Air Quality Management District
21865 Copley Drive, Diamond Bar, CA 91765-4178

COMPLIANCE PLAN

This plan must be renewed annually and is subject to annual renewal fees pursuant to Rule 306 (h).

Plan Issue Date: 9/18/2015 ID 120425

Company: INNOVATIVE CONSTRUCTION SOLUTIONS
4011 W CHANDLER AVE
SANTA ANA, CA 92704

Site Location: VARIOUS LOCATIONS IN SCAQMD

Conditions:

The operation under this Rule 1166 has been conditionally approved and is subject to the following conditions:

SECTION I - GENERAL REQUIREMENTS

1. A signed copy of this plan shall be present at each excavation site at all times and shall be made available to SCAQMD personnel upon request.
2. This plan is not valid for the excavation of VOC contaminated soils at landfills or sites used for disposal of refuse or other types of waste.
3. This plan does not allow the treatment of VOC contaminated soil by thermal, chemical, or mechanical processes. Any of the above treatment processes requires a Permit to Operate from the SCAQMD and a site specific Rule 1166 plan.
4. This plan does not allow back-filling of treated VOC contaminated soil. Back-filling of treated VOC contaminated soil may be allowed under a site specific Rule 1166 plan.
5. The total quantity of VOC contaminated soil excavated and handled at each site shall not exceed 2,000 cubic yards. This total includes any VOC contaminated soils excavated from this location under a various location plan within the last twelve (12) calendar months. Excavations involving quantities in excess of 2,000 cubic yards of VOC contaminated soil requires the application submittal and approval of a site specific Rule 1166 excavation plan.
6. For the purposes of Rule 1166 and this plan, soil measured pursuant to Rule 1166 as VOC contaminated soil, is considered as VOC contaminated soil from the time of measurement onward, until the soil is treated pursuant to an approved SCAQMD treatment process.
7. During each step of the process up to and including the removal and disposal process, all precautions and measures shall be taken to minimize the release of VOC, odor and dust. This includes, but is not limited to:
   - A. The use of additional plastic sheeting or suppressants on exposed soil surfaces and work areas,
   - B. Maintaining paved public streets free of soil deposits, and
   - C. Operating such that VOC soil shall not be spread on-site or off-site; and not performing any unnecessary movement or agitation of soil, including the reshaping or relocation of stockpiles, that may cause the uncontrolled evaporation of VOCs into the atmosphere.

ORIGINAL

8. The SCAQMD shall be immediately notified of any complaints received as a result of activities conducted under this plan. Such notification shall include the nature of the complaints, number of complainants, and the action taken by the plan holder to mitigate the source of the complaint.

SECTION II - PRIOR TO EXCAVATION

9. At least 24 hours prior to commencing excavation or grading of soil at the site, the Executive Officer or designee shall be notified of the excavation by fax using a form approved by the Executive Officer, which is fully completed and includes the name of the company performing the excavation and the application number listed on this mitigation plan. The notification shall be made by faxing the notification form at (909) 396-3342. Fax notifications will receive a reference number by return fax or can be obtained referencing the fax notification by phone, Tuesday through Friday during business hours, at (909) 396-2326. The reference number shall be retained as proof of compliance with this requirement.

Reference Number: Notification Date:

10. Complete verification information in Attachment section and obtain required signatures, prior to commencing excavation.

SECTION III - MONITORING

11. All monitoring shall be conducted by trained personnel who are proficient in the use of the hydrocarbon monitor selected for use at this site.

12. During the excavation process, an organic vapor analyzer (OVA) shall be on site at all times. The OVA shall be maintained in good working order at all times and shall be calibrated by the manufacturer at least once every three months. The calibration of the OVA shall be verified using certified calibration gas at the beginning of each working day with the procedures specified by the manufacturer. If a calibration gas other than hexane is used, each measured reading shall be correlated to and expressed as hexane, using equivalency factors provided by the manufacturer.

13. All monitoring shall be conducted at a distance no more than 3 inches above the soil surface using an OVA described in condition no. 12 above. Monitoring shall be conducted at a minimum frequency of one reading for every two cubic yards of soil excavated, not to exceed fifteen minutes between readings. All readings shall be taken no later than three (3) minutes after each load of soil is excavated.

14. Written records of OVA monitoring and calibrations required above shall be kept in a format approved by the SCAQMD. The approved format is included in the Attachment section (total 6 pages). The certification on all records shall be signed and dated on the day the measurements are observed.

ORIGINAL

15. Upon detection of VOC contaminated soil (readings 50 PPMV or greater), the Executive Officer or designee shall be notified within 24 hours of the first detection of VOC contamination. The notification shall be made by faxing the notification form to (909) 396-3342 or calling (909) 396-2326. A reference number will be faxed back or will be issued when the phone notification is received. All phone notifications shall be followed by mailing the notification form to the District postmarked within 48 hours. The reference number will be retained as proof of compliance with this requirement.

Reference Number: Notification Date:

SECTION IV - HANDLING

16. If the OVA measurement is greater than 50 PPMV but less than 1000 PPMV

    A. The affected work area and load of soil shall be sprayed with water and/or approved vapor suppressant.

    B. Contaminated soil in stockpiles shall be covered with plastic sheeting which overlap a minimum of twenty-four inches and are secured so that no portion of the contaminated soil is exposed to the atmosphere. In the course of handling the stockpile, only the working face of the stockpile may be uncovered.

17. If the soil OVA measurement equals or is greater than 1000 PPMV, notify the District immediately or within one hour of detection, and

    A. The affected soil and working area shall be immediately sprayed with water or an approved vapor suppressant, and either:

    i. The contaminated soil excavated shall be immediately placed in SCAQMD approved sealed containers equipped with vapor tight lids, or,

    ii. The soil shall be directly loaded in trucks, sprayed with additional water or approved vapor suppressants, covered, and transported immediately off site to an approved treatment facility, or,

    B. Handled by alternative storage methods with prior written approval from the SCAQMD

18. All VOC contaminated soil below 1000 PPMV shall be stockpiled, covered with plastic sheeting, and stored separately from non-VOC contaminated soil, or immediately transported to a treatment facility

SECTION V - STORAGE

19. A stockpile shall not contain more than 400 cubic yards of soil.

20. During excavation, the only exposed VOC contaminated soil shall be restricted to the immediate working area of the site or stockpile. All other portions of the stockpile shall be covered with plastic sheeting, with seams, which overlap a minimum of twenty-four inches and are secured with duct tape. Any exposed VOC contaminated soil surfaces (work face) shall be kept moist with water or other approved suppressants at all times, and shall be re-covered during periods of inactivity longer than one (1) hour. At the end of each working day, all stockpiles shall be completely covered and securely anchored to prevent any exposure of soil to the atmosphere.

21. Once covered with plastic sheeting, stockpiles shall remain undisturbed until removed from site.

22. Daily inspections shall be conducted of all covered VOC contaminated stockpiles to ensure the integrity of the plastic cover. Such inspections shall include a visual inspection of all seams and plastic cover surfaces. Any holes, tears or any other potential sources of fugitive VOC emissions shall be repaired immediately. Daily records shall be maintained to ensure compliance with this condition.

SECTION VI - SOIL REMOVAL AND DISPOSAL

23. All excavated VOC contaminated soil shall be removed from the site within thirty (30) days of its excavation.

24. All VOC contaminated soil removed from the site shall comply with the following:

    A. Be transported to an approved treatment/disposal facility. It shall be the responsibility of the plan holder to ensure that the receiving treatment/disposal facility has received approval from the appropriate environmental oversight agencies to handle and treat VOC contaminated soils.

    B. Prior to covering/tarping, loaded contaminated soil shall be treated by spraying with water or dust suppressants.

    C. The truck or trailer shall be completely covered/tarped prior to leaving the site to prevent particulate emissions to the atmosphere.

    D. When loading is completed and during transportation, no excavated material shall extend above the sides or rear of the truck or trailer.

    E. The exterior of the trucks (including the tires) shall be cleaned off prior to the trucks leaving the excavation site.

SECTION VII - RECORDS AND REPORTING

25. A written report shall be provided to the SCAQMD within 30 days of initial detection of contaminated soil, which includes the following information:

    A. The status of the excavation pit, and any VOC contaminated soil remaining on site.

    B. A brief summary indicating if additional clean up efforts are necessary, the additional quantity of VOC contaminated soils to be excavated and the projected schedule of the excavation.

26. Records of disposal shall be maintained for all VOC contaminated soil removed from this site. Such records shall be clearly labeled SCAQMD RULE 1166-VOC CONTAMINATED SOIL and shall include the identification and the location of, 1) the generator, 2) transporter and 3) receiving facility. In addition, such records shall be signed and dated by each of the above parties indicating receipt or relinquishment of the VOC contaminated soil at the time custody is transferred.

27. Records of disposal of VOC contaminated soil shall be maintained on site during the excavation and later maintained for a period of two (2) years. The records shall be made available to SCAQMD personnel upon request.

ORIGINAL

28. Within thirty (30) days after the excavation at the site is completed, the written records under conditions no. 14, 22, and 27 shall be submitted to the SCAQMD at the following address:

South Coast Air Quality Mgmt District

Engineering & Compliance division

Toxics & Waste management unit

(Rule 1166 Compliance)

21865 E. Copley Dr.

Diamond Bar, CA. 91765-4182

29. Once issued, this plan is subject to further review by the SCAQMD and may be revoked if excavation activities are found in violation of plan conditions or SCAQMD's Rules and Regulations. Failure to comply with one or more of the conditions contained within this plan constitutes a violation of Rules 221 and 1166.

NOTICE

This plan does not authorize the emission of air contaminants in excess of those allowed by Division 26 of the Health and Safety Code of the State of California or the applicable Rules and Regulations of the South Coast Air Quality Management District (SCAQMD). This plan cannot be considered as permission to violate existing laws, ordinances, regulations or statutes of other government agencies.

A copy of this plan shall be displayed in the vicinity of the equipment subject to this plan.

Executive Officer

Dorris M. Bailey

DEFINITIONS

Excavation	Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.
Organic Vapor Analyzer (OVA)	For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV
Responsible Party	For the purposes of this plan, Responsible Party is the party financially responsible for initiating the excavation. This may include the property owner or the tank operator. This excludes contractors working for the property owner or operator, and any other party that lacks the direct authority to immediately treat all VOC contaminated soils generated at the excavation site.
VOC Contaminated Soil	Is soil that registers a concentration of 50 PPM or greater of volatile organic compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.
Volatile Organic Compound (VOC)	Is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates,

ammonium carbonate, and exempt compounds. Exempt compounds areas defined in Rule 102 – Definitions of Terms.

Once issued, this plan is subject to further review by the SCAQMD and may be revoked if excavation activities are found in violation of plan conditions or SCAQMD's Rules and Regulations. Failure to comply with one or more of the conditions contained within this plan constitutes a violation of Rules 221 and 1166.

Other governmental agencies may require approval before any excavation begins. It shall be the responsibility of the applicant to obtain that approval. The South Coast Air Quality Management District shall not be responsible or liable for any losses because of measures required or taken pursuant to the requirements of this approved Rule 1166 Contaminated Soil Mitigation Plan.

Questions regarding this plan should be directed to Larry Israel at (909) 396-2370.

IMPORTANT NOTICE
Rules 203, 1149 and 1166 Fees

TO COMPANIES AND CONTRACTORS THAT:

Operate portable soil/vapor extraction units at a location for 5 days or more (Rule 203)
Degas storage tanks known/suspected to contain Volatile Organic Compounds (VOC) (Rule 1149)
Remove tanks or transfer piping known/suspected to contain VOC (Rule 1166)
Handle, excavate, grade, monitor or treat soil known/suspected to contain VOC (Rule 1166)

SCAQMD Regulation III - Fee amendments for the Fiscal Years notification fee are as shown below. All required notifications for soil vapor extraction projects, tank degassing projects, and excavation of VOC soil projects, are subject to the new fee per Rule 301*(x)*. See fee schedule below:

Fiscal Year	Notification Fee*
2014-2015	$57.18
2015-2016	$57.98

The fee is per notification and an additional service charge fee of $25.00 may apply for any returned check per Rule 313(i).

Initial notifications must be faxed to 909-396-3342 and the original notification and fee must be postmarked within 48 hours of the fax time.

SCAQMDrecommends mailing your notification to save time, money, reduce traffic, conserve energy use and avoid air pollution. ***For your convenience please mail all notifications and fees to the following mailing address:***

SCAQMD R203/1149/1166 Notifications,
FILE # 55641,
Los Angeles, CA 90074-5641

Notifications should be completed, signed, mailed and the fee paid by the contractor performing the project. Notifications submitted without a fee are deemed incomplete and they will be returned to sender and referred to the Air Toxics Compliance Unit.

Rules 203, 1149 and 1166 notification forms, instructions, and information can be obtained from the SCAQMD web site at http://www.aqmd.gov

The forms are located at our home page, click on **Business / Compliance Program / Recordkeeping and Reporting Forms or the Rule link below.**

203 Soil Vapor Extraction (SVE) Notification Form
1166 VOC Emissions From Soil Excavation Notification Form
1149 Storage Tank Degassing Notification Form

For any Rule 203/1149/1166 questions call the above Rules Hot Line at (909) 396-2326.

*NOTE: Rule 304(e) requires an owner operator to pay for analysis of SCAQMD field samples showing non compliance. Please consult the current Rule 301 for the correct Notification Fee prior to sending the payment.

Rule 203 and Rule 1166 Form Notification Instructions

Use this form to notify of operation of a Soil Vapor Extraction unit (SVE) at any site for more than 5 days per permit condition (R203); or for notifying about R1166 projects prior to excavating soil that is known or suspected to contain Volatile Organic Compounds (VOC), VOC tank excavation, discovering the presence of > 50 ppm and 1000 ppm VOC contaminated soil during soil excavation, or to notify of onsite VOC contaminated soil mitigation or treating.
For questions check our website at www.aqmd.gov or call the Hotline at (909) 396-2326

NOTIFICATION FEES: Per Rule 301(x) any person required to submit a notification per Rule 1166 projects or Rule 203 - Soil Vapor Extraction projects must pay a notification fee per notification.

FAX all notifications to (909) 396-3342 and then *MAIL* the form and fee within 48 hours of fax to:

SCAQMD Rule 1166 / 203 Notifications, File # 55641, Los Angeles, CA 90074-5641

Notifications must include the following *MANDATORY* information:

Faxback # - Provide your fax # at the top of the Notification Form if you want a **Reference #** faxed back to you.

Notification Type - *CIRCLE the type of Notification.* **Original** is for new or initial Notifications. **Revisions** are for updating information on notifications in which the project End Date has not expired. Provide the most recent prior Reference # issued for **Revisions** or **Cancellations.**

Project Type - *CIRCLE the type of work* you are submitting a notification for. A separate notification and fee is required for each type of work selected.

Mitigation Plan/Permit - Each Project Type requires a valid R1166 Mitigation Plan *or* SVE Permit # *(important).*

Site Contractor Information - Provide the information for the actual contractor ***doing the work.*** The AQMD ID #, also known as Company or Facility ID #, can be found on the contractor's AQMD Mitigation Plan, Permits or invoices.

Site Information - Provide the site name and complete address. Include the street number and name, city, zip code, and nearest cross street. Give more detailed directions for site(s) difficult to locate.

Project Dates - Provide the project Start and End Dates. Any changes will require a Revision notification.

Tank Information - For R1166 tank excavation specify the tank capacity, the VOC material stored in the tank, and if the tank is above ground (a/g) or underground (u/g).

Information Certification - The notification must be signed and dated by the contractor doing the work or authorized representative to confirm that the information provided is complete and accurate.

SOIL/TANK EXCAVATION NOTIFICATION Rule 1166(c)(1)(B) **Notify 24 hours prior of intent to *Excavate*** known or suspected VOC storage and/or transfer equipment (includes diesel and waste oil tanks); or ***handling*** known or suspected VOC contaminated soil. **NOTE:** Soil excavation > 5,000 cubic yards may require a R403 Fugitive Dust Plan.

DETECTING/FINDING VOC SOIL NOTIFICATION - Rule 1166(c)(1)(D)(ii) **Notify of finding VOC contaminated soil**

- within 1 hour of detecting VOC greater than 1000 ppm*
- within 24 hours of detecting VOC greater than 50 ppm
- within 1 hour of an excavation due to a breakdown requiring a Rule 430 notification to SCAQMD

EMERGENCY NOTIFICATION Rule 1166(c)(1)(B) **Notify prior to start work of any incident declared an emergency by** an authorized agency requiring immediate tank removal/repairs or excavating/handling known or suspected VOC soil:

- **Call 1-800-CUT-SMOG prior to excavating or fax the emergency notification to 909-396-3342 and**
- **Mail the notification within 48 hours after the excavation including the agency Order or Declaration.**

SOIL VAPOR EXTRACTION NOTIFICATION (SVE - Rule 203 *) **Notify upon the 5th day after operating at a new site:** Notifying of ***start-up*** or ***testing*** of operation of portable Soil Vapor Extraction equipment lasting 5 days or more. Provide the distance in feet to the nearest sensitive receptor *if* the site is located less than ¼ mile from any Long-Term Health Care Facility, Rehabilitation Center, Convalescent Center, Retirement Home, Residence, School, Playground, Child Care Center or Athletic Facility (* *See your SVE permit condition requirements*).

MITIGATION/TREATING VOC SOIL NOTIFICATION (Rule 203 *) **Notify per Permit condition requirements when:** Notifying of on-site ***mitigation*** or ***treating*** of VOC contaminated soil (* *See your Permit condition requirements*).

ACKNOWLEDGEMENT OF ANNUAL OPERATING PERMIT FEE PAYMENT

Dear Permit Holder:

This letter acknowledges your recent annual operating permit renewal fee payment for the permits to operate or applications listed on the enclosed attachment. The next renewal date for each permit or application is stated on the attachment. For facilities that have been issued a RECLAIM or Title V facility permit, the facility permit serves as a comprehensive permit to operate the equipment listed on the facility permit.

This payment acknowledgment does NOT replace your original Permit to Operate, and you should NOT discard the original permit.

You are required by SCAQMD Rule 206 to affix the original Permit to Operate or a legible facsimile of the permit upon the equipment so that the permit number, equipment description, and the operating conditions are clearly visible.

If you have any questions about this permit renewal acknowledgement letter please call SCAQMD's Billing Services Tuesday through Friday from 8 a.m. to 12 Noon and 1 p.m. to 5 p.m. at (909) 396-2900; or from inside California, you may call toll free at (866) 888-8838. A request for a certified permit copy shall be made in writing by the permittee after the destruction, loss, or defacement of a permit. A request for a permit to be reissued shall be made in writing by the permittee where there is a name or address change without a change of operator or location. A fee of $26.34 must accompany your written request for a certified copy. (If your facility is a RECLAIM or Title V facility, you may request a certified copy of your RECLAIM or Title V facility permit by submitting the request in writing. A fee of $26.34 for the first page and $1.86 for each additional page in the facility permit must accompany your written request.) A fee of $203.93 shall be paid for a reissued permit (RECLAIM or Title V facility shall pay $203.93 for the first page plus $1.86 for each additional page of the Facility Permit). The written request and the fee for a certified copy or reissue of an active permit should be sent to SCAQMD, P.O. Box 4944, Diamond Bar, CA 91765-0944. For questions regarding certified or reissued permits please contact Permit Services at 909-396-3385.

County of Los Angeles Fire Department
Review of Reports

COUNTY OF LOS ANGELES

FIRE DEPARTMENT

DARYL L. OSBY
FIRE CHIEF
FORESTER & FIRE WARDEN

Refer reply to
Health Hazardous Materials Division
5825 Rickenbacker Rd.
Commerce CA 90040-302

December 26, 2018

Sacramento Street Property, LP
c/o
Rob Edelenbos
Tishman Speyer
1 Bush Street, Suite 450
San Francisco, CA 94104

Dear Mr. Edelenbos:

2145 SACRAMENTO STREET AND 2136 & 2159 BAY STREET, LOS ANGELES, CA 90021
(SMU FILE #17-1096/RO0001714)

This Department has completed a review of the reports entitled, Source Area Removal Report, Sacramento Street Property, LP, 2145-2161 Sacramento Street and, 2136 and 2159 Bay Street, Los Angeles, California, dated November 28, 2017 Site-Wide Closure Report, 2145-2161 Sacramento Street, 2136 and 2159 Bay Street, Los Angeles, California, dated April 3, 2018 and, Soil Management Plan, 2145-2161 Sacramento Street, 2136 and 2159 Bay Street, Los Angeles, California, dated April 2018, submitted by your consultant, Ramboll Environ. This Department also reviewed the Notice of Environmental Condition and Environmental Restriction - California Civil Code Section 1471, For Property at: 2145-2161 Sacramento Street and 2136 and 2159 Bay Street, Los Angeles, California, Los Angeles County Assessor s Parcel Numbers 5166-001-002, 5166-005-008, 5166-005-009, 5166-005-010, and 5166-005-013 Notice that was recorded at the Los Angeles County Recorder s Office on December 4, 2018. The above referenced soil management plan SMP is also included within the Notice, which restricts the property to commercial/industrial use due to the presence of subsurface soil contamination unless mitigation measures or remedial action is implemented at the site.

Based on information provided in the reports and Notice, and with the provision that the information was accurate and representative of existing conditions, we concur with your consultant that the known site contamination has been satisfactorily assessed for commercial/industrial site use as long as the Notice re uirements and restrictions are adhered to. The Site Mitigation Unit SMU of this Department has no further re uirement or restriction relating to this site at this time.

This letter, however, does not relieve you of any liability under the California Health and Safety Code, the State Water Code, or other applicable laws and regulations, nor does it relieve you of responsibility for any unidentified conditions or future operations that could pose an environmental concern.

Respectfully submitted,

RICHARD CLAR , SUPERVISOR
SITE MITIGATION UNIT
HEALTH HAZARDOUS MATERIALS DIVISION

F +1 213 943 6301
www.ramboll.com

Dear Mr. Nichols:

Ramboll US Corporation (Ramboll), previously known as Ramboll Environ US Corporation (Ramboll Environ), has prepared this letter to Tishman Speyer to provide corrections to its Phase I Environmental Site Assessment (ESA) report for 2145-2161 Sacramento Street and 2136 and 2159 Bay Street, Los Angeles, California (the "site") dated October 2016 (the "2016 Phase I report"). It is our understanding that the 2016 Phase I report will be appended to the Draft Environmental Impact Report (EIR) for the site.

PHASE I ESA CORRECTIONS

It has come to our attention that two corrections to the 2016 Phase I report are required. Neither correction has any bearing on the report conclusions. Given that the 2016 Phase I report was already issued in final form in October 2016, the corrections are not being made to the text of the report. The corrections are provided below in strikeout and bold lettering to show where edits were made:

- In Section 5.2.4 on page 30, the second to the last sentence should read, "Ramboll Environ was not able to observe labels on these transformers, but based on their locations the transformers are assumed to be owned by the utility company (~~SCE~~**LADWP**)."
- In Section 5.2.5 on page 30, the last three sentences of the first paragraph should read, "The visual survey did not indicate the presence of ACMs, except for a small ~~amount~~ **area** of vinyl floor tile and mastic **in one unit**. In addition, a bulk sample of tile reportedly was collected during the 1990 survey and analyzed for ACMs. The results of the sampling were not provided, but the **area of** tile reportedly was removed."

If you have any questions regarding this letter, please contact the undersigned.

Sincerely,

Eddie Arslanian, PE

1. SUMMARY OF CONCLUSIONS

Ramboll Environ US Corporation (Ramboll Environ) was retained by Tishman Speyer to perform a Phase I Environmental Site Assessment (ESA) of the property located at 2145-2161 Sacramento Street (Sacramento Building), 2136 Bay Street (Building C), and 2159 Bay Street (Building A/B) in Los Angeles, California (herein referred to as the "facility," or the "site"). Ramboll Environ's assessment was conducted in connection with a purchase of the property. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 2.1).

1.1 Site Summary

Hyperloop One leases and operates a transportation research and development facility at the site. The approximately 1.7-acre site is improved with three buildings: an approximately 25,700-square-foot building located in the southern portion of the site (Sacramento Building; 2145-2161 Sacramento Street); an approximately 13,500-square foot building located in the north central portion of the site (Building C; 2136 Bay Street); and an approximately 9,000-square foot building located in the northeast portion of the site (Building A/B; 2159 Bay Street). The site was developed by 1906 (and possibly earlier) for industrial purposes, including a stone yard (northern portion) and carpet cleaning operation (southeast portion). The existing site buildings were constructed beginning in the 1920s. In the northern portion of the site, Hill Brothers Chemical Company (HBCC) began operating in 1924 and continued until approximately 2013, with operations consisting primarily of chemical manufacturing and storage and production of materials used in the building industry. In the southern portion of the site, the Sacramento Building was used for various industrial and warehousing purposes between its construction in 1923 and approximately the late 1990s.

1.2 Recognized Environmental Conditions

Ramboll Environ performed a Phase I ESA of the site at 2145-2161 Sacramento Street, 2136 Bay Street, and 2159 Bay Street in Los Angeles, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed the following REC in connection with the site:

- **Historical Operations Resulting in On-site Soil, Soil Gas and Groundwater Impact.**

  Industrial operations have been conducted at the site since 1906 (and possibly earlier) beginning with a stone yard (northern portion of the site) and carpet cleaning operations (southeast portion of the site). The existing site buildings were constructed in the 1920s. Several buildings and structures used for historical operations are no longer present and the existing buildings have undergone several major modifications (e.g., the use of fill material to raise the foundation of Building A/B).

  HBCC began operating in the northern portion of the site in 1924 and continued until approximately 2013, with operations consisting primarily of chemical manufacturing and storage and production of materials used in the building industry. HBCC's primary chemical storage and processing area, including multiple chemical tanks and a former rock crusher building, was located in the area to the south of Building A/B and southeast of Building C. Several smaller buildings associated with HBCC operations historically were also present in the northern portion of the site that were used for machine shop and automotive repair operations, and storage (e.g., paint,

inflammable materials). Between its construction in 1923 and the late 1990s, the Sacramento Building was used for various industrial and warehousing purposes including insulation and waterproofing manufacturing, battery manufacturing, floor cement manufacturing, and laundry-related operations (e.g., cleaning, bleaching, drying, dyeing).

HBCC is listed on several databases related to the potential presence of historical underground storage tanks (USTs). A 1988 document related to these listings is available on the California State Water Resources Control Boards (SWRCB) GeoTracker database. The 1988 SWRCB record lists various kind of hazardous substance storage features; however, the record does not indicate whether the features were aboveground or belowground. The features included five diesel tanks (1,000 to 6,000 gallons), two gasoline tanks (both 10,000 gallons), seven waste tanks (360 to 4,500 gallons), and six waste oil tanks (200 to 5,000 gallons).

Based on the historical industrial operations at the site, which likely included the use of petroleum products, solvents (including chlorinated solvents), adhesives, paint, metals, acids, caustics, corrosives, asbestos and other chemicals, Ramboll Environ conducted subsurface investigations in August 2016. A total of 31 borings were advanced and soil, soil vapor, and/or groundwater samples were collected. Soil vapor samples were analyzed for volatile organic compounds (VOCs). Soil samples were selectively analyzed for VOCs, total petroleum hydrocarbons (TPH), semi-volatile organic compounds (SVOCs), metals, and asbestos. Groundwater samples were analyzed for VOCs and TPH.

Based on Ramboll Environ's field observations and laboratory analytical results to date, there is evidence that historical release(s) from the site have adversely impacted the subsurface environment, most notably in the immediate vicinity of a subsurface metallic object encountered during drilling. Subsurface impacts consist of VOCs (primarily tetrachloroethene [PCE], trichloroethene [TCE], and 1,1,1-trichloroethane [1,1,1-TCA]) and TPH in soil, soil vapor, and/or groundwater, as well as metals (arsenic, lead) in shallow soil. In summary,

- The results of the recent soil and soil vapor sampling performed do not indicate that significant subsurface impacts exist beneath the existing building footprints (i.e., VOCs are present in soil vapor at concentrations within the United States Environmental Protection Agency (USEPA) Risk Management Range of 1x10-6 to 1x10-4). The detected concentrations of PCE in soil vapor beneath the building would be considered generally low and within the acceptable risk management criteria established by USEPA for the current site uses.
- Given that the site is currently capped with asphalt and/or concrete, no further action is recommended with regard to the presence of metals in shallow soils.
- The recommended approach to address the metallic object and associated PCE/TPH impacts is to remove the metallic object and excavate underlying soil to a depth of approximately 30 feet. It is anticipated that the surface area of the excavation footprint will be approximately 10 feet wide by 15 feet long.
- Given the low concentrations of VOCs and TPH reported in groundwater, no active remediation is warranted although limited monitoring may be required by the appropriate regulatory agency.

The concentrations of these constituents in soil vapor, soil, and/or groundwater constitute a REC for the site. Ramboll Environ will work with the appropriate regulatory agencies to address the subsurface metallic object and implement the recommendation(s), as may be appropriate.

1.3 Other Findings

Although not considered a REC based on currently available information, Ramboll Environ identified the following other finding. The term "other finding" is not defined by ASTM; rather, Ramboll Environ uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former Diesel UST.** According to prior reports, one diesel UST was excavated and removed in or about 1990 near the southwest corner of Building C. A Phase II site investigation was completed in 2015 in the area of the former UST and TPH was reported at concentrations below the Los Angeles Regional Water Quality Control Board (RWQCB) soil screening levels and the United States Environmental Protection Agency (USEPA) regional screening levels (RSLs). Based on the existing data, Ramboll Environ does not consider the former diesel UST to be a significant concern.

A discussion of historical RECs and *de minimis* conditions identified during this review (if any) is presented in Section 6.0 of this report.

1.4 Non-scope Considerations

Ramboll Environ identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The earliest buildings on the site were constructed in the 1920s, before asbestos was generally phased out of use in many building material applications during the 1980s. Ramboll Environ was not provided with any reports of formal asbestos surveys conducted at the facility or operations and maintenance (O&M) plans prepared for the facility. According to a 2014 Phase I report for the Sacramento Building, a visual survey for and limited sampling for asbestos were conducted in that building in 1990. The visual survey did not indicate the presence of ACMs, except for a small amount of vinyl floor tile and mastic. In addition, a bulk sample of tile reportedly was collected during the 1990 survey and analyzed for ACMs. The results of the sampling were not provided in the 2014 Phase I report, but the tile reportedly was removed. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey should be conducted in site buildings.
- **Water Intrusion / Mold.** Ramboll Environ did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the facility has not experienced problems with water intrusion in interior areas. In exterior areas, a minor flooding event occurred in the Hyperloop Area (depicted on Figure 2), which resulted in the installation of a sump near the northeast corner of the Sacramento Building.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction dates of the buildings beginning in the 1920s, it is possible that lead-based paint was used historically on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. Ramboll Environ observed the paint to be in good condition.
- **Radon.** Based on information included in the EDR database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database,

radon did not exceed 4 pCi/L at two properties surveyed in the same zip code as the site. A USEPA survey conducted in Los Angeles County found that the average radon level of a first floor room at 63 properties was 0.711 pCi/L.

2. INTRODUCTION

2.1 Purpose

Ramboll Environ was retained by Tishman Speyer to conduct a Phase I ESA of the property located in Los Angeles, California. Ramboll Environ's assessment was conducted in connection with a potential purchase of the site. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of the Assessment

Ramboll Environ completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the property:

- A visit to the site by Elise Post and Alexis Hillman of Ramboll Environ on July 19, 2016 to observe the exterior and interior features of the site and to identify the uses and conditions specified in the ASTM Standard. Following the July 19 site visit, Ramboll Environ visited the site numerous times in the course of Phase II investigation activities. In addition, Ramboll Environ observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit and subsequent visits with the following individuals (year of initial hire at the site indicated in parentheses): Brandon Polley, Operations Manager for Hyperloop One (2015); Joe Mullin, Director of Facilities for Hyperloop One (2015); and David Coronella, Facilities Manager for Hyperloop One (2015). The aforementioned individuals are referred to herein as "facility personnel". The facility personnel interviewed by Ramboll Environ were identified as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - USEPA's Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The SWRCB GeoTracker database and the Department of Toxic Substances Control (DTSC) EnviroStor database, which contain information about certain regulated facilities in California.
  - The California Division of Oil, Gas, and Geothermal Resources (DOGGR) database pertaining to oil and gas wells.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:

- Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
- Historical and site-specific information obtained from the following local agencies: the City of Los Angeles Building Department (Building Department), the Los Angeles County Assessor's Office (Assessor), the City of Los Angeles Fire Department – Plan Check/UG Tank Division (LAFD Plan Check/UG Tank), the City of Los Angeles Fire Department – Haz Mat Division (LAFD Haz Mat), and the Los Angeles County Public Health Investigator (LA County PHI). Ramboll Environ also requested information from the SWRCB and RWQCB, but personnel from these agencies reported having no information pertaining to the site other than information available on GeoTracker.
- An information request to the City of Los Angeles Fire Department – Industrial/Commercial Division (LAFD – Ind/Comm). Responses had not been received at the time this report was completed. Ramboll Environ understands that the LAFD – Ind/Comm has an administrative backlog such that a response is not expected for up to six months. Ramboll Environ does not expect the LAFD – Ind/Comm to have significantly new information compared to the information received from other LAFD divisions.

☐ A review of physical setting sources, as defined in the ASTM Standard, including:

- The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
- Geologic, hydrogeologic, or hydrologic sources as provided in the EDR report and in the previous environmental reports for the site, as listed below.

☐ A review of documents provided to Ramboll Environ by facility personnel, including safety data sheets (SDSs). In addition, Ramboll Environ was provided with the following previous environmental assessment reports, which are included as Appendix D:

- *Report of Phase I Environmental Site Assessment, Industrial/Commercial Building, 2145 to 2161 Sacramento Street, Los Angeles, Los Angeles County, California, 90021*, prepared by Professional Service Industries, Inc. (PSI), dated July 2014 (the "2014 Sacramento Phase I report");
- *Phase I Environmental Site Assessment, 2159 Bay Street, Los Angeles, California, Parcel Nos. 5166-001-002, 5166-005-010, 5166-005-013, and 5166-005-009*, prepared by Allwyn Environmental (Allwyn), dated January 2015 (the "2015 Bay Phase I report");
- *Phase II Environmental Site Assessment, 2159 Bay Street, Los Angeles, California, Parcel Nos. 5166-001-002, 5166-005-010, 5166-005-013, and 5166-005-009*, prepared by Allwyn Environmental, dated February 2015 (the "2015 Bay Phase II report"); and
- *Limited Phase II Subsurface Investigation, 2145-2161 Sacramento Street, 2136 and 2159 Bay Street, Los Angeles, California,* prepared by Ramboll Environ, dated October 2016 (the "2016 Phase II report").

☐ A review of a preliminary title report dated June 20, 2016 for the site, provided by the Client, to identify environmental liens or activity and use limitations (AULs) imposed on the site.

- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll Environ and Tishman Speyer in July 2016. Surveys for asbestos-containing materials and lead-based paint were not requested or performed. The standard ASTM scope was expanded to include an evaluation for (i) asbestos-containing materials and lead-based paint based on the ages of the buildings (and prior reports, if any), (ii) the potential presence of mold based on information provided on a water intrusion questionnaire, and (iii) the potential presence of radon based on information provided in the EDR report.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements of depth to groundwater were obtained during Phase II work; however, other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll Environ has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the subject site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of Tishman Speyer and may not be relied upon by any other person or entity without Ramboll Environ's prior express written permission.

Under the ASTM Standard, this report is considered current only for a period of 180 days from the date of the site inspection. The conclusions presented in this report represent Ramboll Environ's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll Environ must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll Environ was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll Environ makes no representations or warranties, expressed or implied, about the conditions of the site.

This review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll Environ's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

Other issues considered outside the scope of the ASTM Standard and this review include conducting surveys for the presence of PCBs in building materials, mold, or radon.

3. SITE DESCRIPTION

3.1 Site Setting

Hyperloop One leases and operates a transportation research and development facility located at 2145-2161 Sacramento Street, 2136 Bay Street, and 2159 Bay Street in Los Angeles, Los Angeles County, California (the "site" or the "facility"). The approximately 1.7-acre site is located in the eastern portion of downtown Los Angeles (Figure 1). According to the Assessor's Office, the assessor's parcel numbers (APN) for the site are 5166-001-002, 5166-005-008, 5166-005-009, 5166-005-010, and 5166-005-013.

The site is developed with three buildings: an approximately 25,700-square-foot building located in the southern portion of the site, referred to as the Sacramento Building (2145-2161 Sacramento Street); an approximately 13,500-square foot building located in the central portion of the site, referred to as Building C (2136 Bay Street); and an approximately 9,000-square foot building located in the northeast portion of the site, referred to as Building A/B (2159 Bay Street). Hyperloop One currently occupies or is in the process of building out all tenant spaces at the site (Figure 2). The Sacramento Building is divided into four tenant spaces, three of which Hyperloop One currently uses for engineering and test and development operations. The fourth tenant space currently is vacant but will also be occupied by Hyperloop One. Building A/B is divided into Unit A in the northern portion of the building and Unit B in the southern portion of the building, which currently are being renovated and used for office operations, respectively. Building C consists of a single unit that is used for fabrication and machining operations.

Exterior areas in the central and eastern portions of the site are used for storage, equipment staging, and exterior operations. This area in the central portion of the site between the Sacramento Building and Building C is referred to as the Hyperloop Area (Figure 2). Other smaller structures at the site consist of shipping containers that have been converted into offices and conference rooms in the western portion of the Hyperloop Area; tents used for welding operations and meetings in the eastern portion of the Hyperloop Area; and parking stackers under construction to the north of Building C (Parking Stackers Area). Designated areas for storage of raw materials and hazardous waste are under construction in the Hyperloop Area on the south side of Building C. An unused rail spur is present in the Hyperloop Area.

The site is accessed from Bay Street to the north and Sacramento Street to the south for vehicular and pedestrian access, respectively. Both access roads are surfaced with asphalt. The majority of the site is paved, except for the eastern portion of the Hyperloop Area, which was observed to be an active construction area during Ramboll Environ's site visits. Some tree landscaping with trees is present in the Hyperloop Area. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map (Los Angeles, California); Google Earth	Ranges from approximately 240 feet along the southern property boundary to 244 feet along the northern property boundary.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the south/southeast. Regional topography slopes gently downward to the southeast toward the Los Angeles River.
Hydrology		
Surface Water Runoff	Visual observations	Percolates into the ground surface at unpaved areas or enters drains/sumps that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	Los Angeles River, located approximately 380 feet to the east at its nearest point.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported minor occurrences of flooding in exterior areas of the site, specifically in the southeast corner of the site. A sump reportedly was installed in this area after one minor flooding event. Facility personnel reported that no building materials were affected by the flooding. The site is not located within a 500-year flood zone; however, a 100-year flood zone is located along the Los Angeles River to the east of the site.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on site, although wetlands areas are present near the Los Angeles River to the east of the site. Ramboll Environ did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; GeoTracker records for MTA/Butterfield property	Based on the topographic gradient and the southerly flow direction of the Los Angeles River, shallow groundwater is presumed to flow to the southeast; however, documents available on GeoTracker for the nearby MTA/Butterfield property indicate that groundwater flows to the southwest. Shallow groundwater flow direction at the site is assumed to vary between southeast and southwest.
Depth to Groundwater	2016 Phase II report	During the 2016 Phase II investigation, groundwater was encountered at a depth of approximately 81 feet below ground surface (bgs) at five grab groundwater sample locations.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
On-site Wells	Facility personnel; Visual observations; DOGGR database	There are no production, monitoring or injection wells on site. The grab groundwater sample locations from the 2016 Phase II activities were abandoned after sampling.
Nearest Groundwater Supply Wells	EDR database report	Six federally-registered wells are present within one mile of the site, specifically between one-half mile and one mile south of the site; none are registered as public supply wells. There are no state-registered wells within one mile of the site.
Geologic Conditions	2016 Phase II report	During the 2016 Phase II investigation, on-site soil was observed to consist primarily of fine sand with limited amounts of medium to coarse sand, silty sand, gravelly sand, and silt lenses.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The buildings are heated and cooled via roof-mounted heating, ventilation, and air conditioning (HVAC) units.
Electricity Supplier	Facility personnel	Los Angeles Department of Water and Power (LADWP)
Natural Gas Supplier	Facility personnel	Southern California Gas Company (So Cal Gas)
Use of Fuel Oil for Building Heat	Facility personnel	No current or former use of fuel oil reported.
Water Supplier	Facility personnel	LADWP
Sanitary Sewer	City of Los Angeles Public Works, Bureau of Sanitation	Based on information available online, it appears that the Los Angeles Department of Public Works, Bureau of Sanitation provides sanitary sewer service.
Septic Systems	Facility personnel	No current or former septic systems reported.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey ; NWI = National Wetlands Inventory

* - Source was provided in the EDR database report.

3.2 Current Use of Property

3.2.1 Current Operations

Hyperloop One employs approximately 120 individuals at its transportation research and development (R&D) facility. The R&D operations are related to autonomous passenger rail transport using electric propulsion in a low pressure environment. The major operations conducted at the facility include

engineering, test and development, machining and fabrication, office, welding, and ancillary operations.

- *Engineering* - Engineering operations are primarily computer-based and are conducted in the eastern portion of the Sacramento Building.
- *Test and Development* – Test and development operations primarily consist of physical tests and involve the use of minor quantities of chemicals (e.g., spray bottles of isopropyl alcohol [IPA]). These operations are conducted in the west-central unit of the Sacramento Building.
- *Machining and Fabrication* – Machining operations utilize various types of equipment and are conducted in Building C. The primary chemicals used are coolants (approximately 15 to 30 gallons per week) and minor quantities of other materials typically used for machining (e.g., cutting and grinding fluids, mineral oil distillates). Wastes generated by these operations include metal shavings, personal protective equipment (PPE), and materials stored in flammable containers.
- *Office* – Office operations are conducted in the Sacramento Building and in Building A/B. Unit B recently was renovated for office operations and Unit A currently is under construction as an office space.
- *Welding* – Welding operations are conducted in tents located to the south of the Building A/B and involve the use of compressed gases.
- *Ancillary* – The facility performs packaging, shipping, storage, and administrative operations, none of which involve the use of significant quantities of chemicals. In addition, Hyperloop One conducts the following activities in support of the major operations:
  - Transfer of raw materials and finished products using propane and/or diesel-powered rental equipment (e.g., forklifts, man-lifts); the units are serviced on-site by outside contractors.
  - Operation of four temporary diesel-powered emergency generators. The generators are fueled and serviced by outside contractors.
  - Operation of a chiller for a closed chilled water loop to cool vacuum pumps and chambers.
  - Operation of two stationary air compressors to the north and east of the Sacramento Building, as well as portable air compressors and vacuum pumps in Building C. Condensate from the stationary air compressors is discharged to the ground surface or is captured in buckets.

The primary raw materials used at the site include adhesives, hardeners, welding gases, soldering flux, coolants, acrylic coatings, fireproof paints, epoxy and epoxy remover, retaining compound, wood stain and finish, and aerosol materials, as well as specific chemicals such as acetone and IPA. In addition, Hyperloop One uses maintenance-related materials, such as paints, oils, lubricants, greases, vacuum pump fluid, hydraulic fluid, welding gases, refrigerant chemicals, and sanitizers and detergents.

According to facility personnel, Hyperloop One's operations have remained generally consistent during its period of occupancy at the facility, although the operations have expanded since the company began occupying the site in January 2015.

According to facility personnel, no chlorinated solvents currently are used at the facility and the use of such chemicals would not be expected based on the nature of current site operations. Facility personnel were not aware of any historical use of chlorinated solvents at the site; however, Hyperloop One has only occupied the site since 2015, and specific chemical use prior to that time is unknown.

3.2.2 Waste Management

Small quantities of hazardous wastes are generated at the site, consisting primarily of scrap metal and oily rags. Scrap metal currently is stored in the welding tents and oily rags are kept in small containers within Building C. Designated areas for storage of raw materials and hazardous waste are under construction in the Hyperloop Area on the south side of Building C. Nonhazardous waste generated at the site consists of general facility trash that is collected in uncovered dumpsters positioned on the west side of Building C.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom and kitchen areas, is discharged to the municipal sanitary sewer system. The facility does not generate process wastewater. Air compressor condensate is discharged to the ground surface or is captured in buckets.

Storm water at the site infiltrates into unpaved areas or enters storm drains and sumps in paved areas of the site. These storm drains discharge the storm water to the municipal storm sewer system.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products resulting from the operation of rental equipment (e.g., forklifts, man-lifts), welding emissions, and emissions from fabrication and machining operations.

3.3 Current Uses of Adjoining Properties

The property is located in a mixed industrial/commercial land use area. The nearest residential area is located approximately 0.5 mile feet east of the site. Based on discussions with facility personnel, Ramboll Environ's visual observations from the property boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll Environ's Observations
North	Bay Street, beyond which are various commercial businesses (e.g., textile and import companies).	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
East	Amtrak rail yard; Fatality Analysis of Maintenance-of-way Employees and Signalmen (FAMES) facility.	
South	Sacramento Street, beyond which are various knitting mills and fabric warehouse.	
West	Former industrial building now used as parking facility; Viertel's Towing.	

Table 2: Current Use of Adjacent Properties

Direction	Property / Land Use	Ramboll Environ's Observations

Notes:

During the site visit, Ramboll Environ walked or drove by the borders of these properties that are shared with the subject site. Ramboll Environ did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll Environ contracted with EDR in July 2016 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[1] A copy of the EDR report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll Environ reviewed the results of the state and federal environmental database searches performed by EDR (see Appendix B) and also reviewed information available on the California GeoTracker database. The site is listed on several environmental databases, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll Environ's Comments
Hill Brothers Chemical Co. is listed on the following databases related to the presence of historical USTs: Statewide Environmental Evaluation and Planning System (SWEEPS UST), Hazardous Substance Storage Container Database (HIST UST), and California Facility Inventory Database (CA FID UST). The three databases contain similar information regarding the specifications of the historical USTs, summarized below. The information appears to have been obtained from a 1988 inventory by the SWRCB for hazardous substance storage container information in Los Angeles County, included in Appendix B. • 5 diesel tanks, ranging in size from 1,000 to 6,000 gallons • 7 waste tanks, ranging in size from 360 to 4,500 gallons • 6 waste oil, ranging in size from 200 to 5,000 gallons • 2 gasoline, both of which are listed as 10,000 gallons	Facility personnel had no information on this matter, and no records were available on site. This matter is further discussed in Section 6 of this report.
Hill Brothers Chemical Co. is also listed on the California Hazardous Material Incident Report System (CHMIRS) database. The listing indicates that a release of approximately 300 gallons of ammonia occurred in 2000 during transfer between two fixed tanks. The listing also indicates that the oversight agency was City of Los Angeles Fire Department, but cleanup was conducted by Los Angeles County Hazmat.	Facility personnel had no information on this listing. Because the incident appears to have been addressed by the appropriate regulatory agency(ies) and the release does not appear to have affected soil or groundwater, Ramboll Environ does not consider this matter to represent a contamination concern to the site.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll Environ's Comments
Hill Brothers Chemical Co. is listed on the NPDES Permits Listing (NPDES) and Facility and Manifest Data (HAZNET) databases. The NPDES listing appears to be for various Hill Brothers facilities in California and Arizona, but does not include the site. The HAZNET listing is for disposal of organic waste in 2013.	The listings are compliance-related and are for a former site occupant. The listings do not suggest a contamination concern to the site.

As detailed above, the site is listed on certain databases for which the ASTM Standard specifies that a review of pertinent files or regulatory records be conducted. Certain of these listings (i.e., HAZNET, NPDES) are not indicative of a release or contamination concern. For other listings (i.e., SWEEPS UST, HIST UST, CA FID UST), Ramboll Environ reviewed records regarding this matter obtained from the LAFD Plan Check/UG Tank agency and conducted a limited geophysical survey. This matter is further discussed in Section 6 of this report and in the 2016 Phase II report.

4.1.2 Database Review for Surrounding Properties

There are several listings in the EDR report for off-site facilities within applicable ASTM search radii. Several of these listings (i.e., RCRA hazardous waste generators, USTs, compliance listings), by themselves, are not necessarily indicative of a contamination concern and, therefore, are not discussed herein and were not further evaluated for purposes of this assessment. A number of facilities appear on databases indicating potential contamination concerns (i.e., Superfund Enterprise Management System Archive, RCRA Corrective Action Activity, State Responses Sites, EnviroStor, Solid Waste Information System, Leaking Underground Storage Tank [LUST], Voluntary Cleanup Program Properties [VCP], Waste Management Unit Database, Deed Restriction Listing, Bond Expenditure Plan, EnviroStor Permitted Facilities Listing). Of the sites representing a potential environmental concern, Ramboll Environ has discussed in Table 4 below only 1) facilities that are located adjoining to the site; and 2) facilities that are located potentially upgradient of the site and have not been issued regulatory closure for all listings of concern.

Table 4: Summary of Pertinent Database Listings for Off-Site Properties

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll Environ's Comments
Listings for Adjoining Sites [1]		
According to the EDR database search report, no adjoining sites are listed on databases that are indicative of a potential contamination concern.		

Table 4: Summary of Pertinent Database Listings for Off-Site Properties

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll Environ's Comments
Listings for Non-Adjoining Sites [2]		
MTA/Butterfield; Butterfield (Sun Chemical Corporation) (590 South Santa Fe Ave) (approximately 0.5 mile northwest of site)	MTA/Butterfield is listed on EnviroStor, VCP, and several databases related to compliance and the presence of USTs. The EnviroStor and VCP listings indicate that the property formerly was used for chemical and paint manufacturing, which resulted in subsurface impacts with benzene, polynuclear aromatic hydrocarbons, total petroleum hydrocarbons (TPH), benzene, ethylbenzene, xylenes, and metals. The listings indicate that the property is undergoing cleanup under DTSC oversight.	According to documents available on GeoTracker, the property is undergoing cleanup under DTSC oversight, which includes soil removal for protection of groundwater. Based on the information available and the distance from the site, this matter is unlikely to present a concern to the site.
At Mateo (555 Mateo Street) (approximately 0.6 mile northwest of site)	At Mateo is listed on EnviroStor, VCP, and compliance databases. The EnviroStor and VCP listings indicate that voluntary cleanup actions are being conducted at the property related to former foundry, fuel storage/refueling, and machine shop operations. The listings indicate that the property is undergoing cleanup under DTSC oversight with recent activities including completion of a Removal Action Completion Report in April 2016.	According to documents available on GeoTracker, the property is undergoing cleanup under DTSC oversight. Based on the information available and the distance from the site, this matter is unlikely to present a concern to the site.

Table 4: Summary of Pertinent Database Listings for Off-Site Properties

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll Environ's Comments

Notes:

[1] Ramboll Environ's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the EDR report. The discussion of adjoining and non-adjoining properties does not include (if applicable) listings for certain databases that are (by themselves) not necessarily indicative of a contamination concern (e.g., compliance listings without indication of a release or chemical mishandling, such as RCRA hazardous waste generators or registered storage tanks). Also, for purposes of this analysis, Ramboll Environ considers as "adjoining" properties that are immediately adjacent, even if separated by a road or other physical barrier.

[2] As noted in Table 1, shallow groundwater beneath the site likely flows to the southeast and/or southwest. Within this section, Ramboll Environ did not discuss herein any off-site non-adjoining property that is listed on a database indicative of a contamination concern but for which regulatory closure has been issued, as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely. Finally, Ramboll Environ did not discuss herein any off-site non-adjoining property that is presumed to be downgradient or crossgradient of the subject site. This analysis was based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, but a hazardous material can migrate in the groundwater in a generally downgradient direction; however, the direction of groundwater flow may be affected by localized topographic, hydraulic, and hydrogeologic conditions.

The EDR report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by EDR. Because the location of these properties with respect to the site could not be evaluated, Ramboll Environ is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by EDR; however, Ramboll Environ reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

4.2 Historical Uses of the Site and Adjacent Sites

4.2.1 Past Uses of the Site

The site was developed by 1906 (and possibly earlier) for industrial purposes. As of 1906, the site was being used as a stone yard (northern portion) and for carpet cleaning operations (southeast portion). The Sacramento Building and Building A/B were constructed in 1923 and 1924, respectively, for warehouse purposes. Building C was constructed beginning in 1924 with additions to the east and west sides of the building in the 1950s. A building formerly was located to the north of Building C that appears to have been used as a machine shop based on Sanborn maps. According to Building Department records, the building was demolished in 1989. In addition, several smaller buildings historically were present in the northern portion of the site that were used for various purposes, including automotive repair, storage (e.g., paint, inflammable materials), and specific industrial uses (e.g., rock crushing).

Between the early 1900s and mid-1930s, the current Building A/B was used for soap manufacturing and chemical storage. According to historical sources, HBCC began operating in the northern portion of the site in 1924. HBCC operations continued until approximately 2013. The operations consisted of

chemical manufacturing and production of materials used in the building industry. The operations involved the use of various hazardous materials, discussed further in Table 6. Limited information is available on the specific uses of Buildings A/B and C; however, historical sources suggest that, in general, Building A/B was used for blending and sacking of solid materials and that Building C was used for warehousing operations.

Between its construction in 1923 and 1989, the Sacramento Building was used for various industrial and warehousing purposes. Operations in the 1920s and 1930s included insulation and waterproofing manufacturing, battery manufacturing, electrical appliance repair shop, cooking utensil manufacturing, lumber product distribution, and textile manufacturing and/or distribution. Operations in the 1940s included sofa manufacturing, curled hair manufacturing, and chemical specialties and proprietary medicine manufacturing. Operations between the 1950s and 1960s included floor cement manufacturing, window glazing, fiberglass braided cord manufacturing, machinery warehousing, and egg warehousing and distribution. Notable tenants included Crossfield Products Corp., which operated in the Sacramento Building between approximately 1942 and 1958 and manufactured a product called Dex-O-Tex plastic, a synthetic rubber polymer used as a surfacing material for flooring and for sealing marine vessels. Limited information is available regarding operations in the Sacramento Building in the 1970s and 1980s. In the 1990s, the Sacramento Building appears to have been used mostly for warehousing operations. Between approximately 1992 and 1998, a company called L.A. Dye & Wash Works operated in a portion of the Sacramento Building and conducted various laundry-related operations (e.g., cleaning, bleaching, drying, dyeing). The operations involved the use of various hazardous materials, discussed further in Table 6.

Various operations have been conducted in the Hyperloop Area, possibly including material transferring from rail cars from the rail spur located in this area, auto repair operations, chemical storage operations (e.g., asbestos, ammonia, carbide, calcium, other chemicals). Several tanks are depicted on Sanborn maps. Two tanks, one of which appears to be labeled as calcium storage, are depicted near the southeast corner of Building C. Nine tanks are depicted to the south of Building A/B that are labeled as “chemical tanks” in Sanborn maps between approximately 1950 and 1970. A SWRCB document for HBCC at 2159 Bay Street lists various kind of hazardous substance storage features. The features included five diesel tanks (1,000 to 6,000 gallons), two gasoline tanks (both 10,000 gallons), seven waste tanks (360 to 4,500 gallons), and six waste oil tanks (200 to 5,000 gallons). The record does not indicate whether the features were aboveground or belowground. The location of one diesel UST is known. According to the 2015 Bay Phase I and Phase II Reports, the tank likely was located near the southwest corner of Building C and removed in 1990.

The site has been owned by Lion Arts District Property Owner, LLC since 2014/2015.

A summary of Ramboll Environ’s key observations from the available historical sources is presented in Table 5.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Sanborn Maps (1906, 1950, 1953, 1954, 1959, 1960, 1967, 1970); 2015 Bay Phase I report (1901-1935)*	The 1906 map depicts industrial development in both the northern and southern portions of the site. In the northern portion, the occupant appears to be H. Clement & Co. for stone yard operations. Several structures, including what appears to be a boiler, are depicted that do not appear to be related to the current structures. In the southeast portion of the site, a business labeled as Cal Steam Carpet Cleaning Co. is present. A feature labeled as a cleaner is depicted. A rail spur labeled as "A.T. & S.F. Switch" is present in the central portion of the site. *In addition to the Sanborn maps provided by EDR, several Sanborn maps for the northern portion of the property were included in an appendix to the 2015 Bay Phase I report. The maps, which are provided with a date range of 1901-1935, as opposed to individual years, provide the following information: a structure labeled as "auto repair" is depicted to the southwest of Building C and to the north of the rail spur; portions of Building C are present, but the eastern and western portions of the current building do not appear to be complete; the historical building to the north of Building C is labeled as a machine shop; a feature labeled as "carbide warehouse" is depicted to the southeast of Building C; Building A/B is labeled as "soap manufacturing and chemical storage"; an L-shaped building labeled as "rock crusher" is depicted adjoining to the south of Building A/B; and a tank labeled as "cement storage" is depicted to the southeast of Building A/B. In the maps between 1950 and 1970, the current site buildings and several additional structures are apparent. The northern portion of the site is depicted as being developed with the current Buildings A/B and C, as well as an additional building to the north of Building C. Building A/B is labeled as "sacking and mixing machines." Building C and the building to the north are both labeled as chemical warehouses. Two tanks are depicted near the southeast corner of Building C that appear to be labeled as calcium storage and approximately nine tanks labeled as "chemical tanks" are depicted to the south of Building A/B. In addition, two small structures that are no longer presented are depicted adjacent to the northwest of Building C (labeled as "inflammables shed") and adjacent to the south of Building A/B (labeled as "rock crusher"). In the southern portion of the site, the four tenant units of the Sacramento Building are labeled as being occupied by various tenants between 1950 and 1970. The tenants are listed below by the addresses depicted on the Sanborn maps: • West unit (2145-2147 Sacramento): wholesale eggs (1950-1960), vacant (1967), warehouse (1970) • Center-west unit (2149-2151 Sacramento): cotton and curled hair warehouse (1950), egg warehouse (1953-1960), vacant (1967), warehouse (1970) • Center-east unit (2153-2155 Sacramento): floor cement manufacturing (1950-1954), window glazing (1959-1960), machinery warehouse (1967), warehouse (1970) • East unit (2157-2161 Sacramento): floor cement manufacturing (1950-1954), fiberglass braided cord manufacturing (1959-1960), machinery warehouse (1967), warehouse (1970)

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Aerial Photographs (1923, 1928, 1938, 1948, 1952, 1964, 1977, 1979, 1983, 1989, 1994, 2002, 2005, 2009, 2010, 2012) Satellite Imagery[1] (2013, 2014, 2015, 2016)	The site appears to be developed in the 1923 photograph; however, the resolution is insufficient to identify individual features. In the 1928 photograph, the site appears to be developed with the current Sacramento Building, Building A/B, a rail spur, and a portion of Building C. In addition, a large building adjacent to the north of Building C is apparent. Building C appears to occupy its current footprint in the 1952 and subsequent photographs. Several features (possible tanks or stored equipment) are apparent in the area to the south of Building A/B and southeast of Building C in photographs between 1938 and 2010. In particular, two aboveground storage tanks are visible near the southeast corner of Building C in photographs between 1989 (possibly earlier) and 2010. The building to the north of Building C appears to have been removed as of 1994 based on the 1994 photograph.
Topographic Maps (1894, 1896, 1900, 1928, 1953, 1966, 1972, 1981, 1994, 2012)	The scale of the 1894 – 1900 maps is insufficient to identify the site. In the 1928 map, the site is depicted as developed and the rail spur is apparent. In the 1953 to 2012 maps, the site is depicted as urban land. No concerns are noted.
City Directory Abstracts Sacramento Building (1924, 1929, 1933, 1937, 1942, 1951, 1958, 1962, 1986, 1990, 2000, 2008, 2013)	In 1929, the occupants of the Sacramento Building included an insulation and waterproofing plant, cutlery, and electrical appliance repair shop. Between 1933 and 1942, the Sacramento Building was occupied by a cooking utensil manufacturer (1933-1942), battery manufacturer (1933), laundry textile (1937), wholesale veneer and lumber products distributor (1937), chemical specialties and proprietary medicine company (1942), sofa manufacturer (1942), and hair manufacturer (1942). Between approximately 1942 and 1962, the Sacramento Building was occupied by the manufacturing company Crossfield Products Corp (“Dex o Tex Plastio Floor and Covering Adhesive”; 1942-1958) and also by a variety of egg distributors (1951-1962). By 1990, the Sacramento Building was occupied by LA Dye and Wash Works as well as an ice company. In the 2000s, the Sacramento Building was occupied by Gold Pad (2000), Broadway Knitting (2000-2008), and Songgosia (2006). The most recent listing for the Sacramento Building is Berkson Fabrication and Design (2013). The occupants of Building A/B are listed as Kellastone Co. between 1924 and 1929, and as HBCC between 1929 and 2013. Montgomery Hugh Master Builder Co. and Master Builders Co. are listed as additional occupants in 1951 and 1962, respectively. Advanced Electronic Packaging is listed as an additional occupant in 1986. There are no occupants listed in the city directory for Building C.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
2014 Sacramento Phase I Report, 2015 Bay Phase I Report	The 2014 Sacramento and 2015 Bay Phase I reports contained a significant amount of historical site information, which is incorporated into the summary above. Key information obtained from the reports is as follows: 2014 Sacramento Phase I Report: • Historical presence of insulation and waterproofing (1920s) and battery manufacturing (1930s) operations. • Presence of chemical manufacturing and associated chemical storage operations in the Bay Street portion of the site. • Historical surface releases at the Bay Street portion of the site that migrated to the Sacramento Street portion of the site. 2015 Bay Phase I Report: • Historical operations in the Bay Street portion of the site consisted of manufacturing, storing, repackaging, and distribution materials used in the building industry. • Historical operations in Building A/B included mixing and blending of solid materials. Operations included the use of below-grade concrete-lined sump and floor scale. Some operations involved the use of asbestos. Building A/B has slab-on-grade construction from its original use as a warehouse that was later covered with soil for construction of the current elevated floor deck. • Historical operations in Building C primarily consisted of warehousing for products and raw materials. • The area south of Building C (i.e., the Hyperloop Area) historically contained ammonia storage in ASTs, a cooling tower, and a concrete-lined sump. • The area north of Building C (i.e., the Parking Stackers Area) formerly was improved with a building that was used as a machine shop. After the building was removed, the area was used for storage and had two elevated loading docks. A concrete-lined sump was also present in this area. • A diesel UST formerly was present that a long-time HBCC employee recalled was removed in approximately 1990. • Potential presence of up to 20 unconfirmed USTs based on SWRCB records. • Historical presence of automotive repair operations near the southwest corner of Building C. • Release of approximately 300 gallons of ammonia in 2000. • Presence of several ASTs associated with chemical manufacturing operations, including ASTs for calcium and asbestos storage. • Historical paint storage area near the northwest corner of Building C.

[1] In addition to aerial photographs provided by EDR, Ramboll Environ viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site have been used for industrial purposes since as early as the 1920s. Notable operations on surrounding properties include talc manufacturing and storage to the north of the site, truck repair and machinery storage to the west of the site, carpet cleaning to the

south of the site, and sheet metal manufacturing and railway operations (including a pump house near the southeast of the Sacramento Building) to the east of the site.

4.3 Review of Local and State Agency Information

Ramboll Environ visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 6.

Table 6: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
Assessor	According to the Assessor's website, the APNs for the site are 5166-001-002, 5166-005-008, 5166-005-009, 5166-005-010, and 5166-005-013.
Title Search Report	According to a preliminary title report provided by the client, Lion Arts District, LLC, a Delaware limited liability company acquired a portion of the site in August 2014 from N & G Industrial Properties, LP and a portion of the site in May 2015 from Hill Brothers Chemical Company, a California corporation. In addition, the preliminary title report includes an instrument related to a storm water infiltration trench, which prescribes inspection and maintenance requirements.
Building Department	Notable building department records are summarized by site address: Sacramento Building – 1912 permit for carpet cleaning, 1915 permit for residence, 1923 permit to erect current 2145-2163 Sacramento Street building as warehouse, 1987 interior remodeling and change of use to laundry (bleach/wash/dry), 2015-2016 Lion Arts District Property Owner tenant improvements. 2159 Bay Street – 1924 permit for construction of warehouse building (HBCC listed as occupant in 1929); 1948 permit for 10-foot by 10-foot paint storage building; 1951 permit for chemical manufacturing building; 1953 permit to build dock for storage of flammable liquids; early 1950s permits for building additions; 1968 permit to construct tank foundations and outside storage of crushed rock bins; 1988 Hazardous Substance Storage Container information includes four sumps and 6 tanks of various sizes from 200 gallons to 10,000 gallons used to store wastewater, waste oil, diesel motor vehicle fuel, regular motor vehicle fuel, steam cleaning runoff and installed in years from 1952 to 1980 (whether aboveground or belowground tanks is not specified); 1989 permit to demolish a building; 1994 Hazardous Substance Storage Container information includes 1,000 gallon tank installed in 1952 and used to store diesel; and 2015-2016 Lion Arts District Property Owner tenant improvements. 2148 Bay Street – 1954 permit to construct new building, 1955 permit for ammonia converter and 12-foot diameter storage tank, 1969 permit for building partitions, and 2015-2016 Lion Arts District Property Owner permits for tenant improvements, parking stackers, and roofing work, among others.

Table 6: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
LA County PHI	Ramboll Environ requested records from the LA County PHI, which provided records for 2159 Sacramento and 2159 Bay. The records for the 2159 Sacramento address were for L.A. Dye & Wash Works, which conducted fabric dyeing and washing operations between approximately 1992 and 1998. The operations primarily involved the use of ink, solvent, and a stone wash unit utilizing water and bleach. Several complaints are noted in the LA County PHI records, including chlorine odor complaints, releases of ammonia, and excessive use of solvent on rags. The records also indicate that a clarifier was present that separated water and sludge from the stone washing operations. The records for the 2159 Bay address are for HBCC. The records indicate that HBCC produced a cement polymer called Hi-Fibe, which was a specially formulated fiber filler used as an asbestos replacement to increase viscosity. Two violations are included in the records: one from 1988 indicating that HBCC was required to remove and legally dispose of hazardous waste, and one from 1996 for housekeeping issues related to hazardous material handling (e.g., labeling, recordkeeping). A hazardous material incident report indicates that a release of 300 gallons of ammonia occurred in 2000. A record from 1984 indicates that USTs were present, but the record does not indicate the quantity or location and states that the USTs were not in use. A record from 1996 indicates that hazardous materials were no longer in use at that time.
LAFD Haz Mat	The LAFD Haz Mat division provided records for 2159 Sacramento (L.A. Dye & Wash Works) and 2159 Bay (HBCC) that primarily consisted of chemical inventories and hazardous material business plans (HMBPs). The inventory for L.A. Dye & Wash Works is from 2000 and appears to be inactive. The inventories for HBCC list various materials, including polymers, paints, paint thinner, and several specific chemicals (e.g., magnesium chloride, ammonium hydroxide, anhydrous ammonia, hydrochloric acid). The inventories are dated 2004, 2009, and 2014 and contain similar materials.
LAFD Plan Check/UG Tank	The LAFD Plan Check/UG Tank division provided records regarding tanks and hazardous materials. Several records with information related to ammonia storage tanks are included. The tank sizes listed range from 12,000 to 30,000 gallons. The records do not specify if the tanks are underground or aboveground; however, historical records suggest that ammonia tanks at the facility were aboveground. In addition, a 1975 information report indicates that a 6,000-gallon sealer tank, a 1,500-gallon solvent tank, and a 1,500-gallon finished product tank were present (UST or AST not specified). A 1967 permit for installation of a pressure vessel is also included (whether aboveground or underground tanks is not specified). Hazardous material inventories from the 1950s (labeled as Dangerous Chemical Reports) are included in the LAFD Plan Check/UG Tank records. The materials listed include petroleum-containing compounds (e.g., mineral oil, kerosene), solvents (e.g., toluene, xylene, aromatic), resins, acids and bases, and metal-containing compounds (e.g., chromic acid).

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, the following prior environmental assessment and sampling activities have been conducted at the site:

- **1986 Phase II Activities.** As discussed in the 2014 Sacramento Phase I, several targeted Phase II activities were conducted in 1986 in the area around the Sacramento Building. A total of four reports were prepared by Gregg and Associates; however, limited information regarding the sampling and investigation locations was available. A general discussion of the results is included herein. An investigation was conducted in October 1986 to evaluate runoff from the Bay Street portion onto the Sacramento Street portion of the site, which were separate properties at that time. In surface samples, petroleum hydrocarbons were reported up to 1,140 mg/kg and soluble copper was reported at concentrations above hazardous waste limits. Samples collected from a depth of two feet did not indicate the presence of petroleum hydrocarbon impacts or elevated concentrations of copper. In November 1986, a limited excavation was conducted following the detection of elevated concentrations of copper in surface soil and a total of eight cubic yards of soil were removed. Confirmation sampling did not indicate the presence of elevated concentrations of copper. In December 1986, a boring was advanced in the vicinity of the previously sampled and excavated area and soil samples were analyzed for metals and hydrocarbons. The results did not indicate the presence of impacts.
- **2014 Sacramento Phase I Report.** A Phase I ESA was conducted for the southern portion of the site by PSI in 2014, in association with due diligence activities. Pertinent historical and site-related information contained in the 2014 Sacramento Phase I report has been incorporated into other sections of this report. The 1995 Phase I report did not identify any concerns with respect to soil and groundwater conditions.
- **2015 Bay Phase I Report.** A Phase I ESA was conducted for the northern portion of the site by Allwyn in 2015, in association with due diligence activities. Pertinent historical and site-related information contained in the 2015 Bay Phase I report has been incorporated into other sections of this report. The 2015 Bay Phase I report identified the presence of three RECs, namely, the presence of one diesel UST, the potential presence of up to eight unconfirmed underground tanks, and the historical mechanics shop and automotive repair uses. Allwyn recommended additional assessment related to these RECs.
- **2015 Bay Phase II Report.** A Phase II ESA was conducted for the northern portion of the site by Allwyn in 2015. The Phase II investigation was conducted to assess the RECs identified during the 2015 Bay Phase I report. The Phase II activities included a limited geophysical survey and advancement of 19 borings for collection of soil samples. The primary finding of the geophysical survey was an apparent excavation near the southwest corner of Building C. Based on the geophysical results and visual observations, the geophysical anomaly was interpreted as the location of the former diesel UST identified during the 2015 Bay Phase I historical review. Five borings were advanced in the vicinity of the former UST. The remaining borings were primarily placed in the driveway to the west of Building C and to the south of the rail spur. No borings were advanced inside either of the Bay Street buildings or in the footprint of the former machine shop building, and limited investigation was conducted in presumed areas where hazardous materials formerly were used (e.g., former chemical tanks area). Of the 81 total soil samples, select samples were analyzed for TPH (71 samples), VOCs (5 samples), polynuclear aromatic hydrocarbons (PAHs; 5 samples), and metals (10 samples). TPH in the gasoline range was not detected, but TPH in the diesel and oil ranges was reported in 8 of 71 samples with concentrations ranging from 6 to 941 mg/kg. VOCs were not detected above laboratory reporting limits. Low concentrations of the PAHs benzo[a]pyrene, benzo[g,h,i]perylene, chrysene, and fluoranthene were reported above laboratory limits in one sample. Metals were reported at concentrations interpreted to be consistent with background levels, except for two elevated concentrations of lead (28.2 and 71.6 mg/kg). Allwyn concluded that two areas of TPH impacts were present at the site,

consisting of the area around the former diesel UST and an area to the south of the rail spur where TPH was reported in samples from four boring locations down to a depth of 15 feet. Based on the results of its investigation, Allwyn did not recommend further investigation. Further discussion of these issues is contained in Section 6.

- **2016 Phase II Report.** Based on a review of historical operations at the site, Ramboll Environ recommended a Phase II investigation as part of its due diligence. A Phase II investigation was conducted that included soil, soil vapor, and groundwater sampling. The details of the investigations are discussed under separate cover and summaries of the findings and recommendations are included below.

  - Soil vapor sampling identified the presence of several VOCs throughout the site, with PCE, TCE, and 1,1,1-TCA as the most frequently reported VOCs. PCE was reported in every soil vapor sample collected from the site with the highest concentrations reported in samples collected from a boring where a metallic feature was encountered during drilling (Boring SV-23). The maximum concentrations of PCE, TCE, and 1,1,1-TCA reported in soil vapor were 34.2 micrograms per liter (µg/L), 1.79 µg/L and 0.15 µg/L, respectively.

  - Soil sampling identified PCE, as well as TPH and SVOCs, in select soil samples. The maximum concentrations of PCE and TPH constituents were reported in the sample collected from Boring SV-23 at a depth of approximately 12 feet. In that sample, the PCE concentration in soil was 92.5 micrograms per kilogram (µg/kg) and the concentrations of TPH in the gasoline, diesel, and oil ranges were 164 milligrams per kilogram (mg/kg), 3,140 mg/kg, and 4,260 mg/kg, respectively. Analysis for SVOCs were performed in the deepest sample collected from Boring SV-23; the three SVOCs reported in the soil sample were pyrene, chrysene, and benzo(g,h,i)perylene at concentrations of 57.1 µg/kg, 65.9 µg/kg, and 34.3 µg/kg, respectively. Soil sampling also identified lead and arsenic in select soil samples at elevated concentrations. The maximum lead concentration of 485 mg/kg was reported in the sample collected beneath the Sacramento Building at a depth of approximately 2 feet. The concentration of arsenic exceeded the background concentration of 12 mg/kg in two samples from B-9 at 2 and 5 feet bgs (18.0 mg/kg and 34.3 mg/kg, respectively). Deeper samples collected from Boring B-23, which is directly adjacent to B-9, at the depths of 12 and 15 feet bgs, did not have detectable concentrations of arsenic.

  - Groundwater sampling identified the presence of VOCs including PCE, cis-1,2-DCE[2], m,p-xylene, 1,2,4-trimethylbenzene at concentrations of up to 3.07 µg/L, 1.18 µg/L, 1.45 µg/L, and 1.5 µg/L, respectively. Further, TPH-diesel was reported at a concentration of 1.05 milligrams per liter. Concentrations of PCE, cis-1,2-DCE, and m,p-xylene in groundwater are below their corresponding California Maximum Contaminant Levels (MCLs) in all groundwater samples. There are no MCLs established for TPH and 1,2,4-trimethylbenzene.

  Based on Ramboll Environ's field observations and laboratory analytical results to date, there is evidence that historical release(s) from the site have adversely impacted the subsurface environment, most notably in the immediate vicinity of the subsurface metallic object (near Boring SV-23). In summary,

  - The results of the recent soil and soil vapor sampling performed do not indicate that significant subsurface impacts exist beneath the existing building footprints (i.e., VOCs are present in soil vapor at concentrations within the USEPA Risk Management Range of 1x10-6 to 1x10-4). The

[2] A breakdown product of PCE.

detected concentrations of PCE in soil vapor beneath the building would be considered generally low and within the acceptable risk management criteria established by USEPA for the current site uses.

- Given that the site is currently capped with asphalt and/or concrete, no further action is recommended with regard to the presence of metals in shallow soils.
- The recommended approach to address the metallic object and associated PCE/TPH impacts is to remove the metallic object and excavate underlying soil to a depth of approximately 30 feet. It is anticipated that the surface area of the excavation footprint will be approximately 10 feet wide by 15 feet long.
- Given the low concentrations of VOCs and TPH reported in groundwater, no active remediation is warranted although limited monitoring may be required by the appropriate regulatory agency.

Ramboll Environ will work with the appropriate regulatory agencies to address the subsurface metallic object and implement the recommendation(s), as may be appropriate.

4.5 User-Provided Information

Ramboll Environ provided Tishman with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll Environ. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll Environ.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll Environ conducted a visit to the site on July 19, 2016. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 2, are present. Ramboll Environ did not observe the roof of the buildings.

5.2 General Site Setting and Observations

Ramboll Environ made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 7. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Section 5.2.2) **Potentially Present** Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	**Present** (see Section 5.2.3)
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	Absent
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.4) **Present** **Potentially Present** Absent Absent
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	Absent
9.4.3.3	Floor drains and interior sumps	Absent
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	Absent
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	**Potentially Present** (see Section 5.2.5)
N/A	Lead-Based Paint	**Potentially Present** (see Section 5.2.6)

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
N/A	Water Intrusion	**Potentially Present** (see Section 5.2.7)
N/A	Radon	**Potentially Present** (see Section 5.2.8)

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs do not need to be noted.

N/A – Not applicable

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include adhesives, hardeners, coolants, acrylic coatings, fireproof paints, epoxy and epoxy remover, retaining compound, wood stain and finish, and aerosol materials, as well as specific chemicals such as acetone and IPA. In addition, Hyperloop One uses maintenance-related materials, such as paints, oils, lubricants, greases, vacuum pump fluid, hydraulic fluid, welding gases, refrigerant chemicals, and sanitizers and detergents. These materials generally are stored in four flammable cabinets on the north side of the Sacramento Building, at their points of use in Building C, or in the test and development area of the Sacramento Building. Welding gases and related materials are stored in welding tents in the eastern portion of the Hyperloop Area. Propane and diesel used to power forklifts, man-lifts, and several portable generators are stored in equipment reservoirs. Hazardous wastes generated at the site include scrap metal and oily rags. Scrap metal currently is stored in the welding tents and oily rags are kept in small containers within Building C. Designated areas for storage of raw materials and hazardous waste are under construction in the Hyperloop Area on the south side of Building C. Facility personnel were not aware of any significant spills or releases of materials at waste and container storage areas.

5.2.2 Underground Storage Tanks

According to the 2015 Bay Phase I report, one diesel UST was formerly located at the site that was removed in approximately 1990. Information related to the closure activities is provided in Section 4.4. The site is not listed on the Leaking Underground Storage Tank (LUST) database.

In addition, historical SWRCB records indicate that up to 20 subsurface features, which may include sumps, ASTs, and USTs potentially were present at the site. During the 2016 Phase II investigation, a metallic feature was encountered near the southeast corner of Building C. This matter is further discussed in the 2016 Phase II report.

5.2.3 Pools of Liquid, Standing Surface Water, or Sumps

A sump for collection of storm water is located near the northeast corner of the Sacramento Building. Wastewater management is further discussed in Section 3.2.3.

5.2.4 Polychlorinated Biphenyls (PCBs)

Facility personnel were not aware of on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Several pole-mounted transformers are present on electrical poles on Bay and Sacramento Streets. Because the installation date of the units is unknown and may predate the 1979 federal ban on the manufacture of PCBs, it is possible that the transformer oils contain PCBs. Ramboll Environ was not able to observe labels on these transformers, but based on their locations the transformers are assumed to be owned by the utility company (SCE). Ramboll Environ saw no indication of leaks or releases from electrical equipment during the site visit.

5.2.5 Asbestos Containing Materials (ACMs)

The buildings at the site were constructed between 1923 and 1955, before asbestos was generally phased out of use in many building material applications during the 1980s. Ramboll Environ was not provided with any reports of formal asbestos surveys conducted at the facility. According to the 2014 Sacramento Phase I report, a visual survey and limited sampling for asbestos were conducted in 1990. The visual survey did not indicate the presence of ACMs, except for a small amount of vinyl floor tile and mastic. In addition, a bulk sample of tile reportedly was collected during the 1990 survey and analyzed for ACMs. The results of the sampling were not provided, but the tile reportedly was removed.

There are no regulatory requirements to remove presumed asbestos-containing materials (PACM)/suspect ACM or evaluate whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll Environ did not observe any obviously damaged building materials.

5.2.6 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are “lead-containing paint.” Based on the construction dates of the buildings between 1923 and the 1950s, it is possible that lead-based paint was used historically on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. Ramboll Environ observed the paint to be in good condition.

5.2.7 Water Intrusion

Ramboll Environ did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the facility has not experienced problems with water intrusion in interior areas. In exterior areas, a minor flooding event occurred in the Hyperloop Area, which resulted in the installation of a sump near the northeast corner of the Sacramento Building.

5.2.8 Radon

Based on information included in the EDR database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 pCi/L. The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, radon did not exceed 4 pCi/L at two properties surveyed in the same zip code as the site. A USEPA survey conducted in Los Angeles County found that the average radon level of a first floor room at 63 properties was 0.711 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll Environ performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the property located at 2145-2161 Sacramento Street, 2136 Bay Street, and 2159 Bay Street in Los Angeles, California in October 2016. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 8 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll Environ has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the property located at 2145-2161 Sacramento Street, 2136 Bay Street, and 2159 Bay Street in Los Angeles. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property, except for the following.

- **Historical Operations Resulting in On-site Soil, Soil Gas and Groundwater Impact.**

  Industrial operations have been conducted at the site since 1906 (and possibly earlier) beginning with a stone yard (northern portion of the site) and carpet cleaning operations (southeast portion of the site). The existing site buildings were constructed in the 1920s. Several buildings and structures used for historical operations are no longer present and the existing buildings have undergone several major modifications (e.g., the use of fill material to raise the foundation of Building A/B).

  HBCC began operating in the northern portion of the site in 1924 and continued until approximately 2013, with operations consisting primarily of chemical manufacturing and storage and production of materials used in the building industry. HBCC's primary chemical storage and processing area, including multiple chemical tanks and a former rock crusher building, was located in the area to the south of Building A/B and southeast of Building C. Several smaller buildings associated with HBCC operations historically were also present in the northern portion of the site that were used for machine shop and automotive repair operations, and storage (e.g., paint, inflammable materials). Between its construction in 1923 and the late 1990s, the Sacramento Building was used for various industrial and warehousing purposes including insulation and waterproofing manufacturing, battery manufacturing, floor cement manufacturing, and laundry-related operations (e.g., cleaning, bleaching, drying, dyeing).

  HBCC is listed on several databases related to the potential presence of historical underground storage tanks (USTs). A 1988 document related to these listings is available on the California State Water Resources Control Boards (SWRCB) GeoTracker database. The 1988 SWRCB record lists various kind of hazardous substance storage features; however, the record does not indicate whether the features were aboveground or belowground. The features included five diesel tanks (1,000 to 6,000 gallons), two gasoline tanks (both 10,000 gallons), seven waste tanks (360 to 4,500 gallons), and six waste oil tanks (200 to 5,000 gallons).

  Based on the historical industrial operations at the site, which likely included the use of petroleum products, solvents (including chlorinated solvents), adhesives, paint, metals, acids, caustics, corrosives, asbestos and other chemicals, Ramboll Environ conducted subsurface investigations in August 2016. A total of 31 borings were advanced and soil, soil vapor, and/or groundwater

samples were collected. Soil vapor samples were analyzed for volatile organic compounds (VOCs). Soil samples were selectively analyzed for VOCs, total petroleum hydrocarbons (TPH), semi-volatile organic compounds (SVOCs), metals, and asbestos. Groundwater samples were analyzed for VOCs and TPH.

Based on Ramboll Environ's field observations and laboratory analytical results to date, there is evidence that historical release(s) from the site have adversely impacted the subsurface environment, most notably in the immediate vicinity of a subsurface metallic object encountered during drilling. Subsurface impacts consist of VOCs (primarily tetrachloroethene [PCE], trichloroethene [TCE], and 1,1,1-trichloroethane [1,1,1-TCA]) and TPH in soil, soil vapor, and/or groundwater, as well as metals (arsenic, lead) in shallow soil. In summary,

- The results of the recent soil and soil vapor sampling performed do not indicate that significant subsurface impacts exist beneath the existing building footprints (i.e., VOCs are present in soil vapor at concentrations within the USEPA Risk Management Range of 1x10-6 to 1x10-4). The detected concentrations of PCE in soil vapor beneath the building would be considered generally low and within the acceptable risk management criteria established by USEPA for the current site uses.
- Given that the site is currently capped with asphalt and/or concrete, no further action is recommended with regard to the presence of metals in shallow soils.
- The recommended approach to address the metallic object and associated PCE/TPH impacts is to remove the metallic object and excavate underlying soil to a depth of approximately 30 feet. It is anticipated that the surface area of the excavation footprint will be approximately 10 feet wide by 15 feet long.
- Given the low concentrations of VOCs and TPH reported in groundwater, no active remediation is warranted although limited monitoring may be required by the appropriate regulatory agency.

The concentrations of these constituents in soil vapor, soil, and/or groundwater constitute a REC for the site. Ramboll Environ will work with the appropriate regulatory agencies to address the subsurface metallic object and implement the recommendation(s), as may be appropriate.

6.1.2 Other Findings

In addition to the REC discussed above, the following additional findings related to potential contamination concerns were identified:

- **Former Diesel UST.** According to prior reports, one diesel UST was excavated and removed in or about 1990 near the southwest corner of Building C. A Phase II site investigation was completed in 2015 in the area of the former UST and TPH was reported at concentrations below the Los Angeles Regional Water Quality Control Board (RWQCB) soil screening levels and the USEPA RSLs. Based on the existing data, Ramboll Environ does not consider the former diesel UST to be a significant concern.

6.1.3 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll Environ identified the following *de minimis* conditions related to the site:

- **Ammonia Release.** According to historical sources, a release of approximately 300 gallons of ammonia occurred in 2000 during transfer between two fixed tanks. Based on database listings, the oversight agency was LAFD and cleanup was conducted by Los Angeles County Hazmat. Based on the nature of the reported discharge and the fact that spill response was addressed under agency oversight, it is unlikely to represent a threat to human health or the environment. Thus, Ramboll Environ characterizes this finding as a *de minimis* condition.

6.1.4 Non-scope Considerations

Ramboll Environ identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The earliest buildings on the site were constructed in 1920s, before asbestos was generally phased out of use in many building material applications during the 1980s. Ramboll Environ was not provided with any reports of formal asbestos surveys conducted at the facility or O&M plans prepared by the facility. According to a 2014 Phase I report for the Sacramento Building, a visual survey for and limited sampling for asbestos were conducted in that building in 1990. The visual survey did not indicate the presence of ACMs, except for a small amount of vinyl tile and mastic. In addition, a bulk sample of tile reportedly was collected during the 1990 survey and analyzed for ACMs. The results of the sampling were not provided in the 2014 Phase I report, but the tile reportedly was removed. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey should be conducted.
- **Water Intrusion / Mold.** Ramboll Environ did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the facility has not experienced problems with water intrusion in interior areas. In exterior areas, a minor flooding event occurred in the Hyperloop Area, which resulted in the installation of a sump near the northeast corner of the Sacramento Building.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are “lead-containing paint.” Based on the construction dates of the buildings beginning in the 1920s, it is possible that lead-based paint was used historically on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. Ramboll Environ observed the paint to be in good condition.
- **Radon.** Based on information included in the EDR database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 pCi/L. The USEPA’s continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, radon did not exceed 4 pCi/L at two properties surveyed in the same zip code as the site. A USEPA survey conducted in Los Angeles County found that the average radon level of a first floor room at 63 properties was 0.711 pCi/L.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.” A data gap is only significant if other information obtained during the ESA, or professional experience,

raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll Environ was unable to interview former owners/occupants about historical operations and site conditions; however, Ramboll Environ conducted interviews with representatives of Hyperloop One with tenure at the site dating back to 2015 and reviewed other historical sources regarding former uses of the property.
- Ramboll Environ did not observe the roof of the buildings.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn map dated 1906, which shows that the site was already developed for stone yard and carpet cleaning operations.
- Ramboll Environ has requested site-related information, but not yet received a response, from the RWQCB and the City of Los Angeles Fire Department – Industrial/Commercial Division.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll Environ uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

EDR conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

EDR conducted the search of environmental databases in July, 2016. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 05/02/2016 has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/02/2016 has revealed that there are 29 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 05/16/2016 has revealed that there are 6 SWF/LF sites within approximately 0.5 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

SO CAL GAS/LA-ALAMED	725 CHANNING STREET	WNW 1/2 - 1 (0.560 mi.)	X98	242

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto

sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/04/1996
Comments: DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Agreement
Completed Date:	05/31/1996
Comments:	DTSC signed a Voluntary Cleanup Agreement with Santa Fe for the completion and review of a Preliminary Endangerment Assessment.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	09/04/1996
Comments:	DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	09/13/1995
Comments:	The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

LA 7TH ST CONSOLIDATED FAC (Continued) **1000141475**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported

DEAN AND ASSOCIATES (Continued) **S100833562**

Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description:	This site was previously used to scrap electrical transformers.
Hazardous Waste Desc:	Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env:	The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status:	In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Corrective Action Summary:
Event date: 06/30/1995
Event: RFA Completed

Event date: 06/30/1997
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 06/30/1997
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 07/09/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 07/09/2010
Event: CA550RC

Event date: 07/09/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures

SOUTHERN CALIFORNIA GAS COMPANY-OLYMPIC (Continued) **1000166039**

Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 09/30/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Background Info:	The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility. A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil

OLYMPIC BASE (Continued) **S105689611**

from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste.
The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description:	The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env:	The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status:	The Southern California Gas Company has completed a remedial investigation/feasibility study.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	* Final Remedial Action
Completed Date:	12/16/1991
Comments:	The Final Remedial Action consisted of placing an asphalt cap on the unpaved portions of the Olympic Base Site which would be maintained according to the requirements set forth in the RAP. A deed restriction was recorded on the property. The design of the cap was prepared and included in the RAP workplan.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info:	The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus- industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing. Not reported The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986. Not reported Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smelting site identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Document Type: Triage Meeting
Completed Date: 08/26/2015
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smelting site identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	07/18/1997
Comments:	A Notice of Exemption was completed for the RAW focusing on UPRR areas Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	10/05/2006
Comments:	The Site removal activities included placing an asphalt cover on the property and removal of soil containing metals.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	10/21/2004
Comments:	NOE completed for Removal Action Workplan which describes installation of asphalt cap and soil removal.
Completed Area Name:	PROJECT WIDE

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/10/2006
Comments: Removal Action included placement of an asphalt cover in the property area and removal of 97 tons of soil contaminated with lead and arsenic.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/21/2004
Comments: The RAW proposes to address the lead & arsenic contaminated soil by placing a four-inch asphalt cap on the property area (15,000 sq.ft.) and removing soil from nine impacted areas at the Site boundary. Implementation is scheduled for end of January 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/15/2003
Comments: The Remedial Investigation is approved. The RI involved sampling of lead and other metals, and volatile organic compounds, particularly tetrachlorethene and 1,1,1-trichloroethane.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) with sampling of the site under contract with U.S. EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/18/1997
Comments: Soil removal (excavation) of lead-contaminated soils. The Implementation Report for completion of the Emergency Removal Action by Quemetco at Area 3 (Coast Produce Warehouse) and Area 4 (Residential property at 2151 E. 14th Street) was approved. An estimated 120 tons of contaminated lead was excavated and disposed of off-site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: UPRR: A removal action workplan (RAW-UPRR) was approved for Union Pacific Railroad track areas along Lemon Street (between 10th & 14th Streets). These areas are designated as Areas 1 & 2. A Notice of Exemption was also filed with the OPR as required by the CEQA laws and guidelines. The RAW-UPRR included excavation, treatment and disposal of contaminated soils in the neighboring railroad right-of-way (track) areas of the International Lead Company site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Completed Date: 06/25/1998
Comments: Excavation, treatment and disposal of 2,500 tons of metal contaminated soil from the UPRR rail track areas. The Implementation Report of Emergency Removal Action by Dames & Moore for Areas 1 and 2 was approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: A removal action workplan (RAW-QUEMETCO) which proposed excavation and disposal of contaminated soils, was approved for Areas 3 and 4 (perimeter of Property and residential property). A Notice of exemption was also filed with the OPR as required by the CEQA laws and guidelines.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/07/1994
Comments: DTSC received an information letter for 3 possible hazardous substance release sites allegedly associated with Quemetco/ RSR Corporation, a lead smelting company.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 02/10/2006
Comments: Workplan for additional removal of soil is approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 05/26/1998
Comments: Workplan to delineate soil contamination approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Workplan
Completed Date: 10/31/2000
Comments: WP approved for further Soil and Soil gas investigation.

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company. As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 03/18/2003
Comments: Special Initial Study, Negative Declaration, and De Minimis Impact Finding were prepared and made available for public review. No verbal or written comments were received. DTSC approved the CEQA documents on 3/18/2003. DTSC approved RAW on 3/18/03. Proposed removal activities consists of removing approximately 615 cubic yards of contaminated soil. Chemicals of potential concern previously identified in the soil include the following: Lampslack, PAH's, and BTEX. Removal Activities are anticipated to last approximately 30 days.

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern California Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Manufactured Gas Plants:
Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

MID CITY IRON & METAL CORPORATION (Continued) **S101584674**

Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Alternate Address:	2435 E. WASHINGTON BLVD.
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated along the border of 2455 E. Washington Blvd. Results showed de-creasing contaminant concentrations with increasing distance from 2425 E. Washington Blvd. property boundry. No source was identified at the Amtrak property. Not reported An approximately 50-acres site located in an industrial/

AMTRAK (Continued) **S101586462**

commerical area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation.
Not reported
Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to determine extent of chlorinated solvent contamination and also to identify any contributing sources.

Completed Date: 04/27/1995
Comments: DTSC prepared a Public Participation Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/30/1994
Comments: DTSC completed a PEA and recommended further action at the site. This included further remedial activities, public participation and PRP search.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/30/1992
Comments: While excavating the eastern area and demolishing all existing buildings, other areas were discovered to be contaminated with lead and VOCs (April'94). As a result the total volume of material excavated and removed prior to legislative cancellation of the prison project (Sept'92) was about 40,000 tons. Stabilization measures were also taken, including the implementation of dust control, fensing and posting, and site security. Further investigation and remediation was stopped due to lack of funds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 03/04/1992
Comments: Bid Package 1B-Hazardous Waste Remedial Action (RAP) completed by K/J/C. The RAP was developed for the shallow soil excavation in the eastern area of the site with a cleanup level of 10 ppm.

Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 02/05/1998
Comments: DTSC and the Alameda Corridor Transportation Authority executed a Voluntary Cleanup Agreement (VCA) for the site, which is a 4.4-acre parcel of the former California Reception Center site (aka State Surplus Sale Parcel 497). DTSC will oversee completion of a Remedial Investigation/Feasibility Study (RI/FS), remediation of the site.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/10/1993
Comments: On September 1, 1993, the Department completed review of the PEA. Based on the information provided in the PEA report, the site does not appear to constitute a threat to human health/or the environment. Therefore, the Department concurred with the recommendation that "No Further Action" is warranted at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/19/1993
Comments: On March 29, 1993, the Department received the Notice of Intent to Initiate a PEA. Historical activities include machine shops, tool & die making, agricultural products and clothing manufacturing. 1910-20, the site was occupied by Kellifer Manufacturing Company. 1921-59, Tlomb Tool Co. (machine shop) was at the site. From 1960-1980 Troto Tool & Machine Shop was at the site. In 1980 the new building constructed and Liquette Clothing Company currently using for clothes manufacturing. Currently, the preperty is on sale. The preliminary soil screening investigation at the site revealed that the fill dirt used in construction of foundation found to carry chemical residues. The fill dirt was contaminated with TRPH, halogenated organic compounds such as TCE & PCE. The site is completely covered with asphalt. A PEA is recommended due to the presence of contaminants at the site.

protective of human health and the environment DTSC recommends No Further Action.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/30/1993
Comments:	The site is identified from RP, who likes to submit a PEA. The site consists of 1.53 acres of land and includes a 75,000 sq.ft. two storey building. Phase I investigation revealed no information regarding hazardous waste activities conducted at the site. Further sampling reveals that concentration of oil & grease ranged from 590 to 9900 mg/kg and perchloroethylene (PCE) ranged from 0.89 to 17.0 mg/kg. Due to the evidence of on-site contamination, Department recommends a PEA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

SAN DIEGO COUNTY:

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

Date of Government Version: 09/23/2013
Date Data Arrived at EDR: 09/24/2013

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SACRAMENTO ST./BAY ST.
SACRAMENTO ST./BAY ST.
LOS ANGELES, CA 90021

TARGET PROPERTY COORDINATES

Latitude (North):	34.031174 - 34° 1' 52.23''
Longitude (West):	118.228042 - 118° 13' 40.95''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	386628.6
UTM Y (Meters):	3766098.0
Elevation:	244 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630795 LOS ANGELES, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

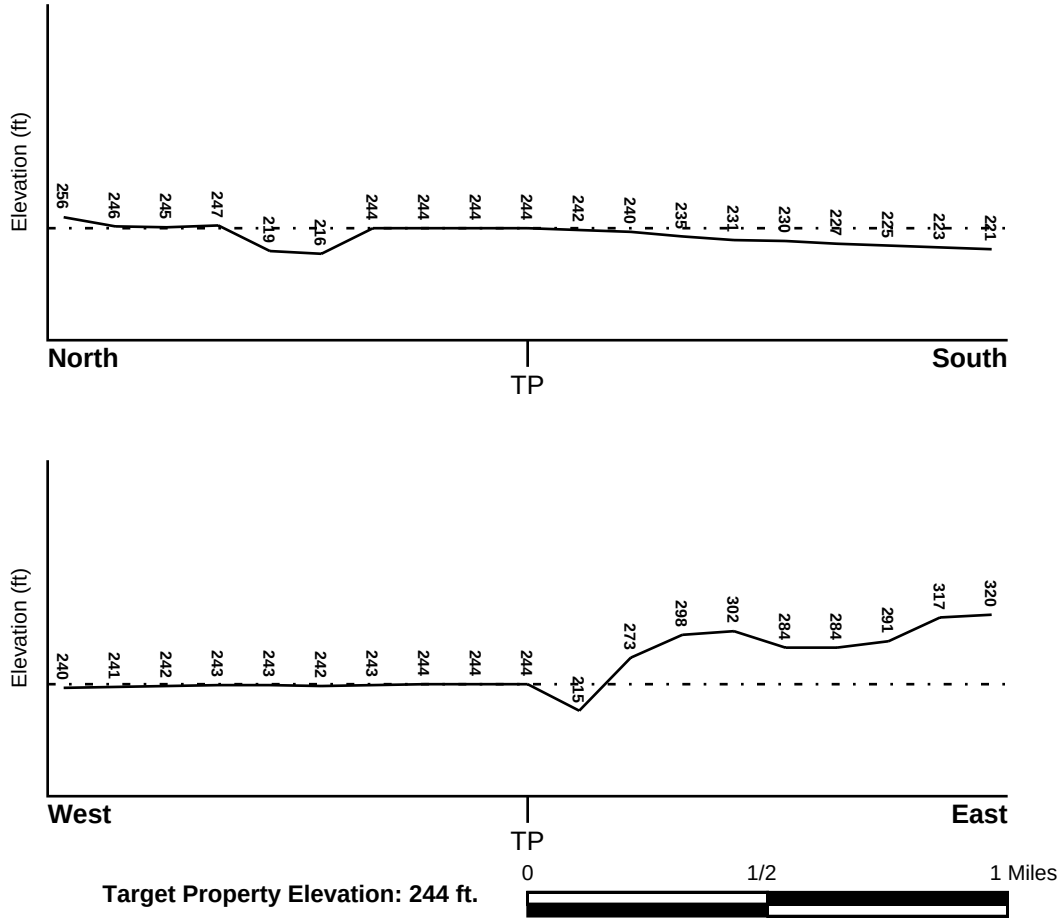
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 244 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/4 - 1/2 Mile SSW	Not Reported
2	1/2 - 1 Mile NE	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll Environ were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Sacramento St./Bay St.	Ramboll Environ
Sacramento St./Bay St.	18100 Von Karman Avenue
Los Angeles, CA 90021	Irvine, CA 92612
EDR Inquiry # 4674219.3	Contact: Rita Vincent

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Environ were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 4C4B-4E1F-AA90

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Ramboll Environ (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Site Assessor:

Lloyd Guss

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Professional:

Eric Fraske

Principal Consultant:

Lloyd Guss

1 FINDINGS AND CONCLUSIONS

Professional Service Industries, Inc. (PSI) performed a Phase I Environmental Site Assessment (Phase I ESA) of the Residential/Commercial Property at 2145 to 2161 Sacramento Street in Los Angeles, California.

PSI performed the Phase I ESA in general conformance with ASTM E1527-13 (the Practice). Limitations, exceptions and deviations from this protocol are discussed in Section 3. Our ESA services also conform to the prior version of the Practice, ASTM E1527-05.

PSI performed our services to comply with the contract between our client and PSI. The report should be read in its entirety to obtain a more complete understanding of the information provided and to aid in any decisions made or actions taken based on this information.

1.1 PHASE I ESA

Improvements to the subject property consist of one, single-story residential/commercial building. The 22,300 square foot building is developed with four industrial/commercial units with mezzanines. No evidence of hazardous material usage, storage, or generation was observed during the site reconnaissance.

Historical resources indicate the property was developed with a carpet cleaning business as early as 1906. In 1923, the present day structure was constructed on the property and occupied thereafter by various light manufacturing, warehousing, and wholesale food distribution businesses. In 1983, the building was renovated into the current industrial/commercial units.

Past environmental reports (See Section 4.0) have identified soil impact to the subject property caused by runoff. This impact was identified in 1986 and subsequently remediated through soil excavation. On July 17, 2014, PSI reviewed City of Los Angeles Fire Department records for the north adjoining property (Hill Brothers Chemical Company). Records indicate numerous ASTs at the site since the 1950s and, with the exception of one minor release to the storm drain that required no further action, no releases were reported. During site reconnaissance, PSI observed that the ASTs at the north adjoining property appear to have been removed or decommissioned. Based on the Fire Department's records and site observations, the former ASTs at the north adjoining property are not considered to represent a recognized environmental condition.

1.1.1 SIGNIFICANT DATA GAPS

The Practice defines a Significant Data Gap as a gap that affects the ability to identify recognized environmental conditions. Findings and conclusions are subject to the limitations imposed by Significant Data Gaps.

PSI's assessment did not identify Significant Data Gaps.

1.1.2 VAPOR ENCROACHMENT CONDITION (VEC)

This assessment has revealed no evidence of a vapor encroachment condition (VEC) in connection with the subject property.

1.1.3 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of historical recognized environmental conditions (HRECs) in connection with the subject property.

1.1.4 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of controlled recognized environmental conditions (CRECs) in connection with the subject property.

1.1.5 RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property.

1.2 OTHER ENVIRONMENTAL ISSUES

1.2.1 ASBESTOS

A previous environmental report, prepared by ATC Environmental Inc. (ATC), dated January, 1990, provided to PSI by the client, indicated that during a visual survey, no visible suspect asbestos containing material was observed, with the exception of a small amount of vinyl asbestos tile and mastic in one unit. According to the property owner, the tile was subsequently removed, which was confirmed by visual observation by PSI.

1.2.2 LEAD BASED PAINT

Due to the age of construction of the building at the subject property (1923), it is possible that lead based painted surfaces are present at the subject property. Painted finishes observed at the subject property were observed to be in good condition with no evidence of cracking or flaking. Lead based paint is not considered to be a significant environmental concern.

1.2.3 MOLD

The visual mold survey did not identify the presence of mold or moisture intrusion. The property owner was not aware of any current or past roof, piping, or other such leaks. Therefore, mold and moisture intrusion are not considered significant environmental concerns.

1.2.4 RADON

PSI reviewed the United States Environmental Protection Agency Radon Zone map to determine the expected average concentration of radon in indoor air at the subject property. According to this map, the subject property is located in Radon Zone 2 indicating an expected indoor air concentration for radon above 2 picoCuries per liter, but below 4 picoCuries per liter. Radon Zone 2 is below the USEPA guideline of 4 picoCuries per liter, and thus radon is not a significant environmental concern.

1.2.5 WETLANDS AND FLOOD PLAINS

Our review of available wetlands records did not identify indications of wetlands on the subject property. Additionally, the subject property is not mapped within a 100- or 500-year flood plain. No wetlands or soils conducive to wetlands were observed on the property.

1.2.6 DRINKING WATER QUALITY

PSI reviewed the Metropolitan Water District (MWD) 2013 report. According to this report, the drinking water provided by the MWD met all federal and state drinking water standards. A copy of this report is provided in the Appendix.

1.2.7 HISTORIC OIL AND GAS WELLS

PSI reviewed online oil and gas well maps posted on the California Department of Conservation Division on Oil, Gas, and Geothermal Resources website. According to these maps, no historic oil or gas wells are located on or in the vicinity of the subject property. The property is not reported to be located within a known methane hazard zone.

1.3 RECOMMENDATIONS

No further assessment is recommended at this time.

2 INTRODUCTION

2.1 CONTRACT

The contract between PSI and our client, including the proposal number/contract reference and the authori□ation date was summari□ed on the General Information section of this report:

2.2 THE USER

The Practice defines the □User□of the Phase I Assessment as:

> □□ the party seeking to use ASTM E1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of this practice ...□

PSI considers our direct client to be the User of this report.

2.3 PURPOSE OF SERVICES

The purpose of our services was to generally conform to the Practice. The goal of the processes established by the Practice is:

> □□ to identify Recogni□ed Environmental Conditions □RECs□in connection with the property.□

The purpose of the Practice is:

> □□ to define good commercial and customary practice in the United States of America for conducting an environmental site assessment □ESA□of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act □CERCLA□□42 U.S.C. □9601□and petroleum products.
>
> As such, the Practice is intended to permit a user to satisfy one of the re□uirements to □ualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability □hereinafter, the landowner liability protections or LLPs□: that is, the practice that constitutes all appropriate in□uiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C.□

The Environmental Protection Agency amended the "All Appropriate Inquiries Rule" at 40 CFR Part 312 to reference the Practice and make clear that persons conducting all appropriate inquiries may use the procedures included in the Practice to comply with the All Appropriate Inquiries Rule.

2.4 STANDARD OF CARE AND WARRANTIES

Our assessment is based on limited information collected under time and cost constraints, in general conformance with the Practice. Findings and conclusions derived from the methodologies described in the Practice contain all of the inherent limitations in the methodologies that are referred to in the Practice, including:

- No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with the property.
- Our services were not intended to be technically exhaustive. There is a possibility that with the proper application of methodologies, conditions may exist on the property that could not be identified within the scope of the assessment, or that were not reasonably identifiable from the available information.
- PSI did not independently verify the information we obtained from records or interviews, and PSI treated the information as reliable.
- Not every property warrants the same level of assessment.
- Subsequent ESAs should not be considered valid standards to judge the appropriateness of a prior assessment. The observations and recommendations presented in this report are time dependent, and conditions will change. This report speaks only as of its date.

PSI did not perform any exploratory probing or discovery, perform tests, operate any specific equipment, or take measurements or samples to perform the ESA scope. The ESA was not a building code, safety, regulatory or environmental compliance inspection. The ESA is not intended to reduce the risk of the presence of mold and physical deficiencies conducive to mold nor the risk that mold or physical deficiencies conducive to mold may pose to the buildings and building occupants.

PSI has performed the services in a manner consistent with that level of care and skill ordinarily exercised by other members of our profession currently practicing in the same locality and under similar conditions, within the limitations of the Practice. No other warranties are implied or expressed.

2.5 RELIANCE

The Borman Group, LLC and NNG Industrial Properties, LP, and their respective partners, affiliates, successors and assigns, and lenders, can rely on this report.

2.6 USE BY OTHER PARTIES

This report was prepared pursuant to a contract between PSI and our client. That contractual relationship included an exchange of information about the property and the purpose of our work that was unique and serves as the basis upon which this report was prepared. Because of the importance of these understandings, our assessment may not be appropriate or sufficient for the intended purposes of another party.

Reliance or any use of this report by anyone other than those parties identified above, for which it was prepared, except with express written permission, is prohibited and therefore not foreseeable to PSI. Any unauthorized reliance on or use of this report, including any of the information or conclusions contained herein, will be at such third party's risk. No warranties or representations expressed or implied in this report are made to any such third party.

Third party reliance letters may be issued:

- upon timely request,
- subject to the permission by our original client, and
- payment of the then-current fee for such letters.

All third parties relying on our report, by such reliance, agree that such reliance is limited by our proposal and/or General Conditions, as applicable.

3 SCOPE AND METHODOLOGY

PSI performed a Phase I ESA of the subject property. The scope of our services and general methodology is presented below.

The information sources that PSI used, including published material, material obtained from commercial and other sources, is listed below and cited as it is presented in the report. The information or excerpts thereof is appended.

3.1 PHASE I ESA

This assessment included four components:

- Records review
- Reconnaissance
- Interviews and
- Preparation of this report, including our evaluation.

The assessment was also intended to satisfy our client's requirements, described in:

- PSI Proposal 0559-122848 dated May 2, 2014.

Other items addressed during this assessment that are beyond the scope of ASTM E 1527 include a desktop review of publicly available documentation related to radon occurrence and drinking water quality in the vicinity of the subject property and a visual survey of asbestos containing building materials, lead based paint, and mold at the subject property.

3.1.1 RECORDS REVIEW

Physical Setting Sources

The sources that PSI reviewed to assist with the physical setting of the site to assist with the interpretation of subsurface water movement are tabulated below.

Summary of Physical Setting Sources	
Source Name	**Year Published/Issued**
USGS 7.5 Minute Topo Map	Los Angeles: 1953, 1966, 1972, 1981, 1994
EDR GeoCheck Report	2014

Summary of Physical Setting Sources	
Source Name	**Year Published/Issued**
State of California GeoTracker Website-URS Phase II Report for 2300 E. 7th Street, Los Angeles, CA	2004

Environmental Regulatory Information

PSI retained Environmental Data Resources, Inc. (EDR) to provide environmental information attributed to the subject property and its surroundings. EDR obtains environmental records published by local, state, tribal, and federal agencies and maps the information for electronic searches

The search was performed to Approximate Minimum Search Distances (AMSD) listed in ASTM E 1527-13.

Unmappable (orphan) sites (if any were listed) having insufficient address information to be mapped were evaluated for potential location within the AMSD. Those that could be determined to be within the AMSD are discussed in Environmental Records Review section of the report.

Freedom of Information (FOIA) Requests

PSI often submits requests under the Freedom of Information Act (FOIA) or its State or local equivalent. In some cases, PSI does not submit such requests since the information is available through informal information requests, interviews or other methods.

The FOIA reviews that we submitted and the outcomes are tabulated and discussed below.

FOIA Request	
Agency	**Response**
City of Los Angeles Fire Department-UST Division	Yes
City of Los Angeles Fire Department-HAZMAT Division	Yes

Regulatory Agency File and Record Reviews

The Practice provides that if the subject property or any adjoining properties are identified on one or more of the standard environmental record sources in 8.2.1, pertinent regulatory files and/or records associated with the listing should be reviewed, subject to the discretion of the EP. PSI considers such file review necessary to assess the property.

Historical Use Information

PSI used USGS Topo maps to provide information about the history of the subject property and its surroundings. PSI also reviewed other historical resources. The resources PSI reviewed are tabulated below.

Historical Resources		
Source Type	**Years Reviewed**	**Source**
USGS Topo Maps	**See Section 3.1.1**	**USGS**
Aerial Photograph(s)	1928, 1938, 1947, 1952, 1964, 1972, 1981, 1989, 1994, 2005, 2009, 2010, 2012	EDR
Fire Insurance Maps	1906, 1950, 1953, 1954, 1959, 1960, 1967, 1970	EDR
Street Directories	1920 to 2013 at approximately five year intervals	EDR

Recorded Land Title Records

PSI did not review land title records to obtain information about the current and past owners of the subject property and past uses and tenancies.

User-Provided Information: Liens, AULs and Other Information

The Practice requires that the User provide information about Environmental Liens and Activity and Use Limitations (AULs) currently recorded against the property. The Practice indicates that the User should engage a title company to conduct the review or negotiate such engagement as an addition to the environmental professional's (EP) services. In addition, the Practice suggests that the User provide the EP with certain other information about the property and the reason for the Phase I ESA.

PSI sent a questionnaire to our client requesting this information. The completed questionnaire is appended.

Helpful Documents and Proceedings

The Practice requires that the environmental professional ask the property owner, the key site manager (if any is identified), and the User for certain helpful documents about the property and certain legal proceedings involving hazardous substances and the subject property.

The responses documenting the persons we contacted and relevant information obtained are appended where practical. If such documentation was too large to append, it is available at the PSI office that prepared this report.

Reconnaissance

A representative of the property owner granted PSI access to the subject property. Our assessor was escorted during the interior site reconnaissance, but was not escorted otherwise.

The ground reconnaissance consisted of observing the periphery of the subject property and viewing the subject property from accessible adjacent public access areas. PSI systematically toured the interior portions of the subject property to provide an overlapping field of view. The peripheries of surface features and/or structures, where present on the subject property, were observed along with accessible interior common areas. PSI photo-documented select features that we encountered during our reconnaissance.

Reconnaissance of adjoining properties was limited to areas and facilities that were readily observable from the subject property or from public access areas.

Interviews

PSI made reasonable attempts to interview selected persons having knowledge of the uses and conditions of the subject property, past and present. A list of the persons that PSI interviewed and attempted to interview, along with our interpretations is presented in the Interview section of this report.

Vapor Encroachment Screening

Vapor encroachment is an evolving matter associated with the potential for chemicals of concern (COC) to migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the property. The Practice requires the EP to evaluate:

> the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

The term "hazardous substance" used in CERCLA is not limited to solids and liquids and USEPA has taken the view that the vapor phase of volatile hazardous substances shall be considered and addressed under CERCLA. Additionally, humans may be subjected to subsurface vapor if subsurface volatile chemicals migrate into occupied buildings through cracks and penetrations in the building floor.

Use of Standard Guide E2600-10

ASTM developed E2600-10 "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" "E2600". The purpose of the guide is

> to provide practical guidance and a useful process for conducting a vapor encroachment screen "VES" on a property parcel involved in a real estate transaction in the United States of America with respect to chemicals of concern "COC" that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the property.
>
> The goal of this VES is to identify a vapor encroachment condition "VEC", which is the presence or likely presence of COC vapors in the sub-surface of the target property "TP" caused by the release of vapors from contaminated soil or groundwater either on or near the property as identified by certain procedures

The Practice references E2600, but does not endorse its use, or any other process for the assessment of soil vapor. PSI considers the goal described in E2600 to be consistent with the goal of the Practice. Based on our experience, we consider the processes in E2600 to be customary practice for conducting a VES for a commercial property transaction. Therefore, PSI's assessment of soil vapor is based on the processes described in E2600.

Methodology

E2600 VES uses information collected as a normal part of the Practice. PSI proposes to

- establish a nominal Area of Concern "AoC" using E2600 Approximate Minimum Search Distances "AMSD"
- reduce or expand the distances based on known or inferred groundwater flow directions and other information regarding the subsurface conditions in the area
- identify potential vapor source sites within the AoC using:
  - environmental records,
  - historical records, and
  - other provided information.

PSI will evaluate the identified potential sources and determine for each if:

- A VEC exists or likely exists;
- A VEC cannot be ruled out; or
- A VEC can be ruled out, because a VEC does not or is not likely to exist.

For those sites where PSI determines that a VEC exists or likely exists, PSI will determine whether or not the condition represents a REC. PSI will discuss its evaluation of VECs in the section of this report where the potential source condition is first encountered.

3.2 LIMITATIONS, EXCEPTIONS, DEVIATIONS AND DATA GAP

Limitations, exceptions, and deviations from the Practice manifest as a lack of or inability to obtain information required by the Practice. This represents the definition of the "data gap" contained in the Practice.

PSI listed the component objectives of the Practice on the appended Data Gap Worksheet and tracked the information obtained against the objectives. Therefore the limitations, exceptions and deviations are identified in the Worksheet.

In general, when required information was incomplete, not provided, otherwise not obtained, or indicated a need for additional information, PSI attempted to use information from other sources to meet the Practices' performance objectives. When the data gaps affected the Environmental Professional's ability to identify RECs, PSI considered the data gap(s) to be significant. PSI identified significant data gaps (if any) on the Data Gap Worksheet and reported them in Section 1. PSI did not identify any significant Data Gaps.

3.3 SIGNIFICANT ASSUMPTIONS

PSI made the following assumptions in developing our Phase I ESA findings and conclusions:

- Regulatory Records and Information - PSI considers all information provided by our environmental information subcontractor(s) and by regulatory agencies regarding regulatory status of facilities to be complete, accurate, and current.
- Title, Lien and AUL Information - PSI considers all information provided by real estate title record review firms regarding property use or ownership, encumbrances or other limitations, if provided, to be complete, accurate and current.
- Interviews - PSI considers all information provided through interviews to be complete, unbiased and provided in good faith.
- PSI interpreted and inferred the direction of the shallow groundwater movement based on the information we obtained and our experience. Actual groundwater flow may be locally influenced by many factors beyond the scope of this

assessment. Subsurface investigation would be necessary to determine site-specific groundwater flow direction.

4 USER-PROVIDED INFORMATION

4.1 USER'S RESPONSIBILITIES

4.1.1 ENVIRONMENTAL LIENS

Our client returned PSI's questionnaire indicating "NO" to the question: "Are you aware of any environmental cleanup liens against the property that are filed under federal, tribal, state or local law?" No supporting documentation was available. The completed questionnaire is appended.

4.1.2 ACTIVITY AND USE LIMITATIONS

Our client returned PSI's questionnaire indicating "NO" to the question: "Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state, or local law?" No supporting documentation was available. The completed questionnaire is appended.

4.2 SUGGESTED INFORMATION

Our client provided PSI with the following suggested information described by the Practice.

- The reason for performing the Phase I ESA.
- The type of property and type of property transaction.
- The complete and correct address for the property.
- The scope of services desired for the Phase I ESA.
- Identification of all parties who will rely on the Phase I ESA report.
- Identification of the site contact and how the contact can be reached.

4.3 HELPFUL DOCUMENTS

PSI was provided with several previous environmental reports prepared for the property. This report is summarized below and presented in the appendix.

- **Phase II ESA 2145 Sacramento Street. Prepared for Halbert Brothers. Prepared by Gregg and Associates. Dated October 10, 1986.**

This assessment was conducted to evaluate evidence of runoff of potentially hazardous materials from the northern adjoining property onto the subject property. Soil samples were collected from two boring locations and analyzed for petroleum hydrocarbons and heavy metals. Petroleum hydrocarbons were not detected above laboratory detection limits in the soil samples collected at a depth of two feet below ground surface (bgs). However, soil samples collected from the surface reported concentrations of petroleum

hydrocarbons at a concentration of 1,140 milligrams per kilogram. Additionally the composite of the two surface samples reported a concentration of soluble copper in excess of hazardous waste limits. Analysis of the samples collected at two feet bgs did not detect any metals in excess of screening levels. Gregg concluded that the soil impacts were surficial and recommended that the impacted soil be excavated and removed from the property.

- **Results of Contaminated Soil Removal Project-2145 Sacramento Street. Prepared for Halbert Brothers. Prepared by Gregg and Associates. Dated December 26, 1986.**

In November of 1986, eight (8) cubic yards of impacted soil were excavated from the subject property and transported to a licensed waste disposal facility. Three soil samples were collected from the bottom of the excavation and analyzed for soluble copper. The concentrations of soluble copper detected were more than an order of magnitude lower than those previously detected on the surface and were below screening levels. It does not appear that the samples were analyzed for petroleum hydrocarbons. Gregg concluded that the impacted soil had been successfully removed from the property and no further action would be necessary.

- **Subsurface Investigation Report. Prepared for N&G Industrial Properties, LP. Prepared by Gregg and Associates. Dated December 26, 1986.**

During this assessment, soil samples were collected from a single boring located on the northern side of the building, south of the borings previously sampled in October of 1986, to evaluate possible impact from off-site runoff of a past chemical spill on the northern adjoining property. The soil samples were analyzed for heavy metals and petroleum hydrocarbons. The concentrations of the detected metals and hydrocarbons were below screening levels. No further assessment was recommended.

- **Summary of Subsurface Investigations performed at 2116 and 2145 Sacramento Street. Prepared for N&G Industrial Properties, LP. Prepared by Gregg and Associates. Dated December 30, 1986.**

This brief letter summary, of the previously mentioned sampling, reported that in October and December of 1986, soil sampling was conducted at the subject property and no concentrations of petroleum hydrocarbons or heavy metals were detected above regulatory screening levels in the collected soil samples. No further assessment was recommended.

- **Asbestos Containing Material Survey Report. Prepared for N&G Industrial Properties. Prepared by ATC. Dated January 1990.**

In 1990, ATC conducted a visual asbestos survey of the building. No visible suspect asbestos containing material was observed, with the exception of a small amount of

vinyl asbestos tile and mastic in one unit. In addition to the visual survey, three bulk samples of the tile near the loading dock of Suite 2145 were collected for analysis. The total amount of floor tile was estimated to be approximately 150 square feet. No exterior building material or roofing material samples were collected as part of this assessment.

The property owner indicated that the tile subsequently was removed, and during reconnaissance of the subject property, PSI did not observe any floor tiles near the loading dock of Suite 2145, confirming that they had been removed.

4.4 PROCEEDINGS

Our client returned PSI's questionnaire indicating "No" to the question: "Pursuant to ASTM E 1527-13 Section 10.9, as the user of this ESA do you know of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products."

PSI identified no evidence of RECs in the information provided to us.

5 PHYSICAL SETTING

Based on our interpretation of the physical setting sources and our experience, PSI infers that the shallowest groundwater:

- Follows the local topography towards the south, and
- Occurs at about 60 feet below the ground surface.

Other information about the physical setting of the subject property is tabulated below.

Physical Setting	
Nominal Elevations, (ft, above MSL)	Approximately 266
Surface Topo Characteristics	The property grades moderately to the southwest.
General Soil Type, Slopes	Urban Land. Soils of this type are characteri□ed as being highly variable.
Does EDR Map a Floodplain On-Site?	No
On-Site Water Bodies	None
Off-Site Water Bodies	None were observed on adjoining properties. The Los Angeles River is located approximately 1/16 mile east of the subject property.

6 ENVIRONMENTAL RECORDS REVIEW

6.1 DATABASE FINDINGS

The distribution of listed sites with respect to the subject property is tabulated and mapped in EDR's Radius Map Report, which is appended. The reader is referred to the table, which can be found near the front of EDR's report.

6.1.1 SUBJECT PROPERTY

EDR's report did not identify the subject property.

6.1.2 ADJOINING PROPERTIES

EDR's report did identify sites adjoining the subject property, as further discussed below.

Facility Name & Address	Hill Brothers Chemical Company 2159 Bay Street Los Angeles, CA 90021	**Map ID: B6** **Distance: Adjoining** **Direction: North**
Database(s) Listed: CA FID UST, HIST UST, SWEEPS UST, NPDES, and CHMIRS		
According to the NPDES database, this facility maintains an active industrial stormwater permit. No violations were reported. According to the CA FID UST, HIST UST, and SWEEPS UST databases, 11 USTs were registered at this property address. However, a review of the City of Los Angeles Fire Department records did not indicate any USTs at this address, but numerous above ground tanks (ASTs). Therefore, PSI believes the databases incorrectly categorized the ASTs as USTs. No leaks are reported at this facility. (See Section 6.2.1, below) According to the CHMIRS database, a release of 300 gallons to the storm drain was reported at this facility in August of 2000. The Fire Department responded, but no further actions were reported. Based on our review of the City of Los Angeles Fire Department records, the former ASTs at the northern adjoining property are not considered to represent a recognized environmental condition.		

6.1.3 SURROUNDING PROPERTIES

EDR's report identified sites surrounding the subject property. PSI considered all of the listed sites unlikely to impact the subject site, based upon factors including (but not limited to):

- The nature of the listing
- The use of the site
- When the site was listed and its current listed status
- The developmental density of the setting

- The distance between the listed and subject sites as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions
- The presence of intervening drainage divides
- The inferred groundwater movement

6.2 OTHER REGULATORY INFORMATION

6.2.1 FOIA RESPONSES

PSI submitted a FOIA request to the City of Los Angeles Fire Department UST and HAZMAT Divisions. PSI received notification from the City of Los Angeles Fire Department that no file was found for the subject property address. However, on July 17, 2014, PSI reviewed City of Los Angeles Fire Department records for the north adjoining property "Hill Brothers Chemical Company". Records indicate numerous ASTs at the site since the 1950s and, with the exception of one minor release to the storm drain that required no further action, no releases were reported. During site reconnaissance, PSI observed that the ASTs at the north adjoining property appear to have been removed or decommissioned. Based on the Fire Departments records and site observations, the former ASTs at the north adjoining property are not considered to represent a recognized environmental condition.

6.2.2 REGULATORY AGENCY-MAINTAINED WEBSITES

PSI reviewed the State of California GeoTracker website for listings related to USTs, leaking underground storage tanks, or hazardous material releases/clean ups at or near the subject property address. No such listings were identified at the subject property or adjoining property addresses.

6.2.3 OTHER REGULATORY AGENCY INFORMATION REVIEWED

No other regulatory agency information was reviewed during this assessment as such a review was determined not to be warranted since the information in the EDR Radius Map Report was sufficient for PSI to determine if a REC, HREC, and/or CREC related to a regulatory database listing exist in connection with the subject property.

7 SITE RECONNAISSANCE

The location and approximate boundaries of the property are illustrated on the appended figures. The legal description of the property, if provided to PSI, is appended.

Site Reconnaissance	
Project Name	Industrial/Commercial Building
Property Address	2145 to 2161 Sacramento Street
City, County, State, ZIP Code	Los Angeles, Los Angeles County, California 90021
Site Area (acres)	0.579
No. Buildings/Units/Stories	One/Four/One □3 units have a me□□anine□
Area (sf)	22,300
Occupied Subgrade Spaces?	No
Year(s), First Developed for Current Use	1923
Year(s), Additional Phases	Unknown
Year Significant Renovations	1983

7.1 DESCRIPTION AND CURRENT USES

Improvements to the subject property consist of one, single-story industrial/commercial building. The 22,300 s□uare foot building is developed with 4 industrial/commercial units. No evidence of ha□ardous material usage, storage, or generation was observed during the site reconnaissance.

7.1.1 INTERIOR AND EXTERIOR OBSERVATIONS

A summary of the subject property uses and conditions is tabulated below. Detailed information is discussed following the summary for any □yes□ answers, along with an opinion about the significance of the listing.

Interior and Exterior Observations	
Yes/No	**Category**
NO	Ha□ardous Substances
NO	Petroleum Products
NO	Aboveground or Underground Storage Tanks □ASTs/USTs□
NO	Drums
NO	Suspect Containers
NO	Electrical or Mechanical E□uip. Suspected to Contain PCBs
NO	Interior Stains or Corrosion
NO	Drains or Sumps
NO	Wastewater Discharges
NO	Septic or Sewage Tanks
NO	Pits, Ponds or Lagoons
NO	Pools of Li□uid or Standing Water
NO	Solid Waste Dumping/Landfills/Suspect Fill Material
NO	Stained Soil or Pavement
NO	Stressed Vegetation
NO	Drinking Water Wells
NO	Irrigation Wells
NO	Monitoring Wells
NO	Odors
NO	Other Uses or Conditions of Concern

None of the abovementioned uses or conditions was identified at the subject property during the site reconnaissance.

Additionally, no evidence of a usage or condition at the subject property that would suggest a vapor encroachment condition exists at the subject property.

7.2 PAST USES

Our interpretation of the past uses of the property, based on the historical data sources listed in Section 3.1 of this report, is tabulated below.

Past Uses	
Year(s)	**Interpreted Property Use**
1906	A Sanborn Fire Insurance map depicts the property to be developed with a carpet cleaning business.
1923 to 2013	According to tax assessor records, the present day structure at the subject property was constructed in 1923. Subsequent aerial photographs and Sanborn maps depict the property to be developed with the present day structures. Historic city directories identified the past tenants of the property as: **2145 Sacramento Street** • Francis Syhreck insulation and waterproofing (1929) • Twine Laundry Textiles (1937) • Sofa Manufacturers (1942) • Sacramento Eggs (1951) • Draper Eggs (1958) • Berkson Fabrication and Design (2013) **2149 Sacramento Street** • Battery Manufacturers (1933) • Curied Hair and Acme Cotton (1942) • Sacramento Eggs (1951) • Farm Fresh Eggs (1958 to 1962) • Gold Pad (2000) • Songgosia (2006) **2151 Sacramento Street** • Broadway (nitting (2000 to 2008) **2153 Sacramento Street** • Allied Veneer Lumber (1937) • Crossfield Products (1942 to 1958) **2157 Sacramento Street** • Robeson Cutlery (1929) • Wagner Cooking Utensil manufacturing (1933 to 1942) **2159 Sacramento Street** • No Listing **2161 Sacramento Street** • Nick Rodrigue((2013)

Historical resources indicate the property was developed with a carpet cleaning business as early as 1906. In 1923, the present day structure was constructed on the property and occupied by various light manufacturing, warehousing, and wholesale food distribution businesses. In 1983, the building was renovated into mixed-use residential/commercial units and two storage suites.

The past uses of the subject property are not considered to represent a recogni□ed environmental condition.

8 ADJOINING PROPERTY RECONNAISSANCE

8.1 DESCRIPTION AND CURRENT USES

Our interpretation of the uses of the adjoining and surrounding property is tabulated below and detailed in the subse□uent sections.

Adjoining Current Use	
Direction	**Interpreted Property Use**
North	Hills Brothers Desert Brand Products
South	Sacramento Street followed by Broadway □nitting.
East	Storage shed for the Amtrak maintenance facility.
West	A vacant commercial building.

8.1.1 INTERIOR AND EXTERIOR OBSERVATIONS

Based on historical records and observations, a summary of our interpretation of the current and past uses and conditions of adjoining and surrounding property is provided below.

Interior and Exterior Observations	
Yes/No	**Category**
No	Ha□ardous Substances
No	Petroleum Products
No	Aboveground or Underground Storage Tanks □ASTs/USTs□
No	Drums
No	Suspect Containers
No	Electrical or Mechanical E□uip. Suspected to Contain PCBs
No	Interior Stains or Corrosion
No	Drains or Sumps
No	Wastewater Discharges
No	Septic or Sewage Tanks
No	Pits, Ponds or Lagoons

Interior and Exterior Observations	
Yes/No	**Category**
No	Pools of Li□uid or Standing Water
No	Solid Waste Dumping/Landfills/Suspect Fill Material
No	Stained Soil or Pavement
No	Stressed Vegetation
No	Drinking Water Wells
No	Irrigation Wells
No	Monitoring Wells
No	Odors
No	Other Uses or Conditions of Concern

None of the abovementioned uses or conditions was identified at the adjoining or surrounding properties during the site reconnaissance.

8.2 PAST USES

Our interpretation of the past uses of the adjoining properties is tabulated below.

Past Site Uses, North	
Year(s)	**Interpreted Property Use**
1906	A Sanborn Fire Insurance map depicts the property to be developed with Stone Yard.
1928 to 2013	Sanborn maps and aerial photographs depict the property to be developed with the present day commercial building and occupied by a chemical company warehouse and a sacking and mixing facility. Aboveground storage tanks are depicted to the north and east of the subject property. Historic city directories did not identify the adjoining property address.

Past Site Uses, East	
Year(s)	**Interpreted Property Use**
1928 to 2013	Sanborn maps and aerial photographs depict the property to be a developed rail yard.

Past Site Uses, South	
Year(s)	**Interpreted Property Use**
1906	A Sanborn Fire Insurance map depicts the property to be developed with Sacramento Street followed by a carpet cleaning business.
1924 to 2012	Aerial photographs and Sanborn Maps depict the property to be developed with Sacramento Street followed by the present day warehouse structure. Historic city directories identified the past tenants of the property as: **2146 Sacramento Street** • Ice Cream manufacturer 1924 to 1933 • MG Group 2000 • Pop iller 2013 **2150 Sacramento Street** • Galvani ed Roofing Supply 1942 • Sterling Li uors 1950 to 1958 • Trade Paper 1958 to 1962 • Globe Amerada Glass 1976 • Z Barten Productions 2000 to 2008 • ABA Apparel 2013 **2152 Sacramento Street** • City Steam Carpet Cleaning 1924 to 1967 • Broadway nitting 1976 to 2013 • Cheerleading 2000 to 2006

Past Site Uses, West	
Year(s)	**Interpreted Property Use**
1906	A Sanborn Fire Insurance map depicts the property to be developed with residential homes.
1928 to 2012	Aerial photographs and Sanborn Maps depict the property to be developed with the present day commercial structure. Historic city directories identified the past tenants of the property as: **2141 Sacramento Street** • Sacramento Adler Bag Co. 1951

The subject property is located within an area primarily developed for industrial use.

Past environmental reports See Section 4.0 have identified surficial soil impact to the subject property caused by runoff from the northern adjoining property. This impact was identified in 1986 and subse uently remediated through soil excavation. On July 17,

2014, PSI reviewed City of Los Angeles Fire Department records for the north adjoining property "Hill Brothers Chemical Company". Records indicate numerous ASTs at the site since the 1950s and, with the exception of one minor release to the storm drain that required no further action, no releases were reported. During site reconnaissance, PSI observed that the ASTs at the north adjoining property appear to have been removed or decommissioned. Based on the Fire Departments records and site observations, the former ASTs at the north adjoining property are not considered to represent a recognized environmental condition.

9 INTERVIEWS

PSI interviewed parties potentially having information about current and/or former conditions at the subject property. The parties and their affiliation are tabulated below.

Interviews		
Name	**Affiliation**	**Role**
Property Manager	MetroResources, Inc.	Property Owner Representative

The manager provided PSI with basic site history information and site access. No evidence of a recogni□ed environmental condition was identified during this interview.

10 OTHER ENVIRONMENTAL ISSUES

PSI conducted additional assessment to address conditions beyond the scope of the Practice. A summary of the scope of work, methodology, and results is provided below for each additional service.

10.1 LIMITED ASBESTOS ASSESSMENT

10.1.1 SCOPE OF WORK AND METHODOLOGY

The scope of the asbestos assessment included a visual inspection of the building. The asbestos assessment performed in connection with this Phase I ESA was of a limited nature for due diligence purposes only, and was not intended to comply with the strict requirements of OSHA or the EPA. A visual inspection was conducted of the building to determine representative suspect asbestos containing materials, if any, and homogeneous areas, which were visually similar in color, texture, general appearance, and that appeared to have been installed at the same time. Only materials that were accessible and/or exposed were inspected. The roof of the building on the subject property was not assessed.

10.1.2 RESULTS

A previous environmental report, prepared by ATC Environmental Inc. (ATC), dated January, 1990, provided to PSI by the client, indicated that during a visual survey, no visible suspect asbestos containing material was observed, with the exception of a small amount of vinyl asbestos tile and mastic in one unit. According to the property owner, the tile was subsequently removed, which was confirmed by visual observation by PSI.

10.2 LIMITED LEAD BASED PAINT ASSESSMENT

Due to the age of construction of the building at the subject property (1923), it is possible that lead based painted surfaces are present at the subject property. Painted finishes observed at the subject property were observed to be in good condition with no evidence of cracking or flaking. For this reason, and because the property is not residential, lead-based paint is not considered a significant environmental concern.

10.3 MOLD BASELINE SURVEY

10.3.1 SCOPE OF SERVICES

This survey is intended to identify observable mold and physical deficiencies conducive to mold as a result of moisture and water infiltration through the building's envelope or substructure, or generated within the building as a result of processes or mechanical systems.

The scope of the baseline survey included the following:

- Review of documents and records relevant to mold or other indoor air quality conditions at the property provided by the Client or readily available on site.
- Interviews of the Client, owners and occupants for information.
- A walk-through survey of the subject property's readily accessible and easily visible components or systems to attempt to identify current observable mold or physical deficiencies conducive to mold within the area surveyed. The inspection included the subject property and surroundings, building exterior, roof, HVAC System where accessible, and the building interior.
- No sampling was included in this scope of work.

10.3.2 RESULTS

The visual mold survey did not identify the presence of mold or moisture intrusion. The property owner was not aware of any current or past roof, piping, or other such leaks. Therefore, mold and moisture intrusion are not considered significant environmental concerns.

10.4 RADON

PSI reviewed the United States Environmental Protection Agency Radon Zone map to determine the expected average concentration of radon in indoor air at the subject property. According to this map, the subject property is located in Radon Zone 2 indicating an expected indoor air concentration for radon above 2 picoCuries per liter, but below 4 picoCuries per liter. Radon Zone 2 is below the USEPA guideline of 4 picoCuries per liter, and thus radon is not a significant environmental concern.

10.5 WETLANDS AND FLOOD PLAINS

10.5.1 WETLANDS RECORDS REVIEW SCOPE OF WORK

PSI reviewed the National Wetlands Inventory map and performed a visual survey for evidence indicating the potential presence of wetlands at the subject property. This review is not intended to establish the presence or absence of wetlands, or to serve as a formal wetlands delineation. Applicable copies of maps and information reviewed are appended.

10.5.2 RESULTS

Our review of available wetlands records did not identify indications of wetlands on the subject property. Additionally, the subject property is not mapped within a 100- or 500-year flood plain. No wetlands or soils conducive to wetlands were observed on the property.

10.6 DRINKING WATER QUALITY

PSI reviewed the Metropolitan Water District MWD 2013 report. According to this report, the drinking water provided by the MWD met all federal and state drinking water standards. A copy of this report is provided in the Appendix.

10.7 HISTORIC OIL AND GAS WELLS

PSI reviewed online oil and gas well maps posted on the California Department of Conservation Division on Oil, Gas, and Geothermal Resources website. According to these maps, no historic oil or gas wells are located on or in the vicinity of the subject property. The property is not reported to be located within a known methane hazard zone.

11 CONCLUSIONS

PSI performed the Phase I ESA in general conformance with ASTM E-1527-13. This assessment did not involve any significant data gaps, and did not identify evidence of recogni□ed environmental conditions in connection with the property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard

associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/10/2013 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/10/2013 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2013 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

MISSION ROAD RECYCLING AND TRA	*840 S. MISSION ROAD*	*ENE 1/8 - 1/4 (0.197 mi.)*	*I29*	*48*

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/03/2014 has revealed that there are 27 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 02/14/2014 has revealed that there are 8 SWF/LF sites within approximately 0.5 miles of the target property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 14 SWEEPS UST sites within approximately 0.25 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 12/09/2013 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/10/2013 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

SO CAL GAS/LA-ALAMEDA MGP	725 CHANNING STREET	WNW 1/2 - 1 (0.602 mi.)	W82	179

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 7 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

LOS ANGELES IMPRINTS (Continued) **1004677526**

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040
Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

WASTE TRANSFER & RECYCLING (Continued) **S103673980**

dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	09/04/1996
Comments:	DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	09/13/1995
Comments:	The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CA BOND EXP. PLAN:
Reponsible Party: COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description: This site was previously used to scrap electrical transformers.
Hazardous Waste Desc: Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env: The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status: In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description:	The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env:	The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status:	The Southern California Gas Company has completed a remedial investigation/feasibility study.

Background Info:	The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took

OLYMPIC BASE (Continued) **S105689611**

over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility.
A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste.
The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 07/09/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/30/2011

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/13/2003
Comments:	DTSC approves PEA Report. The PEA investigative activities conducted at the former smeltingsite identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the

EASTERN SMELTING AND REFINING SITE (Continued) **S106568216**

above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Area Name: PROJECT WIDE

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company. As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Completed Document Type: Removal Action Completion Report
Completed Date: 06/25/1998
Comments: Excavation, treatment and disposal of 2,500 tons of metal contaminated soil from the UPRR rail track areas. The Implementation Report of Emergency Removal Action by Dames & Moore for Areas 1 and 2 was approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: A removal action workplan (RAW-QUEMETCO) which proposed excavation and disposal of contaminated soils, was approved for Areas 3 and 4 (perimeter of Property and residential property). A Notice of exemption was also filed with the OPR as required by the CEQA laws and guidelines.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 10/21/2004
Comments: NOE completed for Removal Action Workplan which describes installation of asphalt cap and soil removal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 06/27/2011
Comments: Site visit completed. Asphalt cap intact.

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 07/10/2008
Comments: Asphalt cover is in good condition. Pallet company occupies site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 08/01/2007
Comments: The Agreement describes maintenance of the asphalt cover in the former Western Lead and Metal property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 07/18/1997
Comments: NOE for RAW at Property and residential area

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Order
Completed Date: 04/28/1997
Comments: Execution of Imminent and Substantial Endangerment Determination and Consent Order for investigation at the Western Lead and Metal Company site which includes both the International Lead Co. Site (Site Code 300591) and the Union Pacific Railroad Company track areas (Site Code 300628).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/07/1994
Comments: DTSC received an information letter for 3 possible hazardous substance release sites allegedly associated with Quemetco/ RSR Corporation, a lead smelting company.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 02/10/2006
Comments: Workplan for additional removal of soil is approved.

Completed Area Name: PROJECT WIDE

BUTTERFIELD (SUN CHEMICAL CORPORATION) (Continued) **S105481902**

Unknown Type:	0
Alternate Address:	590 SOUTH SANTA FE AVENUE
Alternate City,St,Zip:	LOS ANGELES, CA 90013
Background Info:	The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus- industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing. Not reported The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986. Not reported Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

Completed Date: 12/04/2002
Comments: Removal Action Workplan Approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/31/2002
Comments: DTSC approved site characterization activities in December 2002. Contaminants of concern included PAH's & BTEX. A RAW involving excavation will be implemented for the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Alternate Address:	2435 E. WASHINGTON BLVD.
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated along the border of 2455 E. Washington Blvd. Results showed decreasing contaminant concentrations with increasing distance from 2425 E. Washington Blvd. property boundry. No source was identified at the Amtrak property. Not reported An approximately 50-acres site located in an industrial/ commerical area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation. Not reported Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to determine extent of chlorinated solvent contamination and

CA WDS:
Facility ID: 4 19I014242
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

AMTRAK (Continued) **S101586462**

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Date: 09/10/1993
Comments: On September 1, 1993, the Department completed review of the PEA. Based on the information provided in the PEA report, the site does not appear to constitute a threat to human health/or the environment. Therefore, the Department concurred with the recommendation that "No Further Action" is warranted at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/19/1993
Comments: On March 29, 1993, the Department received the Notice of Intent to Initiate a PEA. Historical activities include machine shops, tool & die making, agricultural products and clothing manufacturing. 1910-20, the site was occupied by Kellifer Manufacturing Company. 1921-59, Tlomb Tool Co. (machine shop) was at the site. From 1960-1980 Troto Tool & Machine Shop was at the site. In 1980 the new building constructed and Liquette Clothing Company currently using for clothes manufacturing. Currently, the preperty is on sale. The preliminary soil screening investigation at the site revealed that the fill dirt used in construction of foundation found to carry chemical residues. The fill dirt was contaminated with TRPH, halogenated organic compounds such as TCE & PCE. The site is completely covered with asphalt. A PEA is recommended due to the presence of contaminants at the site.

Waste name:	352
Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D004
Waste name:	ARSENIC

Waste name:	CADMIUM
Waste code:	D007
Waste name:	CHROMIUM
Waste code:	D008
Waste name:	LEAD
Waste code:	D018
Waste name:	BENZENE
Waste code:	D026
Waste name:	CRESOL

INDUSTRIAL SERVICE OIL COMPANY, INC. (Continued) **1000428473**

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: K048
Waste name: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY

Waste code: K049
Waste name: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY

Waste code: K050
Waste name: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY

Waste code: K052
Waste name: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY

Waste code: K170
Waste name: Clarified slurry oil storage tank sediment and/or in-line filter/separation solids from petroleum refining operations.

Corrective Action Summary:

Event date: 06/30/1994
Event: RFA Completed, Assessment was an RFA.

Event date: 10/13/1994
Event: RFA Completed, Assessment was an RFA.

Event date: 01/20/1995
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 08/11/2000
Event: RFI Imposition

Event date: 08/06/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 08/06/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 12/08/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been

INDUSTRIAL SERVICE OIL COMPANY, INC. (Continued) **1000428473**

determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 12/08/2010

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 04/26/1994
Comments: PEA reviewed by DTSC staff. Levels of contaminants observed are protective of human health and the environment DTSC recommends No Further Action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/30/1993
Comments: The site is identified from RP, who likes to submit a PEA. The site consists of 1.53 acres of land and includes a 75,000 sq.ft. two storey building. Phase I investigation revealed no information regarding hazardous waste activities conducted at the site. Further sampling reveals that concentration of oil & grease ranged from 590 to 9900 mg/kg and perchloroethylene (PCE) ranged from 0.89 to 17.0 mg/kg. Due to the evidence of on-site contamination, Department recommends a PEA.
