Solid Waste - Default CalEEMod values.

Construction Off-road Equipment Mitigation - Water Exposed Area, Frequency: 2 times per day. Offroad equipment: Tier 4 Final over 25 HP. Electric air compressors and welders.

Mobile Land Use Mitigation - No mitigation applied.

Mobile Commute Mitigation - No mitigation applied.

Area Mitigation - No mitigation applied.

Energy Mitigation - No mitigation applied.

Water Mitigation - No mitigation applied.

Waste Mitigation - No mitigation applied.

The Bond Project - Proposed - Health Risk Assessment - Mitigated - Los Angeles-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Operational Off-Road Equipment - No off-road equipment.
Fleet Mix - Default fleet mix.

Stationary Sources - Emergency Generators and Fire Pumps - No stationary sources.

 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for    29 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   9818605.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:     29 Source(s);       1 Source Group(s); and     344 Receptor(s)
```

```
                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:     29 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    55.00 ;  Decay Coef. =    0.000     ;
 Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;  Emission Rate Unit
Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Bond_Con.err

 **File for Summary of Results:   Bond_Con.sum

Cultural Resources Technical Report for Santa Monica/Orange Grove Mixed-Use Development 7811 Santa Monica Boulevard

1 INTRODUCTION

Dudek was retained by the City of West Hollywood to prepare an Environmental Impact Report (EIR) for the Santa Monica/Orange Grove Mixed-Use Development Project (proposed project). In support of the EIR, Dudek conducted a cultural resources inventory and evaluation study. The cultural resources inventory and evaluation study comprised a records search of the proposed project site and a 0.5-mile radius at the South Central Coastal Information Center (SCCIC); a Sacred Lands File search from the California Native American Heritage Commission (NAHC); an intensive pedestrian survey of the project site for cultural resources; and recording and evaluating potentially historic buildings located within the project site for the California Register of Historical Resources (CRHR) and the City of West Hollywood's list of historic resources in compliance with all applicable state and local regulations. The potentially historic buildings within the project site are located at:

- 7811 Santa Monica Boulevard
- 1125-1127 N. Ogden Street

1.1 Project Description and Location

The proposed project would involve demolition of an existing surface parking lot, personal training gym facility (7811 Santa Monica Boulevard), and multi-family housing (1125-1127 N. Ogden Drive) followed by construction of a multi-story mixed-use building (residential, hotel, and commercial) totaling 113,300 square feet of gross floor area spread over six floors and a rooftop level. The project would include 79 residential units, and 81-room hotel, and approximately 6,000 square feet of restaurant space. The hotel use would include ancillary fitness, screening room, gardens, rooftop pool desk, and private terrace uses. A total of 197 parking spaces would be located at-grade and within three subterranean parking levels. Two on-site loading spaces would also be provided within the at-grade parking area. The parking areas would be accessed via Santa Monica Boulevard and Orange Grove Avenue.

The project site is located in the City of West Hollywood in Los Angeles County, California (Figure 1), and is approximately bounded by Fountain Avenue to the north, Santa Monica Boulevard to the south, N. Ogden Drive to the east, and N. Orange Grove Avenue to the west (Figure 2). The project site falls within Section 9 of Township 1 South, Range 14 West of the Hollywood, California 7.5' U.S. Geological Survey Quadrangle Map.

1.2 Regulatory Setting

This section includes a discussion of the applicable federal, state, and local laws, ordinances, regulations, and standards governing cultural resources, which must be adhered to before and during construction of the proposed project.

1.2.1 Federal

While there is no federal nexus for this project, the National Register of Historic Places (NRHP) designation criteria were considered in the evaluation of historical resources for the proposed project. The NRHP was established by the National Historic Preservation Act of 1966, as "an authoritative guide to be used by Federal, State, and local governments, private groups and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment."

The National Register of Historic Places

The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and that meet at least one of the following criteria:

1. Are associated with events that have made a significant contribution to the broad patterns of our history
2. Are associated with the lives of persons significant in our past
3. Embody the distinctive characteristics of a type, period, or method of installation, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction
4. Have yielded, or may be likely to yield, information important in prehistory or history.

1.2.2 State

The California Register of Historical Resources

In California, the term "historical resource" includes "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code (PRC), Section 5020.1(j)). In 1992, the California legislature established the CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change." (PRC, Section 5024.1(a).) A resource is eligible for listing in the CRHR if the State Historical Resources Commission determines that it is a significant resource and that it meets any of the following criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage
2. Is associated with the lives of persons important in our past
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values
4. Has yielded, or may be likely to yield, information important in prehistory or history.

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing on the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

California Environmental Quality Act

As described further below, the following California Environmental Quality Act (CEQA) statutes and CEQA Guidelines are relevant to the analysis of archaeological and historical resources:

- PRC Section 21083.2(g): Defines "unique archaeological resource."
- PRC Section 21084.1 and CEQA Guidelines Section 15064.5(a): Define historical resources. In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse

change in the significance of an historical resource"; it also defines the circumstances when a project would materially impair the significance of an historical resource.

- PRC Section 21074(a), defines "tribal cultural resources."
- PRC Section 5097.98 and CEQA Guidelines Section 15064.5(e): Set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- PRC Sections 21083.2(b)–(c) and CEQA Guidelines Section 15126.4: Provide information regarding the mitigation framework for archaeological and historical resources, including examples of preservation-in-place mitigation measures; preservation-in-place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context, and it may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (PRC, Section 21084.1; CEQA Guidelines, Section 15064.5(b)). If a site is either listed or eligible for listing in the CRHR, or if it is included in a local register of historical resources, or identified as significant in an historical resources survey (meeting the requirements of PRC Section 5024.1(q)), it is an "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (PRC, Section 21084.1; CEQA Guidelines, Section 15064.5(a)). The lead agency is not precluded from determining that a resource is an historical resource even if it does not fall within this presumption (PRC, Section 21084.1; CEQA Guidelines, Section 15064.5(a)).

> A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines, Section 15064.5(b)(1); PRC, Section 5020.1(q)). In turn, the significance of an historical resource is materially impaired when a project:
>
> 1. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the CRHR; or

2. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the PRC or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
3. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its eligibility for inclusion in the CRHR as determined by a lead agency for purposes of CEQA.

(CEQA Guidelines, Section 15064.5(b)(2))

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of an historical resource such that the resource's historical significance is materially impaired.

Under CEQA, an Environmental Impact Report is required to evaluate any impacts on unique archaeological resources (PRC, Section 21083.2). A "unique archaeological resource" is defined as:

> [A]n archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:
>
> 1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
> 2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
> 3. Is directly associated with a scientifically recognized important prehistoric or historic event or person. (PRC, Section 21083.2(g))

An impact to a non-unique archaeological resource is not considered a significant environmental impact, and such non-unique resources need not be further addressed in the Environmental Impact Report (PRC, Section 21083.2(a); CEQA Guidelines, Section 15064.5(c)(4)).

CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in PRC Section 5097.98.

California Health and Safety Code

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the county coroner has examined the remains (Section 7050.5b). If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact the NAHC within 24 hours (Section 7050.5c). The NAHC will notify the most likely descendant. With the permission of the landowner, the most likely descendant may inspect the site of discovery. The inspection must be completed within 48 hours of notification of the most likely descendant by the NAHC. The most likely descendant may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

1.2.3 Local

Chapter 19.58 of the City of West Hollywood's Municipal Code describes the City's Cultural Heritage Preservation Ordinance, which was adopted based on the following findings of the Council:

A. **Threatened Structures and Sites.** The Council has determined that the character, history, and spirit of the City, State, and nation are reflected in the historic structures, improvements, natural features, objects, sites, and areas of significance located within the City and that in the face of ever increasing pressures of modernization and urbanization, cultural resources, cultural resource sites, and historic districts located within the City are threatened with alteration, demolition, or removal.

B. **Preservation of Structures and Sites.** The Council has further determined that these threatened structures, representing the City's unique cultural, historical, and social foundations, should be preserved as a living part of community life and development in order to build a greater understanding of the city's past and to give future generations the opportunity to appreciate, enjoy, and understand the city's rich heritage.

C. **Methods of Preservation.** Recognizing that the use of historic preservation measures has become increasingly prevalent as a method for identifying and preserving cultural resources, the city joins with private concerns, the state, and the United States Congress to develop methods of preserving the city's unique aesthetic, architectural, cultural, and historical heritage, in compliance with the provisions of the National Historic Preservation Act of 1966, as amended, and state law (Government Code Section 37361).

(Ord. 01-594 § 2 (Exh. A), 2001)

19.58.050 Criteria for Designation of Cultural Resources

The Historic Preservation Commission may approve a nomination application for and recommend designation of, and the Council may designate a cultural resource, or any portion thereof (both interior and exterior) or historic district in compliance with Sections 19.58.060 (Designation of Historic Districts) and 19.58.070 (Review and Approval of Designations) below if it finds that the cultural resource meets one or more of the following criteria.

A. **Exemplifies Special Elements of the City.** It exemplifies or reflects special elements of the city's aesthetic, architectural, cultural, economic, engineering, political, natural, or social history and possesses an integrity of design, location, materials, setting, workmanship feeling, and association in the following manner:

1. It embodies distinctive characteristics of a period, method, style, or type of construction, or is a valuable example of the use of indigenous materials or craftsmanship; or

2. It contributes to the significance of an historic area by being:

a. A geographically definable area possessing a concentration of historic or scenic properties; or

b. A thematically related grouping of properties which contribute to each other and are unified aesthetically by plan or physical development; or

3. It reflects significant geographical patterns, including those associated with different eras of growth and settlement, particular transportation modes, or distinctive examples of community or park planning; or

4. It embodies elements of architectural design, craftsmanship, detail, or materials that represent a significant structural or architectural achievement or innovation; or
5. It has a unique location or singular physical characteristic or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the city; or

B. **Example of Distinguishing Characteristics.** It is one of the few remaining examples in the city, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen; or

C. **Identified with Persons or Events.** It is identified with persons or events significant in local, state, or national history; or

D. **Notable Work.** It is representative of the work of a notable architect, builder, or designer.

(Ord. 03-663 § 4, 2003; Ord. 02-643 § 48, 2003; Ord. 01-594 § 2 (Exh. A), 2001)

19.58.060 Designation of Historic Districts

Except as outlined below, the criteria and procedure for designating an historic district shall be the same as for designating individual cultural resources as in Section 19.58.070 (Review and Approval of Designations).

A. **Historic Resources Survey.** As part of the nomination for designating an historic district, an historic resources survey shall be prepared identifying all contributing resources and non-contributing resources. If not otherwise designated, all cultural resources listed in a designated historical district will be considered "contributing." The survey may also identify contributing landscaping, natural features or sites. The survey shall be reviewed in accordance to the designation procedures listed below. The survey shall identify the manner in which the proposed district possesses a significant concentration, linkage, or continuity of sites, buildings, structures or objects united historically or aesthetically by plan or physical development within the period of significance and within the context of the district.

B. **Finding of Contribution.** Each cultural resource within a proposed historic district must be identified as a contributing resource. If a resource is individually designated, it is then automatically considered a contributing resource within the district that includes it.

(Ord. 02-643 § 49, 2003; Ord. 01-594 § 2 (Exh. A), 2001)

2 PROJECT SETTING

2.1 Environmental Setting

The project site consists of a densely developed urban environment with no remnants of any natural environmental setting. The northwestern portion of the project site contains a paved parking lot bounded by commercial development to the north, residential development to the east, and light industrial and commercial development to the south. The central portion of the project site contains a large industrial building (currently functioning as commercial space) that extends north across the project site from Santa Monica Boulevard to the paved parking lot. Another paved parking area, specifically for this building, is located adjacent to and west of the building. The northeast portion of the project site consists of a multi-family residential building with a one-story house fronting onto N. Ogden Avenue attached via laundry facilities and a common area to a two-story building towards the rear of the property with six units.

2.2 Historic Context

The following historic context addresses relevant themes concerning the history of the project site. It begins with a general overview of the development of the City of West Hollywood, and provides a brief discussion of the City's patterns of industrial development, as it relates to the industrial setting of the project site in the 1920s–1950s. Finally, this section provides a brief history of multi-family housing patterns within the City.

2.2.1 Historical Overview of West Hollywood

The Cahuenga Valley sits at the base of the Hollywood Hills and was once a sprawling agricultural landscape. The land around present-day West Hollywood was once part of Rancho La Brea, granted to Antonio Jose Rocha by the Mexican government in 1828. The land was subsequently sold to Major Henry Hancock, an army surveyor who would become a prominent figure in the development of Los Angeles, and the man for whom Hancock Park is named. While much of Rancho La Brea was eventually incorporated into the City of Los Angeles, the portion within present-day West Hollywood remained an unincorporated rural landscape consisting of farmhouses (JHRA 1987). A water delivery system was introduced to the area in 1896 by John Pirtle's West Los Angeles Water Company, which made intensive development of the region possible. In 1897, the Los Angeles Times described the area as being an ideal place to farm due to its low occurrence of frost, and praised the region for its successful raising of winter vegetables and lemons (Masters 2011).

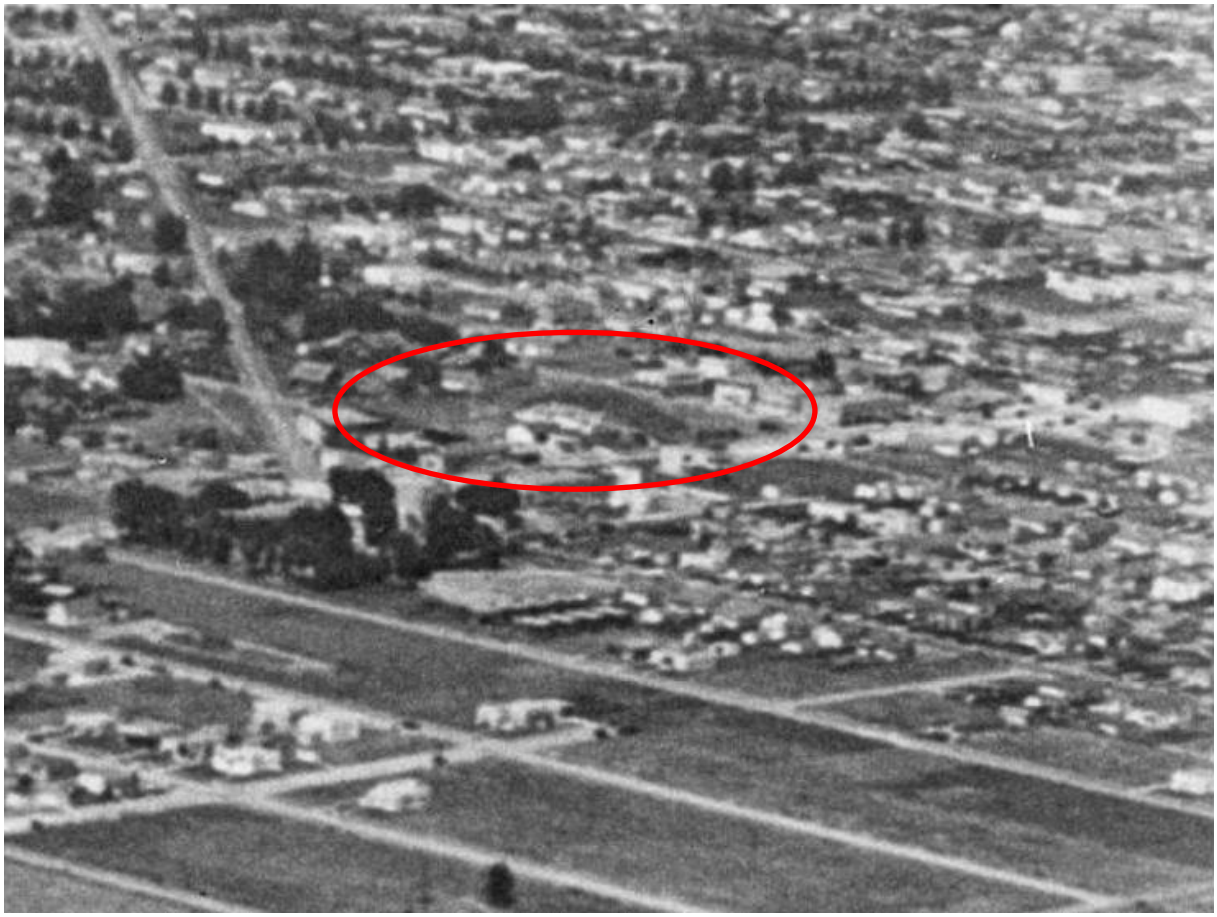
Two of the most important figures in the early development of present-day West Hollywood were Moses H. Sherman and his brother-in-law Eli P. Clark, both transportation entrepreneurs who were responsible for developing one of Southern California's first interurban electric railways, the Pasadena and Pacific, which connected inland Los Angeles with the beaches of Santa Monica. Sherman and Clark were on the hunt for a main rail yard to house their Los Angeles Railway. Sherman found a location just 10 miles west of Los Angeles. In 1894, the two men entered negotiations with Thomas and Leander Quint, who owned a centrally located portion of the land. Sherman and Clark wanted to acquire a portion of the Quints' land to build a powerhouse and maintenance shops for their new suburban railroad. By July 4, 1895, the first electric rail car was up and running on the new line. The Los Angeles Railway (later part of the Los Angeles Pacific Electric company) established a yard on a 5.56-acre piece of land to adjoin the Santa Monica rail line at San Vicente. The yard (eventually known as Sherman yards) was located near the present-day intersection of Melrose Avenue and San Vicente Boulevard (JHRA 1987). Eventually, the name "Sherman" would refer to most of the area known as West Hollywood today.

In 1896, 12 acres of the Quint's barley fields was sold to E.H. White and subdivided to form the townsite of Sherman. The subdivision extended from the eastern border of Rancho Rodeo de Las Aguas on the west to Palm Avenue on the east. The first streets developed in the area were Larrabee, Clark (present-day San Vicente), Cynthia, and Sherman (now Santa Monica Boulevard). Early settlers consisted primarily of railroad workers, engineers, carpenters, and other types of maintenance crew for the new Los Angeles Railway. In 1895, a commercial building was constructed to house the post office, and the first home was built on Larrabee. The town of Sherman continued to grow rapidly over the next decade and became more and more appealing to prospective residents, offering the peace and quiet of a small town with the benefit of being in close proximity to downtown, shopping, and other amenities. Single-family residences began to pop-up throughout the area in the form of cottages and Craftsman bungalows. Santa Monica Boulevard saw the development of a commercial strip lined with one- and two-story vernacular brick buildings and wooden storefronts. Sunset Boulevard was still unpaved at this time (Figure 3).

The Hollywood film industry was founded in 1911 and would bring the next big employment boom through Sherman on the heels of the railroad industry. By 1919, production studios had popped up throughout the Los Angeles area in places like Edendale, Silver Lake, Hollywood, and Culver City. The town's development began to merge with nearby Hollywood. The first major developments near Sherman included the Jesse D. Hampton studio at the corner of present-day Formosa Avenue and Santa Monica Boulevard. Just one block away, Mary Pickford and Douglas Fairbanks, in partnership with Charlie Chaplin and D.W. Griffith, founded United

Artists. The triple threat of movie, oil, and transportation industries in Sherman attracted droves of newcomers and the population boomed (JHRA 1987).

Figure 3. Detail from a 1922 aerial of West Hollywood showing the project site (circled in red), view looking northeast (Source: USC Digital Library, 2016)



A Chamber of Commerce was formed in 1920 to help streamline municipal processes that were being bottlenecked by the Sherman Improvement Association and the Los Angeles County Board of Supervisors. One of Chamber's first agenda items was to widen Santa Monica Boulevard, which required moving and in some cases rebuilding almost every commercial building in Sherman. The Chamber also initiated a campaign to promote the advantages of living in Sherman (JHRA 1987). In 1924, the residents of Sherman were asked to vote on the issue of annexation to Los Angeles (the first of several times the issue would come before voters). Los Angeles had already annexed several large tracts surrounding Sherman, including the 1,203-acre

Fairfax District and 430-acre Melrose District. Unlike Sherman, these districts did not have an established community with its own identity, so incorporation was less controversial. In Sherman, the issue of annexation was particularly divisive. Realtors supported the idea, citing that the future growth and development of Sherman depended on access to Los Angeles' municipal services. Conversely, Sherman's Board of Trade and Chamber of Commerce staunchly opposed annexation, citing fears of increased property taxes. The opposition ultimately prevailed, and Sherman financed the construction of its own sewer system and relied on the county to provide police and fire protection services (Masters 2011).

In 1925, Sherman changed its name to West Hollywood in order to capitalize on the fame of its more affluent neighbor, Hollywood. Its posh location between Beverly Hills and Hollywood made it a very desirable place to live and soon new subdivisions composed of Spanish Colonial Revival single-family houses and other period revival-style apartment buildings began to appear. Many of these new residences were built in close proximity to the Sunset Strip and were often designed by some of the region's most coveted architects. The prime location and impressive streetscapes were very appealing to the film industry, and many of the new ornate apartment buildings were quickly occupied by writers, producers, technicians, cameramen, and actors who appreciated the close proximity to the movies studios (JHRA 1987).

By the mid-1930s the Sunset Strip had become the center of the Hollywood scene, hosting a variety of celebrity-frequented night clubs such as the Trocadero, Mocambo, and Ciro's. These clubs epitomized the glamour and star-power of Hollywood. In spite of prohibition laws (which were not repealed until 1933), drinking and gambling persisted in all of the well-known clubs.

The onset of World War II marked an end to the extravagant Hollywood lifestyle, defined by its excess in the 1920s and 1930s, and replaced it with a somewhat more wholesome image in the 1940s. Rising production costs also resulted in fewer films being produced. After the war, people began to stay home with their television sets rather than go out to the movies or nightclubs. Celebrities also maintained lower social profiles, particularly in the light of political reform and the McCarthy era. The famous nightclubs began to close their doors, starting with the Trocadero in 1946 and Ciro's in 1952.

Relaxed county zoning laws during the 1960s and 1970s resulted in the construction of large multifamily apartment buildings in West Hollywood on streets once dominated by single-family homes. The tracks running along Santa Monica Boulevard that had become part of the Pacific Electric Railway in 1911 and eventually carried red cars until 1941 found themselves largely unused for decades. Strangely, these tracks would occasionally serve the big Southern Pacific freight trains, which could be seen barreling down the boulevard in the 1970s. By 1999, the West Hollywood

segment of tracks were removed and replaced by the landscaped concrete median in place today (Masters 2011). West Hollywood became the last city in the area to be incorporated in 1984.

2.2.2 Industrial Development in West Hollywood

In 1928, it was announced that "many new plants have been completed in Hollywood's industrial section…creating employment for hundreds of workers and adding millions of dollars to the annual output" (Los Angeles Times 1928). Among these new plants in the Hollywood vicinity were the Community Laundry Company, the Hollywood Linen Service, the Victor Talking Machine Company, Van De Kamp's Holland-Dutch Bakery, the Hollywood Paper Box Company, and the Mitchell Camera Factory. These new developments were setting the stage for the region's growth in the manufacturing industry.

The growth of the motion-picture industry led to an entirely new manufacturing boom in the Hollywood and West Hollywood region. As the development of sound pictures rapidly increased, it became necessary for companies specializing in technical equipment for motion pictures to relocate their plants into the neighborhoods of the studios. These manufacturing plants were soon located in the vicinity of Santa Monica Boulevard and Highland Avenue, and in a district near Van Ness and Melrose Avenues. Companies specializing in incandescent lighting, color photography, and laboratory apparatus and film were all involved in the relocation. These companies included the Mitchell Camera Corporation, Mole-Richardson Inc., J.E. Brulatour Inc., Eastman Kodak Company, and The Roy Davidge Film Laboratories (Los Angeles Times 1930).

In the 1940s, millions of dollars poured into the Los Angeles region to create new manufacturing plants and expand existing ones. This growth was primarily funded by the national defense program at the onset of World War II in order to adapt and expand existing manufacturing infrastructure to meet the needs of the war effort (Los Angeles Times 1941). In particular, 1941 was projected to be one of the greatest years in the history of industrial growth in Southern California.

Sanborn Fire Insurance Maps of the project site from 1950 show that the project site and its setting contained industrial and commercial buildings along Santa Monica Boulevard, shifting to a residential area as one moved away from the main thoroughfare (Figures 4 and 5). The dying and cleaning buildings were relocated into a group of buildings at the rear of the property, and the original site contained a large building housing clothing presses (present-day 7811 Santa Monica Boulevard). The northwest portion of the project site contained a neon sign manufacturer, office space, and storage space (currently a parking lot). A mix of single-family and multi-family residences occupied the properties north of the project site, and continue to do so. Businesses outside of, but adjacent to, the current project site, include an automobile repair

shop and restaurant (now an exercise club) to the west; neon sign manufacturing (now a parking lot) to the northwest; multi-family residences to the northeast; and automobile sales and repairs (currently a car leasing company) to the east. The south side of Santa Monica Boulevard was also dominated by industrial and commercial businesses such as a pottery manufacturing, machine shop, furniture store, and restaurants.

2.2.3 Multi-Family Residential Development in West Hollywood

By the 1920s, the movie industry was booming. The resulting influx of job seekers and tourists, along with the town not being annexed into the City of Los Angeles, led to West Hollywood sprouting a wide variety of multi-family housing units: bungalow courts, duplexes, smaller flats and quadruplexes, multiple dwellings on one lot, and rear and above-garage units identified as "accumulative architecture," as well as a few tenements. By the 1940s, the sparsely populated area between Sherman and east Hollywood was almost fully developed with modest single-family residences and multi-family housing units, while commercial and industrial developments sprouted up along main thoroughfares like Santa Monica Boulevard. During the 1950s and 1960s, County-level zoning code changes facilitated the introduction of new multi-family housing types, such as the garden court and the stucco box, in traditionally single-family neighborhoods. These 50 years of residential development led to a distinctive integration of multi-family housing units throughout West Hollywood, compared to the more common tendency to cluster multi-family housing along major roads and thoroughfares as occurred in the rest of Los Angeles. This vast array of historic property types and styles, combined with the unique population which it historically served, led to the development of a highly creative community and to the regional significance of multi-family housing in West Hollywood (Architectural Resources Group 2008).

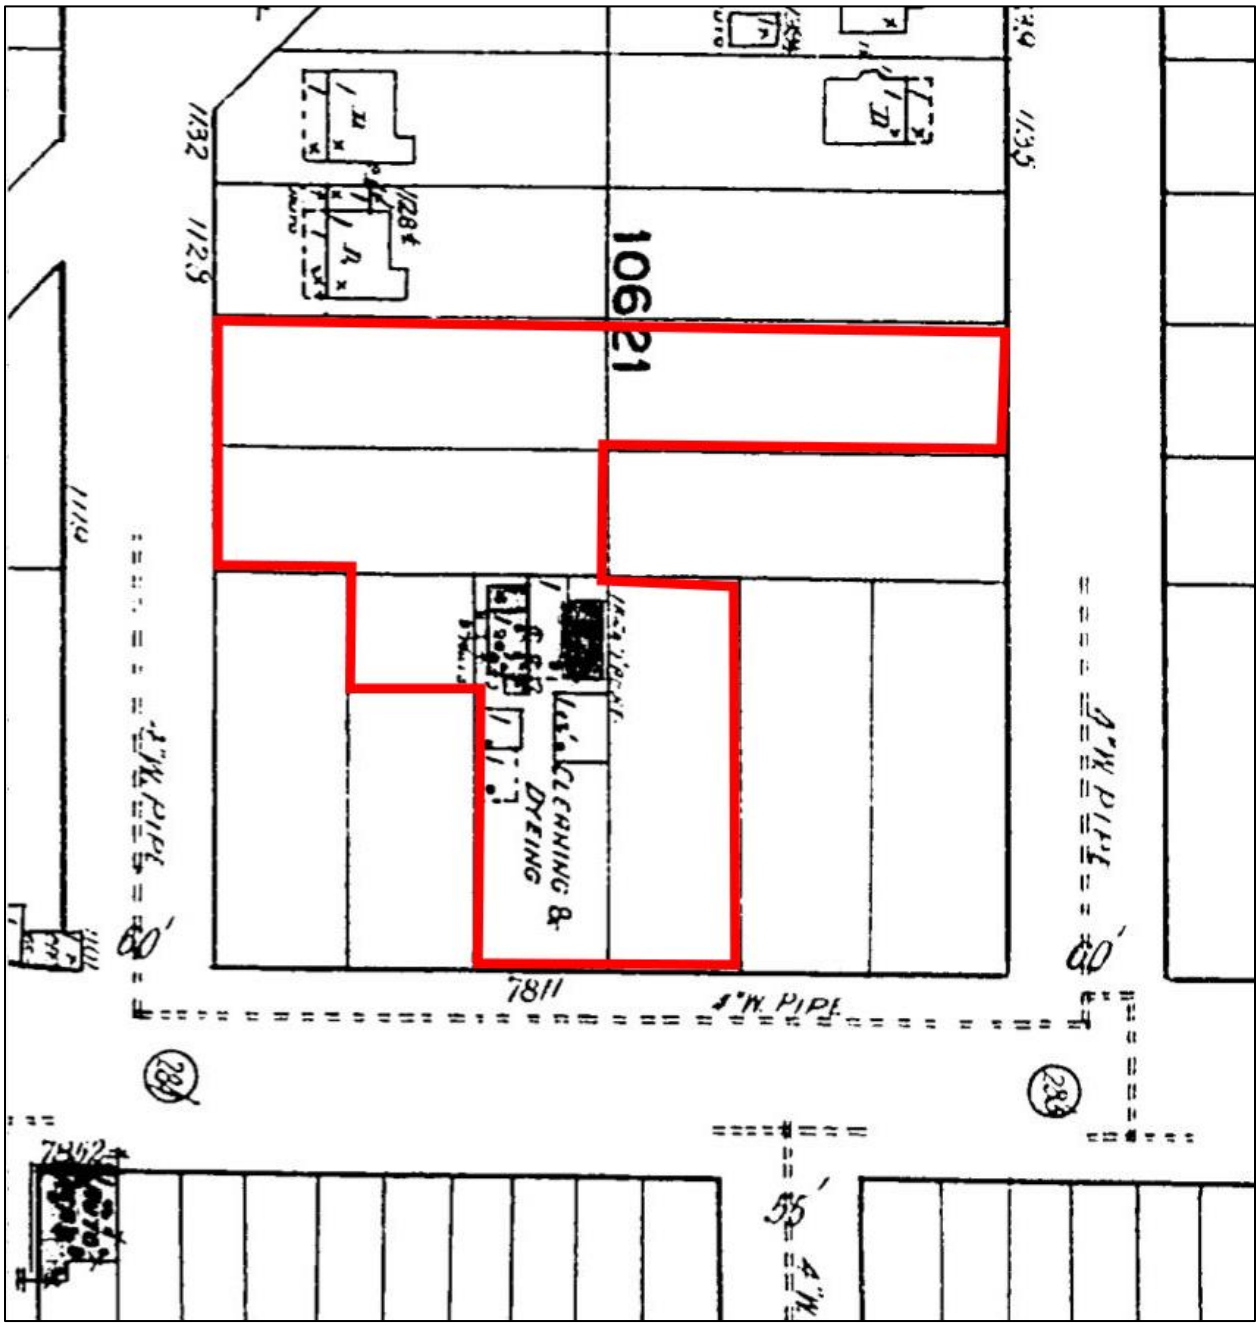

Figure 5. Section of Sanborn Fire Insurance Map from 1950 showing the project site (in red).

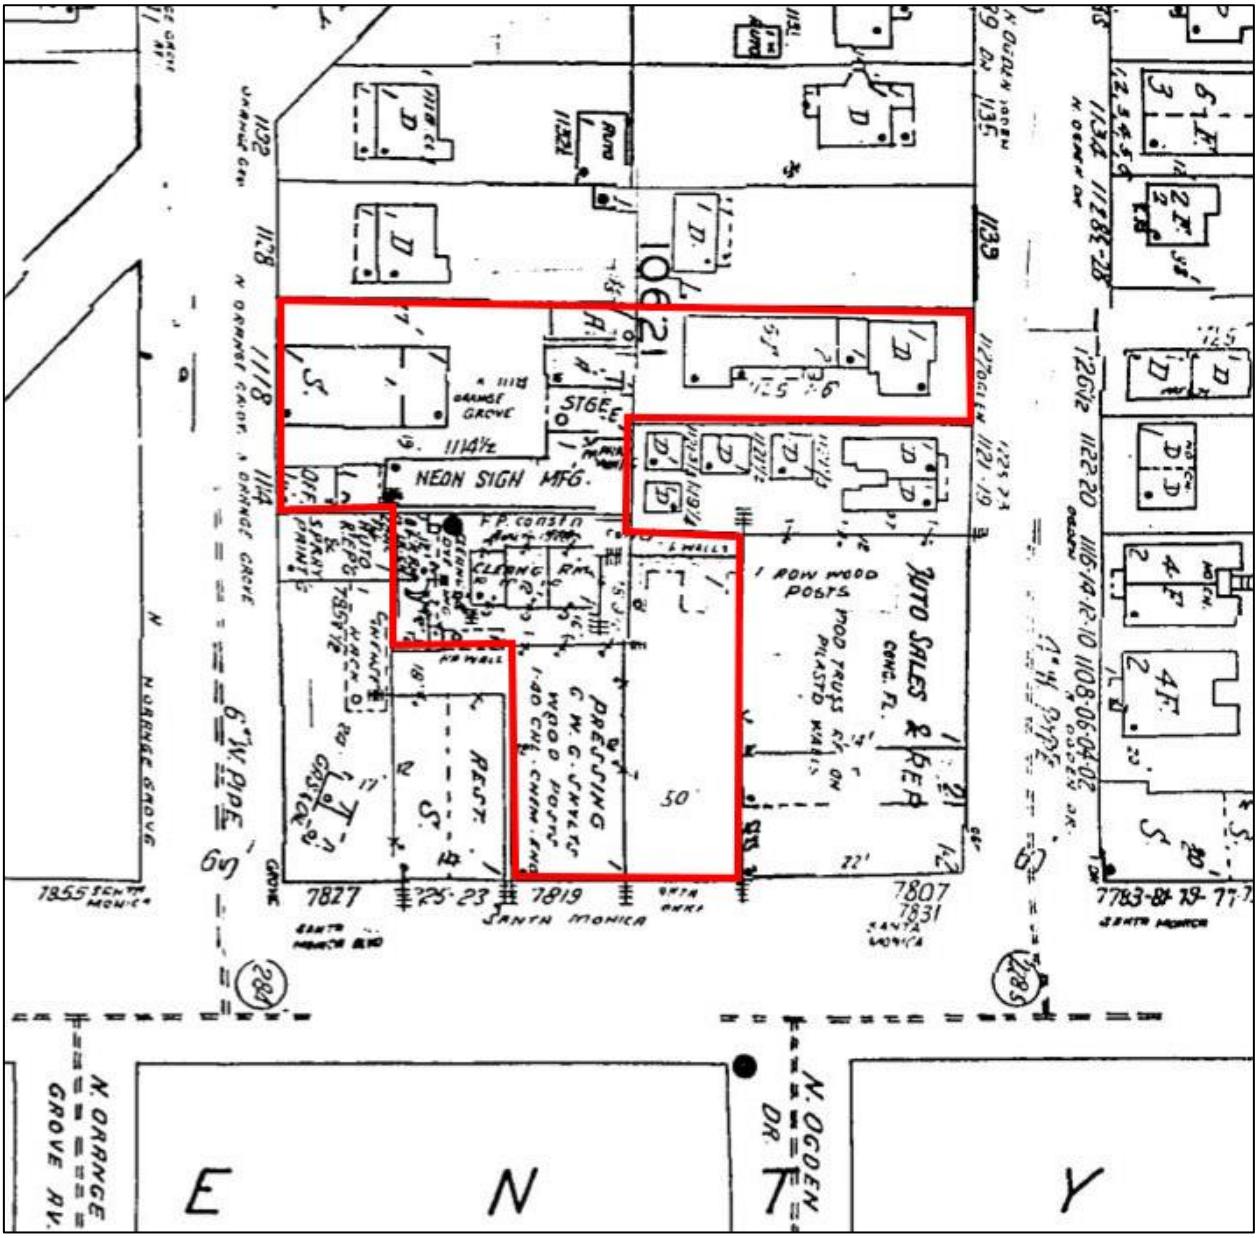

3 BACKGROUND RESEARCH

3.1 CHRIS Records Search

Dudek requested a search of the Californian historical Resources Information System (CHRIS) at the SCCIC, located on the campus of California State University, Fullerton. Dudek received the search results on December 29, 2016. The search included any previously recorded cultural resources and investigations within a 0.5-mile radius of the project site. The CHRIS search also included a review of the NRHP, the CRHR, the California Points of Historical Interest list, the Californian historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. A letter from the SCCIC summarizing the results of the records search, along with a bibliography of prior cultural resources studies, is provided in Appendix A.

3.1.1 Previously Conducted Cultural Resources Studies

The SCCIC records indicate that 28 cultural resource investigations have been conducted within the one-half-mile search radius of the proposed project site (see Table 1). Of these, two studies overlap the project site (LA-10568 and LA-11005). A brief summary of these two studies follows Table 1. There are nine unmapped general overview studies that overlap the project site (LA-02816, LA-03511, LA-03583, LA-03773, LA-03796, LA-04323, LA-07568, LA-11747, and LA-11748). These reports include broad studies of the City of Los Angeles and the Los Angeles Basin and do not specifically address the proposed project site.

LA-10568

In 1987, Johnson Heumann Research Associates (consultants) conducted a broad built environment resources study throughout the City of West Hollywood (City) in support of the City's efforts to prepare a comprehensive historic preservation program for the City's historic

resources. The consultant, along with a team of volunteers, conducted a windshield survey of the entire 1.9 square miles of the City. The focus of the survey was on inventorying architecture of the pre-World War II era; however, outstanding examples of post-war architecture were also considered. While it is assumed that the area of the current proposed project site was considered during this study, the subject properties within the project site were not among the resources identified as being either listed in or potentially eligible for the NRHP. Additionally, five potential conservation zones were identified as a result of the study. The proposed project site is neither within nor in close proximity to any of the potential conservation zones.

LA-11005

In 2010, Cogstone Resource Management, Inc. (Cogstone) conducted an historic property study in support of the Los Angeles County Metropolitan Transportation Authority's (Metro) Westside Subway Extension Project. The project proposed new transit corridors and line extensions as part of Metro's expansion program throughout the Cities of Los Angeles, West Hollywood, Beverly Hills, and Santa Monica, as well as within unincorporated portions of Los Angeles County near the Veteran Affairs Greater Los Angeles Healthcare System (Cogstone 2010). A number of alternatives were considered for the project. Alternatives 4 and 5 would include the Santa Monica/Fairfax Station, which would extend from just east of Fairfax Avenue to just east of Ogden Drive, essentially overlapping the current proposed project site. The Area of Potential Effect (APE) for the Metro project extended one parcel past the limits of the above-ground project improvements. As a result of the study, 91 historic-period properties were recorded and evaluated within the APE which appear either eligible for listing in the NRHP and CRHR and/or contributing resources to existing or potential historic districts. The study also noted 221 non-significant historic-period properties within the APE. While it is assumed that the area of the current proposed project site was included within the Metro project APE at Santa Monica/Fairfax Station, the subject properties within the current proposed project site were not among the study's documented significant and non-significant resources.

3.1.2 Previously Recorded Cultural Resources

According to the SCCIC records, there are no previously recorded cultural resources located within the project site. There are seventeen previously recorded resources within one-half-mile of the project site (Table 2). These resources consist entirely of historic period built environment resources. Included among these resources are six significant historic-period properties listed on the NRHP. These consist of multi-family residences, a community building, a designated historic district, and a patio complex all constructed throughout the 1920s. Specifically, these resources are the El Greco Apartment Complex (P-19-166804), the Mi Casa Apartment Complex (P-19-

176746), the Ramona Apartment Complex (P-19-190041), the Community Clubhouse building (P-19-190575), the North Harper Avenue Historic District (P-19-180739), and the Patio del Moro courtyard complex (P-19-176743) which is also a contributing element to an historic district. Five additional historic-period properties appear individually eligible for listing to the NRHP, CRHR, and/or local government. These resources consist of the Linick/Weisman House (P-19-003173), an unnamed 1920s commercial building (P-19-171024), Plummer Park, site of the Plummer House, also designated the "oldest house in Hollywood" (P-19-173142), an unnamed early twentieth century residential property (P-19-176820), and a mid-twentieth century educational building (P-19-186979). Two additional commercial buildings (P-19-187439 and P-19-188519), the Villa Rosa Apartment building (P-19-188459), and the Fairfax Substation (P-19-191945) are not eligible for the NRHP. The remaining two resources consist of commercial buildings from the 1920s, of which, neither has been evaluated for historical significance. These resources include an unnamed commercial building (P-19-171022) and the Campbell building (P-19-171023).

There are an additional 107 unmapped built environment resources included in the Californian historic Property Data file within one-half-mile of the project site. Of these, 39 resources are on or eligible for state or federal registers. There are also two unmapped built environment resources listed as Los Angeles Historic-Cultural Monuments within the one-half-mile search radius surrounding the project site.

Table 2
Previously Recorded Cultural Resources within One-Half-Mile of the Project Site

Primary Number	Trinomial	Resource Description	Recorded By/Year	NRHP/CRHR Eligibility Status	Proximity to Project Site
19-003173	CA-LAN-3173H	Historic: Linick/Weisman House (built 1914-1915)	Wlodarski, R. 2004	3S (appears eligible for NRHP and CRHR)	Outside
19-166804	—	Historic: El Greco Apartments (built 1929)	Witkin, J. 1988; and Weil, M. E. and J. Witkin 1985	1S (Listed in NRHP) County of Los Angeles Historical Landmark	Outside
19-171022	—	Historic: 1920's Commercial Building	Jacques, T. and N. Michali 1982	Unknown	Outside
19-171023	—	Historic: Campbell Building (1920's commercial building)	Jacques, T. and N. Michali 1982	Unknown	Outside
19-171024	—	Historic: 1920's Commercial Building	Jacques, T. and N. Michali 1982	3S (appears eligible for NRHP and CRHR)	Outside

19-191945	—	Historic: Fairfax Substation Property (built 1929)	Tinsley Becker, W. L. 2015	6Z (not eligible for NRHP, CRHR, or local)	Outside

3.2 Native American Coordination

3.2.1 NAHC Sacred Lands File Search

As part of the process of identifying cultural resources within or near the project, Dudek contacted the Native American Heritage Commission (NAHC) to request a review of the Sacred Lands File (SLF) search on November 4, 2016. The NAHC emailed a response on November 9, 2016, which stated that the SLF search was completed with negative results. Because the SLF search does not include an exhaustive list of Native American cultural resources, the NAHC suggested contacting Native American individuals and/or tribal organizations who may have direct knowledge of cultural resources in or near the project site. The NAHC provided the contact list along with the SLF search results.

Dudek prepared and sent letters to each of the six persons and entities on the contact list requesting information about cultural sites and resources in or near the project site. These letters, mailed on November 15, 2016, contained a brief description of the proposed project, a summary of the SLF search results, and reference maps. Recipients were asked to reply within 15 days of receipt of the letter should they have any knowledge of cultural resources in the area.

Dudek received one response to the initial inquiry letters. Andrew Salas, Chairman of the Gabrieleno Band of Mission Indians – Kizh Nation replied via email on December 14, 2016. Mr. Salas identified the project site as within the ancestral and traditional territories of Kizh Gabrieleño villages. Mr. Salas requested that his Tribe monitor ground disturbing activities during project implementation. Documents related to the NAHC SLF search and initial Native American outreach efforts are included in Appendix B.

3.2.2 Assembly Bill 52

The proposed project is subject to compliance with Assembly Bill (AB) 52 (PRC 21074) which requires consideration of impacts to "tribal cultural resources" as part of the CEQA process, and requires the City of West Hollywood, the CEQA lead agency for the proposed project, to notify any groups (who have requested notification) of the proposed project who are traditionally or culturally affiliated with the geographic area of the project. Because AB 52 is a government-to-government process, all records of correspondence related to AB 52 notification and any subsequent consultation are on file with the City of West Hollywood.

3.3 Building Development Research

On December 15, 2016, Ms. Dotter conducted research for building permits and property history at the City of West Hollywood Planning Division. Documents perused included building permits, proposed change of use applications, and architectural drawings. Additional research sources included the County of Los Angeles Assessor's Office, the University of Southern California Digital Photographs Collection, the California Historical Society, Los Angeles City Directories, USGS topographic maps, Sanborn Fire Insurance maps, and historic aerial photographs from NETR, Inc.

4 SURVEY METHODS AND RESULTS

Dudek Architectural Historian Kara R. Dotter, MSHP, conducted an intensive pedestrian survey of the project site on December 15, 2016. The purpose of the survey was to identify, record, and evaluate any cultural resources located within the project site.

Because the entire project site is developed, intensive archaeological survey methods (i.e., parallel transects) were not warranted. Ms. Dotter examined and photographed all built environment resources (i.e., buildings, structures, and objects) located within the project site. Detailed notes and photographs were taken to thoroughly document the condition of each property, including notes regarding any observed alterations to the buildings and documentation of any character-defining architectural features. Ms. Dotter compiled a detailed physical description of each property as part of the process of recording the current condition and physical integrity of each building. All buildings within the project site were formally recorded and evaluated for historic significance to determine whether or not they should be considered historical resources for the purposes of CEQA (see Section 5 and DPR forms in Appendix B).

Dudek documented the fieldwork using field notes, digital photography, close-scale field maps, and aerial photographs. All field notes, photographs, and records related to this study are on file at Dudek's Encinitas, California, office.

No archaeological resources were identified as a result of the survey. A total of two buildings constructed over 45 years ago were identified within the project site. Table 3 provides a breakdown of all parcels and buildings within the project site:

Table 3
Parcels Located Within the Project site

AIN	Street Address	Current Use	Built Date (per Assessor)
5530-002-067	7811 Santa Monica Boulevard	Commercial/Industrial (gym, parking lot)	1924 (eff. date 1960)
5530-002-027	1125-1127 N. Ogden Drive	Multi-Family Residential	1949
5530-002-019	1114 N. Orange Grove Avenue	Commercial/Industrial (parking lot)	—

INTENTIONALLY LEFT BLANK

5 SIGNIFICANCE EVALUATIONS

5.1 7811 Santa Monica Boulevard

Physical Description

The property at 7811 Santa Monica Boulevard consists of two buildings and a parking lot. The building fronting onto Santa Monica Boulevard is a one-story, load-bearing, red brick commercial building oriented north-south. The roof has a low-sloped flat form surrounded by a brick parapet with decorative angular features. The second building is attached to the north elevation of and oriented perpendicular to the first building, and exhibits the same roof and parapet characteristics, although it appears to be constructed with concrete masonry units. A portion of the north exterior wall of the first building was removed to allow access to the second building, effectively turning the two separate buildings into one space.

The south (main) elevation has three evenly distributed bays; the west and east bays each contain three large fixed full-lite windows separated by narrow mullions, whereas the center bay contains two large fixed full-lite windows flanking a centered full-lite glass door with a large fixed full-lite window flanking either side. The western window of the center bay is narrower than the other windows, due to incorporation of a mail slot into the window which necessitated replacing a vertical section of glass with wood. The front façade is capped with a parapet designed in a stair-step fashion, displaying a subtle nod to Art Deco (Figure 6).

Figure 6. South (main) elevation.

The east elevation of the original building is fairly monolithic, with only two windows and a door piercing the façade north of center (Figure 7). The windows each have a large square fixed pane over a narrower rectangular hopper window, and the full-lite door is flanked with narrow side-lights and topped with a fixed pane reminiscent of a transom window. The parapet has a similar, albeit elongated, form as the parapet on the main elevation. The newer building façade continues in the same plane and contains five windows and a door at ground level. From south to north, the fenestration consists of a pair of large fixed single-lite windows separated by a narrow mullion; a metal-framed full-lite door (which is handicap accessible) bracketed by two narrow fixed-pane sidelights; a large, square, fixed single-lite window; and a pair of large fixed single-lite windows separated by a narrow mullion. A small exterior utility room, constructed with concrete masonry units, the top two feet clad in vertically oriented grooved lumber panels and having a shed roof clad in composition shingles, covers the join between the older and newer

buildings; it is accessed from the exterior via a metal door with a deadbolt. The parapet has a design similar to the original building, but with slightly different proportions (Figure 8).

Figure 7. East elevation, showing older building (grey) and the newer building (orange).

Figure 8. Detail showing the east elevation of the newer building.

The north (rear) elevation is a solid wall with no opening. The variety and location of materials used implies that a portion of the wall (bricks and hollow clay tiles set in lime-rich mortars) was extant well before the rear building (concrete masonry units set in cement-rich mortar) was constructed (Figures 9 through 12).

The west elevation is not visible from the exterior, as it abuts a one-story brick industrial-cum-commercial building and a one-story wood-framed light industrial building.

Figure 9. East portion of north elevation.

Figure 10. West portion of north elevation.

Figure 11. Detail of north elevation, showing the concrete masonry unit wall component which exists above and to the west of the brick and hollow clay tile section.

.

Figure 12. Detail of north elevation, showing the brick and hollow clay tile wall components.

History of the Property

A search of available historical Los Angeles City Directories (1906 to 1942) and Pacific Telephone Street Address Telephone Directory for Los Angeles (1956 to 1987) indicated the property was originally numbered as 7819 Santa Monica Boulevard, but changed to 7811 sometime after 1987; the Sanborn map from 1950 lists the address as 7811, but there are no businesses associated with that street number until some point after 1987. Research failed to locate building permits, or water or sewer connection records, to definitively determine the date of construction for the extant building. However, evidence from Sanborn maps and the Los Angeles City Directories indicate a likely construction date of the mid-1920s. In 1919, a group of five buildings identified as "(illegible)'s Cleaning and Dying" were clustered on the back half of the parcel (Sanborn Fire Insurance Maps, 1919). By 1950, the rear third of the parcel next door (7823-7825 Santa Monica Boulevard) was part of the original parcel and housed several buildings associated with cleaning and dying, whereas the front two-thirds of the original parcel containing a building dedicated to pressing; the building had skylights and wood posts (Sanborn Fire Insurance Maps, 1950).

The directories and Sanborn maps also indicate that a fabric dyer and/or clothes cleaner was located on site by 1919, and remained so until at least the mid-1970s. The names associated with the cleaning and dying businesses are Nathan Gazin and Hollywood City Dye Works. Nathan Gazin was born on July 4, 1885 in Kiev, Russia, and emigrated to the United States in 1910. He and his wife, who both spoke Yiddish, had three children: Evelyn, Leonard, and Clarence (U. S. Bureau of the Census, 1930). The Gazin family moved to Los Angeles from Chicago, Illinois, during the 1920s. In Chicago he was self-employed as a storekeeper in the dry goods industry (U. S. Bureau of the Census, 1920). After moving to Los Angeles, Nathan opened a clothes cleaners business. It appears that at some point he bought out or merged with Hollywood City Dye Works, as by 1932 he's listed in the Los Angeles City Directory as being President of that company. Between 1927 and 1961, Nathan Gazin and Hollywood City Dye Works are listed interchangeably in the Los Angeles City Directories as being located at 7819 Santa Monica Boulevard. From 1962 to 1969, there's a Kings Hollywood Cleaners listed at the same address. In 1973, a Hollywood Cleaning Centers, which was incorporated on December 17, 1965, was listed at 7823-7825 Santa Monica Boulevard, the property next door to the subject property. However, California business registry records indicate that their business license was suspended by the Franchise Tax Board by late 2016.

Nathan Gazin died in Los Angeles, California on March 10, 1974; his tombstone in Hollywood Forever Cemetery indicates he was Jewish and a Freemason.

NRHP and CRHR Designation Criteria

The subject property has undergone numerous exterior alterations that have greatly impacted the integrity of its original design and form, including a change of use from an industrial property to a commercial property. Additionally, research failed to indicate any significant historical associations.

In consideration of CRHR and NRHP criteria, the subject property is not known to be associated with any significant persons or events. Therefore, it does not appear eligible under Criteria A/1 or B/2. The property is also not significant for its architectural merits since it has been substantially altered over time. Therefore, the property does not appear eligible under Criteria C/3. Finally, the subject property will not yield any information important in prehistory or history. Therefore, the property does not appear eligible under Criteria D/4.

In consideration of City of West Hollywood designation criteria, the subject property does not exemplify special elements of the City (City Criterion A), nor does it represent a rare example of an architectural type or specimen (City Criterion B). Further, background research failed to reveal any associations with the building and any significant persons or events (City Criterion C). Finally, the building is not representative of the work of a notable architect, builder, or designer (City Criterion D).

5.2 1125-1127 N. Ogden Drive

Physical Description

The subject property consists of a one-story single-family residence attached by a one-story room to a two-story multiple-family building housing six apartments. An asphalt driveway runs along the south edge of the parcel, leading to a small resident parking area at the rear.

The single-family residence is at the front of the property, facing east onto N. Ogden Drive. Designed in the minimal traditional style, the building is roughly square in plan with stuccoed walls and a complex low-sloped hipped roof covered in composition shingles. There's also a subtle nod to the streamline modern style in the presence of a belt course located about one-third high on each exterior wall; inclusion of a small octagonal window on the south elevation; and the placement of windows at corners creating a wrap-around effect. All of the rectangular windows are covered by security bars. The east (main) elevation contains a centered front door obscured by a security door, and a one-over-one double-hung wood window at the extreme north and south ends of the façade (Figure 13). A small concrete front stoop accessed by two steps leads to the front door, which is sheltered by the roof corner. The roof corner is supported by two 4x4in.

wood columns. The belt course is wood, and on the north half of the front façade it is topped by a band of tiles (four rows of 1x1 in. tiles topped with a row of 1x6 in. rectangular tiles).

Figure 13. The east (main) elevation of the single-family residence.

The north elevation contains five windows located above the tiled belt course (Figure 14). The fenestration consists of two one-over-one double-hung wood-sash windows separated by a narrow mullion at the extreme east end, a shorter one-over-one double-hung wood window to the left of center, and two one-over-one double-hung wood-sash windows separated by a narrow mullion at the extreme west end of the elevation. The belt course of wood topped by a band of tiles continues along this elevation.

The west (rear) elevation presents as two sections: the northern two-thirds is attached to a one-story section connecting the two buildings. The space contains laundry facilities and common

space, with stairs running up the house's exterior wall to the second floor of the apartment building and a small roof-top patio area. The southern third of the rear elevation contains a door covered by a security door and accessed by a two-step-tall concrete stoop, while a window occupies the area near the end of the wall. Heavy foliage obscures the corner, preventing definitive identification of the window type and size (Figure 15).

Figure 14. The north elevation of the single-family residence.

Figure 15. The west elevation of the single-family residence, with the connecting section to the left of the image. The stairs lead to the roof-top patio, and the door to the left leads into the common spade and laundry facilities.

The south elevation appears fairly monolithic, with one-over-one double-hung wood-sash windows at the far west and east ends of the façade and a small fixed hexagonal window located higher up on the wall east of center. A narrow wood belt course runs the length of the elevation (Figure 16).

Figure 16. The south elevation of the singe-family residence.

The two-story building is located towards the rear of the property, and is a subtle ell-shaped in plan. Similar to the single-family residence, it was designed in the minimal traditional style, is stuccoed, and has a complex low-sloped hipped roof covered in composition shingles. The one-story connecting section abuts the east elevation, leaving only a solid expanse of stuccoed wall visible at the second story (Figure 17).

Figure 17. The east elevation of the two-story apartment section.

The north elevation was not accessible, but glimpses from N. Ogden Drive indicate that it is stuccoed and has limited fenestration at the first- and second floors.

The west elevation exhibits the same pattern of fenestration at the first floor and second floor: a pair of windows separated by a narrow mullion, a smaller single window, and another pair of windows separated by a narrow mullion. The notable difference between the two floors is that the first floor windows are two-over-two double-hung wood-sash windows, whereas the second floor has metal sliding windows. There is also a shallow external storage locker attached to the first floor south of center below where utilities enter the building (Figure 18).

Figure 18. The east elevation of the two-story apartment section.

The south elevation serves as the main façade for the two-story section. The cantilevered second-floor walkway, accessed by a free-standing concrete-and-metal staircase, shelters the first-floor walkway. Wood 4x4 in. columns support the roof overhanging the second-floor walkway. The first floor has a thin wood belt course like the one adorning the single-family residence. As with the west elevation, the first-floor fenestration pattern repeats on the second floor: a single window, a pair of windows separated by a narrow mullion, a door (on the ell dog-leg facing east), a pair of windows separated by a narrow mullion, a door, a pair of windows separated by a narrow mullion and then a second a pair of windows separated by a narrow mullion, a door, and a last pair of windows separated by a narrow mullion. With the exception of the first three windows on the second floor, which are metal sliding windows, all windows are two-over-two double-hung wood-sash windows. Security doors obscure all of the doors. A delicate-looking wrought-iron railing borders the staircase and second-floor walkway. The railing design has simple spindles interspersed occasionally with two gently curving spindles forming a shape reminiscent of an urn (Figures 19 and 20).

Figure 19. The west elevation of the two-story section, view looking northeast.

Figure 20. The west elevation of the two-story section, view looking northeast.

History of the Property

The building permit and ensuing plumbing and electrical permits indicate the property was built during late 1949–early 1950 as multi-family housing. The 1950 Sanborn map shows the property in the configuration observed during the site visit. However, at some point several windows were replaced, tile work was added to portions of the belt course, and heavy security bars were added to windows on the one-story building and to all doors on the property.

A search of available historical Los Angeles City Directories (1906 to 1942) and Los Angeles Street Address Directories (1956 to 1987) indicated the property retains its original street number. In reviewing the directories for names of residents, not every apartment was listed nor were the names of every apartment dweller. None of the names listed were identified as belonging to an historically significant person.

NRHP and CRHR Designation Criteria

The subject property has undergone exterior alterations that have greatly impacted the integrity of its original design and form. Additionally, research failed to indicate any significant historical associations.

In consideration of CRHR and NRHP criteria, the subject property is not known to be associated with any significant persons or events. Therefore, it does not appear eligible under Criteria A/1 or B/2. The property is also not significant for its architectural merits since it has been substantially altered over the years. Therefore, the property does not appear eligible under Criteria C/3. Finally, the subject property will not yield any information important in prehistory or history. Therefore, the property does not appear eligible under Criteria D/4.

In consideration of City of West Hollywood designation criteria, the subject property does not exemplify special elements of the City (City Criterion A), nor does it represent a rare example of an architectural type or specimen (City Criterion B). Further, background research failed to reveal any associations with the building and any significant persons or events (City Criterion C). Finally, the building is not representative of the work of a notable architect, builder, or designer (City Criterion D).

INTENTIONALLY LEFT BLANK

6 FINDINGS AND RECOMMENDATIONS

6.1 Archaeological Resources

6.1.1 Findings

No archaeological resources were identified within the project site as a result of the CHRIS records search or field survey. While the entire project site has been heavily disturbed by urban development over the years, it is always possible that intact archaeological deposits are present below the original layer of fill material.

6.1.2 Recommendations

The project site should be treated as potentially sensitive for archaeological resources. Additionally, the City should verify whether there have been any further requests for monitoring arising from the AB 52 consultation efforts. Mitigation measures to reduce potential impacts to unanticipated archaeological resources and human remains are provided below.

MM 1 **Unanticipated Discovery of Archaeological Resources:** In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the proposed project, all construction work occurring within 100 feet of the find shall immediately stop until a qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards, can evaluate the significance of the find and determine whether or not additional study is warranted. Depending on the significance of the find under CEQA (Section 15064.5(f); PRC, Section 21082), the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work such as preparation of an archaeological treatment plan, additional testing, or data recovery may be warranted.

MM 2 **Unanticipated Discovery of Human Remains:** In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the Los Angeles County Coroner shall be notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the county coroner has determined, within 2 working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the county coroner determines that the remains are, or are believed to be, Native American, he or she shall notify the NAHC in Sacramento within 24 hours. In accordance with California Public

Resources Code, Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendent from the deceased Native American. The most likely descendent shall complete his or her inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

6.2 Historic Built Environment Resources

6.2.1 Findings

Two properties within the proposed project site were evaluated for historical significance and integrity considerations at the national, state, and local levels. As a result of the evaluation, neither of these buildings were found eligible for designation at the national, state, or local levels. Therefore, the proposed project would have a less than significant impact on historical resources and there are no recommendations relating to historic built environment resources.

Project Description:
The Seventy-Eight Eleven Santa Monica Boulevard Project (proposed project) would involve construction and operation of an approximately 269,484 square foot (sf) mixed-use structure with a height of 71.5 feet at its tallest point. The structure would consist of a hotel, a restaurant, apartment units, and an art gallery. These uses would be developed on an approximately 0.92-acre site located within the City of West Hollywood (City) consisting of the following addresses: 7811 Santa Monica Boulevard, 1114 and 1118 North Orange Grove Avenue, and 1125 North Ogden Drive (see attached map). The existing commercial building, surface parking lots, and multi-family residential units would be demolished under the proposed project.

RE: Proposed 7811 Santa Monica Boulevard Project (#9127), City of West Hollywood;
Hollywood USGS Quadrangle, Los Angeles County, California

Dear Ms. Dorrler:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE.

Attached is a list of tribes culturally affiliated to the project area. I suggest you contact all of the listed Tribes. If they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.

Subject: ***Seventy-Eight Eleven Santa Monica Boulevard Project, City of West Hollywood, Los Angeles County, California***

Dear Ms. Candelaria:

Dudek was retained by the City of West Hollywood (City) to conduct a cultural resources study for the proposed Seventy-Eight Eleven Santa Monica Boulevard Project (the proposed project). The proposed project would involve construction and operation of an approximately 269,484 square foot (sf) mixed-use structure. The structure would consist of a hotel, a restaurant, apartment units, and an art gallery.

These uses would be developed on an approximately 0.92-acre site located within the City of West Hollywood consisting of the following addresses: 7811 Santa Monica Boulevard, 1114 and 1118 North Orange Grove Avenue, and 1125 North Ogden Drive. The project site is currently built out with a one-story, L-shaped, commercial building and a surface parking lot at the 7811 Santa Monica Boulevard address. A surface parking lot occupies the property at 1114 North Orange Grove Avenue and 1118 North Orange Grove Avenue. Multi-family residential units are located at 1125 North Ogden Drive. The existing commercial building, surface parking lots, and multi-family residential units would be demolished under the proposed project. The site falls within Township 1 South, Range 14 West, Section 9 the *Hollywood* U.S. Geological Service 7.5-minute series topographic Quadrangle map (see Figure 1, Location Map).

As part of the process of identifying cultural resources issues for this proposed project, Dudek contacted the California Native American Heritage Commission (NAHC) to request a Sacred Lands File (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed project site. The SLF search was returned with negative results.

The NAHC recommended that we contact you regarding your knowledge of the presence of cultural resources that may be impacted by this project. If you have any knowledge of cultural resources that may exist within or near the proposed project site, please contact me directly at

Ms. Candelaria:

Dear Ms. Goad:

Dudek was retained by the City of West Hollywood (City) to conduct a cultural resources study for the proposed Seventy-Eight Eleven Santa Monica Boulevard Project (the proposed project). The proposed project would involve construction and operation of an approximately 269,484 square foot (sf) mixed-use structure. The structure would consist of a hotel, a restaurant, apartment units, and an art gallery.

These uses would be developed on an approximately 0.92-acre site located within the City of West Hollywood consisting of the following addresses: 7811 Santa Monica Boulevard, 1114 and 1118 North Orange Grove Avenue, and 1125 North Ogden Drive. The project site is currently built out with a one-story, L-shaped, commercial building and a surface parking lot at the 7811 Santa Monica Boulevard address. A surface parking lot occupies the property at 1114 North Orange Grove Avenue and 1118 North Orange Grove Avenue. Multi-family residential units are located at 1125 North Ogden Drive. The existing commercial building, surface parking lots, and multi-family residential units would be demolished under the proposed project. The site falls within Township 1 South, Range 14 West, Section 9 the *Hollywood* U.S. Geological Service 7.5-minute series topographic Quadrangle map (see Figure 1, Location Map).

As part of the process of identifying cultural resources issues for this proposed project, Dudek contacted the California Native American Heritage Commission (NAHC) to request a Sacred Lands File (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed project site. The SLF search was returned with negative results.

The NAHC recommended that we contact you regarding your knowledge of the presence of cultural resources that may be impacted by this project. If you have any knowledge of cultural resources that may exist within or near the proposed project site, please contact me directly at (760) 840-7556, adorrler@dudek.com, or at 3544 University Avenue, Riverside, CA 92501 within 15 days of receipt of this letter.

Subject: ***Seventy-Eight Eleven Santa Monica Boulevard Project, City of West Hollywood, Los Angeles County, California***

Dear Mr. Morales:

Dudek was retained by the City of West Hollywood (City) to conduct a cultural resources study for the proposed Seventy-Eight Eleven Santa Monica Boulevard Project (the proposed project). The proposed project would involve construction and operation of an approximately 269,484 square foot (sf) mixed-use structure. The structure would consist of a hotel, a restaurant, apartment units, and an art gallery.

These uses would be developed on an approximately 0.92-acre site located within the City of West Hollywood consisting of the following addresses: 7811 Santa Monica Boulevard, 1114 and 1118 North Orange Grove Avenue, and 1125 North Ogden Drive. The project site is currently built out with a one-story, L-shaped, commercial building and a surface parking lot at the 7811 Santa Monica Boulevard address. A surface parking lot occupies the property at 1114 North Orange Grove Avenue and 1118 North Orange Grove Avenue. Multi-family residential units are located at 1125 North Ogden Drive. The existing commercial building, surface parking lots, and multi-family residential units would be demolished under the proposed project. The site falls within Township 1 South, Range 14 West, Section 9 the *Hollywood* U.S. Geological Service 7.5-minute series topographic Quadrangle map (see Figure 1, Location Map).

As part of the process of identifying cultural resources issues for this proposed project, Dudek contacted the California Native American Heritage Commission (NAHC) to request a Sacred Lands File (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed project site. The SLF search was returned with negative results.

The NAHC recommended that we contact you regarding your knowledge of the presence of cultural resources that may be impacted by this project. If you have any knowledge of cultural resources that may exist within or near the proposed project site, please contact me directly at (760) 840-7556, adorrler@dudek.com, or at 3544 University Avenue, Riverside, CA 92501 within 15 days of receipt of this letter.

GABRIELENO BAND OF MISSION INDIANS - KIZH NATION
Historically known as The San Gabriel Band of Mission Indians
Recognized by the State of California as the aboriginal tribe of the Los Angeles basin

Dear Adrianne Dorrler,

Subject: Seventy-Eight Eleven Santa Monica Boulevard Project, City of West Hollywood, Los Angeles County, California

"The project locale lies in an area where the Ancestral & traditional territories of the Kizh(Kitc) Gabrieleño villages, adjoined and overlapped with each other, at least during the Late Prehistoric and Protohistoric Periods. The homeland of the Kizh (Kitc) Gabrieleños , probably the most influential Native American group in aboriginal southern California (Bean and Smith 1978a:538), was centered in the Los Angeles Basin, and reached as far east as the San Bernardino-Riverside area. The homeland of the Serranos was primarily the San Bernardino Mountains, including the slopes and lowlands on the north and south flanks. Whatever the linguistic affiliation, Native Americans in and around the project area exhibited similar organization and resource procurement strategies. Villages were based on clan or lineage groups. Their home/ base sites are marked by midden deposits, often with bedrock mortars. During their seasonal rounds to exploit plant resources, small groups would migrate within their traditional territory in search of specific plants and animals. Their gathering strategies often left behind signs of special use sites, usually grinding slicks on bedrock boulders, at the locations of the resources. Therefore, in order to protect our resources we're requesting one of our experienced & certified Native American monitor as well as a Archeo- Monitor to be on site during any & all ground disturbances (this includes but is not limited to pavement removal, pot-holing, or grubbing, auguring, boring, grading, excavation and trenching).

In all cases, when the NAHC states there are "No" records of sacred sites" in the subject area; they always refer the contractors back to the Native American Tribes whose tribal territory the project area is in. This is due to the fact, that the NAHC is only aware of general information on each California NA Tribe they are "NOT " the "experts" on our Tribe. Our Elder Committee & Tribal Historians are the experts and is the reason why the NAHC will always refer contractors to the local tribes.

In addition, we are also often told that an area has been previously developed or disturbed and thus there are no concerns for cultural resources and thus minimal impacts would be expected. I have two major recent examples of how similar statements on other projects were proven very inadequate. An archaeological study claimed there would be no impacts to an area adjacent to the Plaza Church at Olvera Street, the original Spanish settlement of Los Angeles, now in downtown Los Angeles. In fact, this site was the Gabrieleno village of Yangna long before it became what it is now today. The new development wrongfully began their construction and they, in the process, dug up and desecrated 118 burials. The area that was dismissed as culturally sensitive was in fact the First Cemetery of Los Angeles where it had been well documented at the Huntington Library that 400 of our Tribe's ancestors were buried there along with the founding families of Los Angeles (Pico's, Sepulveda's, and Alvarado's to name a few). In addition, there was another inappropriate study for the development of a new sports complex at Fedde Middle School in the City of Hawaiian Gardens could commence. Again, a village and burial site were desecrated despite their mitigation measures. Thankfully, we were able to work alongside the school district to quickly and respectfully mitigate a mutually beneficial resolution.

Given all the above, the proper thing to do for your project would be for our Tribe to monitor ground disturbing construction work. Native American monitors and/or consultant can see that cultural resources are treated appropriately from the Native American point of view. Because we are the lineal descendants of the vast area of Los Angeles and Orange Counties, we hold sacred the ability to protect what little of our culture remains. We thank you for taking seriously your role and responsibility in assisting us in preserving our culture.

With respect,

Please contact our office regarding this project to coordinate a Native American Monitor to be present. Thank You

Addendum: clarification regarding some confusions regarding consultation under AB52:

AB52 clearly states that consultation must occur with tribes that claim traditional and cultural affiliation with a project site. Unfortunately, this statement has been left open to interpretation so much that neighboring tribes are claiming affiliation with projects well outside their traditional tribal territory. The territories of our surrounding Native American tribes such as the Luiseno, Chumash, and Cahuilla tribal entities. Each of our tribal territories has been well defined by historians, ethnographers, archaeologists, and ethnographers – a list of resources we can provide upon request. Often, each Tribe as well educates the public on their very own website as to the definition of their tribal boundaries. You may have received a consultation request from another Tribe. However we are responding because your project site lies within our Ancestral tribal territory, which, again, has been well documented. What does Ancestrally or Ancestral mean? The people who were in your family in past times, Of, belonging to, inherited from, or denoting an ancestor or ancestors http://www.thefreedictionary.com/ancestral. . If you have questions regarding the validity of the "traditional and cultural affiliation" of another Tribe, we urge you to contact the Native American Heritage Commission directly. Section 5 section 21080.3.1 (c) states "…the Native American Heritage Commission shall assist the lead agency in identifying the California Native American tribes that are traditionally and culturally affiliated with the project area." In addition, ***please see the map below.***

*P3a. Description: **(Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)**

The property at 7811 Santa Monica Boulevard consists of two buildings and a parking lot. The building fronting onto Santa Monica Boulevard is a one-story, load-bearing, red brick commercial building oriented north-south. The roof has a low-sloped flat form surrounded by a brick parapet with decorative angular features. The second building is attached to the north elevation of and oriented perpendicular to the first building, and exhibits the same roof and parapet characteristics, although it appears to be constructed with concrete masonry units. A portion of the north exterior wall of the first building was removed to allow access to the second building, effectively turning the two separate buildings into one space.

The south (main) elevation has three evenly distributed bays; the west and east bays each contain three large fixed full-lite windows separated by narrow mullions, whereas the center bay contains two large fixed full-lite windows flanking a centered full-lite glass door with a large fixed full-lite window flanking either side. The western window of the center bay is narrower than the other windows, due to incorporation of a mail slot into the window which necessitated replacing a vertical section of glass with wood. (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

A search of available historical Los Angeles City Directories (1906 to 1942) and Pacific Telephone Street Address Telephone Directory for Los Angeles (1956 to 1987) indicated the property was originally numbered as 7819 Santa Monica Boulevard, but changed to 7811 sometime after 1987; the Sanborn map from 1950 lists the address as 7811, but there are no businesses associated with that street number until some point after 1987. Research failed to locate building permits, or water or sewer connection records, to definitively determine the date of construction for the extant building. However, evidence from Sanborn maps and the Los Angeles City Directories indicate a likely construction date of the mid-1920s. In 1919, a group of five buildings identified as "(illegible)'s Cleaning and Dying" were clustered on the back half of the parcel (Sanborn Fire Insurance Maps, 1919). By 1950, the rear third of the parcel next door (7823-7825 Santa Monica Boulevard) was part of the original parcel and housed several buildings associated with cleaning and dying, whereas the front two-thirds of the original parcel containing a building dedicated to pressing; the building had skylights and wood posts (Sanborn Fire Insurance Maps, 1950).

The directories and Sanborn maps also indicate that a fabric dyer and/ or clothes cleaner was located on site by 1919, and remained so until at least the mid-1970s. The names associated with the cleaning and dying businesses are Nathan Gazin and Hollywood City Dye Works. Nathan Gazin was born on July 4, 1885 in Kiev, Russia, and emigrated to the United States in 1910. He and his wife, who both spoke Yiddish, had three children: Evelyn, Leonard, and Clarence (U. S. Bureau of the Census, 1930). The Gazin family moved to Los Angeles from Chicago, Illinois, during the 1920s. In Chicago he was self-employed as a storekeeper in the dry goods industry (U. S. Bureau of the Census, 1920). (continued on page 3)

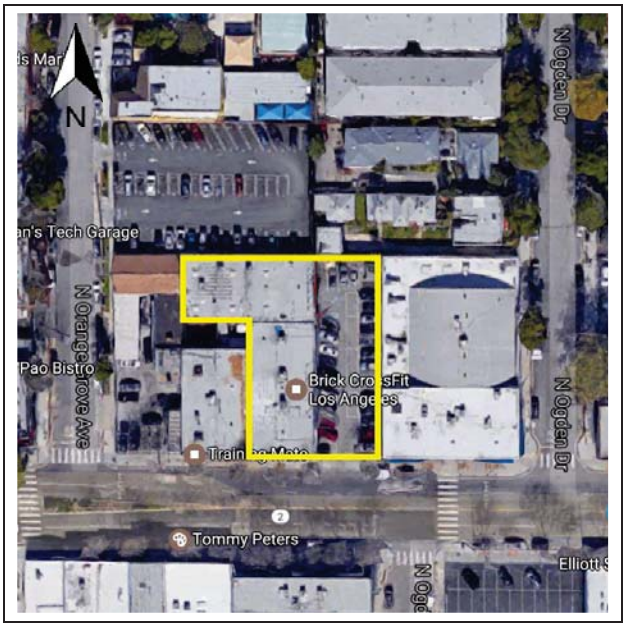
B13. Remarks:

***B14. Evaluator:** Kara R. Dotter, MSHP

***Date of Evaluation:** December 15, 2016

(This space reserved for official comments.)



***P3a. Description:** (continued)

The front façade is capped with a parapet designed in a stair-step fashion, displaying a subtle nod to Art Deco.

The east elevation of the original building is fairly monolithic, with only two windows and a door piercing the façade north of center. The windows each have a large square fixed pane over a narrower rectangular hopper window, and the full-lite door is flanked with narrow side-lights and topped with a fixed pane reminiscent of a transom window. The parapet has a similar, albeit elongated, form as the parapet on the main elevation. The newer building façade continues in the same plane and contains five windows and a door at ground level. From south to north, the fenestration consists of a pair of large fixed single-lite windows separated by a narrow mullion; a metal-framed full-lite door (which is handicap accessible) bracketed by two narrow fixed-pane sidelights; a large, square, fixed single-lite window; and a pair of large fixed single-lite windows separated by a narrow mullion. A small exterior utility room, constructed with concrete masonry units, the top two feet clad in vertically oriented grooved lumber panels and having a shed roof clad in composition shingles, covers the join between the older and newer buildings; it is accessed from the exterior via a metal door with a deadbolt. The parapet has a design similar to the original building, but with slightly different proportions.

The north (rear) elevation is a solid wall with no opening. The variety and location of materials used implies that a portion of the wall (bricks and hollow clay tiles set in lime-rich mortars) was extant well before the rear building (concrete masonry units set in cement-rich mortar) was constructed.

The west elevation is not visible from the exterior, as it abuts a one-story brick industrial-cum-commercial building and a one-story wood-framed light industrial building.

***B10. Significance:** (continued)

After moving to Los Angeles, Nathan opened a clothes cleaners business. It appears that at some point he bought out or merged with Hollywood City Dye Works, as by 1932 he's listed in the Los Angeles City Directory as being President of that company. Between 1927 and 1961, Nathan Gazin and Hollywood City Dye Works are listed interchangeably in the Los Angeles City Directories as being located at 7819 Santa Monica Boulevard. From 1962 to 1969, there's a Kings Hollywood Cleaners listed at the same address. In 1973, a Hollywood Cleaning Centers, which was incorporated on December 17, 1965, was listed at 7823-7825 Santa Monica Boulevard, the property next door to the subject property. However, California business registry records indicate that their business license was suspended by the Franchise Tax Board by late 2016.

Nathan Gazin died in Los Angeles, California on March 10, 1974; his tombstone in Hollywood Forever Cemetery indicates he was Jewish and a Freemason.

NRHP and CRHR Designation Criteria

The subject property has undergone numerous exterior alterations that have greatly impacted the integrity of its original design and form, including a change of use from an industrial property to a commercial property. Additionally, research failed to indicate any significant historical associations.

In consideration of CRHR and NRHP criteria, the subject property is not known to be associated with any significant persons or events. Therefore, it does not appear eligible under Criteria A/ 1 or B/ 2. The property is also not significant for its architectural merits since it has been substantially altered over time. Therefore, the property does not appear eligible under Criteria C/ 3. Finally, the subject property will not yield any information important in prehistory or history. Therefore, the property does not appear eligible under Criteria D/ 4.

In consideration of City of West Hollywood designation criteria, the subject property does not exemplify special elements of the City (City Criterion A), nor does it represent a rare example of an architectural type or specimen (City Criterion B). Further, background research failed to reveal any associations with the building and any significant persons or events (City Criterion C). Finally, the building is not representative of the work of a notable architect, builder, or designer (City Criterion D).

*P3a. Description: **(Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)**

The subject property consists of a one-story single-family residence attached by a one-story room to a two-story multiple-family building housing six apartments. An asphalt driveway runs along the south edge of the parcel, leading to a small resident parking area at the rear.

The single-family residence is at the front of the property, facing east onto N. Ogden Drive. Designed in the minimal traditional style, the building is roughly square in plan with stuccoed walls and a complex low-sloped hipped roof covered in composition shingles. There's also a subtle nod to the streamline modern style in the presence of a belt course located about one-third high on each exterior wall; inclusion of a small octagonal window on the south elevation; and the placement of windows at corners creating a wrap-around effect. All of the rectangular windows are covered by security bars. The east (main) elevation contains a centered front door obscured by a security door, and a one-over-one double-hung wood window at the extreme north and south ends of the façade. A small concrete front stoop accessed by two steps leads to the front door, which is sheltered by the roof corner. The roof corner is supported by two 4x4in. (continued on page 3)

Period of Significance: n/ a **Property Type:** Industrial/ Commercial **Applicable Criteria:** n/ a
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The building permit and ensuing plumbing and electrical permits indicate the property was built during late 1949–early 1950 as multi-family housing. The 1950 Sanborn map shows the property in the configuration observed during the site visit. However, at some point several windows were replaced, tile work was added to portions of the belt course, and heavy security bars were added to windows on the one-story building and to all doors on the property.

A search of available historical Los Angeles City Directories (1906 to 1942) and Los Angeles Street Address Directories (1956 to 1987) indicated the property retains its original street number. In reviewing the directories for names of residents, not every apartment was listed nor were the names of every apartment dweller. None of the names listed were identified as belonging to an historically significant person.

NRHP and CRHR Designation Criteria
The subject property has undergone exterior alterations that have greatly impacted the integrity of its original design and form. Additionally, research failed to indicate any significant historical associations.

In consideration of CRHR and NRHP criteria, the subject property is not known to be associated with any significant persons or events. Therefore, it does not appear eligible under Criteria A/ 1 or B/ 2. The property is also not significant for its architectural merits since it has been substantially altered over the years. Therefore, the property does not appear eligible under Criteria C/ 3. Finally, the subject property will not yield any information important in prehistory or history. Therefore, the property does not appear eligible under Criteria D/ 4. (continued on page 3)

***P3a. Description:** (continued)

wood columns. The belt course is wood, and on the north half of the front façade it is topped by a band of tiles (four rows of 1x1 in. tiles topped with a row of 1x6 in. rectangular tiles).

The north elevation contains five windows located above the tiled belt course. The fenestration consists of two one-over-one double-hung wood-sash windows separated by a narrow mullion at the extreme east end, a shorter one-over-one double-hung wood window to the left of center, and two one-over-one double-hung wood-sash windows separated by a narrow mullion at the extreme west end of the elevation. The belt course of wood topped by a band of tiles continues along this elevation.

The west (rear) elevation presents as two sections: the northern two-thirds is attached to a one-story section connecting the two buildings. The space contains laundry facilities and common space, with stairs running up the house's exterior wall to the second floor of the apartment building and a small roof-top patio area. The southern third of the rear elevation contains a door covered by a security door and accessed by a two-step-tall concrete stoop, while a window occupies the area near the end of the wall. Heavy foliage obscures the corner, preventing definitive identification of the window type and size.

The south elevation appears fairly monolithic, with one-over-one double-hung wood-sash windows at the far west and east ends of the façade and a small fixed hexagonal window located higher up on the wall east of center. A narrow wood belt course runs the length of the elevation.

The two-story building is located towards the rear of the property, and is a subtle ell-shaped in plan. Similar to the single-family residence, it was designed in the minimal traditional style, is stuccoed, and has a complex low-sloped hipped roof covered in composition shingles. The one-story connecting section abuts the east elevation, leaving only a solid expanse of stuccoed wall visible at the second story.

The north elevation was not accessible, but glimpses from N. Ogden Drive indicate that it is stuccoed and has limited fenestration at the first- and second floors.

The west elevation exhibits the same pattern of fenestration at the first floor and second floor: a pair of windows separated by a narrow mullion, a smaller single window, and another pair of windows separated by a narrow mullion. The notable difference between the two floors is that the first floor windows are two-over-two double-hung wood-sash windows, whereas the second floor has metal sliding windows. There is also a shallow external storage locker attached to the first floor south of center below where utilities enter the building.

The south elevation serves as the main façade for the two-story section. The cantilevered second-floor walkway, accessed by a free-standing concrete-and-metal staircase, shelters the first-floor walkway. Wood 4x4 in. columns support the roof overhanging the second-floor walkway. The first floor has a thin wood belt course like the one adorning the single-family residence. As with the west elevation, the first-floor fenestration pattern repeats on the second floor: a single window, a pair of windows separated by a narrow mullion, a door (on the ell dog-leg facing east), a pair of windows separated by a narrow mullion, a door, a pair of windows separated by a narrow mullion and then a second a pair of windows separated by a narrow mullion, a door, and a last pair of windows separated by a narrow mullion. With the exception of the first three windows on the second floor, which are metal sliding windows, all windows are two-over-two double-hung wood-sash windows. Security doors obscure all of the doors. A delicate-looking wrought-iron railing borders the staircase and second-floor walkway. The railing design has simple spindles interspersed occasionally with two gently curving spindles forming a shape reminiscent of an urn.

***B10. Significance:** (continued)

In consideration of City of West Hollywood designation criteria, the subject property does not exemplify special elements of the City (City Criterion A), nor does it represent a rare example of an architectural type or specimen (City Criterion B). Further, background research failed to reveal any associations with the building and any significant persons or events (City Criterion C). Finally, the building is not representative of the work of a notable architect, builder, or designer (City Criterion D).

1.0 EXECUTIVE SUMMARY

An Environmental Site Assessment - Phase I was prepared for the subject property located at 7811 Santa Monica Blvd & 1114 Orange Grove Ave West Hollywood, CA 90046. The scope of work for the Phase I meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments*. The purpose of the Phase I report is to provide information regarding the potential for hazardous material impacts to the soil and groundwater beneath the subject property. Such threats or material threats are identified in this report as recognized environmental conditions (REC). The extent of this evaluation in conjunction with owner/client supplied data is intended to satisfy the requirements of all appropriate inquiry into the previous ownership and uses of the property. The scope of the work included a site reconnaissance, research of land use records and other sources for preliminary indications of hazardous material use, storage, or disposal at the property and/or on contiguous parcels.

Historical site utilization research indicates that the subject property was initially developed with a cleaning and dyeing facility from 1919-1970 (Hollywood City Dye Works, Kings Hollywood Cleaners). In 1950, there were approximately six structures onsite including store/office spaces and a neon sign manufacturing facility with a spray painting booth attached (National Neon Products). In 1955 a soap manufacturing facility was present onsite. Until at least 1970 the subject property remained developed with the neon sign manufacturing facility, cleaning/dyeing facility, and soap manufacturing facility. National Neon Production vacated the subject property in 1989/90. From 1990 to present the subject property was utilized as commercial office space and parking areas. There is currently one single-story structure onsite that is utilized as a gym/workout space.

No evidence of current or historical use, storage, generation and/or disposal of hazardous substances was observed onsite. The subject property is identified on the EMI and EDR US Historical Cleaners databases. There are no underground storage tank files or industrial records maintained at the Los Angeles County Department of Public Works Environmental Programs Division for the subject property.

The nearest listed contaminated site to the subject property is the LA County Fire Department station #8 located approximately 1,000 feet to the east. The station is a former leaky tank site that received case closure in October 2003. It is considered unlikely the subject property was impacted by this offsite cross-gradient source.

A data failure was encountered in the preparation of this report. The Part B Owner and Part C User questionnaires were not returned. This data gap does not alter the conclusions/recommendations of this report. Review of a preliminary title report revealed no evidence of environmental liens or environmental activity use limitation (AULs) associated with the subject property. **This assessment has revealed evidence of recognized environmental conditions (RECs) in connection with the subject property**. The former presence of a neon sign (solvents/metals) manufacturing facility, clothes cleaning/pressing (solvents) facility and a cleaning/dyeing (solvents) facility are considered RECs in connection with the subject property. These facilities historically utilized solvents. Mercury use is also a potential issue in connection with the neon sign manufacturing facility. It is recommended that these RECs be evaluated through subsurface assessment consisting of soil and soil gas sampling and analysis. An asbestos/lead survey is recommended prior to the demolition/redevelopment of the subject property building.

2.0 INTRODUCTION

The following report presents the findings of the Environmental Site Assessment - Phase I prepared for the subject property located at 7811 Santa Monica Blvd & 1114 N. Orange Grove West Hollywood, California 90046. The scope of the Phase I study meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments* and included research of available land use records and other sources for preliminary indications of hazardous material use, storage or disposal at the property. The findings of this study are intended to provide information to the client regarding potential hazardous material impacts to the soil and groundwater beneath the site.

The scope of the investigation was conducted in general accordance with ASTM Standard Practice for Environmental Site Assessments – Phase I, Environmental Site Assessment Process ASTM E 1527-13. The steps outlined in this process are intended to permit a user (client) to satisfy one of the requirements to qualify for the innocent land owner, contiguous property owner, or bona fide purchaser limitations on CERCLA liability. Specifically, this report along with certain obligations of the client, constitutes All Appropriate Inquiry (AAI) into the previous ownership and uses of the property consistent with the standard of care as practiced in this area by environmental professionals. A main component of the assessment is to identify recognized environmental conditions as they may affect the subject property. As defined by ASTM E 1527-13, a recognized environmental condition (REC) means *"the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property."*

An important component of complying with the ASTM E 1527-13 Standard is information to be obtained or in the possession of the client and/or seller of the property. Such information includes obtaining and review of a recent title report, any specialized information regarding the site or surrounding area which may give rise to identification of a recognized environmental condition, and/or reasons given by the seller should the purchase price be significantly lower than what would be reasonably expected for a property of similar size and value. Often a real estate appraiser is

commissioned to evaluate the purchase or sale price of a property. Such an appraisal is outside the scope of this Phase I Assessment report.

The independent conclusions represent California Environmental's (CE) professional judgment based on the conditions that existed and the information and data available during the course of study. Factual information regarding operations, conditions, and test data provided by the client, the owner or their representatives have been assumed to be correct and complete. This report includes **GENERAL FINDINGS** and **CONCLUSIONS AND RECOMMENDATIONS**, which together with the remainder of this report are subject to the **NOTICE** at the end of the report. **This report was prepared for the sole use and reliance by the client as identified on the title page of this report. Use of this report by other entities is expressly forbidden unless permission is granted by the client and CE.**

The scope of work included:

- A walkover of the site.
- Review of client/owner supplied information including a title report.
- Review of building and grading permits on file with the City of West Hollywood Building Department.
- Review of underground storage tank files and industrial waste records maintained by the Los Angeles County Department of Public Works Environmental Programs Division.
- Review of historical USGS topographic maps and historical aerial photographs maintained by EDR Company.
- Research of historical Sanborn Fire Insurance Maps maintained by EDR Company.
- Contact with the California Environmental Protection Agency, Department of Toxic Substances Control to review their files.
- Contact with the California Environmental Protection Agency, Regional Water Quality Control Board to review their files.
- Contact with the Los Angeles County Health Department to review their files.

- Contact with the South Coast Air Quality Management District to review their files.

- Review of the DOGGR Well Finder Online Mapping Program, Oil Field Maps, and oil well records maintained by the State of California Division of Oil, Gas, and Geothermal Resources.

- Review of the City of Los Angeles - City Wide Methane Ordinance Map (A-20960).

- Review of Los Angeles County Landfill Maps.

- Review of the following lists and maps of suspect or known contaminated sites; a complete listing of these sources is contained within **APPENDIX IV**.

    - California Regional Water Quality Control Board, (RWQCB) - *Computer Case Listing of Reported Underground Tank Leaks*, covering Los Angeles County.

    - California Department of Health Services - *Hazardous Waste and Substance Sites - Cortese List and Contaminated Wells List, which includes the Bond Expenditure Plan* (BEP) sites.

    - California Environmental Protection Agency, Facility and Manifest Data, HAZNET.

3.0 SITE DESCRIPTION

3.1 LOCATION AND LEGAL DESCRIPTION

The subject property is located between Ogden Drive and Orange Grove Avenue on the north side of Santa Monica Blvd, in the City of West Hollywood, California; see **FIGURE 1 - VICINITY MAP**. The current street addresses for the property are 7811 Santa Monica Blvd and 1114 Orange Grove Ave. According to the Los Angeles County Tax Assessor's office, the Assessor's Parcel Numbers (APNs) for the subject property are 5530-002-067 and -019.

3.2 SITE RECONNAISSANCE

The site conditions were observed during a reconnaissance conducted by Mr. Samuel Buckley of California Environmental and Mr. Darren Embry on March 10, 2014. California Environmental completed an Environmental Field Reconnaissance Checklist during the site reconnaissance. An Environmental Field Interview and User Questionnaires were provided to the User. The Field/User Questionnaire was not returned. The Environmental Field Reconnaissance Checklist is included in **APPENDIX I**. The features described below are shown on the enclosed **FIGURE 2 - PLOT PLAN**. Photographs of the subject property are attached in the **ILLUSTRATIONS** section of this report.

3.2.1 Description of Property/Proposed Project

The subject property consists of one rectangular parcel and one irregular L-shaped parcel of land that encompass approximately 0.75 acres. The property is currently developed with one single-story gym structure. The interior is largely unfinished, consisting of large open workout spaces. The building is currently occupied by Brick Crossfit training gym. The remainder of the property is asphalt paved parking area for the gym. The Orange Grove parcel is a city-operated parking lot. Access to the property is via Santa Monica Blvd to the south and Orange Grove Ave to the west.

3.2.2 Adjacent Properties

The subject property is bordered to the north by a pre-school with residential development beyond; to the east by Executive Car Leasing (car rental agency); to the south by Santa Monica Blvd with commercial properties beyond including more car leasing offices; and to the west by Euro Design AutoCrafts, Inc, a body/collision auto repair shop and automobile painting facility.

3.2.3 Topography and Drainage

The subject property has a gentle slope to the south. The topographic elevation of the subject property is approximately 290 feet amsl. Drainage from the site is by sheetflow towards the adjacent city streets. No evidence of surface drains, catch basins, sumps or standing water was observed on the subject property at the time of the site reconnaissance.

3.2.4 Past Uses of the Property

No evidence of the past use, treatment, storage, disposal or generation of hazardous substances was observed on the subject property at the time of the site reconnaissance.

3.2.5 Use of Hazardous Substances

No evidence of hazardous substance use was observed on the subject property at the time of the site reconnaissance.

3.2.6 Storage Tanks

No evidence of existing aboveground or underground storage tanks, clarifiers, sumps, or grease interceptors was observed on the subject property at the time of the site reconnaissance.

3.2.7 Containers of Hazardous or Unidentified Substances

Several cans of household paint were observed in the parking lot of the subject property. No significant evidence of containers of hazardous or unidentified substances was observed on the subject property at the time of the site reconnaissance.

3.2.8 Solid Waste Disposal

One trash bin was observed. No evidence of spills and/or staining was observed on the pavement beneath the bin. Several large tires presumed to be utilized as workout equipment were observed in the parking area. No other evidence of onsite disposal or landfill of solid waste material was observed on the subject property at the time of the site reconnaissance.

3.2.9 Poly-Chlorinated Biphenyl's (PCBs)

No evidence of PCB containing transformers or equipment was observed on the subject property at the time of the site reconnaissance. Fluorescent light fixtures were observed in the subject building. Fluorescent light fixtures manufactured prior to 1977 (and fluorescent light fixtures without a date of manufacture) may have ballasts capacitors that contain PCBs, which is recognized by the EPA as a suspect carcinogen. Used fluorescent lamp tubes are considered to be hazardous mercury-bearing waste requiring proper disposal in accordance with local, state, and federal requirements. The onsite ballasts were not inspected during the site reconnaissance. Due to the date of construction of the subject building, it is considered likely that the onsite ballasts contain PCB concentrations greater than the federal action limit of 50 parts per million (ppm). It is recommended that the fluorescent light fixtures be inspected for PCB content labels prior to disposal.

3.2.10 Heating/Cooling Equipment

Heating and cooling equipment was not observed at the time of the site reconnaissance.

3.2.11 Asbestos Containing Building Materials (ACM)

Sampling of suspect asbestos containing material (ACM) was not included in the scope of work for this study. Due to the age of construction of the subject building it is recommended that an asbestos survey be conducted by a certified asbestos consultant prior to renovation or demolition of the subject building.

3.2.12 Wastewater Disposal Systems

Wastewater treatment or disposal systems were not observed on the subject property at the time of the site reconnaissance No evidence of wastewater treatment or disposal systems was observed on the subject property at the time of the site reconnaissance. It is not uncommon for early development properties to have onsite sewerage disposal systems such as seepage pits and/or cesspools.

3.2.13 Radon

Radon hazard assessment was not included in the scope of this study. However, the EDR research report indicates the levels of radon at 68 sites located within the 90046 zip code in Los Angeles County were below four picoCurie per Liter (pCi/L), the Federal Action level.

3.2.14 Lead

Sampling of suspect lead in paint was not included in the scope of work for this project. Lead content in paint was significantly reduced in 1977. Due to the date of construction of the subject building, it is possible that lead based paint was utilized onsite. The paint coating of the structures were in good condition at the time of the site reconnaissance.

3.2.15 Wells

No evidence of dry wells, irrigation wells, injection wells, abandoned wells, monitoring wells or other wells was observed on the subject property at the time of the site reconnaissance.

3.2.16 Odor

No evidence of strong, pungent or noxious odors was noted on the subject property at the time of the site reconnaissance.

3.2.17 Stressed Vegetation

No evidence of stressed vegetation was observed on the subject property at the time of the site reconnaissance.

3.2.18 Staining or Residue

No evidence of staining or residue was observed on the subject property at the time of the site reconnaissance.

3.2.19 Pits, Ponds, or Lagoons

No evidence of pits, ponds, and/or lagoons was observed on the subject property at the time of the site reconnaissance.

3.2.20 Potable Water Supply

The City of Los Angeles Department of Water and Power supply water to the subject property.

3.2.21 Sewage Disposal System

The subject property is connected to the public sewage disposal system.

3.2.22 Other Conditions of Concern

No other conditions of environmental concern regarding potential sources for soil and groundwater contamination were observed on the subject property at the time of the site reconnaissance.

3.3 SITE DRIVE-BY

A drive-by of the area within one-quarter mile of the property was conducted to help identify nearby sites that possibly use, store or generate hazardous materials. The area surrounding the subject property consists of residential and commercial properties. An automobile painting and repair shop is located adjacent to the subject property. No service stations are located on the properties adjacent to the subject property. A list of selected environmental risk sites identified within a one-quarter mile radius of the subject property is included in the **STANDARD ENVIRONMENTAL RECORDS SOURCES** section of this report.

4.0 PREVIOUS WORK

No previous environmental reports were provided for the subject property.

5.0 GEOLOGY AND HYDROGEOLOGY

The subject property is located near the southern margin of the Transverse Ranges Geomorphic Province where the Santa Monica Mountains abut the Los Angeles Coastal Plain. The property is underlain by recent and older alluvial fan deposits shed from the adjacent Santa Monica Mountains. The site is within the Hollywood Groundwater Basin. A prominent structural feature in the area is the Santa Monica/Hollywood (SMHF) Fault which is the bounding fault (located approximately one mile to the north) along the southern edge of the Santa Monica Mountains. The alluvial deposits are underlain by Pliocene through Miocene sedimentary rocks.

The subject property is located within the central portion of the Hollywood Groundwater Basin. The site is underlain by sandy silts and clays of the Bellflower aquiclude which extends to a depth of approximately 85 feet below ground surface in the vicinity of the site. Groundwater occurs in the Exposition aquifer, which extends from the bottom of the Bellflower aquiclude to depths of approximately 145 feet below ground surface. Perched or semi-perched groundwater may occur within the aquiclude. The regional direction of groundwater flow is towards the south.

A nearby impacted site is the World Oil #65 site located approximately 1,750 feet to the west of the subject property (8020 Santa Monica Blvd). The site had a release of gasoline that was evaluated and remediated under the oversight of the LARWQCB. The site received case closure in 2005. As part of their evaluation and monitoring, groundwater monitoring wells were installed on the property in 2001. Depth to groundwater in the monitoring wells was found to be between 62-76 feet bgs. The groundwater flow direction was south-southwest.

The Los Angeles County Department of Public Works Hydrological Records Division maintains well information for the County of Los Angeles. The nearest well to the subject property is well no. 2642P located approximately 0.75 miles south of the property near the intersection of Genesee Ave and Rosewood Ave. The latest measurement was taken on 10/21/2009, and showed the groundwater elevation to be 12.2 feet bgs.

6.0 SITE UTILIZATION HISTORY

6.1 HISTORICAL CITY DIRECTORIES

EDR Company was contacted to research historical city directories for the subject property and adjacent sites. The city directories were reviewed at approximately five year intervals spanning from 1920-2004. A summary of city directories reviewed for the subject property is included in **TABLE I**. The EDR City Directory is attached in **APPENDIX II**.

TABLE I
Historical City Directories

Year		Source

6.2 BUILDING PERMIT RESEARCH

The City of West Hollywood Department of Building and Safety was visited by our personnel for the purpose of researching building permits and Certificates of Occupancies for the property. The file for the 1114 Orange Grove parcel contained a building permit application from 1993 for a mixed-use condominium and retail structure. It also contained a demolition permit from 2004 for a commercial building. The file for the 7811 Santa Monica Blvd property contained permits for commercial improvements from 1989, the permit for the construction of a medical office in 2010, and a tenant improvement permit from 2013 to convert the building from office space to a fitness studio.

6.3 UNDERGROUND STORAGE TANK PERMIT RESEARCH

The Los Angeles County Department of Public Works Environmental Programs Division was contacted to obtain files containing underground storage tank (UST) records and industrial waste files for the subject property. A response letter indicates that no files are maintained for the subject property. The inquiry and response letters are attached in **APPENDIX III**.

6.4 STATE REGULATORY AGENCY FILE REVIEW

Inquiry letters were sent to the State of California Department of Toxic Substances Control (DTSC) and the California Regional Water Quality Control Board – Los Angeles Region (RWQCB). Response letters from RWQCB and DTSC indicates that there were no records maintained for the subject property address. The agency inquiries and response letters are included in **APPENDIX III**.

CalEPA DTSC and RWQCB online databases were also reviewed. The DTSC Envirostor lists Federal Superfund, State Response, Voluntary Clean-ups, School Clean-ups and Investigations, Military Evaluations and Geotracker LUFT/SLIC databases. The subject property is not listed on the databases researched for this report. There are six listed facilities identified within a 2,000-foot radius of the subject property. A review of nearby environmental concern sites can be found in the **STANDARD ENVIRONMENTAL RECORDS** section of this report.

6.5 LACHD AND SCAQMD FILE REVIEW

An inquiry letter was sent to the Los Angeles County Health Department (LACHD) for any information they may have regarding soil, water or air contamination at the subject property. A file was reviewed for the subject property. The file outlined the business practices conducted at the subject property associated with the formerly present National Neon Production facility. Part of their production process included sheet metal work and spray paint booths. The sheet metal produced no hazardous waste. The spray painting produced paint thinner and waste paint that was stored in containers and hauled by an authorized transporter while the sludge was disposed of via trash service.

A review of the SCAQMD Facility Information Detail (FIND) database indicates that no records are maintained for the subject property addresses. The agency inquiry and response letters are included in **APPENDIX III**.

6.6 HISTORICAL AERIAL PHOTOGRAPH RESEARCH

Historical aerial photographs were reviewed as part of this study. The photographs are part of the aerial photograph collections maintained by the EDR Company. Ten photographs were reviewed for the subject property. The photographs are summarized below in **TABLE II**. The aerial photographs are attached in **APPENDIX II** of this report.

TABLE II
Historical Aerial Photographs

Date	Source	Description
1928	Fairchild	The subject property is developed with approximately five structures. The property is in an area of dense urban development. A gasoline/oil service station is present on the adjacent western parcel.
1938	Laval	The subject property appears to be in the same development configuration as the previous photo. The adjacent service station remains present. The surrounding area remains populated with primarily residential development except for the commercial structures along Santa Monica Blvd.
1947	Fairchild	The subject property and surrounding area appear similar to the previous photo.
1956	Fairchild	The subject property and surrounding area appear similar to the previous photo. The adjacent service station remains present.
1965	Fairchild	The subject property and surrounding area appear similar to the previous photo. The formerly adjacent service station is no longer present.
1976	Teledyne	The subject property remains developed with approximately five structures. A large shopping center is located on the other side of Orange Grove Ave from the subject property.
1989	USGS	The subject property and surrounding area appear similar to the previous photo.
1994	USGS	The subject property and surrounding area appear similar to the previous photo.
2002	USGS	The subject property appears developed with three structures. The surrounding area appears developed with commercial/residential structures.
2005	EDR	The subject property appears developed with one structure and the Orange Grove parcel is a parking lot (current configuration).

6.7 HISTORICAL FIRE INSURANCE MAPS

The EDR Company was contacted to review historical fire insurance maps for the subject property. Maps covering the subject property for nine time periods were found. The map descriptions are summarized below in **TABLE III.** Copies of the fire insurance maps are attached in the **ILLUSTRATIONS** section of this report.

TABLE III
Historical Fire Insurance Maps

Date	Description
1919	The subject property is developed with four structures associated with a cleaning & dyeing facility. The surrounding area is mainly undeveloped.
1950	The subject property is developed with five/six structures. The SM Blvd parcel is occupied by a pressing and cleaning/dyeing facility. A store, offices, and a neon sign manufacturing facility with a spray-painting area occupy the Orange Grove parcel. The adjacent western parcel (corner of SM Blvd and Orange Grove) contains an auto repair and spray painting facility as well as a gasoline/oil service station. The areas north and south of Santa Monica Blvd are developed with residential structures.
1955	The subject property is developed with six structures. A soap manufacturing facility, offices, and a neon sign manufacturing facility with a spray-painting area occupy the Orange Grove parcel. A pressing facility and a cleaning/dyeing facility occupy the Santa Monica Blvd parcels. The adjacent western parcel remains developed with an auto repair and spray painting facility as well as a gasoline/oil service station.
1960	The soap manufacturing facility on the Orange Grove parcel is replaced with a detergent packaging facility. The remained of the property remains similar to the previous map. The adjacent gasoline/oil station remains present.
1961	The subject property appears similar to the previous map. The adjacent parcel no longer contains a gasoline/oil service station.
1962	The subject property and surrounding area appear similar to the previous map.
1966	The subject property and surrounding area appear similar to the previous map.
1969	The subject property and surrounding area appear similar to the previous map.
1970	The subject property and surrounding area appear similar to the previous map.

6.8 HISTORICAL TOPOGRAPHIC MAP RESEARCH

Historical USGS topographic maps were provided by EDR Company and from online database sources. Maps covering the subject property for eight time periods were found. The map descriptions are summarized below in **TABLE IV.** The topographic maps are attached in **APPENDIX II** of this report.

TABLE IV
Historical Topographic Maps

Date	Quadrangle	Description
1900	Los Angeles	The subject property is located to the west of the City of Hollywood at the base of the Santa Monica Mountains. The Cahuenga Pass is located to the northeast of the subject property.
1901	Santa Monica	The subject property is located northwest of the city of Los Angeles. Santa Monica can be seen to the southwest of the subject property on the coast of the Pacific Ocean. Limited development appears in the subject property vicinity. Pasadena is located to the east of the subject property.
1902	Hollywood	The subject property and surrounding area appear similar to the 1900 map.
1926	Hollywood	The subject property appears in an area of dense development on the north side of Santa Monica Blvd. The La Brea oil fields are located to the south of the subject property. The topographic elevation of the subject property is approximately 290 ft. amsl.
1966	Hollywood	The subject property appears in an area of urban development. The La Brea oil field has been replaced by urban development.
1972	Hollywood	The subject property and surrounding area appear similar to previous map.
1981	Hollywood	The subject property and surrounding area appear similar to previous map.
1994	Hollywood	The subject property and surrounding area appear similar to previous map.

7.0 NEARBY CONTAMINATED SITES

7.1 LANDFILLS

The Major Waste System maps for Los Angeles County, the Solid Waste Information Systems (SWIS), and the Waste Management Unit Database (WMUD) were reviewed to identify landfills and transfer stations located near the property.

Map no. 144-157 and the EDR database report indicate that there are no landfills or transfer stations located within a 2,000-foot radius of the subject property. No active hazardous waste landfills are located within Los Angeles County.

7.2 OIL FIELD MAPS/METHANE HAZARD ZONES

Oil field maps published by the State of California Division of Oil, Gas and Geothermal Resources (DOGGR) and online mapping systems (DOGGR Well Finder) were researched to determine if oil production occurred on or near the subject property. Wildcat map no. 1-5 indicates that there are no oil wells or oil field located within a 2,000-foot radius of the property. The site is not located within a recognized Methane Hazard Zone.

7.3 STANDARD ENVIRONMENTAL RECORD SOURCES

In addition to the above records, agency database lists were reviewed for known or suspected contaminated sites and for sites which store, generate or use hazardous materials near the subject property. The property is listed on the EMI and EDR US Hist Cleaners databases. Fifty-eight environmental sites, listed on the EDR Us Hist Auto Station, EDR US Hist Cleaners, EMI, DRYCLEANERS, HIST CORTESE, SWEEPS UST, HIST UST, CA FID UST, UST, LUST, and RCRA-SQG databases, are located within a one-quarter mile radius of the subject property. The nearest listed contaminated site to the subject property is the LA County Fire Department station #8 located approximately 1,000 feet to the east. The station is a former leaky tank site that received case closure in October 2003. It is considered unlikely that the soil or groundwater beneath the subject site are impacted by the release identified on the government environmental databases. Selected environmental risk sites found to exist within a 1,500 ft. radius of the property are listed in **TABLE V**. The EDR Radius Map with GeoCheck is attached in **APPENDIX IV**.

TABLE V
Standard Environmental Record Sources

Name	Address	Distance from Subject Property	Source(s)
Natl Neo Prod.	1114 N Orange Grove Ave	**Subject Property**	EMI
Gazin Nathan	7819 Santa Monica Blvd	**Subject Property**	EDR US Hist Cleaners

Laurel Pet Hospital	7970 Santa Monica Blvd	1,230 ft. W	RCRA-SQG, FINDS

Note: A search of public information databases may omit some nearby contaminated sites due to missing or inaccurate information in the public record. Listings from the EDR US Hist Auto Station/Cleaners databases over 500 ft. from the subject property were not included in this table.

7.4 POTENTIAL VAPOR ENCROACHMENT CONDITION (p-VEC)

The State of California has adopted Indoor Air Quality Guidelines (CHHSL's) issued by CALEPA in 2005. Potential sources for indoor air contamination include degassing of solvents and other compounds from contaminated soil and contaminated groundwater. A neon sign manufacturing facility was present at the subject property from 1958-1990, a cleaning/dyeing facility was present from 1919-1970, and a clothes cleaning/pressing facility was also present from 1929-1958. The past use of solvents associated with these facilities on the subject property suggests the potential of a vapor encroachment condition. It is recommended to evaluate this p-VEC through subsurface assessment consisting of soil gas testing.

8.0 GENERAL FINDINGS

During the research phase of this study, the following information was obtained:

- Historical topographic map research indicates the subject property was in an area of dense development beginning in 1926.

- The elevation of the subject property ranges is approximately 290 feet above mean sea level.

- Topographic contour lines in the vicinity of the subject and adjacent properties indicate a gentle slope toward the south.

- Sanborn Fire Insurance Map research indicates the subject property was initially developed with a cleaning and dyeing facility in 1919.

- Historical aerial photograph research indicates that the subject property was developed with five structures in 1928.

- Building permit records showed the oldest permit on file to be a commercial renovation permit for office spaces in 1989.

- Historical city directories indicate that a variety of commercial/light industrial tenants have occupied the subject property space including National Neon Products (sign manufacturing) Crescent Machine Works, Hollywood City Dye Works, and Kings Hollywood Cleaners.

- No underground storage tank records or industrial waste files are maintained at the Los Angeles County Department of Public Works Environmental Programs Division.

- No records are maintained at DTSC for the subject property.

- No records are maintained at RWQCB for the subject property.

- No records are maintained at SCAQMD for the subject property.

- A file was reviewed at LACHD for the subject property. The file outlined the business practices conducted at the subject property associated with the formerly present National Neon Production facility. Part of their production process included sheet metal work and spray paint booths. The sheet metal produced no hazardous waste. The spray painting produced paint thinner and waste paint that was stored in containers and hauled by an authorized transporter while the sludge was disposed of via trash service.

- No landfills or transfer stations are located within a 2,000-foot radius of the subject property.

- No oil wells or oil fields are located within a 2,000-foot radius of the subject property.

- The subject property is not located within a recognized methane hazard zone.

- The subject property is identified on the EMI and EDR US Historical Cleaners databases.

- The nearest listed contaminated site to the subject property is the LA County Fire Department station #8 located approximately 1,000 feet to the east. The station is a former leaky tank site that received case closure in October 2003. It is considered unlikely the subject property has been impacted by this offsite cross-gradient source.

- The depth to groundwater beneath the subject property is estimated at 50-75 ft bgs.

- A potential vapor encroachment condition (p-VEC) was found associated with the subject property.

- The regional direction of groundwater flow is towards the south.

During the site reconnaissance, the following observations were made:

- The subject property consists of one irregular shaped parcel and one rectangular parcel that encompass approximately 0.75 acres.

- The property is currently developed with one single-story office/gym structure. The Orange Grove Ave parcel is developed with a city-operated parking lot.

- The subject property is nearly level. Drainage from the site is by sheetflow towards the adjacent city streets.

- No evidence of surface drains, catch basins, sumps or standing water was observed on the subject property.

- No evidence of the past use, treatment, storage, disposal or generation of hazardous substances was observed on the subject property.

- No evidence of hazardous substance use was observed on the subject property.

- No evidence of existing aboveground or underground storage tanks, clarifiers, sumps, or grease interceptors was observed on the subject property.

- No evidence of large containers of hazardous or unidentified substances was observed on the subject property.

- No evidence of onsite disposal or landfill of solid waste material was observed on the subject property.

- No evidence of PCB containing transformers or equipment was observed on the subject property.

- Heating and cooling equipment was not observed at the time of the site reconnaissance.

- No evidence of wastewater treatment or disposal systems was observed on the subject property.

- No evidence of dry wells, irrigation wells, injection wells, abandoned wells, monitoring wells or other wells was observed on the subject property.

- No evidence of strong, pungent or noxious odors was noted on the subject property.

- No evidence of stressed vegetation was observed on the subject property.

- No evidence of staining or residue was observed on the subject property.

- No evidence of pits, ponds, and/or lagoons was observed on the subject property.

- The subject property is connected to the public sewage disposal system.

- No other conditions of environmental concern regarding potential sources for soil and groundwater contamination were observed on the subject property.

- The area surrounding the subject property consists of commercial properties.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Historical site utilization research indicates that the subject property was initially developed with a cleaning and dyeing facility from 1919-1970 (Hollywood City Dye Works, Kings Hollywood Cleaners). In 1950, there were approximately six structures onsite including store/office spaces and a neon sign manufacturing facility with a spray painting booth attached (National Neon Products). In 1955 a soap manufacturing facility was also present. Up to 1970 the subject property remained developed with the neon sign manufacturing facility, cleaning/dyeing facility, and soap manufacturing facility. National Neon Production vacated the subject property in 1989/90. From 1990 to present the subject property has been utilized as commercial office space and parking areas. There is currently one structure onsite that is utilized as a gym/workout space.

No evidence of use, storage, disposal or generation of hazardous substances was observed onsite. The subject property is identified on the EMI and EDR US Historical Dry Cleaners databases. There are no underground storage tank files or industrial records maintained at the Los Angeles County Department of Public Works Environmental Programs Division.

The nearest listed contaminated site to the subject property is the LA County Fire Department station #8 located approximately 1,000 feet to the east. The station is a former leaky tank site that received case closure in October 2003. It is considered unlikely the subject property has been impacted by this offsite cross-gradient source.

A data failure was encountered in the preparation of this report. The Part B Owner and Part C User questionnaires were not returned. Review of a preliminary title report revealed no evidence of environmental liens or environmental activity use limitation (AULs) associated with the subject property.

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-13 for the property located at 7811 Santa Monica Blvd & 1114 Orange Grove Ave West Hollywood, California 90046. **This assessment has revealed evidence of recognized environmental conditions in connection with the subject property.** The former presence of a neon sign manufacturing facility, clothes cleaning/pressing facility and a cleaning/dyeing

facility are considered RECs in connection with the subject property. These facilities historically utilized solvents. Mercury use is also a potential issue in connection with the neon sign manufacturing facility. It is recommended that these RECs be evaluated through subsurface assessment consisting of soil and soil gas sampling and analysis.

Potential Vapor Encroachment Condition (p-VEC)

A recognized environmental condition was identified in connection with the property. A neon sign manufacturing facility was present at the subject property from 1958-1990, a cleaning/dyeing facility was present from 1919-1970, and a clothes cleaning/pressing facility was also present from 1929-1958. The State of California has adopted Indoor Air Quality Guidelines issued by CalEPA in 2005. One of the potential sources for indoor air contamination is degassing of solvents and other compounds from underlying contaminated soil/groundwater. Therefore, subsurface assessment activities are recommended for the subject property to determine if the subsurface has been impacted by the historical onsite use of solvents.

This report is subject to the following **NOTICE**:

10.0 NOTICE

All properties are subject to some element of environmental risk and the risk cannot be eliminated. Industrial and commercial properties developed prior to modern environmental laws are especially risk prone to environmental hazards which include, but are not limited to, wastes which may be toxic, ignitable, corrosive or reactive. The potential for these environmental hazards to impact the use of the property can be reduced by the identification and mitigation of the hazards prior to development or redevelopment of the property. Due to the difficulty in locating underground wastes, in some cases it is not always possible to ascertain that hazardous wastes are present on the property prior to development.

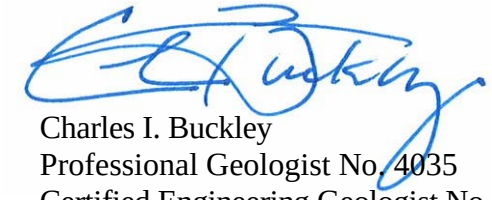
A Phase I environmental site assessment does not utilize subsurface exploration to check for the presence of hazardous wastes on the property. The experience of the assessor, along with the research of available reports, aerial photographs and land use records are used to evaluate the potential for hazardous wastes to occur on the site. Based on the information gained from the historical research, subsurface exploration may be recommended to check for the presence of hazardous wastes. Preexisting environmental problems such as the presence of hazardous wastes in the soil or groundwater, can be concealed by grading activities and site improvements. If such wastes are present these wastes cannot be observed.

The undersigned, Charles I. Buckley declares that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312 and I have the specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20.

This report was prepared with the skill and competence as commonly used by environmental professionals in this area. No warranty, expressed or implied, of any kind is made or intended in connection with this report, or by the fact you are being furnished this report, or by any other oral or written statement.

Should you have any questions or desire any additional information, please contact the undersigned.

Respectfully Submitted,



Charles I. Buckley
Professional Geologist No. 4035
Certified Engineering Geologist No. 1250
Certified Hydrogeologist No. 55

EDUCATION:

- **Masters** Work in Hydrogeology
  California State University, Los Angeles, 1980-1988
- **Bachelor of Science**, Geology (Engineering Geology)
  University of California, Los Angeles, 1978

REGISTRATIONS AND APPOINTMENTS:

- State of California, Dept. of Conservation, Former Member, State Mining and Geology Board (Appointed by Gov. Pete Wilson and State Senate confirmed to 4 year term, 1997-2001)
- State of California, Certified Hydrogeologist, No. 55
- State of California, Registered Geologist No. 4035
- State of California, Certified Engineering Geologist No. 1250

PROFESSIONAL EXPERIENCE:

Jan 88-Present CALIFORNIA ENVIRONMENTAL
CEO - Principal Hydrogeologist

Founded California Environmental in January of 1988. Clients include Fortune 500 Corporations, County Government, Municipal Agencies, Financial Institutions, Land Developers, and Consultants. Principal Investigator for groundwater supply and groundwater contamination investigations. Project leader for groundwater remediation at a State of California Superfund Sites. Principal hydrogeologist for design and implementation of a groundwater monitoring network for an existing Sanitary Landfill. Lead investigator to delineate structure of a California Groundwater Basin; Pioneered use of a cost effective soil/gas vapor technique used to track groundwater plumes. Conducted over 2000 Phase I Environmental Investigations in California. These investigations included the use and interpretation of historic topographic maps, Sanborn Insurance Maps, aerial photography, and other historic data sources. Successfully completed remedial clean-up on 500+ sites in southern California; including impacts associated with fuels, PCBs, metals, asbestos and chlorinated solvents. Expert consultant for environmental impairment of soil and groundwater: Expert for the Port of Los Angeles, L.A. County Counsel, L.A. City Recreation and Parks and private attorneys.

PROFESSIONAL EXPERIENCE: (continued)

Mar 84-Dec 87 KOVACS-BYER AND ASSOCIATES
Manager Environmental Services Group

Spearheaded the development into the groundwater and environmental segments of consulting market. Ascended from project geologist status to manager of Environmental Services Group. Responsible for all aspects of project management including; organization and staffing, developing technical requirements needed to complete projects, client and agency liaison.

Provided technical leadership for groundwater testing including design and analysis of aquifer pump tests. Lead Geotechnical Investigator for remedial repair of complex landslide terrains. Prepared Seismic Analysis for critical facilities. Recommended specialized drainage systems for abatement of groundwater problems. Project Consultant for award winning projects on which severe geotechnical problems were overcome.

Mar 80-Mar 84 GEOTECHNICAL SERVICES GROUP; BUREAU OF ENGINEERING;
CITY OF LOS ANGELES
Assistant Engineering Geologist

Performed geologic mapping in hillside areas of the City of Los Angeles. Reviewed Geotechnical Reports submitted to the City of Los Angeles for private development. Directed landslide investigations. Prepared Expert Opinion documents regarding groundwater and geologic issues for the City Engineer and City Attorney. Conducted field monitoring of known landslides within the City of Los Angeles.

Aug 79-Mar 80 UNITED STATES GEOLOGICAL SURVEY
Field Assistant

Assisted in geological mapping for a uranium resource development project sponsored by the Department of Energy and the United States Geological Survey.

APPENDIX I

Environmental Field Reconnaissance Checklist and Field Interview and User Questionnaires

ENVIRONMENTAL FIELD
RECONNAISSANCE CHECKLIST (PART A)

Completed By: Samuel T. Buckley Title: Project Manager

Property Address: 7811 SM Blvd & 1114 Orange Grove Ave Date: 3/10/14

USES OF THE PROPERTY	
1. Name of present occupants of the property (include business names and addresses or unit numbers):	Brick Crossfit
2. Describe the present use(s) of the property:	Gym, parking lot
3. Describe the present of adjacent properties:	North – pre-school, residential East – car sales/leasing/rentals South – SM Blvd, commercial beyond West – auto repair/painting
4. Is the property used for an industrial use?	No
5. Is any adjoining property used for an industrial use?	Yes – adjacent auto repair/painting
6. Is the property used as a gasoline station, auto repair facility, commercial printing facility, dry cleaners, photo developing laboratory, or junkyard? If so, identify which and give the name of the business(es):	No
7. Is the property used as a landfill or a waste treatment, storage, processing, recycling, or disposal facility?	No
8. Is any adjoining property used as a gasoline station, auto repair facility, commercial printing facility, dry cleaners, photo developing laboratory, or junkyard? If so, identify which and give the name of the business(es):	Yes – auto repair to the west on SM Blvd
9. Is any adjoining property used as a landfill or a waste treatment, storage, processing, recycling, or disposal facility?	No
10. Is the property used for agricultural purposes?	No
PROPERTY CONDITIONS	
11. Are there or have there been any damaged or discarded industrial or automotive batteries on the property?	None observed
12. Are there currently any solvents, paints, fuels, pesticides, herbicides, or other chemicals, in individual containers larger than 5 gallons or totaling more than 50 gallons, used on or stored at the property?	Yes-household paints observed in parking lot of gym
13. Are there currently any industrial drums (typically 55 gallons) or sacks of chemicals located on the property?	No
14. Is there any visible evidence fill dirt has been brought onto the property from a contaminated site?	No
15. Is there any visible evidence fill dirt has been brought onto the property from an unknown site?	No
16. Are there any waste treatment or waste disposal ponds, pits or lagoons on the property?	No
17. Is there any stained soil, or soil emitting unusual odors, on the property?	No

18. Are there any flooring, drains, or walls in the facility that are stained by substances other than water or have emitted unusual odors?	No
19. Is there heating and cooling equipment onsite?	Rooftop HVAC units
20. What is the fuel source for any onsite heating and cooling equipment?	Natural gas/electricity
21. Is there any visible evidence of storage tanks (underground or aboveground) at the property?	No
22. Are there currently or have there been any vent pipes, fill pipes, fill ports, or surface covers indicating possible fill ports on the property or adjacent to any building located on the property?	No
23. Is there visible evidence of geotechnical and/or environmental subsurface assessments such as patched borings or groundwater monitoring well covers?	No
24. Are there any oil wells, drilling sumps, mud pits, or oil pipelines on or adjacent to the property?	No
25. Are there any pipelines on, beneath, or adjacent to the property, other than water, sewer, and natural gas utilities serving the property?	No
26. Is the property known to be located in a methane hazard area due to oil fields, natural seepage, or landfill gas?	No
27. Does the property or any facility at the property produce wastewater other than domestic sewage and storm water runoff?	No
28. Are there any waste water treatment systems (clarifiers, oil/water separators, grease traps, filtration systems, etc.) at the property?	No
29. How is waste water from the property disposed of? Sanitary sewer. Septic system. Surface water. Pond, pit, sump, or well. Other (describe).	Sanitary sewer
30. Does the property or any facility at the property produce solid waste other than domestic trash and greenwaste?	No
31. How is solid waste from the property disposed of? Municipal or private trash service. Recycling. Onsite dumping or burial. Other (describe).	Municipal trash
32. How is solid waste stored at the property?	Bins
33. Does the property or any facility at the property generate hazardous or special waste in the course of normal operation? Examples include spent solvents, photo processing waste, waste oil, used filters, etc. Provide copies of generator notification or waste manifests.	No
34. If hazardous or special wastes are generated at the property, how are they stored?	n/a
35. Are pesticides or herbicides stored, mixed, or disposed of on the property?	No

36. Are there any transformers, capacitors, or hydraulic equipment on the property that are known or suspected of containing PCBs?	No
37. Are there any building materials on the property known or suspected to contain asbestos? Please describe:	Suspect– possible roofing materials, floor tiles
ENVIRONMENTAL COMPLIANCE	
38. Does the property or any occupant of or facility on the property have any licenses, permits, registrations, or notifications for tanks, pipelines, industrial waste, wastewater treatment, wastewater discharge, stormwater discharge, waste disposal, waste storage or treatment, air emissions, chemical use, or chemical storage?	No
39. Is there visible evidence of any spills, leaks, or other releases or threatened releases of any hazardous substances or petroleum products from the property to soil, groundwater, or surface water?	No
40. Is there visible evidence of any release or threatened release of any hazardous substances or petroleum products from another location to soil, groundwater, or surface water at the property?	No
41. Is there visible evidence of the current or past existence of environmental violations on the property or in any facility located on the property?	No
42. Does the property discharge waste water, other than storm water runoff, into a storm drain or onto adjacent properties or streets?	No
43. Does the property discharge waste water, other than storm water, into a sanitary sewer system?	No
44. Is there visible evidence that hazardous substances, petroleum products, unidentified waste materials, tires, batteries, or any other waste materials have been dumped, buried, or burned on the property?	No

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.
