The site is underlain by alluvium of Holocene and Pleistocene age. The alluvium consists of channel and floodplain deposits of the Los Angeles River. Underlying these surficial deposits are several hundred feet of basin-fill deposits of Tertiary age. The alluvial materials range from clay to gravel-size particles with sand and silt predominating. The site is in the Los Angeles Forebay Area. The younger alluvial materials of the Forebay Area vary in thickness from 0 to 60 feet.

From information provided by the Los Angeles Flood Control District, there are no known ground-water wells in the area and the depth to ground water is thought to be significantly greater than 100 feet.

SUBSURFACE INVESTIGATION PROGRAM

The site was examined prior to drilling by a Staff Hydrogeologist from Gregg & Associates, Inc. The proposed work specified slant drilling of one soil boring to a depth of 20 feet. The boring was to be drilled directly in front of a loading dock, and slant drilled under the edge of the building foundation. This placement of the boring would allow assesment of any contaminants that may have drained out of the warehouse as a result of spillage within the warehouse, as well as assist in the determining the soil characteristics beneath the structure.

SUBSURFACE INVESTIGATION

The site was drilled and the soil sampled on November 4, 1986 by Gregg Drilling & Testing, Inc. of Huntington Beach, California under the supervision of a Staff Hydrogeologist from Gregg & Associates, Inc. The soil boring (Boring 2145-B1) was slant drilled at approximately 17 degrees from vertical to a measured depth of 20 feet. A Mobile Drilling Co. Model B-53 hollow-stem auger drilling rig was used to drill and sample the boring.

The Model B-53 drilling rig uses hollow-stem auger flights with an inside diameter (ID) of 3.25 inches and an outside diameter (OD), including the drill bit, of approximately 7.5 inches. Individual auger flights are in 5-foot lengths. During drilling a retractable plug prevented soil from entering into the auger flights. The plug, which is lowered or retrieved by a wireline, is at the end of a drive hammer. When a target depth was reached a Modified California Sampler, consisting of an outer sampler barrel lined with two 6-inch long rings (2.50 inches OD and 2.375 inches ID) placed end to end, was used to collect the soil sample. The sampler is attached to the drive hammer, lowered through the hollow-stem auger to the target depth, and driven 12 inches by the 140-pound drive hammer falling 30 inches. A soil sample was collected in the two sample rings.

Soil samples were collected at depths of 1, 5, 10, and 20 feet below the ground surface using a Modified California Sampler. After the Modified California Sampler was driven to the desired depth, it was retrieved and the rings were removed. Each end of the ring containing the soil sample to be used for laboratory analysis, was sealed with aluminum foil, covered with plastic end caps, and secured with duct tape. The sample was then labeled and placed in an ice chest for cold storage during field work and transport. The soil samples were later placed in a freezer for storage and were delivered to Chemical Research Laboratories (CRL) the same day. The soil in the upper 6-inch ring was examined in the field for visual and olfactory indications of chemical contamination and used for lithologic description.

To avoid cross-contamination of soil samples, the Modified California Sampler and rings were cleaned prior to each assembly. The equipment was washed with a tri-sodium phosphate solution, rinsed with tap water, rinsed with distilled water, and allowed to air dry. The auger flights and drill bit were steam cleaned prior to arrival at the site.

LABORATORY ANALYSES

Chemical analyses of the soil samples were performed by Chemical Research Laboratories (CRL), an independent testing laboratory located in Stanton, California. The soil sample collected at a depth of 1 foot was analyzed for CAC metals, and the laboratory composited the individual depth-specific samples collected from the boring for analyses of Total Petroleum Hydrocarbons (TPH). The soil samples were analyzed for Total Petroleum Hydrocarbons (TPH) using EPA Method 418.1, and the 17 California Administrative Code (CAC) Metals listed in Title 22, Section 66699 of the California Administrative Code. The CAC Metals are Antimony (Sb), Arsenic (As), Barium (Ba), Beryllium (Be), Cadmium (Cd), Chromium (Cr), Cobalt (Co), Copper (Cu), Lead (Pb), Mercury (Hg), Molybdenum (Mo), Nickel (Ni), Selenium (Se), Silver (Ag),

Thallium (Tl), Vanadium (V), and Zinc (Zn) and are considered to be priority pollutants. These parameters were selected as possible contaminants in the absence of any information of known spills associated with operation at 2145 Sacramento Street.

SITE LITHOLOGY

The soil between 0 and 20 feet beneath the ground surface of the site at 2145 Sacramento Street consists of fine to coarse-grained sand, that is light to dark brown in color, slightly moist, loose, and has no odor. There is no indication of ground water between 0 and 20 feet. The boring log prepared in the field is presented as an attachment to this report.

RESULTS OF LABORATORY ANALYSES

A composite soil sample from Boring 2145-B1 was analyzed for Total Petroleum Hydrocarbons (TPH) using EPA Method 418.1. This sample consisted of a composite of aliquots from the 1, 5, 10, and 20 foot depth specific samples. The Total Petroleum Hydrocarbon concentration for the sample was 17 milligrams per kilogram (mg/kg) (Table 1).

Laboratory analysis of California Adminstrative Code (CAC) metals was performed on the soil sample collected at the 1 foot depth (Table 2). The results of the CAC Metals analysis indicate that none of the total concentrations of the 17 metals in the soil samples exceeded the Total Threshold Limit Concentration (TTLC) established by the Department of Health Services (DOHS) and only one of the total concentrations of the 17 metals in the soil sample was above the Soluble Threshold Limit Concentration (STLC). The total concentration of lead was 26.2 mg/kg, exceeding the STLC of 5 milligrams per liter (mg/l). A second extraction and analysis was necessary to determine if the soluble concentration of this metal was above the corresponding STLC. The results of this second analysis indicated that the soluble concentration of lead was 1.4 mg/l, well below the STLC of 5.0.

ND - NOT DETECTED
NA - NOT ANALYZED

CONCLUSIONS

The soil from one boring on the site at 2145 Sacramento Street has been examined for visual and olfactory indication of the possible presence of chemical contaminants. One soil boring was completed on the site. A composite of the depth-specific samples from the boring was analyzed for Total Petroleum Hydrocarbons (TPH) and the soil sample collected at a depth of 1 foot was analyzed for California Administrative Code (CAC) Metals.

A low level of TPH (17 mg/kg) was detected in the composite soil sample from boring 2145-B1. The TPH concentration does not represent a significant level of contamination. It is concluded that no further site characterization or remediation will be necessary for soil contamination from TPH. The soluble concentrations of CAC Metals in the soil sample are below the STLC for all metals tested, and therefore do not represent significant levels of contamination. No further site characterization or remediation is suggested for metals contamination at this site. It is concluded that the soils sampled and analyzed on the site do not contain levels of TPH nor CAC metals in significant concentrations.

GREGG & ASSOCIATES, INC.
18351 BEACH BOULEVARD, SUITE L
HUNTINGTON BEACH, CA 92648 ☐ 714-841-2019

December 30, 1986

Mr. Norman Solomon
929 E. 2nd Street, Suite 101
Los Angeles, CA 90012

SUBJECT: Summary of results of subsurface investigations performed at 2116 and 2145 Sacramento Street, Los Angeles, CA.

Dear Mr. Solomon:

Pursuant to your recent request, this letter summarizes the conclusions presented in two reports dated December 26, 1986 concerning our subsurface investigations at the 2116 and 2145 Sacramento Street sites. Subsurface investigations were performed at both sites on November 4, 1986 for the purpose of assessing the presence or absence of possible chemicals in the soil from past operations. Soil samples from both sites were analyzed for Total Petroleum Hydrocarbons and 17 priority metals (CAC). Laboratory results indicate low concentrations of Total Petroleum Hydrocarbons in the soil samples from both sites. Laboratory analysis for the 17 priority metals (CAC) indicate that soluble metal concentrations from soil samples from each site are below the Soluble Threshold Limit Concentrations (a criteria for a hazardous material) established by the California Department of Health Services. The results of the subsurface investigations of both 2116 and 2145 Sacramento Street sites indicate that the soils sampled do not contain significant levels of Total Petroleum Hydrocarbons or metals, and that no further site characterization or remediation is likely to be required by regulatory agencies.

1.0 INTRODUCTION

This report presents the results of a Site Verification investigation performed on a site located at 2145 Sacramento Street in Los Angeles, California owned by Halbert Brothers, Inc. (Halbert Brothers) as shown on Figure 1. Westend Properties, the representative of Halbert Brothers, retained Gregg & Associates, Inc., a Huntington Beach, California firm specializing in hydrogeology and soil contamination investigations, to conduct the Site Verification investigation. The objective of the Site Verification investigation was to assess if the property is contaminated from an offsite runon of a chemical spill. The activities described in this report are the results of the Site Verification investigation.

This report presents information concerning the history, geology, and hydrology of the site and surrounding area. The drilling and soil sampling methods are outlined and the selection of chemical parameters for analyses are discussed. The physical and chemical findings of the this investigation are presented and are the basis for the conclusions.

1.1 Regulatory Agencies

The Regional Water Quality Control Board (RWQCB) - Los Angeles Region and the Department of Health Services (DOHS) in Los Angeles, California are the cognizant State agencies for control and mitigation of ground-water contamination and control of toxic wastes, respectively. The RWQCB has the authority to require a site investigation and to prescribe clean-up levels if

contamination is found to threaten surface or ground water. The RWQCB is empowered to protect all waters of the State from any type of degradation under the Porter-Cologne Water Quality Control Act. Under the California Water Code, an individual causing or permitting contamination of ground water to exist is responsible for notification, technical assessment, and clean-up and abatement of the contamination (California Water Code Section 13.2.71, 13.2.67, 13.3.04).

The Department of Health Services (DOHS), Hazardous Waste Management Branch, Toxic Substance Control Division becomes involved when soils become contaminated and pose a threat to human health. The DOHS requires notification by the owner if toxic wastes are located at the site. A remediation plan is developed based on levels of contamination. If the owner takes the initiative in notifying the Department, penalties are generally not imposed. The DOHS is also the responsible agency for management of the State's hazardous waste management program.

2.0 SITE DESCRIPTION

2.1 Location and History

The building currently on the site at 2145 Sacramento Street is used as warehouse. Land use in the surrounding area is primarily industrial. The property is immediately adjacent to a chemical manufacturing plant. Soil at an unpaved area at a railroad track spur crossing has been stained white by what appears to be a runon from a small chemical spill from the nearby chemical

manufacturing plant.

2.2 Geology and Hydrology

The site is underlain by alluvium of Holocene and Pleistocene age. The alluvium consists of channel and floodplain deposits of the Los Angeles River. Underlying these surficial deposits are several hundred feet of basin-fill deposits of Tertiary age. The alluvial materials range from clay to gravel-size particles with sand and silt predominating. The site is in the Los Angeles Forebay Area. The younger alluvial materials of the Forebay Area vary in thickness from 0 to 60 feet.

From information provided by the Los Angeles Flood Control District, there are no known ground-water wells in the area and the depth to ground water is thought to be significantly greater than 100 feet.

3.0 SITE VERIFICATION INVESTIGATION PROGRAM

The site was examined prior to drilling by an Environmental Engineer from Gregg & Associates, Inc. The proposed work specified drilling two soil borings approximately 10 feet apart and collecting two surface samples of the soil in the area that exhibited white staining. The borings were to be drilled to 15 feet below the ground surface to assess the vertical migration, if any, of the potential contaminant that caused the white staining of the soil.

3.1 Subsurface Investigation

The site was drilled and the soil sampled on September 15, 1986

by Gregg Drilling & Testing, Inc. of Huntington Beach, California under the supervision of an Environmental Engineer from Gregg & Associates, Inc. Two soil borings (Borings 2 and 3) were drilled on the site to a depth of 15 feet. A Mobile Drilling Co. Model B-53 hollow-stem auger drilling rig was used to drill and sample the borings.

The Model B-53 drilling rig uses hollow-stem auger flights with an inside diameter (ID) of 3.25 inches and an outside diameter (OD), including the drill bit, of approximately 7.5 inches. Individual auger flights are in 5-foot lengths. During drilling a retractable plug prevented soil from entering into the auger flights. The plug, which is lowered or retrieved by a wireline, was at the end of a drive hammer. When a target depth was reached a Modified California Sampler, consisting of an outer sampler barrel lined with two 6-inch long rings (2.50 inches OD and 2.375 inches ID) placed end to end, was used to collect the soil sample. The sampler is attached to the drive hammer, lowered through the hollow-stem auger to the target depth, and driven 12 inches by the 140-pound drive hammer falling 30 inches. A soil sample was collected in the two sample rings.

Soil samples were collected at depths of 2 and 10 feet below the ground surface in Borings 2 and 3 using a Modified California Sampler. After the Modified California Sampler was driven to the desired depth, it was retrieved and the rings were removed. Each end of the ring containing the soil sample to be used for laboratory analysis, was sealed with aluminum foil, covered with

plastic end caps, and secured with duct tape. The sample was then labeled and placed in an ice chest for cold storage. The soil samples were placed in a freezer for storage and were delivered to Chemical Research Laboratories (CRL) the same day. The soil in the upper 6-inch ring was examined in the field for visual and olfactory indications of chemical contamination and used for lithologic description.

To avoid cross-contamination of soil samples, the Modified California Sampler and rings were cleaned prior to each assembly. The equipment was washed with a tri-sodium phosphate solution, rinsed with tap water, rinsed with distilled water, and allowed to air dry. The auger flights and drill bit were steam cleaned.

3.2 Surface Sampling

Two surface samples were collected in the white stained soil. A surface sample of the upper 1 to 2 inches of the soil was taken in a clean stainless steel ring. The ring was washed with a tri-sodium phosphate solution, rinsed with tap water, rinsed with distilled water, and allowed to air dry prior to sampling. The ring was sealed with aluminum foil, covered with plastic end caps, and secured with duct tape. The sample was then labeled and placed in an ice chest for cold storage. The soil samples were delivered to CRL the same day.

3.3 Laboratory Analyses

Chemical analyses of the soil samples were performed by Chemical Research Laboratories (CRL), an independent testing laboratory located in Stanton, California. The laboratory composited the

individual depth-specific samples collected from the 2-foot interval in each of the two borings for analyses for Total Petroleum Hydrocarbons (TPH) and CAC Metals. The two surface soil samples were analyzed individually for pH, and composited for analyses for TPH and CAC Metals.

The chemical parameters analyzed included Total Petroleum Hydrocarbons (TPH) using EPA Method 418.1, pH using EPA Method 9040, and the 17 California Administrative Code (CAC) Metals listed in Title 22, Section 66699 of the California Administrative Code. The CAC Metals are Antimony (Sb), Arsenic (As), Barium (Ba), Beryllium (Be), Cadmium (Cd), Chromium (Cr), Cobalt (Co), Copper (Cu), Lead (Pb), Mercury (Hg), Molybdenum (Mo), Nickel (Ni), Selenium (Se), Silver (Ag), Thallium (Tl), Vanadium (V), and Zinc (Zn) and are considered priority pollutants. The analysis for Chromium included one test for Total Chromium and another for Chromium VI.

4.0 FINDINGS

4.1 Site Lithology

The soil between 0 and 15 feet beneath the ground surface of the site consists of slightly moist, fine- to coarse-grained sand that is tan to light brown in color. At the time of this investigation there was no detectable odor in the soil, nor were there indications of ground water at 15 feet. The Boring Logs are presented in Appendix A.

4.2 Chemical Results

No petroleum hydrocarbons were detected in the composite soil samples collected from the 2-foot interval in the soil borings. The composite of the surface soil samples showed 1,140 milligrams per kilogram (mg/kg) of Total Petroleum Hydrocarbons (Table 1; Appendix B).

The pH of the samples collected from the surface soil in the white stained area ranged from 8.84 to 8.89, which is somewhat alkaline (Table 2; Appendix B).

The results of the CAC Metals analyses indicate that all total concentrations of the 17 metals in the composite of the soil samples from the 2-foot intervals collected in the borings are significantly below the Total Threshold Limit Concentration (TTLC) established by the DOHS, and are also below the Soluble Threshold Limit Concentration (STLC). The analysis of the composite of the surface soil samples also did not indicate that any of the total concentrations of the 17 metals exceeded the TTLC; however, the TTLCs for Arsenic, Barium, Cadmium, Lead, Copper, Thallium, Zinc, and Mercury did exceed the STLC established by the DOHS. Because the total concentrations of these metals were above the correspondings STLCs, a second extraction and analysis was necessary to determine if the soluble concentrations of these metals were above the corresponding STLCs. The results of this second analysis indicated that only the soluble concentration of Copper (26.0 mg/kg) was above the STLC of Copper (25.0 mg/kg) established by the DOHS (Table 3; Appendix B).

5.0 CONCLUSIONS

The soil on the site has been examined for the presence of chemical contaminants. Two soil borings and two surface soil samples were completed on the site. A composite of the 2-foot soil samples from the borings and a composite of the two surface samples were analyzed for Total Petroleum Hydrocarbons (TPH) and California Administrative Code (CAC) Metals. The two surface samples were also analyzed individually for pH.

A high level of contamination by TPH (1,140 mg/kg) was found in the composite of the surface soil samples. No petroleum hydrocarbons were detected in the composite of the soil samples collected at the 2-foot intervals in Borings 2 and 3. The absence of TPH at 2 feet below the ground surface possibly indicates that soil contamination is restricted to the upper few inches of the soil and is likely a result of the chemical that created the white stain on the soil. However, it may be necessary to conduct further investigation to determine the lateral and vertical extent of contamination by TPH.

The composite soil samples were analyzed for the 17 metals listed in Title 22, Section 66699 of the California Administrative Code (CAC). The composite of the 2-foot samples from Borings 2 and 3 did not contain any of the 17 metals in total concentrations which exceeded the Total Threshold Limit Concentrations (TTLC) or the Soluble Threshold Limit Concentrations (STLC) established by the DOHS. The CAC Metals analysis of a composite of the surface soil samples also did not indicate that any of the total

concentrations of the 17 metals exceeded the TTLC, however a second analysis (wet) did indicate that soluble Copper concentrations (26 mg/kg) exceeded the STLC (25 mg/kg), established by the DOHS, by 1 mg/kg. Further investigation may be necessary to define the lateral extent of the soluble Copper in the soil.

The pH of the two surface samples indicates that the soil is somewhat alkaline, but this is within a background range typical of soils in the region.

It can be concluded that the results of this investigation indicate that high levels of TPH contamination and slight soluble Copper contamination exist on the site in a localized area at depths below the ground surface of less than 2 feet and likely only in the upper few inches. This contamination could likely be effectively removed by excavation and disposal of the upper 6 inches of soil. A second series of soil samples should be collected from below the excavation and analyzed for TPH and soluble Copper. This conclusion was reached based on observations at the site, chemical data, and an understanding of regulatory agency policy and guidelines. Because these policies and guidelines may change with time, it is suggested that Halbert Brothers may wish to submit this report to the DOHS for their review.

BORING LOGS

The blow counts as recorded on the boring log reflect the number of 30-inch falls of a hammer required to drive the sampler 12 inches, and should be used only as an approximate indication of soil density and consolidation. The blow counts should not be used to establish bearing capacity which is measured using a smaller diameter penetration device.

1.0 INTRODUCTION

This report presents the results of a Soil Removal Project performed on a site located at 2145 Sacramento Street in Los Angeles, California owned by Halbert Brothers, Inc. (Halbert Brothers) as shown on Figure 1. Hill Brothers Chemical Company (Hill Brothers) retained Gregg & Associates, Inc., a Huntington Beach, California firm specializing in hydrogeology and soil contamination investigations, to conduct the Soil Removal Project. The objective of the Soil Removal Project was to remove soil that was contaminated by a chemical spill which may have originated on Hill Brothers property and which accumulated on the adjacent property at 2145 Sacramento Street owned by Halbert Brothers.

This report presents information concerning the history, geology, and hydrology of the site and surrounding area. The drilling and soil sampling methods are outlined and the selection of chemical parameters for analyses are discussed. The physical and chemical findings of this investigation are presented and are used as the basis for the conclusions and recommendations.

2.0 SITE DESCRIPTION

2.1 Location and History

The building on the site at 2145 Sacramento Street has been used as a warehouse for approximately 60 years. Land use in the surrounding area is primarily industrial. The property is immediately adjacent to the Hill Brothers facility which

manufactures chemicals. Soil at an unpaved area near a railroad track spur crossing has been stained white by what appears to be a run-on from a small chemical spill which may have originated from the rear parking area of the Hill Brothers facility. The stained soil had earlier (September 10, 1986) been sampled and laboratory indicated that the soil contained 5 to 529 mg/kg total copper, and 26 mg/l soluble copper. The California Department of Health Services has set 2,500 mg/kg for Total Threshold Limit Concentrations for copper (TTLC), and 25 mg/l for Soluble Threshold Limit Concentrations (STLC) for copper. If concentrations of copper in a material exceeds these limits then the material may be considered hazardous.

2.2 Geology and Hydrology

The site is underlain by alluvium of Holocene and Pleistocene age. The alluvium consists of channel and floodplain deposits of the Los Angeles River. Underlying these surficial deposits are several hundred feet of basin-fill deposits of Tertiary age. The alluvial materials range from clay to gravel-size particles with sand and silt predominating. The site is in the Los Angeles Forebay Area. The younger alluvial materials of the Forebay Area vary in thickness from 0 to 60 feet.

From information provided by the Los Angeles Flood Control District, there are no known ground-water wells in the area and the depth to ground water is thought to be significantly greater than 100 feet.

3.0 SOIL REMOVAL PROGRAM

3.1 Soil Removal

The site was examined prior to excavation by a Staff Hydrogeologist from Gregg & Associates, Inc. The excavation work was conducted by United Pumping Service Inc. on November 17, 1986 and consisted of removing approximately 8 cubic yards of soil from an area approximately 10 feet wide, and 40 feet long. The soil was excavated to a depth of 6 to 8 inches. The soil was excavated using a small Bobcat front-end loader, and placed in a certified hazardous waste transport bin. A Uniform Hazardous Waste Manifest was completed for the transportation of the soil and a copy of the manifest is attached to this report. The excavated soil was transported by United Pumping Service Inc. to Casmalia Resources, a certified hazardous waste depository.

3.2 Surface Sampling

Three soil samples were collected from the excavation following soil removal. Soil samples were collected at a depth of approximately 1 foot below the original grade. The soil samples are designated as samples 2145-EX1, 2145-EX2, and 2145-EX3. Soil samples were collected in glass sample jars, capped with threaded lids, sealed with duct tape, labeled, and transported to an analytical laboratory for analysis.

3.3 Laboratory Analyses

Chemical analyses of the soil samples were performed by Chemical Research Laboratories (CRL), an independent testing laboratory located in Stanton, California. Soil samples were analyzed for total copper concentration and soluble copper concentration.

4.0 FINDINGS

4.1 Results of Chemical Analyses

The three soil samples were analyzed for total copper concentrations and soluble copper concentrations. Total copper concentrations were 22, 9.4, and 27 milligrams per kilogram (mg/kg) for samples 2145-EX1, 2145-EX2, and 2145-EX3 respectively. The Total Threshold Limit Concentrations (TTLC) for copper is 2,500 mg/kg. The total copper concentration of sample 2145-EX3 exceeded the Soluble Threshold Limit Concentrations (STLC) for copper by 2 mg/kg. All soil samples were also analyzed for soluble concentrations of copper to determine if the soluble copper concentrations exceed the STLC for copper. Soluble copper concentrations were 2.2, 0.4, and 2.8 milligrams per liter (mg/l) in soil samples 2145-EX1, 2145-EX2, and 2145-EX3 respectively. The STLC for copper is 25 (mg/l).

TABLE 1 - RESULTS OF CHEMICAL ANALYSES OF SOIL SAMPLES FOR TOTAL AND SOLUBLE COPPER CONCENTRATIONS

SAMPLE NUMBER	TOTAL COPPER (MG/KG) (TTLC 2,500 MG/KG)	SOLUBLE COPPER (MG/L) (STLC 25 MG/L)
2145-EX1	22	2.2
2145-EX2	9.4	0.4
2145-EX3	27	2.8

5.0 CONCLUSIONS

Approximately 8 cubic yards of surface soil was removed from the site to remediate residual concenterations of copper in the shallow soil. After excavation and removal of the soil, three soil samples were collected and analyzed for the presence of copper. All total copper concentrations in the soil samples were significantly below the TTLC of 2,500 mg/kg established by the DOHS. Although the total copper concentration of sample 2145-EX3 exceeded the STLC of 25 mg/kg for copper, the soluble concentration of copper in the soil sample was well below the STLC, as were the soluble concentrations in samples 2145-EX1, and 2145-EX2. It is therefore concluded that there is no significant copper contamination remaining in the soil in the area of the excavation, and no further site characterization or remediation is necessary.

Personnel Qualifications

RESUME

Eric C. Fraske, PE

Geotechnical and Environmental Department Manager, Cypress, California

Education

Bachelor of Science: Major-Civil Engineering
Michigan State University: May 2004

Certifications/Registrations/Technical Training

State of California Registered Civil Engineer (PE #76976)
Nevada Certified Environmental Manager (CEM # 2134)
40 Hour HAZWOPER

Professional Experience

Mr. Fraske is the department manager for the geotechnical and environmental group of the Cypress, California office of PSI. As department manager, Mr. Fraske oversees all environmental and geotechnical projects. His responsibilities include coordinating personnel and equipment resources to ensure client satisfaction. Mr. Fraske is closely involved with clients, potential clients, and projects in order to form strong alliances and long lasting working relationships. His work involves extensive client contact, program quality assurance/quality control (QA/QC), and liaison with federal, state, and local regulatory agencies.

Prior to joining PSI, Mr. Fraske worked as a field technician for an air quality firm from 2002 to 2004. As a field technician, his work experience included ambient air sampling, gas emissions testing, pollution modeling, compliance demonstrations, TRIS, report development, and industrial air permitting.

Project Experience

Mr. Fraske has conducted many Phase I ESAs for commercial lenders, local and nationwide banks, and real-estate developers. Transactions included mergers and acquisitions, and refinancing.

Representative Phase I Environmental Site Assessments Project Experience

- Over 50 Proposed CVS Locations Throughout Southern California
- Proposed NFL Stadium Locations, Southern California
- Sony Pictures Studios, Culver City, California
- Kodak Theater and Hollywood and Highland Retail Complex, Hollywood, California
- Proposed Extra Space Self Storage Facilities, Throughout Southern California
- FDIC Portfolio Locations, Throughout Arizona
- Pacific Gateway Industrial Center, Torrance, California
- 60,000 Acres of Timberland in South Georgia
- 6,000 Acre Former Cattle Farm, Bleckley County, Georgia
- Five Volvo Equipment Dealerships, Savannah, Macon, Marietta, Atlanta, and Augusta, Georgia
- Various Fiber Optic Cable Sites, Marietta, Georgia
- Multiple Burger King Restaurants, New York, New York

Mr. Fraske has performed Phase II Subsurface Investigations and a variety of subsurface investigations for commercial lenders, state environmental protection agencies, and private individuals at several commercial and industrial real estate properties.

Representative Phase II Environmental Site Assessments and Site Investigation Project Experience

- Mira Mar Naval Air Station, San Diego, California
- Former Gasoline Station, Compton, California
- Active Sugar Mill, Clewiston, Florida
- 300 Square Mile Agricultural Land Acquisition, South Florida
- Plating Facility, West Hollywood, California
- Former Western Brass Manufacturing Facility, Los Angeles, California
- Former Dry Cleaner, Garden Grove, California
- Former Auto Dealership, Manhattan Beach, California
- Former Nike Missile Site, Rancho Palos Verdes, California
- Former Wastewater Treatment Plant, Fort Oglethorpe, Georgia
- 6,000 Acre Former Cattle Farm, Bleckley County, Georgia
- Three former gasoline stations, Savannah, Georgia

Mr. Fraske has conducted soil excavations, groundwater sampling, operations and maintenance of total fluids free product recovery systems and soil vapor extraction systems, well surveys, well development, groundwater sampling and effluent sampling of treated groundwater on several impacted properties.

Representative Remediation Project Experience

- Former Gasoline Station, Culver City California
- Former Dry Cleaner, Garden Grove, California
- Former Dry Cleaner, Montclair, California
- Former Plating Facility, West Hollywood, California
- Former Technicolor Studio, Hollywood, California
- Oil Spill, Fontana, California
- Former Auto Dealership, Manhattan Beach, California
- 6,000 Acre Former Cattle Farm, Bleckley County, Georgia
- Former Wastewater Treatment Plant, Fort Oglethorpe, Georgia
- Emory Northlake Medical Center, Tucker, Georgia,
- Peachtree Mitsubishi, Doraville, Georgia

Years experience with other firms: 2
Year started with PSI: 2004

Lloyd D. Guss, PG

Senior Geologist, Long Beach, California

Years with PSI: 5½ **Years experience with other firms: 13½**

Education

B.Sc. in Geology, California State University, Long Beach, 1992

Certifications/Registrations/Technical Training

California Registered Professional Geologist (No. 7034)
Colorado State Environmental Scientist registration (No. 5618)
Phase II Environmental Site Assessment Workshop, PSI (1999)
Professional Certificate in UST Leak Detection Standards and Systems,
University of California, Riverside (1994)
OSHA 29 CFR 1910.120 HAZWOPER, worker

Professional Experience

For about nineteen years, Mr. Guss has been involved with all aspects of quality project work for environmental and hazardous waste site investigations, risk management, and remediation activities. His responsibilities have included: project management, technical project oversight, project administration and budgeting, upholding company safety standards, regulatory agency liaison, managing and training personnel, data evaluation, and reporting.

California Department of Transportation (Caltrans) Project Experience

Mr. Guss has over eight years of experience providing services to Caltrans under various environmental related contracts. Services have included emergency response, UST removals, hazardous waste management, soil and groundwater assessments, and aerial deposited lead investigations throughout California. Projects have included property acquisition investigations, lead studies of bridge paint and right-of-way soil, and high profile drinking water assessments. Mr. Guss maintains a good working relationship with numerous contract managers at several Caltrans district offices throughout California.

Petroleum Hydrocarbon Project Experience

As Team Leader and Project Manager for environmental work at two major Los Angeles refineries, Mr. Guss was responsible for: a high profile groundwater investigation of Los Angeles aquifers (Gage, Lynwood, and Silverado), an LNAPL recovery optimization program to expand product recovery systems, oversight of air sparge and vapor extraction systems, remedial excavation of approximately 1,000 tons of California Hazardous Waste and reporting to the DTSC, and submitting routine deliverables to the CRWQCB and AQMD.

Landfill Project Experience

Mr. Guss managed a biologically sensitive military landfill remediation/restoration project, which involved the excavation of over 30,000 tons of dioxins, furans, and lead impacted soil. In addition, his team was responsible for initiating a re-profiling program so that soil could be separated and transported to the appropriate waste disposal facility, which resulted in a substantial cost saving for the client. Not only was the project completed under budget, but it was also completed on schedule.

Chlorinated Solvent Project Experience

Mr. Guss has managed a number of chlorinated solvent projects ranging from small dry cleaning facilities to a large chemical company tank farm located in the Port of Los Angeles.

ALLWYN ENVIRONMENTAL PROJECT NO. 0073-0001

EXECUTIVE SUMMARY

This report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by Allwyn Environmental (Allwyn) for Ryley Carlock & Applewhite (RCA) on behalf of Hill Brothers Chemical Company (HBCC) on the HBCC Facility located at 2159 Bay Street, Los Angeles, California 90021 (herein referred to as the Property in this Report). The Property was approximately 1.1 acres in size. The center of the Property was located at a latitude of approximately 34.0312° North and a longitude of approximately 118.2280° West. The Property was comprised of Assessor's Parcel Numbers (APNs) 5166-001-002, 5166-005-010, 5166-005-013, and 5166-005-009. The purpose of this Phase I ESA was to identify recognized environmental conditions (RECs) in connection with the Property.

The Property was developed and occupied by a HBCC Facility. The facility was used primarily for the storage, distribution, repackaging, and manufacturing of chemicals mainly used in the building industry. Raw materials and products were transported via trucks to and from the HBCC Facility. The Property was used for the manufacturing of dry products. Liquid products were manufactured at the HBCC Facility located in the City of Industry, California and transported to the Property for distribution to clients. There were three on-site employees at the HBCC Facility on the Property at the time of our reconnaissance.

The Property was developed with two buildings – the eastern Office-Warehouse 1 building, and the southern Warehouse 2 separated into three sub-units (Warehouse 2 A, B, C). There were concrete paved dock areas north of Warehouse 2, and we observed some storage units in this area. The western portion of the Property was mainly used as an access driveway to the southern portion of the Property. The southern portion of the Property was a paved area used for storage and loading and unloading operations. The remnants of a railroad spur were observed in the southern portion of the Property. There was a concrete dock area south of Warehouse 1. This dock area contained remnants of previous milling operations including crushing and drying equipment.

The Office-Warehouse 1 building was located in the eastern portion of the Property. The two-story office portion of the building was located in the north end. The second floor was no longer used; except for some minor storage. The first floor contained typical office, rest room, storage, and kitchen/break room areas. The office area had a wood floor elevated above the surrounding grade. We observed numerous pipes and utilities in the crawl space beneath the office area.

Warehouse 1 was mainly used for two large mixing/blending and backing machines. Solid raw materials were blended and packaged by these machines. These machines processed solid materials, so there was some dust in these areas. We did not observe oily stains or other potential indications of liquid wastes in the manufacturing area. We observed a concrete-lined sump beneath one of the machines. A floor scale mounted in a below-grade sump was present in the warehouse for weighing materials. We did not observe cracks, open joints, or other subsurface migration pathways in or around the sump. The southern portion of the warehouse was used for storage of products and some raw materials. Based on our discussions, the floor of the warehouse was also an elevated floor deck in the past, but it was later filled with soil, and the warehouse had a concrete slab-on-grade.

Based on our observations and interviews, there were no floor drains in Warehouse 1, except for one recently installed for an eye-wash station. The floor drain was piped to the east side of the building and discharged to the ground surface. We observed the eye wash floor drain discharge area east of the

building, and there was some sediment in this area. We understand from HBCC employees that the floor drain pipe was installed by jetting the soil beneath the floor slab, and the sediment in this area was the soil generated by installation of the floor drain pipe. We did not observe oily stained soils, residues, or other indications of potential hazardous substances or petroleum products in this drain discharge area.

There was a concrete and wood platform dock located on the south end of Warehouse 1. This area was called the Milling Dock in the past. There were several pieces of un-used equipment in the dock area. Some of the historic operations in this area processed asbestos materials. After the use of asbestos ended, the equipment and dock area were reportedly cleaned to remove remaining asbestos fibers. We observed a large concrete-lined sump in this area covered by a steel plate. The sump contained a couple feet of stormwater. We probed the bottom of the sump, and it appeared to be concrete based on our probes. Some of the previous equipment historically extended down into this sump. We observed several indications of previous equipment in this area. An air compressor was located south of the west end of Warehouse 1. There was a pan to collect water drained from the air compressor, and the water was allowed to evaporate.

The southern Warehouse 2 appeared to be three separate buildings connected end-to-end. The warehouse had a concrete floor, and we did not observe any sumps or floor drains in this warehouse. This warehouse was used mainly for storage of products and raw materials. There were pallets and stacks of materials lining the south and north walls of the long narrow warehouse. An air compressor was located on a mezzanine in the northeastern portion of Warehouse 2A. A small product test area was located in the southwestern portion of the warehouse. We observed various tools, products, and chemicals in this area. We did not observe any floor drains, open cracks or joints, or other potential subsurface migration pathways in this area of the warehouse. Based on our observations and discussions, there were no floor drains, sumps, or other subsurface migration pathways in the warehouse, other than some typical concrete floor cracks and joints. We did not observe any oily staining, residues, or other potential indications of releases of hazardous substances or petroleum products in Warehouse 2. We did observe a small oily stain on the concrete pavement outside the northeast corner of the warehouse. It appeared that some air compressor lubricating oil had leaked in this area.

We observed two rings in the concrete pavement south of the east end of Warehouse 2, and two vertical aboveground storage tanks (ASTs) were previously located in this area for their ammonia operations. A cooling tower was reportedly located west of these ASTs on the concrete pavement for cooling the ammonia tanks and pipes, and the cooling tower reportedly used a magnetic de-scaler in the past. There was a roll-off bin used as a trash dumpster in the southwest corner of the Property. We understand that the trash was removed from the Property and taken to the City of Industry HBCC Facility for recycling/disposal. We observed a storm drain inlet covered by a grate in the southeastern portion of the Property. The inlet appeared to be a concrete-lined sump. HBCC personnel did not know the discharge location of the storm drain. We observed a storm drain inlet in Sacramento Street south of the Property, so there was apparently some type of storm sewer system in the area. The remainder of the southern portion of the Property was used for some limited storage and unloading operations. We observed remnants of the old railroad spur in this area. We observed the rails for the track in the asphalt pavement in this area. There was some gravel/rock ballast material along the eastern portion of the track.

The northern portion of the Property was mainly used for outdoor storage, loading and unloading operations. Elevated docks were located at the east and west ends of this concrete paved area. We observed two storage containers for product and material storage in this area. The western container

had a grated floor over a secondary containment area. We observed some liquid products observed in this storage container. There were stacks of pallets and other stored materials in this area. In the east-central portion of this area, there was a storm drain covered by a grate. The storm drain was a concrete-lined sump with an apparent discharge pipe to the north. The discharge location of this drain was not known by HBCC personnel. On-site personnel indicated rain water readily drains from the storm drain, so it likely discharges to a storm sewer system.

A propane-powered forklift was used at the Property. Propane tanks were stored in Warehouse 1. On-site personnel indicated that the forklift was serviced by an outside contractor, and wastes were removed from the Property. They indicated that no trucks were stored, fueled, or maintained at the Property.

Allwyn conducted a review of readily available local, State, and Federal standard environmental databases for the Property and surrounding sites. There were multiple listings for the facility on the Property in the Database Search Report. Most of these listings were non-ASTM Standard Databases.

The facility on the Property was listed on the Facility Inventory Database for California (CA FID UST), Statewide Environmental Evaluation and Planning System (SWEEPS UST), and the Hazardous Substance Storage Container Database (HIST UST). These lists apparently include facilities with active and inactive listings of hazardous substance containers including ASTs, underground storage tanks (USTs), sumps and pits. The source of the data is the State Water Resource Control Board (SWRCBD), and as discussed below, we contacted SWRCBD, and they did not have records on the Property. This data indicated that there were 20 hazardous substance containers on the Property.

Allwyn contacted EDR for record origins on the tanks / containers information pertaining to the Property. An EDR representative provided a document. The recovered document was a Hazardous Substance Storage Container Information Form from the SWRCBD. This form was apparently used to report the presence of all types of hazardous substance containers including motor vehicle fuel tanks, other tanks, waste tanks, sumps, pits, ponds, and lagoons. The form was completed in 1988, and it indicated that there were 20 hazardous substance containers on the Property. The form had details on the 20 containers. There were nine tanks listed with underground piping (pressure=1, suction=6, and gravity=2). There were nine sumps and two tanks with no piping. A copy of the historical SWRCBD information is available in Appendix E.

During our historical review, we requested records for any ASTs or USTs at the Property, and we found no other records of potential USTs on the Property. Sanborn Maps typically list all USTs and ASTs due to the flammable materials stored in the tanks, and we did not find references of USTs on the Sanborn Maps. Based on the data provided in the EDR report, nine of these hazardous substance container listings were sumps, and two tanks with no piping and 3 gauge or 12 gauge wall thickness were likely ASTs (these wall thicknesses are generally too thin to be a UST). There were nine containers listed as tanks with underground piping at the Property. Based on our interviews, a 40-year HBCC employee recalled one UST at the Property in the past. It was a diesel fuel UST, and it was removed from the Property in about 1990. The UST was located near the southwest corner of the southern Warehouse 2. However, HBCC found no records of USTs on the Property, and the HBCC employee familiar with the Property for 40 years does not recall any other USTs at the Property. Based on our review, we believe that the presence of one diesel fuel UST at the Property represents a REC, and the potential presence of up to eight unconfirmed underground tanks also represents a REC for the Property.

The California Hazardous Material Incident Report System (CHMIRS) contains information on reported hazardous material incidents (accidental releases or spills). The Property was listed on this system twice. One listing was from 1988-1992, but there was little additional data. The second listing was from 2000 for a 300-gallon spill of ammonia. We contacted the Office of Emergency Services for additional information on these incidents. They did not have information on the first incident. The records provided indicated that the 300-gallon spill of ammonia was remediated by the Los Angeles Fire Department. Based on our experience, reported spills are typically assessed and remediated, so we would not expect this matter to represent a REC for the Property.

Based on our review of historical documents, we were not able to document Property usages back to the first developed use. The adjacent Los Angeles and San Pedro Railroad track east of the Property was developed in 1869, so the Property vicinity was likely vacant natural land prior to this time. A 1900 Assessor Map showed the Property vicinity subdivided into residential sized lots, and a Baists Real Estate Survey map from 1910 showed apparent residential houses on several lots near the Property. Therefore, the Property may have been used for residential purposes in the late 1800s and early 1900s. The 1910 map showed two structures orientated north-south on the western parcels of the Property, and there was a label stating “Stone Yard”. The railroad spurs were present on the Property and sites to the north and south, so the Property vicinity was likely in transition to commercial or light industrial usage. The 1914 map showed no buildings on the western lots of the Property, but the “Stone Yard” label was still present.

A 1921 map showed the large warehouse building west of the Property and the apparent northern warehouse on the Property. These buildings were labeled “Pacific Pipe and Supply”. The warehouse on the Property was labeled “Machine Shop” on the 1901 to 1935 Sanborn Map. A small building in the southwest corner of the Property was labeled as automotive repair. The historical use of the northern portion of the Property as a machine shop and the southwestern portion of the Property for automotive repair may potentially represent a REC for the Property. HBCC apparently began operations on the Property in about 1924. A 1926 City Directory indicated National Kellastone Co., Western Salt Co., and HBCC were listed for the Property address. Therefore, the Property may have been occupied by a few entities during this time frame. As HBCC’s operations grew, their facility likely expanded to cover the entire Property. HBCC recently sold some of the eastern portion of the previous facility back to the railroad. The HBCC Facility has apparently included tanks with underground piping in the past, but we did not find records on the locations of these tanks. The HBCC Facility appeared to mainly manufacture solid products at the Property in the past, but both solid and liquid products were distributed by the facility.

The Phase I ESA was completed for RCA and HBCC to aid in evaluating the presence of RECs associated with the Property. We have performed this Phase I ESA in accordance with the scope and limitations of the Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13) of the Property and our contract.

This assessment did not reveal the evidence of current or controlled RECs in connection with the Property, except for the possible exceptions:

- Presence of one diesel fuel UST,
- Potential presence of up to eight unconfirmed underground tanks, and
- Historical mechanics shop and automotive repair uses.

Allwyn recommends additional assessment of these matters.

1.0 INTRODUCTION

1.1 PROJECT BACKGROUND

Allwyn Environmental (Allwyn) was retained by Ryley Carlock & Applewhite (RCA) on behalf of Hill Brothers Chemical Company (HBCC) to conduct a Phase I Environmental Site Assessment (ESA) of 2159 Bay Street, Los Angeles, California 90021 herein referred to as the Property in this Report (See Figure 1 for the Vicinity Map of the Property). The Property was approximately 1.1 acres in size. The center of the Property was located at a latitude of approximately 34.0312° North and a longitude of approximately 118.2280° West. The Property was comprised of Assessor's Parcel Numbers (APNs) 5166-001-002, 5166-005-010, 5166-005-013, and 5166-005-009. This document presents the Phase I ESA in general agreement with the requirements of the *ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation: E1527-13* (ASTM E1527-13).

1.2 PROJECT OBJECTIVES

The objective of a Phase I ESA is to identify recognized environmental conditions (RECs). A REC is defined in ASTM E1527-13 as:

> "*The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*[1]

Additionally, the ASTM E1527-13 standard includes additional classifications of a controlled recognized environmental condition (CREC) and a historical recognized environmental condition (HREC). A CREC is defined in ASTM E1527-13 as:

> *"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). (See Note 2.) A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report. (See Note 3.)*
>
> *Note 2 – For example, if a leaking underground storage tank has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria, this would be considered a controlled recognized environmental condition. The "control" is represented by the restriction the property use remain commercial.*

Note 3 – A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be implemented."

A HREC is defined in ASTM E1527-13 as:

"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the environmental professional considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

1.3 SCOPE OF SERVICES

Allwyn completed the following scope of services for the Phase I ESA in general agreement with ASTM E1527-13:

- Review of HBCC-provided information
- Conduct a site reconnaissance, including a site visit of Property and a representative evaluation of adjoining site uses
- Review standard environmental record sources within minimum search distances
- Review readily-available historical sources (potentially including aerial photographs, fire insurance maps, property tax files, recorded land title records, and topographical maps)
- Conduct interviews with owner, occupant, or other persons knowledgeable with the site history and operations
- Conduct a Tier 1 Vapor Encroachment Screening
- Evaluate information to formulate professional opinion and conclusions
- Prepare report

1.4 REASON FOR PERFORMING THE PHASE I ESA

The Phase I ESA is intended to aid RCA and HBCC with their evaluation of the environmental condition of the Property associated with a potential sale of the Property for future commercial occupancy and to satisfy one of the requirements for the landowner liability protection to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability, namely "all appropriate inquiry into the previous ownership and uses of the Property consistent with good commercial and customary practice".

1.5 USER RELIANCE

This document and the information contained herein have been prepared solely for the use of RCA, HBCC, and their authorized representatives. Any reliance on this report by other parties shall be at such party's sole risk. Any future consultation or provision of services to third parties related to the Property requires approval from RCA and HBCC or their representatives. Any such services may be provided at the sole discretion of Allwyn and under terms and conditions acceptable to Allwyn, including potential additional compensation.

2.0 PROPERTY INFORMATION

2.1 PROPERTY LOCATION AND LEGAL DESCRIPTION

This report presents the findings of the Phase I ESA performed by Allwyn for the Property at 2159 Bay Street, Los Angeles, CA 90021 (the "Property"). The Property was comprised of four APNs 5166-001-002, 5166-005-010, 5166-005-013, and 5166-005-009, and the Property was is approximately 1.1 acres in size. The center of the Property was located at a latitude of approximately 34.0312° North and a longitude of approximately 118.2280° West.

A legal description for a portion of the Property was included with a deed associated with the GeoSearch Chain-of-Title Report, and a copy of the deed is included in Appendix A. Parcel maps are also attached in Appendix A.

2.2 ENVIRONMENTAL SETTING

2.2.1 Topography

Based on our site reconnaissance, the Property and neighboring vicinity were developed land in an urban area. The Property was located within the coverage area of Los Angeles, California 7.5 Minute Quadrangle United States Geological Service (USGS) map which Allwyn viewed through www.usgs.gov. Based on the surface contours on this map, the terrain of the Property and neighboring vicinity appears relatively flat. The USGS map showed an approximate elevation of the Property as about 243 to 244 feet above mean sea level, and Google Earth showed an approximate elevation of 244 feet above mean sea level for the Property. Surface runoff in the Property vicinity was generally to the south and southeast likely draining to the Los Angeles River located east of the Property.

2.2.2 Regional and Property Geology

The Property was geographic located within the Coastal Plain of Los Angeles. According to the Water Replenishment District of Southern California (WDR), geology within the Coastal Plain of Los Angeles is mainly comprised on Holocene and Pleistocene age deposits. Holocene sediments within the deposits consists of gravel, sand, silt, and clay deposited from the erosion of the nearby hills and mountains. Holocene deposits also included historic beach deposits (sands) and shallow ocean floor sediments (silts, clays). Underlying these sediments are basement rocks that generally do not provide sufficient quantities for groundwater pumping.[2]

Currently, there is no site-specific geologic information for the Property. Allwyn searched for local geologic information on the State of California GeoTracker website; the closest facility with subsurface geology information was the City of Los Angeles 7th Street Consolidated Maintenance Yard, located approximately 0.3 miles northeast of Property. Database records for this facility referenced a geotechnical investigation conducted approximately 0.4 miles northwest of the Property which indicated that sandy alluvium extended to depths ranging from 10 to 30 feet below ground surface (bgs). Immediately underlying the recent alluvium was the Upper Pliestocene age Lakewood Formation, comprising primarily sands and gravels and generally extending to an approximate depth of 90 feet bgs. Beneath the Lakewood Formation was siltstone of the Pliocene age Fernando Formation, which is also known locally as the Pico and/or Repetto Formations. During the geotechnical investigation conducted

approximately 0.4 miles northwest of the Property, groundwater was encountered at a depth of approximately 60 feet bgs.[3]

2.2.3 Regional Groundwater Conditions

The Property was located within Central Basin of the larger Coastal Plain of Los Angeles, a 500-square-mile coastal plain. The Central Basin has a surface area of approximately 270 square miles and is drained mainly by the Los Angeles and San Gabriel Rivers. The Los Angeles River was located approximately 300 feet east of the Property and flowed in a southerly direction towards the Pacific Ocean, located approximately 19 miles from the Property. The Los Angeles River is a concrete-lined river, and therefore, it is unlikely that the river has a hydrological effect on the local groundwater conditions in the vicinity of the Property.

There are many restrictive structures that affect the water–bearing rocks in the Central Basin, and include various faults, folds, and uplifted basement areas. Most of these structures form minor restrictions on localized areas.[4] The California Department of Water Resources has divided the Central Basin into four separate sections: Los Angeles Forebay, the Montebello Forebay, the Whitter and the Pressure Area. The Property was located in the Pressure Area, which is a confined aquifer system which is replenished from up-gradient forebays areas and adjacent groundwater basins. The Pressure Area receive minimal recharge from surface water.[4]

2.2.4 Property Vicinity Groundwater

Allwyn reviewed various monitoring points and facilities located within a one-mile radius of the Property on GeoTracker. Based on our research, localized groundwater conditions suggests that depth water ranges from 26 feet bgs to 36 feet bgs. Information regarding groundwater flow direction in the Property vicinity was limited. The nearest groundwater flow direction data presented in the database was for a facility located approximately 0.6 miles east of the Property, and the groundwater flow direction was to the south.

Allwyn also reviewed Los Angeles County Department of Public Works groundwater monitoring well database for any active wells within a 1.0-mile radius of the Property. The database shows Well ID# 2278 (State Well ID# 2S13W10A01) was located southeast of the Property. Well ID# 2278 has been active since June 1, 1936. The highest recorded groundwater elevation found was about 323 feet on 10/01/1962, and the lowest groundwater elevation found was about 144 feet on 11/04/1938. At the time of this report, the most recent well gauging data from November 19, 2014 indicated the depth to be about 21 feet bgs with an elevation of about 244 feet.

2.3 CURRENT PROPERTY USE AND OCCUPANCY

The Property was developed and occupied by a HBCC Facility. The Facility was used primarily for the storage, distribution, repackaging, and manufacturing of chemicals mainly used in the building industry. Raw materials and products were transported via trucks to and from the HBCC Facility on the Property. The Property was used for the manufacturing of dry products. Liquid products were manufactured at the HBCC Facility located in the City of Industry, California and transported to the Property for distribution to clients. At the time of our reconnaissance, there were three on-site employees at the HBCC Facility on the Property.

2.4 PUBLIC UTILITIES

The Property was located in the City of Los Angeles, California. The following utilities and providers served the Property and/or vicinity:

- Electric – Southern California Edison
- Natural Gas – The Gas Company
- Potable Water – Los Angeles Department of Water & Power
- Solid Waste – Property wastes taken to City of Industry facility
- Wastewater – Los Angeles Department of Water & Power

2.5 CURRENT USES OF ADJOINING SITES

The current uses of the sites immediately adjoining the Property are summarized below:

- North – Office trailers used by Amtrak, an apparent residence at 2149 Bay Street and Ace Button & Trims at 2143 Bay Street; several vacant and occupied light industrial/commercial buildings were located further northwest of the Property
- East – Parking areas associated with Amtrak; railroad tracks; Los Angeles River
- South – Multi-tenant single story building with various addresses on Sacramento Street (2145 to 2161)
- West – Viertel's 24-Hr Towing at 2116 Bay Street with additional commercial buildings fronting on Santa Fe Street further to the west

3.0 USER PROVIDED RECORDS

As part of the Phase I ESA process, the User of this report, typically our client, must conduct inquires required by 40 CFR 312 in order to qualify for the landowner liability protections. The User should provide this information to the Environmental Professional. Allwyn developed a User Information Documentation Form to solicit this information from the User of this Phase I ESA Report to satisfy these requirements. Mr. Shane T. Burkhart, HBCC Director-Corporate Safety & Compliance Division, was sent via e-mail User Information Documentation Forms by Allwyn. Mr. Burkhart returned the completed documents via e-mail on November 25, 2014. A summary of the responses is presented below, and a copy of the completed form is presented in Appendix B.

3.1 ENVIRONMENTAL LIENS

Mr. Burkhart was not aware of any environmental cleanup liens filed or recorded against the Property.

3.2 ACTIVITY AND USE LIMITATIONS

Mr. Burkhart was not aware of any activity and use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that were in place at the Property and/or have been filed or recorded against the Property.

3.3 SPECIALIZED KNOWLEDGE

Mr. Burkhart indicated that he did not possess specialized knowledge or experience related to the Property or nearby sites.

3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Mr. Burkhart indicated that the purchase price of this Property was not below fair market value.

3.5 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE KNOWLEDGE

Mr. Burkhart indicated that he was not aware of commonly known or reasonably ascertainable information about the Property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases.

3.6 INDICATORS OF PRESENCE OR LIKELY PRESENCE OF CONTAMINATION

Mr. Burkhart indicated that he was not aware of any obvious indicators that point to the potential presence or likely presence of contamination at the Property.

3.7 GOVERNMENT ENFORCEMENT ACTIONS

Mr. Burkhart indicated that he was not aware of any government enforcement actions regarding the Property.

4.0 HISTORICAL USE

The ASTM E1527-13 standard requires the Environmental Professional to identify the obvious uses of the Property from the present back to the Property's first developed use or 1940, whichever is earliest. This information is collected to identify the likelihood that past uses have led to RECs in connection with the Property. This task is accomplished by reviewing standard and other historical sources to the extent that they are necessary, reasonably ascertainable, and likely to be useful. These standard records include aerial photographs, fire insurance maps, property tax files, land title records, topographic maps, city directories, building department records, and zoning/land use records.

The general type of historical use (i.e., commercial, retail, residential, industrial, undeveloped, office) should be identified at 5-year intervals, unless the specific use of the Property appears to be unchanged over a period longer than 5 years. The historical research is complete when the use is defined or when data failure occurs. Data failure occurs when the standard historical sources have been reviewed, yet the Property use cannot be identified back to its first developed use or to 1940. Data failure is not uncommon in trying to identify the use of the Property at 5-year intervals back to first use or 1940, whichever is earlier.

Historical records were researched and obtained by Allwyn to identify obvious uses of the Property from the present back to the Property's first developed use, or to 1940, whichever is earlier. The results of this research and data failure, if encountered, are presented in the following sections.

4.1 AERIAL PHOTOGRAPHS

Aerial photographs of the Property and vicinity were reviewed from HistoricAerials.com and Google Earth for the years 1948 to 2014. Some photographs are attached in Appendix D. A brief description of each aerial photograph follows:

1948 Aerial Photograph – HistoricAerials.com
Property Features: The Property was developed with three commercial major buildings. The existing eastern office and warehouse building was present on the east end of the Property, and the building parallels the existing railroad tracks and Los Angeles River to the east. There was an apparent large east-west orientated building on the northern portion of the Property parallel to Bay Street. The central portion of the existing central warehouse was located directly south of the larger east-west building. The southern end of the Property appears vacant with a railroad spur connecting to the railroad tracks east of the Property. Several vertical aboveground storage tanks (ASTs) were visible south of the eastern building and east of the southern building.
Adjoining Site Features: North: Bay Street was present north of the Property. There were several side-by-side commercial buildings located on the north side of Bay Street. The 2143 Bay Street warehouse building was present along with the current building to the west. There were apparent commercial buildings east of the 2143 Bay Street warehouse with a curved northern wall along a railroad spur to the north. South: The existing multi-tenant commercial buildings were present south of the central portion of the Property with Sacramento Street beyond. East: There were numerous trains on railroad tracks parallel to the Los Angeles River beyond. West: The existing warehouse building was present, and stored materials to the south.

1952 Aerial Photograph – HistoricAerials.com
Property Features: The Property appeared similar, except there were additions to the east and west ends of the southern warehouse building extending the overall building to its current size.
Adjoining Site Features: North: The site appeared similar with no apparent changes other than there were railroad cars on the spur along the north sides of the buildings. South: There were no apparent changes from the 1948 aerial photograph, except a canopy or small portion of the northwest corner of the buildings was no longer present. There appeared to be a railroad spur directly south of the Property and north of the commercial buildings. East: There were no apparent changes from the 1948 aerial photograph. West: There were no apparent changes from the 1948 aerial photograph.
1964 Aerial Photograph – HistoricAerials.com
Property Features: The northern warehouse building was shorter on the west end. A canopy or portion of the building was removed to shorten the building. There were railroad cars adjacent to the east side of the eastern office-warehouse building. Two ASTs and other equipment were apparent south of the east end of the southern warehouse building, and two vertical ASTs were apparent in the southeastern portion of the Property. Vehicles and stored materials or equipment were apparent in the southern and western portions of the Property.
Adjoining Site Features: North: Portions of the buildings have been removed from these sites. There appeared to be a small yard north of the east end of Bay Street. The buildings at the eastern end of these sites do not appear to be present. South: There was a railroad spur along the north side of the adjacent buildings with railroad cars present on the spur track. East: There were no apparent changes from the 1952 aerial photograph, except the railroad cars directly adjacent to the east side of the eastern office-warehouse building. West: There were no apparent changes from the 1952 aerial photograph.
1972 Aerial Photograph – HistoricAerials.com
Property Features: There were no apparent changes on the Property from the 1964 aerial photograph, except a potential horizontal AST located south of the eastern office-warehouse building and a third vertical AST located further south near the other two vertical ASTs in the southeastern portion of the Property.
Adjoining Site Features: North: The buildings at the east end were no longer present, and the western buildings appeared essentially the same. Railroad cars were present on the spur north of the buildings. South: There were no apparent changes from the 1964 aerial photograph. East: There were no apparent changes from the 1952 aerial photograph. West: There were no apparent changes from the 1952 aerial photograph.

1980 Aerial Photograph – HistoricAerials.com
Property Features: There were no apparent changes on the Property from the 1972 aerial photograph, except that the apparent horizontal AST was no longer present south of the eastern office-warehouse building.
Adjoining Site Features: North: There were no apparent changes from the 1972 aerial photograph. South: There were no apparent changes from the 1964 aerial photograph, except for a small rectangular addition to the northwest corner of the multi-tenant buildings. East: There were no apparent changes from the 1952 aerial photograph. West: There were no apparent changes from the 1952 aerial photograph.
1994 Aerial Photographs – Google Earth and HistoricAerials.com
Property Features: Both photographs were poor quality. The northern warehouse building and the three vertical ASTs south of the eastern office-warehouse building in the southeastern portion of the Property were no longer present. The concrete slabs and docks appeared to be present in the former location of the northern warehouse.
Adjoining Site Features: North: There were some small structures or sheds in the eastern portion of these sites. There were no apparent changes to the commercial buildings north of the western portion of the Property. South: There was a large addition to the westernmost structure covering the northwest corner of the multi-tenant buildings. East: There were no apparent changes from the 1952 aerial photograph. West: There were no apparent changes from the 1952 aerial photograph.
2003 and 2004 Aerial Photographs – HistoricAerials.com 2003, 2005, 2006, and 2007 Aerial Photographs – Google Earth
Property Features: Photographs were better quality. There did not appear to be the railroad spur entering the Property from the southeastern corner. There were more materials or storage units in the northern portion of the Property. The eastern office warehouse and the southern warehouse appeared similar to today. In the 2006 and 2007 photographs, the southeastern portion of the Property was fenced off with the apparent current fencing in this area crossing the old rail spur area and lining the eastern border of the Property.
Adjoining Site Features: North: The land directly north of the eastern office-warehouse building appeared to be cleared, and the railroad spur serving these northern sites was no longer present. The building east of 2143 Bay Street warehouse appeared to be improved by the time of the 2004 photograph, and numerous sky lights were present in the roof of this structure. In addition, the land directly east of this building appeared to be a grass yard and car parking area. In the 2005 and subsequent photographs, there were office trailers located in the eastern portion of these sites along the railroad tracks. South: An apparent commercial building was present east of the multi-tenant buildings in the location of the former railroad spurs for this southern site and the Property. The two large multi-tenant buildings and the two western buildings were still present. In the 2005 and 2007 photographs, this easternmost structure was no longer present, and this area appeared to be a parking lot. East: The land directly east of the Property appeared to be paved as a parking lot for vehicles using the railroad tracks. West: There were no apparent changes from the 1952 aerial photograph, except numerous cars were parked south of the large warehouse building.

2009 and 2011 Aerial Photographs – Google Earth
Property Features: There were no apparent changes from the 2007 aerial photograph other than the equipment and materials stored west and south of the buildings. The eastern office-warehouse building and southern warehouse buildings were still present. Three vertical ASTs were present near the southeast corner of the southern warehouse buildings.
Adjoining Site Features: North: There were no apparent changes from the 2007 aerial photograph. South: A larger commercial warehouse building was present east of the multi-tenant buildings, south of the eastern portion of the Property. This appeared to be the current building in this location. The remainder of the southern sites appeared similar. East: There were no apparent changes from the 2007 aerial photograph. West: There were no apparent changes from the 2007 aerial photograph.
2013 and 2014 Aerial Photographs – Google Earth
Property Features: The vertical ASTs south of the buildings were no longer present. There was generally less equipment and materials stored in the open yard areas.
Adjoining Site Features: North: There were no apparent changes from the 2007 aerial photograph. South: There were no apparent changes from the 2011 aerial photograph. East: There were no apparent changes from the 2007 aerial photograph. West: There were no apparent changes from the 2007 aerial photograph, other than no cars were present south of the building in the parking lot.

4.2 SANBORN MAPS

Sanborn Fire Insurance Maps were created to assist fire insurance agents in assessing the fire hazards of particular pieces of property in towns and cities throughout the United States. The maps indicate the size, shape, and construction materials of residences, commercial properties, and factories and often include such details as building use, house and block numbers, widths of streets and locations of water mains. Sanborn Maps were regularly updated, making them a valuable tool for documenting the changes in structure and building use in American cities.

Allwyn searched for Sanborn Maps at the Los Angeles Public Library – Central Library, as part of our research for the report. The Property was located within the boundaries of available maps. Allwyn retained copies of Sanborn Maps for the Property for the years 1901, 1935, 1951, 1953, 1958, 1960, 1963, 1968, and 1970. Location of the Property on Sanborn Maps can be found on Volume 2, Sheet 227. Copies of these versions of Volume 2, Sheet 227 are included in Appendix D.

The Sanborn Map labeled 1901 – 1935 was originally prepared in 1901 and updated over the years through 1935. We were not able to determine the difference between the original data and the updated data. The western parcels of the Property contained a warehouse building and several other out buildings. These parcels were labeled with “Pacific Pipe & Supply Co. Plumbing Supplies”. The main warehouse on these parcels appeared to be the old rectangular warehouse along the south side of Bay Street. The warehouse was labeled “Machine Shop”, wood truss roof, and concrete floor. There were several small buildings on the south side of this main warehouse, and two were labeled as steel. There was one out

building in the southwest corner labeled as "auto repg". A small structure was shown south of the railroad spur with no labels. Another small structure was shown in the southeast corner, and it was labeled with "Carbide HO", "1926", "Reinf conc", "BR FIREPR". The eastern parcel contained the current office warehouse building labeled as soap manufacturing and chemical storage. The southern dock was labeled as rock crusher, and there was an apparent AST labeled as cement storage. Another small out building or shed was shown adjacent to the AST.

The 1951 Sanborn Map showed the northern and southern warehouses, and they were labeled as chemical warehouses with concrete floors. The eastern building was labeled as office and storage at the north end, and sacking and mixing machines in the warehouse portion. There were two ASTs south of the east end of the southern warehouse labeled as steel calcium storage on grade. There were numerous ASTs south of the eastern building labeled as chemical tanks, and there was a rock crusher label north of the tanks and south of the building. There was a small shed west of the northwest corner of the southern warehouse labeled as inflammable storage. The railroad spur was shown on the southern portion of the Property. We did not observe any indications of underground tanks or underground storage tanks (USTs) shown on the Property. A small feature was shown in the street in front of the Property, and it was labeled DH. Based on our review, this abbreviation was for a double fire hydrant. We did observe a fire hydrant in this location during our reconnaissance. There were no apparent changes to the Property in the 1953 and 1958 Sanborn Maps.

The 1960 Sanborn Map showed the shorter northern warehouse with the western portion of the warehouse no longer present (similar to the 1964 aerial photograph). There were no apparent changes to the Property in the 1963 and 1968 Sanborn Maps and the northern portion of the Property shown on the 1970 Sanborn Map.

4.3 PROPERTY TAX FILES

The Property was located in the city of Los Angeles. The City of Los Angeles Assessor's Office retains records of property tax files dating back to 1950 in their current files. Based on Los Angeles Assessor's Office records, the parcels related to the Property have been owned by HBCC back to at least the 1950s. The City of Los Angeles has archived records prior to 1950.

We reviewed historical Assessor Maps at the archives, and some are attached in Appendix C. Maps from 1900-1909, 1910-1919, 1919-1928, and 1928-1935 showed the western portions of the Property as 40-foot by 140-foot residential lots with a 20-foot wide alley to the south. The eastern portion of the Property was shown as part of the Atchison, Topeka and Santa Fe Rail Road Company right-of-way for the adjacent railroad tracks. Some of these maps labeled the area south of Bay Street as the "M. L. Wicks Subdivision".

The 1942-1949 map showed the western parcels of the Property similar to the current configuration, except the railroad spur parcel extended west of the subject Property. This map indicated that the Property vicinity south of Bay Street was the M. L. Wicks Subdivision of the Garbolino-Cooper and South and Porter Tracts (Track No. 14463). The records indicated Pacific Pipe and Supply Co. and HBCC owned Lots 103, 104, 105, 106, and 107 (old lots) and HBCC owned Parcels 6 and 7 (land north and south of the railroad spur).

The 1950 and 1955 maps showed the western parcels of the Property similar to the current configuration, and the records indicated HBCC owned Parcels 6 and 7.

4.4 HISTORICAL TITLE REPORT

Allwyn subcontracted Geo-Search to prepare a Historical Title Report for Parcel 5166-001-002 of the eastern portion of the Property. The report is presented in Appendix D.

The Geo-Search Historical Title Report indicated several owners for this parcel of the Property in the past 115 years. Previous owners included the State of California in 1897, Southern California Rail Road Company from 1897 to 1937, Pacific Pipe and Supply Company from 1937 to 1944, Atchison, Topeka and Santa Fe Rail Road Company from 1944 to 1991, and HBCC from 1991 to current.

The Historical Title Report included a search for recorded environmental liens and activity and use limitations (AULs). No environmental liens or AULs were identified for this portion of the Property.

4.5 USGS TOPOGRAPHIC MAPS

Allwyn used www.historicaerials.com to review topographic maps for Los Angeles, California from the years 1907, 1910, 1913, 1920, 1927, 1931, 1940, 1956, 1968, 1975, 1982, 1987, and 1994. The 7.5 Minute Topographic map for 2014 for the Property was reviewed through USGS at www.usgs.gov. Property and vicinity topographic maps from 1956 to 2014 show the Property area to be pink which indicates urbanized land. The previous topographic maps from 1907 to 1940 show one building on the south side of Bay Street between Santa Fe Avenue and the railroad tracks to the east. Based on the location of the building, it was probably the building west of the Property. Therefore, these maps did not provide sufficient detail on buildings on the Property.

4.6 CITY DIRECTORIES

Allwyn reviewed city directories at the Los Angeles Public Library – Central Library in downtown Los Angeles on December 1, 2014, to identify past uses at the address assigned to the Property. The directories were reviewed, if available, at approximately 5-year intervals for the years spanning 1935 (or earliest developed use when applicable) through 2014 (not necessarily inclusive). Noteworthy findings are included in Table 4 below. In general, odd addresses on Bay Street would include the Property and land to the west, even addresses on Bay Street would be north to northwest of the Property, and Sacramento Street addresses would be south of the Property.

4.7 BUILDING DEPARTMENT RECORDS

Allwyn contacted the City of Los Angeles Department of Building and Safety (LA DBS) regarding historical building department records for the Property. LA DBS provided a history of building permits dating back to 1924. There were two permits for new construction in 1924. The history of building permits is presented in Appendix C. Allwyn requested a copy of a building permit from 9/24/1948 pertaining to building reparations and alterations in relation to damages from a fire in the 1940s. There was a permit from 1948 for a 10-foot by 10-foot addition for paint storage. This addition appeared to be the small addition to the northwest corner of the southern warehouse. The permit included a sketch of the Property, and the sketch showed the northern wood-framed warehouse with a concrete floor, the southern warehouse for storage, and the eastern warehouse. We did not find any permits associated with tanks at the Property. Copies of the building permits are presented in Appendix C.

4.8 FIRE DEPARTMENT RECORDS

On November 20-21, 2014 Allwyn contacted the Los Angeles Fire Department (LAFD) which serviced the Property and vicinity. Allwyn contacted LAFD for the records regarding hazardous material responses and other environmental data maintained by LAFD such as inspections, chemical storage records, USTs, or ASTs for the Property. A representative of the LAFD indicated they do not keep records of the ASTs for facilities that have not registered for permits within the last five years with the LAFD. Verbal confirmation from an LAFD representative indicates the Property facility did not register any ASTs in the past five years. On November 24, 2014, Allwyn received a response from LAFD via e-mail with documents on the Property Facility's hazardous waste inventory and Unified Program (UP) form. Since no UST records were provided to us, the LAFD did not have any UST records for the Property.

4.9 SEWER/SEPTIC RECORDS

Allwyn contacted Bureau of Engineering from the City Los Angeles Department of Public Works (LA DPW) to request the sewer connection records for the Property on December 1, 2014. Engineers at the LA DPW provided sewage line maps for the Property, but there were no existing septic records pertaining to the Property. The Bureau of Engineering verbally communicated to Allwyn that there were no septic records for the Property if there are presence of sewage lines. The sewage line for the Property and the adjacent sites can be seen in Appendix C sewer maps.

4.10 ZONING/LAND USE RECORDS

According to the City of Los Angeles Planning Department's GIS-based Zoning Information and Map Access System (ZIMAS) database, the Property was designated with zoning code M3-1-RIO which referenced in the Official City of Los Angeles Municipal Code under SEC. 12.20 as "Heavy Industrial Zone". ZIMAS database also indicates adjacent sites to the Property are also classified with zoning code M3-1-RIO.

4.11 OTHER HISTORICAL SOURCES

We searched the internet for other historical sources. We found several Baists Real Estate Surveys for the Property and vicinity on-line. A map from 1910 showed the south side of Bay Street with numerous residential sized lots, and there were several small structures on these lots. The lots at the east end of Bay Street on the Property contained two structures orientated north-south. There was a label stating "Stone Yard" on the western parcels of the Property. The railroad spur was shown south of these structures. The railroad track land was shown east of the east end of Bay Street, so the eastern portion of the Property was likely part of the railroad track right-of-way at that time. A map from 1914 showed no buildings on the western lots of the Property, but the "Stone Yard" label was still present. A 1921 map showed the large warehouse building west of the Property and the apparent northern warehouse on the Property, and these buildings were labeled "Pacific Pipe and Supply". The railroad spur was still present south of these parcels, and the land east of the east end of Bay Street was part of the Atchison, Topeka, and Santa Fe Railroad right-of-way.

The Los Angeles and San Pedro Railroad track east of the Property was developed in 1869. The land east of the Property has been used for railroad tracks since this time frame. A railroad junction was located southeast of the Property with railroad associated structural development.

4.12 SUMMARY OF PROPERTY AND SURROUNDING SITES HISTORICAL USE INFORMATION

4.12.1 Property Specific Historical Use

Based on our review of historical documents, we were not able to document Property usages back to the first developed use. The adjacent Los Angeles and San Pedro Railroad track east of the Property was developed in 1869, so the Property vicinity was likely vacant natural land prior to this time. A 1900 Assessor Map showed the Property vicinity subdivided into residential sized lots, and a Baists Real Estate Survey map from 1910 showed apparent residential houses on several lots near the Property. Therefore, the Property may have been used for residential purposes in the late 1800s. The 1910 map showed two structures orientated north-south on the western parcels of the Property, and there was a label stating "Stone Yard". The railroad spurs were present on the Property and sites to the north and south, so the

Property vicinity was likely in transition to commercial or light industrial usage. The 1914 map showed no buildings on the western lots of the Property, but the "Stone Yard" label was still present.

A 1921 map showed the large warehouse building west of the Property and the apparent northern warehouse on the Property. These buildings were labeled "Pacific Pipe and Supply". The warehouse on the Property was labeled "Machine Shop" on the 1901 to 1935 Sanborn Map. HBCC apparently began operations on the Property in about 1924. A 1926 City Directory indicated National Kellastone Co., Western Salt Co., and HBCC were listed for the Property address. Therefore, the Property may have been occupied by a few entities during this time frame. As HBCC's operations grew, their facility likely expanded to cover the entire Property. HBCC recently sold some of the eastern portion of the previous facility back to the railroad. The HBCC Facility has apparently included tanks with underground piping in the past, but we did not find records on the locations of these tanks. The HBCC Facility appeared to mainly manufacture solid products at the Property in the past, but both solid and liquid products were distributed by the facility.

4.12.2 Summary of Adjacent Sites Historical Use Information

Based on our review of historical documents, the east adjacent site was developed with the Los Angeles and San Pedro Railroad track in 1869, so the Property vicinity was likely vacant natural land prior to this time. A 1900 Assessor Map showed the Property vicinity subdivided into residential sized lots, and a Baists Real Estate Survey map from 1910 showed apparent residential houses on several lots near the Property. The land east of the Property has remained railroad right-of-way, and most maps identify the tracks as the Atchison, Topeka and Santa Fe Railroad.

The land north of Bay Street appeared to be residentially developed in the 1910 map. The 1914 map showed some large commercial structures north of Bay Street, and the Sanborn Maps labeled the buildings as Talc and Talcum Manufacturing and Talcum Powder Storage. The 1951 Sanborn Map had similar labels on the buildings plus a building labeled as Machine Shop and Welding. The Sanborn Maps through 1970 had similar labels. The talc and talcum related businesses apparently moved out of these buildings in the 1980s and 1990s, and a variety of commercial businesses have occupied these buildings. One building was apparently converted to apparent residential usage in the late 2000s.

The east adjacent site was apparently residentially developed by 1910. The residences were removed by 1921, and these former residential sites were part of the Pacific Pipe & Supply Co. operations. The original warehouse from this time appeared to still be present on this adjacent site. The pipe and plumbing supply usages appeared to transition to a truck and automobile terminal by 1950. This facility appeared to be used for truck, automobile, and rigging terminal and storage to at least 1970. This facility has been apparently used as an automobile storage yard for a towing company since the 2000s.

The south adjacent sites were apparently residentially developed by 1910, and residences were still present in the 1921 map. The 1926 City Directory listings seem to indicate either commercial businesses in the old residences or the multi-tenant commercial buildings had been developed. The multi-tenant buildings were present in the 1948 aerial photograph. These buildings have been occupied by a variety of commercial businesses since that time.

5.0 REGULATORY REVIEW

5.1 DATABASE INFORMATION

Allwyn conducted a review of readily-available local, State, and Federal standard environmental record sources to assess whether current and past usages and practices at the Property and surrounding sites (within appropriate minimum search distances) may have caused a REC at the Property. Information from these sources was gathered either by Allwyn personnel directly or by a paid database search service (EDR – Environmental Database Resources Inc.). A copy of the EDR Radius Map Report is provided in Appendix E, and it explains the database listings. The databases that were reviewed and the approximate minimum search distances (in parentheses) were:

- Federal ASTM Standard Records
  - National Priorities List (NPL)/Proposed NPL Sites (1.0 mile)
  - Delisted NPL Sites (0.5 mile)
  - Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) (0.5 mile)
  - CERCLIS-No Further Remedial Action Planned (NFRAP) (0.5 mile)
  - Resource Conservation and Recovery Act (RCRA) Generator (Property and Adjoining Sites)
  - RCRA Corrective Action Report (CORRACTS) Sites (1.0 mile)
  - RCRA non-CORRACTS Treatment, Storage, or Disposal (TSD) Site (0.5 mile)
  - Emergency Response Notification System (ERNS) (Property Only)

- State of California ASTM Standard Records
  - Clean Water State Revolving Fund (CWSRF) Sites (1.0 mile)
  - California Superfund Program List (0.5 mile)
  - Solid Waste Facility/Landfill Lists (0.5 mile)
  - Institutional Control/Engineering Control Registry (AUL) Sites (Property Only)
  - Brownfields Tracking System / Voluntary Remediation Program (VRP) Sites (0.5 mile)
  - Registered Underground Storage Tank List (UST) Sites (Property and Adjoining Sites)
  - Leaking Underground Storage Tank List (LUST) Sites (0.5 mile)

- Additional Environmental Record Sources
  - RCRA Compliance Facilities (0.125 mile)
  - California Hazardous Materials Incident Reporting System (CHMIRS) (Property only)
  - Environmental Permits (Property Only)
  - Dry Cleaners (0.125 mile)

Note: The objective of this database search is to evaluate the potential impact of a listed facility on the Property that is the subject of the Phase I ESA. Table 5 provides the relative position of groundwater flow at the listed facility in relationship to the Property based on the assumption that groundwater flow generally trends to the south in this area. Therefore, facilities that are indicated as “up-gradient” of the Property can potentially impact the facility and may be considered to be RECs.

5.2 SUMMARY OF STANDARD RECORDS REVIEW

This section summarizes the findings of the standard records review within the applicable search radius from the Property. The search was conducted from the center of the Property, so facilities may be closer than identified in the EDR Radius Map Report. The Property was also included in the EDR search record. Records for the Property and other sites located within the appropriate search radius are found in Table 5.

TABLE 5

RECORDS SUMMARY FOR SITES WITHIN ASTM-DEFINED SEARCH RADIUS			
Site Name and Address	Record	Distance and Direction from Property	Groundwater Flow at Facility Relative to Property
Hill Brothers Chemical Co. 2159 Bay St	CHMIRS, CA FID UST	Property	Property

Industrial Service Oil Company, Inc. 1700 S. Soto St	RCRA-TDSF CORRACTS	0.946 mi. SSE	Down-Gradient

There were multiple listings for the Property in the EDR Radius Map Database Report. Most of these listings were non-ASTM Standard Databases.

The Facility Inventory Database for California (CA FID UST) contains both active and inactive listings of hazardous substance containers including USTs. The source of the data is the State Water Resource Control Board (SWRCBD), and as discussed below, we contacted SWRCBD, and they did not have records on the Property. This data indicated that there were 20 hazardous substance containers on the Property.

The Statewide Environmental Evaluation and Planning System (SWEEPS UST) is a UST database that was maintained and updated by a company contacted by the SWRCB in the early 1990s. The database is no longer updated or maintained. A review of the SWEEPS UST Database in June of 1994, revealed that there are 20 SWEEPS UST containers listed for the Property. Based on our review of the information provided, the containers appeared to range in size from 200 gallons to 10,000 gallons in size. The container wall thicknesses ranged from 12 gauge to 8 inches. The dates provided range from 1952 to 1980. Several containers were listed as product content, and several were listed as waste content. The products listed included diesel and regular unleaded. The wastes listed were waste oil.

The Hazardous Substance Storage Container Database (HIST UST) is a historical listing of UST or hazardous substance container sites. A review of the HIST UST listing revealed that there 20 containers associated with the Property, and the containers appeared to be the same as the SWEEPS listings.

Allwyn contacted EDR on December 5, 2014 for record origins on their tanks / containers information pertaining to the Property. An EDR representative communicated to Allwyn that their team will investigate and verify the legitimacy of the source of the information. EDR Customer Care Specialist, Katrin Kraft, contacted Allwyn via e-mail on December 9, 2014 with database information on the historical listings for the Property in the EDR Radius Map Report. The recovered document was a Hazardous Substance Storage Container Information Form from the SWRCBD. This form was apparently used to report the presence of all types of hazardous substance containers including motor vehicle fuel tanks, other tanks, waste tanks, sumps, pits, ponds, and lagoons. The form was completed in 1988, and it indicated that there were 20 hazardous substance containers on the Property. The form had details on

the 20 containers. There were nine tanks listed with underground piping (pressure=1, suction=6, and gravity=2). There were nine sumps and two tanks with no piping. A copy of the historical SWRCBD information is available in Appendix E.

During our historical review, we requested records for any ASTs or USTs at the Property, and we found no other records of USTs on the Property. Sanborn Maps typically list all USTs and ASTs due to the flammable materials stored in the tanks, and we did not find references of USTs on the Sanborn Maps. Based on the data provided in the EDR report, nine of these hazardous substance container listings were sumps, and two tanks with no piping and 3 gauge or 12 gauge wall thickness were likely ASTs (these wall thicknesses are generally too thin to be a UST). There were nine containers listed as tanks with underground piping at the Property. Based on our interviews, an HBCC employee only recalls one UST at the Property in the past (See Section 7). Based on our review, we believe that the presence of one diesel fuel UST at the Property represents a REC, and the potential presence of up to eight unconfirmed underground tanks also represents a REC for the Property.

The California Hazardous Material Incident Report System (CHMIRS) contains information on reported hazardous material incidents (accidental releases or spills). The Property was listed on this system twice. One listing was from 1988-1992, but there was little additional data. The second listing was from 2000 for a 300-gallon spill of ammonia. We contacted the Office of Emergency Services for additional information on these incidents. They did not have information on the first incident. The records provided indicated that the 300-gallon spill of ammonia was remediated by the Los Angeles Fire Department. Based on our experience, reported spills are typically assessed and remediated, so we would not expect this matter to represent a REC for the Property.

The Facility Index System/Facility Registry System (FINDS) contains both facility information and pointers to other sources that contain more details. The United States Environmental Protection Agency (US EPA) Toxics Release Inventory System (TRIS) is the particular system researched for this Property. The system contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site. The Property was apparently listed due to the chemicals stored at the Property.

The Clean Air Act requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program (RMP), which includes a hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases. Prevention programs need to include safety precautions and maintenance, monitoring, employee training measures; and emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (i.e. the fire department) should an accident occur. The Property was listed as having a RMP due to the chemicals at the facility.

The Property was listed on the National Pollutant Discharge Elimination (NPDES) list as active. Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements is an active site and is listed on the NPDES list.

Facility Manifest Data (HAZNET) is database of information extracted from the hard copies of the hazardous waste manifests received each year. Data from the manifests are submitted and entered without correction, and therefore many contain some invalid values for data elements such as generator

ID, TSD ID, waste category, and disposal method. The Property was listed on this database due to the disposal of some asbestos containing waste and an alkaline tank solution.

Emissions Inventory Data (EMI) is a toxics and criteria pollutant emissions database collected by the Air Resources Board and local air pollution agencies. The Property was listed once on this database.

Waste Discharge System (WDS) is a database of facilities that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping. The Property was listed on this database as active.

5.3 AGENCY REQUESTS

5.3.1 State Department of Environmental Quality Records

Allwyn contacted State Water Resources Control Board (SWRCBD) on December 5, 2014 for additional information on historical USTs and Property groundwater and left a voicemail requesting research information pertaining to the Property. Allwyn received a response from SWRCBD on December 5, 2014. The SWRCBD representative verbally indicated that SWRCBD does not retain any databases other than GeoTracker (www.geotracker.waterboards.com). Information on the Property was not available on GeoTracker.

5.3.2 Health/Environmental Department Records

Allwyn visited The Bureau of Engineering for the city of Los Angeles Department of Public Works to request sewer and septic records for the Property vicinity. No septic records were identified. We obtained a map showing a sewer connection for the Property as shown in Appendix C.

5.3.3 Other Agency Records Request

Allwyn visited the Kenneth Hahn Hall of Administration in downtown Los Angeles on December 1, 2014 to request building usage information on the Property and vicinity. Allwyn was told business and building use information is only documented for properties at the time of a title transfer. The Assessor representative for the Properties' parcels refused to provide any title change information as he felt the records did not provide specific and accurate information.

On November 20, 2014, Allwyn visited the central office for the Los Angeles Fire Department on 200 North Main Street, 17th Floor, Los Angeles, CA 90012 for information on USTs and ASTs pertaining to the Property. Allwyn was told by an LAFD office clerk that their office does not retain any records on ASTs but there would be information on ASTs at their secondary office at 201 North Figueroa Street, Los Angeles, CA 90021. Allwyn visited the secondary LAFD office on November 21, 2014 to request for AST and UST records pertaining to the Property. Allwyn was told by LAFD representative that their office only retains records for AST permits registered within the past five years. LAFD representative told Allwyn that the Property has no AST or UST permits registered in their database within the last five years.

6.0 SITE RECONNAISSANCE

6.1 METHODOLOGY AND LIMITING CONDITIONS

Chet Pearson, Sean Roy, and Tiffany Chen of Allwyn conducted a site reconnaissance of the Property on November 21, 2014. The purpose of the site reconnaissance was to observe the Property and usages, and to aid in identifying potential RECs. Site observations were recorded on a checklist completed by Ms. Chen and presented in Appendix F. Photographs taken by Chet Pearson, Sean Roy and Tiffany Chen are presented in Appendix G.

6.1.1 Methodology

The Property was traversed via foot. Allwyn personnel observed the surrounding Sites from the Property, and toured the Property vicinity via foot and by vehicle.

6.1.2 Limiting Conditions

Allwyn was instructed to not discuss the purpose of the site reconnaissance with the existing employees. We were not able to access the railroad right-of-way to the east of the Property, but we were able to view these areas through the fence from the eastern portion of the Property. We did not encounter any other limiting conditions. The weather was clear, sunny and approximately 70 degrees, throughout the site reconnaissance.

6.2 PROPERTY USE AND DESCRIPTION

6.2.1 Property Use

The Property was developed and occupied by a HBCC Facility. The facility was used primarily for the storage, distribution, repackaging, and manufacturing of chemicals mainly used in the building industry. Raw materials and products were transported via trucks to and from the HBCC Facility on the Property. The Property was used for the manufacturing of dry products. Liquid products were manufactured at the HBCC Facility located in the City of Industry, California and transported to the Property for distribution to clients. There were three on-site employees at the HBCC Facility on the Property at the time of our reconnaissance. Based on our discussions with HBCC employees and observations at the Property, the facility operations have diminished over the years, and there were historically more operations on the Property.

6.2.2 Property Description

The Property was currently developed with two buildings – the eastern Office-Warehouse 1 building, and the southern Warehouse 2 separated into three sub-units (Warehouse 2 A, B, C). There were concrete paved dock areas north of Warehouse 2, and we observed some storage units in this area. The western portion of the Property was mainly used as an access driveway to the southern portion of the Property. The southern portion of the Property was a paved area used for storage and loading and unloading operations. The remnants of a railroad spur were observed in the southern portion of the Property. There was a concrete dock area south of Warehouse 1. This dock area contained remnants of previous milling operations including crushing and drying equipment.

The Office-Warehouse 1 building was located in the eastern portion of the Property. The two-story office portion of the building was located in the north end. The second floor was no longer used. We observed some minor storage of office equipment and supplies in this area. The first floor contained typical office, rest room, storage, and kitchen/break room areas. The office area had a wood floor elevated above the surrounding grade. We observed numerous pipes and utilities in the crawl space beneath the office area. We observed the crawl space from a couple areas, but we did not access this area.

Warehouse 1 was mainly used for two large mixing/blending and backing machines. Solid raw materials were blended and packaged by these machines. These machines processed solid materials, so there was some dust in these areas from the manufacturing operations. We did not observe oily stains or other potential indications of liquid wastes in the manufacturing area. We observed a concrete-lined sump beneath one of the machines. A floor scale mounted in a below-grade sump was present in the warehouse for weighing materials. The floor scale was reportedly mechanically operated. We did not observe cracks, open joints, or other subsurface migration pathways in or around the sump. The southern portion of the warehouse was used for storage of products and some raw materials. Based on our discussions, the floor of the warehouse was also an elevated floor deck in the past, but it was later filled with soil, and the warehouse had a concrete slab-on-grade. We observed some small rectangular "vent" holes around the perimeter of the building stem walls, and there was soil observed beneath the elevated dock-high floor.

Based on our observations and interviews, there were no floor drains in Warehouse 1, except for one recently installed for an eye-wash station. The floor drain was piped to the east side of the building, and discharged to the ground surface. We observed the eye wash floor drain discharge area east of the building. There was some sediment in this area. We understand from HBCC employees that the floor drain pipe was installed by jetting the soil beneath the floor slab, and the sediment in this area was the soil generated by installation of the floor drain pipe. We did not observe oily stained soils, residues, or other indications of potential hazardous substances or petroleum products in this drain discharge area.

There was a concrete and wood platform dock located on the south end of Warehouse 1. This area was called the Milling Dock in the past due to previous milling operations in this area. There were several pieces of un-used equipment in the dock area. Some of the historic operations (prior to 1977) in this area processed asbestos materials for their products. The asbestos materials were transported to the Property by rail cars, unloaded along the eastern spur (east of Warehouse 1) with a front end loader, and placed into the equipment on the Milling Dock south of Warehouse 1. After the use of asbestos ended, the equipment and dock area were reportedly cleaned to remove remaining asbestos fibers.

We observed a large concrete-lined sump in the area beneath the Milling Dock. The sump was covered by a steel plate. The sump contained a couple feet of stormwater and some sediment. We probed the bottom of the sump, and it appeared to be concrete based on our probes. Some of the previous equipment historically extended down into this sump. We observed several indications of previous equipment in this area. An air compressor was located south of the west end of Warehouse 1. There was a pan to collect water drained from the air compressor, and the water was allowed to evaporate.

The southern Warehouse 2 appeared to be three separate buildings connected end-to-end. The warehouse had a concrete floor, and we did not observe any sumps or floor drains in this warehouse. This warehouse was used mainly for storage of products and raw materials. There were pallets and stacks of materials lining the south and north walls of the long narrow warehouse. An air compressor was located on a mezzanine in the northeastern portion of Warehouse 2A. A small product test area was located in

the southwestern portion of the warehouse. We observed various tools, products, and chemicals in this area. We did not observe any floor drains, open cracks or joints, or other potential subsurface migration pathways in this area of the warehouse. Based on our observations and discussions, there were no floor drains, sumps, or other subsurface migration pathways in the warehouse, other than some typical concrete floor cracks and joints. We did not observe any oily staining, residues, or other potential indications of releases of hazardous substances or petroleum products in Warehouse 2. We did observe a small oily stain on the concrete pavement outside the northeast corner of the warehouse. It appeared that some air compressor lubricating oil had leaked in this area.

We observed two rings in the concrete pavement south of the east end of Warehouse 2. HBCC personnel indicated that two vertical ASTs were previously located in this area for their ammonia operations. A cooling tower was reportedly located west of these ASTs. There was a roll-off bin used as a trash dumpster in the southwest corner of the Property. We understand that the trash was removed from the Property and taken to the City of Industry HBCC Facility for recycling/disposal. We observed a storm drain inlet covered by a grate in the southeastern portion of the Property. It was located near the northeast corner of the adjacent building south of the Property. The inlet appeared to be a concrete-lined sump. HBCC personnel did not know the discharge location of the storm drain. We observed a storm drain inlet in Sacramento Street south of the Property, so there was apparently some type of storm sewer system in the area. The remainder of the southern portion of the Property was used for some limited storage and unloading operations. We observed remnants of the old railroad spur in this area. We observed the rails for the track in the asphalt pavement in this area. There was some gravel/rock ballast material along the eastern portion of the track.

The northern portion of the Property was mainly used for outdoor storage, loading and unloading operations. Elevated docks were located at the east and west ends of this concrete paved area. We observed two storage containers for product and material storage in this area. The western container had a grated floor over a secondary containment area. We observed some liquid products observed in this storage container. There were stacks of pallets and other stored materials in this area. In the east-central portion of this area, there was a storm drain covered by a grate. The storm drain was a concrete-lined sump with an apparent discharge pipe to the north. The discharge location of this drain was not known by HBCC personnel. On-site personnel indicated rain water readily drains from the storm drain, so it likely discharges to a storm sewer system.

A propane-powered forklift was used at the Property. Propane tanks were stored in Warehouse 1. On-site personnel indicated that the forklift was serviced by an outside contractor, and wastes were removed from the Property. They indicated that no trucks were stored, fueled, or maintained at the Property.

6.3 GENERAL PROPERTY OBSERVATIONS

6.3.1 Hazardous Substances and Petroleum Products in Connection with Identified Uses

A variety of hazardous substances and petroleum products were used in connection with the operations at the Property. Some of the raw materials used to manufacture their products were hazardous substances, and some of their products stored and distributed from the Property contained hazardous substances and/or petroleum products. The forklift, air compressors, and machinery at the Property used lubricating and/or hydraulic oils. Based on our observations, we did observe some indications of dust

releases from the bagging operations, but we did not observe indications of significant releases that might impact the subsurface soils at the Property.

6.3.2 Storage Tanks

Allwyn did not observe storage tanks on the Property. We did observe various concrete-lined sumps in and around Warehouse 1, propane tanks for the forklift, and surface indications of previous ASTs south of the warehouses. We did not observe vent pipes (other than for the sinks and toilets), depressed areas, patched pavement areas, or other potential indications of past USTs at the Property.

6.3.3 Odors

Allwyn did not detect strong pungent, or noxious odors on the Property.

6.3.4 Pools of Liquids

Allwyn did not observe any pools of liquids likely to contain hazardous substances or petroleum products on the Property. One of the exterior sumps had water in it, but the water appeared to be from rain. We did not observe any oily sheens, colors, or other potential indications of hazardous substances or petroleum products in the liquid.

6.3.5 Drums and Containers

Allwyn did observe several 55-gallon drums present on the Property at the time of the site reconnaissance. Allwyn observed eight metal 55-gallon drums with missing lids outside in the vicinity of the Milling Dock, some partially filled with white dried waste material. Additionally, Allwyn observed one polypropylene 55-gallon drum that was sealed and unlabeled in Warehouse 2C. Several drums were observed inside Warehouse 1; these drums were used to store trash.

The liquid product containers stored at the Property for distribution to clients were typically 5-gallon plastic or metal containers, one-gallon metal and plastic containers, and smaller containers. The solid product containers were typically paper or plastic bags stored on pallets.

We observed some typical household cleaning and maintenance containers in the office and warehouses.

6.3.6 PCB-Containing Equipment

Allwyn did not observe any PCB-containing equipment on the Property. We observed several pole or platform mounted transformers along the north side of Bay Street.

6.4 EXTERIOR OBSERVATIONS

6.4.1 Pits, Ponds, or Lagoons

Allwyn did observe a large concrete-lined sump beneath the Milling Dock at the Property. The sump included an approximate 2-foot layer of sediment, and the bottom of the pit appeared to be concrete based on our probing. Some previous equipment historically extended down into this sump.

We did not observe any ponds or lagoons at the Property.

6.4.2 Stained Soil or Pavement

Allwyn did observe a minor oil stain outside the northeast corner of Warehouse 2A. Allwyn did observe some small traces of stains on the concrete floor inside Warehouse 1.

6.4.3 Stressed Vegetation

Allwyn did not observe areas of stressed vegetation that would indicate the presence of contamination on the Property.

6.4.4 Solid Waste

Allwyn did not observe any solid waste or areas that were apparently filled or graded by non-natural causes (or filled by fill of the unknown origin) suggesting trash, construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting trash or other solid waste disposal. The Property did contain some scattered trash and litter.

6.4.5 Wastewater and Stormwater

Allwyn did observe two stormwater drains on the Property. One drain was located near the loading zone, north of Warehouse 2 and west of the eastern dock. The second drain was located in the southeastern portion of the Property. In general, stormwater runoff on the Property appeared to drain to these two storm drains.

6.4.6 Wells

Allwyn did not observe evidence of dry wells, disposal wells, monitoring wells, and/or water wells on the Property.

6.4.7 Septic System

Allwyn did not observe evidence of a septic system on the Property.

6.5 SURROUNDING SITES OBSERVATIONS

The Property was located in an urban area. The vicinity appeared to be predominantly commercial and light industrial development.

The west adjoining site had a large open warehouse building and open yard to the south apparently used for storing towed vehicles from time to time. At the time of the site reconnaissance, we did not observe any vehicles stored at this site. We observed a couple signs indicated “Viertel’s 24-hour towing” used this site.

The north adjoining sites were developed and occupied by a variety of different occupants. There were two office trailers north of the east end of the Property that were used for security/police associated with the Amtrak railroad tracks to the east. An old warehouse building appeared to have been converted to a residence with a yard was located west of the office trailers. There were multiple occupant spaces in office-warehouse type buildings to the west. Most of the spaces had an address number, but no signs indicating the business. We did observe a sign for Ace Trims. A gasoline service station was observed further west on the northeast corner of Santa Fe Avenue and Bay Street.

The south adjoining sites were developed with commercial buildings. There were two large multi-tenant commercial buildings with a variety of occupants located on Sacramento Street. We observed numbers for addresses, but most of the spaces did not have occupant signs. We did observe one small sign for an ice supply company. A commercial warehouse type building was located south of the east end of the Property, and it had a sign FAMES (Fatality Analysis of Maintenance Employees and Signalmen) apparently associated with the railroad tracks. We observed a storm sewer drain in the south side of Sacramento Street near the east end.

The east adjoining site contained parking areas associated with the railroad tracks to the east. The concrete-lined Los Angeles River was further east.

7.0 INTERVIEWS

7.1 PROPERTY OWNERS AND OCCUPANTS

The owner questionnaire for the Property was complete by Shane T. Burkhart, the Director of Corporate Safety & Compliance Division of HBCC. The completed questionnaire is attached in Appendix H. We also interviewed Mr. Burkhart before, during and after the site reconnaissance.

Mr. Burkhart indicated that he has been familiar with the Property for about 10 years, but the current CEO of HBCC has been with the company for 40 years. He indicated that the Property was used by HBCC for warehousing, blending, and packaging of dry/solid non-hazardous materials generally used by the building industry. He indicated that some of the historic products used asbestos fibers in the past, and the asbestos was delivered to the Property along the eastern spur (adjacent to the east side of Warehouse 1), and the asbestos materials were off-loaded on the dock-high slab. The use of asbestos materials in products ended in late 1977, and the equipment on the Milling Dock and the work areas were cleaned of asbestos fibers. He was not aware of any buried wastes or landfill materials on the Property. He indicated that he thought that there were ASTs and USTs on the Property in the past. He was familiar with the previous ASTs associated with the manufacturing processes, but he was not aware of the details associated with the USTs. He provided us with a variety of documents including material safety data sheets (MSDS/SDSs), a Stormwater Pollution Prevention Plan, permits for air compressors, and other documents.

Mr. Burkhart indicated the Property has been used as a chemical manufacturing factory for the building industry. Mr. Burkhart provided to Allwyn MSDS/SDS information on hazardous and non-hazardous chemicals that have been or were used on the Property. These materials included: ammonia anhydride, Kevlar, barite, magnesium oxide, sand, and talc. Mr. Burkhart and other HBCC personnel indicated that raw materials were transported to the Property by trucks (rail cars in the past). They indicated that products manufactured at the HBCC Facility in City of Industry, California were transported to the Property for distribution to their clients. These materials were loaded and unloaded with a forklift. The trucks were not stored, fueled, repaired, or maintained at the Property. The forklift was maintained by a subcontracted service, and all wastes were removed from the Property.

Mr. Burkhart recalled two incidents of warehouse fires in the past. The first fire occurred in the 1940s, and the warehouse buildings burned. The second fire occurred in the 1980s, and the former northern warehouse along Bay Street burned. LA DBS building permit records indicate restoration and demolitions permits issued around the years of these fires.

Mr. Burkhart was not aware of the location or number of previous USTs on the Property in the past. He indicated that he would contact the HBCC CEO about this matter. The CEO indicated that he was only aware of one UST at the Property in the past. He recalled a diesel fuel UST located near the southwest corner of the southern Warehouse 2, and he indicated that the UST was removed from the Property in about 1990. Mr. Burkhart indicated that he and others have searched for documents related to this UST, and no records of USTs at the Property have been found.

7.2 GOVERNMENT AGENCIES

As previously discussed in Sections 4 and 5, Allwyn contacted a variety of government agencies for information on the Property. The information received was previously discussed. We did not identify any governmental persons with direct knowledge of the Property, so no interviews were conducted.

8.0 VAPOR ENCROACHMENT SCREEN

8.1 TIER 1 SCREENING EVALUATION

The Tier I Screening Evaluation requires the review of information generally collected in a Phase I ESA to identify potential vapor encroachment conditions (VECs) within an approximate minimum search distance(See Table 8.1), referred to as the Area of Concern (AOC). If known or suspected contaminated sites are present within the AOC, then an evaluation is performed for those sites whether a contaminant of concern (COC) is likely to be present.

TABLE 8.1

VAPOR ENCROACHMENT SCREENING RESOURCES AND APPROXIMATE MINIMUM SEARCH DISTANCE		
STANDARD ENVIRONMENTAL RESOURCES (WHERE AVAILABLE)	APPROXIMATE MINIMUM SEARCH DISTANCE SURROUNDING THE TARGET PROPERTY (MILES)	
	Hazardous Substances COC	Petroleum Hydrocarbon COCs
Federal NPL site list	1/3	1/10
Federal CERCLIS list	1/3	1/10
Federal RCRA CORRACTS facility list	1/3	1/10
Federal RCRA non-CORRACTS TSD facilities list	1/3	1/10
Federal RCRA generators list	Property only	Property only
Federal institutional control/engineering control registries	Property only	Property only
Federal ERNS list	Property only	Property only
State- and tribal-equivalent NPL	1/3	1/10
State- and tribal-equivalent CERCLIS	1/3	1/10
State- and tribal landfill and/or solid waste disposal site lists	1/3	1/10
State- and tribal leaking storage tank lists	1/3	1/10
State- and tribal registered storage tank lists	Property only	Property only
State- and tribal institutional control/engineering control registries	Property only	Property only
State- and tribal voluntary cleanup sites	1/3	1/10
State- and tribal Brownfield sites	1/3	1/10

The approximate minimum search distance may be expanded or reduced in the up-gradient, down-gradient, and/or cross-gradient by the Environmental Professional based on experience in the local area and applying professional judgment. A commonly used method to reduce the AOC in Tier 1 screening when groundwater flow direction is known or can be inferred is the Buonicore Methodology[5]. The revised AOC for Tier 1 Screening are provided in Table 8.2.

TABLE 8.2

Source Location	AOC Using Buonicore Methodology	
	Hazardous Substance COC (feet)	Petroleum Hydrocarbon COC (feet)
Up-gradient	1,760	528
Down-gradient	100	100 (LNAPL) 30 (dissolved)
Cross-gradient	365	165 (LNAPL) 95 (dissolved)

LNAPL – Light, non-Aqueous Phase Liquid

If known or suspected contaminated sites are present within the AOC, then an evaluation is performed for those sites whether a COC is likely to be present.

If potential COCs exist on contaminated sites, the Environmental Professional must then evaluate whether a VEC exists on the Property. The factors used to evaluate the presence of a VEC include:

- Existing and planned use of the target Property
- Type of existing and planned structure
- Surrounding area description
- Review of federal, state, local, and tribal government records
- Soil and geological characteristics, groundwater depth and flow direction, and property information data

The conclusion from the Tier 1 screening is one of the following:

- A VEC exists
- A VEC likely exists
- A VEC cannot be ruled out
- A VEC can be ruled out because a VEC does not or is not likely to exist

If a VEC can be ruled out from a Tier 1 screening, no further investigation is necessary.

A REC does not necessarily exist if a VEC exists, likely exists, or cannot be ruled out by the Tier 1 screening and the Environmental Professional can use professional judgment considering factors such as site conditions and building design and operation.

8.2 TIER 1 SCREENING RESULTS

Allwyn conducted a Vapor Encroachment Screening on the Property in accordance with the ASTM E2600-10 standard. Facilities identified from the database search report were evaluated using the ASTM E2600-10 criteria to evaluate whether the site presents a vapor encroachment condition.

Allwyn has concluded from the Tier 1 Vapor Encroachment Screening that a VEC for the Property does not exist from nearby sites due to lack of reported releases within the distances. However, a VEC cannot be ruled out at the Property due to the historical presence of tanks with underground piping on the Property.

9.0 SUMMARY

9.1 SUMMARY

The Property was developed and occupied by a HBCC Facility. The facility was used primarily for the storage, distribution, repackaging, and manufacturing of chemicals mainly used in the building industry. Raw materials and products were transported via trucks to and from the HBCC Facility. The Property was used for the manufacturing of dry products. Liquid products were manufactured at the HBCC Facility located in the City of Industry, California and transported to the Property for distribution to clients. There were three on-site employees at the HBCC Facility on the Property at the time of our reconnaissance.

The Property was developed with two buildings – the eastern Office-Warehouse 1 building, and the southern Warehouse 2 separated into three sub-units (Warehouse 2 A, B, C). There were concrete paved dock areas north of Warehouse 2, and we observed some storage units in this area. The western portion of the Property was mainly used as an access driveway to the southern portion of the Property. The southern portion of the Property was a paved area used for storage and loading and unloading operations. The remnants of a railroad spur were observed in the southern portion of the Property. There was a concrete dock area south of Warehouse 1. This dock area contained remnants of previous milling operations including crushing and drying equipment.

The Office-Warehouse 1 building was located in the eastern portion of the Property. The two-story office portion of the building was located in the north end. The second floor was no longer used; except for some minor storage. The first floor contained typical office, rest room, storage, and kitchen/break room areas. The office area had a wood floor elevated above the surrounding grade. We observed numerous pipes and utilities in the crawl space beneath the office area.

Warehouse 1 was mainly used for two large mixing/blending and backing machines. Solid raw materials were blended and packaged by these machines. These machines processed solid materials, so there was some dust in these areas. We did not observe oily stains or other potential indications of liquid wastes in the manufacturing area. We observed a concrete-lined sump beneath one of the machines. A floor scale mounted in a below-grade sump was present in the warehouse for weighing materials. We did not observe cracks, open joints, or other subsurface migration pathways in or around the sump. The southern portion of the warehouse was used for storage of products and some raw materials. Based on our discussions, the floor of the warehouse was also an elevated floor deck in the past, but it was later filled with soil, and the warehouse had a concrete slab-on-grade.

Based on our observations and interviews, there were no floor drains in Warehouse 1, except for one recently installed for an eye-wash station. The floor drain was piped to the east side of the building and discharged to the ground surface. We observed the eye wash floor drain discharge area east of the building, and there was some sediment in this area. We understand from HBCC employees that the floor drain pipe was installed by jetting the soil beneath the floor slab, and the sediment in this area was the soil generated by installation of the floor drain pipe. We did not observe oily stained soils, residues, or other indications of potential hazardous substances or petroleum products in this drain discharge area.

There was a concrete and wood platform dock located on the south end of Warehouse 1. This area was called the Milling Dock in the past. There were several pieces of un-used equipment in the dock area. Some of the historic operations in this area processed asbestos materials. After the use of asbestos ended,

the equipment and dock area were reportedly cleaned to remove remaining asbestos fibers. We observed a large concrete-lined sump in this area covered by a steel plate. The sump contained a couple feet of stormwater. We probed the bottom of the sump, and it appeared to be concrete based on our probes. Some of the previous equipment historically extended down into this sump. We observed several indications of previous equipment in this area. An air compressor was located south of the west end of Warehouse 1. There was a pan to collect water drained from the air compressor, and the water was allowed to evaporate.

The southern Warehouse 2 appeared to be three separate buildings connected end-to-end. The warehouse had a concrete floor, and we did not observe any sumps or floor drains in this warehouse. This warehouse was used mainly for storage of products and raw materials. There were pallets and stacks of materials lining the south and north walls of the long narrow warehouse. An air compressor was located on a mezzanine in the northeastern portion of Warehouse 2A. A small product test area was located in the southwestern portion of the warehouse. We observed various tools, products, and chemicals in this area. We did not observe any floor drains, open cracks or joints, or other potential subsurface migration pathways in this area of the warehouse. Based on our observations and discussions, there were no floor drains, sumps, or other subsurface migration pathways in the warehouse, other than some typical concrete floor cracks and joints. We did not observe any oily staining, residues, or other potential indications of releases of hazardous substances or petroleum products in Warehouse 2. We did observe a small oily stain on the concrete pavement outside the northeast corner of the warehouse. It appeared that some air compressor lubricating oil had leaked in this area.

We observed two rings in the concrete pavement south of the east end of Warehouse 2, and two vertical ASTs were previously located in this area for their ammonia operations. A cooling tower was reportedly located west of these ASTs on the concrete pavement for cooling the ammonia tanks and pipes, and the cooling tower reportedly used a magnetic de-scaler in the past. There was a roll-off bin used as a trash dumpster in the southwest corner of the Property. We understand that the trash was removed from the Property and taken to the City of Industry HBCC Facility for recycling/disposal. We observed a storm drain inlet covered by a grate in the southeastern portion of the Property. The inlet appeared to be a concrete-lined sump. HBCC personnel did not know the discharge location of the storm drain. We observed a storm drain inlet in Sacramento Street south of the Property, so there was apparently some type of storm sewer system in the area. The remainder of the southern portion of the Property was used for some limited storage and unloading operations. We observed remnants of the old railroad spur in this area. We observed the rails for the track in the asphalt pavement in this area. There was some gravel/rock ballast material along the eastern portion of the track.

The northern portion of the Property was mainly used for outdoor storage, loading and unloading operations. Elevated docks were located at the east and west ends of this concrete paved area. We observed two storage containers for product and material storage in this area. The western container had a grated floor over a secondary containment area. We observed some liquid products observed in this storage container. There were stacks of pallets and other stored materials in this area. In the east-central portion of this area, there was a storm drain covered by a grate. The storm drain was a concrete-lined sump with an apparent discharge pipe to the north. The discharge location of this drain was not known by HBCC personnel. On-site personnel indicated rain water readily drains from the storm drain, so it likely discharges to a storm sewer system.

A propane-powered forklift was used at the Property. Propane tanks were stored in Warehouse 1. On-site personnel indicated that the forklift was serviced by an outside contractor, and wastes were removed from the Property. They indicated that no trucks were stored, fueled, or maintained at the Property.

Allwyn conducted a review of readily available local, State, and Federal standard environmental databases for the Property and surrounding sites. There were multiple listings for the facility on the Property in the Database Search Report. Most of these listings were non-ASTM Standard Databases.

The facility on the Property was listed on the CA FID UST, SWEEPS UST, and HIST UST Databases. These lists apparently include facilities with active and inactive listings of hazardous substance containers including ASTs, USTs, sumps and pits. The source of the data is the SWRCBD; we contacted SWRCBD, and they did not have records on the Property. This data indicated that there were 20 hazardous substance containers on the Property.

Allwyn contacted EDR for record origins on the tanks / containers information pertaining to the Property. An EDR representative provided a document. The recovered document was a Hazardous Substance Storage Container Information Form from the SWRCBD. This form was apparently used to report the presence of all types of hazardous substance containers including motor vehicle fuel tanks, other tanks, waste tanks, sumps, pits, ponds, and lagoons. The form was completed in 1988, and it indicated that there were 20 hazardous substance containers on the Property. The form had details on the 20 containers. There were nine tanks listed with underground piping (pressure=1, suction=6, and gravity=2). There were nine sumps and two tanks with no piping. A copy of the historical SWRCBD information is available in Appendix E.

During our historical review, we requested records for any ASTs or USTs at the Property, and we found no other records of potential USTs on the Property. Sanborn Maps typically list all USTs and ASTs due to the flammable materials stored in the tanks, and we did not find references of USTs on the Sanborn Maps. Based on the data provided in the EDR report, nine of these hazardous substance container listings were sumps, and two tanks with no piping and 3 gauge or 12 gauge wall thickness were likely ASTs (these wall thicknesses are generally too thin to be a UST). There were nine containers listed as tanks with underground piping at the Property. Based on our interviews, a 40-year HBCC employee recalled one UST at the Property in the past. It was a diesel fuel UST, and it was removed from the Property in about 1990. The UST was located near the southwest corner of the southern Warehouse 2. However, HBCC found no records of USTs on the Property, and the HBCC employee familiar with the Property for 40 years does not recall any other USTs at the Property. Based on our review, we believe that the presence of one diesel fuel UST at the Property represents a REC, and the potential presence of up to eight unconfirmed underground tanks also represents a REC for the Property.

The CHMIRS contains information on reported hazardous material incidents (accidental releases or spills). The Property was listed on this system twice. One listing was from 1988-1992, but there was little additional data. The second listing was from 2000 for a 300-gallon spill of ammonia. We contacted the Office of Emergency Services for additional information on these incidents. They did not have information on the first incident. The records provided indicated that the 300-gallon spill of ammonia was remediated by the Los Angeles Fire Department. Based on our experience, reported spills are typically assessed and remediated, so we would not expect this matter to represent a REC for the Property.

Based on our review of historical documents, we were not able to document Property usages back to the first developed use. The adjacent Los Angeles and San Pedro Railroad track east of the Property was developed in 1869, so the Property vicinity was likely vacant natural land prior to this time. A 1900 Assessor Map showed the Property vicinity subdivided into residential sized lots, and a Baists Real Estate Survey map from 1910 showed apparent residential houses on several lots near the Property. Therefore, the Property may have been used for residential purposes in the late 1800s and early 1900s. The 1910 map showed two structures orientated north-south on the western parcels of the Property, and there was a label stating "Stone Yard". The railroad spurs were present on the Property and sites to the north and south, so the Property vicinity was likely in transition to commercial or light industrial usage. The 1914 map showed no buildings on the western lots of the Property, but the "Stone Yard" label was still present.

A 1921 map showed the large warehouse building west of the Property and the apparent northern warehouse on the Property. These buildings were labeled "Pacific Pipe and Supply". The warehouse on the Property was labeled "Machine Shop" on the 1901 to 1935 Sanborn Map. A small building in the southwest corner of the Property was labeled as automotive repair. The historical use of the northern portion of the Property as a machine shop and the southwestern portion of the Property for automotive repair may potentially represent a REC for the Property. HBCC apparently began operations on the Property in about 1924. A 1926 City Directory indicated National Kellastone Co., Western Salt Co., and HBCC were listed for the Property address. Therefore, the Property may have been occupied by a few entities during this time frame. As HBCC's operations grew, their facility likely expanded to cover the entire Property. HBCC recently sold some of the eastern portion of the previous facility back to the railroad. The HBCC Facility has apparently included tanks with underground piping in the past, but we did not find records on the locations of these tanks. The HBCC Facility appeared to mainly manufacture solid products at the Property in the past, but both solid and liquid products were distributed by the facility.

9.2 POTENTIAL RECOGNIZED ENVIRONMENTAL CONDITIONS

As discussed in this report, Allwyn reviewed a variety of features, conditions, and nearby facilities that were given consideration as potential RECs. However, based on our observations, experience, and review, most of these features, conditions, and nearby facilities were found to not represent a REC for the Property as discussed in this report. We did identify RECs associated with the Property as discussed below.

9.3 DATA GAPS

A data gap is defined as the lack or inability to obtain information required by ASTM E1527-13 despite good faith efforts by the Environmental Professional to gather such information. The Environmental Professional is required to document and comment on the significance of only those data gaps that affect the ability of Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Property.

Allwyn encountered a data gap or data failure in the historical review. Limited information was found on specific Property usages prior to the 1920s. Based on the general information found, the Property was historically part of a residential subdivision until the early 1900s. It was apparently a Stone Yard and then part of Pacific Pipe & Supply Company.

9.4 RECOGNIZED ENVIRONMENTAL CONDITIONS

The Phase I ESA was completed for RCA and HBCC for a potential sale of the Property and to identify RECs at the Property. We have performed this Phase I ESA in accordance with the scope and limitations of the Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13) of the Property and our contract.

This assessment did not reveal the evidence of current or controlled RECs in connection with the Property, except for the possible exceptions:

- Presence of one diesel fuel UST,
- Potential presence of up to eight unconfirmed underground tanks, and
- Historical mechanics shop and automotive repair uses.

Allwyn recommends additional assessment of these matters.

10.0 DEVIATIONS

This Phase I ESA was performed in general accordance with the requirements of the Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process - ASTM Designation: E1527-13 (ASTM E1527-13). We were not able to determine Property usages back to the first development. The Property vicinity appeared to be part of a residential subdivision in 1900. As previously discussed, we conducted a Tier I Vapor Encroachment Screening as an addition to this practice. Based on our experience, we believe that there were no other substantive deviations, deletions, or additions to this practice, including client-imposed limitations.

11.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

11.1 ENVIRONMENTAL PROFESSIONAL EXPERIENCE

Mr. Chet L. Pearson has over 30 years of experience in the environmental field. Mr. Pearson's technical experience includes a wide range of environmental site assessments, investigations, studies, and remediation; regulatory compliance evaluations; and general environmental services. He has directed over 1,000 Phase I ESAs throughout the western United States. He has assessed a wide variety of properties ranging from thousands of acres of vacant land to large heavy industrial facilities. He has completed assessments of historic properties located in downtown areas and in Arizona's historic mining areas. He has a Bachelor of Science in Engineering degree and a Master's of Science in Engineering degree from Arizona State University. He was previously a Registered Environmental Assessor I and II in California, prior to this program ending. Mr. Pearson's resume is provided in Appendix I.

11.2 ENVIRONMENTAL PROFESSIONAL SIGNATURE AND STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property.

Signature of the Environmental Professional:

Tiffany Chen
Allwyn Environmental
Staff Scientist

Chet L. Pearson
Allwyn Environmental
Environmental Professional/Principal

12.0 LIMITATIONS

Allwyn has performed our services for this project in accordance with Allwyn's Proposal Contract dated November 11, 2014, our discussions, and with the Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13). No other guarantees or warranties are expressed or implied. These services were performed to the degree of skill and diligence normally employed by experienced professionals performing the same or similar services in the same geographic area at the time the services were performed.

This Phase I ESA was conducted to permit Allwyn to render a professional opinion regarding the likelihood of a REC being present on, in, or beneath the subject Property at the time services were performed. No Phase I ESA is thorough or exhaustive enough to wholly eliminate uncertainty regarding the potential for RECs in connection with the Property. In addition, the level of inquiry for each Phase I ESA is variable, consistent with good commercial or customary practice, and will consider the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.

Allwyn has reviewed and relied on written documents, oral statements, and observations made by others. We have assumed this information is true, correct, accurate, and complete, and have not conducted an independent examination of the materials and statements. Allwyn shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed, or for items that were not visible, accessible, or present on the site and adjoining sites at the time of the site reconnaissance.

Environmental regulatory criteria are continually changing. Therefore, environmental conditions, such as contaminant concentrations in certain media that are considered legal and acceptable at the time of this report may in the future be subject to different regulatory standards. Professional opinions and judgments expressed in this Phase I ESA are based on our understanding and interpretations of current regulatory standards and practices. This report is not meant to provide or represent legal opinions.

This document and the information contained herein have been prepared solely for the use of RCA, HBCC and their authorized representatives. Any reliance on this report by other parties shall be at such party's sole risk. Any future consultation or provision of services to third parties related to the Property may be provided at Allwyn's sole discretion and under terms and conditions acceptable to Allwyn, including additional compensation, with RCA's and HBCC's approval.

According to ASTM E1527-13, Phase I ESAs are generally valid for 180 days from several trigger dates, unless site conditions or usage have changed to impact site environmental conditions. If within this period, the Phase I ESA is to be used by a different user than for whom the assessment was originally prepared, the new user must meet the User Responsibilities described in ASTM E1527-13.

This Phase I ESA may be used for up to 1 year from the date of issue, provided that the following inquiries are updated or conducted within 180 days of the date of purchase:

- Interviews with owners, operators, and occupants
- Searches for recorded environmental liens
- Review of Federal, Tribal, State, and local government records
- Visual inspection of the Property and adjoining sites
- Declaration of the Environmental Professional responsible for the assessment or update

Our scope of services specifically did not address the following issues:

- Asbestos-Containing Material (ACM) in Buildings
- Radon
- Lead-Based Paint
- Lead in Drinking Water
- Wetlands
- Regulatory Compliance
- Cultural and Historic Resources
- Industrial Hygiene
- Health and Safety
- Ecological Resources
- Endangered Species
- Biological Agents
- Indoor Air Quality unrelated to releases of hazardous substances or petroleum products into the environment
- Mold

APPENDIX B

USER INFORMATION DOCUMENTATION FORM

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE PER ASTM E1527-13
AE Project No. _____

Allwyn Environmental requests your assistance to identify and assemble information described by the *User Responsibilities* criteria of the ASTM standard. The *User* is defined as a purchaser, potential tenant, owner, lender or property manager, or other party seeking to use the Phase I ESA report. For all "Yes" answers, please provide copies, references or additional information on an attached sheet.

Your Name: SHANE BURKHART Tel: 623-535-9955
User's Name: HILL BROTHERS CHEMICAL COMPANY
Property Name: HILL BROTHERS CHEMICAL COMPANY - LOS ANGELES
Property Address: 2159 BAY STREET City: LOS ANGELES State: CA

Are you aware of any environmental clean-up liens filed or recorded against the Property? YES ☐ NO ☒ UNK ☐

Are you aware of any Activity and Use Limitations, including Engineering Controls, Institutional Controls or Land Use Restrictions, that have been filed or recorded against the Property? YES ☐ NO ☒ UNK ☐

Do you have any special knowledge or experience about the Property, nearby sites, or the activities that occur or occurred on the Property? YES ☐ NO ☒ UNK ☐

Is the purchase price below fair market value? YES ☐ NO ☒ UNK ☐

If "YES," is it possible the lower price might be attributable to real or perceived environmental contamination? YES ☐ NO ☒ UNK ☐

Are you aware of commonly known or reasonable ascertainable information about water quality problems, chemical releases, environmental compliance issues, permit violations, or government enforcement actions, or other environmental conditions that might have a negative impact on the environmental condition of the Property or the surrounding area? YES ☐ NO ☒ UNK ☐

Do you know of any pending, threatened or past legal actions or government enforcement actions Involving the Property or current or past occupants of the Property? YES ☐ NO ☒ UNK ☐

Do you know of any government enforcement actions involving the Property or against current or former Occupants or owners for possible or documented violations of environmental laws or regulations? YES ☐ NO ☒ UNK ☐

Are you aware of any obvious indicators of environmental contamination at the Property? YES ☐ NO ☒ UNK ☐

Why do you want to have this Phase I Environmental Site Assessment performed?

- ☐ Potential Landowner Liability Protection under CERCLA
- ☐ Lender's Requirements
- ☒ Business Operations Planning
- ☒ Baseline Review
- ☐ Planning/Zoning Requirements

Do you know if any of the following types of documents about the Property exist, and can you provide copies to Allwyn Environmental?

- ☐ Environmental Site Assessment Reports
- ☐ Environmental Compliance Audit Reports
- ☐ Underground Injection Permits
- ☐ Hazardous Waste Generator Notices
- ☐ Community Right-To-Know Plan
- ☐ Environmental Management Plan
- ☐ Hydrogeologic Reports
- ☐ Geotechnical Reports
- ☒ SARA Title III/Form R Reports
- ☐ Risk Assessments
- ☐ Chain-of-Title Records
- ☒ NPDES Permits
- ☒ Wastewater Permits
- ☒ Solid Waste Permits
- ☐ Air Emissions Permits
- ☐ UST Registrations
- ☐ AST Registrations
- ☒ Material Data Safety Sheets (MSDS)
- ☐ Safety Plans
- ☒ Stormwater Plans
- ☐ Notice of Violations
- ☐ Institutional/Engineering Controls

☐ BLUEPRINTS ($8.00 Service Fee, plus a SD Surcharge Fee (Section 98.0416 of the LAMC) and $1.00 per page.

No plans available for Single Family Dwellings and Commercial buildings 3 stories and under, prior to 1978.

To obtain copies of blueprints on file, all of the following requirements must be submitted:
1. A release letter from the current owner.
2. A copy of the current owner's Grant Deed.
3. A release letter from the architect and engineer whose stamp is on the plans.
   Letters must be on Letterhead and have engineer/architect's stamp and signature.

Instructions and Payment Options

You can pay the fees due and obtain requested records by using one of the following options:

1) Copies of documents range from $0.10 to $1.50 per page (excluding blueprint copies)
Blueprint copies $8.00 Service Fee, plus a System Development Surcharge Fee and $1.00 per page.

2) Send your check to one of the following addresses:
Metro Office, 201 N. Figueroa St., 1st Floor, Room 110, Los Angeles, CA 90012 **Van Nuys Office**, 6262 Van Nuys Bl., Van Nuys, CA 91401.
Make check payable to "City of Los Angeles". Once payment is received, your records will be faxed or mailed to you. All checks must have name & address pre-printed on them.

3) You may pay and pick up requested records in person at the respective office. We accept cash, checks, Visa, Mastercard, and American Express.

4) You may choose to leave your request with counter personnel for processing for later pick-up or faxing. We will call you to inform you when the research is done and the cost. Please allow 7-10 working days for processing research requests. Large requests may require a non-refundable deposit to be paid before printing copies and may take longer to process.

5) For any questions regarding records research or this form, please contact our 311 Call Center or (213) 473-3231- outside the city.

BUILDING AND SAFETY RECORDS SECTION

WHAT WE HAVE

- BUILDING PERMITS - New, Additions, Alterations, Rehab, Demolition
- CERTIFICATE OF OCCUPANCY - From 1946 - Present
- RANGE FILES - Any Violations/Orders to Comply on a Property
- PLOT PLANS - Small size drawing on the back of a Building Permit
- GEOLOGY/SOILS REPORT - Reports approved by the Grading Department
- AFFIDAVITS - Building & Safety Affidavits: Lot Ties, Parking, Maintenance of Building
- BOARD FILES - Action taken by the Board of Building & Safety Commissioners
- ADMIN. APPROVALS/VARIANCES/MODIFICATIONS - By Building & Safety
- ELECTRICAL, PLUMBING, MECHANICAL PERMITS - Only available from 1985 - 1990 and 1997 to present.
- BLUEPRINTS/PLANS - A Written consent from the present Owner, a written consent from the Architect/Engineer and a copy of the Owner's Grant Deed is needed before plans can be issued. No Blueprints available for Single Family Dwellings and any building under three stores, BEFORE 1978.

WHAT WE DO NOT HAVE

- INSPECTOR SIGN OFF CARDS
- VIOLATIONS WITHIN THE LAST 12 MONTHS
- SEPTIC TANK PERMITS/UNDERGROUND TANKS
- CONDITIONAL USE PERMITS
- ENVIRONMENTAL INFORMATION
- POLICE PERMITS/BUSINESS LICENSE
- PROPERTY OWNERS/GRANT DEEDS
- BLUEPRINTS - For Electrical and Plumbing
- SETBACKS, SANBORNE MAPS, ZA, CPC

TARGET PROPERTY SUMMARY

Hill Brothers Chemical Company
2159 bay st
los angeles, Los Angeles County, California 90021

USGS Quadrangle: ***Los Angeles, CA***
Target Property Geometry: ***Point***

Target Property Longitude(s)/Latitude(s):
(-118.227791, 34.031306)

County/Parish Covered:
Los Angeles (CA)

Zipcode(s) Covered:
Los Angeles CA: 90013, 90021, 90023, 90033

State(s) Covered:
CA

****Target property is located in Radon Zone 2.***
Zone 2 areas have a predicted average indoor radon screening level between 2 and 4 pCi/L (picocuries per liter).

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/10/2014 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SOUTHERN CALIFORNIA GAS COMPAN	*2424 EAST OLYMPIC BLVD.*	*SE 1/4 - 1/2 (0.454 mi.)*	*W97*	*172*

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/05/2014 has revealed that there are 26 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/18/2014 has revealed that there are 8 SWF/LF sites within approximately 0.5 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 09/08/2014 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SO CAL GAS CO	***2424 E OLYMPIC BL***	***SE 1/4 - 1/2 (0.454 mi.)***	***W95***	***152***

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SO CAL GAS/OLYMPIC BASE MGP	2424 E OLYMPIC BLVD	SE 1/4 - 1/2 (0.454 mi.)	W93	151
SO CAL GAS/LA-ALAMEDA MGP	725 CHANNING STREET	WNW 1/2 - 1 (0.548 mi.)	Z108	227

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 9 EDR US

EXECUTIVE SUMMARY

Hist Auto Stat sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Historical Generators:
Date form received by agency: 01/22/1992
Site name: WASTE TRANSFER AND RECYCLING
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

SANTA FE/W.A. GRANT (Continued) **S102860873**

Comments: DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA BOND EXP. PLAN:
Reponsible Party: COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description: This site was previously used to scrap electrical transformers.
Hazardous Waste Desc: Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env: The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status: In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002756606

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110059795574

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ANGELUS WESTERN PAPER FIBERS (Continued) **S101704329**

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Date form received by agency: 09/01/1996
Site name: SHELL OIL CO
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Manufactured Gas Plants:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were weere discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domesttic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a stanndby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility

CA BOND EXP. PLAN:

Reponsible Party: RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description: The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc: The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env: The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne

SOUTHERN CALIFORNIA GAS COMPANY, OLYMPIC BASE SITE (Continued) **S100833289**

particulates.

Site Activity Status: The Southern California Gas Company has completed a remedial investigation/feasibility study.

Background Info: The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs).
The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility.
A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently

OLYMPIC BASE (Continued) **S105689611**

experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste. The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

Handler Activities Summary:

U.S. importer of hazardous waste: No

SOUTHERN CALIFORNIA GAS COMPANY-OLYMPIC (Continued) **1000166039**

Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: 181
Waste name: 181

Waste code: 281
Waste name: 281

Waste code: 291
Waste name: 291

Waste code: 331
Waste name: 331

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Corrective Action Summary:
Event date: 06/30/1995
Event: RFA Completed

Event date: 06/30/1997
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 06/30/1997
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 07/09/2010
Event: CA550RC

Event date: 07/09/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

SOUTHERN CALIFORNIA GAS COMPANY-OLYMPIC (Continued) **1000166039**

Event date: 07/09/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/30/2011
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Alternate Address:	590 SOUTH SANTA FE AVENUE
Alternate City,St,Zip:	LOS ANGELES, CA 90013
Background Info:	The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus- industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing.
	Not reported
	The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986.
	Not reported
	Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Alternate Address: 2182 EAST 11TH STREET
Alternate City,St,Zip: LOS ANGELES, CA 90021
Background Info: The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company. As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 09/19/2000
Comments: DTSC entered into a Voluntary Cleanup Agreement (Agreement) (Docket Number HSA-A 99/00-171) with Whittaker Corporation (Proponent) to conduct a Preliminary Endangerment Assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smeltingsite identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Waste2:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Date: 03/25/1998
Comments: Former name of this site was "California Reception Center - LAC". This 20+ acre site is being broken into two irregularly-shaped parcels, with no identifiable addresses. The establishment of 2 parcels will facilitate addressing future activities. This site will now be known as Los Angeles CRA - Sale Parcel "497A" and represents one of the parcels. The other Parcel is Alameda Corridor-Sale Parcel "497B". CalSites # 19400011. Parcel "497A" will be the project of the Los Angeles Community Redevelopment Agency (CRA). CRA, in their "Brownfields Program" will complete an RI/FS on the 497A Parcel, obtain a purchase option from the State of California, and solicit foster redevelopment of the site. Parcel "497B" will be the project of the Alameda Corridor Transportation Authority (ACTA). Please see CalSites #19400011 for further information on Parcel "497B".

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/30/1992
Comments: While excavating the eastern area and demolishing all existing buildings, other areas were discovered to be contaminated with lead and VOCs (April'94). As a result the total volume of material excavated and removed prior to legislative cancellation of the prison project (Sept'92) was about 40,000 tons. Stabilization measures were also taken, including the implementation of dust control, fensing and posting, and site security. Further investigation and remediation was stopped due to lack of funds.

Alternate Address:	2435 E. WASHINGTON BLVD.
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated along the border of 2455 E. Washington Blvd. Results showed de-creasing contaminant concentrations with increasing distance

AMTRAK (Continued) **S101586462**

from 2425 E. Washington Blvd. property boundry. No source was identified at the Amtrak property.
Not reported
An approximately 50-acres site located in an industrial/ commerical area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation.
Not reported
Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to determine extent of chlorinated solvent contamination and also to identify any contributing sources.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	09/10/1993
Comments:	On September 1, 1993, the Department completed review of the PEA. Based on the information provided in the PEA report, the site does not appear to constitute a threat to human health/or the environment. Therefore, the Department concurred with the recommendation that "No Further Action" is warranted at the site.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	04/19/1993
Comments:	On March 29, 1993, the Department received the Notice of Intent to Initiate a PEA. Historical activities include machine shops, tool & die making, agricultural products and clothing manufacturing. 1910-20, the site was occupied by Kellifer Manufacturing Company. 1921-59, Tlomb Tool Co. (machine shop) was at the site. From 1960-1980 Troto Tool & Machine Shop was at the site. In 1980 the new building constructed and Liquette Clothing Company currently using for clothes manufacturing. Currently, the preperty is on sale. The preliminary soil screening investigation at the site revealed

CITY NATIONAL BANK (Continued) **S101480832**

that the fill dirt used in construction of foundation found to carry chemical residues. The fill dirt was contaminated with TRPH, halogenated organic compounds such as TCE & PCE. The site is completely covered with asphalt. A PEA is recommended due to the presence of contaminants at the site.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Corrective Action Summary:

Event date: 06/30/1994
Event: RFA Completed, Assessment was an RFA.

Event date: 10/13/1994
Event: RFA Completed, Assessment was an RFA.

Event date: 01/20/1995
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 08/11/2000
Event: RFI Imposition

Event date: 08/06/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 08/06/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 12/08/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013

Next Scheduled EDR Contact: 01/19/2015
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Next Scheduled EDR Contact: 02/16/2015
Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/25/2014
Date Data Arrived at EDR: 09/09/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Last EDR Contact: 10/08/2014
Next Scheduled EDR Contact: 01/19/2015
Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 08/16/2014
Date Data Arrived at EDR: 09/10/2014
Date Made Active in Reports: 10/20/2014
Number of Days to Update: 40

Source: EPA
Telephone: (415) 947-8000
Last EDR Contact: 09/10/2014
Next Scheduled EDR Contact: 12/22/2014
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Date Data Arrived at EDR: 07/03/1995

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

SITE RECONNAISSANCE DOCUMENTATION FORM

SITE RECONNASSIANCE CHECKLIST

Project Number: 0073-0001-001 Date: 11/21/2014

Project Name: Hill Brothers Chemical Co. Phase I Los Angeles

Site Name: Hill Brothers Chemical Co.

Site Address: 2159 Bay Street

City, State & Zip: Los Angeles, California 90021

Conducted By: Chet Pearson, Sean Roy and Tiffany Chen

Site Contact: Shane T. Burkhart Company: Hill Brothers Chemical Co.

Site Contact Phone: (623) 535-9955

Comments: Site recon accompanied by Shane T. Burkhart, Gary Smart, Nate Waters, and Dave Hernandez of HBCC.

Three employees present at the time of site recon.

General Site Conditions

Site:	Vacant:		Use:	storing/packing/transporting raw materials; distribution center
	Developed:	✓	Buildings:	2 warehouses (Warehouse 1, Warehouse 2A, 2B, 2C) and 1 office
	Topography:	Industrial, flat land		

	Stories	Construction	Use
Building #1:	2		Office
Building #2:	1		Warehouse 1
Building #3:	1		Warehosue 2A, 2B, 2C

SITE RECONNAISSANCE CHECKLIST

General Site Description: HBCC started 1923, purchase property in 1924. No on site truck fueling or maintenance. Facility fire in late 1940s, and was rebuilt. Current CEO has been with HBCC for over 40 years. Raw materials enter S & NW side of Property. Outside vendor brings in raw materials and stored in warehouse and arrives in pallets on bags . West warehouse is for storage. Kevlar, polypropylene, talc, barite, sand, and magnesium oxide stored in warehouse.

Exterior Observations	
	Distressed vegetation:
✓	Stained Soil or Pavement: At northeast corner of Warehouse 2a, water-oil dripping from the corner of the building created a stain on the asphalt. Appeared to be from air compressor.
✓	Pits, Ponds or Lagoons: Concrete sump with ~ 2-3 feet of sediment and murky,standing water located underneath the Milling Dock.
	Solid Waste, Fill Material:
	Wastewater:
	Wells:
✓	Pipes, vents, caps: and Sewer vents and pipes located on the east side of the office building, pipe and vents connected to the kitchen and restrooms

Other Observations: Warehouse 2A, 2B, 2C - no sumps and drains. Air Compressor above on mezzanine in Warehouse 2A Warehouse 1 - eye wash station installed in last 9 months.

SITE RECONNAISSANCE CHECKLIST

Petroleum Products and Hazardous Substances

Storage Areas:

ASTs: Yes | No ✓ Number of ASTs: 0

Contents: N/A Size: N/A gallons

Secondary Containment: Yes No

Type of Secondary Containment: Berm double walled Other

Location(s): N/A

Condition of AST: Good Fair Poor

Staining? Yes | No

Comments: Previously existed 2 ASTs that contained anhydrous ammonia use to make ammonia hydroxide nearby milling dock.

Drums/Containers Yes ✓ | No Number of Drums/Containers 13

Contents: Size: 55 gallons

Labels: Yes | No ✓

Secondary Containment: Yes No

Type of Secondary Containment: Berm Tray Overpack Other

Location(s): Outside, south of Warehouse 1, inside Warehouse 1, inside Warehouse 2A

Condition of Drum(s): Good Fair Poor

Staining? Yes | No

Comments: 8 unlabeled, metal 55 gal drums are missing lids, some containing partially filled white dried material located south of Warehouse 1. Trash stored in four, unlabeled 55 gal drums inside Warehouse 1 (three covered, one open). 1 polypropylene sealed, unlabeled 55 gal drum inside Warehouse 2C near toold workshop area.

SITE RECONNAISSANCE CHECKLIST

USTs: Yes | No ✓ Number of USTs: 0

Contents: N/A Size: N/A gallons

Contents: N/A Size: N/A gallons

Vent Pipes: Yes | No Fill Ports: Yes | No

UST Monitoring System present with records? Yes | No

Records Available? Yes | No

Location(s): N/A

Spills/Staining around fill ports/Pumps? Yes | No

USTs in Use? Yes | No

Dispensers: Yes | No ✓ Number of Dispensers:

N/A

General: Any Odors: No odors.

Pooled Liquid: Pool of unknown water (possibly storm water) collected at the bottom of a concrete lined sump underneath the Milling Dock.

Comments: EDR Radius report indicated tanks on the Property in past but current employees do not know of any underground tanks at the Property. Two former ASTs contained anhydrous ammonia bearby Milling Dock.

SITE RECONNAISSANCE CHECKLIST

Waste Storage, Handling

Exterior: Waste material generated by on-site operations picked up and transported by HBCC personnel to their facility in City of Industry for disposal.

Interior: Waste material generated by operation temporarily placed in 55 gal drums (1 unlabeled drum in Warehouse 2C 4 unlabeled drums in Warehouse 1)

Polychlorinated Biphenyls (PCBs)

Potential PCB containing Equipment:

Oil filled Electrical Transformers:	Yes	No ✓	Labeled:	Yes	No
Spills, Staining, Leaks:	Yes	No			
Owner:					
Oil Filled Electrical Capacitors:	Yes	No ✓	Labeled:	Yes	No
Spills, Staining, Leaks:	Yes	No			
Owner: Los Angeles Department of Water and Power					
Hydraulic Systems:	Yes ✓	No	Labeled:	Yes	No
Spills, Staining, Leaks:	Yes	No			
Waste Oil Tanks:	Yes	No	Labeled:	Yes	No
Spills, Staining, Leaks:	Yes	No ✓			
Pole Mounted Transformers:	Yes ✓	No	Labeled:	Yes	No
Spills, Staining, Leaks:	Yes	No			

Owner: Los Angeles Department of Water and Power

Comments: Multiple pole-mounted above ground transformers along north side of Bay Street -Pole # 73300M 21792M. Transformer # 60965, 90970, 90971.

SITE RECONNAISSANCE CHECKLIST

Adjoining Sites (including addresses)

North: 2121 Bay (?), 2143 Bay (Button and Ace Trims), 2135 Bay (?), 2133 Bay (?), 2125 Bay (Republic Input) Transformers in from of 2149 Bay. 7 Bay Truck Station at corner of Bay and Santa Fe ; 2130 Violet (Excel Metals)

South: Single story brick building with elevated concrete slab. Former clothing donation center. Piles of saw dust and random equipment strewn outside building. Storm water drain at corner of three adjoining sites. Recently installed security fencing.

East: 2161 Bay; North-East: Parking lot sold to Amtrak by HBCC (about 10 years ago); Railroad tracks Los Angeles River (concrete lined)

West: 2116 Bay - Viertel's 24-Hr towing.; 100 Santa Fe (Fi Yah House Music Studio), 1018 Santa Fe (Gallery 1018); 935 Santa Fe (Retail Pumps)

Interior Observations

Heating/Cooling System: Wall-mounted AC unit in the office. Old heating unit upstairs on second floor office- Natural gas hot water heater located at first floor of office.

Drains and/or Sumps: one 4'x4' scale built into the floor in Warehouse 1

Staining and /or Corrosion: Minor oil stains located on the concrete floor of Warehouse 1

Hydraulic Lifts/Elevators: No hydraulic lifts/elevators.

General Description of Interior of Building(s): Office- very old and fair to poor condition, 1st floor in use by employeees 2nd floor not occupied/used. Warehouse 1- storing and parking raw materials , Warehouse 2A, 2B, 2C - storing inventory Warehouse 2C for storage and maintenance (workshop tools)

Wastewater

Wastewater:

- ☐ Onsite disposal (septic system):
- ✓ Offsite Disposal: Sanitary Sewer

Exterior and Interior drains: No interior sewage drains other than three restrooms and four sinks. (1 toilet and 1 urinal and 1 sink in restroom downstairs in office, 1 sink in kitchen downstairs; 2 restrooms upstairs office - 2 toilets, two sinks) Exterior drains- one in front of the building by parking lot and one in the back near the southern property line.

Other Observations

Utilities:

- Electric: Southern California Edison
- Natural Gas: The Gas Co.
- Water: LADWP- Los Angeles Department of Water and Power
- Wastewater: LADWP - Los Angeles Department of Water and Power

Limitations:

- Access:
- Weather: ~70 degrees, sunny day
- Other:

SITE RECONAISSANCE CHECKLIST

General Comments: Relatively good housekeeping practices. No waste kept on site. Waste material generated by on-site operations are picked up and transported by HBCC personnel to their City of Industry facility for disposal.

Storage areas for HBCC inventory and raw materials are Warehouse , Warehouse 2A, 2B, 2C, and two Conex trailers near the loading zone at the north end of the property facing Bay Street. No historical ASTs or USTs observed on site. Possible former locations of previous ASTs are outside near the Milling Dock. Former railroad spur on the south side of the Property. No HBCC vehicles are maintained at the facility. Propane powered forklift used to move materials around site. Outside service conducts forklift maintenance- all fluids removed from Property. Spare propance tanks secured in locked cabinent inside Warehouse 1.

INTERVIEW DOCUMENTATION FORM

Instructions – Thank you for completing this environmental questionnaire. Please answer the questions below based on your knowledge. You are not expected to find the answers. If you answer "yes" to any of the questions, please provide additional information, or an AE representative will contact you to go over the information. Feel free to attach any information you think might be helpful with your answers. Your information is important to us in assessing the Property, so please complete the form and return as soon as possible.

PROPERTY INFORMATION

Address: 2159 BAY STREET City: LOS ANGELES State: CA

Current Occupants: HILL BROTHERS CHEMICAL COMPANY

Current Activities: WAREHOUSING, BLENDING AND PACKAGING DRY/SOLID NON-HAZARDOUS MATERIALS

UTILITY INFORMATION

Please list the service providers for the following utilities:

Electric: SOUTHERN CALIFORNIA EDISON Water: L.A. DEP'T OF WATER & POWER

Gas: THE GAS CO. Sewer: L.A. DEP'T OF WATER & POWER

Solid Waste: CITY OF INDUSTRY

SOLID WASTE

☐ Yes ☐ No ☐ Unk Do you know if solid waste like garbage, trash, demolition debris, construction debris, landscaping debris, liquids, containers have been discarded on or buried beneath the Property?

☐ Yes ☐ No ☐ Unk Do you know if the Property has ever operated as a landfill?

☐ Yes ☐ No ☐ Unk Has soil from an unknown sources been placed, spread, or piled on the surface or used as fill on the Property?

☐ Yes ☐ No ☐ Unk Do you know if used tires were ever discarded on or buried beneath the Property?

☐ Yes ☐ No ☐ Unk Are you aware of any former stock ponds, wastewater ponds, silage pits, or other excavations that have been filled on the Property?

WASTEWATER AND LIQUID DISCHARGES

☐ Yes ☐ No ☐ Unk Are you aware of current or former pits, ponds or lagoons for liquid wastes on the Property?

☐ Yes ☐ No ☐ Unk Are you aware of any current or past wastewater interceptors, clarifiers, or sumps on the Property?

STORAGE TANKS

☐ Yes ☐ No ☐ Unk Are there any aboveground storage tanks (ASTs) currently located on the Property?

☒ Yes ☐ No ☐ Unk Are you aware of any past ASTs located on the Property?

☐ Yes ☒ No ☐ Unk Are there any underground storage tanks (USTs) currently located on the Property?

☒ Yes ☐ No ☐ Unk Are you aware of any past USTs located on the Property?

HAZARDOUS SUBSTANCES, PETROLEUM PRODUCTS AND CONTAINERS

☒ Yes ☐ No ☐ Unk Are there any containers of hazardous chemicals or petroleum products currently stored or used on the Property?

☒ Yes ☐ No ☐ Unk Are you aware of past usage of hazardous chemicals or petroleum products on the Property?

☐ Yes ☐ No ☐ Unk Do you know of any current or previous in-ground hydraulic lifts on the Property?

☐ Yes ☒ No ☐ Unk Have pesticides ever been mixed, stored or applied on the Property?

STORMWATER AND DRAINAGE PROVISIONS

☐ Yes ☐ No ☐ Unk Are there any drywells on the Property?

☐ Yes ☐ No ☐ Unk If yes, do you know if they are registered with the state agency?

☐ Yes ☒ No ☐ Unk Are there any retention or detention basins on the Property?

☒ Yes ☐ No ☐ Unk Do you know if stormwater from an off-site source flows onto the Property?

WELLS

Do you know of any current or former groundwater wells on the Property?
If Yes, check type of well(s):

☐ Irrigation ☐ Domestic ☐ Livestock ☐ Monitoring ☐ Geotechnical

CURRENT/PREVIOUS ENVIRONMENTAL ACTIONS

☐ Yes ☒ No ☐ Unk Are you aware of any previous environmental inspections, environmental investigations, environmental site assessments, environmental violations, pending law suits or administrative actions, or environmental liens relating to the Property, or to the current or past owners, occupants, or facilities which were on the Property?

ENVIRONMENTAL DOCUMENTS

Do you know of any of the following types of documents about the Property, and can you provide copies to AE? Check all that apply:

- ☐ Prior environmental assessment
- ☐ reports Environmental audit reports
- ☒ Hazardous Waste Generator Notices
- ☐ Geotechnical Reports
- ☐ SARA Title III/Form R Reports
- ☐ Title Records
- ☐ Hazardous Waste Manifests
- ☐ Water Well Records
- ☐ Drywell Registration Records
- ☒ NPDES Permits
- ☒ Wastewater Permits
- ☐ Air Emissions Permits
- ☐ UST Registrations
- ☐ AST Registrations
- ☒ Material Safety Data Sheets
- ☐ Safety Plans
- ☐ SPCC Plan
- ☒ SWPPP

PRIOR SITE USES

Do you know if the Property was used for any of the following businesses? Check all that apply. List other past uses/owners in the notes section below.

- ☐ Gasoline or Diesel Fueling Station
- ☐ Heavy Equipment Repair or Maintenance
- ☐ Commercial Laundry
- ☐ Commercial Printing
- ☒ Warehousing/Distribution
- ☐ Farm Operation: Agriculture or Dairy
- ☐ Automotive Sales or Services
- ☐ Dry-cleaning
- ☐ Medical Services
- ☒ Industrial/Manufacturing
- ☐ Junkyard or Salvage Business
- ☒ Laboratory or Chemical Handling

PERSON COMPLETING THE FORM

Name: _____ Years Familiar w/Property: 10

Business Affiliation: CORPORATE DIRECTOR OF SAFETY & COMPLIANCE

Address: 7121 WEST BELL ROAD, SUITE 250 City: GLENDALE State: AZ Zip: 85308

Tel: 623-535-9955 Fax: 623-321-9955 E-Mail: SHANE@HILLBROTHERS.COM

Relationship to the Property (please check all that apply):

Owner	Occupant	Key Site Manager
☐ Individual Owner	☒ Owner Occupant	☐ Property Manager
☒ Corporation or LLC	☒ Business Occupant	☐ Facilities Manager
☐ Partnership	☐ Business Employee	☐ Maintenance Supervisor
☐ Trust/Trustee		☒ Plant Supervisor
☐ Owner's Broker		☐ Leasing Agent

Signature: _____ Date Completed: NOVEMBER 25, 2014

NOTES

APPENDIX I

ENVIRONMENTAL PROFESSIONAL RESUME

Education:
MSE, Civil Engineering, Arizona State University

BSE, Civil Engineering, Arizona State University

Registrations:
Professional Engineer, Civil and Environmental, Arizona, 1986/1999

Professional Engineer, Civil, New Mexico, 1992

Professional Engineer, Civil, Nevada, 1992

Professional Engineer, Civil, Colorado, 1996

Professional Engineer, Civil, Utah, 1998

Former Board Member of Arizona State Board of Technical Registration

40-Hour Health & Safety Training, OSHA
8-Hour Refresher Training, OSHA

Years of Experience:
31

Mr. Pearson has more than 30 years of experience on a wide variety of environmental projects. His experience includes Phase I, II, and III Environmental Site Assessments (ESAs); research on site histories; environmental compliance audits; asbestos/lead-based paint surveys; indoor air quality studies; underground storage tank (UST) corrective actions; environmental compliance plans; permitting; soil and groundwater investigations; soil-gas surveys; feasibility studies; developing remedial plans and specifications; pilot testing; design and installation of remediation systems; operation and maintenance of soil and groundwater remediation systems; risk assessments; technical report preparation; correspondence with involved attorneys and regulatory agencies; and expert witness work.

Mr. Pearson has completed over one thousand Phase I and II ESAs throughout the Southwestern US. He has assessed a wide range of properties from a small bus stop right-of-way take to miles of land for flood control channels to thousands of acres of land for future master-planned communities. He has also assessed a wide range of properties including residential subdivisions, finished lots, retail centers, shopping centers with dry cleaners, service stations, office buildings, high-rise multi-use retail and office buildings, manufacturing facilities, industrial plants, semi-conductor facilities, power generating stations, multi-tenant industrial buildings, automotive dealerships, automotive repair facilities, equipment repair and rental yards, service stations; fuel distribution facilities, junkyards, landfills, shooting ranges, and Superfund facilities. He has also conducted numerous remedial investigations and site characterizations, feasibility studies, emergency response actions, risk assessments, soil remediation, and groundwater remediation project. He has assisted many clients with obtaining closure from regulatory agencies on a wide variety of matters.

Relevant project experience includes:

Phase I and II ESA, CityScape Development – Phoenix, Arizona: Principal on a large-scale development in downtown Phoenix. Services included reviewing all previous environmental reports prepared by others and conducting Phase I and II ESAs on various parts of the three city-block project. The previous development dated back to the 1880s. Oversaw the archaeological survey of one block prior to start of construction. Observed and monitored the excavation for the below-grade parking structure to evaluate found items. Assisted with the characterization and remediation of a former heating oil tank, impacted soils, asbestos-containing materials (ACMs), and solid waste materials. Conducted multiple Phase I ESAs on portions of the project.

Phase I and II ESAs, Asbestos Survey, and Remediation Oversight, Outfall Channel Project - Goodyear, Arizona: Project Principal for Phase I ESA of a planned 5-mile long outfall channel. The channel alignment crossed farm fields, farm complexes, residential properties, and some commercial sites. Recommended and conducted Phase II ESA services in several areas including a former crop duster landing strip and at a petroleum pipeline release area. Conducted an Asbestos Survey for demolition of a house. Provided remediation oversight services during remedial efforts on pesticide-impacted soils.

Phase I and II ESAs/Environmental Compliance Audits/UST Corrective Actions, Vehicle Maintenance Facilities – Arizona, California, Nevada, New Mexico, Utah, Colorado, Texas, and Idaho: Project Principal for conducting various Phase I, II, and III ESAs and compliance services throughout the Western U.S. including four facilities in the Los Angeles, California area. Conducted site assessments on developed commercial properties (equipment rental yards) and vacant lots. Conducted compliance audits on existing facilities involving waste characterizations, evaluations of treatment/disposal alternatives, reviewing chemical handling procedures, and developing a corporate policy manual and Spill Prevention Control and Countermeasure (SPCC) Plans. Directed underground storage tank (UST) removals/corrective actions, removal of hydraulic lifts, excavation of contaminated soils, and soil and groundwater investigations/remediation at several sites.

Phase I ESAs and some Phase II ESAs, 24 Commercial Properties – Arizona, California, and Texas: Project Principal for 24 Phase I ESAs on various commercial properties over a two-month period. Directed simultaneous assessments of 24 Properties in three states. Conducted thorough reviews of site histories dating back to the 1700s in some cases. Researched a variety of special resource issues such as wetlands, endangered species, etc. Identified several environmental issues, and directed Phase II assessments to evaluate these issues. Delineated the extent of contaminated soils. Developed cost estimates for the excavation and off-site disposal of solid waste and impacted soils.

ESA Services on Caterpillar Repair Facility – Mesa, Arizona: Project Principal for assessment of a large equipment repair and maintenance facility including the assessment of 39 current and previous USTs, reviewed State Superfund documents, reviewed drywell records to document proper abandonment, conducted comprehensive asbestos surveys on a few buildings, prepared an Asbestos Operations and Maintenance Plan, and prepared a SPCC Plan. We assessed the 39 UST areas to document existing soil data compared to current soil remediation levels (SRLs). Some deficiencies were identified, and additional site characterization work was completed. Removed the last 5 remaining USTs and an oil-water separator. Compiled a comprehensive ESA report documenting over 50 years of activities on the Property.

Phase I and II ESA, Equipment Rental and Truck Repair Facility - Yucaipa, California. Principal for Phase I and II ESA of an equipment rental and truck repair facility since 1960. The Property was historically developed with a house and barn. Documented a long history of equipment and vehicle fueling and repairing at the facility. Conducted Phase II ESA on various issues identified at the facility including several areas of heavily stained soils. Identified contaminant concentrations above cleanup levels. Conducted remedial actions and verified remediation of the impacted soils.

Phase I and II ESA/Demolition Oversight/Remediation Industrial Facility - Chandler, Arizona. Principal for assessment of a metal plating facility and compliance with a Consent Order from the Arizona Department of Environmental Quality (ADEQ). Assessed various areas identified as suspected release areas while the plant remained operational. Various process areas were found to contain soils with elevated concentrations of heavy metals and cyanide. Conducted a comprehensive Phase I/II ESA with thousands of soil samples to identify additional suspect areas. Assisted the client with entering Voluntary Remediation Program at ADEQ. Oversaw asbestos survey and oversight of facility demolition activities. Oversaw remediation of impacted soils and concrete, and assisted the client with obtaining closure and a No Further Action (NFA) letter from ADEQ. The thorough ESA and remediation services allowed the Property sale to a developer. Continued to provide environmental services to the developer with obtaining municipal credits for existing conditions, and conducting Phase I ESAs for prospective purchasers and tenants of portions of the Property.

Phase I and II Environmental Site Assessment/Remediation, Verrado Master Planned Community - Buckeye, Arizona: Project Principal for a Phase I and II ESA on an 8,000-acre Site formerly used for testing and maintaining heavy earth moving equipment. The Property included vehicle/equipment maintenance area, numerous borrow and material processing areas, UST areas, wash racks, septic systems, groundwater wells, seepage pits, landfill areas, and asbestos-containing materials. Directed an extensive Phase II investigation. Developed cost estimates for the excavation and off-site disposal of landfill materials, abatement of ACMs, and the remediation of impacted soils. Directed extensive remedial excavation and off-site disposal of contaminated soils, blasting materials, and landfill materials and remediation of petroleum-impacted soils by bioventing. Obtained aquifer protection permit (APP) closure on the septic system. Conducted numerous Phase I ESAs as parcels were sold to various home builders.

Phase I ESA, Arizona Department of Transportation (ADOT) Yard - Benson, Arizona: ADOT leased land for a yard from Freeport-McMoRan Corporation (FMC), and ADOT was planning to vacate the Property. The lease required a Phase I ESA by a qualified and approved firm and individual. ADOT selected Mr. Pearson, and FMC approved him to conduct the assessment. The Property was located in the Lowell District of Bisbee founded in 1880, and the Lavender Pit Mine was located less than one-half mile from the Property. The historical mining usages of the Property were researched at several different local sources, and interviews were conducted with various current and former FMC employees. The Property had historically been covered with mine waste materials, and FMC had been in the process of remediating the mine wastes on adjacent sites. The Property had not yet been remediated due to ADOT's occupancy. A historic smelter was located about 2 miles from the Property, so we reviewed ADEQ and EPA records on historic dust emissions and heavy metals concentrations in the vicinity. Documented current and historic activities on the Property and vicinity to the satisfaction of ADOT and FMC.

Phase I ESAs, Several Mining Properties – near Jerome and Clarkdale, Arizona: Project Principal for several Phase I ESAs on several mining properties including a residential house, vacant desert land, and some vacant land with mine-related facilities. Some of the development dated back to the 1920s. Significant research was conducted to evaluate the histories associated with these Properties. We used local repositories of historic information and interviews with residents and mine employees. An asbestos survey was conducted on a residence from the 1920s. There were various mining facilities located on or near these Properties, and there were aquifer protection permit (APP) files for many of these facilities. We reviewed the APP files at ADEQ. Documented the activities on the Properties to allow for land transactions.

Phase I ESA on Power Generating Station – Gila Bend, Arizona: Project Principal for a Phase I ESA on 1,100 acres containing a natural-gas-fired electricity generating station, agricultural farm fields, irrigation wells, and vacant desert land. The client was purchasing a percentage interest in the facility, but we had to assess the entire facility. The power generating station included lined evaporation basins, cooling towers, substations, paved roads, parking lots, a water treatment system, oil/water separators, an administration building, a warehouse/shop, a waste containment area, an aboveground storage tank (AST) farm, and numerous electrical control and switch buildings. We provided a comprehensive assessment of the current and past operations at the facility.

Phase I and II ESA, Master-Planned Community - Coolidge, Arizona. Project Principal for Phase I and II ESA for a 3,172-acre community. The Property was predominantly farm land with numerous developed areas and some vacant desert land. Previous Phase I ESAs had identified some recognized environmental conditions, but there were several significant environmental concerns that were not discussed. Directed the initial Phase II ESA including a pesticide and herbicide screening of the farm fields. Reviewed UST and LUST files at ADEQ and identified additional issues. Recommended additional Phase II ESA work.

Phase I ESA, Greenlee County Airport, ADEQ Brownfields Program - Greenlee County, Arizona. Project Principal for assessment of 42 acres of land within the airport. The Property included undeveloped vacant land used for access to the airport and a shed used to store buses for the local school district. Nearby airport facilities included the terminal, taxiway and runways, apron, and a historic runway. Documented the bus storage activities and verified that no bus maintenance or fueling activities occurred on the Property. No listings of environmental significance were identified in the databases searched. Researched the historical usages of the airport including historical military operation.

Phase I ESA, Retail Center - Phoenix, Arizona: Project Principal for a Phase I ESA on a retail center with a grocery store. The Property was previously part of the Cave Creek Landfill. The shopping center was developed over existing landfill materials. We reviewed previous sampling and testing of the soils and waste materials to compare the test results to current standards. Our assessment also included an extensive review of the existing landfill gas protection system, review of previous monitoring of the system, and a review of the City of Phoenix and ADEQ files on the Cave Creek Landfill with respect to existing contamination and methane migration issues. We conducted monitoring of the landfill gas protection system to verify current methane and volatile organic compound (VOC) levels beneath the building. We assisted the prospective purchaser with evaluating the current requirements to penetrate and patch the liner associated with the landfill gas protection system.

Phase I and II ESAs, Remedial Investigations, Feasibility Studies, and UST Corrective Actions on Ten Service Stations - Maricopa and Pinal Counties, Arizona. Project Principal and/or Project Manager for Phase I ESAs and UST audits on ten self-service gasoline stations. Documented UST systems, evaluated compliance status, and documented site histories. Directed UST removals. Conducted extensive remedial investigations involving soil and groundwater sampling and testing to delineate the extent of releases from current and historic USTs. Conducted feasibility studies and prepared Corrective Action Plans on several sites. Remedial efforts on soil and/or groundwater included excavation and on-site bioremediation or thermal desorption; vapor extraction using thermal and catalytic oxidizers, internal combustion engines, and/or carbon; air-sparging; and in situ bioremediation using oxygen release compounds. Directed free-product removal. Directed corrective actions at all ten Sites, and ADEQ issued closure letters for all ten Sites. Provided expert witness testimony. Prepared risk assessment on a site.

Phase I ESA on Two Construction Debris Landfills – Phoenix, Arizona. Project Principal for a Phase I ESA on about 85 acres of vacant land containing two current construction debris landfill operations and the former 7th Avenue City of Phoenix landfill. Reviewed existing Phase I and II ESAs on file with the City of Phoenix, and reviewed City of Phoenix and ADEQ files on the former 7th Avenue Landfill with respect to existing soil and groundwater contamination and methane generation and migration issues. The Property was located adjacent to the former 19th Avenue Landfill Superfund Site, so we also reviewed files on this adjacent closed landfill. Based on our review, we developed a Phase II ESA scope of services to further evaluate the waste materials on the Property.

Phase II ESA Site Characterization and Remediation Oversight, Surprise Sportsman Club - Surprise, Arizona. Principal for a comprehensive Site Characterization of former rifle, pistol, and shotgun shooting range. Work included sampling and testing of surface soils throughout the shooting range, soils in the impact berms, and the surface debris in the former shotgun shooting range areas; investigating former septic systems; and conducting a comprehensive asbestos survey of the structures on the Property. Observed and monitored the remedial activities including the excavation and off-site disposal of lead and clay target debris; excavation, treatment, and/or off-site disposal of soils with contaminant concentrations exceeding residential soil remediation levels (SRLs); and confirmation soil sampling and testing. Assisted the client with obtaining closure and NFA letter from ADEQ.

PRIVILEGED AND CONFIDENTIAL ATTORNEY WORK PRODUCT. DO NOT DISTRIBUTE, COMMINGLE OR DUPLICATE WITHOUT PRIOR CLEARANCE FROM LEGAL COUNSEL

1.0 INTRODUCTION

Allwyn Environmental (Allwyn) understands that Hill Brothers Chemical Company (HBCC) is considering the sale of the Property located at 2159 Bay Street, Los Angeles, California (Site) (Figure 1). HBCC has reportedly occupied the Property since the 1920s. The facility has historically been used for the distribution, repackaging, and manufacturing of chemicals, mainly for use in the building industry. Major activities include production and resale of acids and ammonia, manufacturing and sales of coatings, and repackaging and sales of certain dry granular additives for sealants and coatings. The facility currently includes two building areas with offices and warehouses.

Allwyn recently prepared a Phase I Environmental Site Assessment (ESA) for the Property, *Hill Brothers Chemical Company, Phase I Environmental Site Assessment, 2159 Bay Street, Los Angeles, California, Parcel Nos. 5166-001-002, 5166-005-010, 5166-005-013, and 5166-005-009*, dated January 12, 2015 (Allwyn, 2015a). This Phase I ESA did not reveal the evidence of current or controlled Recognized Environmental Conditions (RECs) in connection with the Property, except for the possible exceptions:

- Presence of one diesel fuel underground storage tank (UST);
- Potential presence of up to eight unconfirmed underground tanks; and
- Historical mechanics shop and automotive repair uses.

Allwyn recommended additional Site assessment of these matters and to address these RECs. During a file review at the City of Los Angeles Fire Department Allwyn obtained a drawing of a proposed UST system that was submitted as part of a permit in January 1970. This drawing indicates the location of the UST system was near the southwest corner of Warehouse 2C at the Site. A copy of this drawing is included in Appendix A.

Allwyn, on behalf of HBCC, has prepared this *Phase II Site Assessment Report – 2159 Bay Street, Los Angeles, California* (Report), to document the field work and findings for the drilling and sampling activities that were recently conducted at the Site. Soil boring locations were selected based on the recommendations of the Phase I ESA, historical areas of interest, and to provide general coverage of shallow subsurface conditions (Figures 2 and 3).

The activities described in this Report were conducted in accordance with the *Phase II Environmental Site Assessment, Hill Brothers Chemical Company, 2159 Bay Street, Los Angeles, California Proposal Number 1501-07* (Proposal), dated 16 January, 2015 (Allwyn, 2015b). Deviations from the proposed scope of work are described below.

1.1 Deviations from the Proposed Scope of Work

The following deviations from the proposed scope of work were:

- Soil boring SB3 encountered auger refusal at a depth of 16 feet below ground surface (bgs) and did not achieve the proposed depth of 20 feet bgs;
- Soil boring SB12 encountered auger refusal at a depth of 16 feet bgs and did not achieve the proposed depth of 20 feet bgs; and
- A total of 71 soil samples were analyzed for total petroleum hydrocarbons instead of the proposed 74 soil samples due to a lack of sample recovery and auger refusal.

2.0 SCOPE OF ACTIVITIES

As indicated in the Proposal, Allwyn performed pre-field activities, prepared a Health and Safety Plan (HASP), conducted a limited geophysical survey, drilled and sampled 19 soil borings, managed the investigative derived waste, and prepared this Report. The purpose of the scope of work was to investigate historical areas of interest, and to provide general coverage of shallow subsurface soil conditions at the Site.

Analytical results of soil samples will be compared to applicable United States Environmental Protection Agency (EPA) Region 9, Regional Screening Levels (RSLs) for industrial soil, where appropriate. "*RSLs are risk-based concentrations derived from standardized equations combining exposure information assumptions with EPA toxicity data. RSLs are considered by the EPA to be protective for humans (including sensitive groups) over a lifetime; however, RSLs are not always applicable to a particular site and do not address non-human health endpoints, such as ecological impacts.*

RSLs are intended to be used for site "screening" and as initial cleanup goals, if applicable. RSLs are not de facto cleanup standards and should not be applied as such. The RSL's role in site "screening" is to help identify areas, contaminants, and conditions that require further attention at a particular site. Generally, at sites where contaminant concentrations fall below RSLs, no further action or study is warranted under the Superfund program, so long as the exposure assumptions at a site match those taken into account by the RSL calculations. Chemical concentrations above the RSL would not automatically designate a site as "dirty" or trigger a response action; however, exceeding a RSL suggests that further evaluation of the potential risks by site contaminants is appropriate."

2.1 Pre-Field Activities

On January 20, 2015, Allwyn mobilized to the Site to mark anticipated boring locations, confirm overhead utility clearance, and verify the removal of stored materials and items in planned work areas. Allwyn worked with the HBCC personnel to clear the work areas. None of the 19 proposed boring locations were located in concrete pavement so there was no need for concrete coring.

Boring permits were not anticipated based on the proposed depths of 20 feet bgs for the borings. Los Angeles County, Public Health Department requires boring permits for soil borings extending to a depth of 50 feet or greater or if groundwater is encountered prior to a depth of 50 feet bgs.

2.1.1 Health and Safety Plan

A HASP for work conducted at the Site and workers within the "exclusion zone" was prepared by Allwyn pursuant to the regulations found in 29 Code of Federal Regulations (CFR) Part 1910.120 and California

Code of Regulations (CCR), Title 8, Section 5192. The HASP prepared for the work scope outlined the potential chemical and physical hazards that could be encountered during the drilling and sampling activities. The appropriate personal protective equipment and emergency response procedures for the anticipated Site-specific chemical and physical hazards were detailed in this HASP. Contracted personnel involved with the field work authorized and abided by the HASP.

2.1.2 Underground Utility Locating

Prior to drilling, Underground Service Alert of southern California (USA) was notified, as required by state law. On January 21, 2015, USA issued ticket number A50210235 for the utility notification request.

2.1.3 Surface Geophysics

On January 27, 2015, a private utility locating subcontractor, Southwest Geophysics, Inc. (Southwest), was also retained to clear the proposed drilling locations of private utilities and conduct a limited geophysical survey prior to the initiation of intrusive activities. The following equipment was used: Geonics EM61 MK2 time domain instrument, Schonstedt GA-52 magnetic gradiometer, Fisher M-Scope TW-6 pipe and cable locator, RD8000 line tracer, and GSSI SIR 3000 Ground Penetrating Radar (GPR) unit using a 400 MHz transducer.

Observations of anomalies, suspected piping, and excavations were marked out in the vicinity of the proposed borings and areas of interest including the northeast driveway/loading dock (near soil borings SB18 and SB19), the southwest corner of Warehouse 2C (soil borings SB14, SB15, SB16, and SB17) and the western driveway (soil borings SB1, SB2, and SB3). There was no indications of potential USTs or excavations in the northeast driveway/loading dock location.

There was however a rather large apparent excavation on the west side of Warehouse 2C which encompass soil borings SB16 and SB17. The apparent excavation and surface patching measures approximately 20 feet x 10 feet oriented North-South. Proposed soil borings SB16 and SB17 lie within and along the eastern edge of the apparent excavation. Proposed soil boring SB3 is just to the west-southwest of the apparent excavation. There appears to be possible vent and product piping coming off the southern end of the suspect excavation which run to the west wall of the southwest corner of Warehouse 2C. There are visible pipes sticking out along the west wall near the corner that have been cut off at ground level. This is interpreted to be a former/removed UST system with vent and product piping remaining in place near soil boring SB16. There appears to be a former boring location in the center of the excavation with

an approximate diameter of 8-inches and patched with concrete. In addition, there is an unsurfaced area of soil measuring approximately 3 feet x 2 feet on the south side of the same corner of Warehouse 2C that may have been a dispenser location near soil boring SB15.

There was also an approximate 6-foot diameter ring-like circular anomaly just north of soil boring SB2 which did not appear to be an excavation or a UST. Lastly, a small apparent partial excavation is present just to the north of soil boring SB8 south of the railroad tracks. The remaining proposed boring locations are clear of any large anomalies or apparent excavations.

2.1.4 Subcontractor Mobilization

Prior to conducting the field activities, the drilling subcontractor, Yellow Jacket Drilling Services (Yellow Jacket) began mobilizing appropriate equipment and materials required to perform the work to the Site. Field activities began once the Site preparation activities were completed.

2.1.5 Pre-field Meeting

A pre-field meeting was conducted at the Site between Allwyn and Yellow Jacket at the onset of initiating the field activities. During the meeting, Allwyn confirmed the work to be performed, the health and safety measures that were to be implemented by Allwyn and Yellow Jacket, and the project schedule.

2.2 Drilling and Sampling of Soil Borings

Allwyn subcontracted Yellow Jacket, a California Department of Water Resources (DWR) licensed driller to drill the 19 boring and sampling locations (Figure 4). Drilling and sampling activities were conducted from January 28 to 30, 2015. The soil borings were advanced to approximately 20 feet bgs with the exception of soil borings SB3 and SB16 which both encountered auger refusal at 16 feet bgs at a coarse gravel layer.

During borehole advancement, a California-certified Professional Geologist prepared lithologic descriptions of material derived from each 5-foot interval and also at formation changes. The soil descriptions were conducted using visual-manual procedures of Unified Soil Classification System (USCS). Soil cuttings were placed in 55-gallon drums, labeled, and stored on-Site for future disposal. The soil descriptions were recorded on field boring log forms. Appendix B includes the soil boring logs.

Drilling was performed using a limited access hollow-stem auger drill rig. During the drilling activities, soil samples were collected at approximate five-foot intervals with a split-spoon type sampler. Soil samples were driven into stainless steel tubes. The two ends of the sample tubes were covered with Teflon

sheeting, tightly closed with end caps, labeled, and stored in an ice filled cooler. The samples were picked up, transported, and submitted to Eurofins-Calscience Laboratories (Calscience) of Garden Grove, California for analysis. Chain-of-custody procedures were implemented for sample tracking. A total of 81 soil samples were collected during the drilling of the 19 soil borings. Each soil sample was labeled as follows:

- Sample Identification
- Date and time of sample collection
- Initials of the sampler
- Project number
- Client Name

A total of 71 soil samples were analyzed for total petroleum hydrocarbons (TPH) in the gasoline range (TPHg), diesel range (TPHd), and oil range (TPHo) following EPA Test Method 8015B Modified. Five select soil samples were analyzed for volatile organic compounds (VOCs) following EPA Test Method 8260B and for polynuclear aromatic hydrocarbons (PAHs) following EPA Test Method 8270C SIM. A total of 10 soil samples were analyzed for Resource Conservation and Recovery Act (RCRA) 8 Metals following EPA Test Method 6010B/7471A. Appendix C presents a photograph log of the soil sampling activities.

2.2.1 Equipment Decontamination

Subsurface drilling equipment was decontaminated before mobilization to the Site, after drilling each boring, and prior to demobilization from the Site. Drilling equipment was decontaminated by pressure washing within a self-contained trailer. The split-spoon sampler was decontaminated prior to collection of each soil sample by scrubbing with a brush using Alconox (a laboratory-grade detergent) and distilled or purified water, followed by double rinsing with distilled or purified water.

2.2.2 Field Screening

Soil samples were monitored for organic vapors using a MiniRae 2000® photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp for screening VOCs. The screening equipment was calibrated against isobutylene gas having a concentration of 100 parts per million (ppm). Monitoring was performed by placing a sample of soil removed from soil cores into a plastic Zip-lock™ bag. The bag was sealed and soil was broken up inside the bag. The PID probe was then inserted into the bag to monitor the headspace. PID measurements are included on the borings logs included as Appendix B.

2.3 Management of Investigative Derived Waste

The storage and disposal of IDW was performed in accordance with industry standards and EPA rules and regulations. IDW generated during soil sampling and equipment decontamination was stored in 55-gallon drums pending characterization and profiling for disposal. As part of the waste profiling process the disposal facility has requested the additional analysis of soil sample SB4-2 for Soluble Threshold Limit Concentration (STLC) for lead by EPA Test 6010B. The waste profiles will be submitted to HBCC in the near future for review and signature. Copies of the non-hazardous waste manifests will be sent directly to HBCC from the disposal facility.

2.4 Site Topography

Based on Allwyn Site reconnaissance, the Property and neighboring vicinity were developed land in an urban area. The Property is located within the coverage area of Los Angeles, California 7.5 Minute Quadrangle United States Geological Service (USGS) map which Allwyn viewed through www.usgs.gov. Based on the surface contours on this map, the terrain of the Property and neighboring vicinity appears relatively flat. The USGS map showed an approximate elevation of the Property as about 243 to 244 feet above mean sea level, and Google Earth showed an approximate elevation of 244 feet above mean sea level for the Property. Surface runoff in the Property vicinity was generally to the south and southeast likely draining to the Los Angeles River located east of the Property.

2.5 Site Geology

Based on a review of the above referenced geological map, the Site is generally underlain by a Holocene stratigraphic unit designated as Quaternary Alluvium deposits (Qay2). These young surficial deposits are characterized by unconsolidated and uncemented gravel, sand, silt, and clay. These deposits are interpreted to overlay a late Pleistocene older alluvial stratigraphic unit characterized by moderate to well consolidated and slightly to well cemented gravel, sand, silt, and clay.

2.5.1 Fill

A layer of fill material was encountered across much of the Site, varying in depth from a few inches thick to approximately 5 feet, with an average thickness of approximately 2 feet. Please note that fill material was observed to a depth of 15 feet bgs in soil boring SB16 and to a depth of 9 feet bgs in soil boring SB17 which were located in the interpreted former UST excavation near Warehouse 2C. See boring logs for details. The fill material generally consisted of a dark yellowish brown very fine- to fine-grained silty sand with minor debris (i.e., brick and asphalt fragments).

2.5.2 Quaternary Alluvium Deposits

Based on the above-referenced geological map and lithologic characterization during the current soil boring activities at the Site, unconsolidated sedimentary strata

encountered were interpreted to be that of the Holocene Quaternary Alluvium deposits. These alluvial deposits were observed to consist of pale yellowish brown to light olive gray, lenses of silty sand, well sorted sand, well graded sand, and gravels, of various grain sizes and thicknesses.

2.5.3 Site Hydrogeology

The Site is interpreted to be located in the Chavez Rivine Hydrologic Subarea (50401) within the Los Angeles Hydrologic Unit. According to the Regional Water Quality Control Board (RWQCB), groundwater within this hydrologic subarea has been designated as having existing beneficial uses for municipal, industrial, process, and agricultural supply. The hydrologic areas and water use designations were presented in the LARWQCB's "Basin Plan" (Plan) originally adopted in 1994 and revised in August 2014. The Chavez Rivine hydrologic subarea is part of the Coastal Plain of Los Angeles, Central Sub-Basin. The California Department of Water Resources has divided the Central Sub-Basin into four separate sections: Los Angeles Forebay, the Montebello Forebay, the Whitter and the Pressure Area. The Site is located in the Pressure Area, which is reported to be a confined aquifer system which is replenished from up-gradient forebays areas and adjacent groundwater basins. The Pressure Area is interpreted to receive minimal recharge from surface water. Regionally, groundwater in the Site vicinity is anticipated to generally flow to the south-southwest, towards the Pacific Ocean.

Groundwater was not encountered during the soil boring activities conducted as part of this assessment. Allwyn reviewed various monitoring points and facilities located within a one-mile radius of the Property on GeoTracker. Based on our research, localized groundwater conditions suggests that depth to water ranges from 26 feet bgs to 36 feet bgs. Information regarding groundwater flow direction in the Property vicinity was limited. The nearest groundwater flow direction data presented in the database was for a facility located approximately 0.6 miles east of the Property, and the groundwater flow direction was to the south.

Allwyn also reviewed Los Angeles County Department of Public Works groundwater monitoring well database for any active wells within a 1.0-mile radius of the Property. The database shows Well ID # 2778 (State Well ID# 2S13W10A01) was located southeast of the Property. Well ID # 2778 has been active since June 1, 1936. The highest recorded groundwater elevation found was about 323 feet on October 1, 1962,

and the lowest groundwater elevation found was about 144 feet on November 4, 1938. At the time of this report, the most recent well gauging data from November 19, 2014 indicated the depth to groundwater of approximately 244 feet bgs with a water level elevation at 21 feet below sea level.

2.5.4 Surface Water

The Los Angeles River was located approximately 300 feet east of the Property and flowed in a southerly direction towards the Pacific Ocean, located approximately 19 miles from the Property. The Los Angeles River is a concrete-lined river, and therefore, it is unlikely that the river has a hydrological effect on the local groundwater conditions in the vicinity of the Property.

3.0 ANALYTICAL RESULTS

Table 1 presents the soil sample analytical results of TPH in the gasoline, diesel, and oil range, TPHg, TPHd, and TPHo, respectively. Table 2 presents the soil sample analytical results for VOCs and PAHs. Table 3 presents the soil sample analytical results for RCRA 8 metals. Copies of the final laboratory reports are included as Appendix D.

3.1 Soil Sampling Results

The following sections presents a brief summary of the laboratory analytical results for 81 soil samples (71 TPH samples and 10 metal samples) collected during the current assessment. Laboratory results of soil samples analyzed for TPH are summarized in Table 1 and shown on Figure 4. Laboratory results of soil samples analyzed for VOCs and PAHs are summarized in Table 2 and shown on Figure 5. Laboratory results of soil samples analyzed for RCRA 8 metals are summarized in Table 3 and shown on Figure 6.

3.1.1 TPH

A total of 71 soil samples were analyzed for TPH by EPA Test Method 8015B Modified. TPHg was reported not to be present at concentrations above the laboratory reporting limit of 5 milligrams per kilogram (mg/kg) in any of the 71 samples analyzed. TPHd was reported to be present in 8 of the 71 soil samples analyzed at concentrations ranging from 6 mg/kg (SB5-15.5) to 559 mg/kg (SB5-5.5). TPHo was reported to be present in 12 of the 71 soil samples analyzed at concentrations ranging from 21 mg/kg (SB4-5.5) to 941 mg/kg (SB5-5.5).

Detectable concentrations of TPH were reported to be present in 9 of the 19 soil borings. No detectable concentrations of TPH (TPHg, TPHd, or TPHo) were reported to be present in soil samples collected from soil borings SB1, SB2, SB8, SB9, SB10, SB11, SB12, SB13, SB14, and SB19. TPH analytical results are presented in Table 1 and Figure 4. Copies of the laboratory reports are included in Appendix D.

3.1.2 VOCs

Five selected soil samples (SB12-5.5, SB15-6, SB16-16.5, SB17-10.5, and SB18-5.5) were analyzed for VOCs by EPA Test Method 8260B. No detectable concentrations of VOCs were reported in any of the five samples analyzed. VOC analytical results are presented in Table 2 and Figure 5. Copies of the laboratory reports are included in Appendix D.

3.1.3 PAHs

Five selected soil samples (SB12-5.5, SB15-6, SB16-16.5, SB17-10.5, and SB18-5.5) were additionally analyzed for PAHs by EPA Test Method 8270C_SIM. No detectable concentrations of PAHs were reported in four of the five samples analyzed (SB12-5.5, SB16-16.6, SB17-10.5, and SB18-5.5). Detectable concentrations of benzo[a]pyrene (0.021 mg/kg), benzo[g,h,i]perylene (0.027 mg/kg), chrysene (0.024 mg/kg), and fluoranthene (0.027 mg/kg) were reported to be present in soil sample SB15-6. PAH analytical results are presented in Table 2 and Figure 5. Copies of the laboratory reports are included in Appendix D.

3.1.4 RCRA 8 Metals

Ten selected soil samples (SB1-2, SB1-5, SB4-2, SB4-5, SB7-2, SB7-5, SB15-2, SB15-5, SB18-2, and SB18-5) were analyzed for RCRA 8 metals, including arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver, by EPA Test Method 6010B, with the exception of mercury (EPA Test Method 7471A).

Detectable concentrations of arsenic were reported in 9 of the 10 soil samples analyzed at concentrations ranging from 1.68 mg/kg (SB7-5) to 4.37 mg/kg (SB4-2). Detectable concentrations of barium were reported in 10 of the 10 soil samples analyzed at concentrations ranging from 32.1 mg/kg (SB18-5) to 134 mg/kg (SB4-2). Cadmium was detectable in 1 of the 10 soil samples (SB4-2) at a concentration of 0.497 mg/kg. Detectable concentrations of chromium were reported in 10 of the 10 soil samples analyzed at concentrations ranging from 3.44 mg/kg (SB18-5) to 17.5 mg/kg (SB15-2). Detectable concentrations of lead were reported in 8 of the 10 soil samples analyzed at concentrations ranging from 1.05 mg/kg (SB15-5) to 71.6 mg/kg (SB4-2). Mercury was detectable in 1 of the 10 soil samples (SB4-2) at a concentration of 0.109 mg/kg. No detectable concentrations of selenium or silver were reported in any of the 10 soil samples analyzed. RCRA 8 metals analytical results are presented in Table 3 and Figure 6.

As mentioned above, the waste disposal facility requested the additional analysis of SB4-2 for STLC for lead by EPA Method 6010B, for waste characterization purposes, based on the reported concentration of 71.6 mg/kg. The STLC result was 3.02 milligrams per liter (mg/L) which is less than the STLC limit of 5.0 mg/L. Copies of the laboratory reports are included in Appendix D.

4.0 CONCLUSIONS

4.1 TPH Impacts to Soil

Based on the analytical results of the current soil sampling at the Site, there appears to be two areas at the Site where shallow subsurface soil has been impacted by petroleum hydrocarbons in the diesel and oil range. These areas are located near the southern property boundary as indicated by soil sample results in soil borings SB4, SB5, SB6, and SB7 and near the southwestern corner of Warehouse 2C near the interpreted location of a former UST system as indicated by soil samples results in soil borings SB3, SB15, SB16, and SB17. Please note that TPHo was also reported in soil boring SB18 at a depth of 5.5 feet bgs near the loading docks but the reported concentration on 25 mg/kg in one relatively shallow soil sample. The vertical extent of the areas with shallow detections of TPHd and THPo were defined at each soil boring location.

Groundwater was not encountered during the drilling and sampling of the 19 soil borings during the current assessment. RSLs for TPHg, TPHd, and TPHo have not been established since TPH is a mixture of hydrocarbons with a large variation.

As described above there appears to be two areas at the Site of limited lateral extent where the shallow soil has been impacted by petroleum hydrocarbons in the diesel and oil range. Both areas have been assessed vertically with a maximum reported depth of hydrocarbon-bearing soil of 15.5 feet bgs in SB5 and 10.5 feet bgs in SB15 (Figure 4).

4.2 Discussion of VOC Soil Sample Results

As mentioned above none of the five soil samples analyzed for VOCs reported any detectable concentrations of VOCs. It should be noted that two of the soil samples that were analyzed for VOCs (SB15-6 and SB18-5.5) were additionally analyzed for TPH and reported detectable concentrations.

Soil samples SB16-16.5 and SB17-10.5 were collected from native material beneath the fill contact in the interpreted location of the former UST near the southwest corner of Warehouse 2C. The rationale of these two sample locations was to see if there was any residual impacts to soil from a possible release from the historical UST. Soil sample SB12-5.5 was selected to give additional coverage of the Site.

4.3 Discussion of PAH Soil Sample Results

No detectable concentrations of PAHs were reported in four of the five samples analyzed (SB12-5.5, SB16-16.6, SB17-10.5, and SB18-5.5). Detectable concentrations of benzo[a]pyrene (0.021 mg/kg), benzo[g,h,i]perylene (0.027 mg/kg), chrysene (0.024 mg/kg), and fluoranthene (0.027 mg/kg) were reported to be present in soil sample SB15-6. None of the PAH analytes reported to have detectable concentrations exceeded their respective RSL. See Table 2 for a detailed list of RSLs for PAHs.

4.4 Discussion of RCRA 8 Metals in Soil

With the exception of arsenic in two soil samples (SB4-2 and SB4-5), none of the RCRA 8 metals exceeded their respective RSL in any of the 10 soil samples analyzed. The reported concentrations for arsenic of 4.02 mg/kg (SB4-2) and 4.37 mg/kg (SB4-5) slightly exceeded the RSL of 3.0 mg/kg for arsenic. Please note that soil sample SB1-5 has a reported concentration of 3.00 mg/kg which is right at the RSL. The average arsenic concentration for the nine samples with detectable concentrations is 2.84 mg/kg. Arsenic is a naturally occurring metal and is commonly encountered in Southern California soils. The next step of the screening level process is to compare the reported concentrations of metals at a site to naturally occurring background concentrations. In the absence of site specific background metals concentrations Allwyn has reviewed available published reports.

A published report of background concentrations of metals in the western United States was prepared by Shacklette and Boerngen (Shacklette) and in California soils was prepared by the Kearney Foundation (Kearney). As reported by Kearney, California soils were reported to have arsenic concentrations ranging from 4.9 mg/kg to 6.0 mg/kg. The ranges of background concentrations for Kearney are either the arithmetic mean (Arith) +1 standard deviation or the geometric mean (Geo) +1 geometric deviation. As reported by Shacklette, soil samples collected from the western United States, including California, were reported to have background arsenic concentrations ranging from 2.8 to 10.9 mg/kg. The ranges of background concentrations for Shacklette are the arithmetic mean +/- 1 standard deviation. A publication from the California Department of Toxic Substances Control (DTSC) reported an upper-bound background arsenic concentration of 12 mg/kg in Southern California.

Based on a review of the above referenced documents and Allwyn's experience it is likely that the reported concentrations of arsenic at the Site are within the range of naturally occurring background concentrations and would likely not require remediation. In addition, based on the reported concentrations, sample depths, and the asphalt/concrete paving across the majority of the Site, there is

a low likelihood that a significant health risk exists due to ingestion, inhalation, or dermal contact with arsenic-bearing soil at the Site.

Two soil samples (SB1-2 and SB4-2) reported concentrations of lead that are interpreted to be above background when compared to the results from the remaining soil samples. The reported concentrations of 28.2 mg/kg (SB1-2) and SB4-2 mg/kg (SB4-2) are well below the RSL of 800 mg/kg for industrial soil. As mentioned above, for waste characterization purposes for the disposal of soil cuttings, the disposal facility requested the analyses of SB4-2 for STLC lead. The reported STLC concentration for SB4-2 was 3.04 mg/L indicating the lead-bearing soil cuttings would not be characterized as a hazardous waste since it is below the limit of 5.0 mg/L.

Based upon the data presented in this report Allwyn Environmental does not propose any additional investigative activities.

Soil samples collected by Allwyn Environmental between January 28 and 30, 2015. Soil samples, with depth in feet below grade, analyzed for total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), and oil (TPHo) by EPA Method 8015B modified. Results reported in milligrams per kilogram (mg/kg).

<5.0 - Not detected at or above the numeric laboratory reporting limit shown

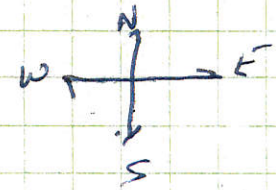
DRAWING OF PROPOSED UST SYSTEM

APPROVED
JAN 8 197
LOS ANGELES FIRE DEPARTMENT
BUREAU OF FIRE PREVENTION

SUBJECT TO FIELD INSPECTION

Bay Street

The approval of these plans and/or specifications does not exempt them from strict compliance with all other pertinent Sections of the Municipal Code and other laws and regulations.



Tanks and piping shall be installed in compliance with the Los Angeles Fire Code.

An emergency valve shall be installed under all dispensers served by a pressure delivery system.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-01-1790 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/28/15. They were assigned to Work Order 15-01-1790.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-01-1790 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-01-1879 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/29/15. They were assigned to Work Order 15-01-1879.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-01-1879 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-01-1949 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/30/15. They were assigned to Work Order 15-01-1949.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-01-1949 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

eurofins | Calscience

Work Order Narrative

Work Order: 15-01-1790 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/28/15. They were assigned to Work Order 15-01-1790.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-01-1790 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

PRIVILEGED AND CONFIDENTIAL ATTORNEY WORK PRODUCT
DO NOT DISTRIBUTE, COMMINGLE OR DUPLICATE WITHOUT PRIOR CLEARANCE FROM LEGAL COUNSEL.

Hello Donald

I was working with Soclaris to get the waste profiled for disposal and was told I need to run a couple of additional analyses on the soil samples. I need to run STLC for lead on SB4-2 (Calscience Work Order # 15-01-1790-1A) and a random soil sample for Title 22 Metals. For the random Title 22 soil sample let's use SB4-5 (Calscience Work Order # 15-01-1790-2A). Let me know if you have any questions or need anything from me.

Thank you.

Sean Roy

APPENDIX E
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

RAMBOLL ENVIRON

ENVIRONMENT & HEALTH

ELISE POST

Senior Associate 6B

Elise Post is a Senior Associate at Ramboll Environ's Los Angeles office. She has over five years of experience in environmental consulting, with particular emphasis in environmental due diligence, site investigation, and environmental compliance. Her experience includes performing Phase I Environmental Site Assessments, conducting comprehensive regulatory agency file reviews, performing Phase II site investigations, providing environmental compliance support, and contributing to litigation support. She works primarily on redevelopment projects in California from the due diligence phase, to site investigation, data evaluation, and remediation, as well as construction oversight and soil management.

EDUCATION

2010-2011
Master of Science, Earth Systems
Stanford University, Palo Alto, California

2006-2010
Bachelor of Science, Geological and Environmental Sciences, Conferred with Distinction
Stanford University, Palo Alto, California

COURSES/CERTIFICATIONS

Geologist In Training - California, 2015
OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 2011-2016
American Red Cross Adult CPR & First Aid Training, 2011-2016

PROJECTS

Phase I Environmental Assessments and Environmental Due Diligence
Conduct Phase I Environmental Site Assessments and limited environmental compliance reviews of various industrial, commercial, and residential properties throughout the western United States. Responsibilities include site visits, personnel interviews, historical site investigation data reviews, agency records reviews, compliance research, and report drafting.

CONTACT INFORMATION

Elise Post

epost@ramboll.com
+1 (213) 943 6335

Ramboll Environ
350 S Grand Avenue
Suite 2800
Los Angeles, 90071
United States of America

Field Experience

Perform Phase II subsurface investigations and site characterization at commercial and industrial facilities. Install borings via direct-push and hollow stem auger drilling methods. Install groundwater monitoring and injection wells, as well as sub-slab and multi-depth soil vapor probes. Utilize recent technologies (e.g., vapor pins) for sub-slab investigations. Perform soil logging and prepare Unified Soil Classification System (USCS) boring logs.

Environmental Compliance Support

Provide environmental compliance oversight of a former industrial complex located in Henderson, Nevada with a 50-year history of chemical manufacturing and waste disposal operations, including those related to products such as perchlorate and refined metals. Assisted facility for compliance with a variety of environmental obligations, including National Pollutant Discharge Elimination System (NPDES), Groundwater Discharge, Underground Injection Control, Water Appropriation, and Air permits.

Prepared Spill Prevention Control and Countermeasure (SPCC) plans and chemical inventory reporting for several commercial facilities.

Redevelopment Project Experience

Prepare and implement Soil Management Plans (SMP) for large-scale redevelopment projects, including a 40-story residential building in Century City, a former manufacturing facility with documented volatile organic compound (VOC) impacts in Santa Monica, and a former manufacturing facility in El Monte that is part of the El Monte Operable Unit of the San Gabriel Valley Superfund site. Prepare South Coast Air Quality Management District Rule 1166 permit and conduct associated monitoring. Prepare work plans for and conduct groundwater well decommissioning for historical monitoring and agricultural wells associated with redevelopment sites. Assist with design of sub-slab depressurization system to mitigate vapor intrusion risk at redevelopment site.

ALEXIS HILLMAN

Manager 8

Alexis Hillman is a Manager at Ramboll Environ's Los Angeles office. She has 15 years of experience in environmental investigations and due diligence projects and is a California Professional Geologist and Certified Hydrogeologist. Ms. Hillman has conducted and managed soil, groundwater, soil vapor, and indoor air quality sampling projects as well as aquifer testing for Phase II site investigations and groundwater monitoring programs, and has contributed to the development of feasibility studies, treatability studies, remedial investigation reports, and remedial action plans. She manages due diligence projects and has contributed to litigation support projects. Ms. Hillman works extensively on redevelopment projects from the due diligence phase, to site investigation, data evaluation, risk assessment, and remediation, as well as construction oversight and soil management.

CAREER

1996-2000
Assistant Geoscientist to Senior Associate Geoscientist, McLaren/Hart, Inc.
Staff Geoscientist responsible for site investigations, due diligence, preparation of work plans, groundwater monitoring reports, Phase I and Phase II reports.

EDUCATION

1990-1994
BS Geology
University of California, Los Angeles

COURSES/CERTIFICATIONS

OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 2015
Certified Hydrogeologist - California, 2003-2015
Professional Geologist - California, 2001-2015

PROJECTS

2014-2015

Aerospace Manufacturing Facility

Managed a Phase I environmental site assessment to evaluate environmental liabilities for an aerospace manufacturing facility in southern California with a 25 year history of extensive site investigations and ongoing remedial actions. The site soil, soil gas and groundwater has been impacted primarily with chlorinated solvents and cleanup is being performed under the oversight of the Los Angeles Regional Water Quality Control Board. The work was conducted on behalf of the parent company, which was considering sale of the business.

2013-2015

Commercial/Residential Redevelopment

Managed site investigation activities and risk assessment following identification of a recognized environmental condition during due diligence of a site being redeveloped into a high rise commercial and residential building in Los Angeles. Implemented soil management plan during grading to address previously unknown areas of impacted soil. Worked with Los Angeles County Fire Department, Health Hazardous Materials Division (LAFD) to satisfy requirements for no further action for soil while meeting agressive project redevelopment schedules. LAFD provided a letter requiring no further action ackknowledging that the contamination had been satisfactorily mitigated with a vapor barrier and passive venting system.

2012-2015

Due Diligence

Project Manager

Manager for property transaction environmental assessments, including industrial, commercial and residential property. Responsibilities include agency research, file, aerial photo, and historical map review; site visits and interviews; asbestos, lead-based paint, and drinking water sampling; detailed site plan preparation; and reporting.

2010-2014

Former Dry Cleaning Facility

Confidential Real Estate Investor, United States

Project Geologist and Project Manager

Evaluated historical releases from a former dry cleaning facility located in a shopping center. Conducted subsurface evaluations in an existing grocery store to evaluate VOCs in soil, soil gas, and groundwater. Conducted a screening human health risk assessment followed by indoor air sampling. Evaluated VOCs in groundwater over several monitoring events. Negotiated with the local agency to demonstrate groundwater plume stability and acceptable vapor intrusion risk to achieve regulatory closure.

2010-2013

Redevelopment of Industrial Property

Project Manager

Managed environmental issues during redevelopment of a former manufacturing facility in South Gate, California. A soil management plan was prepared to guide earthwork. The site had received a no further action letter for soil with unrestricted use from the DTSC; however, several areas of soil impacted with TPH, VOCs, and SVOCs were encountered during grading operations. To maintain the project schedule and avoid costly penalties for missed deadlines, aggressive excavations were conducted in five areas and in total 24,749 tons of impacted soil were removed and disposed off-site. In areas where building pads were proposed, soil gas surveys were completed to demonstrate to future tenants that the risk to site workers was well below commonly accepted standards. In addition, three previously unknown USTs were found during the grading process and removed and closed under the oversight of the local agency. A supplemental no further action letter was subsequently granted by the DTSC.

2002

Due Diligence

Conducted environmental due diligence of aerospace, chemical, manufacturing, multi-tenant and light industrial business parks as part of corporate mergers and acquisitions and commercial real estate transactions in California, Wyoming, and Montana. As part of the due diligence process, prepared cost scenarios for compliance issues regarding air, wastewater, and OSHA issues.

2001-2003

Former Manufacturing Facility

Task Manager

Implemented remedial action plan (RAP) involving the installation of a dual-phase and soil vapor extraction system to clean up chlorinated-solvent impacted soil and groundwater. Implementation of the RAP requires management of permitting process through numerous agencies in Southern California.

2001-2002

MTBE Field Investigation

Field geologist for agency driven, regional methyl tertiary-butyl ether (MTBE) study. Conducted discrete-depth groundwater sampling using a combination of air rotary casing hammer and mud rotary drilling techniques and using the Simulprobe sampling tool. The project included continuous core sampling, geophysical logging, and monitoring well installation in the shallow and regional aquifers. The project was completed under the supervision of RWQCB and USEPA representatives. Results of the investigations were used to determine cost allocations for regional remedial efforts.

2001

Due Diligence

Geologist for Phase I Environmental Assessment at former crude oil impoundment site. The Site is currently developed with a shopping center, however due to former operations at the site methane monitoring is conducted on a continuing basis. Other issues identified during the assessment included potential migration of impacted groundwater from an offsite source, and dry cleaning operations at the Site that have impacted a shallow perched groundwater zone. Responsible for reviewing all environmental documents related to the various identified issues and summarizing the work completed to the satisfaction of the Site owner.

1999-2000

Development of Feasibility Studies

Geologist for development of Feasibility Study and Treatability Studies for chlorinated solvent-impacted manufacturing facility in Southern California. The project included document review, compilation and presentation of soil and groundwater data, and comparison to potentially applicable agency clean-up criteria, for the purpose of selecting remedial action alternatives and appropriate treatability studies. Also responsible for implementing certain tasks for treatability studies, installing multiple offsite monitoring wells including several in public right-of-ways and in residential areas and implementing the community relations program in place to address the potential concerns of community members.

1999

Site Investigation

Field geologist for subsurface soil and groundwater investigation at a proposed 2-mile railroad construction site with underground petroleum pipelines. This expedited site characterization included sampling at nearly 200 points, management of field database and mobile laboratory, plume definition and GPS surveying.

1999

Site Investigation

Geologist for extensive Cone Penetrometer Testing (CPT) study Implemented CPT logging and multiple-depth groundwater sampling investigation along downgradient property boundary and prepared detailed cross-section of stratigraphy and distribution of contaminants for presentation to the Regional Water Quality Control Board.

1998

Former Landfill

Geologist for development of Brownfields Redevelopment Workplan. The site was a former landfill that was underdeveloped. Responsibilities include preliminary historical research regarding the extent and nature of the landfill, and development of a work plan to investigate the potential impact to soil and/or groundwater by the former landfill as well as current site operators.

1998

Site Investigation

Field geologist conducting slug tests at former underground storage tank site involved in litigation. The project included slug tests on multiple monitoring wells at the site and data analysis using AQTESOLV. The results were used along with physical soil analysis results to determine if a release date could be estimated.

1996-1997

Site Investigation

Field geologist for the installation of groundwater monitoring wells for a medical equipment manufacturing facility in Irvine, California. Groundwater at the facility is impacted with chlorinated solvents. Responsible for obtaining permits, including right-of-way; setting up subcontractors for well installation and lab analyses; and supervising installation of the monitoring wells. These wells were installed to aid in characterizing the extent of impact to groundwater. Also responsible for preparing groundwater monitoring reports, including groundwater contour maps, chemical impact figures, and hydrographs, under supervision of the RWQCB - Santa Ana Region.

1996

Pesticide Manufacturing Plant

Field geologist for several phases of site characterization for a pesticide manufacturing plant in the Los Angeles area where soil is impacted by chlorinated pesticides, and dioxins and furans. Responsible for implementing sampling plan, which involved precise measurement of sampling depths with the Geoprobe®. Also responsible for performing modified decontamination procedures to ensure representative integrity of samples. All work was performed under supervision of the Department of Toxic Substances Control.

EDDIE ARSLANIAN

Principal / Southwest Business Unit Operations Director

Eddie Arslanian has over 15 years of professional experience in providing technical and management expertise in environmental consulting and engineering to help clients understand their environmental liabilities and evaluate their risks. His clients include law firms, financial institutions, insurance companies, real estate investment trusts (REITs) and commercial/industrial businesses. Eddie has designed, implemented and managed various phases of site characterizations, feasibility studies, remediation design and implementation, indoor air testing, health risk assessments and fate and transport studies at contaminated sites under the oversight of various federal, state and local environmental regulatory agencies. He has also managed and performed environmental due diligence of aerospace, biotech, chemical, manufacturing and healthcare facilities, nurseries, and multi-tenant and light industrial business parks as part of corporate mergers and acquisitions and commercial real estate transactions throughout the US, as well as in Europe and Mexico. As part of the due diligence process, he has evaluated environmental liabilities for subsurface contamination issues and compliance issues regarding air, wastewater, waste, and health and safety.

PROJECTS

Site Investigation and Remediation

- Assisted a developer with the redevelopment of a former pen manufacturing facility in Santa Monica, California with VOC impacts to underlying soil, soil vapor, and groundwater. Although an *in situ* thermal treatment remediation program had been implemented at the site to the satisfaction of the LARWQCB, residual VOC impacts remained in subsurface soil and soil vapor. Accordingly, a soil management plan was prepared to properly handle soils during earthwork activities and to minimize off-site disposal costs. Further, a sub-slab depressurization system (SSDS) was designed to address the potential for VOC vapor intrusion into the existing on-site buildings.
- Designed and managed the implementation of site characterizations, remediation, and health risk assessments for the redevelopment of a shopping center in Pleasant Hill, California under the oversight of the San Francisco Bay Regional Water Quality Control Board (SFRWQCB). The work was conducted for the developer of the shopping center and involved decommissioning a former auto care facility, which included the removal of hydraulic lifts containing polychlorinated biphenyls (PCBs), above-ground and underground storage tanks (USTs), and clarifiers. Remediation activities included “hot-spot” soil

EDUCATION

MBA, University of Southern California, Marshall School of Business, 2005.

MS, Civil/Environmental Engineering, University of California, Los Angeles, 1996.

BS, Civil/Environmental Engineering, University of California, Irvine, 1995.

COURSES / CERTIFICATIONS

Professional Engineer (Civil) - California

excavations to address soils impacted by total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and PCBs, as well as in situ injections of sodium permanganate to address VOC-impacted groundwater. As part of obtaining a "no further action" (NFA) designation for the site from the SFRWQCB, assisted client with respect to finalization of the deed restriction for the site.

- Designed and managed the site characterization, health risk assessments, and the interim remediation plan (IRAP) for a former industrial site in Torrance, California with known VOC impacts to underlying soil and groundwater. Work was initially conducted under the oversight of the Los Angeles Regional Water Quality Control Board and was later transferred to the California Environmental Protection Agency's Department of Toxic Substances Control (DTSC). As part of the IRAP, managed the installation and implementation of a sub-slab venting system to address vapor intrusion issues within the building at the site. Indoor air quality testing is routinely performed to evaluate the performance of the sub-slab venting system. Due to the sensitivity of the site characterization, which involves a significant amount of work on adjacent properties due to the dispersion of the VOCs in groundwater, interfaced with public relations firm and community members to alleviate environmental concerns.
- Managed the implementation of a remediation project at a site in Los Angeles, California where soil and groundwater had been impacted by petroleum hydrocarbons including methyl tert-butyl ether (MTBE) and other fuel oxygenates. The remediation involved soil vapor extraction (SVE) for soils and bioslurping of gasoline free product from select groundwater monitoring wells. The work was conducted under the oversight of the LARWQCB. The work also involved coordination with the California Underground Storage Tank Fund for reimbursement of environmental expenses.
- Designed and managed a Resource Conservation and Recovery Act (RCRA) Facility Investigation and Corrective Measures study of a tanker truck washing facility in Carson, California under a DTSC Corrective Action Consent Agreement. Contaminants evaluated in the subsurface included VOCs and toxaphene. The work, which is currently ongoing, involved the preparation of a site conceptual model, health risk assessment, contaminant fate and transport modeling, as well as the preparation of a CMS report involving various corrective measures to address separate source areas/chemicals of potential concern associated with the site. As part of the work, two separate interim measures were implemented consisting of (1) in situ ozone sparging to remediate VOCs in groundwater within one of the source areas and to control off-site VOC migration and (2) SVE to remediate VOCs within the vadose zone on a portion of the site located adjacent to residences and to address potential VOC vapor intrusion.
- Assisted a developer with the redevelopment of a property in South Gate, California that was formerly used for concrete pipe manufacturing. A soil management plan was initially prepared to guide earthwork. Although the site had received a NFA letter for soil with unrestricted use from the DTSC, shortly after grading activities the first of several areas of soil impacted with TPH, VOCs, and semivolatile organic compounds (SVOCs) were encountered. To keep the project on track and avoid costly penalties for missed tenant pad deadlines, aggressive excavations were conducted of impacted areas. At final count, a total of 24,749 tons of impacted soil were removed and disposed off-site. In areas where building pads were proposed, soil gas surveys were completed as an additional assurance for future tenants that the risk to site workers was well below commonly accepted standards.
- Provided strategic oversight on the design and implementation of subsurface investigations and remedial planning of a site in Lakewood, California with PCE releases to underlying soil and groundwater. As part of the oversight efforts, assisted with the planning/design/implementation of the SVE system, as well as the design and implementation of a treatability study for various oxidants and an in situ pilot studies involving persulfate and potassium permanganate. The work is being conducted under the oversight of the LARWQCB.

- Designed and managed several site investigation and remediation projects involving SVE at dry cleaning facilities in California. Successfully obtained NFA designations for the sites from environmental agencies including the LARWQCB and the County of Los Angeles Fire Department – Health Hazardous Materials Division (County Fire Department).
- Designed and managed the implementation of a remedial action workplan (RAW) for a site in Norco, California where groundwater was impacted with VOCs, perchlorate, and N-Nitrosodimethylamine (NDMA). The remedial action involved the use of 2-PHASE™ extraction to treat impacted soil vapors and groundwater. All work was conducted under the oversight of DTSC.
- Designed and managed site investigations and the preparation of a feasibility study and a remedial action plan (RAP) for an acetone recycling facility in Los Angeles, California under the oversight of DTSC. The remedial action plan called for in situ and ex situ treatment of soils by SVE. The work was performed on behalf of a potential responsible party (PRP) group.
- Assisted a tenant with decommissioning of its sulfur prilling facility at the Port of Long Beach in California. Efforts involved characterization of sulfur waste material, preparation of a soil management plan to guide earthwork activities, oversight of site demolition including the abatement of asbestos, lead-based paint, and mold from building structures. During demolition activities, assisted client with management of separate waste streams including sulfur-impacted soil/concrete/wood.
- Designed and managed subsurface soil investigations, as well as the preparation and implementation of soil excavation plans to address asbestos-impacted soils at sites in San Bernardino, California. The work was performed under the oversight of the South Coast Air Quality Management District (SCAQMD) under a Procedure 5 Plan. The work also included negotiating with SCAQMD to designate a portion of the site as an asbestos inactive waste site pursuant to National Emission Standards for Hazardous Air Pollutants Rule 61.151.
- Oversaw the closure of an industrial facility in Vernon, California with known soil impacts of arsenic and VOCs. The work involved conducting site-wide soil and soil gas sampling, on-site monitoring for soils, decommissioning of various clarifiers and sumps, soil excavations, abandoning a former water well, and performing a human health risk assessment under the oversight of the city of Vernon – Environmental Health and Control Department.
- Managed the site characterization and remediation as part of the sale of a paper mill facility in Pomona, California. The work was conducted under the oversight of the County Fire Department and involved soil and soil gas sampling, soil excavation, as well as the preparation of a soil management plan and screening human health risk assessment. Successfully achieved a NFA designation from the County Fire Department for the facility under a tight timeframe.
- Managed several UST removal projects including soil sampling and excavations at sites in California under the oversight of the Los Angeles County – Department of Public Works and other city agencies.
- Designed, managed, and participated in various subsurface investigations in the evaluation of metals, PCBs, polynuclear aromatic hydrocarbons, petroleum hydrocarbons, and chlorinated solvents impact to soil and groundwater at sites throughout Arizona and California. Subsurface investigations involved soil vapor surveys, cone penetrometer testing (CPT), membrane interphase probe (MIP) investigations, soil and groundwater sampling, and installation of groundwater monitoring wells.
- Managed fate and transport modeling efforts as they relate to petroleum hydrocarbons and chlorinated solvents in groundwater. One of these projects involved the fingerprinting and age-dating of petroleum hydrocarbons from a commingled groundwater plume.

Due Diligence

- Developed and managed the environmental due diligence program for a major life insurance company's nationwide portfolio of real estate assets.
- Managed a team of professionals in the process of evaluating environmental liabilities and remediation budgets of a former aerospace manufacturing facility in California under extremely tight deadline. The site has been impacted with various VOCs, TPH, metals, emerging chemicals (NDMA and 1,4-dioxane), and radioactive wastes. The assignment also included a methane evaluation, as well as asbestos, lead-based paint, and indoor air quality assessments. The work was conducted on behalf of the site's buyer, which developed it into a commercial business park.
- Managed the environmental due diligence of six nurseries located throughout California, Georgia, North Carolina, Ohio, and Oregon, and evaluated issues related to subsurface impacts by former uses of pesticides, as well as on-going operational compliance issues.
- Assisted a buyer of a former industrial facility in southern California that was significantly impacted by chlorinated solvents in soil and groundwater. Post-acquisition efforts included oversight of the remediation of the vadose zone with in situ thermal treatment and evaluation of human health risk assessments to assess various future redevelopment scenarios. The work was conducted under the oversight of the LARWQCB.
- Assisted buyer of a former industrial facility that was undergoing investigations and remediation of VOCs, metals, and PCBs under the oversight of the DTSC in Los Angeles, California. Issues that were evaluated included the deed restriction, short term remediation including deep soil excavation, long term remediation of groundwater including in situ injections of molasses, as well as potential vapor intrusion issues.
- Managed the environmental due diligence of an approximately 20-acre pet food manufacturing facility in Vernon, California. Former operations at the facility involved gasoline stations; automobile repair and maintenance facilities; an oil tank farm; foundries; machine shops; a cleaning product manufacturing facility; a mineral processing facility; wool and leather products manufacturing facilities; and numerous meat processing and packing facilities.
- Managed the environmental due diligence of radiopharmaceutical manufacturing facilities in Texas. As part of the due diligence, evaluated the conditions and financial assurance requirements of its radioactive materials license issued by the Texas Department of State Health Services.
- As part of a business auction, managed a team in evaluating environmental liabilities at eight food product manufacturing facilities located in California, Missouri, New Mexico, New York, and Texas. Primary compliance issues involved air, wastewater, health and safety, and risk management plans.
- Managed and implemented several mold surveys at apartment complex facilities in California to assist client in risk management and for capital improvement planning.
- Managed several asbestos surveys at sites in California and advised client on abatement methods, notification procedures, and contractor selection.
- Prepared projected cost scenarios for soil and groundwater remediation at various sites in the US and in Europe. Cost scenarios have included the remediation of asbestos, PCBs, chlorinated solvents, petroleum hydrocarbons, and metals in soil and/or groundwater.

Litigation Support and Mediation

- Assisted client counsel in preparation of report and served as percipient witness in depositions on a case involving the cause of subsurface groundwater contamination of volatile organic compounds at a site in Carson, California. Issues involved standard of care during drilling and installation of groundwater monitoring wells, source of contamination, and estimated damages. Designated as an expert witness on the case.

- As part of an eminent domain action, developed remedial action options and cost estimates for a former commercial/industrial property in Los Angeles, California that was to be redeveloped as a public school institution.
- Assisted counsel on the preparation of an expert report in a case involving the standard of environmental due diligence and the amount of environmental reserve that should had been set aside for the remediation at a steel mill and other facilities formerly located on a property in Los Angeles, California that was to be converted to residential and commercial use.
- Assisted a potential responsible party on review of RCRA Facility Investigations and potential cost allocations of a former pesticide manufacturing facility in northern California. The work is being done under a Corrective Action Consent Agreement with the DTSC.
- Conducted historical investigations and managed subsurface soil investigations, as part of potential litigation and settlement discussions, to evaluate the extent of buried asbestos at a former asbestos manufacturing facility in San Bernardino, California.
- Assisted counsel with regard to the presence and origin of slag- and tar-like material found at a site in Carson, California. The effort included forensic fuel-fingerprint analysis on the slab and tar samples to age-date the samples.

Compliance Assistance

- Assisted manufacturing facilities with compliance issues as they relate to their wastewater discharges. Such assistance included negotiations with regulatory agencies including the Los Angeles County Sanitation District for higher discharge limits.
- Provided assistance to facilities with regard to storm water issues in accordance with the Los Angeles County Standard Urban Storm Water Mitigation Plan (SUSMP). Such assistance has included the evaluation of best management practices (BMPs), as well as design issues for storm water infiltration basins.
- Provided assistance to a retail shopping center in Malibu, California to comply with its Waste Discharge Requirements (WDR) permit issued by the LARWQCB relating to groundwater monitoring to assess potential impacts from an on-site leachfield that discharges treated wastewater.
- Provided assistance to chemical manufacturing facilities to help them comply with the Toxic Substance Control Act.
- Assisted a Japanese client with potential waste characterization issues as it relates to products that they plan to import to the US.

Other Projects

- Managed the repair and upgrade activities related to USTs and their components to comply with SB989 requirements.
- Managed and implemented indoor air quality testing activities for sites with underlying soil and groundwater impacts with VOCs.
- Managed a team of architects and engineers to obtain Leadership in Energy and Environmental Design (LEED) certification from the US Green Building Council for a learning center building located in Torrance, California.

An Environmental Consultant's Overview

Guest Lecturer at University of Southern California, Master's in Real Estate Program, USC RED-562.

FARSHAD RAZMDJOO

Managing Principal

Farshad Razmdjoo is the Managing Principal of Ramboll Environ's Southwest operations. He has over 30 years of experience in environmental consulting and engineering. Farshad currently manages a vast variety of consulting projects, including real estate and merger and acquisition due diligence, tenant environmental audits, environmental, health and safety audits, property decommissioning and redevelopment, remedial investigations, remedial action design and implementation, regulatory agency interaction, asbestos management programs, radon surveys, mold investigation and remediation programs and evaluations of lead in drinking water. In addition, he has developed and managed an environmental risk-management program for a major real estate investment trust. Farshad is highly experienced in working with federal and California environmental regulations and has a working knowledge of many other state and local regulatory requirements and agencies throughout the United States. Much of Farshad's past and current projects involve assessing environmental issues at commercial and industrial facilities throughout the North America, Europe, China, and India. For the past 22 years at Ramboll Environ, Farshad has managed projects for representatives in real estate development companies, insurance companies, financial institutions, pension funds, institutional investors, private equities, real estate investment trusts, aerospace companies, industrial and manufacturing companies, and law firms.

Certificate in Hazardous Materials Management, University of Irvine, California, 1989-2015
National Registry of Environmental Professionals, 1988-2015

PROJECTS

2011-2015

Remediation, Manufacturing Facility

Negotiated with the Santa Ana Regional Water Quality Control Board (SARWQCB) a reasonable path forward for a former manufacturing facility located in Irvine, California where soil and groundwater is impacted with volatile organic compounds (VOCs). Historically, considerable remediation had been performed on site by other consultants, which included excavation, and above ground soil treatment, soil vapor extraction, and groundwater pump and treat technologies. The site has been in a post remediation monitoring phase under the oversight of the SARWQCB. Post remediation monitoring indicated that overall, natural attenuation processes were reducing VOC concentrations over time. However, in 2013, the SARWQCB requested the responsible parties to consider evaluating additional remedial options to reduce concentrations of VOCs in one area of the site. Also a Membrane Interface Probe (MIP) investigation was performed in that area of the site.

2013-2015

Remediation, Manufacturing Facility

Using the data collected during the MIP investigation, Farshad directed the development of a limited and focused remedial program utilizing state of the art technology appropriate for the restrictive conditions which are present in the area of the site investigated (challenging geologic materials, limited access due to occupied buildings, roadways, neighboring properties, etc.). The SARWQCB approved the remedial plan that included injection of zero valent iron into the shallow saturated zone to reduce VOCs in the area of concern. The remediation was completed during October and November 2014. A post monitoring program started in December 2014 is on-going.

2013-2015

Site Investigation

Directed the evaluation of potential off-site sources, and development of a site conceptual model for a facility in Vernon, California where chlorinated VOCs (CVOCs) were discovered in groundwater. Designed and managed investigation of soil, soil gas, and groundwater to evaluate potential sources, including use of compound-specific isotope analysis to help demonstrate that the CVOCs detected in soil gas are distinct from those detected in groundwater, and unrelated. Managed additional soil, soil gas, and groundwater investigation and provided oversight for a soil vapor extraction pilot test. All work is being implemented under the oversight of Los Angeles Regional Water Quality Control Board (LARWQCB).

2012-2013

Remediation Oversight, Former Industrial Facility

Assisted an owner of a former industrial facility in southern California that was significantly impacted by CVOCs in soil, soil gas, and groundwater. The scope of work included oversight of the remediation of the vadose zone with in situ thermal treatment and evaluation of human health risk assessments to assess various future redevelopment scenarios. The work was conducted under the oversight of the LARWQCB.

2011-2015

Due Diligence, Former Metal Stamping Facility

Managed the acquisition due diligence and subsequent redevelopment of a former metal stamping facility in Santa Fe Springs, California. Under Farshad's direction, a Phase I ESA was completed and, based on the findings of the Phase I ESA, a targeted Phase II subsurface investigation was performed to evaluate areas of potential environmental concern that included soil gas, soil, and groundwater sampling. Farshad also assisted the client with closure activities for the site that included performing an assessment of building materials for polychlorinated biphenyls contamination, coordination and oversight of asbestos and lead-based paint surveys, groundwater monitoring well abandonment, post excavation soil sampling on removal of various subsurface features, and preparation of a soil management plan (SMP), to be implemented during redevelopment activities. Subsequently, a no further action letter was obtained from the Santa Fe Springs Fire Department.

2007-2009

Due Diligence, Former Aerospace Facility

Directed the due diligence process and estimating environmental liabilities for acquisition of a former aerospace manufacturing facility in Los Angeles, California under extremely tight deadline. The site has been impacted with various VOCs, total petroleum hydrocarbons, metals, emerging chemicals, and radioactive wastes. The assignment also included evaluation of methane, asbestos, lead-based paint, and indoor air quality. The work was conducted on behalf of the site's buyer, which planned to develop it into a commercial business park.

2007-2009

Site Characterization, Industrial Center

Designed and managed the implementation of site characterizations, remediation, and human health risk assessments for an existing 75-acre commercial and light industrial center in Irvine, California under the oversight of the Orange County Health Care Agency (OCHCA) and the SARWQCB. The work was conducted for the property owner and involved performing appropriate site characterization to define the extent of CVOC releases in soil, soil gas, and groundwater from prior and existing tenants; one of which included a dry cleaning facility. The human health risk assessment considered site specific conditions and data to define risk based threshold concentrations deemed as acceptable concentrations in soil, soil gas, and groundwater for indoor worker receptors.

2007-2009

Site Remediation, Industrial Center

Remediation involved injection of approximately 100,000 pounds of zero-valent iron in sixty direct push borings to create three separate permeable reactive barriers or treatment zones. Each zone will chemically reduce chlorinated solvents in the "shallow zone" groundwater as it migrates through the permeable reactive barrier(s). Due to the low groundwater concentrations, Farshad was able to negotiate the elimination of post remediation groundwater monitoring. The project also involved collection of sub-slab and indoor air samples followed by installation and operation of a sub-slab depressurization system and epoxy coating the interior floors to mitigate vapor intrusion. Post mitigation indoor air samples reported a reduction of indoor air concentrations by 100 times. Farshad successfully negotiated a "No Further Action" for the site with the concurrence from the SARWQCB.

1997-2015

Environmental Risk Management, Real Estate Investment Trust

Farshad has developed and managed an environmental risk management program for a major real estate investment trust (REIT). This REIT contained over 200 properties with 400 tenants with pharmaceutical and life science operations throughout the western and eastern United States, China, and India. As part of the environmental risk management program, an acquisition due diligence, an asbestos management program, a moisture intrusion and mold prevention response (MIMPR) program, and a tenant environmental audit (TEA) program were developed and implemented. A mold prevention and response plan, as outlined in the MIMPR, was prepared and implemented. More than 300 tenant exit audits for tenants vacating the properties were conducted in accordance with the TEA. An overall tenant environmental audit program has been developed.

1995-2015

Due Diligence, Merger/Acquisition, International Portfolios

Farshad has managed over 30 international multi-site environmental assessments at over 200 industrial, manufacturing, and commercial facilities as a part of merger and acquisition environmental due diligence. These included evaluation of aerospace component manufacturing facilities, automotive manufacturing and distribution facilities, medical device manufacturing facilities, telecommunication facilities, and hardware store facilities. Work plans and subsequent Phase II soil and groundwater investigations were also completed for many of those assignments.

1987-2015

Due Diligence, National Real Estate and Development

Acted as point of contact and responsible Principal for several national real estate and development clients with properties throughout the United States. Farshad has completed over 1000 assignments supporting the clients in acquiring, managing, and disposing properties. Many of these assignments were undertaken and successfully completed under extreme time constraints.

2004-2005

Decontamination/Decommissioning, Former Biopharmaceutical Facility

Managed the decontamination and decommissioning of a former biopharmaceutical research facility. A detailed survey of over 250 rooms was conducted, and radiological materials, hazardous chemicals, and potentially biologically hazardous substances were identified. Upon completion of the decontamination/decommissioning, the entire facility was cleaned and prepared for re-occupancy. Throughout the decommissioning process, Ramboll Environ worked closely with State regulatory officials to demonstrate that all cleanup activities were in compliance with applicable regulations.

2000-2001

Remedial Investigation, Superfund Site

Managed a remedial investigation at a California Superfund site in Los Angeles County. The site was under a consent order from Cal-EPA Department of Toxic Substances Control at the time. The project involved performing RI/FS, conducting human health and ecological risk assessments, and preparing a remedial action plan.

1998

Phase I/Phase II Management, Industrial Park

Managed, reviewed, and evaluated numerous Phase I and II reports associated with the acquisition of a 500acre industrial park in Spokane, Washington. Prepared a report of findings including conclusions and recommendations for review by the client.

1997-1998

Site Closure, Dry Cleaning Facility

Managed the preparation of a sampling and analysis plan evaluating the nature and extent of soil and groundwater contaminated with tetrachloroethene (PCE) at a dry cleaning facility in Santa Ana, California. Ramboll Environ obtained closure for the site from the SARWQCB.

1997-1998

Litigation Support

Managed litigation support services related to the fate and transport of organic compounds in soil and groundwater, appropriate remedial alternatives, and cost associated for two facilities in southern California. The results of the evaluations were successfully used as part of the settlement negotiations with the opposing parties.

1996-1997

Site Assessments, Manufacturing Plants

Managed Phase I and II site assessments and estimation of remediation costs of six manufacturing plants in Costa Mesa (Orange County), Perris (Riverside County), Ontario (San Bernardino County), Somerton (Arizona), Alliance (Ohio), and Winter Heaven (Florida).

1996-1998

Site Investigation Program, Dry Cleaning Facility

Designed and managed a site investigation program to evaluate the nature and the extent of soil contaminated with PCE at a dry cleaning facility in Aliso Viejo, California. Based on the results, several remedial alternatives were evaluated and a risk assessment was performed. Based on the results of the risk assessment, site closure was obtained from OCHCA.

1994-1996

Remedial Investigation/Feasibility Study, Former Manufacturing Facility

Managed a remedial investigation/feasibility study (RI/FS) using CPT/HydroPunch and Geoprobe techniques, with installation of multi-level groundwater monitoring wells, evaluation and selection of a remedial alternative, and design and preparation of an interim remedial action plan for remediation of soil and groundwater contaminated with dense non-aquas phase liquid (DNAPL) at a former manufacturing facility in Oxnard, California. The first phase of remediation included the excavation and placement of approximately 11,000 cubic yards of impacted soil into vapor extraction cells for on-site treatment. Soil vapor and vertical and horizontal groundwater extraction wells were installed. The vapor and groundwater treatment systems included air stripping, ultra violet oxidation, and vapor and liquid granulated activated carbon. All work was conducted under oversight of LARWQCB and Ventura County Air Pollution Control District.

1994-1995

Groundwater Investigation, Electronic Manufacturing Plant

Managed a groundwater investigation program at a former electronics manufacturing plant in Santa Ana, California. This included installation, development, and sampling of shallow groundwater monitoring wells and evaluation and interpretation of hydrogeological and analytical data. The investigation was performed under the regulatory oversight of the SARWQCB.

Dear Mr. Tipton and Ms. Andes:

Ramboll Environ US Corporation (Ramboll Environ) is pleased to submit this report to Allen Matkins Leck Gamble Mallory & Natsis LLP (Allen Matkins) on behalf of its client, Tishman Speyer, to document the findings of a Limited Phase II subsurface investigation conducted recently at the facility located at 2145-2161 Sacramento Street and 2136 and 2159 Bay Street in Los Angeles, California (the "site;" Figures 1 and 2). The Phase II investigation was performed in accordance with proposals to Allen Matkins dated August 1, August 12, and August 22, 2016.

In August and September 2016, Ramboll Environ conducted a Phase I environmental site assessment (ESA) of the site, referenced herein as the 2016 Phase I ESA report dated October 2016. The background, objectives of the subsurface investigation, scope of work, findings, and conclusions are presented below.

BACKGROUND

The 1.7-acre site is improved with three buildings: an approximately 25,700-square-foot building located in the southern portion of the site (Sacramento Building; 2145-2161 Sacramento Street); an approximately 9,000-square foot building located in the northeast portion of the site (Building A/B; 2159 Bay Street); and an approximately 13,500-square foot building located in the north central portion of the site (Building C; 2136 Bay Street). The site was developed by 1906 (and possibly earlier) for industrial purposes such as a stone yard (northern portion) and for carpet cleaning operations (southeast portion). Between its construction in 1923 and 1989, the Sacramento Building was used for various industrial and warehousing purposes. Hill Brothers Chemical Company (HBCC) began operating in the northern portion of the site in 1924. HBCC operations continued until approximately 2013. The operations consisted of chemical manufacturing and production of materials used in the building industry. Currently, Hyperloop One leases and operates a transportation research and development facility at the site.

In 2015, a Phase II ESA (the 2015 Phase II) was conducted for the Bay Street portion of the site (the former HBCC area) by the previous owner, HBCC. The 2015

Phase II investigation was conducted to assess the recognized environmental conditions (RECs) identified during a 2015 Phase I ESA for the Bay Street portion of the site. The Phase II activities included a limited geophysical survey and advancement of 19 borings for collection of soil samples. All borings were located in the exterior portions of the former HBCC area. The primary finding of the geophysical survey was an apparent excavation near the southwest corner of Building C. Based on the geophysical results and visual observations, the geophysical anomaly was interpreted as the location of the former diesel underground storage tank (UST) identified during the 2015 Phase I ESA historical review. Five borings were advanced in the vicinity of the former UST. The remaining borings were primarily placed in the driveway to the west of Building C and to the south of the rail spur. No borings were advanced inside either of the Bay Street buildings or in the footprint of the former machine shop building (which was previously located directly north of Building C), and limited investigation was conducted in presumed areas where hazardous materials formerly were used (e.g., former chemical tanks area). Of the 81 total soil samples, select samples were analyzed for total petroleum hydrocarbons (TPH; 71 samples), volatile organic compounds (VOCs; 5 samples), polynuclear aromatic hydrocarbons (PAHs; 5 samples), and heavy metals (10 samples). TPH in the gasoline range was not detected, but TPH in the diesel and oil ranges was reported in 8 of 71 samples with concentrations ranging from 6 to 941 milligrams per kilogram (mg/kg). VOCs were not detected above laboratory reporting limits (RLs). Low concentrations of the PAHs benzo[a]pyrene, benzo[g,h,i]perylene, chrysene, and fluoranthene were detected above laboratory RLs in one sample. Metals were reported at concentrations interpreted to be consistent with background levels, except for two elevated concentrations of lead (28.2 and 71.6 mg/kg).

The 2015 Phase II was limited in nature, especially with regard to the analytical program for the assessment of VOCs in the subsurface, given the past industrial operations at the site that could have used VOCs. Soil vapor sampling for VOCs was not performed and only a small subset of soil samples were selected for VOC analysis (5 out of the total 81 soil samples collected). In addition, the boring locations did not provide adequate coverage of areas where historical tanks were located based on historical records such as Sanborn maps. In response to these findings (as described more fully in the 2016 Phase I ESA report for the site), Ramboll Environ performed a limited Phase II subsurface investigation at the site in several phases. The initial investigation focused on shallow soil and soil vapor sampling in areas not previously investigated and the potential presence of USTs. Based on the results, subsequent Phase II activities included deeper soil and soil vapor sampling, and finally, grab groundwater sampling to follow up on the findings of the two phases of soil and soil vapor sampling.

OBJECTIVE

The objectives of the initial Phase II subsurface investigation were to evaluate (a) potential presence of USTs; (b) whether historical industrial operations have resulted in shallow subsurface concentrations of VOCs such that there is a potential for vapor intrusion risk to future site occupants, and; (c) whether elevated concentrations of TPH, asbestos, and metals are present in concentrations exceeding applicable screening criteria in soil in select areas of the sites. Additional subsurface sampling was completed to further evaluate the presence of VOCs, primarily tetrachloroethene (PCE) at the site.

SCOPE OF WORK

The scope of work, which was competed in several different mobilizations, included (1) field mobilization; (2) conducting a soil vapor survey, soil and grab groundwater sampling; (3) conducting a UST survey; (4) laboratory analyses; and (5) data evaluation and reporting. Drilling and sampling activities were supervised by Ramboll Environ field personnel working under the supervision of a California Registered Professional Engineer.

Field Mobilization

Prior to the initiation of drilling activities, Ramboll Environ contacted Underground Service Alert (USA) to mark the locations of all major utilities at the site boundaries in the vicinities of the proposed boring locations. In addition to the services provided by USA, Ramboll Environ contracted with Spectrum

Geophysics of Chatsworth, California, to conduct a geophysical survey in the immediate vicinity of the proposed boring locations to identify any subsurface structures or underground obstructions.

Ramboll Environ also prepared a site-specific Health and Safety Plan (HASP). The HASP was designed to minimize exposure of Ramboll Environ's field personnel to potentially hazardous materials. All field personnel were required to implement the procedures presented in the HASP while conducting the planned field work. Ramboll Environ also contracted with the appropriate subcontractors for the planned fieldwork.

Soil Vapor Survey, Soil and Groundwater Sampling

Initial Soil and Soil Vapor Sampling

On August 6 and 7, 2016, under Ramboll Environ's oversight, Interphase Environmental Inc. of Commerce, California (Interphase) advanced 19 soil borings. Eight soil borings (B-4, B-5, and B-12 through B-17), located inside 2136 Bay Street and 2145-2161 Sacramento Street buildings, were advanced to depths of approximately 5 feet below ground surface (bgs) using a cart-mounted direct push rig. Nine soil borings (B-1 through B-3 and B-6 through B-11), located outside of the buildings, were advanced to depths of approximately 5 and 10 feet bgs using a truck-mounted direct push rig. Two soil borings (B-18 and B-19), located east of the 2159 Bay Street building, were advanced to depths of approximately 5 feet bgs using a hand auger (see Figure 2). Soil samples were collected at depths of approximately 2 and 5 feet bgs using either a hand auger or direct-push drilling techniques (B-4 through B-19). In addition, at three exterior locations (B-1 through B-3) north of the 2136 Bay Street building, soil samples were collected at approximately 5 and 10 feet bgs using direct-push drilling techniques. Soil samples were collected using TerraCore samplers and placed into preserved volatile organic analysis (VOA) vials and in 8-ounce glass jars. The soil samples were labelled and placed in an insulated cooler with ice for shipment, under chain-of-custody protocols, to Positive Lab Services (Positive) of Los Angeles, California, a fixed base laboratory, for analytical testing. Soil samples were selectively analyzed for TPH, VOCs, and metals using United States Environmental Protection Agency (USEPA) Methods modified 8015B, 8260B, 6010B/7471A. Asbestos was analyzed using polarized light microscopy. VOC samples were held pending soil vapor survey analytical results; soil samples from five locations with the highest soil vapor VOC concentrations were analyzed. The soil samples were logged to characterize soil type and relative moisture content.

At 17 locations, the soil borings were converted to temporary soil vapor probes at depths of approximately 5 feet bgs (SV-1 through SV-17; see Figure 2). The soil vapor probes were installed by placing the probe at depth, adding approximately one foot of sand around each soil vapor point, and completing to the surface with dry and hydrated bentonite.

The soil vapor probes were installed and sampled in general accordance with the guidelines established by the California Environmental Protection Agency (Cal/EPA)/DTSC/California Regional Water Quality Control Board – Los Angeles and San Francisco Regions (LARWQCB/SFRWQCB) in "*Advisory – Active Soil Vapor Investigations*", dated April 2012 (the advisory). Each soil vapor probe was allowed to equilibrate for a minimum of 2 hours prior to sampling on August 6, 2016 and August 8, 2016.

In accordance with the Cal/EPA advisory, a tracer vapor mixture of n-propanol and n-pentane was placed at the tubing-surface interface of each soil vapor probe before sampling. These compounds were analyzed to evaluate if there were any surface leaks into the subsurface due to improper installation or sealing of the probes. The tracer vapor mixture was not detected above laboratory RLs in any of the samples, indicating that surface leakage did not occur.

Soil vapor samples were collected in vapor-tight syringes and analyzed in an onsite mobile laboratory operated by Jones Environmental (Jones) of Fullerton, California, a state-certified mobile laboratory, for the full suite of VOCs using USEPA Method 8260B. In addition to the primary samples, two duplicate soil vapor samples were collected from probes SV-6-5 and SV-13-5.

Prior to collection of samples and between successive sampling attempts, sampling equipment was decontaminated to minimize the potential for cross-contamination. After the collection of soil vapor

samples, the tubing was removed from each sampling location and the boreholes were patched to match the surrounding asphalt or concrete. Investigated derived waste (IDW) generated during these activities were placed in a 55-gallon Department of Transportation (DOT)-rated drum and stored on site pending offsite disposal.

UST Survey

On August 9, 2016, Ramboll Environ retained Spectrum Geophysics to conduct a geophysical survey of the readily accessible areas at the site to evaluate the potential presence of steel USTs. This survey was restricted to select portions of the site, as shown on Figure 2, due to the ongoing operations of Hyperloop One, the current site tenant. Report of Spectrum Geophysics' findings is available in Attachment A.

Based on the findings of the initial soil and soil vapor sampling that indicated the presence of VOCs and TPH in soil and soil vapor (see Findings section for further details), Ramboll Environ conducted additional deeper soil and soil vapor sampling to further evaluate the concentrations of VOCs in the vicinity of previous boring locations where elevated VOC concentrations were detected.

Additional Soil and Soil Vapor Survey

On August 16 and 17, 2016, under Ramboll Environ's oversight, Interphase advanced seven additional soil borings. Five soil borings were advanced to depths of approximately 35 feet bgs using a truck-mounted direct push rig. Two soil borings encountered refusal and were advanced to a total depth of approximately 24 feet bgs and 30 feet bgs (SV-23 and SV-26, respectively). Soil samples were collected using EnCore samplers and in 8-ounce glass jars and labelled and placed in an insulated cooler with ice for shipment, under chain-of-custody protocols, to Positive for analytical testing. Samples were analyzed selectively for TPH, VOCs, metals, and semi-volatile organic compounds (SVOCs) by USEPA Methods modified 8015B, 8260B, 6010B/7471A, and 8270C respectively. The soil samples were logged to characterize soil type.

At five locations, the soil borings were converted to temporary multi-nested soil vapor probes at depths of approximately 15, 25, and 35 feet bgs (SV-20 through SV-22, SV-24, and SV-25; see Figure 2). At SV-23, soil vapor probes were installed at depths of approximately 15 and 25 feet bgs. At SV-26, a soil vapor probe was installed at 30 feet bgs.

Each soil vapor probe was allowed to equilibrate for a minimum of two hours prior to sampling on August 18, 2016. Soil vapor samples were collected and analyzed by Jones for the full suite of VOCs using USEPA Method 8260B. In addition to the primary samples, two duplicate soil vapor samples were collected from probes SV-21-35 and SV-23-15.

While advancing SV-23, a metallic feature was encountered. Based on field observations and laboratory analytical results showing VOC and TPH impacts (see Findings section), there was evidence that historical releases may have occurred in the area associated with the metallic feature. Based on the metallic feature and the VOCs reported at deeper sample locations, Ramboll Environ installed and sampled five temporary groundwater monitoring wells in order to evaluate potential groundwater impacts.

Temporary Groundwater Monitoring Wells

On August 25 and 27, 2016, under Ramboll Environ's oversight, BC2 Environmental (BC2) of Orange, California and Gregg Drilling and Testing, Inc. (Gregg) of Signal Hill, California advanced five temporary groundwater monitoring wells to approximately 86.5 feet bgs using hollow-stem auger (HSA) drilling equipment (GW-1 through GW-5, see Figure 2). Groundwater was first encountered at approximately 81 feet bgs at each temporary monitoring well location. Once the borings were advanced to an approximate total depth of 86.5 feet bgs, temporary 2-inch schedule 40 polyvinyl chloride (PVC) well casings were emplaced inside the hollow-stem augers. Five feet of screened casing was enveloped in a filter sock to minimize introduction of fines, and the augers were pulled up approximately 5 feet to expose the well screen to the water bearing zone.

Grab groundwater samples were collected with disposable bailers and decanted into laboratory-prepared glassware, sealed, labeled, and placed in chilled coolers pending delivery to Positive under standard chain-of-custody procedures. Groundwater samples were analyzed for VOCs and TPH using USEPA Methods 8260B and modified 8015B, respectively.

Prior to drilling and in between boring locations, all tools were decontaminated by pressure washing to minimize introduction of foreign contaminants. IDW generated during field activities were placed in DOT-rated 55-gallon drums and stored on-site pending disposal.

IDW was removed on September 1 and 9, 2016 and disposed at Soil Safe of Adelanto, California as non-hazardous waste.

FINDINGS

Soils collected from depths of approximately 5 feet to 86.5 feet bgs were described as consisting of primarily fine sand with limited amounts of medium to coarse sand, silty sand, gravelly sand, and silt lenses. During drilling in the vicinity of Boring SV-23[1], a metallic object was encountered at a depth of approximately 5.5 feet, In addition, an oily sheen was observed in the soil sample collected from a depth of approximately 12 feet in the same boring. Saturated soil conditions were encountered at a depth of approximately 81 feet bgs across the site.

Analytical results for soil vapor samples are summarized in Table 1, analytical results for soil samples are summarized in Tables 2a through Table 2d, and analytical results for groundwater samples are summarized in Table 3. Laboratory analytical reports are included in Attachment B (soil vapor samples) and Attachment C (soil and groundwater samples). The following sections summarize the soil vapor, soil and groundwater analytical results.

Soil Vapor

Soil vapor sampling identified the presence of several VOCs throughout the site, with PCE, trichloroethene (TCE), and 1,1,1-trichloroethane (1,1,1-TCA) as the most frequently detected VOCs. PCE was reported in every soil vapor sample collected from the site with the highest concentrations reported in samples collected from Boring SV-23 (Figure 2). The maximum concentrations of PCE, TCE, and 1,1,1-TCA reported in soil vapor were 34.2 micrograms per liter (µg/L), 1.79 µg/L and 0.15 µg/L, respectively.

Soil

Soil sampling identified PCE, as well as TPH and SVOCs, in select soil samples collected from the site. The maximum concentrations of PCE and TPH constituents were reported in the sample collected from Boring SV-23 at a depth of approximately 12 feet. In that sample, the PCE concentration in soil was 92.5 micrograms per kilogram (µg/kg) and the concentrations of TPH in the gasoline, diesel, and oil ranges were 164 mg/kg, 3,140 mg/kg, and 4,260 mg/kg, respectively. Analysis for SVOCs were performed in the deepest sample collected from Boring SV-23; the three SVOCs reported in the soil sample were pyrene, chrysene, and benzo(g,h,i)perylene at concentrations of 57.1 µg/kg, 65.9 µg/kg, and 34.3 µg/kg, respectively.

Soil sampling also identified lead in select soil samples at elevated concentrations. The maximum concentration of 485 mg/kg was reported in the sample collected from Boring SV-14 at a depth of approximately 2 feet.

Groundwater

Groundwater sampling identified the presence of VOCs including PCE, cis-1,2-dichloroethene (cis-1,2-DCE)[2], m,p-xylene, and 1,2,4-trimethylbenzene at concentrations of up to 3.07 µg/L, 1.18 µg/L, 1.45 µg/L,

[1] Probe SV-23 is located in the vicinity of former tank locations identified on historical Sanborn maps.
[2] A breakdown product of PCE.

and 1.5 µg/L, respectively. Further, TPH-diesel was reported at a concentration of 1.05 milligrams per liter. The presence of VOCs and TPH-diesel were reported in the groundwater samples collected in the vicinity of the metallic object and generally where tanks have been identified on historical Sanborn maps.

Development of Soil Vapor Screening Levels

As part of its data evaluation, Ramboll Environ developed risk-based soil vapor screening levels for commercial/industrial land use, based on the USEPA Regional Screening Levels (RSLs) and DTSC-modified RSLs. The development of the screening levels is described below.

The DTSC-modified RSLs or USEPA RSLs are concentrations of chemicals in commercial air that the Cal/EPA and/or USEPA consider to be below thresholds of concern for risks to human health over a lifetime. The thresholds of concern used to develop the RSLs are an excess lifetime cancer risk of one-in-a-million (10^{-6}) and a hazard quotient (HQ) of 1.0 for noncancer health effects. The National Contingency Plan (NCP); 40 Code of Federal Regulations [CFR] § 300) is commonly cited as the basis for target risk and hazard levels. According to the NCP, lifetime incremental cancer risks posed by a site should not exceed one in a million (1×10^{-6}) to one hundred in a million (1×10^{-4}), and noncarcinogenic chemicals should not be present at levels expected to cause adverse health effects (i.e., HI greater than one). As a conservative measure, the RSLs are calculated to correspond to an estimated cancer risk of 1×10^{-6} (the low or conservative end of the target risk range) or a noncancer HQ of 1.0. The USEPA RSLs were used unless the DTSC-modified RSLs were more stringent.

According to the recommended methodology in the Preliminary Endangerment Assessment (PEA) Guidance Manual by the DTSC (Cal/EPA 2013), the soil vapor screening levels were derived using the DTSC-modified RSLs (Cal/EPA 2014) or USEPA RSLs (USEPA 2015) for commercial air and applying conservative default attenuation factors for soil vapor migrating from subsurface to existing commercial building vapor (Cal/EPA 2011). A default attenuation factor of 0.001 was used for soil vapor measured at shallow depths in soil (e.g. 5 feet bgs) and migrating through soil column and foundation into a building (i.e., the estimated indoor air concentrations would be 1/1000 of the measured soil vapor concentrations). This analysis is by design very conservative and is intended to serve only as a screening tool to evaluate whether a more detailed risk analysis should be undertaken.

The soil vapor screening levels are provided in Tables 1, for the chemicals present above laboratory RLs in soil vapor samples.

Data Evaluation

Soil Vapor

The soil vapor probe analytical results were compared to calculated screening levels as described above and shown in Table 1.

- PCE was the only compound detected in any of the soil vapor samples at concentrations that exceeded the calculated soil vapor screening value of 2.1 µg/l for PCE based on a $1x10^{-6}$ risk. Soil vapor screening values are calculated specifically for samples at a depth of 5 feet bgs. It should be noted that in soil vapor samples collected from 5 feet bgs beneath and immediately around the existing buildings, none had concentrations of PCE that exceeded the $1x10^{-5}$ risk value of 21 µg/l.
- The maximum reported concentration of PCE was 34.2 µg/l in SV-23 at a depth of approximately 15 feet bgs, which is near the location of the encountered metallic object and not beneath any buildings.

Soil

Soil sample results for TPH, VOCs, and SVOCs were compared to USEPA Region IX RSLs for soils under a commercial/industrial land use scenario. TPH and VOC results were also compared to LARWQCB soil

screening levels (SSLs) calculated using the attenuation factor method[3]. For VOCs, the attenuation factor method takes into consideration the lithology, distance of the soil sample above groundwater, and the chemical's California Maximum Contaminant Level (MCL). In this case for PCE, soil samples from the depth of 0 to 20 feet bgs have an SSL of 35 µg/kg, from 21 to 40 feet bgs the SSL is 15 µg/kg, and deeper than 401feet bgs the SSL is 5 µg/kg.

- PCE concentrations exceeded its SSL in Boring SV-23 at depths of 12, 15, 20, and 24 feet bgs.
- TPH-diesel exceeded its SSL of 1,000 mg/kg in Boring SV-23 at the depths of 12 and 24 feet bgs. TPH-diesel exceeded its RSL of 440 mg/kg in Boring SV-23 at the depths of 12, 15, 20 and 24 feet bgs.
- Concentrations of SVOCs pyrene and chrysene were well below their respective RSLs of 23,000,000 µg/kg and 290,000 µg/kg. There is no RSL established for benzo(g,h,i)perylene.

Soil sample results for metals were compared to commercial/industrial soil screening levels from DTSC HERO Note 3 or USEPA RSLs as well as published background concentrations for California soils. Metals concentrations were below screening levels and background levels for all metals with the exception of the following.

- The lead concentration exceeded its RSL of 320 mg/kg in one soil sample, B-14 at 2 feet bgs, with a concentration of 485 mg/kg in a boring beneath the Sacramento building.
- Lead concentrations exceeded the background concentration of 23.9 mg/kg in several soil samples including, B-3 at 5 feet bgs (224 mg/kg), B-9 at 2 feet bgs (28.5 mg/kg), B-11 at 2 feet bgs (29.2 mg/kg), B-15 at 2 feet bgs (50.2 mg/kg), and B-16 at 2 and 5 feet bgs (29.3 mg/kg and 26.8mg/kg, respectively). With the exception of Boring B-16, all lead concentrations decrease to concentrations below background in a deeper sample. Concentrations in the samples from B-16 at 2 and 5 feet bgs only slightly exceed the background concentration.
- The concentration of arsenic exceeded the background concentration of 12 mg/kg in two samples from B-9 at 2 and 5 feet bgs (18.0 mg/kg and 34.3 mg/kg, respectively). Deeper samples collected from Boring B-23, which is directly adjacent to B-9, at the depths of 12 and 15 feet bgs, did not have detectable concentrations of arsenic.

Asbestos was not reported in select soil samples tested for asbestos with the exception of two samples, where a trace amount (<1%) was reported.

Groundwater

VOCs including PCE, cis-1,2-dichloroethene (cis-1,2-DCE)[4], m,p-xylene, and 1,2,4-trimethylbenzene as well as TPH-diesel range were reported in one or more groundwater sample. Concentrations of PCE, cis-1,2-DCE, and m,p-xylene in groundwater are below their corresponding MCLs in all groundwater samples. There are no MCLs established for TPH and 1,2,4-trimethylbenzene.

CONCLUSIONS AND RECOMMENDATIONS

Based on Ramboll Environ's field observations and laboratory analytical results to date, there is evidence that historical release(s) from the site have adversely impacted the subsurface environment, most notably in the immediate vicinity of the subsurface metallic object (near Boring SV-23). In summary,

- The results of the recent soil and soil vapor sampling performed do not indicate that significant subsurface impacts exist beneath the existing building footprints (i.e., VOCs are present in soil vapor at concentrations within the USEPA Risk Management Range of $1x10^{-6}$ to $1x10^{-4}$). The detected

[3] 1996 LARWQCB Interim Site Assessment & Cleanup Guidebook attenuation factor method was used assuming 100% sand to calculate SSLs.

[4] A breakdown product of PCE.

concentrations of PCE in soil vapor beneath the building would be considered generally low and within the acceptable risk management criteria established by USEPA for the current site uses.

- Given that the site is currently capped with asphalt and/or concrete, no further action is recommended with regard to the presence of metals in shallow soils.
- The recommended approach to address the metallic object and associated PCE/TPH impacts is to remove the metallic object and excavate underlying soil to a depth of approximately 30 feet. It is anticipated that the surface area of the excavation footprint will be approximately 10 feet wide by 15 feet long.
- Given the low concentrations of VOCs and TPH reported in groundwater, no active remediation is warranted although limited monitoring may be required by the appropriate regulatory agency.

Ramboll Environ will work with the appropriate regulatory agencies to address the subsurface metallic object and implement the recommendation(s), as may be appropriate.

CLOSURE

We appreciate the opportunity to be of service to you on this project. If you have any questions or need further information, please contact Eddie Arslanian or Alexis Hillman.

Sincerely,

Josh Nandi

LIMITATIONS

This report has been prepared for the exclusive use of Allen Matkins Leck Gamble Mallory & Natsis LLP and Tishman Speyer may not be relied upon by any other person or entity without Ramboll Environ's prior express written permission. This report has been prepared in conformance with generally accepted standards of practice in the fields of environmental sciences and engineering at the time the services were rendered. Ramboll Environ makes no other warranty or representation, either express or implied, with respect to its services.

The findings are based in part on information/data provided by Tishman Speyer, and/or other third parties and conditions identified as a result of Ramboll Environ's investigations as of the date of the report. Ramboll Environ has not attempted to verify information/data provided to it by our client or other third parties, except as explicitly noted in our report, and makes no express representations to the accuracy of such information/data by the inclusion of it in our report.

It is Ramboll Environ's opinion that the level of detail carried out during the investigation is appropriate to meet the study objectives; however, there is no warranty or guarantee, expressed or implied, that this investigation has uncovered all potential environmental liabilities associated with the site.

µg/l - micrograms per liter
DUP - Duplicate sample

[1] Soil Gas Screening Values calculated using California Department of Toxic Substances Control Office of Human and Ecological Risk (HERO), Human Health Risk Assessment (HHRA) Note 3 (January 2016 update) and/or USEPA Regional Screening Levels (RSLs; May 2016) and attenuation factor (AF) for existing slab recommended in DTSC Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance, October 2011). It is noted that Screening Levels are calculated assuming a sample collection depth of 5 feet. Deeper soil vapor samples are compared to Screening Levels for general comparison purposes only.

Samples analyzed by United States Environmental Protection Agency (USEPA) Method 8260B.
<X - Analyte not present above laboratory reporting limit (RL).
Bold values indicate analyte present above laboratory RL.
Only compounds with at least one detection are listed.

[1] USEPA. 2016. Regional Screening Levels for Chemical Contaminants at Superfund Sites. May. Screening levels presented for industrial soils.

[2] Los Angeles Regional Water Quality Control Board (LARWQCB). 1996. Interim Site Assessment & Cleanup Guidebook. Attenuation factor method used assuming 100% sand and depth to groundwater of 81 feet.

[a]Most stringent of aliphatic or aromatic hydrocarbon screening level used.

VOCs - volatile organic compounds

TPH - total petroleum hydrocarbons

AF - attenuation factor

ft bgs - feet below ground surface

µg/kg - micrograms per kilogram

mg/kg - milligrams per kilogram

USEPA - United States Environmental Protection Agency

Samples analyzed for VOCs by USEPA Method 8260B and for TPH full carbon chain by modified USEPA Method 8015.

<X - not detected above laboratory reporting limit

Bold - detections above laboratory reporting limit

NA - Not Analyzed

Only compounds with at least one detection are listed.

Notes:

[1] California Department of Toxic Substances Control Office of Human and Ecological Risk (HERO), Human Health Risk Assessment (HHRA) Note 3 (January 2016 update) and/or USEPA Regional Screening Levels (RSLs; May 2016)

[a] Arsenic occurs naturally in soil. An evaluation of arsenic soil data from school sites in Southern California found arsenic concentrations ranging from 0.15 mg/kg to 20 mg/kg, with an upper-bound background arsenic concentration of 12 mg/kg (Chernoff G, Bosan W, Oudiz D. 2008. Determination of a Southern California Regional Background Arsenic Concentration in Soil). Arsenic concentrations in soil samples collected at the site were conservatively screened against 12 mg/kg.

[b] Chromium RSLs are listed as Chromium III/Chromium VI

mg/kg - milligrams per kilogram

USEPA - United States Environmental Protection Agency

Samples analyzed for metals by USEPA Method 6010B/7471A

<X - not detected above laboratory reporting limit

NA - not analyzed

ND - not detected

Trace - denotes the presence of asbestos below the Limit of Quantification (1%)

Bold - detections above laboratory reporting limit

Client Address:	350 S Grand Ave, Suite 2800 Los Angeles, CA 90071	**JEL Ref. No.:** **Client Ref. No.:**	E-0578 WO-2016-118
Attn:	Alexis Hillman	**Date Sampled:** **Date Received:**	8/6/2016 8/6/2016
Project Name:	Sacramento & Bay (Project # 04-16129AB)	**Date Analyzed:**	8/6/2016
Project Address:	2159 Bay Street Los Angeles, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B - Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling. Parachlorobenzotrifluoride (PCBTF) was detected in the following samples: SV-13-5', SV-13-5' DUP, SV-15-5', and SV-16-5'. PCBTF is not currently calibrated for or added to the CCV or LCS standards. Therefore, it is reported as a Tentatively Identified Compound (TIC).

Project Address:	2159 Bay Street Los Angeles, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B - Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling. Parachlorobenzotrifluoride (PCBTF) was not detected in any of the samples reported herein. PCBTF is not currently calibrated for or added to the CCV or LCS standards. Therefore, it is reported as a Tentatively Identified Compound (TIC).

Approval:

Steve Jones, Ph.D.
Laboratory Manager

Project Name:	Sacramento & Bay (Project # 04-16129AB)	**Date Analyzed:**	8/18/2016
Project Address:	2159 Bay Street Los Angeles, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B - Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. 3 purge volumes were used.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Steve Jones, Ph.D.
Laboratory Manager

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 08, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Report No.: 1608071
Project Name: Sacramento & Bay, Los Angeles, CA / 04-16129AB

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 08, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

D Sanchez
Project Manager

Report No.: 1608071
Project Name: Sacramento & Bay, Los Angeles, CA / 04-16129AB

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 08, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Report No.: 1608141
Project Name: Sacramento & Bay, Los Angeles, CA / 04-16129AB

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 16, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Report No.: 1608152
Project Name: Sacramento & Bay, Los Angeles, CA / 04-16129AB

Dear Ms. Alexis Hillman,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on August 17, 2016.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Project Manager
