EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by California Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

I, the undersigned, being the Custodian or the Keeper of Records, certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or under another classification. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at (323) 890-7806.

Sincerely,

Yvonne Curtis, Deputy Health Officer
Public Health Investigation

Dear Mr. Buckley:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would like to inform you about EnviroStor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Chatsworth's Central Files, please contact me at (818) 717-6521.

Sincerely,

Vivien Tutaan/cs
Regional Records Coordinator

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which

there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/06/2013 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 23 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 19 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Used oil transporter:	No

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

USA PRINTING (Continued) **1010562193**

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 01/28/2014
Number of Days to Update: 78

Source: EPA
Telephone: N/A
Last EDR Contact: 01/21/2014
Next Scheduled EDR Contact: 04/21/2014
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/04/2013

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

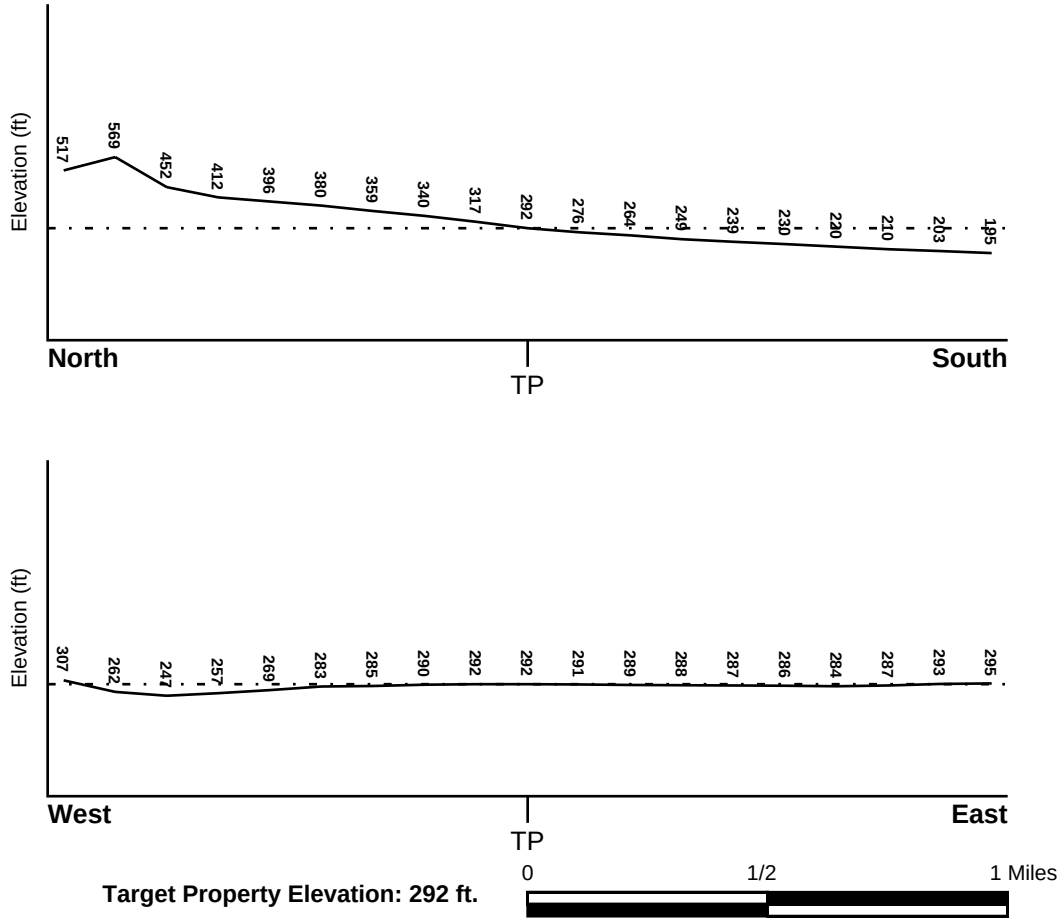
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

November 18, 2014
CE Job No. EV0314-3317

FARING CAPITAL
8687 Melrose Avenue, Suite B538
West Hollywood, CA 90069
Attention: Mr. Jason Illoulian

Subject: Screening Soil Gas Evaluation, Commercial Properties, 7811 Santa Monica Blvd & 1114 N Orange Grove Ave West Hollywood, CA 90046.

Reference: Report by California Environmental (CE), ENVIRONMENTAL SITE ASSESSMENT - PHASE I, Commercial Properties, APNs 5530-002-067 and -019, 7811 Santa Monica Blvd & 1114 N Orange Grove, West Hollywood, CA 90046 dated June 2014.

Dear Mr. Illoulian:

Introduction

CE is pleased to present the results of the screening soil gas assessment conducted for the subject property. This work was implemented following preparation of the above referenced Phase I Assessment Report (CE-ESA). The CE-ESA identified recognized environmental conditions (RECs) in connection with the property. The site is located between Ogden Drive and Orange Grove Avenue on the north side of Santa Monica Blvd, in the City of West Hollywood, California; see **FIGURE 1 – VICINITY MAP**.

Historical site utilization research indicates that the subject property was initially developed with a cleaning and dyeing facility from 1919-1970 (Hollywood City Dye Works, Kings Hollywood Cleaners). In 1950, there were approximately six structures onsite including store/office spaces and a neon sign manufacturing facility with a spray-painting booth attached (National Neon Products). In 1955 a soap manufacturing facility was present onsite. Until at least 1970 the subject property remained developed with the neon sign manufacturing facility, cleaning/dyeing facility, and soap manufacturing facility. National Neon Production vacated the subject property in 1989/90. From 1990 to present the subject property was utilized as commercial office space and parking areas. There is currently one single-story structure onsite that is utilized as a gym/workout space.

The former presence of the cleaning/dyeing facilities (possible solvent use) at the Santa Monica Blvd address and the neon sign manufacturing facility with spray booth at the Orange Grove are considered RECs. CE implemented soil gas testing and collected a soil sample on the property to evaluate these RECs.

Soil Gas Assessment

Soil-gas sampling was implemented onsite on November 3, 2014. Southwest Geophysics located subsurface utilities at the exterior boring locations and the interior locations using total field magnetics and GPR methods. An Underground Service Alert notification was also made. H&P Mobile Geochemistry conducted soil-gas probe placement and sampling under the direction of California Environmental. A direct-push Strataprobe rig was utilized for the placement of the exterior soil vapor probes. The interior probes were hand-driven to depths of 5 ft. below ground surface (bgs). One soil gas probe was placed at 5 ft bgs in one location in the exterior parking area to the north of the gym structure. In the interior of the structure, four soil gas probes were placed at 5 ft bgs. The soil gas probe locations are shown on the attached **FIGURE 2 – ASSESSMENT MAP**. The interior probes were placed within the historical locations of the cleaning and dyeing facilities. Seven soil-gas samples were collected from the five locations including a sample duplicate. Soil-gas samples were obtained and analyzed for volatile organic compounds (USEPA Method 8260B) in general accordance with the DTSC/RWQCB guidelines (CalEPA/DTSC/RWQCB Soil-gas Advisory, 2012) in an onsite state certified mobile laboratory.

The soil-gas probes consisted of a sampling tip attached to inert nylon tubing. Each segment of tubing was pre-measured to ensure the correct depth. The sample point was set within a six inch sand-sensing zone at the desired depth of each soil vapor point. Dry granular bentonite was placed above and/or below the sand-sensing zone and hydrated in order to seal the sand-sensing zone. The probe was completed to the surface with the hydrated bentonite and capped with gas-tight 2-way valve preventing degassing of the gas point and interference from the surface. The soil-gas probes were allowed to equilibrate for two hours prior to the collection of the soil-gas samples. A standard 3-purge volume (3 PV) was utilized for the vapor sampling. 1,1-difluoroethane was utilized as the leak check compound. Vapor probe locations were sampled using the H&P Mobile Geochemistry SOP which includes protocols for surface seals, purge volume tests, tracer compounds, sample flow rate, duplicate samples, and analytical instrument calibration.

Laboratory analysis of soil-gas found concentrations of Ethylbenzene (4.2 ug/l – 4.3 ug/l) in two of the soil-gas samples (CE2 @ 5ft. and replicate). Detections of xylenes (1.3 ug/l - 24 ug/l) were detected in CE1 @ 5ft, CE2 @ 5ft, and the replicate sample. TCE was detected (0.44 ug/l – 2.2 ug/l) in CE3@5ft, CE4 @ 5ft, CE5 @ 5ft. and CE6 @ 5ft. The remaining samples were below the method-reporting limits for all other EPA Method 8260 compounds. One of the detections of TCE (CE4 @ 5ft. – 2.2 ug/l) exceeds the California Human Health Screening Level for commercial development. However, a risk calculation (see **Risk Evaluation** below) indicates that the incremental risk level for vapor intrusion to indoor air is less than the allowable of 10^{-6} for commercial and residential properties. All other VOCs detected are at or below their respective CHHSLs for commercial development. The soil-gas laboratory report and chain of custody record are attached in **APPENDIX I**. The locations of the soil-gas probes are depicted on **FIGURE 2 – ASSESSMENT MAP.**

Soil Assessment

A neon sign manufacturing facility was formerly located on the subject property in the area that is currently operating as a public parking lot (Orange Grove Ave). A soil sample was obtained and analyzed for heavy metals per Title 22 Metals. The detections found were consistent with regional

background concentrations of metals in soil. The complete soil sampling laboratory report is attached in **APPENDIX I.**

Risk Evaluation

California Environmental implemented a screening soil gas assessment at the property during November 2014. The screening assessment was initiated to evaluate potential VOC impacts from the former onsite cleaning and dyeing facilities. The sampling identified low concentrations of tetrachloroethylene (TCE) in several of the soil gas samples obtained from the property. CalEPA-DTSC issued guidance documents for assessing risk associated with a variety of VOCs in shallow soil gas beneath residential/commercial properties in 2005, 2010 and 2012. A CalEPA-DTSC modified Johnson and Ettinger (J&E) model was used to assess the risk to human health from indoor air quality from the low concentration of TCE found in soil gas. The calculation showed the incremental risk level for vapor intrusion to indoor air to be less than the allowable of 10^{-6} for commercial and residential properties. Therefore, future indoor air mitigation is not required.

Conclusions

Soil gas testing beneath the subject site by CE revealed concentrations of TCE in four samples, ethylbenzene in two samples, and xylenes in three samples. The testing documents that a reportable release from the former onsite cleaning and dyeing facilities has not occurred. The majority of the onsite soil gas concentrations are at or below the CalEPA-DTSC advisory risk-based concentrations (CHHSLs) for VOCs in shallow soil gas for commercial properties. The risk analysis presented above indicates that the existing commercial building and future residential and/or commercial building(s) will not require vapor intrusion mitigation.

A soil sample was obtained and analyzed for heavy metals per Title 22 Metals. The concentrations of metals found are consistent with regional background concentrations of metals in soil. Further assessment is not recommended.

H&P Project: CE110314-SB2-B
Client Project: 3317 / 7811 Santa Monica Blvd

Dear Mr. Charlie Buckley:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 03-Nov-14 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody

Unless otherwise noted, all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis Villarreal

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory (Certification # L11-175) in accordance with the DoD-ELAP program. H&P is approved by the State of Arizona under Certification Numbers AZM758 and AZ0779. H&P is approved as an Environmental Laboratory in conformance with the Environmental Laboratory Accreditation Program (CA) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste for the following methods:

Certificate# 2741, 2743, 2579, 2754 & 2740 approved for EPA 8260 and LUFT GC/MS
Certificate# 2742, 2745, & 2741 approved for LUFT
Certificate# 2745 & 2742 approved for EPA 418.1

H&P Mobile Geochemistry, Inc. is approved as an Environmental Laboratory in conformance with the National Environmental Accreditation Conference Standards for the category Environmental Analysis Air and Emissions for the following analytes and methods:

Hexachlorobutadiene by EPA TO-15 & TO-14A
1,2,4-Trichlorobenzene by EPA TO-15 & TO-14A
1,2-Dichlorobenzene by EPA TO-15 & TO-14A
Dichlorotetrafluoroethane by EPA TO-14A
1,4-Dichlorobenzene by EPA TO-15 & TO-14A
Benzene by EPA TO-15 & TO-14A
Chlorobenzene by EPA TO-15 & TO-14A
Ethyl benzene by EPA TO-15 & TO-14A
Styrene by EPA TO-15 & TO-14A
Toluene by EPA TO-15 & TO-14A
Total Xylenes by EPA TO-15
1,1,1-Trichloroethane by EPA TO-15 & TO-14A
1,1,2,2-Tetrachloroethane by EPA TO-15 & TO-14A
1,1,2-Trichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethane by EPA TO-15 & TO-14A
1,1-Dichloroethene by EPA TO-15 & TO-14A
1,2-Dichloroethane by EPA TO-15 & TO-14A
1,2-Dichloropropane by EPA TO-15 & TO-14A
Benzyl Chloride by EPA TO-15 & TO-14A
Bromoform by EPA TO-15
Bromomethane by EPA TO-15 & TO-14A
Carbon tetrachloride by EPA TO-15 & TO-14A
Chloroethane by EPA TO-15 & TO-14A
Chloroform by EPA TO-15 & TO-14A
Chloromethane by EPA TO-15 & TO-14A
cis-1,2-Dichloroethene by EPA TO-15 & TO-14A
cis-1,3-Dichloropropene by EPA TO-15 & TO-14A
Methylene chloride by EPA TO -15 & TO-14A
Tetrachloroethane by EPA TO-15 & TO-14A
trans-1,2-Dichloroethene by EPA TO-15
trans-1,3-Dichloropropene by EPA TO-15 & TO-14A
Trichloroethene by EPA TO-15 & TO-14A
Vinyl chloride by EPA TO -15
2-Butanone by EPA TO-15
4-Methyl-2-Pentanone by EPA TO-15
Hexane by EPA TO-15
Methyl tert-butyl ether by EPA TO-15
Vinyl acetate by EPA TO-15

1,3-Dichlorobenzene by EPA TO-15 & TO-14A
Trichlorofluoromethane by EPA TO-14A
Naphthalene by H&P SOP TO-15/GC-MS
1,2-Dibromoethane (EDB) by EPA TO-15 & TO-14A
1,2-Dibromo-3-chloropropane by EPA TO-15
1,3-Butadiene by EPA TO-15
1,1,2-Trichlorotrifluoroethane by EPA TO-14A
Carbon disulfide by EPA TO-15
1,4-Dioxane by EPA TO-15

This certification applies to samples analyzed in summa canisters.

Re : 3317 Faring Capital

A243698 / 4K03004

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 11/03/14 14:50 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Eydie Schwartz

Project Manager

Subject: **PHASE I ENVIRONMENTAL SITE ASSESSMENT**
1125 North Ogden Drive, West Hollywood, California 90046
AEI Project No. 368901

Dear Jason Illoulian:

AEI Consultants is pleased to provide the Phase I Environmental Site Assessment (Phase I ESA) report of the above referenced address. This assessment was authorized and performed in accordance with the scope of services outlined in the proposal, the scope and limitations of ASTM Standard Practice E1527-13, and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we may assist you in any other matter, please contact me at (310) 798-4255 or abennett@aeiconsultants.com.

Sincerely,

Adam Bennett
AEI Consultants

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Illoulian & Illulian Properties, LP to conduct a Phase I ESA in conformance with the proposal and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 1125 North Ogden Drive, West Hollywood, Los Angeles County, California. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

PROPERTY DESCRIPTION

PROPERTY INFORMATION	
Property Name	N/A
Street Address(es)	1125 North Ogden Drive
City	West Hollywood
State	California
Location	West side of North Ogden Drive
Vicinity Characteristics	Commercial and residential mixed use
Approximate Site Acreage/Source	0.17/Site Contact
Property Type	Multi-family
Subject Property Use(s)	Residential
Assessor Parcel Number(s)	5530-002-027
SITE AND BUILDING INFORMATION	
Number of Buildings	One
Year(s) of Construction	1949
Number of Floors/Stories	Two
Basement or Subgrade Area(s)	Crawl space
Number of Units	Seven
Building Area (SF)/Source	3,718/Site Contact
Building Description(s)	One two-story residential building with crawl-space foundation
Building Occupant(s)	Multiple residential tenants
Additional Improvements	Concrete sidewalks, asphalt covered parking area and associated landscaping
Current On-site Operations	Residential and maintenance activities
Current Use of Hazardous Substances	None identified
UTILITY PROVIDER INFORMATION	
Natural Gas Provider	The Gas Company
Electricity Provider	Southern California Edison
Heating System Fuel Source	Natural gas
Cooling System Power Source	Electricity
Potable Water Provider or Source	Los Angeles Department of Water and Power
Sewage Disposal Provider or Treatment System	Los Angeles County Sanitation District
REGULATORY INFORMATION	
Regulatory Database Listings	FTTS INSP, FRS; refer to Section 5.1
Institutional Controls	None identified
Engineering Controls	None identified

Environmental Liens	None identified

Based on a review of historical sources, the subject property was identified to consist of vacant land in at least 1919. Construction of the current site improvements began in 1948/1949 and has been occupied by residential tenants since that time.

The following historical address was associated with the subject property: 1127 North Ogden Drive. This address was also researched as part of this assessment.

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Multi-tenant / residential (1133 North Ogden Drive)	None identified
Northeast	North Ogden Drive followed by: Multi-tenant / residential (1128-1134 North Ogden Drive)	None identified
East	North Ogden Drive followed by: Multi-tenant / residential (1118 - 1126 North Ogden Drive)	None identified
South	Multi-tenant / residential (1119-1123 North Ogden Drive)	None identified
West	Public Parking Lot (1114 North Orange Grove Avenue)	None identified
Northwest	Multi-tenant / residential (1128 North Orange Grove Avenue)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

Based upon the Soil and Groundwater Assessment and Site Closure Report (SGASCR) for the Vacant lot located at 801 North Fairfax Avenue (approximately 0.43 mile south-southwest of the subject property) obtained from the Regional Water Quality Control Board, the direction of groundwater flow beneath the subject property is inferred to be to the west-southwest. Based on SGASCR , groundwater is presumed to be present at an estimated depth of 42 to 43 feet bgs.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- Based on a review of historical records, the adjacent site to the west was formerly a neon sign manufacturing company with a spray painting booth from at least 1950 until at least 1970. This site was not listed in the regulatory database. The paint booth operated at a time that pre-dates regulatory oversight of hazardous materials and petroleum products. However, spray painting operations typically use chlorinated solvents, particularly PCE, during surface preparation and spray gun cleaning activities. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Based on the proximity of this site to the subject property, the potential exists that, if a release of chlorinated solvents occurred at this site, the subsurface of the subject property may have also been impacted. Assessment of the subject property does not indicate that the subject property would be investigated as a source of this contamination, and therefore, it is unlikely that the subject property owner would be responsible for any cleanup costs associated with a release at this site. The User should be aware that if groundbreaking activities or redevelopment of the subject property occurs, residual impacts from this adjacent site may be present. However, no releases have been reported from this site. Based on the lack of a documented release and time elapsed since last use, the adjacent site is not expected to represent a REC to the subject property at this time.
- According to Mr. Darren Embry, demolition of the building is planned for the near future. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment. Similarly, OSHA regulations require that specific work practices be implemented when handling construction materials and debris that contain asbestos and/or lead-containing materials.
- Due to the age of the subject property building, there is a potential that LBP is present. During the site inspection, damaged and peeling paint was observed throughout the interior and exterior of the subject property building. AEI understands that demolition

activities of the subject property building is planned. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS, OPINIONS, AND RECOMMENDATIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 1125 North Ogden Drive, West Hollywood, Los Angeles County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the subject property during the course of this assessment. AEI recommends no further investigation for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I ESA performed in conformance with the proposal and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 1125 North Ogden Drive, West Hollywood, Los Angeles County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this Phase I ESA was limited by the following:

- Due to the size of the property, a representative sample of interior spaces was inspected by AEI. Due to the residential nature of occupancy, this limited inspection method is expected to be adequate for the purposes of this assessment. AEI inspected the following units: 1125-1, 1125-2, 1125 3/4 and 1127.
- AEI requested an interview with the subject property owner; however, the subject property owner has not responded as of this report date. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall Findings of this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

1.6 DATA GAPS AND DATA FAILURE

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	Historical sources were not obtained at five-year intervals dating back to first developed use . AEI was not able to track the history of the subject property between the years 1920 and 1947 as none of the historical sources utilized as part of this assessment covered this time period. In the 1919 Sanborn Map, the subject property appears as vacant undeveloped land. In the 1949 building permit the subject property is developed with the current multi-family residential structures. Thus, it is assumed that during the 1920 and 1947 time period the subject property would have been undeveloped, if not residential. Therefore, this data failure is not expected to significantly alter the Findings of this assessment.
Information/Sources Consulted	City directories, Sanborn fire insurance maps, aerial photographs, agency records, interviews

1.6.2 DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of Illoulian & Illulian Properties, LP. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors, or assigns. Reliance is provided in accordance with AEI's proposal and Standard Terms and Conditions executed by Illoulian & Illulian Properties, LP on February 21, 2017. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Property Name	N/A
Street Address(es)	1125 North Ogden Drive
City	West Hollywood
State	California
Location	West side of North Ogden Drive
Vicinity Characteristics	Commercial and residential mixed use
Approximate Site Acreage/Source	0.17/Site Contact
Property Type	Multi-family
Subject Property Use(s)	Residential
Assessor Parcel Number(s)	5530-002-027
SITE AND BUILDING INFORMATION	
Number of Buildings	One
Year(s) of Construction	1949
Number of Floors/Stories	Two
Basement or Subgrade Area(s)	Crawl space
Number of Units	Seven
Building Area (SF)/Source	3,718/Site Contact
Building Description(s)	One two-story residential building with crawl-space foundation
Building Occupant(s)	Multiple residential tenants
Additional Improvements	Concrete sidewalks, asphalt covered parking area and associated landscaping
Current On-site Operations	Residential and maintenance activities
Current Use of Hazardous Substances	None identified
UTILITY PROVIDER INFORMATION	
Natural Gas Provider	The Gas Company
Electricity Provider	Southern California Edison
Heating System Fuel Source	Natural gas
Cooling System Power Source	Electricity
Potable Water Provider or Source	Los Angeles Department of Water and Power
Sewage Disposal Provider or Treatment System	Los Angeles County Sanitation District
REGULATORY INFORMATION	
Regulatory Database Listings	FTTS INSP, FRS; refer to Section 5.1
Institutional Controls	None identified
Engineering Controls	None identified
Environmental Liens	None identified

Utility provider information listed in the table above is provided by Mr. Darren Embry, Director of Community Development, unless otherwise noted above.

2.2 SITE AND VICINITY CHARACTERISTICS

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Multi-tenant / residential (1133 North Ogden Drive)	None identified
Northeast	North Ogden Drive followed by: Multi-tenant / residential (1128-1134 North Ogden Drive)	None identified
East	North Ogden Drive followed by: Multi-tenant / residential (1118 - 1126 North Ogden Drive)	None identified
South	Multi-tenant / residential (1119-1123 North Ogden Drive)	None identified
West	Public Parking Lot (1114 North Orange Grove Avenue)	None identified
Northwest	Multi-tenant / residential (1128 North Orange Grove Avenue)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.3 PHYSICAL SETTING

Geology: According to the United States Department of Agriculture's Report and General Soil Map for Los Angeles County, the area surrounding the subject property is underlain by soils of the Hanford association. Hanford soils consist of well-drained soils on flood plains and alluvial fans. In a typical profile the surface layer is light brownish gray fine sandy loam seven inches thick. The material to a depth of 60 inches or more is yellowish-brown coarse sandy loam and gravelly coarse sand substratum.

USGS Topographic Map:	Hollywood, California Quadrangle
Nearest surface water to subject property:	Franklin Canyon Reservoir / 2.93 mile west
Gradient Direction/Source:	West-southwest / Soil and Groundwater Assessment and Site Closure Report (SGASCR) for the Vacant lot located at 801 North Fairfax Avenue (approximately 0.43 mile south-southwest of the subject property) obtained from the Regional Water Quality Control Board
Estimated Depth to Groundwater/Source:	42 to 43 feet bgs / SGASCR

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description/Use	Source(s)
1919	Vacant lot	Sanborn maps
1920 - 1947	Unknown	Data failure; refer to Section 1.6.1
1948/1949 - present	Current multi-tenant residential stucture	Aerial photographs, Building permits, City directories, Interviews, Sanborn maps, Site observation

Based on a review of historical sources, the subject property was identified to consist of vacant land in at least 1919. Construction of the current site improvements began in 1948/1949 and has been occupied by residential tenants since that time.

The following historical address was associated with the subject property: 1127 North Ogden Drive. This address was also researched as part of this assessment.

AEI did not identify potential environmental concerns in association with the current or historical use of the subject property.

3.2 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the Environsite Corporation collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1948	The subject property appears developed with the a residential structure or under development with the current structure	NORTH: Residential structures NORTHEAST: Roadway followed by: residential structures EAST: Roadway followed by: residential structures SOUTH: Residential structures WEST: Commercial structures NORTHWEST: Residential structure

Year(s)	Subject Property Description	Adjacent Site Descriptions
1952	The subject property appears developed with the current residential structure	NORTH: No significant change is noted NORTHEAST: No significant change is noted EAST: No significant change is noted SOUTH: No significant change is noted WEST: No significant change is noted NORTHWEST: No significant change is noted
1964, 1972, 1977, 1980, 1985, 1989, 1994	No significant change is noted	NORTH: Current multi-family residential dwelling NORTHEAST: No significant change is noted EAST: No significant change is noted SOUTH: No significant change is noted WEST: No significant change is noted NORTHWEST: Commercial structure
2002	Unidentifiable	NORTH: Unidentifiable NORTHEAST: Unidentifiable EAST: Unidentifiable SOUTH: Unidentifiable WEST: Unidentifiable NORTHWEST: Unidentifiable
2005. 2010, 2014	The subject property appears with the current site improvements	NORTH: Current multi-family residential structure NORTHEAST: Roadway followed by: current residential structures EAST: Roadway followed by: current residential structures SOUTH: Current residential structures WEST: Current parking lot NORTHWEST: Current commercial day school

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the aerial photograph review.

If available, copies of historical aerial photographs are provided in the report appendices.

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the Historic Information Gatherers collection of Sanborn Fire Insurance maps.

The following maps were reviewed:

Year(s)	Subject Property Description (Listed Address)	Adjacent Site Descriptions
1919	Vacant lot located on Friend Avenue	NORTH: Vacant lot NORTHEAST: Friend Avenue followed by: vacant lots EAST: Friend Avenue followed by: vacant lots SOUTH: Vacant lot WEST: Vacant lot NORTHWEST: Residential dwelling
1950, 1955	Current multi-tenant / residential structure addressed as 1125 - 1127 North Ogden Drive	NORTH: Residential dwelling NORTHEAST: North Ogden Drive followed by: Multi-family residential structures with associated automotive structure EAST: North Ogden Drive followed by: Multi-family residential structures SOUTH: Multi-family residential structures WEST: A store, office and neon sign manufacturing with spray painting NORTHWEST: No significant change is noted
1962, 1966, 1970	No significant change is noted	NORTH: Multi-tenant residential NORTHEAST: No significant change is noted EAST: No significant change is noted SOUTH: No significant change is noted WEST: No significant change is noted NORTHWEST: Nursery School

Based on a review of historical records, the adjacent site to the west was formerly a neon sign manufacturing company with a spray painting booth from at least 1950 until at least 1970. This site was not listed in the regulatory database. The paint booth operated at a time that pre-dates regulatory oversight of hazardous materials and petroleum products. However, spray painting operations typically use chlorinated solvents, particularly PCE, during surface preparation and spray gun cleaning activities. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Based on the proximity of this site to the subject property, the potential exists that, if a release of chlorinated solvents occurred at this site, the subsurface of the subject property may have also been impacted. Assessment of the subject property does not indicate that the subject property would be investigated as a source of this contamination, and therefore, it is unlikely that the subject property owner would be responsible for any cleanup costs associated with a release at this site. The User should be aware that if groundbreaking activities or redevelopment of the subject property occurs, residual impacts from this adjacent site may be present. However, no releases have been reported from this site. Based on the lack of a documented release and time elapsed since last use, the adjacent site is not expected to represent a REC to the subject property at this time.

If available, copies of historical Sanborn maps are provided in the report appendices.

3.4 CITY DIRECTORIES

A search of historical city directories was conducted for the subject property utilizing Envirosite Corporation. The following table summarizes the results of the city directory search.

Year(s)	Address - Occupant Listed
1875, 1881, 1886, 1891, 1896, 1899, 1905, 1910, 1915, 1920, 1925, 1930, 1935, 1941, 1946	No listing
1951	1127 North Ogden Drive - Residence
1956, 1963, 1968, 1970, 1975	1125 North Ogden Drive - Apartment 1127 North Ogden Drive - Residence
1981, 1985	1125 North Ogden Drive - Apartment
1990, 1995	1125 North Ogden Drive - Apartment 1127 North Ogden Drive - Residence
1998, 2001, 2006	1125 North Ogden Drive - Residence
2010	No listing
2015	1125 North Ogden Drive - Residence

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the city directory review.

If available, copies of historical city directories are provided in the report appendices.

3.5 HISTORICAL TOPOGRAPHIC MAPS

In accordance with our approved scope of services, historical topographic maps were not reviewed as a part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

On February 22, 2017, AEI contacted the Los Angeles County Public Health Investigations via email for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems.

No information on the subject property was on file with the LACPHI.

4.2 FIRE DEPARTMENT

The City of West Hollywood is serviced by the Los Angeles County Fire Department. The Los Angeles County Fire Department Health Hazardous Materials Division has centralized the storage of files regarding hazardous material usage, storage and historical information with LACPHI. Refer to Section 4.1.1.

4.3 BUILDING DEPARTMENT

On February 22, 2017, AEI contacted the West Hollywood Building Department via email for information on the subject property in order to identify historical tenants, features of concern and property use.

Please refer to the following table for a listing of permits reviewed:

Year(s)	Owner/Applicant	Description of Permit and Building Use
1949	Mr & Mrs Arthur Davids	Building permit / new apartments 7 units
1998	HaverJ & Ankine Mouradian	Building permit / balcony floor repair due to termite damage
2003	Mourdian	Plumbing permit / additional gas lines and repair/ alteration of drainage and/or vent piping
2004	Ankine Mouradian	Building permit / replace window
2006	Ankine Tr Ankine Mouradian	Building permit / reroof
2009	Ankine Tr Ankine Mouradian	Building permit / replace stairway handrail on outside of building
2011	Ankine Tr Ankine Mouradian	Mechanical permit / Furnace, ac compressor
2012	Ankine Tr Ankine Mouradian	Mechanical permit / Furnace, ac compressor

Evidence indicating current or prior use or storage of hazardous substances was not on file for the subject property with the West Hollywood Building Department.

4.4 PLANNING DEPARTMENT

On February 22, 2017, AEI contacted the West Hollywood Planning Department via email for information on the subject property in order to identify AULs associated with the subject property.

AEI spoke with Rocio Martinez, Records Management Specialist, who indicated that evidence indicating the existence of AULs was not on file for the subject property with the West Hollywood Planning Department.

4.5 COUNTY ASSESSOR OFFICE

On February 22, 2017, AEI visited the Los Angeles County assessor's office website for information on the subject property in order to determine the earliest recorded date of development and use.

According to the Los Angeles County assessor's office, the current building was constructed in 1949.

4.6 OIL AND GAS WELLS/PIPELINES

On February 22, 2017, AEI reviewed the California Department of Conservation Division of Oil, Gas and Geothermal Resources (DOGGR) maps and the National Pipeline Mapping System (NPMS) Public Map Viewer concerning the subject property and nearby properties. The maps contain information regarding oil and gas development.

According to the California Department of Conservation Division of Oil, Gas and Geothermal Resources map, oil or gas wells are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

According to the NPMS Public Map Viewer, pipelines are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.7 OTHER AGENCIES SEARCHED

South Coast Air Quality Management District (SCAQMD) On February 22, 2017, AEI visited the SCAQMD website for information regarding any records of Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) issued to occupants of the subject property and associated with air emission equipment primarily related to stationary sources of air pollution, such as dry cleaning machines, boilers, and/or underground storage tanks.

No information on the subject property was on file with the SCAQMD.

The Regional Water Quality Control Board (RWQCB) On February 22, 2017, AEI visited the GeoTracker website for information on the subject property and nearby sites of concern to identify any evidence of unauthorized releases of hazardous materials to the groundwater. Cases typically handled by the RWQCB include releases from underground storage tanks (USTs).

No information on the subject property was on file with the RWQCB-GeoTracker website.

Department of Toxic Substances Control (DTSC) On February 22, 2017, AEI visited the online Waste Tracking System (HWTS) database maintained by the DTSC for information regarding documented hazardous wastes generated at the subject property.

No information on the subject property was on file with the DTSC-HWTS website.

The United States Fish and Wildlife Service (USFWS) On February 22, 2017, AEI visited the USFWS national wetlands inventory website for information wetlands locations at or in the vicinity of the subject property.

No information about wetlands located at or in the vicinity of the subject property was on file with the USFWS.

The California Department of Toxic Substances Control (CDTSC) On February 22, 2017, AEI visited the EnviroStor website for information on the subject property and nearby sites of concern to identify any evidence of unauthorized releases of hazardous materials to the groundwater. Cases typically handled by the CDTSC include hazardous waste facilities and cleanup.

No information on the subject property was on file with the CDTSC-EnviroStor website.

The Los Angeles County Department of Public Works (LACDPW) On February 22, 2017, AEI visited the LACDPW website for information on the subject property in order to identify underground storage tanks (USTs) and/or previous or current hazardous material usage.

No information on the subject property was on file with the LACDPW website.

4.8 STATE ENVIRONMENTAL SUPERLIENS AND PROPERTY TRANSFER LAWS

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens and/or property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Envirosite Corporation (EC) to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EC into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EC, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report is included in Appendix C of this report.

The subject property was identified in the regulatory database report as follows: FTTS INSP, FRS. See Section 5.1 for additional discussion.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
SEMS (formerly CERCLIS)	0.5	No	0	
SEMS-ARCHIVE (formerly CERCLIS NFRAP)	0.5	No	0	
RCRA CORRACTS	1	No	0	
RCRA-TSDF	0.5	No	0	
RCRA LQG, SQG, CESQGs, VGN, NLR	SP/ADJ	No	0	
US ENG CONTROLS	SP	No	0	
US INST CONTROLS	SP	No	0	
ERNS	SP	No	0	
STATE/TRIBAL HWS	1	No	6	No; sites within the search radius are cross gradient and/or at sufficient distance and are not expected to represent a significant environmental concern

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
STATE/TRIBAL SWLF	0.5	No	0	
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	No	0	
STATE/TRIBAL LUST	0.5	No	9	No; sites within the search radius are cross gradient and/or at sufficient distance and are not expected to represent a significant environmental concern
STATE/TRIBAL EC and IC	SP	No	0	
STATE/TRIBAL VCP	0.5	No	0	
STATE/TRIBAL BROWNFIELD	0.5	No	0	
ORPHAN	N/A	No	30	No; none of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and/or based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	**Yes**	2	No; subject property listings are discussed below

Facility Name: Hazard Control DBA Environmental Res Cal
Database(s): FTTS INSP, FRS Address: 1125 North Ogden Drive Distance: Subject property Direction: Subject property
Comments: The subject property is listed in the FTTS INSP database. This database lists tracking of inspections related to the Federal Insecticide, Fungicide and Rodenticide Act and Toxic Substance Control Act (FIFRA/TSCA). The inspection was dated May 26, 2004. No further information was available in this database. The subject property is listed in the FRS database. Facility Registration System database lists the subject property with ID number 110022537370 identified in the NCDB supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements. No further information was available in this database. Based on the lack of documented release and the nature of the listings, these listings are not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation,

to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

AEI requested an interview with the subject property owner; however, the subject property owner has not responded as of this report date. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall Findings of this assessment.

6.1.2 INTERVIEW WITH KEY SITE MANAGER

The key site manager, Darren Embry, was contacted via email on March 1st and March 7th, 2017. As of the date of this report Darren Embry has not responded to AEI's request for interview. Mr. Embry sent AEI a preliminary questionnaire that indicated that the subject property is slated for demolition.

6.1.3 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI attempted to obtain contact information for past owners, operators and occupants of the subject property in order to interview them regarding the potential for contamination at the property. AEI requested this contact information, reviewed agency records, and performed online research to obtain this information. Contact information was not found. As such, interviews with past owners, operators and occupants were not reasonably ascertainable.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User Questionnaire was completed by Mr. Darren Embry, Director of Community Development. Sections 6.2.1 through 6.2.6 represent information contained therein.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.2.1 Environmental Liens

AEI was not informed by Mr. Darren Embry of any environmental cleanup liens encumbering the subject property that are filed or recorded under federal, tribal, state, or local law.

6.2.2 Activity and Land Use Limitations

AEI was not informed by Mr. Darren Embry of any AULs, such as engineering controls, land use restrictions, or institutional controls, that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state, or local law.

6.2.3 Specialized Knowledge

AEI was not informed by Mr. Darren Embry of any specialized knowledge or experience related to the subject property or nearby properties.

6.2.4 Valuation Reduction for Environmental Issues

Mr. Darren Embry did not indicate to AEI any information to suggest that the valuation of the subject property is significantly less than the valuation for comparable properties due to environmental factors.

6.2.5 Commonly Known or Reasonably Ascertainable Information

Mr. Darren Embry did not inform AEI of any commonly known or reasonably ascertainable information about the subject property which aided AEI in identifying conditions indicative of a release or threatened release.

6.2.6 Knowledge of Presence or Likely Presence of Contamination

Mr. Darren Embry did not inform AEI of any obvious indicators that pointed to the presence or likely presence of contamination at the subject property.

6.3 Previous Reports and Other Provided Documentation

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	March 6, 2017
AEI Site Assessor(s)	Jeff McNeil
Property Escort(s)/Relationship(s) to Property	Kyle Jones / real estate agent
Units/Areas Observed	Due to the size of the property, a representative sample of interior spaces was inspected by AEI. Due to the residential nature of occupancy, this limited inspection method is expected to be adequate for the purposes of this assessment. AEI inspected the following units: 1125-1, 1125-2, 1125 3/4 and 1127
Area(s) not accessed and reason(s)	Units not specified above
Weather	Clear and sunny

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	✔	Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✔	Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)
	✔	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✔	Unidentified Substance Containers
	✔	Electrical or Mechanical Equipment Likely to Contain Fluids
	✔	Interior Stains or Corrosion
	✔	Strong, Pungent, or Noxious Odors
	✔	Pools of Liquid
✔		Drains, Sumps, and Clarifiers
	✔	Pits, Ponds, and Lagoons
✔		Stained Soil or Pavement
	✔	Stressed Vegetation
	✔	Solid Waste Disposal or Evidence of Fill Materials
	✔	Waste Water Discharges
	✔	Wells
	✔	Septic Systems
	✔	Biomedical Wastes
✔		Other

The subject property is currently occupied by multiple residential tenants. On-site operations consist of residential and maintenance activities.

DRAINS, SUMPS, AND CLARIFIERS

One storm drain was observed in the parking area of the subject property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drain . Based on the use of the drain solely for storm water runoff, the presence of the drain is not expected to represent a significant environmental concern.

STAINED SOIL AND PAVEMENT

Minor amounts of oily surface staining were observed in the parking area. The staining appears to be from leaking vehicles and is surficial in nature. Based on the small size and the surficial nature of the staining, it is not expected to represent a significant environmental concern.

OTHER

The subject property is currently occupied by residential tenants. Small amounts of cleaning supplies, maintenance supplies, paints and roof patching compounds were observed on site. All materials were packaged in consumer quantities and no signs of inappropriate material handling were observed. Based on the nature of these materials, the presence or use of these materials at the subject property is not expected to represent a significant environmental concern.

7.2 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	✔	Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✔	Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)
	✔	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✔	Unidentified Substance Containers
✔		Electrical or Mechanical Equipment Likely to Contain Fluids
	✔	Strong, Pungent, or Noxious Odors
	✔	Pools of Liquid
	✔	Drains, Sumps, and Clarifiers
	✔	Pits, Ponds, and Lagoons
	✔	Stained Soil or Pavement
	✔	Stressed Vegetation
	✔	Solid Waste Disposal or Evidence of Fill Materials
	✔	Waste Water Discharges
	✔	Wells
	✔	Septic Systems
	✔	Other

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Transformers

Four pole-mounted transformers were observed on the adjacent sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers.

Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that are considered to be "fibrous" and through processing can be separated into smaller and smaller fibers. The fibers are strong, durable, chemical resistant, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos was considered an ideal product and has been used in thousands of consumer, industrial, maritime, automotive, scientific, and building products.

At the federal level, asbestos is primarily regulated by the United States EPA primarily through the EPA's NESHAP (Standard 40 CFR Chapter 61, Subpart M), the OSHA through the General Industry Standard, and the Construction Industry Standard (29 CFR 1926.1101 and 29 CFR 1910.1001). Many states have regulations in place for the inspection, management, and remediation of asbestos including company and individual licensing requirements for all activities relating to asbestos. Under both federal and state regulations building owners and employers may be required to perform certain activities related to the in-place management of asbestos, and prior to renovations or demolition activities (i.e. asbestos inspections or remediation) that may disturb building materials suspected of containing asbestos.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state, or local regulations in regards to ACM.

Due to the age of the subject property building, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (Acoustical and Smooth)	Walls and Ceilings
Ceiling Tile	Ceiling Systems
Thermal Systems Insulations, Packings, Gaskets	Heating Systems, Cooling Systems, Domestic and Heating and Cooling Piping, Ductwork, Other Equipment
Floor Tile and Associated Mastics, Flooring Felts, Papers (under hardwood/other)	Floors
Vinyl Sheet Flooring and Adhesives	Floors
Cove Base and Associated Mastics	Walls
Ceramic Tile Adhesives and Grouts	Walls, Floors, and Ceilings
All Adhesives	Mirrors, Wall Coverings, Construction, etc.
Grout and Caulking	Windows and Doors
Gypsum Board, Tape, and Joint Compound	Wall and Ceiling Systems
Insulation Materials	Walls, Ceilings, Attic Spaces
Roofing Materials (Felts, Rolled, Shingle, Flashings, Adhesives, Tar, Insulations)	Roof and Parapet Wall Systems
Brick and Block, Mortars	Walls

All observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance.

According to Mr. Darren Embry, demolition of the building is planned for the near future. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment. Similarly, OSHA regulations require that specific work practices be implemented when handling construction materials and debris that contain asbestos and/or lead-containing materials.

8.2 LEAD-BASED PAINT

LBP is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

LCP is defined as any paint with any detectable amount of lead present in it. It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LCP.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property building, there is a potential that LBP is present. During the site inspection, damaged and peeling paint was observed throughout the interior and exterior of the subject property building. AEI understands that demolition activities of the subject property building is planned. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and

worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The Los Angeles Department of Water and Power supplies potable water to the subject property. The most recent water quality report (2015) states that the 90th percentile value for lead levels in samples obtained from the area's water supply was 6.3 µg/L. Typical sources of lead in drinking water include corrosion of household plumbing systems. Overall, lead levels are well within standards established by the United States EPA.

8.5 MOLD/INDOOR AIR QUALITY ISSUES

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI observed interior areas of the subject property building in order to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems, and behind enclosed walls and ceilings, may be present on the subject property.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

SURROUNDING SITES: SEARCH RESULTS:

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative equal to or higher than the subject property have been differentiated below from sites with an elevation lower than the subject property.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

Handler Activities Summary :

U.S. importer of hazardous waste :	No
Mixed waste (haz. and radioactive) :	No
Recycler of hazardous waste :	No
Transporter of hazardous waste :	No
Treater storer or disposer of HW :	No
Underground injection activity :	No
On-site burner exemption :	No
Furnace exemption :	No
Used oil fuel burner :	No
Used oil processor :	No
Used oil refiner :	No
Used oil fuel marketer to burner :	No
Used oil Specification marketer :	No
Used oil transfer facility :	No
Used oil transporter :	No

Facility has No violations / inspections reported.

Handler Activities Summary :

U.S. importer of hazardous waste :	No
Mixed waste (haz. and radioactive) :	No
Recycler of hazardous waste :	No
Transporter of hazardous waste :	No
Treater storer or disposer of HW :	No
Underground injection activity :	No
On-site burner exemption :	No
Furnace exemption :	No
Used oil fuel burner :	No
Used oil processor :	No
Used oil refiner :	No
Used oil fuel marketer to burner :	No
Used oil Specification marketer :	No
Used oil transfer facility :	No
Used oil transporter :	No

Facility has No violations / inspections reported.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History :

The Site is a 4,000 square feet commercial property located in West Hollywood. Dry cleaning operations have been conducted since 1954. Soil and soil vapor have been impacted with chlorinated volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE). Soil vapor surveys in 2002 showed up to 663 micrograms per liter (µg/L) PCE at 5 feet below ground surface (bgs) in SV3 and up to 780 µg/L at 52 feet bgs in SV102. The highest concentrations were detected near the former dry cleaning machine. Limited soil vapor extraction (SVE) remediation was conducted from a single vapor extraction well (VEW-1) located near the former dry cleaner source area from approximately May 2003 to June 2004. Source area PCE concentrations decreased from 663 to 0.9 µg/L. The Regional Board issued a California Water Code (CWC) Section 13267 Order dated July 9, 2008 that required a Phase I Environmental Site Assessment (ESA) and a comprehensive work plan for a Phase II investigation and sampling of all potentially affected media (soil, soil vapor and groundwater). In accordance with the Order, a December 15, 2008 " Groundwater and Soil Gas Assessment Work Plan " was submitted to the Regional Board. In a subsequent Order dated March 24, 2011, the Regional Board required additional soil and soil vapor sampling near the current and former source areas and modifications to the proposed locations and construction three proposed onsite groundwater monitoring wells. The Order also required clarification on information from the prior SVE remediation and corrections to the previously submitted site plans, and inclusion of boring/well construction logs, cross-sections, and plume maps in future report submittals. A " Subsurface Investigation Work Plan " dated May 31, 2011 was submitted and proposed the installation of three groundwater monitoring wells and a soil vapor investigation in accordance with the Regional Board's March 24, 2011 amended Order and subsequent discussions from meetings. Following a May 25, 2011 meeting with Regional Board staff, the work plan proposed the installation of three onsite groundwater monitoring wells located southwest and, presumably, downgradient of primary source areas. The wells were located and constructed based on an inferred southwest groundwater flow direction and depth to groundwater of 70 feet bgs from an adjacent site. Soil samples were collected at 5-foot intervals in acetate sleeves for lithology; soil samples from 5 and 15 feet bgs were analyzed for VOCs. Five-foot samples from two locations were also analyzed for physical parameters for subsequent vapor intrusion evaluation. Nested soil

vapor probes were installed at 5, 15 and 25 feet for each well. An updated soil vapor assessment was proposed that would us previously-installed onsite soil vapor proves provided that they were still viable for sampling. Any probes not found to be viable would be replaced. On August 15, 2011, the Regional Board issued an Order to Four Seasons regarding comments on the November 22, 2002 " Unsaturated Soil Remedial System Installation Workplan " . The Order requested some clarifications and corrections on the soil vapor plume maps. The Order further requested clarification of the rationale for SVE remediation, as no prior boring logs were submitted, not were any pilot tests conducted. There was no indication of how that SVE system should be designed or operate. Prior reports did not clearly specify system operation vs. shutdown dates/times and rationale (e.g., maintenance, rebound testing, etc.). Based on these deficiencies, a revised SVE system operation report was requested. In response to these comments, Four Seasons Cleaners submitted an October 26, 2011 " Response to Comments ... " letter which addressed each of the Regional Board's concerns. Regional Board staff reviewed the May 31, 2011 work plan and prepared an approval letter (modified Order) also dated August 15, 2011. The Order required modification of the number and locations of the soil samples collected for geotechnical parameters and required several additional soil and soil vapor samples at specified locations onsite. The Order required depth-discrete vertical sampling of the groundwater to determine the vertical extent of groundwater impacts and modification of the proposed well screen lengths. The Order required the initiation of a quarterly groundwater monitoring program to evaluate spatial and temporal groundwater quality conditions and that the groundwater monitoring be coordinated with that at the adjacent Crescent Shopping Center Site. In response to the August 15, 2011 Order, Four Seasons Cleaners submitted a November 30, 2011 " Subsurface Investigation Report " which summarizes the results of their investigation. No further subsurface investigations have been conducted since that time. The first two rounds of groundwater data from November 2011 and April 2012 are presented in a groundwater monitoring report dated June 11, 2012. The groundwater data were collected from the Four Seasons and the Crescent Shopping Center Sites. PCE concentrations in groundwater from the most recent sampling event (April 24, 2012) ranged from 95.8 to 507 µg/L on the Four Seasons Site and 58.5 to 247 µg/L at the Crescent Shopping Center Site. The groundwater elevation data from wells on both sites collectively show that the groundwater flow direction is to the southwest. No additional groundwater monitoring has since been conducted. On March 6, 2013, the Regional Board received a " Notice of Intent to Destroy Four Groundwater Monitoring Wells " from the Crescent Shopping Center Site in preparation for site demolition for the Walgreens redevelopment. The Regional Board approved the well destruction in a March 20, 2013 letter. The four wells (MW-1 through MW-4) were destroyed on April 17, 2013 and summarized in a May 17, 2013 Well Destruction Report. One well (MW-5) was not destroyed at the time, since it was not directly in the Walgreens redevelopment footprint. In December 2013, the former buildings were demolished. Since December 2013, the Crescent Shopping Center Site has been an unpaved lot with perimeter fencing. In July 2015, Regional Board staff learned that Walgreens was no longer considering the redevelopment and wanted to sell the property. In October 2015, the City of West Hollywood purchased the property from Walgreens with the initial intent to install a paved parking lot at that location until a permanent plan is identified. In a February 19, 2016 letter, the City of West Hollywood was directed to install replacement groundwater monitoring wells (to replace those that were destroyed) and repair or replace MW-5. Once these wells are all in place, the Regional Board will required groundwater monitoring at the combined Four Seasons and Crescent Shopping Center sites to resume. Subsurface investigation will likewise resume to resolve any data gaps that remain between the two sites.

Site History :

The Site was originally developed in 1926 and included a gasoline service station and automotive repair shop. The gas station was demolished and the Site was extensively remodeled in 1961. Since that time, various retail tenants have occupied the Site including a dry cleaner and print/copy business. Dry cleaning operations were conducted at the Top Hat Cleaners from 1962 to 2013. As a result, soil, soil vapor and groundwater have been impacted with halogenated volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE). Soil, soil vapor and groundwater investigations have been conducted at the Site under Regional Board oversight since 1999. In March 2000, 75 tons of PCE-impacted soil was excavated to a depth of 10 feet below ground surface (bgs) beneath the former dry cleaning machine. Groundwater occurs at approximately 75 to 80 feet bgs and generally flows toward the southwest. Walgreens purchased the Site in 2000, and until 2015, had committed extensive planning and resources to their proposed mixed-use redevelopment (SMB20 Project). The SMB20 Project was a planned mixed-use retail and residential redevelopment that included a subterranean parking garage. As a result, the developer had planned to conduct a site-wide excavation of surficial soil to depths of 20 to 25 feet bgs. In 2010, soil and soil vapor samples were collected within the construction footprint as part of the City's Environmental Impact Report (EIR) to identify areas of concern and determine the extent of contamination prior to the excavation. Soil contamination within the construction footprint was to be removed by excavation and hauled away by the developer. Residual contamination in soil and soil vapor below 25 feet bgs was to be addressed by the responsible party under the Regional Board's Site Cleanup Program. In February 2010, JHA conducted a soil and soil vapor investigation as part of the SMB20 EIR. The intent of this investigation was to evaluate shallow soil and soil vapor impacts beneath the footprint of the proposed redevelopment. Seven soil borings (BSG-1 through BSG-7) were installed around the perimeter of the Top Hat Cleaners and in the western portion of the Site to investigate the extent of known and potential impacts to soil and soil vapor from known or suspected source areas, including Top Hat Cleaners, a print shop and former gas station. Petroleum hydrocarbons were not detected in soil beneath the former gas station and low VOCs-impacts were detected beneath the print shop. PCE concentrations up to 0.368 milligrams per kilogram (mg/kg) and 969 micrograms per liter (µg/L) were detected in soil and soil vapor, respectively, near Top Hat Cleaners. In April 2013, four onsite groundwater monitoring wells (MW-1 through MW-4) were destroyed in preparation for Site demolition and SMB20 Project. One offsite well (MW-5) was not destroyed. In December 2013, the former buildings were demolished. Currently the Site is an unpaved vacant lot with perimeter security fencing. In January 2014, JHA installed two deep borings (DB-1 and DB-2) and 13 shallow borings (SB-1 through SB-13) to further delineate the lateral and vertical extent of residual VOCs in soil. The deep borings were located at source areas within the dry cleaners and drilled to a total depth of 83.5 feet bgs. Soil samples in the deep borings were collected at 5-foot intervals from 5 to 70 feet bgs. Grab groundwater samples were collected from each boring via temporary wells. Soil gas probes were installed in each deep boring at 10-foot intervals from 5 to 70 feet bgs. Soil samples were collected from the 13 shallow borings at 5-foot intervals from 5 to 30 feet bgs. Soil vapor probes were not installed in the shallow soil borings based on results from the February 2010 investigation by JHA and based on the planned site-wide soil excavation to 20-25 feet for the SMB-20 Project. Since the SMB-20 Project is no longer planned, an additional shallow soil vapor survey (the current workplan) is proposed to resolve these data gaps. Results from the 2014 investigations showed that the highest PCE concentrations in soil (up to 0.260 milligrams per kilogram (mg/kg) in Boring SB-1 at 5 feet bgs) were primarily in shallow soil near the former Top Hat Cleaners (Figure 1). At 10 and 15 feet bgs, these concentrations generally decreased by at least an order of magnitude. None of the detected PCE concentrations in soil exceed current regulatory screening levels for commercial or residential scenarios. The 2014 soil data generally coincide with those from the 2010 sampling event. Shallow soils onsite (less than 20 ft bgs) also tend to be predominantly clayey soils with high organic carbon; and therefore, would tend to have high sorption capacities for PCE as well. Soils below 20 feet at the Site are predominantly sandy soils, and consequently, have PCE concentrations below detection limits. Results of the 2014 soil vapor sampling from the two deep borings (DB-1 and DB-2) at the former Top Hat Cleaners detected PCE concentrations up to 303 micrograms per liter (µg/L). No lateral soil vapor data are available due to Walgreen's plans to conduct site-wide shallow excavation. However, a comparison of the 2014 and 2010 soil vapor data suggests that residual PCE concentrations in soil vapor in the source area are considerably lower than what was projected (greater than 1,000 µg/L) in 2010. Nevertheless, PCE was detected in soil vapor in all samples in DB-1 and DB-2 and all detected concentrations exceeded both commercial and residential California Human Health Screening Levels of 1.6 and 0.47 µg/L, respectively. Therefore, further assessment and delineation of the residual soil vapor plume is warranted at this time. An additional soil vapor survey work plan dated November 6, 2015 was prepared by JHA Environmental and submitted to the Regional Board for review. The purpose of the soil vapor

survey was to better delineate the lateral extent of the soil vapor plume onsite for planning purposes prior to further soil cleanup. In a letter dated February 19, 2016, Regional Board staff reviewed the soil vapor survey work plan and the prior March 10, 2014 " Report of Findings for a January 2014 Subsurface Environmental Assessment " that summarized recent shallow soil matrix data across the site and deeper soil and soil vapor from the former dry cleaner source areas. In March 2016, JHA installed ten soil borings - six borings to 40 feet and four borings to 20 feet bgs. Soil vapor probes were installed in the borings at 10-foot intervals. Seven soil matrix samples were collected in boring B10/SG10, located between two prior deep borings near the former dry cleaning machine. A total of 32 soil vapor samples were collected the probes and analyzed for aromatic and halogenated volatile organic compounds (VOCs) by USEPA Method 8260B (Full Scan). Results of soil matrix sampling showed detectable PCE ranging from 0.0287 mg/kg at 10 feet bgs to 0.0025 mg/kg and 35 feet bgs. The detectable soil matrix concentrations decreased with depth and were below the most conservative residential screening level of 0.42 mg/kg. No other VOCs were detected in soil matrix. The results confirm those of prior investigations and indicate that the current soil matrix beneath the Site is not significantly impacted with PCE. March 2016 soil vapor sampling showed detectable PCE concentrations ranging from 1.20 µg/L in SG-3 at 30 feet bgs to 389 µg/L in SG-8 at 40 feet bgs. The highest concentrations were in the eastern central portion of the Site, whereas the lowest concentrations were in the southwestern portion of the Site. All of the detected PCE concentrations exceed the residential screening level of 0.24 µg/L. PCE is the predominant VOC detected in soil vapor, but TCE concentrations were also detected in some of the soil vapor probes at concentrations ranging from 0.013 to 0.138 µg/L. None of the detected TCE concentrations exceeds the residential screening level of 0.24 µg/L. As with PCE, the highest TCE concentration was detected in SG-8 at 40 feet in the eastern central portion of the Site. In general, PCE concentrations in soil vapor tend to increase with increasing depth. The distribution of PCE contamination and vertical increasing trends may be related to groundwater PCE impacts. However, PCE concentrations in soil vapor from SG-10 near the former dry cleaner source area show the opposite trend - they decrease with depth as follows: 196 µg/L (10 ft bgs), 173 µg/L (20 ft bgs), 166 µg/L (30 ft bgs) and 126 µg/L (40 ft bgs). This localized reverse trend may be due to residual contamination associated with the former dry cleaning equipment source area. Based on the results of the soil vapor survey, JHA recommended a workplan for soil excavation that would remove any residual soil matrix impact from the former dry cleaner source area and to reduce the PCE concentrations in shallow soil gas. In July 25, 2016, JHA submitted a " Work Plan [for a] Limited Soil Excavation " . The work plan proposes a limited 40x20x15 feet (445 cubic yard) excavation in the vicinity of the former dry cleaning machine to remove residual PCE-impacted soil and ultimately reduce soil gas concentrations. Two confirmation samples would be collected from each sidewall (8 feet and 15 feet bgs) and four samples from the excavation floor. Soil samples will be collected using USEPA Method 5035 and analyzed for VOCs by USEPA Method 8260B. The Tier 1 Environmental Screening Level (ESL) for PCE of 0.42 mg/kg for residential land use will be used as the soil cleanup goal for this proposed soil remediation. If this cleanup goal is not in a particular area, then further excavation and additional confirmation samples will be collected and analyzed. Following the excavation and confirmation sampling, the excavation will be backfilled with clean, imported fill soil. The work plan was approved in a Regional Board Letter dated October 10, 2016.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Completed Activities

Completed Date :	07/14/1994
Area Name :	PROJECT WIDE
Sub Area Name :	N/R
Document Type :	Phase 1

Comments :

Pursuant to the MOU, DTSC has reviewed an environmental site assessment and other documents for the Linn House (Westside Hospice) property. The property, currently two vacant lots that have been combined into one legal parcel, is intended for the location of a new hospice to be owned and operated by the Aids Healthcare Foundation. A Supplemental Phase I Environmental Assessment Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

To maintain currency of the following federal and state databases, Envirosite Corporation contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

STANDARD ENVIRONMENTAL RECORDS:

FEDERAL RCRA NON-CORRACTS TSD FACILITIES LIST

ARCHIVED RCRA TSDF: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Date of Government Version: 01/09/2017
Date Release Frequency: Varies
Next Scheduled Contact: 03/20/2017
Source: U.S. Environmental Protection Agency
Telephone: 215-814-2469
Last Contact: 01/09/2017

RCRA_TSDF: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Date of Government Version: 01/09/2017
Date Release Frequency: Quarterly
Next Scheduled Contact: 03/20/2017
Source: U.S. Environmental Protection Agency
Telephone: 215-814-2469
Last Contact: 01/09/2017

FEDERAL CERCLIS LIST

CERCLIS: Comprehensive Environmental Response Compensation and Liability Act program sites reported to the Environmental Protection Agency and can be proposed for the NPL List

Date of Government Version: 11/15/2016
Date Release Frequency: Quarterly
Next Scheduled Contact: 04/04/2017
Source: U.S. Environmental Protection Agency
Telephone: 800-424-9346
Last Contact: 01/24/2017

CERCLIS NFRAP: Comprehensive Environmental Response Compensation and Liability Act No Further Remedial Action Planned sites that have been removed and archived

Date of Government Version: 11/16/2016
Date Release Frequency: Quarterly
Next Scheduled Contact: 04/05/2017
Source: U.S. Environmental Protection Agency
Telephone: 800-424-9346
Last Contact: 01/25/2017

FEDERAL FACILITY: Sites where Federal Facilities Restoration and Reuse Office (FFRRO) arranged cleanup for Base Closure and Property Transfer at Federal Facilities

Date of Government Version: 01/30/2017
Date Release Frequency: Varies
Next Scheduled Contact: 04/10/2017
Source: U.S. Environmental Protection Agency
Telephone: 703-603-8712
Last Contact: 01/30/2017

SEMS_8R_ACTIVE SITES: The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. NPL sites include latitude and longitude information. For non-NPL sites, a brief site status is provided.

Date of Government Version: 12/05/2016
Date Release Frequency: Quarterly
Next Scheduled Contact: 04/10/2017
Source: U.S. Environmental Protection Agency
Telephone: 703-603-8867
Last Contact: 01/30/2017

SEMS_8R_ARCHIVED SITES: The Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Date of Government Version: 12/05/2016
Date Release Frequency: Quarterly
Next Scheduled Contact: 04/10/2017
Source: U.S. Environmental Protection Agency
Telephone: 703-603-8867
Last Contact: 01/30/2017

STANDARD ENVIRONMENTAL RECORDS: ***(cont.)***

FEDERAL RCRA CORRACTS FACILITIES LIST

CORRACTS: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases

Date of Government Version: 01/09/2017
Date Release Frequency: Quarterly
Next Scheduled Contact: 03/20/2017
Source: U.S. Environmental Protection Agency
Telephone: 202-566-1667
Last Contact: 01/09/2017

FEDERAL DELISTED NPL SITE LIST

DELISTED NPL: National Priority List of sites that were delisted and no longer require action

Date of Government Version: 01/30/2017
Date Release Frequency: Quarterly
Next Scheduled Contact: 04/10/2017
Source: U.S. Environmental Protection Agency
Telephone: 703-603-8867
Last Contact: 01/30/2017

DELISTED PROPOSED NPL: Sites that have been delisted from the proposed National Priority List

Date of Government Version: 01/30/2017
Date Release Frequency: Quarterly
Next Scheduled Contact: 04/10/2017
Source: U.S. Environmental Protection Agency
Telephone: 703-603-8867
Last Contact: 01/30/2017

Elevation:	295.604 ft. above sea level

USGS TOPOGRAPHIC MAP:

Subject Property Map:	34118a3 HOLLYWOOD, CA
Most Recent Revision:	2012

Geological Landscape Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION:

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

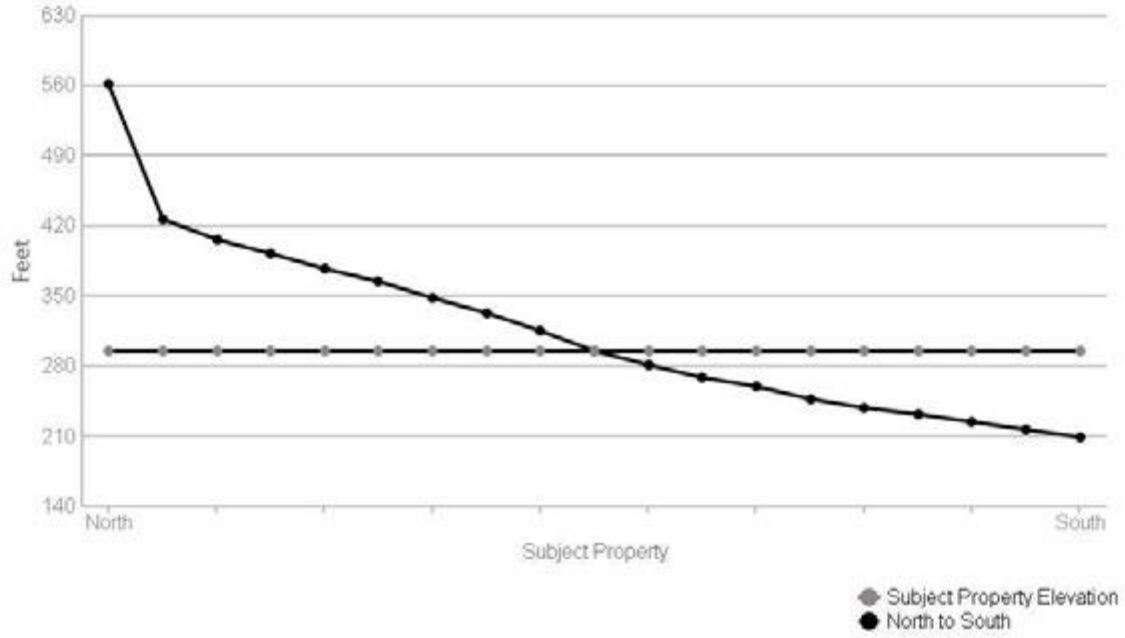
TOPOGRAPHIC INFORMATION:

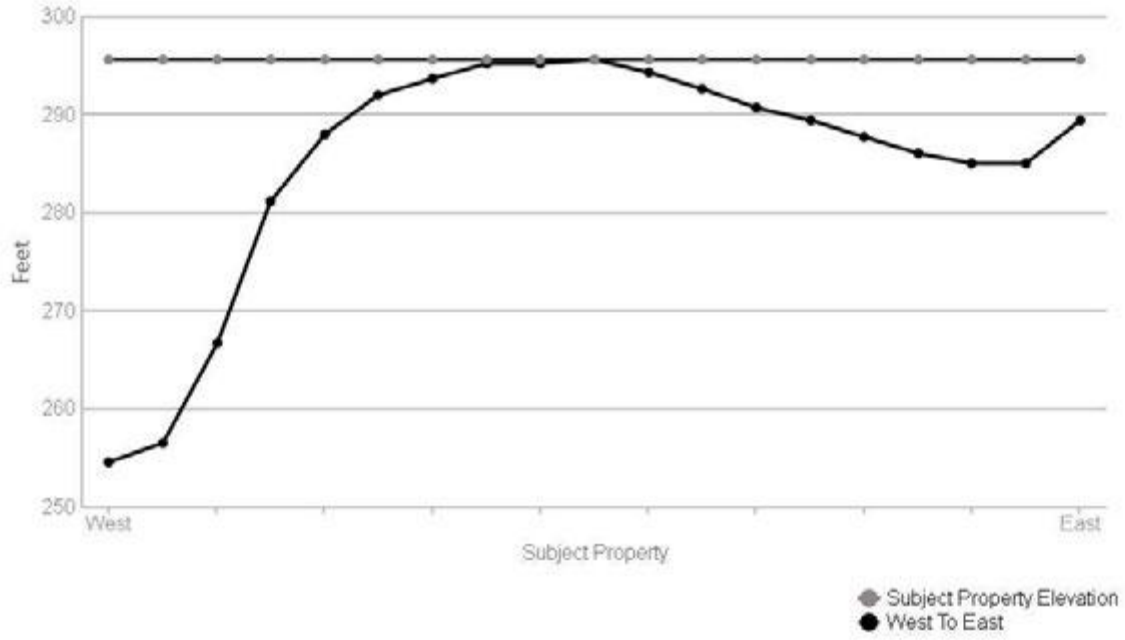
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the subject property, what downgradient sites might be impacted

SUBJECT PROPERTY TOPOGRAPHY:

General Topographic Gradient: S

SURROUNDING TOPOGRAPHY: *ELEVATION PROFILES*





Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROGEOLOGIC INFORMATION:

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the subject property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

DFIRM FLOOD ZONE:

NATIONAL WETLAND INVENTORY:

	NWI Electronic
NWI Quad at Subject Property:	Data Coverage:
HOLLYWOOD	Yes - refer to the Geological Setting Source Map

GROUNDWATER FLOW VELOCITY INFORMATION:

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF SUBJECT PROPERTY:

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

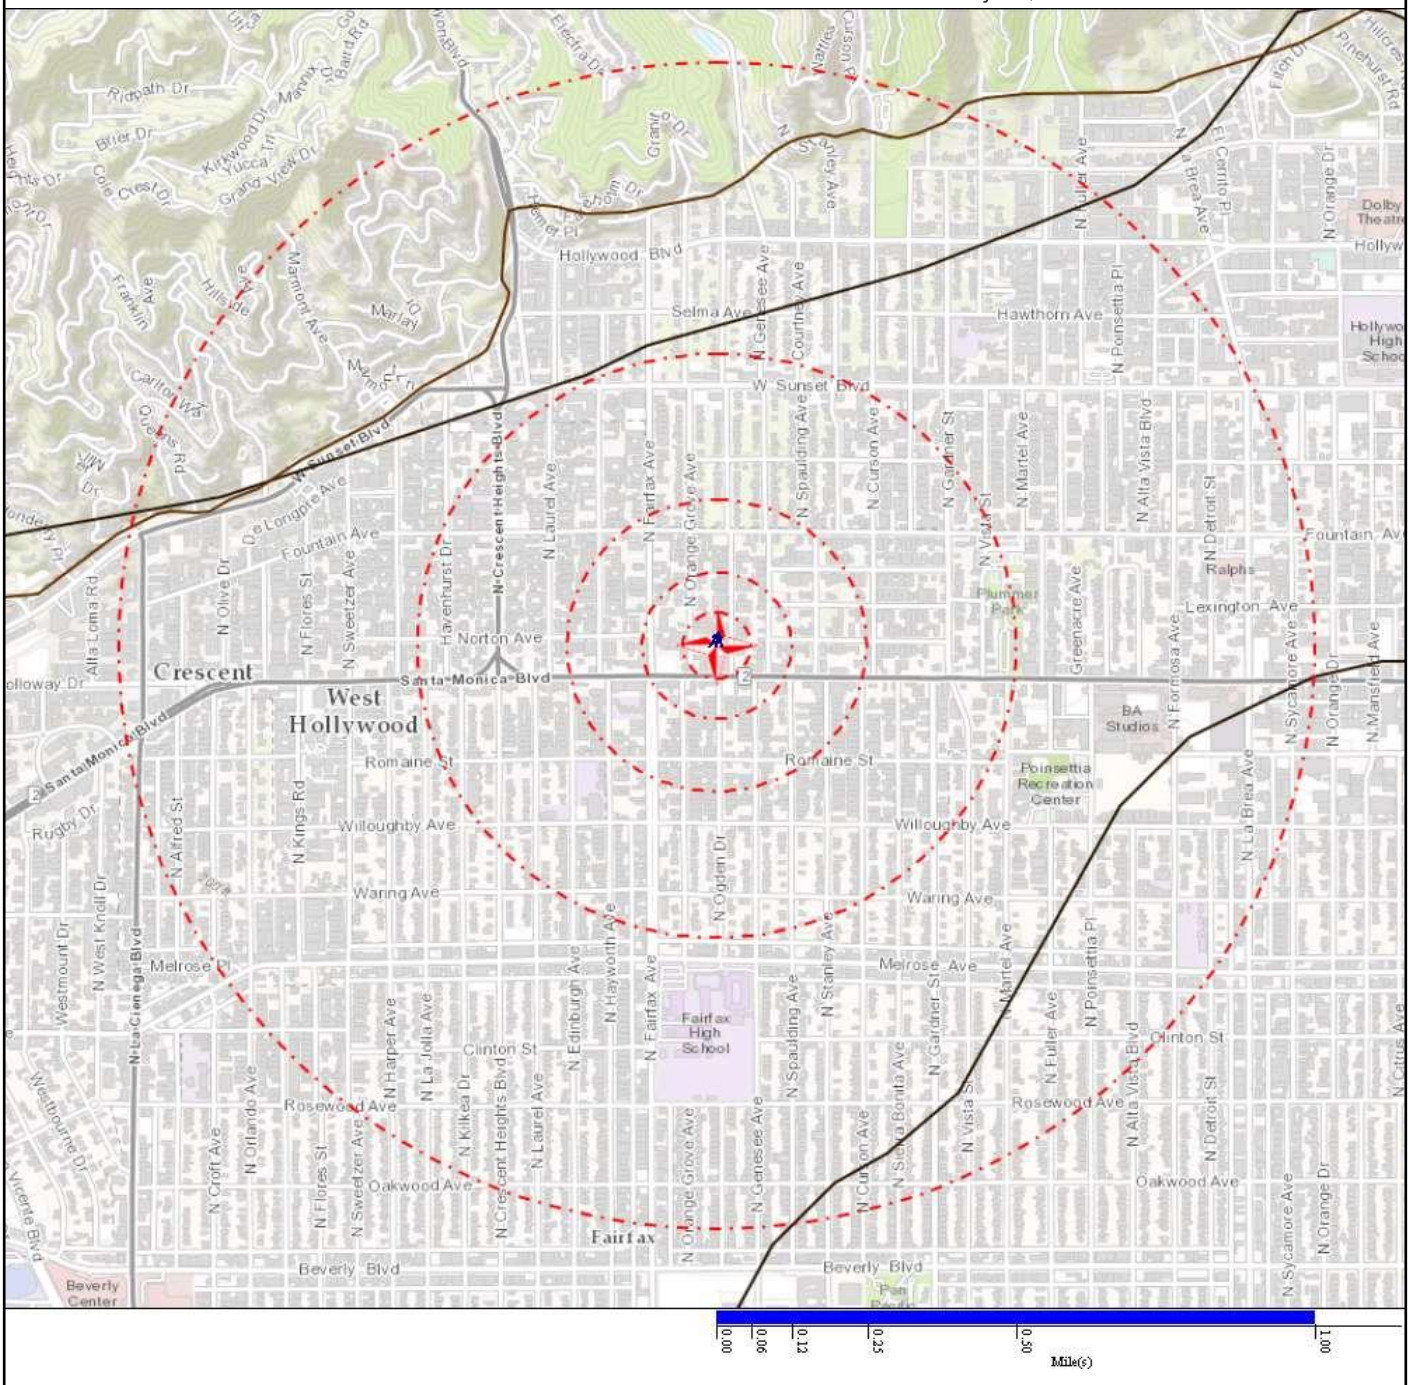
REPORT DATE: February 22, 2017



DOMINANT SOIL COMPOSITION IN GENERAL AREA OF SUBJECT PROPERTY:

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO/STATSGO data.

SOIL MAP ID : 1

Soil Component Name:	NOTCOM
Soil Surface Texture:	Not Reported
Hydrologic Group:	Not Reported
Soil Drainage Class:	Not Reported
Hydric Status:	0
Corrosion Potential - Uncoated Steel:	Not Reported

SOIL MAP ID : A

Soil Component Name:	Metz
Soil Surface Texture:	Loamy sand
Hydrologic Group:	B
Soil Drainage Class:	Not Reported
Hydric Status:	3
Corrosion Potential - Uncoated Steel:	High

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0	30	Loamy sand	No data	No data	Min:42.343, Max:14.1143	Min:8.4, Max:6.6
2	30	97	Sand	No data	No data	Min:42.343, Max:14.1143	Min:8.4, Max:6.6
3	97	152	Sand	No data	No data	Min:42.343, Max:14.1143	Min:8.4, Max:6.6

LOCAL / REGIONAL WATER AGENCY RECORDS:

Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

Historical Information Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

FIM+ Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIM), real estate atlases and similar maps for the site location and adjoining properties. Maps from the HIG Collection were used to create a multi-page file named FIM+ Maps. The maps have title blocks that include the map publisher, year the map was created and, if applicable, the year the map was last updated. The years provided are:

1919, 1950, 1955, 1962, 1966, 1970

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the "Site Specific HIG Data") contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. Accordingly, there can be no guaranty or warranty that the information provided is complete for its particular intended purpose. No warranty expressed or implied, is made whatsoever in connection with the Site Specific HIG Data. Historical Information Gatherers specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular purpose. Historical Information Gatherers, its officers, employees and independent contractors cannot be held liable to anyone for any loss or damage, whether arising out of errors or omissions, negligence, accident or any other cause, resulting directly or indirectly from any information provided or any information not provided in the Site Specific HIG Data. Any liability on the part of Historical Information Gatherers is strictly limited to a refund equal to the amount paid for the Site Specific HIG Data.

HIG Copyright Notice

This Research Summary and the selection, arrangement and compilation of Site Specific HIG Data are the property of Historical Information Gatherers. © Copyright 2017 by Historical Information Gatherers, Inc. All rights reserved. The person or entity that ordered and paid for the Site Specific HIG Data is granted a personal, non-assignable, limited license to reproduce the Site Specific HIG Data solely for purposes of providing supporting documentation for reports produced for the site location which is noted on page one of this Research Summary. Any other reproduction or other use of the Site Specific HIG Data in any media or format, in whole or in part, is expressly prohibited without prior written permission from Historical Information Gatherers, and the person or entity that ordered and paid for the Site Specific HIG Data assumes all liability for the making of any such reproductions.

Licensing Agreement

The licensing agreement between Historical Information Gatherers and infoGroup provides that Historical Information Gatherers may create photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright. The licensing agreement also permits the person or entity that ordered and paid for the Site Specific HIG Data to include photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright as supporting documents for reports produced for the site which is the subject of the Site Specific HIG Data.

REGULATORY AGENCY RECORDS

May 21, 2009

Ankine Mouradian
3151 Kirkham Drive
Glendale, CA, 91206-1129

No. CE0-027-801

Re: 1125 – 1127 Ogden

Dear Property Owner:

I have conducted an inspection of your property listed above and observed the following deficiencies, which constitute violations of the West Hollywood Municipal Code (corresponding sections in parenthesis):

1. There are personal items being stored outside on the property that are in public view (WHMC 19.30.030 E.4). Please store all items at the rear of the property out of public view in a screened designated area.
2. The security bars on the bedroom windows appear to be bolted into the stucco making them non-openable (WHBC 1026.4). Please ensure that all security bars are openable from the inside with a quick release mechanism and that the windows are free of any obstruction.
3. The handrail to the second floor is deteriorating (WHMC 19.30.030 B.3). Please repair or replace the handrails per the West Hollywood Building Code. You must obtain a permit from the Building Department prior to commencement of work.
4. The stucco is spawling at the front of the building (WHMC 19.30.030 B.2). Please repair, patch and paint the deteriorated area to prevent more damage to the structure.
5. There are areas at the front of the structure where the wood trim is deteriorated (WHMC 19.30.030 B.12). Please repair the damaged wood trim and repaint to match the existing.
6. There are areas where the window trim is deteriorating and in need of repainting (WHMC 19.30.030 B.1). Please properly prep and repaint the window trim as needed.

The above mentioned violations are a recap of what was discussed on our on site meeting on May 21, 2009. Please make all of these corrections by June 11, 2009. If the remaining violations are corrected the case will be closed and we thank you in advance for your cooperation.

If you need to discuss possible methods and time limits for the correction of the violation(s), please call me at (323) 848-6837

LONG FORM DEED OF TRUST AND ASSIGNMENT OF RENTS

A.P.N.5530-002-027

This Deed of Trust, made this May 19, 2004, between **Ankine Mouradian, Trustee of the Ankine Mouradian 1999 Family Trust**, herein called Trustor, whose address is **540 N. Jackson Street #104, Glendale, CA 91206**, and THE CITY OF WEST HOLLYWOOD, a municipal corporation, herein called **Beneficiary**,

Witnesseth: That Trustor IRREVOCABLY GRANTS, TRANSFERS AND ASSIGNS TO BENEFICIARY IN TRUST, WITH POWER OF SALE, that property in Los Angeles County, California, described as:

LOT 75 OF THE HOLLYWOOD VALLEY VIEW TRACT AS PER MAP RECORDED IN BOOK 10, PAGE 192 OF MAPS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

TOGETHER WITH the rents, issues and profits thereof, SUBJECT, HOWEVER, to the right, power and authority hereinafter given to and conferred upon Beneficiary to collect and supply such rents, issues and profits.

For the Purpose of Securing:

1. Performance of each agreement of Trustor herein contained. 2. Payment of the indebtedness evidenced by that certain promissory note of even date herewith, and any extension or renewal thereof, in the principal sum of **$32,750.00**, executed by Trustor in favor of Beneficiary or order. 3. Payment of such further sums as the then record owner of said property hereafter may borrow from Beneficiary, when evidenced by another note (or notes) reciting it is so secured. 4. Performance of each obligation of Trustor set forth in that certain Loan Agreement of even date herewith between Trustor and Beneficiary.

04 2028273

To Protect the Security of This Deed of Trust, Trustor Agrees:

(1) To keep said property in good condition and repair; not to remove or demolish any building thereon; to complete or restore promptly and in good workmanlike manner any building which may be constructed, damaged or destroyed thereon and to pay when due all claims for labor performed and materials furnished therefor; to comply with all laws affecting said property, or requiring any alterations or improvements to be made thereon; not to commit or permit waste thereof; not to commit, suffer or permit any act upon said property in violation of law; to cultivate, irrigate, fertilize, fumigate, prune and do all other acts which from the character or use of said property may be reasonably necessary, the specific enumerations herein not excluding the general.

(2) To provide, maintain and deliver to Beneficiary fire and extended coverage insurance with endorsements for vandalism, malischief, and special extended perils, in the full replacement value of the improvements (excluding footings and foundations), and with endorsements for increases in costs due to changes in code and inflation, and any other insurance requested by Beneficiary, and with loss payable to Beneficiary, and any other insurance required by the Loan Agreement. The amount collected under any fire or other insurance policy may be applied by Beneficiary upon any indebtedness secured hereby and in such order as Beneficiary may determine, or at option of Beneficiary the entire amount so collected or any part thereof may be released to Trustor. Such application or release shall not cure or waive any default or notice of default hereunder or invalidate any act done pursuant to such notice.

(3) To appear in and defend any action or proceeding purporting to affect the security hereof or the rights or powers of Beneficiary; and to pay all costs and expenses, including cost of evidence of title and attorney's fees in a reasonable sum, in any such action or proceeding in which Beneficiary may appear, and in any suit brought by Beneficiary to foreclose this Deed of Trust.

(4) To pay: at least ten days before delinquency all taxes and assessments affecting said property, including assessments on appurtenant water stock; when due, all encumbrances, charges and liens, with interest, on said property or any part thereof, which appear to be prior or superior hereto; all costs, fees and expenses of this Trust.

Should Trustor fail to make any payment or to do any act as herein provided, then Beneficiary, but without obligation so to do and without notice to or demand upon Trustor and without releasing Trustor from any obligation hereof, may: make or do the same in such manner and to such extent as either may deem necessary to protect the security hereof, Beneficiary being authorized to enter upon said property for such purposes; appear in and defend any action or proceeding purporting to affect the security hereof or the rights or powers of Beneficiary; pay, purchase, contest or compromise any encumbrance, charge or lien which in the judgment of either appears to be prior or

superior hereto; and, in exercising any such powers, pay necessary expenses, employ counsel and pay his reasonable fees.

(5) To pay immediately and without demand all sums so expended by Beneficiary, with interest from date of expenditure at the amount allowed by law in effect at the date hereof, and to pay for any statement provided for by law in effect at the date hereof regarding the obligation secured hereby any amount demanded by the Beneficiary not to exceed the maximum allowed by law at the time when said statement is demanded.

(6) That any award of damages in connection with any condemnation for public use of or injury to said property or any part thereof is hereby assigned and shall be paid to Beneficiary who may apply or release such moneys received by him in the same manner and with the same effect as above provided for disposition of proceeds of fire or other insurance.

(7) That by accepting payment of any sum secured hereby after its due date, Beneficiary does not waive his right either to require prompt payment when due of all other sums so secured or to declare default for failure so to pay.

(8) That upon payment of all sums secured hereby, this Deed of Trust and said note shall be cancelled and retained by Beneficiary, Beneficiary shall reconvey, without warranty, the property then held hereunder. The recitals in such reconveyance of any matters or facts shall be conclusive proof of the truthfulness thereof. The grantee in such reconveyance may be described as "the person or persons legally entitled thereto." Five years after issuance of such full reconveyance, Beneficiary may destroy said note and this Deed of Trust.

(9) Upon any default, Beneficiary may at any time without notice, either in person, by agent, or by a receiver to be appointed by a court, and without regard to the adequacy of any security for the indebtedness hereby secured, enter upon and take possession of said property or any part thereof, in his own name sue for or otherwise collect such rents, issues and profits, including those past due and unpaid, and apply the same, less costs and expenses of operation and collection, including reasonable attorney's fees, upon any indebtedness secured hereby, and in such order as Beneficiary may determine. The entering upon and taking possession of said property, the collection of such rents, issues and profits and the application thereof as aforesaid, shall not cure or waive any default or notice of default hereunder or invalidate any act done pursuant to such notice.

(10) That upon default by Trustor in payment of any indebtedness secured hereby, or in performance of any agreement hereunder, Beneficiary may declare all sums secured hereby immediately due and payable by delivery to Trustee Trustor of written declaration of default and demand for sale and of written notice of default and election to cause to be sold said property.

After the lapse of such time as may then be required by law following the recordation of said notice of default, and notice of sale having been given as then

required by law, Beneficiary, without demand on Trustor, shall sell said property at the time and place fixed by it in said notice of sale, either as a whole or in separate parcels, and in such order as it may determine, at public auction to the highest bidder for cash in lawful money of the United States, payable at time of sale. Beneficiary may postpone sale of all or any portion of said property by public announcement at such time and place of sale, and from time to time thereafter may postpone such sale by public announcement at the time fixed by the preceding postponement. Beneficiary shall deliver to such purchaser its deed conveying the property so sold, but without any covenant or warranty, express or implied. The recitals in such deed of any matters or facts shall be conclusive proof of the truthfulness thereof. Any person, including Trustor or Beneficiary as hereinafter defined, may purchase at such sale.

6

After deducting all costs, fees and expenses of Beneficiary and of this Trust, including cost of evidence of title in connection with sale, Beneficiary shall apply the proceeds of sale to payment of: all sums expended under the terms hereof, not then repaid, with accrued interest at the amount allowed by law in effect at the date hereof; all other sums then secured hereby; and the remainder, if any, to the person or persons legally entitled thereto.

(11) That this Deed of Trust applies to, inures to the benefit of, and binds all parties hereto, their heirs, legatees, devisees, administrators, executors, successors and assigns. The term Beneficiary shall mean the owner and holder, including pledgees, of the note secured hereby, whether or not named as Beneficiary herein. In this Deed of Trust, whenever the context so requires, the masculine gender includes the feminine and/or neuter, and the singular number includes the plural.

(12) If the Trustor shall sell, convey, hypothecate, transfer, encumber or alienate the real property described herein, or any part thereof, or any interest therein, or shall be divested of title or any interest therein in any manner or way, whether voluntarily or involuntarily, without the written consent of the Beneficiary being first had and obtained, or if Trustor shall fail to make any payments due under the note secured by this Deed of Trust, or fail to perform any other obligation under this Deed of Trust or note secured hereby, or any other deed of trust encumbering the subject property or the promissory note or other agreement secured thereby, then Beneficiary shall have the right, at its option, to declare any indebtedness or obligations secured hereby, irrespective of the maturity date specified in any note evidencing the same, immediately due and payable.

(13) That Trustor shall promptly pay when due the payments of interest, principal, and all other charges accruing under any superior or prior trust deed, mortgage, or other instrument encumbering the Property. Beneficiary shall have the right, but not the obligation, to cure any defaults on any superior or prior deed of trust or promissory note secured thereby and upon curing such default Trustor shall immediately reimburse Beneficiary for all costs and expenses incurred thereby, together with interest thereon at the maximum legal rate permitted to be charged by non-exempt lenders under the State of California, and Trustor's failure to pay such amount on demand shall be a breach hereof. Trustor's breach or default of any covenant or condition of any superior

or prior trust deed, mortgage or other instrument encumbering the Property shall be a default under this Deed of Trust.

(14) This Deed of Trust secures a promissory note evidencing a loan made by Beneficiary to Trustor pursuant to a Participation Agreement dated MAY 19, 2004, for the purpose of assisting Trustor in constructing improvements to the subject property. In accordance therewith, Trustor has made the following covenants and agreements, and Trustor agrees that any breach of any of these covenants shall be a material default under this Deed of Trust:

(15) Trustor agrees that for the period commencing with the date hereof and ending on the date that the promissory note is repaid in full:

a. There shall be no discrimination against nor denial of occupancy to any tenant or prospective tenant at the subject property on the basis of such tenant's or prospective tenant's receipt of or eligibility for housing assistance under any federal, state or local housing assistance program;

b. Rehabilitated units on the Property shall not be converted to condominium ownership. Also, rehabilitated units on the Property shall not be converted to any form of cooperative ownership which would impose rents which are not affordable to lower income families.

The undersigned Trustor requests that a copy of any Notice of Default and of any Notice of Sale hereunder be mailed to him at his address hereinbefore set forth.

OWNER - BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9, commencing with Section 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500)):

_____ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving he or she did not build or improve for the purpose of sale).

_____ I,as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law).

_____ I am exempt under Sec._____, B. & P.C. for this reason:

ELECTRICAL PERMIT APPLICATION

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Sec. 7000) of Div. 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) license pursuant to the Contractors License Law.).

☐ I am exempt under Section _____, B.&P.C. for this reason

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier _____

Policy No. _____

(This section need not be completed if the permit is for one hundred dollars ($100) or less).

☒ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

6-12-98 Date _____ Signature of Applicant

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

6-12-98 Date _____ Signature of Applicant

RE: 1125 N OGDEN DR, WEST HOLLYWOOD, CA 90046

I, the undersigned, being the Custodian or the Keeper of Records, certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or under another classification. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at (323) 890-7806.

Sincerely,

Yvonne Curtis, Deputy Health Officer
Public Health Investigation

ASTM USER QUESTIONNAIRE

AEI Consultants
Environmental & Engineering Services

ASTM E 1527-13 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the **User** (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: 1125 N Ogden Dr. West Hollywood CA, 90046

Person Interviewed/Title: Darren Embry, Dir. of Comm Dev Date: 2/28/17

If known, when was the property initially developed? 1949, to the best of our knowledge

If different, when were the current building(s) on the property constructed? N/A

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (**Note:** If unknown, a review of title records or an environmental lien search is recommended)

Yes___ No✓ If you answer yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes___ No✓ If you answer yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *User* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes___ No✓ If you answer yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

Yes✓ No___ If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the *property*?

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:

a. Do you know the past uses of the *property*?

Yes✓ No___

b. Do you know of specific chemicals that are present or once were present at the *property*?

Yes___ No✓

c. Do you know of spills or other chemical releases that have taken place at the *property*?

Yes___ No✓

d. Do you know of any environmental cleanups that have taken place at the *property*?

Yes___ No✓

If you answered yes to any of the questions above, please include an explanation in the space provided below:

Only use we are aware of is residential, consistent with the current use.

6. The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *User* of this *ESA*, based on your knowledge and experience related to the *property,* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes___ No✓___ If you answer yes, please include an explanation in the space provided below:

Please provide the following property contact information:

Property Owner: Jason Illoulian Phone Number: (424) 332-1111

Key Site Personnel: Darren Embry Phone Number: (323) 481-9178

Past Owner: Vikan S. Mouradian Phone Number: N/A

Water Quality and Drought

Our mission is and always has been to deliver the highest quality water at the lowest possible cost to our customers. For over a century, LADWP has upheld its commitment to maintaining a world-class water system that transports, treats and delivers safe and reliable tap water to the City of Los Angeles.

In 2015, we continued to supply nearly 200 billion gallons of safe drinking water to 4 million residents and businesses. The water we served surpassed all drinking water standards for health and safety set by the U.S. Environmental Protection Agency (US EPA) and the State of California, State Water Resources Control Board – Division of Drinking Water (SWRCB-DDW).

To help ensure high quality water, LADWP water employees actively safeguard our water sources, manage state-of-the-art water treatment processes, maintain and operate water facilities, and rigorously sample and test the water we serve.

Last year we collected more than 32,000 water samples throughout the city and performed more than 147,000 water quality tests for compliance as well as for research and operational improvements. We tested for more than 200 regulated and unregulated contaminants and constituents of interest such as sodium and hardness.

Photographer: Art Mochizuki

As California enters a sixth year of drought, more water from the Colorado River which is considered "hard water" due to its naturally high mineral content, is being distributed in the city. Customers may notice a difference but the quality remains the same. The drought has also made water conservation an essential part of maintaining water quality. LADWP's innovative use of nearly 100 million 4-inch plastic shade balls on the Los Angeles Reservoir -- our largest treated water reservoir -- upholds water quality by preventing sunlight triggered chemical reactions and reducing the amount of disinfectant needed to maintain water quality. As an added benefit, the shade balls serve as a barrier between the water and the sun, preventing the annual loss to evaporation of about 300 million gallons of water, enough to supply 2,760 single family homes per year.

With new treatment methods and conservation ever on the forefront of our minds, LADWP remains committed to providing safe and reliable drinking water for all our customers.

Albert Gastelum
Director of Water Quality

A Word about Water Conservation

L.A.'s Water Future

The ongoing drought has made water conservation a large part of our daily lives here in Los Angeles. Decades of significant investments and changes in customer behavior had already dropped water use to 131 gallons per person each day. In late 2014, the Mayor's Executive Directive No. 5 (ED5): Emergency Drought Response, called on us to reduce the city's water use by 20 percent by 2017.

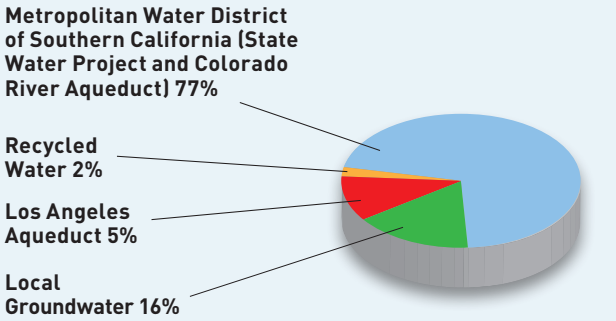
By the end of 2015, LADWP customers reduced their water usage down to 107 gallons per capita per day (GPCD), ahead of the Mayor's goal of 111 GPCD by January 2016.

While the efforts of our residents, businesses and City agencies to save water is hugely important, planning for Los Angeles' water future requires that we continue our plans to develop a more extensive and diverse set of water resources. Projects to increase local stormwater capture, expand our use of recycled water, and recover the full use of contaminated groundwater basins, have been accelerated. These are important components of a water future that is more resilient to climate variations and less dependent on supplies that must be imported from hundreds of miles away. LADWP's new 2015 Urban Water Management Plan lays out the water resource plan that will lead to a more sustainable Los Angeles. That plan is integrated into the City's "One Water" effort that seeks to comprehensively address all water issues as a coordinated, multi-beneficial effort, from drinking water resources to the challenge of polluted urban run-off. The City's water future is indeed very exciting!

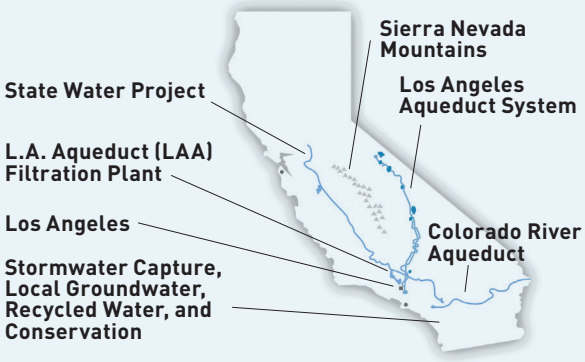
Dramatically expanding our current use of these resources, in particular, recovering all of our valuable local groundwater, will require new treatment technologies and a multiple-barrier approach to safeguard public health at all times. But there should never be any doubt that all water served to LADWP customers is treated and tested rigorously to meet all U.S. and California drinking water standards, and is safe for you and your family.

That is our obligation and our commitment to you. We are your LADWP.

LA's Water Supply in 2015



LA's Water Sources



Martin L. Adams

Senior Assistant
General Manager-Water

Water Quality in the News

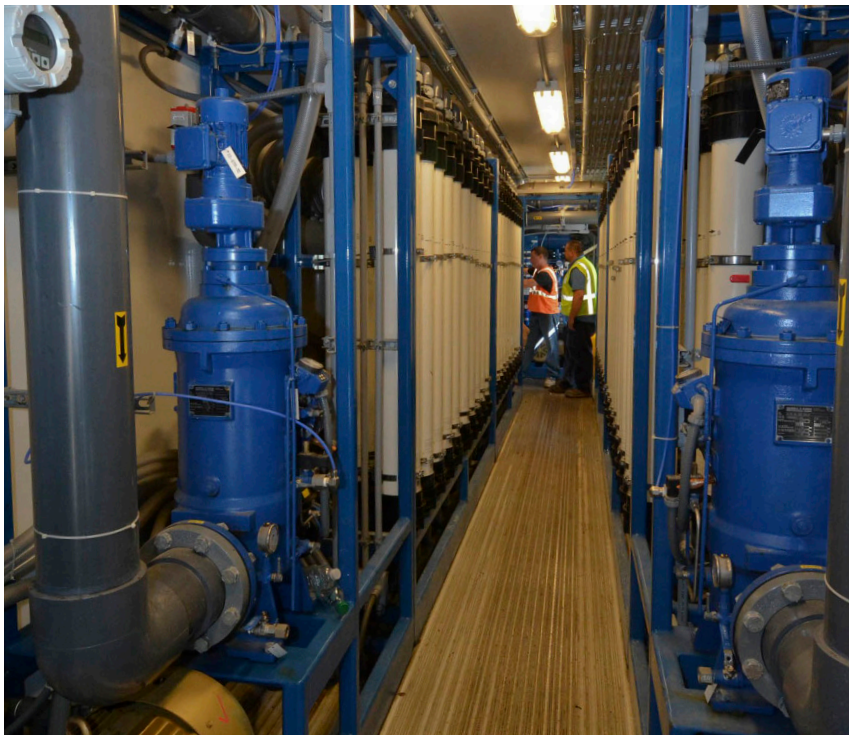
Conserving Water in Silver Lake Reservoir

Our successes in water quality and conservation include our effort in the summer of 2015 to treat and conserve as much Silver Lake Reservoir water as possible before draining it in preparation for construction of the Silver Lake Bypass Line. The reservoir was disconnected in 2013 from the city's water system as part of a federal mandate to phase out open drinking water reservoirs. The bypass line is part of the solution. To conserve as much of the 400 million gallons of water remaining, we built a temporary ultra-filtration treatment system to filter and disinfect the water. As a result, nearly 200 million gallons were conserved and treated to drinking water standards and served to our customers.

Algal Toxins

In August 2015, US EPA released a 10-day health advisory level for two toxins which may be found in drinking water. The toxins, microcystin and cylindrospermopsin, are produced by cyanobacteria. Microcystin is produced by Microcystis and other cyanobacteria. Cylindrospermopsin is produced by Cylindrospermum. These freshwater bacteria can be found in rivers, lakes and bays, especially in summer months. Cyanobacteria mimic algae by growing in vast clusters or "blooms." High levels of nutrients like nitrate and phosphorus, in addition to plenty of sunlight, support the growth of these bacteria.

Although advisories are not regulations, they guide water agencies to help protect public health. Cylindrospermum has never been detected in LA source waters. Microcystis and other cyanobacteria are occasionally detected. LADWP has a comprehensive surface water monitoring plan. Additionally, water treatment processes utilized at the Los Angeles Aqueduct Filtration Plant including filtration, ozone, and chlorination are effective in eliminating cyanobacteria toxins. Used together, these treatment processes provide multiple layers of protection for the drinking water delivered to our customers.



Lead and Copper in LA's Water

The high levels of lead in Flint, Michigan's drinking water received national media attention when they were found to be significantly above the federal Action Level of 15 parts per billion (ppb). In Los Angeles lead is not a problematic issue in tap water. LADWP tests the city's water for lead in accordance with every state and federal drinking water requirement, including US EPA's Lead and Copper Rule (LCR). Lead and copper testing, as specified by the rule, has been done since 1992 and is part of our obligation to ensure that the city's drinking water is safe to drink.

Water sources do not typically contain high levels of naturally-occurring lead. When lead is found in treated water, it is normally due to water chemistry which can cause a reaction or leaching of metals from water pipes and customers' plumbing. The cause of the high lead levels in Flint was related to switching water sources from Lake Huron to the Flint River, which has a different water chemistry. The switch likely caused a reaction in the systems that convey the water to customers' taps and, most likely with customers' home plumbing.

In Los Angeles, the most recent LCR sampling conducted in 2015 indicate continued compliance with the Action Levels. We credit this to LADWP's diligent efforts, from monitoring to minimizing water corrosion, to meeting all requirements for the safety of drinking water, and ensuring protection from lead contamination. Customers interested in testing their tap water for lead and other contaminants can consider services by private laboratories. If their home meets the US EPA site criteria, we invite customers to volunteer to be part of LADWP's LCR Residential Sampling Team. LCR in-home testing is free. To sign-up, please contact Tom Dailor at (213) 367-0921.

Important Notice

Chloramine Disinfectant

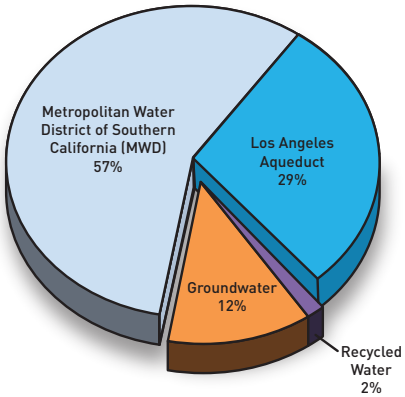
Chloramine requires different treatment for certain water uses. If you maintain a pond or aquarium, you must provide adequate treatment to remove both the chlorine and ammonia as both are toxic to fish. For more information, please visit www.ladwp.com/waterquality or call 1-800-DIAL-DWP.

2015 Urban Water Management Plan

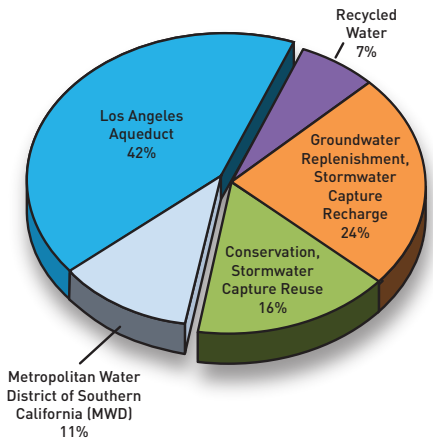
LADWP has updated the Urban Water Management Plan (UMWP) for the City of Los Angeles. The 2015 UWMP contains the City's long-term strategy for managing water resources and ensuring water supply reliability through the year 2040. The UWMP provides the framework for future reliability, as well as meets the State requirement of updating the UWMP every five years in compliance with the California Urban Water Management Planning Act. The 2015 UWMP is consistent with the City's goals and policy objectives for a reliable water supply, including the Mayor's Executive Directive No. 5 and the Sustainable City Plan.

The 2015 UWMP includes aggressive measures to increase water use efficiency, develop additional local supplies, increase supply diversity, and reduce dependence on purchased imported supplies. The pie charts below represent the city's current water supply portfolio, and projected supply mix under dry and average weather conditions by 2040. As illustrated on the charts, the City's locally-developed supplies are projected to increase from 14 percent to 49 percent in dry years or to 47 percent in average years. These local supplies are not influenced by hydrologic variability and will become the cornerstone of LA's future water supplies. To learn more about the UWMP, visit www.ladwp.com/uwmp.

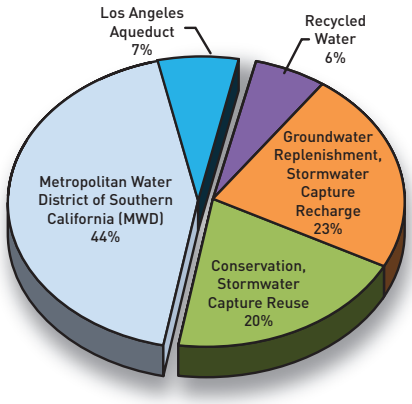
Fiscal Year 2011 - 2015 Average Year
Total Production: 513,540 AFY



Fiscal Year 2039 - 2040 Average Year
Total Production: 675,700 AFY



Fiscal Year 2039 - 40 Single/Multiple Dry Year
Total Production: 709,500 AFY



Regulatory Compliance
How do we measure up?

Meeting the highest federal and state standards for the city's drinking water guides our water operations. We are investing in major infrastructure projects to meet drinking water regulations, such as the Long Term 2 Enhanced Surface Water Treatment Rule (LT2). Our major efforts to comply with the regulation include addressing the four remaining uncovered treated water reservoirs, constructing an ultraviolet (UV) treatment facility to meet the LT2 requirements for Los Angeles Reservoir, and continuing to find new ways to reduce disinfection byproducts without compromising public safety.

Assessment Programs for Surface and Groundwater Sources

Surface Supply: In 2015, we completed a new assessment of the Owens Valley and Mono Basin watersheds that supply the Los Angeles Aqueduct. These sources are most vulnerable to geothermal activities that release naturally occurring arsenic into creeks that feed the Owens River. Other activities that impact water quality in these watersheds are livestock grazing, wildlife, and unauthorized public use of storage reservoirs. The impact to water quality from these activities is deemed to be minimal. Regular monitoring for Cryptosporidium and Giardia indicates that their presence is infrequent and at very low levels.

Groundwater Supply: Assessment of groundwater sources in the San Fernando and Sylmar Basins was updated in 2013. Assessment of groundwater sources in the Central Basin was completed in March 2003. Located in highly urbanized areas, the wells within these aquifers are most vulnerable to the following activities: dry cleaning, manufacturing, chemical processing and storage, fertilizer and pesticide storage, metal finishing, and septic systems. These local water supplies are managed with treatment and blending of water from other sources to ensure compliance with drinking water standards. A copy of the surface water and groundwater assessments can be obtained by contacting Tom Dailor of LADWP Water Quality Regulatory Affairs at (213) 367-0921.

Purchased Supplies: Metropolitan Water District of Southern California's (MWD) most recent update of the sanitary survey of the Colorado River watershed was conducted in 2010. The Colorado River Aqueduct supply is considered to be most vulnerable to recreation, urban and stormwater runoff, increasing urbanization in the watershed and wastewater. The California Department of Water Resources (DWR) updated the State Water Project sanitary survey in 2011. The State Water Project supply is considered to be most vulnerable to urban and storm water runoff, wildlife, agriculture, recreation, and wastewater. Both sources of supply are treated at MWD filtration plants. A copy of the assessments can be obtained by contacting MWD at (213) 217-6850.

Lead and Copper in LA's Water

US EPA regulates the amount of lead and copper acceptable in drinking water. Issued by US EPA in 1991, the Lead and Copper Rule (LCR) requires public water systems to test their water at specified locations: in their source waters, in the distribution system, and at customer taps. In the City of Los Angeles, LADWP follows and meets the LCR requirements that ensure protection from lead and copper contamination, either in our source waters or in the water after it travels through our distribution system of pipes. We must also determine if customers' home plumbing and fixtures contribute significant amounts of lead and copper to tap water.

Residential sampling was conducted most recently in the summer of 2015. The LCR Residence Sampling Team is composed of LADWP customers who agree to participate in this important program. The current lead standard at the customer tap is 15 parts per billion (ppb), and the current copper standard is 1,300 ppb.

Consistent with past years, both lead and copper were well below the Action Levels for more than 90 percent of the homes tested as required by the LCR. The 90th percentile for lead was 6.3 ppb and 579 ppb for copper.

LADWP informed all participating customers of their results for both lead and copper, and offered additional information on how customers could further reduce the levels of lead and copper in their tap water.

While the regulation applies to water utilities, the federal "2014 Reduction of Lead in Drinking Water Act" set standards for pipe and plumbing fittings and fixtures, solder, and flux for maximum allowable lead levels. To learn more visit www.epa.gov/dwreginfo/ lead-and-copper-rule.

Even though we are in compliance with the LCR, LADWP is implementing a state-approved corrosion control program. The first phase was a demonstration facility that provides treatment to minimize the corrosive nature of water. Operating since 2010, the facility, which uses zinc orthophosphate, has further lowered the measureable amounts of lead at customer taps in the western Los Angeles area. Since then, a second corrosion control facility was constructed and operated in 2015 in Hollywood. The program will be expanded over the next five years to provide similar protection to the San Fernando Valley and central Los Angeles customers. LADWP has operated a small corrosion control station that serves the Watts area since the late 1990s. The eastern and harbor areas receive treated water directly from MWD which also has an active corrosion control program.

Report on Public Health Goals

Once every three years, State regulations require LADWP to prepare a Public Health Goals Report that focuses on regulated contaminants found in drinking water at levels above a California Public Health Goal (PHG). A PHG is a level identified as having no adverse health effects. PHGs are not standards, but are used in the regulatory process to create a primary drinking water standard for new contaminants that are not yet regulated. While PHGs are based solely on health outcomes, primary drinking water standards must also consider testing and treatment technology, and balance the health benefits with the cost of compliance.

The PHG report includes the effects of exposure to a contaminant, the relative risk associated with it, the best available treatment technology to remove or reduce the contaminant to the PHG level, and the cost associated with such treatments. For Los Angeles, the contaminant in drinking water that would be the best candidate for further risk reduction beyond regulatory requirements is arsenic.

LADWP's 2016 Public Health Goals report will be available by July 1, 2016 at www.ladwp.com/waterquality and will be presented to the Los Angeles Board of Water and Power Commissioners at a regularly scheduled meeting in August 2016.

Second Annual Tap Water Day

The City celebrated the Second Annual Tap Water Day on Thursday, May 5, 2016 by unveiling a high-low drinking fountain and water filling station right outside City Hall East. The annual event promotes appreciation of Los Angeles' clean, reliable drinking water and encourages the use of many new drinking/filling stations in the city where pedestrians and cyclists can conveniently fill up their reusable water bottles. Each day, LADWP delivers 550 million gallons of water to 4 million customers, with nearly 200 billion gallons supplied to customers in 2015. LADWP's tap water costs approximately half a penny per gallon.

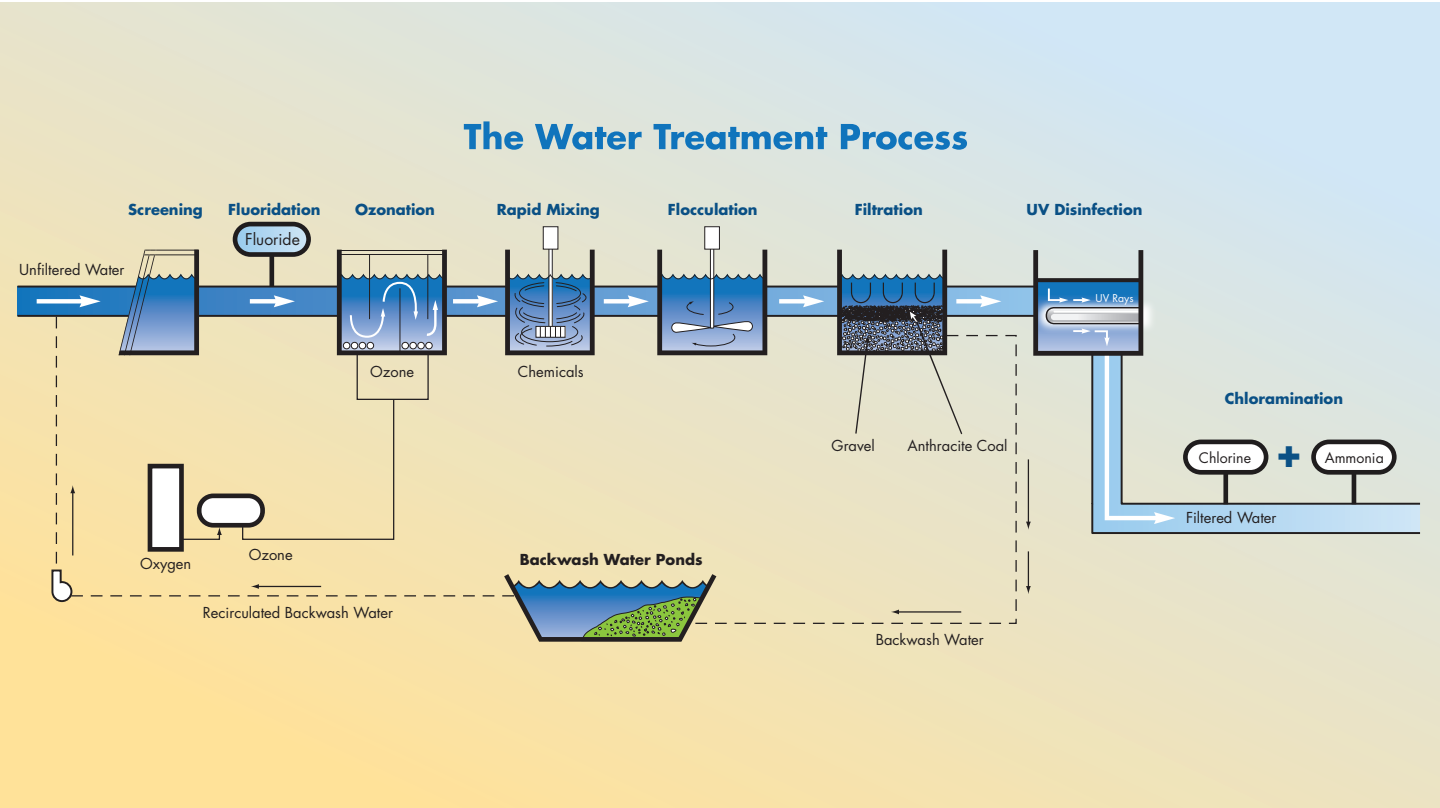
Water Treatment Process

Surface Water Treatment

LADWP water comes from four different sources—three are from surface water sources like lakes and rivers and the other is groundwater from local wells and springs. The taste and appearance of surface water can vary seasonally and groundwater generally contains more minerals. All these factors make for different tasting water. Despite these variations, LADWP water meets all drinking water standards for health and aesthetics. All water coming from the Los Angeles Aqueduct and the California Aqueduct (known as the State Water Project), and the Colorado River Aqueduct is filtered and treated to ensure safe drinking water for Los Angeles.

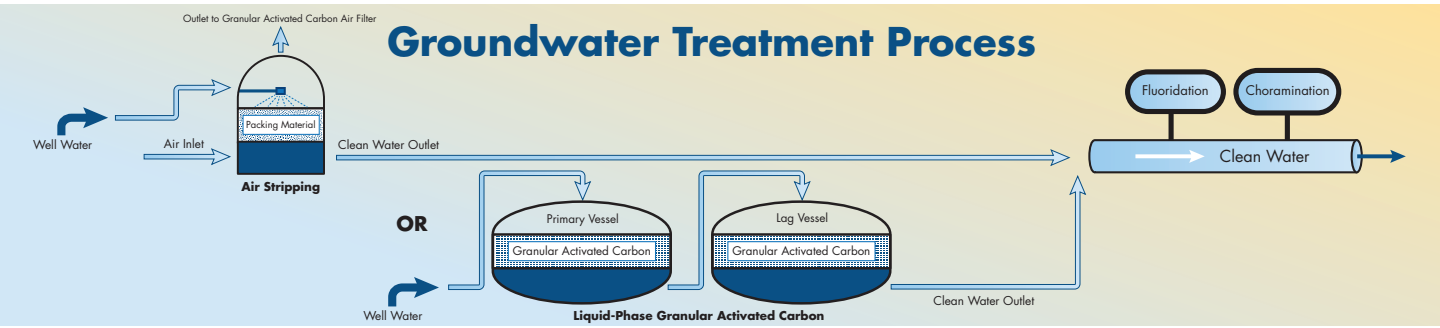
Water from the Los Angeles Aqueduct and California Aqueduct is treated at the Los Angeles Aqueduct Filtration Plant as follows:

Water flows into the filtration plant by gravity and travels through screens to remove environmental debris such as twigs and dead leaves. Fluoride is adjusted to the optimal level to promote oral health by strengthening tooth enamel. Ozone, a super-charged oxygen molecule and a powerful disinfecting agent is injected into the water to help particles clump together and to improve the water's taste and appearance. Treatment chemicals are quickly dispersed into the water to make fine particles called "floc." A six-foot-deep filter composed of crushed coal over gravel removes the floc and previously added chemicals. In May 2014, we commissioned a new advanced process at the filtration plant, the Dr. Pankaj Parekh Ultraviolet (UV) Disinfection Facility, which replaces ozone as the primary disinfectant for surface water. The water goes through UV purification which has been identified as one of the most effective methods of drinking water treatment by the US EPA. Then chlorine and ammonia are added during the final step to ensure lasting disinfection and to protect the water as it travels through the city's vast distribution system to your tap.



Groundwater Treatment

The city has vast groundwater supplies in the San Fernando and Central Basins. We pump from the clean parts of the basins and disinfect groundwater with chlorine and ammonia as a safeguard against microbial pathogens. As a standard practice, the City of Los Angeles has been disinfecting all groundwater sources since the 1920s. Some areas in the San Fernando Basin have been contaminated as a result of industrial activities. Since discovering man-made contaminants in the San Fernando Basin groundwater wells, we continuously monitor and ensure that the groundwater meets drinking water quality standards by minimizing the substances by treatment or blending. The treatment process currently in place for groundwater treatment is shown below. To recover the use of all water in the San Fernando Basin and to expand our local water supplies for emergency and drought, we are designing a comprehensive treatment facility to remove groundwater contaminants. To date, we have completed the initial characterization and source assessment of the San Fernando Basin and have started the initial design phase. Future facilities may use state-of-the-art processes like advanced oxidative process, ultraviolet, and biological treatment. Our goal is for this treatment system to be fully operating by 2022.



Water Quality at Home

Q: Should I be concerned about lead in water provided by LADWP?

A: No. The water we deliver to you has very little to no lead. We test the water regularly and find no detectable amounts of lead in any of our water sources or only trace amounts in the distribution system. To see the results of our most recent lead and copper analyses, please go to Table I.

However, there are two potential sources of lead in tap water. The most common source of lead is your faucet. Some manufacturers use metal alloys that contain a significant amount of lead. When water remains in the faucet, without being used for several hours, lead from the faucet can dissolve into the water. Then, when you turn the faucet on, the water that comes out for the first 20 or 30 seconds may contain lead. Similarly, copper pipes joined with lead-based solder in your plumbing system, is another potential source of lead. This source should not be significant if your home was built after 1990, because lead-based solders were banned in the United States in 1986.

If you would like to test the water in your home or business, services are available from private laboratories for a fee. A lead test usually costs around $50. You can obtain references for qualified laboratories by contacting the California State Water Resources Control Board, Laboratory Accreditation Program at (916) 323-3431.

If you determine there is lead in your tap water, a list of National Sanitation Foundation (NSF) certified lead-free water faucets and plumbing materials is available by contacting the NSF Consumer Affairs or 1 (800) 673-6275. Also, check that any faucet you are planning to purchase is NSF approved. If you choose a water filter, you should follow the installation and maintenance instructions very carefully. An improperly installed or poorly maintained filter can adversely affect the quality of your water.

TIPS! Here are a few simple steps you can follow to minimize your exposure to lead from your faucet

- If a faucet has not been used for more than six hours, let the cold water run for approximately one minute before using the water for cooking or drinking. We recommend you save this water for irrigating non-edible plants.
- Do not use hot tap water for cooking or drinking. Lead dissolves more from pipes that carry hot water.
- Periodically (approximately every three months), remove the faucet aerator, let the water run for 30 seconds to flush out debris, clean the aerator and reinstall.
- If you replace a faucet, select a new model or type that complies with the provisions of National Sanitation Foundation (NSF) Standard 61. Compliance is usually identified on the package. A listing of faucets complying with this standard can be obtained from the NSF at www.nsf.org or by calling NSF at (800) 673-6275.

2015 Drinking Water Quality Monitoring Results

Tables I-III list the results of water tests performed by LADWP and MWD from January to December 2015. LADWP tests for over 200 contaminants. These tables include only contaminants with values that are detected.

How to Read the Tables

The substances found in the water served in your area are listed as follows:

- For **San Fernando Valley Area** – water test results are under the Los Angeles Aqueduct Filtration Plant, the Northern Combined Wells, and MWD Jensen Filtration Plant columns
- For **Western Los Angeles Area** – water test results are under the Los Angeles Aqueduct Filtration Plant column
- For **Central Los Angeles Area** – water test results are under the Los Angeles Aqueduct Filtration Plant and the Southern Combined Wells columns
- For **Harbor/Eastern Los Angeles Area** – water test results are under the MWD Jensen, Weymouth, and Diemer Filtration Plants columns

Some substances are reported on a citywide basis as required by the State Water Resources Control Board - Division of Drinking Water [SWRCB-DDW].

Abbreviations

ACU = apparent color unit
CFU/mL = colony-forming unit per milliliter
CFU/100mL = colony-forming unit per 100 milliliter
< = less than the detection limit for reporting purposes
µg/L = micrograms per liter (equivalent to ppb)
µS/cm = microSiemens per centimeter
mg/L = milligrams per liter (equivalent to ppm)
ng/L = nanograms per liter (equivalent to ppt)
NTU = nephelometric turbidity units
NA = not applicable
NR = not reported
NT = not tested
NUM/100 mL = number per 100 milliliter
% = percentage
pCi/L = picoCuries per liter
TON = threshold odor number

Unregulated Contaminant Monitoring Rule

The Unregulated Contaminant Monitoring Rule (UCMR) is a special program developed by the U.S. Environmental Protection Agency (US EPA) that requires public water systems to survey up to 30 selected contaminants of emerging concern (CECs) once every five years. LADWP conducted the Third UCMR (UCMR3) monitoring in 2013 and 2014. Values in this report reflect the sum of all tests. We are required to report the data for five years. Results indicate that most of the contaminants were not detected at the very low detection levels (MRL) required by US EPA for UCMR3 analyses. Of the contaminants that were detected (see Table IV below), chlorate and strontium were in significant, but expected concentrations.

LADWP routinely tests for and detects chlorate in the distribution system. Chlorate is a disinfection byproduct of chlorination. It is unregulated, although the State Water Resources Control Board, Division of Drinking Water (SWRCB-DDW) has set a notification level of 800 mg/L. UCMR3 test results for chlorate were much lower, ranging from not detected to 296 mg/L.

The element strontium is highly abundant on Earth as a cation (Sr+2) and its chemistry is quite similar to the calcium cation (Ca+2). In fact, strontium (as ranelic acid) is used to treat osteoporosis. Strontium in drinking water has no adverse health effects below 4,000 µg/L, the health-based Advisory Level recommended by US EPA. Strontium levels in the LADWP's treated water sources were much lower, ranging from 225-934 µg/L.

Terms Used in the Tables

Compliance: A drinking water standard based on the health risk (primary standards) and aesthetic (secondary standards) exposure of a contaminant to consumers. For example, bacteria and nitrate have strict limits that must be met at all times due to the acute effects they can cause. Other standards, like small amounts of disinfection by-products and man-made chemicals, have standards that are based on a lifetime of exposure because the risk to consumers is very low. Compliance with most standards is based on an average of samples collected within a year. This allows for some fluctuation above and below the numerical standard, while still protecting public health.

Federal Minimum Reporting Level (MRL): Lowest level of a contaminant which can be detected in drinking water using analytical methods established by the US EPA. Data reported in Table IV reflect MRLs.

Maximum Contaminant Level Goal (MCLG): Level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the US EPA.

Maximum Residual Disinfectant Level (MRDL): Highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): Level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the beneficial use of disinfectants to control microbial contaminants. MRDLGs are set by US EPA.

Notification Level (NL): Health-based advisory level established by SWRCB-DDW for chemicals in drinking water that lack MCLs.

Table I

Calendar Year 2015 Water Quality Monitoring Results

Health-based Primary Drinking Water Standards (MCLs) Substances Detected in Treated Water

Substances	Major Sources in Our Drinking Water	Units	Meet Primary Standard (YES / NO)	State Primary Standard MCL or (MRDL)	State PHG or Federal (MCLG)
Aluminum	Erosion of natural deposits; residue from surface water treatment processes	µg/L	YES	1000	600
Arsenic	Erosion of natural deposits	µg/L	YES	10	0.004
Barium	Erosion of natural deposits	µg/L	YES	1000	2000
Bromate (b)	By-product of ozone disinfection; formed under sunlight	µg/L	YES	10	0.1
Chromium, Hexavalent	Industrial discharge; erosion of natural deposits	µg/L	YES	10	0.02
Fluoride	Erosion of natural deposits; water additive that promotes strong teeth	mg/L	YES	2	1
Gross Alpha Particle Activity (c)	Naturally present in the environment	pCi/L	YES	15	0
Gross Beta Particle Activity (c)	Naturally present in the environment	pCi/L	YES	50	0
Nitrate (as N) (d)	Erosion of natural deposits; runoff and leaching from fertilizer use	mg/L	YES	10	10
Nitrate + Nitrite (as N)	Erosion of natural deposits; runoff and leaching from fertilizer use	mg/L	YES	10	10
Tetrachloroethylene (PCE)	Discharge from factories, dry cleaners, metal degreasing sites such as auto shops	µg/L	YES	5	0.06
Trichloroethylene (TCE)	Discharge from metal degreasing sites and other factories	µg/L	YES	5	1.7
Turbidity (e)	Soil runoff	NTU	YES	TT, >95%	none
Uranium (c)	Erosion of natural deposits	pCi/L	YES	20	0.43

(a) Values reflect Highest Running Annual Average (HRAA). HRAA is the highest of all Running Annual Averages (RAAs). RAA is a calculated average of all samples collected within a twelve month period, which may include test data from the previous calendar year. HRAA may be higher than the range, which is based on the test data in the reported calendar year.

(b) Bromate is tested in water treated with ozone. Bromate has also been found in water treated with chlorine in some LADWP reservoirs that have elevated bromide levels and are exposed to sunlight. The Metropolitan Water District of Southern California (MWD) only tests for bromate at the Jensen Filtration Plant, which utilizes ozonation.

(c) Radiological monitoring is performed in cycles of varying frequencies. Monitoring for Gross Alpha Particle Activity was conducted in 2009 and 2011. Monitoring for Gross Beta Particle Activity and Uranium was conducted in 2015 at Los Angeles Aqueduct Filtration Plant, Northern Combined Wells blend points, and Southern Combined Wells blend points. MWD conducted all radiological analyses in 2014 for samples collected at the Weymouth, Diemer, and Jensen Treatment Plants.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Public Health Goal (PHG): Level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA).

Regulatory Action Level (AL): Concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow. ALs are set by US EPA.

Secondary Maximum Contaminate Level (SMCL): Highest level a constituent allowed in drinking water that may affect the taste, odor or appearance. SMCLs are set by US EPA.

State Detection Limit (DLR): A detected contaminant at or above its detection level for reporting purposes. DLRs are set by the SWRCB-DDW. Data reported in Tables I through III reflect DLRs.

State Maximum Contaminant Level (MCL): Highest level of a contaminant allowed in drinking water. Primary MCLs are set as close to the Public Health Goals (PHGs) or Maximum Contaminant Level Goals (MCLGs) as is economically and technologically feasible. For certain contaminants, compliance with MCL is based on the average of all samples collected throughout the year.

Treatment Technique (TT): Required process intended to reduce the level of a contaminant in drinking water. For example, the filtration process is a treatment technique used to reduce turbidity (cloudiness in water) and microbial contaminants from surface water. High turbidities may be indicative of poor or inadequate filtration.

Los Angeles Aqueduct Filtration Plant		Northern Combined Wells		Southern Combined Wells		MWD Weymouth Plant		MWD Diemer Plant		MWD Jensen Plant

4	3 – 4	4	3 – 4	4	<1 – 5	3	2 – 3	3	2 – 3	2	2 – 3

(d) In 2015, SWRCB-DDW revised the reporting method for nitrate. Previously, nitrate data was expressed as "Nitrate (as NO3)", which has an MCL of 45 mg/L. Nitrate data is now expressed as nitrogen or "Nitrate (as N)", which has an equivalent MCL of 10 mg/L. The MCL for nitrate has not changed.

(e) Turbidity is a measure of the cloudiness of water and is a good indicator of water quality and filtration performance. High turbidity can hinder the effectiveness of disinfectants. The Primary Drinking Water Standard for turbidity (included in this table) at drinking water filtration plants is less than or equal to 0.3 NTU in at least 95% of the measurements taken in any month and shall not exceed 1.0 NTU at any time. The reporting requirement for treatment plant turbidity is to report the highest single measurement in the calendar year (listed under "range") as well as the lowest monthly percentage of measurements that are less than or equal to 0.3 NTU. The percentage is listed under "average".

Table 1 - (cont'd) Health-based Primary Drinking Water Standards (MCLs) Substances Detected in Treated Water and Reported on City-wide Basis

Substances	Major Sources in Our Drinking Water	Units	Meets Primary Standard (YES/NO)
Bromate (uncovered reservoirs)	By-product of ozone disinfection; formed under sunlight	µg/L	YES
Chlorine Residual, Total	Drinking water disinfectant added for treatment	mg/L	YES
Copper (at-the-tap) AL = 1300 (f)	Internal corrosion of household water plumbing systems	µg/L	YES
Escherichia coli Bacteria (E. coli) (g)	Human and animal waste	NUM/100 ml	YES
Fluoride	Erosion of natural deposits; water additive that promotes strong teeth	mg/L	YES
Haloacetic Acids (Five) (HAA5)	By-product of drinking water disinfection	µg/L	YES
Lead (at-the-tap) AL = 15 (f)	Internal corrosion of household water plumbing systems	µg/L	YES
Total Coliform Bacteria	Naturally present in the environment	% Positives	YES
Total Trihalomethanes (TTHM)	By-product of drinking water chlorination	µg/L	YES

(a) Values reflect Highest Running Annual Average (HRAA). HRAA is the highest of all Running Annual Averages (RAAs). RAA is a calculated average of all samples collected within a twelve month period, which may include test data from the previous calendar year. HRAA may be higher than the range, which is based on the test data in the reported calendar year.

(f) At-the-tap monitoring of lead and copper is conducted every three years as required by the Federal Lead and Copper Rule. A system is out of compliance if the Regulatory Action Level is exceeded in the 90th percentile of all samples at the customers' tap.The most recent monitoring was conducted in 2015. Although the City's treated water has little or no detectable lead, studies were conducted and corrosion control implementation started. A small corrosion control plant has been in operation in the Watts area since the 1990's. Corrosion control was introduced to the Western Los Angeles area in 2010 and to the Hollywood area in 2015. Corrosion control will be expanded to the rest of the City by 2020.

Table II

Calendar Year 2015 Water Quality Monitoring Results

Aesthetic-based Secondary Drinking Water Standards (SMCLs) Substances Detected in Treated Water

Substances	Major Sources in Drinking Water	Units	Meets Secondary Standard (YES/NO)	State Secondary MCL	Los Angeles Aqueduct Filtration Plant	
					Average	Range
Aluminum	Erosion of natural deposits; residue from some surface water treatment processes	µg/L	YES	200	<50	<50
Chloride	Runoff/leaching from natural deposits; seawater influence	mg/L	YES	500	80	73 – 88
Color, Apparent (unfiltered)	Naturally-occurring organic materials	ACU	YES	15	3	3 – 4
Manganese NL = 500	Leaching from natural deposits	µg/L	YES	50	<20	<20
Odor	Naturally-occurring organic materials	TON	YES	3	<1	<1
Specific Conductance	Substances that form ions when in water; seawater influence	µS/cm	YES	1600	546	492 – 593
Sulfate (as SO4)	Runoff/leaching from natural deposits	mg/L	YES	500	78	67 – 86
Total Dissolved Solids (TDS)	Runoff/leaching from natural deposits	mg/L	YES	1000	350	329 – 369
Turbidity (d)	Soil runoff	NTU	YES	5	<0.1	<0.1 – 0.2
Zinc	Run off/leaching from natural deposit	µg/L	YES	5000	<50	<50

(a) Values reflect Highest Running Annual Average (HRAA). HRAA is the highest of all Running Annual Averages (RAAs). RAA is a calculated average of all samples collected within a twelve month period, which may include test data from the previous calendar year. HRAA may be higher than the range, which is based on the test data in the reported calendar year.

Table I

State Primary Standard MCL or (MRDL)	State PHG / [MRDLG] or Federal (MCLG)	Average	Range
10	0.1	HRAA = 7 (a)	Range = 2 – 8
(4)	[4]	HRAA = 2 (a)	Range = 1.7 – 2.2
TT	300	90th Percentile value = 579	Number of samples exceeding AL = 1 out of 103
TT	0	<1	<1 – 2
2	1	Average = 0.7	Range = 0.7 – 0.8
60	none	HLRAA = 16 (h)	Range = 3 – 18
TT	0.2	90th Percentile value = 6.3	Number of samples exceeding AL = 3 out of 103
5% of monthly samples are coliform positive	0	Highest monthly % positive samples = 0.7 %	Range = % positive samples 0 – 0.7
80	none	HLRAA = 42 (h)	Range = 15 – 47

(g) For E. coli, the MCL is exceeded when a routine sample and a repeat sample are Total coliform positive, and one of these is also positive for E. coli or Fecal coliform. On April 27, and October 17, 2015, samples collected in the Griffith Park and Beverly Crest areas, respectively, tested positive for Total coliform and E. coli. Follow-up sample sets were collected at both sampling locations the following day, as required. Both sample sets were negative for Total coliform and E. coli. No Total Coliform Rule (TCR) violation occurred. A total of 8,124 samples were collected and analyzed for E. coli and Total coliforms in 2015.

(h) The Federal Stage 2 Disinfectant/Disinfection Byproducts Rule (DBPR) requires compliance monitoring and reporting for haloacetic acids (HAAs) and total trihalomethanes (TTHMs) based on a locational running annual average (LRAA) of established monitoring locations. The value for the location with the Highest Locational Running Annual Average (HLRAA) for HAAs and TTHMs in 2015 is reported.

Table II

Vanadium NL = 50	Erosion of natural deposits	µg/L	<3	<3	<3	<3 – 4

(a) Values reflect Highest Running Annual Average (HRAA). HRAA is the highest of all Running Annual Averages (RAAs). RAA is a calculated average of all samples collected within a twelve month period, which may include test data from the previous calendar year. HRAA may be higher than the range, which is based on the test data in the reported calendar year.

General Information

This annual Drinking Water Quality Report (also known as a Consumer Confidence Report) is required by the California State Water Resources Control Board, Division of Drinking Water (SWRCB-DDW) and is prepared in accordance with their guidelines. The report is available both online at www.ladwp.com/waterqualityreport or you can call 1-800-DIAL-DWP to request a copy be mailed to you. LADWP, the largest municipal utility in the nation, was established more than 100 years ago to provide a reliable and safe water and electric supply to the city's 4 million residents and businesses.

LADWP is governed by a five-member Board of Water and Power Commissioners, appointed by the Mayor and confirmed by the City Council. The Board meets regularly on the first and third Tuesdays of each month at 11:00 a.m.

Meetings are held at:

Los Angeles Department of Water and Power
111 North Hope Street, Room 1555H
Los Angeles, CA 90012-2694

The meeting agenda is available to the public on the Thursday prior to the week of the meeting. You can access the Board agenda at www.ladwp.com/board or by calling (213) 367-1351.

For general information about LADWP, call 1-800-DIAL DWP (1-800-342-5397) or visit www.ladwp.com.

For questions regarding this report, please contact Mr. Nathan Aguayo at (213) 367-4941, Nathan.Aguayo@ladwp.com or call the water quality hotline at (213) 367-3182.

Want to know more about your drinking water and related regulations?

Soil and Groundwater Assessment and Site Closure Report
801 N. Fairfax Avenue
Los Angeles, California

Dear Dr. Rong:

This report presents the results of a soil and groundwater assessment conducted by Rincon Consultants, Inc. on behalf of Fairfax Associates, LLC at the site located at 801 N. Fairfax Avenue in Los Angeles, California. The subject property was formerly used as an automotive repair and body shop (Digo's Auto Center) and was previously developed as a gasoline service station dating back to at least 1928. During the current assessment the site was a vacant, undeveloped lot.

The current groundwater assessment did not identify gasoline constituents in groundwater. We request that the RWQCB issue environmental closure for this site.

Sincerely,
RINCON CONSULTANTS, INC.

Sarah A. Larese, REA
Associate Environmental Scientist

Walter Hamann, PG, CEG, REA II

EXECUTIVE SUMMARY

On November 1 and 2, 2006, three 2-inch diameter groundwater monitoring wells (MW1, MW2, and MW3) were installed at the site. The purpose of the well installations was to determine the current condition of soil and groundwater beneath the site, as requested by the Los Angeles Regional Water Quality Control Board (RWQCB).

The groundwater monitoring wells were installed to depths of approximately 58 feet below grade. They consisted of blank polyvinyl chloride (PVC) casing installed to approximately 38 feet below grade and 20 feet of slotted PVC casing from 38 feet below grade to total depth. Soil samples were collected at five-foot intervals and were preserved onsite using EPA Method 5035. Soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPH–g), benzene, toluene, ethylbenzene, and total xylenes (BTEX) and the following fuel oxygenates: DIPE, ETBE, MTBE, TAME, and TBA. All fieldwork was performed under the responsible supervision of a California Professional Geologist.

Soil samples collected from MW1 at 25, 30, 35 and 45 feet below grade had very low concentrations of benzene ranging from 2.0 to 5.0 micrograms per kilogram (µg/kg). In addition, the soil sample collected from MW3 at 35 feet below grade had 2.0 µg/kg benzene.

The groundwater monitoring wells were developed, surveyed and sampled according to the RWQCB protocols. During the assessment, depth to groundwater was measured between 42 and 43 feet below grade. Flow direction was determined to be to the west-southwest. On November 14, 2006, groundwater samples were collected from the newly installed groundwater monitoring wells. The groundwater samples were analyzed for TPH–g, BTEX, ethanol and the following fuel oxygenates: DIPE, ETBE, MTBE, TAME, and TBA. None of the groundwater samples collected had detectable levels of any of the constituents for which they were analyzed.

As part of the redevelopment of the site, soil will be excavated to a depth of about 35 feet below grade. Groundwater collected and analyzed from beneath the site did not have detectable concentrations of TPH–g, BTEX, ethanol, DIPE, ETBE, MTBE, TAME, or TBA. Based on the findings of this assessment, we recommend that the RWQCB grant environmental closure of this property.

INTRODUCTION

This report presents the results of a soil and groundwater assessment conducted by Rincon Consultants, Inc. on behalf of Fairfax Associates, LLC at the site located at 801 N. Fairfax Avenue in Los Angeles, California. The subject property was formerly used as an automotive repair and body shop (Digo's Auto Center) and was previously developed as a gasoline service station dating back to at least 1928. During the current assessment the site was a vacant, undeveloped lot.

The following sections provide an overview of the project history; describe the purpose and scope of the project, the physical setting, and sampling and analytical testing methodologies; and provide the results of the sampling and testing program.

PROJECT HISTORY

AEI Consultants previously conducted three assessments of the site. The first assessment performed on October 31, 2003, included collection of soil samples in and around the underground storage tanks (USTs). Soil samples were analyzed for total petroleum hydrocarbons (TPH) as gasoline, diesel, and motor oil; and for volatile organic compounds (VOCs) by EPA method 8260B. Five borings were drilled and one soil sample from each boring was sent to a laboratory for analysis. No TPH as gasoline, diesel, motor oil, and no VOCs were detected in the samples analyzed.

On July 21, 2005, three USTs were removed from the site under a permit from the City of Los Angeles Fire Department. The UST excavation cavity had a width of 25 feet, a length of 28 feet, and a depth of 17 feet. Five soil samples were obtained from the tank pit and analyzed for TPH and VOCs pursuant to the tank removal permit, and five soil samples were obtained from the overburden stockpiled soil. Two of the five soil samples obtained from the tank pit had detectable levels of total xylenes at concentrations of 5.1 micrograms per kilogram (µg/kg) and 9.6 µg/kg. TPH and other VOCs were not detected in the samples. No MTBE or other fuel oxygenates were detected in any of the samples analyzed from this site.

On February 16, 2006, AEI Consultants performed an additional site assessment as follows: one direct push boring was advanced onsite to 50 feet below grade. Soil samples were obtained and analyzed for TPH and VOCs. Soil samples from the following depths were analyzed in a laboratory: 20, 25, 30, 35, 40, 45, and 50 feet below grade. All of these samples had low concentrations of benzene. The benzene concentrations ranged from 2.6 µg/kg to 9.2 µg/kg. No TPH or other VOCs were detected in these samples.

Groundwater beneath the site occurs at about 40 feet below grade. Because the depth to groundwater exists at a distance of less than 20 feet from the base of detectable levels of gasoline constituents, the Los Angeles Fire Department chose not to oversee environmental issues related to this former gasoline service station, and instead referred the project to the RWQCB.

In order to obtain environmental closure for this site, a Soil and Groundwater Assessment Work Plan prepared by Rincon and dated September 15, 2006 was submitted to the RWQCB. The work plan proposed the installation of three groundwater monitoring wells at the site. On October 10, 2006, via email, Jay Huang of the RWQCB approved the installation of the proposed groundwater monitoring wells at the site. A follow-up approval letter dated November 13, 2006 was also sent from the RWQCB to the property owner.

PURPOSE AND SCOPE

The purpose of the soil and groundwater assessment was to determine the current condition of soil and groundwater beneath the site, as directed by the RWQCB.

Our scope of work included the following:

- Obtain groundwater monitoring well installation permits from the County of Los Angeles Department of Public Health, Environmental Health Division.
- Using a limited-access hollow-stem auger drill rig, install three 2-inch diameter groundwater monitoring wells at the site (Figure 2, Site Map).
- Collect soil samples at 5-foot intervals for purposes of soil classification, field screening for volatile organic contaminants, and retaining undisturbed samples for laboratory analysis.
- Develop and sample the wells in accordance with approved protocols.
- Analyze soil and groundwater samples for TPH-g, BTEX, and fuel oxygenates by approved methodologies.
- Prepare this report documenting our findings.

GEOLOGIC AND HYDROGEOLOGIC SETTING

Topography

The current USGS topographic map (Hollywood Quadrangle, 1966, photorevised 1994) indicates that the site is situated at an elevation of about 240 feet above mean sea level with topography sloping gradually to the southwest. The eastern flank of the Santa Monica Mountains are depicted farther to the north.

Geology and Hydrogeology

The site is located within the Coastal Plain of the Los Angeles Basin in Los Angeles County. The landward portion of the Los Angeles Basin is bounded to the north by the Santa Monica Mountains, Elysian Hills and Repetto Hills, to the east by the Merced Hills, Puente Hills, and Santa Ana Mountains, and to the south and west by the Pacific Ocean. The Santa Monica Mountains are part of the Transverse Ranges Geomorphic Province that is characterized by east-west trending faults, folds and mountain ranges. This province is considered to be highly seismically active.

The faulting and seismicity of Southern California is dominated by the compressionary regime associated with the intersection of the San Andreas Fault Zone and the Garlock fault. The San Andreas Fault Zone separates two tectonic plates. The western side of the fault is the Pacific Plate and the eastern side of the fault is the North American Plate. The Western Plate is moving in a northwesterly direction relative to the North American Plate. The San Andreas Fault generally trends northwest-southeast. However, north of the Transverse Ranges Province, the fault trends more in an east-west direction, causing the fault's right-lateral strike-slip movement to produce north-south compression between the two plates. This compression has produced

rapid uplift of many of the mountain ranges in Southern California. North-south compression in southern California has been estimated from 5 to 20 millimeters per year (SCEC, 1995). This crustal shortening is accommodated by faulting (mainly reverse faulting) and causes a large potential for seismicity throughout most of southern California. Faults of the northern Peninsular Ranges Province generally reflect reverse as well as strike slip faulting patterns, since the province is in a transitory position between areas dominated by strike-slip movement and by compression.

Associated with the rapid uplift of the mountains surrounding the Coastal Plain of the Los Angeles Basin is rapid sedimentation of the basin (DWR, 2003). Quaternary age (within the last 1.6 million years) unconsolidated and semi-consolidated sediments are over 1,000 feet thick in some localities of the Coastal Plain. The Quaternary sediments are underlain by Tertiary (1.6 to 65 million years old) age rocks. The Tertiary material is principally composed of marine sediments of the Pico, Repetto, Monterey, and Topanga formations that filled the basin when it was below sea level.

Site Geology

The project site appears on the Geologic Map of the Hollywood and Burbank (South ½) Quadrangles by Thomas W. Dibblee, Jr. (1991). According to this map, the site is underlain by Quaternary Age unconsolidated surficial alluvial sediments consisting of clay, sand and gravel. and minor stream channel deposits of sand and gravel. The alluvial sediments were shed from the Santa Monica Mountains, located to the north of the site. These deposits are typical of alluvial fans and are slightly elevated and dissected in the area of the site. The Santa Monica Fault is located about 1 mile north and northwest of the site. According to the Alquist-Priolo Special Studies Map of the Hollywood Quadrangle by W. A. Bryant (1986), the subject property is not located within an Alquist-Priolo or active earthquake fault zone.

During the current assessment, soil was comprised of silty sands with some clay and gravel from surface to total depth explored (58 feet below grade).

Regional Groundwater Occurrence and Quality

The site is located within the Hollywood Subbasin of the Coastal Plain of Los Angeles Groundwater Basin. The Hollywood Subbasin underlies the northeastern part of the Coastal Plain of Los Angeles Groundwater Basin. The subbasin is bounded on the north by the Santa Monica Mountains and the Hollywood fault, on the east by the Elysian Hills, on the west by the Inglewood fault zone, and on the south by the La Brea High, formed by an anticline that brings impermeable rocks close to the surface. Surface drainage flows southward to join Ballona Creek, then westward to the Pacific Ocean. Average annual precipitation ranges from 12 to 14 inches. Groundwater in the Hollywood Subbasin is mainly produced from Pleistocene age alluvial sands and gravels. Semi-perched water may exist in the Holocene alluvium that forms a thin cover over about half of the subbasin. The remainder of the subbasin has silt and clay deposits of the Bellflower aquiclude of the Lakewood Formation cropping out at the surface. Historical production has come from deeper aquifers of the Lakewood and San Pedro Formations. These aquifers are widespread throughout the Coastal Plain of Los Angeles.

Unconfined groundwater conditions exist in the shallow aquifers in the northern and eastern portion of the subbasin. In the deeper aquifers and in the remainder of the subbasin, groundwater is confined, and clay members separate the aquifers over much of this subbasin.

During the current assessment, groundwater was encountered at about 42 to 43 feet below grade and was determined to flow to the west-southwest.

METHODOLOGY

GROUNDWATER MONITORING WELL INSTALLATION AND SAMPLING

Three 2-inch diameter groundwater monitoring wells (MW1, MW2, and MW3) were installed on November 1 and 2, 2006 at the locations shown in Figure 2. The wells were installed by BC^2 Drilling of Fullerton, California under the direction of Rincon. Due to the presence of nearby overhead electric power-lines along the Waring Avenue sidewalk located adjacent to the southern boundary of the site, a limited-access hollow-stem auger drill rig was used to drill the borings and install the wells. Well development and sampling were conducted by Rincon on November 8 and November 14, 2006, respectively. Well surveying was conducted by W.M. Holding, Inc. (W.L. Meagher Surveys) of Ventura, California on November 15, 2006.

Soil Sampling

During drilling of the borings, soil samples were collected at five-foot intervals. The soil samples were collected by driving a modified California Liner sampler with brass liner inserts. The bottom liner from each sample interval collected above first encountered groundwater was retained for laboratory analysis. Soil samples were collected and preserved onsite via EPA Method 5035 protocol as follows: a disposable Encore sampler was inserted into the brass liner. Soil collected with the Encore sample was placed into VOA vials preserved with sodium bisulfate ($NaHSO_4$) (2 VOAs) and methanol (1 VOA). The VOAs were then capped, labeled, placed in a sealable plastic bag, and stored in a cooler with ice pending delivery to the analytical laboratory. The bottom liner was then sealed with Teflon, capped, labeled, placed in a sealable plastic bag, and stored in the cooler with ice pending delivery to the analytical laboratory. One liner from each sample interval was used to screen for volatile organics using a photoionization detector (PID) and to classify the soil using the Unified Soil Classification System.

Groundwater was encountered in the borings at depths of about 42 to 43 feet below grade. The borings were deepened to 58 feet below grade to enable installation of a groundwater monitoring well. Soil boring logs and well completion diagrams are included as Appendix 1, Log of Boring/Monitoring Wells. Soil cuttings generated during drilling were stockpiled onsite. Augers were decontaminated between use by steam cleaning. Sampling equipment was decontaminated between use by washing with a non-phosphate solution followed by a potable water rinse. The decontamination fluids were stored onsite in 55-gallon DOT drums.

Well Installation

The wells were constructed with 20 feet of 2-inch diameter, 0.020-inch slotted, threaded, PVC well screen (base of well) and about 38 feet of 2-inch diameter, threaded, PVC well pipe (top of well). Monterey sand was installed in the annulus between the well and the borehole and extended to a depth of 35 feet below grade (3 feet above the top of well screen). A 3-foot thick bentonite plug was placed above the sand pack. The remaining annulus from 32 feet below grade to the surface was grouted with a neat cement. Each well was finished at grade with a locking well cap and a steel traffic-rated well box. Soil boring logs and well completion diagrams are included as Appendix 1, Log of Boring/Monitoring Wells.

Well Development

The wells were developed with the combined use of a PVC bailer and submersible pump. The wells were initially surged and bailed with the PVC bailer to suspend sediments in the well casing and remove the suspended sediments. Fluids were then pumped from each well using an electric submersible pump. This procedure was repeated until the purge water was relatively clear. Approximately 27 gallons of fluids were purged from MW1 and MW2 and 40 gallons were purged from MW3. Purged water was bailed and pumped directly into labeled, 55-gallon DOT drums. The development equipment was decontaminated between use by washing with a non-phosphate solution followed by successive rinses with potable and deionized water. Copies of well development data sheets are included as Appendix 2, Well Development Data Sheets.

Well Sampling

Prior to sampling of the wells, depth to water and total well depth were measured using an electronic water level indicator. A submersible pump was used to purge the wells. A temperature-conductivity-pH meter was used to monitor aquifer parameters during purging. These parameters were monitored to verify that the aquifer conditions had stabilized and the sample to be collected was representative of the aquifer conditions at that location. Approximately 3 well volumes of water were removed from each well using the submersible pump. Purged water was pumped directly into labeled, 55-gallon DOT drums.

After allowing the wells to recover to within 80% of their original levels, groundwater samples were collected using disposable bailers. Samples were retained in 40-milliliter VOA vials. Care was taken to ensure no headspace or bubbles were created within the vials. The samples were labeled, placed in a sealable plastic bag and stored in a cooler with blue ice pending delivery to an analytical laboratory. Copies of groundwater sampling data sheets are included as Appendix 3, Groundwater Sampling/Purging Data Sheets.

Well Surveying

The wells were surveyed by a licensed land surveyor, W.M. Holding, Inc. (W.L. Meagher Surveys) of Ventura, California. The top of the well casings were surveyed to the nearest 0.01 feet. The surveying was conducted to allow for conversion of depth to water measurements into elevations and, thus, allow for a determination of groundwater flow direction. A copy of the well survey report is included in Appendix 4, Well Survey Report.

LABORATORY ANALYSIS

The soil and groundwater samples were transported to American Scientific Laboratories of Los Angeles, California under chain-of-custody documentation. Twenty-six soil samples and three groundwater samples were analyzed for TPH-g, BTEX and fuel oxygenates by EPA Method 8260.

RESULTS

SOIL SAMPLING

No soil discoloration was noted for the soil samples collected during the current assessment. Except for a few soil samples with readings of 1 or 2, no PID readings were measured for the majority of the soil samples. Soil was comprised of silty sands with some clay and gravel from surface to total depth explored (58 feet below grade). Groundwater was encountered during drilling of the borings at a depth of about 42 feet below grade. Copies of the soil boring logs are included in Appendix 1.

A summary of the laboratory analytical results is included in Table 1, Soil Laboratory Analytical Results. A copy of the laboratory analytical report is included in Appendix 5. None of the soil samples had detectable levels of the following constituents for which they were analyzed:

- Total petroleum hydrocarbons as gasoline (TPH-g), toluene, ethylbenzene, and total xylenes; and,
- The fuel oxygenates: DIPE, ETBE, MTBE, TAME, and TBA

Soil samples collected from MW1 at 25, 30, 35 and 45 feet below grade had very low concentrations of benzene ranging from 2.0 to 5.0 micrograms per kilogram (µg/kg). In addition, the soil sample collected from MW3 at 35 feet below grade had 2.0 µg/kg benzene.

GROUNDWATER SAMPLING

During groundwater sampling, groundwater was encountered in the wells at depths of between about 42 and 44 feet below grade. Groundwater elevation data are presented in Table 2, Groundwater Elevation Data. The groundwater flow direction is to the west-southwest at a gradient of 0.016 foot per foot (see Figure 2). The wells are positioned so that MW- 3 is upgradient, MW-1 is cross-gradient and MW-2 is downgradient of the former UST pit.

Table 2 - Groundwater Elevation Data

Well ID	Date Measured	Depth to Water (feet)	Measuring Point Elevation[1] (feet msl)	Groundwater Elevation (feet msl)
MW1	11/14/06	43.86	243.87	200.01
MW2	11/14/06	42.47	241.97	199.50
MW3	11/14/06	41.82	241.97	200.15

1 - True elevation (City of Los Angeles survey benchmark #13-04431)
msl – mean sea level

Results of the groundwater analyses are summarized in Table 3, Groundwater Laboratory Analytical Results. A copy of the laboratory analytical report is included in Appendix 5. None of the groundwater samples had detectable levels of any of the constituents for which they were analyzed:

- No total petroleum hydrocarbons as gasoline, benzene, toluene, ethylbenzene, or total xylenes.
- No fuel oxygenates: DIPE, ETBE, MTBE, TAME, or TBA.
- No ethanol.

DISCUSSION

BENZENE IN SOIL

Low levels of benzene (ranging from 2 to 5 µg/kg) were detected in the soil samples collected from MW1 at depths of 25, 30 35, and 45 feet below grade and from MW3 at 35 feet below grade. The proposed redevelopment of the site includes the construction of 3 levels of subterranean parking. Soil from beneath the site will be excavated to a depth of about 35 feet below grade. The benzene-impacted soil detected at the site at depths of up to 35 feet below grade will be removed during the redevelopment of the site. The soil sample collected from MW1 at 45 feet below grade was located within the groundwater zone beneath the site. Although a low concentration of benzene (3 µg/kg) was detected in this soil sample, the groundwater sample collected and analyzed from MW1 was nondetect for benzene.

Furthermore, groundwater beneath the site did not have any detectable concentrations of any of the constituents for which it was analyzed, including benzene.

CONCLUSIONS AND RECOMMENDATIONS

As part of the redevelopment of the site, soil will be excavated to a depth of about 35 feet below grade. Groundwater collected and analyzed from beneath the site did not have detectable concentrations of TPH–g, BTEX, ethanol, DIPE, ETBE, MTBE, TAME, or TBA. Based on the findings of this assessment, we recommend that the RWQCB grant environmental closure of this property.

LIMITATIONS

This report has been prepared for and is intended for the exclusive use of Fairfax Associates, LLC. The contents of this report should not be relied upon by any other party without the written consent of Rincon Consultants, Inc.

Our conclusions regarding the site are based on the results of a limited subsurface sampling program. The results of this evaluation are qualified by the fact that only limited sampling and analytical testing was conducted during this assessment.

This scope was not intended to completely establish the quantities and distribution of contaminants present at the site or to determine the cost to remediate the site. The concentrations of contaminants measured at any given location may not be representative of conditions at other locations. Further, conditions may change at any particular location as a function of time in response to natural conditions, chemical reactions and other events. Conclusions regarding the condition of the site do not represent a warranty that all areas within the site are similar to those sampled.

GROUND WATER SAMPLING/PURGING DATA SHEET

Job No: 06-2210	Date: 11/13
Project/Location FAIRFAX	Well Number: MW1
Observation Period Start: 1300 Stop:	Survey Reference Point: TOC
Sampled By: CM	Witnessed By:

PURGING DATA

Type of Pump	SUB	Pump Inlet Depth (ft)	55
Well Diameter (in)	2"	Depth of Well (ft)	58.16
Depth to Water (ft)	43.86	Length of Water Column (ft)	14.30
Product Thickness (ft)	0	Volume Multiplier (gal/ft)	.16
One Casing Volume (gal)	2.29	Three Casing Volumes (gal)	6.86
Purge Time, Start	2:38	Purge Time, Stop	2:50
Total Purge Time	12	Purge Rate (gpm)	
Purge Volume (gal)	8	Drawdown (ft)	

CASING OR BOREHOLE VOLUME

0.5-inch Diameter = 0.010 gal/ft	4-inch Diameter = 0.65 gal/ft
0.75-inch Diameter = 0.023 gal/ft	6-inch Diameter = 1.46 gal/ft
1-inch Diameter = 0.041 gal/ft	9-inch Diameter = 3.30 gal/ft
1.5-inch Diameter = 0.092 gal/ft	12-inch Diameter = 5.87 gal/ft
2-inch Diameter = 0.16 gal/ft	15-inch Diameter = 9.18 gal/ft

INDICATOR DATA

Volume Pumped (gal)	Before Purge							
Parameter		2	4	7				At Sampling
Temperature (C)	23.9	23.7	23.5	22.2				20.3
Conductivity (micromhos)	1392	1301	1259	1215				1210
pH	9.63	9.59	9.96	9.61				9.53
Dissolved Oxygen	3.39	3.17	3.45	3.5				4.70

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:
1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

APPENDIX H

QUALIFICATIONS

Jeffrey L. McNeil – Associate Consultant

Education:

Bachelor of Science - Physics, University of California, Irvine
Bachelor of Arts – Business Administration, University of California, Irvine

Training/Licenses/Registrations:

Radon Measurement Specialist, National Radon Safety Board # NRSB 12SS030
Asbestos Building Inspector (AHERA)

Summary of Professional Experience:

Mr. McNeil has performed due diligence services on all commercial property types including but not limited to, multi-family, multi-tenant, single-tenant, retail shopping centers, industrial facilities, gasoline servicing stations, nursing/assisted living facilities and mobile home parks. Mr. McNeil has performed thousands of Phase I Environmental Site Assessments (ESAs), Property Condition Assessments (PCAs) and Physical Needs Assessments (PNAs) in accordance with Fannie Mae, Freddie Mac and HUD guidelines on Multi-family housing and all other commercial property types.

Select project experience for Mr. McNeil includes:

- Freddie Mac Scope Combination Environmental Site Assessment (ESA) / Property Condition Assessment (PCA): 140 Unit Multi-family – San Bernardino County
- Freddie Mac Small Balance Loan Report: 66 Unit Multi-family – Kern County
- Combination Environmental Site Assessment (ESA) / Property Condition Assessment (PCA): 585,147 Square Foot Office Complex – Orange County
- Phase I Environmental Site Assessment (ESA): Industrial Facility – Steel fabrication and machine shop – Los Angeles County
- Phase I Environmental Site Assessment (ESA): 171,330 Square Foot Research and Development Laboratory – Orange County
- Phase I Environmental Site Assessment (ESA): 420 Unit Multifamily Property – San Bernardino County
- Property Condition Assessment (PCA): 125,333 Square Foot Retail Shopping Center – Los Angeles County
- Property Condition Assessment (PCA): 78,388 Square Foot Medial Office Building – Los Angeles County
- Property Condition Assessment (PCA): 7,320 Square Foot Office Building – Honolulu Hawaii

Mr. McNeil has over 35 years' experience in hazardous materials handling, storage and transportation. Over 30 years' experience in construction, remodeling and renovation of residential and non-residential use properties with over 20 years' experience in direct report preparation of commercial due diligence reports.

Victor T. DeTroy – National Client Manager, Due Diligence Services

B.A. - Earth and Environmental Science, Columbia University, Cum Laude

OSHA 40-Hour Hazardous Waste Operations
Emergency Response (HAZWOPER) Training
EPA AHERA 24-hour Asbestos Building Inspector

Mr. DeTroy has worked the environmental service industry since 2007 and provides project management to ensure compliance and satisfaction of client requirements for Phase I Environmental Site Assessments, Transaction Screens, limited due diligence assessments, Phase II and Phase III subsurface investigations, and quarterly groundwater monitoring events. He has successfully completed assessments on a variety of residential, commercial, and complex industrial sites. Mr. DeTroy is accustomed to all aspects of Due Diligence Property Assessments and the needs and requirements of a variety of reporting standards, including ASTM, EPA's All Appropriate Inquiry (AAI), Freddie Mac, Fannie Mae, HUD, and customized client formats.

Project experience for Mr. DeTroy includes:

- Phase I Environmental Site Assessments
- Telecommunication Phase I Environmental Site Assessments
- Environmental Transaction Screens
- Environmental Transaction Analyses
- Limited Environmental Site Assessments
- Regulatory Database Reviews
- Historical Records Reviews
- Project Coordination and Setup
- Due Diligence Portfolio Management
- The design and implementation of Phase II soil and groundwater investigations and Phase III subsurface characterizations for a variety of suspected contaminants for due diligence and liability purposes

Subsurface investigations have included extensive soil and groundwater testing, identification of petroleum hydrocarbons and volatile organic compounds contamination in near surface soils, and contaminant plume delineation in soil vapor, soil, and groundwater. Mr. DeTroy's management and technical experience has allowed AEI's projects to be performed in a cost effective and timely manner to the satisfaction of AEI's clients and regulatory agencies.

① Certified in accordance with the Unitary Air-Conditioner Equipment certification program, which is based on AHRI Standard 210/240.

② All models are U L Listed. Ratings shown are for elevations up to 2000 ft. For higher elevations reduce ratings at a rate of 4% per 1000 ft. elevation.

③ Convertible to LPG.

④ This value is approximate. For more precise value, see Unit Nameplate.

⑤ Based on U.S. Government Standard Tests.

⑥ Filters must be installed in return air stream. Square footages listed are based on 300 f.p.m. face velocity. If permanent filters are used size per manufacturer's recommendation with a clean resistance of 0.05" W.C.

⑦ Sound Power values are not adjusted for AHRI 270-95 tonal corrections.

⑧ Standard Air — Dry Coil — Outdoor.

TECHNICAL GUIDE

R-410A
ZE/ZF/ZR/XN/XP SERIES
3 - 6 TON
60 Hertz

Description

YORK® ZE/ZF/ZR/XN/XP Series units are convertible single package high efficiency rooftops with a common roof curb for the 3, 4, 5 and 6 Ton sizes (ZE, ZR, XN, XP not available in 6 Ton). Although the units are primarily designed for curb mounting on a roof, they can also be slab-mounted at ground level or set on steel beams above a finished roof.

All ZE/ZF/ZR/XN/XP Series units are self-contained and assembled on rigid full perimeter base rails allowing for overhead rigging. Every unit is completely charged, wired, piped and tested at the factory to provide a quick and easy field installation.

All models (including those with an economizer) are convertible between bottom and horizontal duct connections.

ZE/ZF/ZR Series units are available in the following configurations: cooling only, cooling with electric heat, and cooling with one or two stage gas heat. Electric heaters are available as factory-installed option or field installed accessory.

XN/XP Series units are available in the following configurations: cooling and heating only and cooling and heating with electric heat.

Tested in accordance with:

AHRI CERTIFIED www.ahridirectory.org Unitary Small AC AHRI Standard 210/240

AHRI CERTIFIED www.ahridirectory.org Unitary Small HP AHRI Standard 210/240

1. These values have been accessed using a model of sound propagation from a point source into the hemispheric/free field. The dBA values provided are to be used for reference only. Calculation of dBA values cover matters of system design and the fan manufacture has no way of knowing the details of each system. This constitutes an exception to any specification or guarantee requiring a dBA value of sound data in any other form than sound power level ratings.

ZF 6.5 THROUGH 10 TON

ZF12.5 TON

Description

ASHRAE 90.1 COMPLIANT

YORK® Predator® units are convertible single packages with a common footprint cabinet and common roof curb for all 6.5 through 12.5 ton models. All units have two compressors with independent refrigeration circuits to provide 2 stages of cooling. The units were designed for light commercial applications and can be easily installed on a roof curb, slab, or frame.

All Predator® units are self-contained and assembled on rigid full perimeter base rails allowing for 3-way forklift access and overhead rigging. Every unit is completely charged, wired, piped, and tested at the factory to provide a quick and easy field installation.

Predator® units in all tonnage sizes are convertible between side airflow and down airflow, with corresponding economizer if economizer option is desired.

Predator® units are available in the following configurations: cooling only, cooling with electric heat, and cooling with gas heat. Electric heaters are available as factory-installed options or field-installed accessories.

All units provide constant supply air volume. A variable air volume (VAV) option, which features a variable frequency drive (VFD), is available on 6.5 through 12.5 ton models.

Sound Power Level, Sound Pressure Level

Per pg.1.12, Harris, Handbook of Acoustical Noise Measurements and Noise Control:

Lp=Lw-20*Log(R)-10.9+C, in meters - true for spherical spreading

Per Diehl, pg. 80:
(Ref: Diehl, George M. Machinery Acoustics, 1974.)
Lp=Ld=Lw-20*Log(R)+2.5, in feet - true for a free field above a reflecting plane.

Lp =Lw-20*Log(R)-0.5, in feet - in a free field without a reflecting plane

Per Black and Veatch spreadsheet:

Lp=Lw-10*Log(2PiR^2)

Test Lw (dBA)	Test R (Ft)	Diehl (Reflecting Plane): Lp (dBA)
92.0	50.0	60.5

RAY-TRACE PROGRAM (FOR A POINT-SOURCE)

Uses the Equation: $(A_{e4})_{point}=20*\log[(2*pi*N)^{1/2}/\tanh(2*pi*N)^{1/2}]+5dB$
(Ref. Pg.174, Noise and Vibration Control, L.L. Beranek Editor, 1971 Ed.

EXECUTIVE SUMMARY

This report documents the traffic impact analysis prepared for the proposed project located at 7811 Santa Monica Boulevard (hereafter referred to as the Project) in the City of West Hollywood. The project is anticipated to open in 2026.

The following sections examine the Project's impacts on vehicle miles traveled (VMT) as well as an accompanying circulation analysis documenting project effects on residential roadways and driveway access.

CEQA Analysis and Vehicle Miles Traveled (VMT)
In November 2020, the City adopted an update to its local transportation analysis guidelines to ensure consistency with Senate Bill 743 (SB 743). SB 743 mandates that cities replace the current traffic impact analysis metric, Level of Service (LOS), with Vehicle Miles Traveled (VMT) for CEQA purposes.

VMT is an estimate of the distance traveled by vehicles, which means that impacts are now based on the distance that vehicles travel to a proposed development and how many vehicles are making those trips. Projects located near amenities, transit, or other non-vehicular modes of transportation will generate lower VMT.

Consistent with the State's Office of Planning and Research guidelines, the City is presuming that projects proposed within ½-mile of an existing major transit stop or an existing stop along a high quality transit corridor (transit stop containing an existing rail transit station or the intersection of two or more major bus routes with a frequency service interval of 15 minutes or less during the morning or afternoon peak commute period), will have a less than significant impact on VMT.

Per the Southern California Association of Governments (SCAG) and Los Angeles County Metropolitan Transportation Authority (Metro), the entire City of West Hollywood is within a high-quality transit area, meaning that all development projects will be screened out of conducting a VMT analysis, excluding any of the following:

1. A project with a floor area ratio (FAR) of less than 0.75,
2. A project with more than the required number of parking spaces,
3. A project that is inconsistent with the applicable Sustainable Communities Strategy,
4. A project that replaces affordable residential units with fewer, moderate- or high-income residential units,
5. A project with the potential for significant regional draw.

This Project does not meet any of these categories, meaning that it is presumed that it will have a less than significant impact on VMT, per CEQA.

Non-CEQA Analysis
This study is also providing a non-CEQA analysis for residential roadways and driveways.

Below are the results of the supplemental analysis:

- The Project is estimated to generate a net total of 812 weekday daily trips including 42 weekday AM peak-hour trips, 54 weekday midday peak-hour trips and 53 weekday PM peak-hour trips. These totals include credits for internal capture and the former use at the site.

- The Future 2026 without Project traffic analysis included ambient growth through 2026 and the addition of traffic from 125 proposed area/cumulative projects within the cities of West Hollywood and Los Angeles.

- There is an anticipated increase in vehicle trips at the two analyzed residential roadway segments, but the increase is not expected to lead to any major traffic delays.

- Based on the City's Municipal Parking Code requirements, the proposed Project is required to provide 183 spaces but would provide only 145 parking spaces using an affordable housing incentive. Since the project is using a parking reduction allowed for sites with affordable housing, it is proposing to provide less than the required number of parking spaces.

- Project construction would involve 62 daily construction worker employees and 74 one-way truck trips per day during the peak period of construction.

- The driveway analysis conducted at the two project driveways showed minimal delays and conflicts for vehicles entering and exiting the project site.

  No major queuing issues, severe delays, or back-ups were anticipated at Project driveways and City streets. Project pedestrian improvements along with the existing pedestrian infrastructure will continue to provide a safe local pedestrian travel network

1. INTRODUCTION

This report documents the traffic study prepared for the proposed mixed-use project located at 7811 Santa Monica Boulevard (hereafter referred to as the Project) in the City of West Hollywood. KOA was retained to study the potential traffic impacts associated with the proposed Project.

The following sections examine the Project's impacts on vehicle miles traveled (VMT). Furthermore, strictly for informational purposes, the study includes analysis on how projected project traffic would affect operations within the study area during typical weekday morning, midday, and evening peak-hour periods.

The scope and methodologies used for this traffic study were developed in consultation with the City of West Hollywood staff. The project study area for the supplemental analysis, as defined through consultation with City staff, encompasses eight intersections and two residential street segments. Key tasks undertaken for this traffic analysis include:

- Definition of study approach
- Determination of existing traffic conditions
- Trip generation forecasts of the planned Project land use
- Vehicle Miles Traveled (VMT) analysis and significant impact determination

1.1 PROJECT LOCATION

The Project site is located at 7811 Santa Monica Boulevard, between Orange Grove Avenue and Ogden Drive within the City of West Hollywood. Figure 1 illustrates the study area and the site location in relation to the surrounding street system. Three driveways will provide access to the site: one full-movement driveway on Orange Grove Avenue, one full-movement, residential-only driveway on Ogden Drive, and ingress-only driveway on Santa Monica Boulevard. The project will include design features for each outbound direction at the at the Orange Grove Avenue and Ogden Drive driveways that will restrict outbound-northbound vehicle movements. Figure 2 shows the preliminary site plan.

1.2 PROJECT DESCRIPTION

The proposed project would involve the construction and operation of an approximately 212,500 square-foot mixed-use building on a 0.92-acre site located within the City of West Hollywood. The project would consist of a 45-room hotel, 3,756 square feet of restaurant space, 1,381 square feet of art gallery space, and 95 apartment units.

Figure 1: Project Study Area and Study Intersections

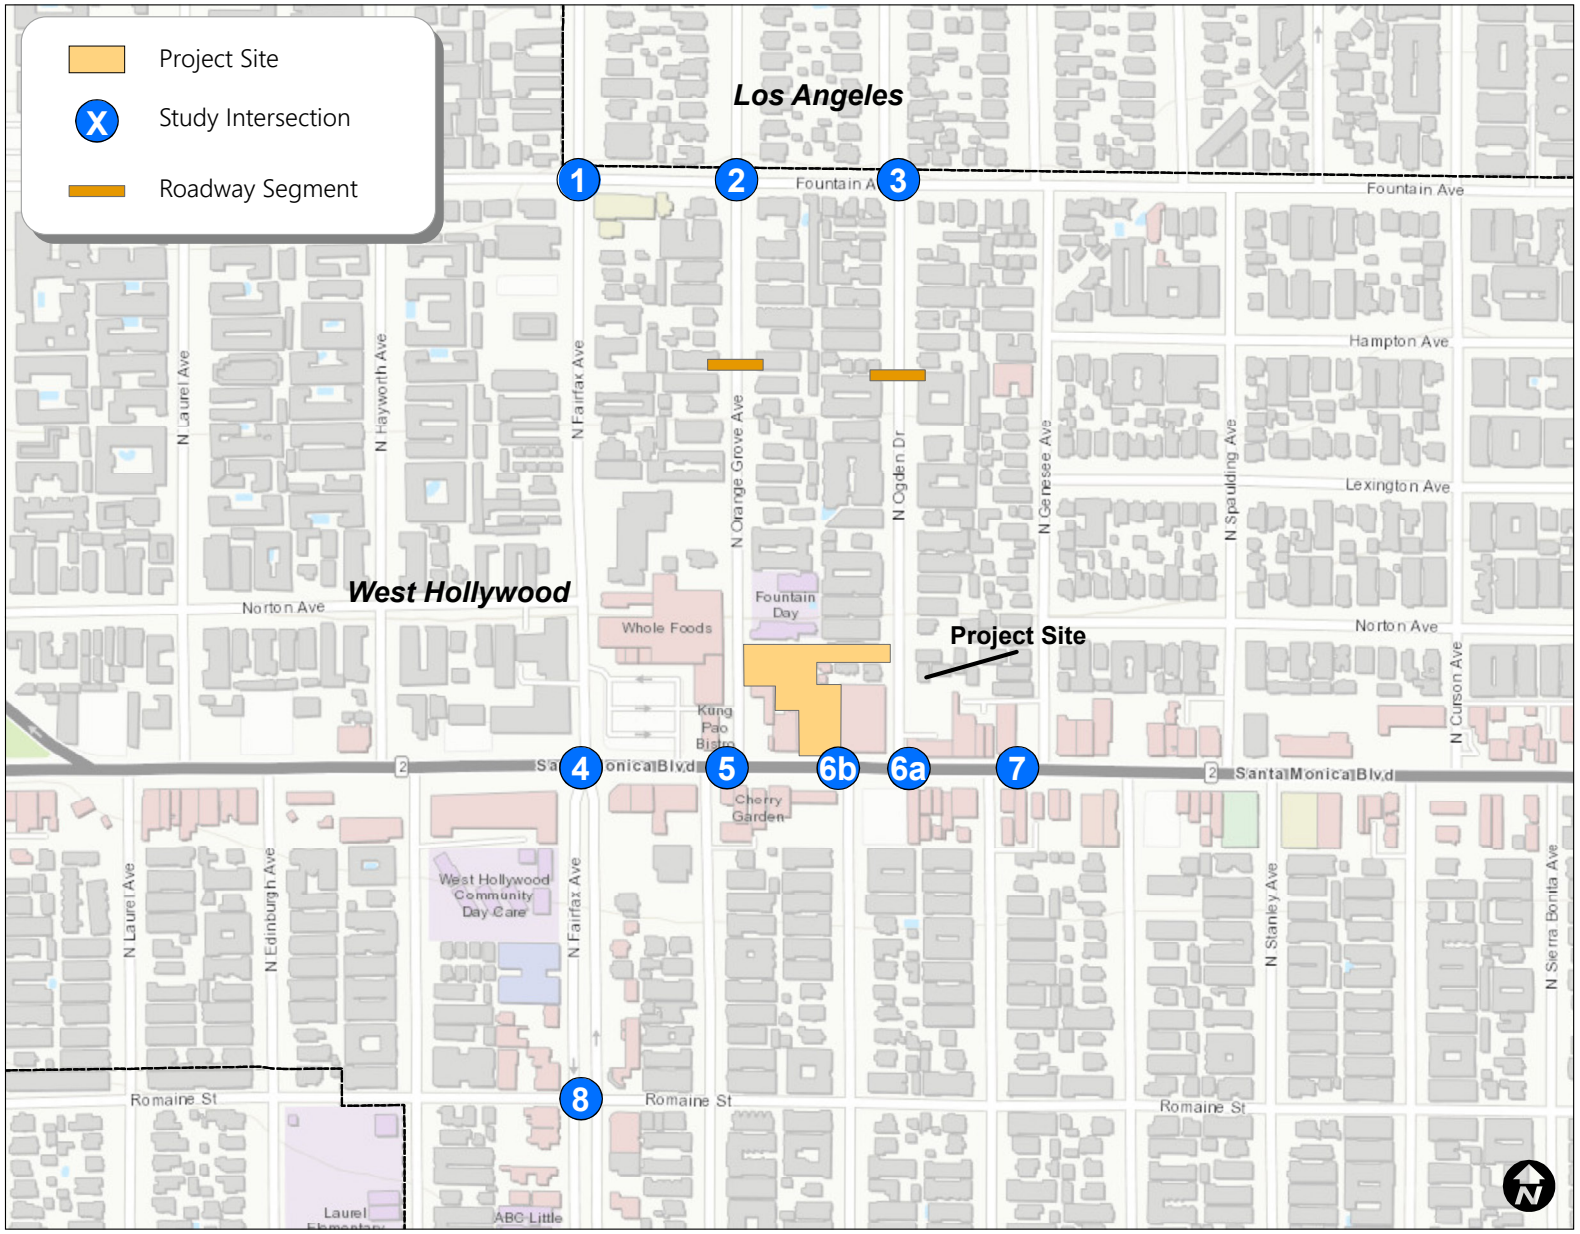

Figure 2: Preliminary Site Plan

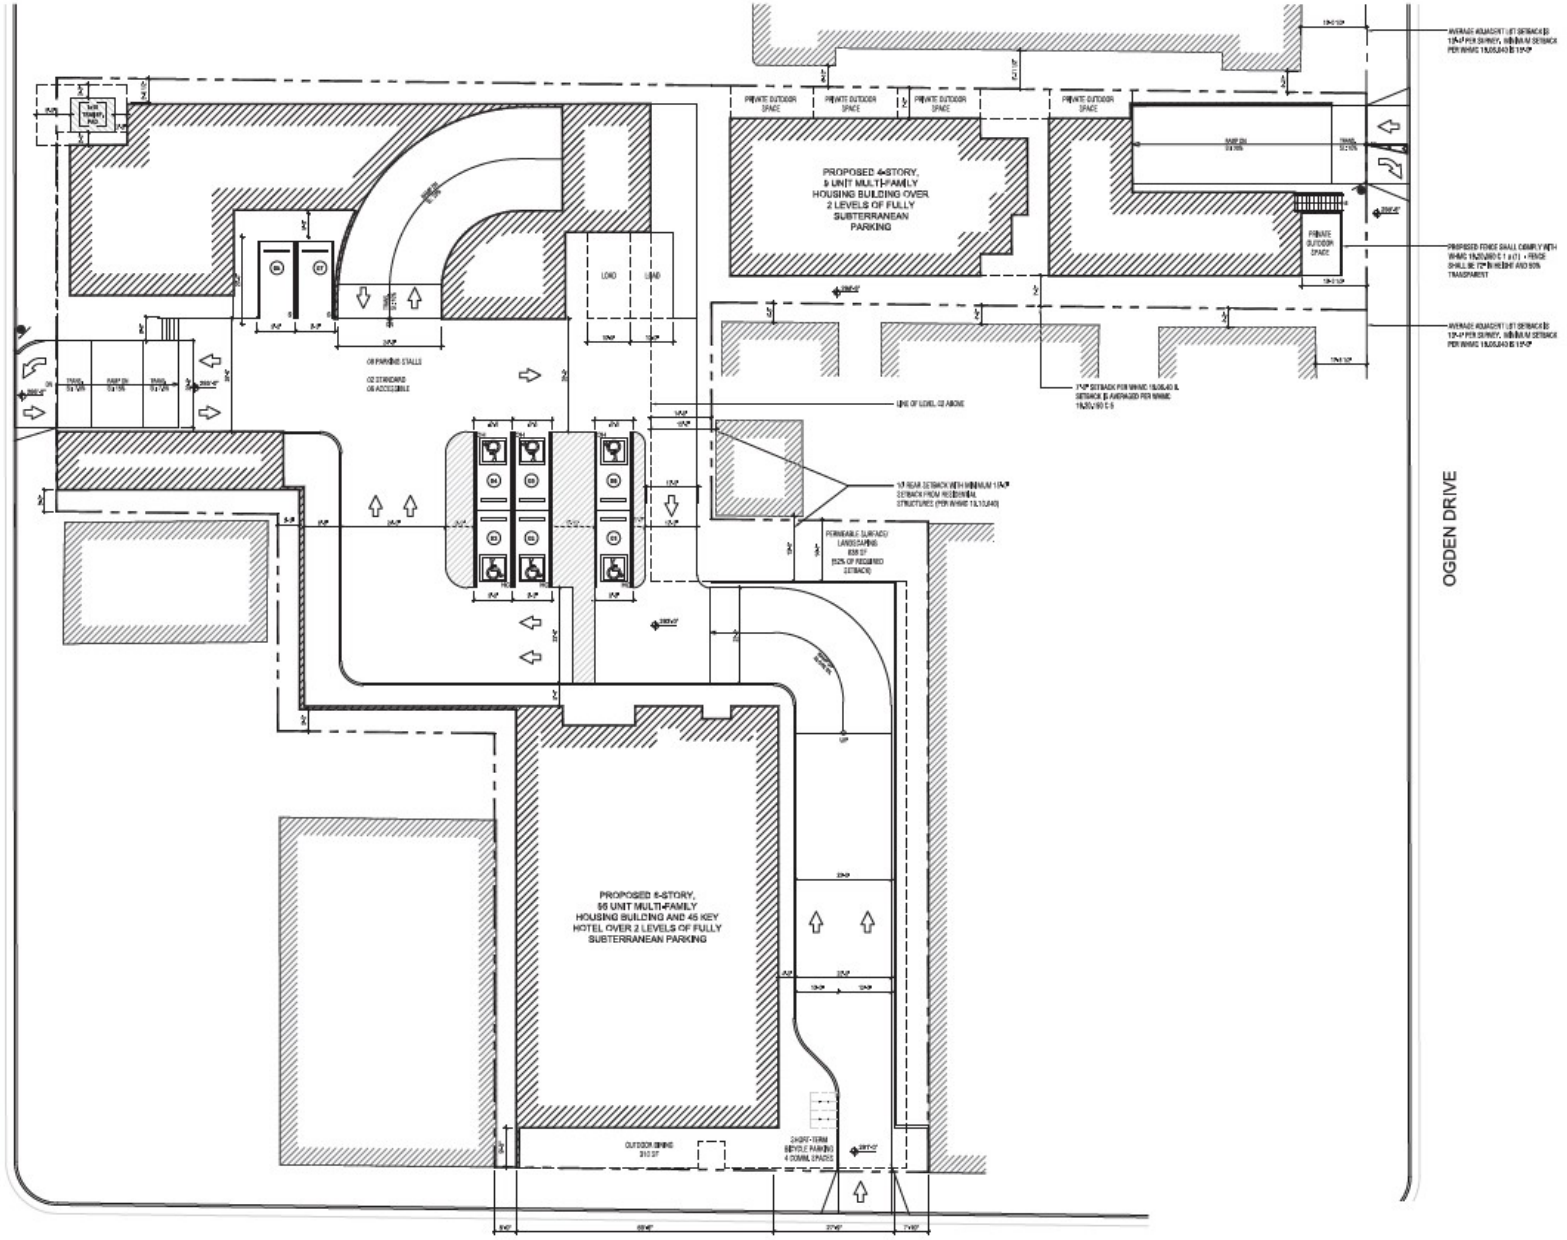


1.3 PROJECT STUDY AREA

Based on consultation with City staff, the supplemental analysis included eight intersections. They are:

1. Fairfax Avenue & Fountain Avenue [Signalized]
2. Orange Grove Avenue & Fountain Avenue [Stop Controlled] [1]
3. Ogden Drive & Fountain Avenue [Stop Controlled] [1]
4. Fairfax Avenue & Santa Monica Boulevard [Signalized]
5. Orange Grove Avenue & Santa Monica Boulevard [Stop Controlled]
6. Ogden Drive & Santa Monica Boulevard [Stop Controlled]
7. Genessee Avenue & Santa Monica Boulevard [Signalized]
8. Fairfax Avenue & Romaine Street [Stop Controlled]

    1. *Shared Intersection (City of West Hollywood and City of Los Angeles)*

As indicated, five of the eight study intersections are stop-sign controlled while the remaining intersections are signalized. For the purposes of this analysis, intersection #6 (Ogden Drive and Santa Monica Boulevard) was split into two as it functions as two separate intersections. In the analysis, intersection 6a represents the north-leg and intersection 6b represents the south leg.

In addition, two residential street segments were included in this study for analysis:

A. Orange Grove Avenue, south of Fountain Avenue
B. Ogden Drive, south of Fountain Avenue

The locations of the eight study intersections and two street segments are illustrated on Figure 1.

1.4 VEHICLE MILES TRAVELED ANALYSIS METHODOLOGY

In November 2020, the City adopted an update to its local transportation analysis guidelines to ensure consistency with Senate Bill 743 (SB 743). SB 743 mandates that cities replace the current traffic impact analysis metric, Level of Service (LOS), with Vehicle Miles Traveled (VMT) for CEQA purposes.

VMT is an estimate of the distance traveled by vehicles, which means that impacts are now based on the distance that vehicles travel to a proposed development and how many vehicles are making those trips. Projects located near amenities, transit, or other non-vehicular modes of transportation will generate lower VMT.

Project Screening Process

Consistent with the State's Office of Planning and Research guidelines, the City is presuming that projects proposed within ½-mile of an existing major transit stop or an existing stop along a high quality transit corridor (transit stop containing an existing rail transit station…or the intersection of two or more major bus routes with a frequency service interval of 15 minutes or less during the morning or afternoon peak commute period), will have a less than significant impact on VMT.

Per the Southern California Association of Governments (SCAG) and Los Angeles County Metropolitan Transportation Authority (Metro), the entire City of West Hollywood is within a high-quality transit area, meaning that all development projects will be screened out of conducting a VMT analysis, excluding any of the following:

1. A project with a floor area ratio (FAR) of less than 0.75,

   The Project's FAR is 3.06, which is well above the FAR threshold of 0.75.

2. A project with more than the required number of parking spaces,

   The project is required to provide 183 spaces under the Zoning Code but would provide only 145 parking spaces through the use of an affordable housing incentive. Since the project is using a parking reduction allowed for sites with affordable housing, it is proposing to provide less than the required number of parking spaces.

3. A project that is inconsistent with the applicable Sustainable Communities Strategy,

   As a mixed-use project located in a High-Quality Transit Corridor, The Bond project is consistent with the applicable Sustainable Communities Strategy.

4. A project that replaces affordable residential units with fewer, moderate- or high-income residential units,

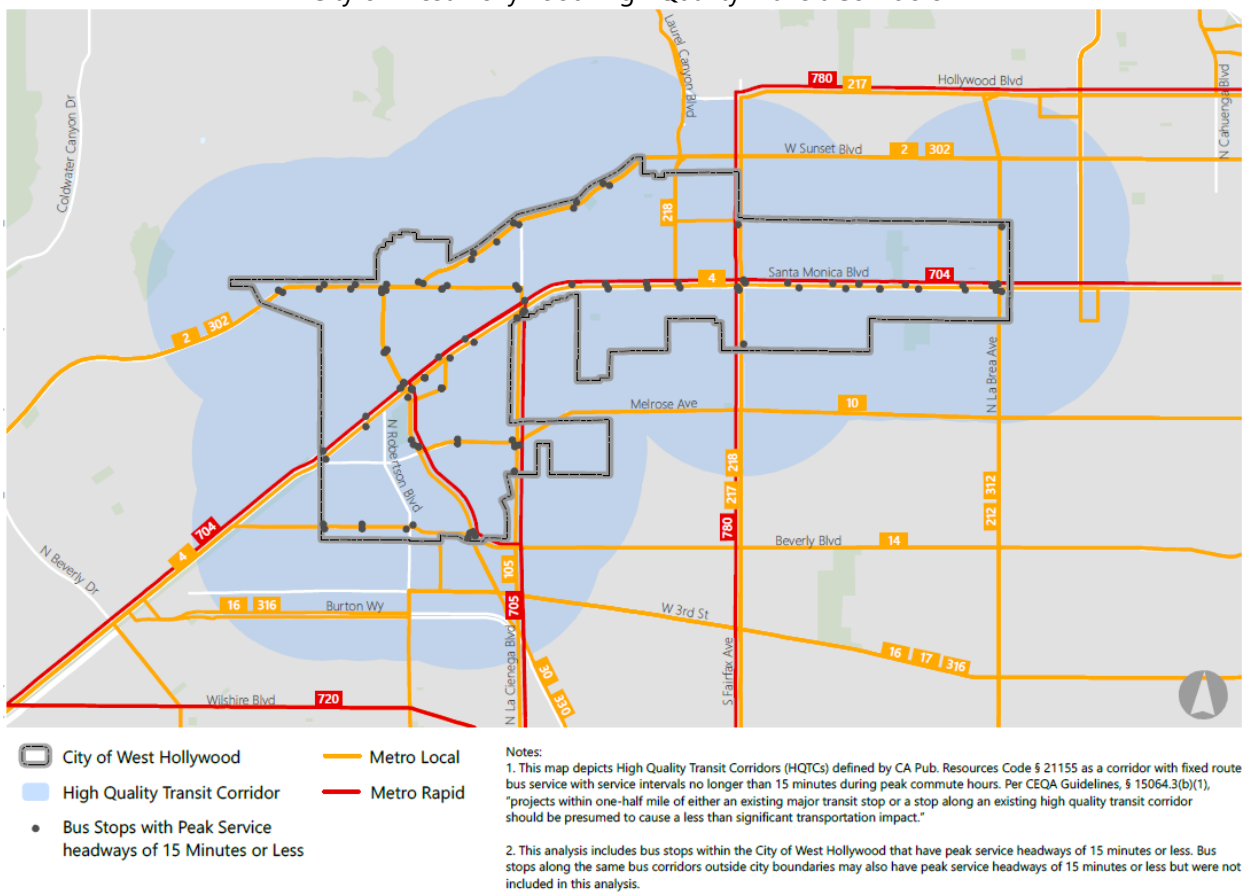
   The project would result in the removal of 7 existing market rate housing units. The project would also result in the development of 95 residential units, including at least 8 very low income units and 8 moderate income units. As such, while housing units would be removed, they are not affordable housing units and they would be more than replaced by the proposed project.

5. A project with the potential for significant regional draw.

   The project proposes a mix of uses including hotel, restaurants, and residential uses and therefore would not require a skilled and specialized workforce to draw employees from greater distances in the region. More specifically, these are the types of uses that draw their employment base from the existing available workforce within the surrounding areas which results in a low VMT to access the project site due to both physical proximity and available transit options and alternate modes of transportation.

This project does not meet any of these categories, meaning that it is presumed that it will have a less than significant impact on VMT, per CEQA. Below is a map of the City's High Quality Transit Areas and Corridors.

City of West Hollywood High Quality Transit Corridors



Source: City of West Hollywood/Fehr & Peers, 2020

However, a supplemental analysis is provided for this project.

1.5 SUPPLEMENTAL ANALYSIS METHODOLOGY

Study Scenarios

Weekday morning, midday and afternoon peak hour traffic operations were evaluated at the eight study intersections and daily traffic assessed at two street segments for each of the following traffic scenarios:

- Existing
- Future (Year 2026) without Project
- Future (Year 2026) with Proposed Project

Existing Conditions

To define existing traffic conditions, new peak period turning movement counts were collected on Wednesday, May 11, 2016, at the study intersections. New 24-hour counts were collected at the study street segments on the same day. The analysis of existing traffic volumes used for this traffic analysis is discussed in Chapter 2 of this report. The peak-hour and Average Daily Traffic (ADT) traffic volume counts are provided in Appendix A.

The existing conditions at each of the study intersections and street segments is further discussed in Chapter 2 of this report.

Project Trip Generation and Distribution

Project trip generation calculations included rates established by Trip Generation (10th edition), published by the Institute of Transportation Engineers (ITE). Former use trip generation credits were also applied.

The methodology utilized for Project trip generation and distribution calculations is discussed in Chapter 3 of this report.

Future Without Project Conditions

To define regional traffic growth that would affect operations during the project buildout year (2026), an ambient/background traffic growth rate was defined to account for increase in area-wide traffic. An annual growth rate of 1% was utilized to increase existing (year 2016) traffic volumes to establish future (year 2026) base traffic volumes.

In addition to future ambient growth, traffic from area related projects (approved and pending) was also included in the analysis. KOA researched information collected by the City of West Hollywood and City of Los Angeles pertaining to approved projects and projects pending approval within 1.5-miles of the Project site. Daily and peak hour trips that would be generated from each of the related projects were computed. The trip rates are based on the Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition published in 2017.

Street segment conditions under the future without-Project area is discussed in Chapter 4 of this report.

Future With Project Conditions

Based on the inclusion of future ambient growth, traffic from area related projects (approved and pending), and traffic from the proposed Project, future with Project conditions were analyzed, as provided in Chapter 5 of this report.

2. EXISTING CONDITIONS

This chapter documents the existing conditions in the study area. Per CEQA, existing conditions is established at the time the Notice of Preparation is issued. As such, Existing Conditions reflect Year 2016 conditions. The discussion presented here is limited to specific roadways in the project vicinity. Figure 3 depicts the lane configurations and traffic control at the study intersections.

2.1 EXISTING ROADWAY SYSTEM

Major roadways within the study area include:

- Fountain Avenue
- Santa Monica Boulevard
- Romaine Street
- Fairfax Avenue
- Orange Grove Avenue
- Ogden Drive
- Genesee Avenue

Table 1 summarizes the characteristics of the major roadways.

Table 1: Study Area Roadway Descriptions

Roadway	Classification	# Lanes		Median Type	Parking Restrictions		Posted Speed Limit (mph)	General Land Use
		NB/ EB	SB/ WB		North Side / East Side	South Side / West Side		
North - South Streets								
Fairfax Avenue	Arterial Street	2 / 3	2 / 3	TL / RM	1 hour 8 AM - 6 PM (N. of SMB), 2 Hour 8 AM - 6 PM (S. of SMB)	1 hour 8 AM - 6 PM (N. of SMB), 2 Hour 8 AM - 6 PM (S. of SMB)	35	Commercial / Residential
Orange Grove Avenue	Local Street	1	1	NS	No Limit	No Limit	25	Residential
Ogden Drive	Local Street	1	1	NS	No Limit	No Limit	25	Residential
Genesee Avenue	Local Street	1	1	NS	No Limit	No Limit	25	Residential
East - West Streets								
Fountain Avenue	Collector Street	2	2	ST	No Limit	No Limit	35	Residential
Santa Monica Boulevard	Arterial Street	2	2	TL	2 Hour 8 AM - 12 AM (M-F); 11 AM - 8 PM (Sat)	2 Hour 8 AM - 12 AM (M-F); 11 AM - 8 PM (Sat)	35	Commercial
Romaine Street	Collector Street	1	1	NS	No Limit	No Limit	25	Residential

DY - Double Yellow
RM - Raised Median
TL - Center Turn Lane
ST - Striped
NSAT - No Stopping Any Time
NS - No Stopping

2.2 EXISTING TRANSIT SERVICE

As summarized in Table 2, the Project study area is served by bus transit lines operated by the City of West Hollywood and the Los Angeles County Metropolitan Transportation Authority (Metro).

Figure 4 illustrates the routes of the transit services that serve the Project study area.

Table 2: Transit Service

Agency	Line	From	To	Via	Peak Frequency
Metro	4	Downtown Los Angeles	Santa Monica	Santa Monica Boulevard	10.5 Minutes
Metro	217	Fox Hills / Culver City	East Hollywood	La Cienega Boulevard / Fairfax Avenue / Hollywood Boulevard	12 Minutes
Metro	218	Studio City	Beverly Hills	Laurel Canyon Boulevard / Fairfax Avenue / Third Street	60 Minutes
Metro	780	Washington / Fairfax	Pasadena	Fairfax Avenue / Hollywood Boulevard	10 - 15 Minutes
West Hollywood	The PickUp	Robertson Boulevard / Santa Monica Boulevard	La Bre Avenue / Santa Monica Boulevard	Santa Monica Boulevard	Every 15 minutes - Friday Saturday from 8:00pm - 3:00am; Sunday from 2:00pm - 10:00pm
West Hollywood	CityLine Blue / Orange	Free daytime neighborhood shuttle		Santa Monica Boulevard / San Vicente Boulevard	Every 30 Minutes Monday-Saturday from 9:00am - 5:00pm

Figure 3: Existing Intesection Geometry

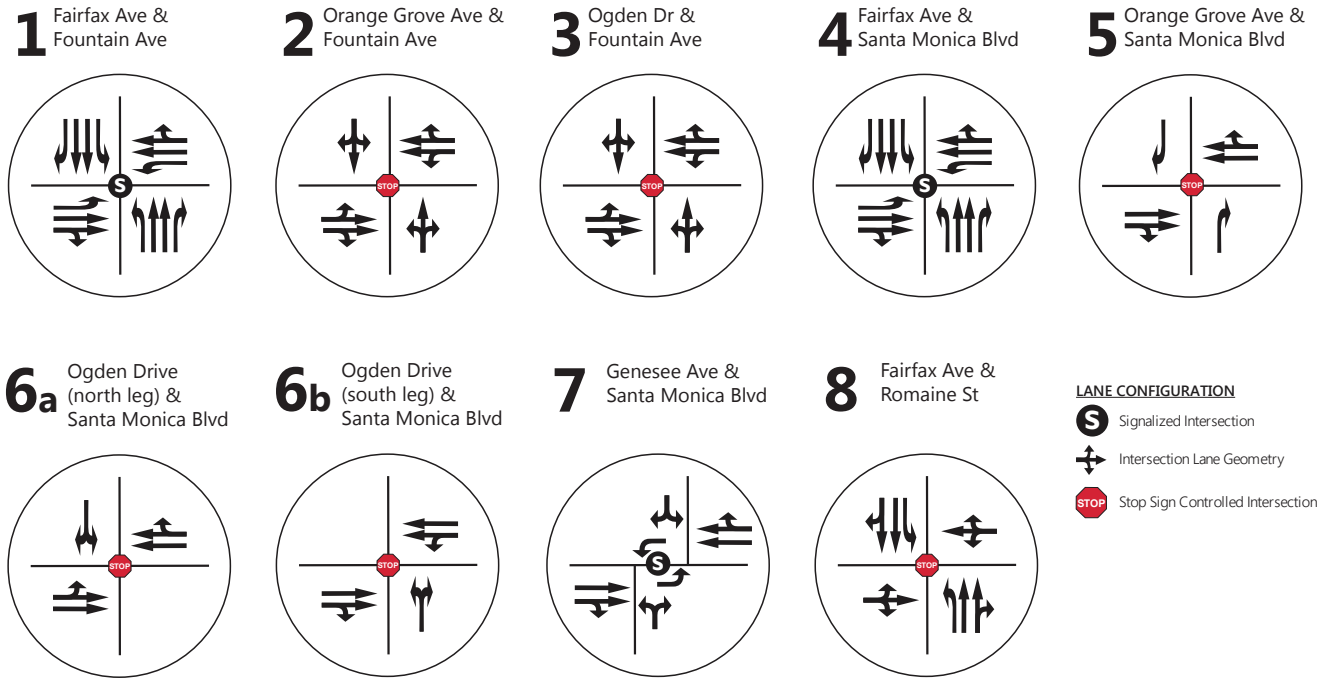


Figure 4: Existing Transit Usage Lines

2.3 EXISTING TRAFFIC VOLUMES

KOA compiled new manual intersection turn movement and machine roadway segment counts. These counts were collected on Wednesday, May 11, 2016. The turning movement counts were collected during the morning (7-9 AM), midday (11 AM-1 PM) and evening (4-7 PM) periods. The machine counts were collected for 24 hours on the same day.

Traffic count summaries are provided in Appendix A of this report.

2.4 EXISTING STREET SEGMENT VOLUMES

Table 3 summarizes the two street segments where 24-hour automatic (machine) traffic counts were conducted. These streets were chosen for specific review as they primarily serve the residential areas surrounding the Project site.

Figure 8 illustrates the locations of the study street segments and existing weekday daily traffic volumes on these facilities.

Table 3: Existing Daily Traffic Volumes on Study Street Segments

Segment			No. of Lanes	Existing Daily Traffic Volumes
1	Orange Grove Avenue	Between Fountain Avenue and Santa Monica Boulevard	2	2,022
2	Ogden Drive	Between Fountain Avenue and Santa Monica Boulevard	2	1,976

3. PROJECT TRAFFIC

This section defines the estimated traffic generated by the proposed Project in a three-step process including trip generation, trip distribution, and trip assignment.

3.1 PROJECT TRIP GENERATION

Traffic volumes that are expected to be generated by the Project during the weekday a.m., midday, and p.m. peak hours and daily periods were estimated based on trip rates defined in the Institute of Transportation Engineers Trip Generation (10th Edition). Vehicle trips generated by existing uses that are currently active were applied to the gross trip generation estimates as trip credits. The trip rates and the traffic generation forecast for the proposed project are provided in Table 4.

Table 4: Project Trip Generation Estimates

Land Use	ITE Code	Intensity	Units	Daily Total	AM Peak			Midday Peak			PM Peak		
					Total	In	Out	Total	In	Out	Total	In	Out
Trip Generation Rates

Total				812	42	15	27	54	28	26	53	32	21

Trip generation rates based on ITE Trip Generation Manual, 10th Edition, Institute of Transportation Engineers, 2012, unless otherwise noted. Midday Peak rates from Peak Hour of Generator.

1. Quality Restaurant AM In/Out ratio from AM Peak Hour of Generator.

The Project is estimated to gross 1,217 weekday daily trips, including 59 weekday AM peak-hour trips, 75 weekday midday peak-hour trips, and 99 weekday PM peak-hour trips. Taking into consideration existing uses that would be removed and internal trip capture credits, the Project is estimated to generate a net total of 812 weekday daily trips including 42 weekday AM peak-hour trips, 54 weekday midday peak-hour trips and 53 weekday PM peak-hour trips.

3.2 PROJECT TRIP DISTRIBUTION

Trip distribution is the process of assigning the trips by direction to and from a project site. Trip distribution is dependent upon the land use characteristics of the project and the general location of land uses to which project trips would originate or terminate. Project trip distribution was based on the general geographic distribution of population and employment from which the project trips would originate or terminate as well as development trends in the area, local and sub-regional traffic routes, and regional traffic flows.

Figures 5A, 5B, 5C, and 5D illustrate the intersection trip distribution percentages by use and in/out direction for the proposed Project during the peak hour study periods.

3.3 PROJECT TRIP ASSIGNMENT

The final product is the trip assignment process, which takes a full accounting of project trips by direction and turning movement at the study intersections.

4. FUTURE 2026 WITHOUT-PROJECT CONDITIONS

This section provides an analysis of future traffic conditions in the study area with ambient growth and related area projects added but without the proposed Project. The year 2026 was selected for analysis based on the anticipated completion date of the Project.

4.1 AMBIENT GROWTH

For the analysis of background traffic during the Project opening year, an annual traffic growth rate of 1% was utilized to account for increase in area-wide traffic. This annual growth rate was confirmed with City of West Hollywood staff.

To apply this ambient growth rate to existing (year 2016) volumes, a growth factor of 1.10 was utilized. This factor provides a one percent annual increase over the ten-year period between existing conditions and future (year 2026) conditions.

4.2 RELATED PROJECTS

Based on data provided by West Hollywood and the surrounding cities, a list of area/related projects was compiled. These projects were considered to potentially contribute measurable traffic volumes to the study area during the future analysis period. The total number of related projects included within this traffic analysis was 125 projects (89 projects – City of West Hollywood and 36 projects – City of Los Angeles). These projects are all located within an approximate 1.5-mile radius from the Project site.

The related projects trip generation estimates were developed using trip generation rates from the Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition published in 2017, or defined by the project traffic studies.

Table 5 provides the related project trip generation calculations.

Table 5 - Area/Cumulative Projects Trip Generation

4.3 FUTURE WITHOUT PROJECT STREET SEGMENT ANALYSIS

Future without-Project traffic conditions were estimated based on the existing 24-hour traffic counts conducted on each study street segment, using an ambient growth of 1% per year to account for the increase in area-wide traffic within the ten-year period. Related project trip assignments were also included as some related projects are located near the study segments. The ambient growth applied would estimate the future traffic increase along the street segments due to "cut-through" traffic.

Table 6 summarizes the projected future street segment traffic volumes on the two study street segments.

Table 6: Future 2026 Without Project Daily Volumes on Study Street Segments

Segment			Existing Daily Traffic Volumes	Future w/o Project Daily Traffic Volumes
1	Orange Grove Avenue	Between Fountain Avenue and Santa Monica Boulevard	2,022	2,262
2	Ogden Drive	Between Fountain Avenue and Santa Monica Boulevard	1,976	2,189

5. FUTURE 2026 WITH PROJECT CONDITIONS

This section documents future traffic conditions in the study area and street segments with the addition of Project-generated traffic. Traffic volumes for these conditions were derived by adding Project trips to the future without-Project volumes.

5.1 FUTURE WITH PROJECT STREET SEGMENT ANALYSIS

The effects of the project on the surrounding neighborhood streets were analyzed. Project traffic assigned on the surrounding residential street segments were added to the future base conditions. Table 7 summarizes the future with project conditions on the two study street segments.

Table 7: Future 2026 With Project Daily Traffic Volumes on Study Street Segments

Segment			Existing Daily Traffic Volumes	Future w/o Project Daily Traffic Volumes	Project Only	Future w/ Project Daily Traffic Volumes	Increase (%)
1	Orange Grove Avenue	Between Fountain Avenue and Santa Monica Boulevard	2,022	2,262	105	2,367	4.6%
2	Ogden Drive	Between Fountain Avenue and Santa Monica Boulevard	1,976	2,189	15	2,204	0.7%

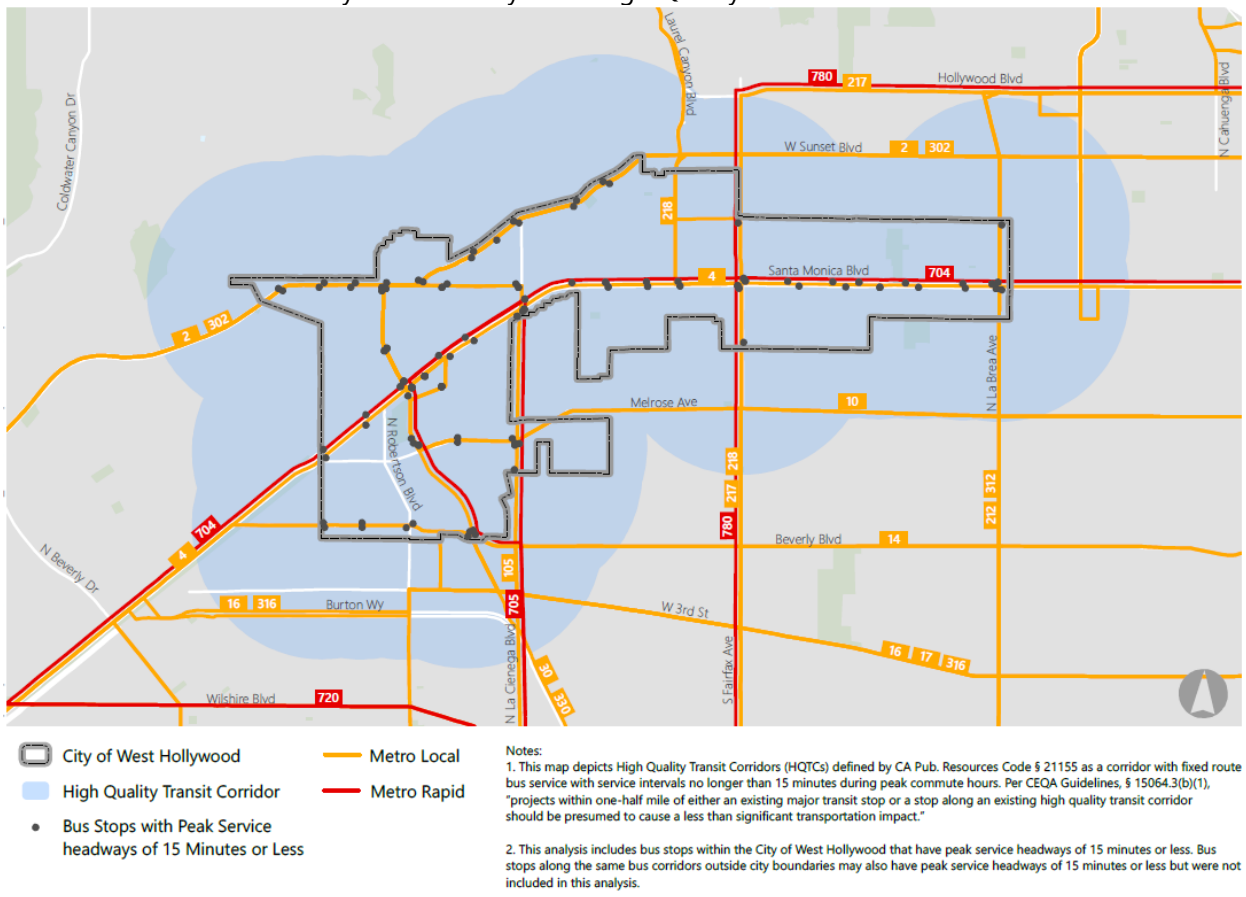
6. VMT ANALYSIS AND PROJECT IMPACTS

As discussed in Section 1, Vehicle Miles Traveled (VMT) is an estimate of the distance traveled by vehicles, which means that impacts are now based on the distance that vehicles travel to a proposed development and how many vehicles are making those trips. Projects located near amenities, transit, or other non-vehicular modes of transportation will generate lower VMT.

Consistent with the State's Office of Planning and Research guidelines, the City is presuming that projects proposed within ½-mile of an existing major transit stop or an existing stop along a high quality transit corridor (transit stop containing an existing rail transit station…or the intersection of two or more major bus routes with a frequency service interval of 15 minutes or less during the morning or afternoon peak commute period), will have a less than significant impact on VMT.

Per the Southern California Association of Governments (SCAG) and Los Angeles County Metropolitan Transportation Authority (Metro), the entire City of West Hollywood is within a high-quality transit area, meaning that all development projects will be screened out of conducting a VMT analysis.

City of West Hollywood High Quality Transit Corridors



Source: City of West Hollywood/Fehr & Peers, 2020

However, if a project meets any of the following, it would not be screened out of a VMT analysis: The Bond project does not meet any of the criteria listed; reasoning for this is provided below:

1. A project with a floor area ratio (FAR) of less than 0.75,

   The Project's FAR is 3.06, which is well above the FAR threshold of 0.75.

2. A project with more than the required number of parking spaces,

   The project is required to provide 183 spaces under the Zoning Code but would provide only 145 parking spaces through the use of an affordable housing incentive. Since the project is using a parking reduction allowed for sites with affordable housing, it is proposing to provide less than the required number of parking spaces.
   `

3. A project that is inconsistent with the applicable Sustainable Communities Strategy,

   As a mixed-use project located in a High-Quality Transit Corridor, The Bond project is consistent with the applicable Sustainable Communities Strategy.

4. A project that replaces affordable residential units with fewer, moderate- or high-income residential units,

   The project would result in the removal of 7 existing market rate housing units. However, the project would also result in the development of 95 residential units, including at least 8 very low income units and 8 moderate income units. As such, while existing housing units would be removed, they are not affordable housing units and they would be more than replaced by the proposed project.

5. A project with the potential for significant regional draw.

   The project proposes a mix of uses including hotel, restaurants, and residential uses and therefore would not require a skilled and specialized workforce to draw employees from greater distances in the region. More specifically, these are the types of uses that draw their employment base from the existing available workforce within the surrounding areas which results in a low VMT to access the project site due to both physical proximity and available transit options and alternate modes of transportation.

This project does not meet any of these categories, meaning that it is presumed that it will have a less than significant impact on VMT, per CEQA.

7. PARKING ASSESSMENT

This section documents the parking effects associated with the proposed Project. The parking analysis was based on the City of West Hollywood Municipal Code parking standards.

7.1 PARKING CODE REQUIREMENTS

Required parking for the project is established in Chapter 19.28 of the West Hollywood Municipal Code. Based on these requirements, the proposed project would be required to have 183 spaces. However, due to the project providing affordable housing units, the required parking may be reduced. The project would provide 145 total parking spaces, which is within the allowed reduction for affordable housing. Approximately 100 parking spaces would be dedicated to serve the project, and 45 flexible spaces that are included in the project are intended to replace the spaces the City currently leases in the existing on-site parking lot that are currently available for public use.

The project will also provide 37 bicycle parking spaces.

8. SITE ACCESS

This section summarizes the vehicle access, queuing, and pedestrian analysis for the proposed Project. The Project would provide two full-movement driveways, one on Orange Grove Avenue, and another, residential-only driveway on Ogden Drive. A third, ingress-only driveway will be provided along Santa Monica Boulevard.

8.1 VEHICLE DELAYS AND QUEUING

The Orange Grove Avenue driveway would be located approximately 250 feet north from the intersection of Santa Monica Boulevard and Orange Grove Avenue. The driveway would be located on the western side of the Project site and no new striped left-turn pocket is proposed on Orange Grove Avenue for vehicles entering the Project site; the travel lane would remain a shared-left-through lane. The roadway will continue to provide one traffic lane in each direction with on-street parking on both sides.

The Ogden Drive driveway would be located approximately 330 feet north from the intersection of Santa Monica Boulevard and Ogden Drive. The driveway would be located on the eastern side of the Project site and no new striped left-turn pocket is proposed on Ogden Drive for vehicles entering the Project site; the travel lane would remain a shared-left-through lane. The roadway will continue to provide one lane of traffic in each direction with on-street parking on both sides.

The Santa Monica Boulevard, ingress-only driveway would be in the approximate center of the site, equidistant from both Orange Grove Avenue and Ogden Drive. The driveway would be located on the southern side of the Project site and no new striped left-turn pocket is proposed on Santa Monica Boulevard Drive for vehicles entering the Project site; the travel lanes would remain in their pre-Project configuration. The roadway will continue to provide two lanes of traffic in each direction with on-street parking on both sides.

Vehicle Delay and Queuing

Vehicle queuing analysis was conducted to measure both on-site and off-site queuing issues and traffic delays at the driveways. Based on the methodology used in the traffic analysis, vehicle delay and queuing were measured under project conditions at the driveways. Table 8 shows the anticipated vehicle delay and 95th percentile queuing at the project driveways for entering and exiting vehicles during the peak periods.

Vehicle Delay

As Table 8 shows, the expected vehicle delays under future with project conditions would be 7 to 24 seconds (LOS A and C) for all time periods. Thus, the driveways are expected to operate well and with minimal delays.

Vehicle Queuing

On-street and driveway vehicle queuing were also analyzed. As Table 8 also shows, the vehicle queues due to project trips at all approaches are expected to be less than one vehicle during the peak hours. The project-related queues are not expected to cause any severe vehicle back-ups on either street or project driveways. As such, no major queuing issues are anticipated due to project traffic.

Appendix B shows the driveway delay and queuing worksheets.

Table 8: Project-Related Vehicle Delays and Queuing at Driveways

AM Peak Hour			
Driveway	Left Turn Movement	Delay (sec.) / LOS	Queuing (Vehicles)
		Future With Project	Future With Project
Orange Grove Avenue	Outbound (WB) LT	9.6 / A	< 1
	Inbound (SB) LT	7.3 / A	0
Ogden Drive	Inbound (NB) LT	7.5 / A	0
Santa Monica Boulevard	Inbound (EB) LT	18 / C	< 1
Midday Peak Hour			
Driveway		Delay (sec.)	Queuing (Vehicles)
		Future With Project	Future With Project
Orange Grove Avenue	Outbound (WB) LT	9.3 / A	< 1
	Inbound (SB) LT	7.3 / A	0
Ogden Drive	Inbound (NB) LT	7.3 / A	0
Santa Monica Boulevard	Inbound (EB) LT	19.3 / C	< 1
PM Peak Hour			
Driveway		Delay (sec.)	Queuing (Vehicles)
		Future With Project	Future With Project
Orange Grove Avenue	Outbound (WB) LT	9.5 / A	< 1
	Inbound (SB) LT	7.4 / A	0
Ogden Drive	Inbound (NB) LT	7.4 / A	0
Santa Monica Boulevard	Inbound (EB) LT	23.6 / C	< 1

Note: Delay and Vehicle Queue values are for each movement, not for the intersection as a whole. Proposed Project will restrict northbound-outbound movements from both Ogden Drive and Orange Grove Driveways.

8.2 PEDESTRIAN AND VEHICLE CIRCULATION

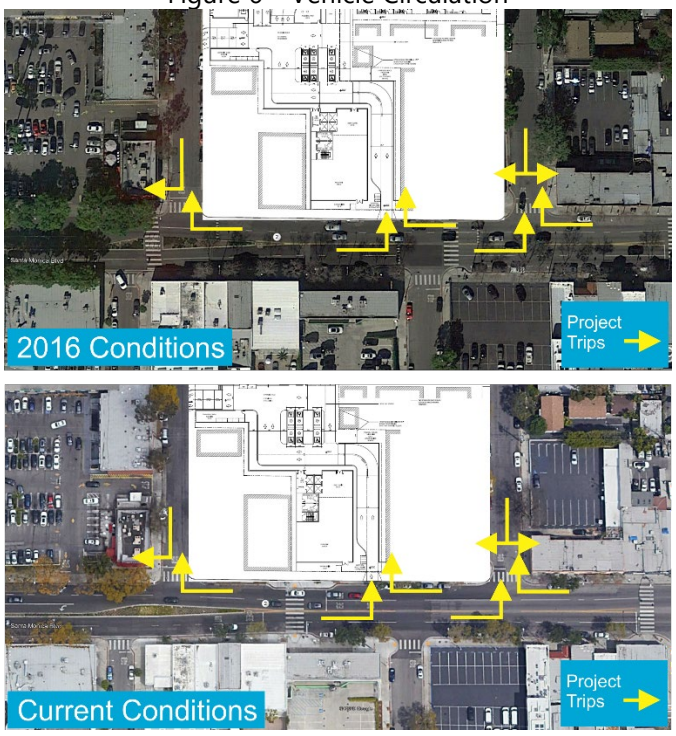
The nearby unsignalized intersections of Santa Monica Boulevard & Orange Grove Avenue and Santa Monica Boulevard & Ogden Drive both have striped crosswalks that provide for safe pedestrian movements across the intersections (east/west). The signalized intersection of Santa Monica Boulevard & Fairfax Avenue also provides crosswalks and pedestrian-phasing that allows for safe pedestrian movements. The Project will also not be adding any additional curb-cuts or driveways along Santa Monica Boulevard.

As of May 2016, when the original traffic counts were collected, Santa Monica Boulevard, along the project frontage, looked slightly different. As the image shows below, Orange Grove Avenue was restricted to not allow through movements across Santa Monica Boulevard, but there were two marked crosswalks. One crosswalk was on the west leg of Orange Grove Avenue and the other on the east leg of Ogden Drive (south jog).

Since then, the City improved that street block by replacing both crosswalks with a single marked crosswalk with a signal, which improve pedestrian visibility to vehicles. The new crosswalk is augmented with a curb extension on its north end and is located equidistant between Orange Grove Avenue and Ogden Drive (south jog).

The single crosswalk will not change project traffic circulation or access. As shown in the image below, project trip assignment would remain the same as it would have been with the two crosswalks.

Figure 6 – Vehicle Circulation



8.3 RIDESHARE AND PASSENGER LOADING AND UNLOADING

The project will accommodate passenger loading and unloading on-site. Should rideshare pick-up and drop-off activity become excessive and generate traffic issues on the residential portions of Orange Grove Avenue or Ogden Drive, the City will work with the owner to remedy those concerns.

9. CONSTRUCTION TRAFFIC

Construction Period Trip Generation Assumptions

The following assumptions were applied to the Project construction-period trip generation analysis. This information was provided by the City and Project applicant:

- Construction workers would total 62 persons
- Passenger vehicles traveling to and from the site daily would be 62
- 37 trucks per day are anticipated during peak construction

Table 9 provides the trip generation calculations that served as input to the traffic analysis within this report section. Truck trips were multiplied by a Passenger Car Equivalent (PCE) factor of 2.5, consistent with truck studies in the region.

Table 9: Construction Trip Generation Totals

TRIP GENERATION	AVERAGE DAILY TRIPS			AM PEAK HOUR						MIDDAY PEAK HOUR						PM PEAK HOUR					
				Truck Trips*		Employee Trips		Total Trips		Truck Trips*		Employee Trips		Total Trips		Truck Trips*		Employee Trips		Total Trips	
	Trucks*	Employee	Total	In	Out	In	Out	In	Out	In	Out	In	Out	In	Out	In	Out	In	Out	In	Out
Field Personnel	0	124	124	0	0	47	0	47	0	0	0	0	0	0	0	0	0	0	47	0	47
Contruction Truck	185	0	185	13	13	0	0	13	13	15	15	0	0	15	15	13	13	0	0	13	13
TOTAL TRIPS	**185**	**124**	**309**	**13**	**13**	**47**	**0**	**59**	**13**	**15**	**15**	**0**	**0**	**15**	**15**	**13**	**13**	**0**	**47**	**13**	**59**

** Truck trips include a Passenger Car Equivalency (PCE) factor of 2.5.*

Field Personnel - 62 total workers, assumed 75% of the construction work crew would travel to and from the site during AM and PM peak hours.

Trucks - Approximately 37 daily and up to five peak hour construction truck trips in the construction period. Both multiplied by PCE factor of 2.5. Assuming 8-hour workday.

During the peak of Project construction activities, employee and truck trips would total 309 trips daily, with 72 of those trips occurring during both the a.m. peak hour and the p.m. peak hour, and 30 occurring during the mid-day peak hour.

Trucks are expected to use the US-101 and I-10 freeways, as well as major arterial roadways, to access the project site. Workers are expected to travel to/from the site from the north (towards US-101), south, and east.

No construction-related traffic is expected to enter residential roadway segments.

10. ANALYSIS SUMMARY

The following summarizes the traffic study results and conclusions:

- The project is presumed to not result in any significant VMT impacts.
- A supplemental analysis was conducted. The study area includes two roadway segments.
- The project would consist of a 45-room hotel, 3,756 square feet of restaurant space, 1,381 square feet of art gallery space, and 95 apartment units. The Project is anticipated to be completed in 2026.
- The Project is estimated to generate 812 daily trips, of which 42 (15 in, 27 out) would occur during the a.m. peak hour, 54 (28 in, 26 out) would occur during the midday peak hour, and 53 (32 in, 21 out) would occur during the p.m. peak hour. These totals include credits from internal capture and for the former use at the site.
- The Future 2026 without Project traffic analysis included ambient growth through 2026 and the addition of traffic from 125 proposed area/cumulative projects within the cities of West Hollywood and Los Angeles.
- The project is required to provide 183 spaces under the Zoning Code but would provide only 145 parking spaces through the use of an affordable housing incentive. Since the project is using a parking reduction allowed for sites with affordable housing, it is proposing to provide less than the required number of parking spaces.
- Project construction would involve 62 daily construction worker employees and 37-trucks per day (up to five truck trips per hour) during the peak period of construction.
- No major queuing issues, severe delays, or back-ups were anticipated at all three Project driveways and City streets. Project pedestrian improvements along with the existing pedestrian infrastructure will continue to provide a safe local pedestrian travel network.

ITM Peak Hour Summary

Prepared by:

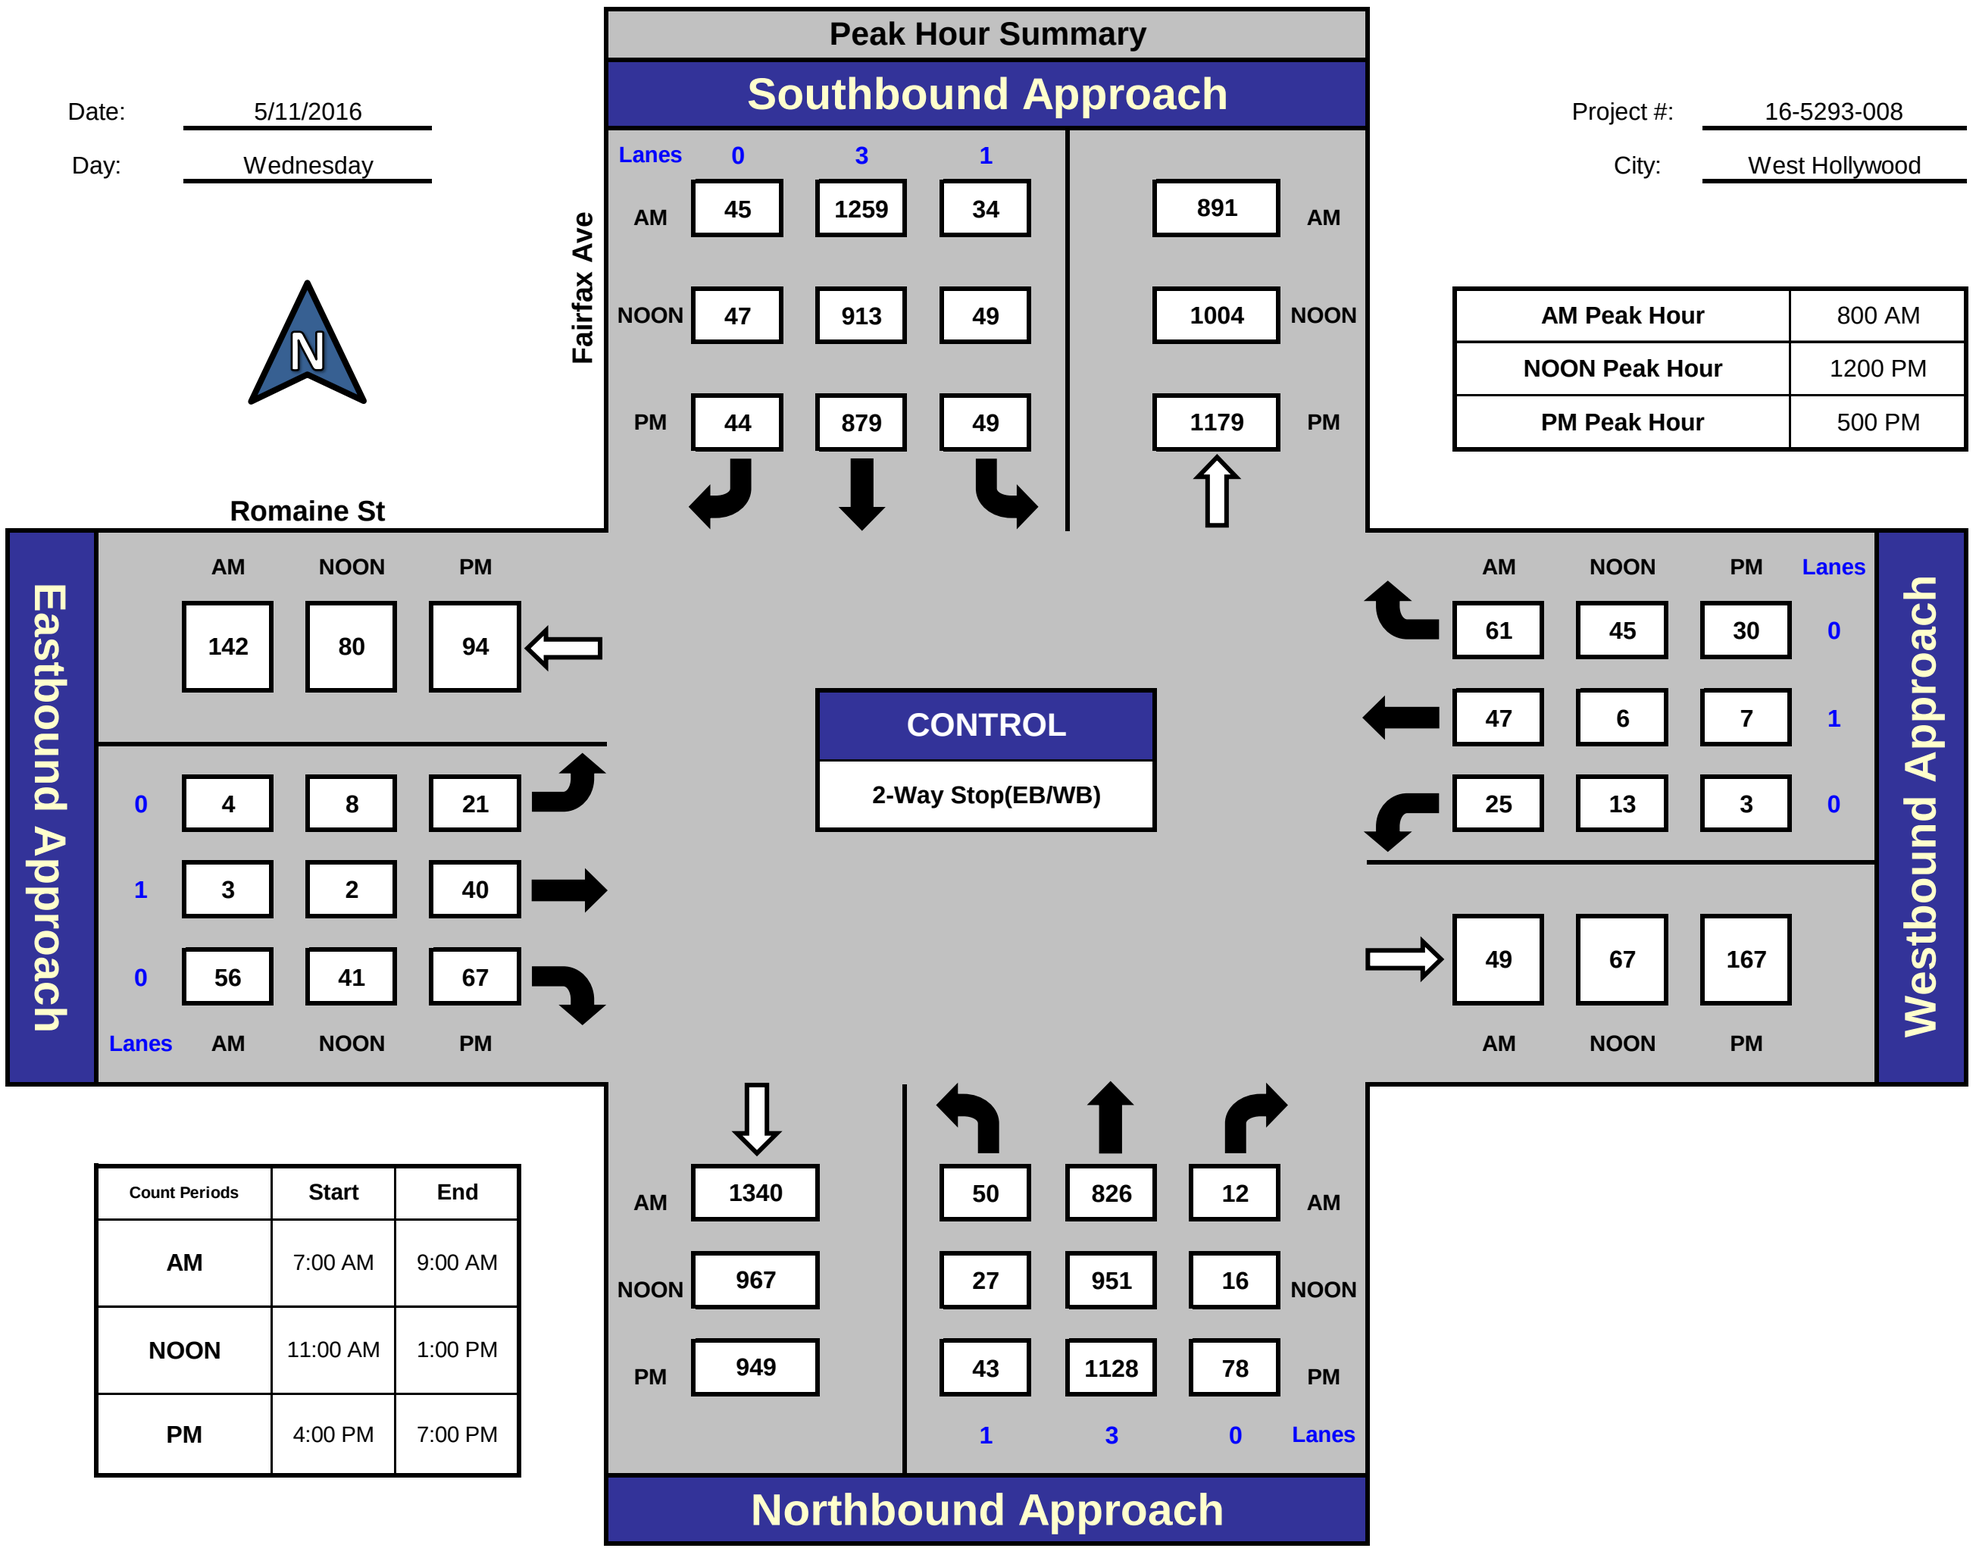
Fairfax Ave and Romaine St , West Hollywood

Date: 5/11/2016

Day: Wednesday

Project #: 16-5293-008

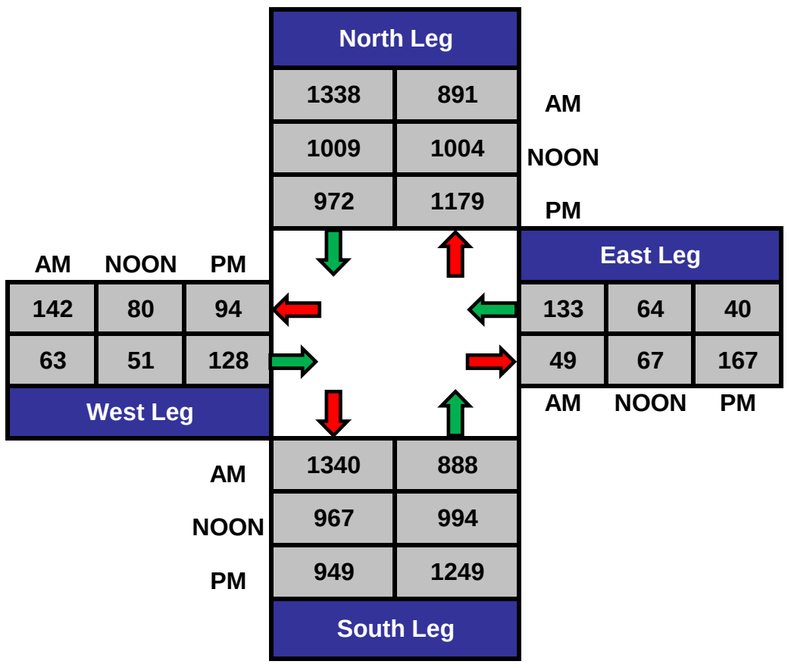
City: West Hollywood



AM Peak Hour	800 AM
NOON Peak Hour	1200 PM
PM Peak Hour	500 PM

Count Periods	Start	End
AM	7:00 AM	9:00 AM
NOON	11:00 AM	1:00 PM
PM	4:00 PM	7:00 PM

Total Ins & Outs



Total Volume Per Leg

RE: Santa Monica and Orange Grove Mixed-Use Project: Civil Engineering Initial Study Data

---

This memo summarizes the civil related technical studies needed to evaluate the Santa Monica and Orange Grove Mixed-Use project's impacts relating to surface hydrology, water supply, wastewater, and groundwater.

General

Existing Conditions

The existing site consists of six lots at 7811 Santa Monica Blvd, 1114 North Orange Grove Ave, and 1125 North Ogden Drive in the City of West Hollywood, California. The project site currently consists of existing commercial buildings, residential buildings, and parking lots. The project site is approximately 44,200 square feet (0.92 acres) and appears to be 100% impervious.

Proposed Conditions

The site will be developed into a mixed-use building consisting of two subterranean parking levels, ground level restaurant space, a 95 unit apartment complex, and a 45 room hotel. The development will span approximately to the property line and be six stories above grade.

Excavation Depths and Earthwork Volumes

The estimated depths of excavation expected for the subterranean parking and building foundations depths are approximately 27-34 feet below the finished surface on Santa Monica Boulevard. The assumed floor slab thickness is 5" with a 2" sand barrier per the Geotechnical Engineering Investigation report dated November 17, 2014 by Geotechnologies, Inc. The combined parking structure footprint is approximately 37,430 sq. ft.

The earthwork volume for the project was determined using Civil 3D software for AutoCAD. The net site earthwork as a result of the subterranean parking excavation will be approximately 44,300 cubic yards of cut/export. Assuming a 25 percent expansion factor, this equates to a hauled volume of 55,375 cubic yards. See rough grading plan and sections in Attachment A.

The soil export will be hauled to an acceptable location per local jurisdictions' Haul Route requirements. Since the project is in West Hollywood and adjacent to Los Angeles, it is likely that each jurisdiction will have haul route requirements.

Surface Hydrology

Existing Hydrology

Existing storm water runoff from the project site is conveyed via sheet flow and curb drains to the adjacent streets. The existing site is generally flat with a 1% slope to the west and a 3% slope to the south. The site is located within the Federal Emergency Management Agency (FEMA) Flood Zone X, which denotes an area where the potential for flooding is minimal. There are no surface water bodies in the project vicinity.

The existing site's total peak flow generated from a 50-year storm event is approximately 2.95 cubic feet per second (cfs) with 0.93 cfs flowing to Santa Monica Boulevard, 1.51 cfs flowing to North Orange Grove Ave, and 0.51 cfs flowing to North Ogden Drive. See Existing Hydrology Exhibit in Attachment B.

Proposed Hydrology

Storm water runoff from the Project site will be conveyed to the public streets via roof downspouts and site area and podium drains. The proposed development will decrease the existing impervious area by adding planting and landscaping around the site and upper levels. The existing peak flow of 2.95 cfs generated from a 50-year storm will be reduced by the proposed development to 2.87 cfs.

Existing Water Quality Management

Based on our research and existing records, there are currently no stormwater BMPs on the existing site.

Proposed Water Quality Management - Construction

Within the State of California, the National Pollutant Discharge Elimination System (NPDES) requirements mandate that stormwater Best Management Practices (BMPs) be implemented during project construction. These stormwater BMPs may include, but are not limited to: sandbag barriers, shaker plates, silt fences, fiber rolls, and street sweeping.

Proposed Water Quality Management-Project Implementation

Permanent post-construction stormwater management mitigation will be implemented per the County of Los Angeles Department of Public Works Low Impact Development Standards Manual, dated February 14, 2014.

LID (Low Impact Development) is a storm water management strategy with goals to mitigate the impacts of increased runoff and storm water pollution as close to its source as possible.

Considering the proposed development's subterranean footprint and lack of setbacks, we expect infiltration to be infeasible. Capture and reuse may be feasible to treat a portion of the stormwater, but will depend on overall landscaping. This option should be explored with the Architect and Landscape Architect. Preliminary calculations show the 85th Percentile rainfall flow and volume for the project site will be approximately 0.34 cfs and 2,580 cubic feet (cf), respectively. Based on these approximate values, 100% of the required treatment flow could be treated using biofiltration per the LA county LID manual. Biofiltration systems could be located throughout the project site where feasible. The design team should engage early in satisfying stormwater mitigation requirements.

Groundwater

Existing Groundwater

Existing Groundwater conditions are to be verified pending the completion of the project Geotechnical Investigation Report.

Proposed Groundwater Impacts

Impacts on groundwater due to subterranean parking excavation, including temporary and permanent dewatering will be confirmed pending the completion of the project Geotechnical Investigation Report.

Water Supply

There is an existing 12-inch water main on Santa Monica Blvd, which is owned and operated by the Los Angeles Department of Water and Power (LADWP). A flow and pressure report has been conducted by the LADWP, and is attached to this report. We anticipate a 6-inch fire water service, capable of delivering 1,400 gpm, and 6-inch domestic water service, capable of delivering 700 gpm, to serve the project. Based on the flow report, the 12-inch main has a static pressure of 93 psi and a residual pressure of 88 psi at a flow of 1400 gpm. See the LADWP Flow Test Results in Attachment C.

Currently there are no existing fire hydrants along the proposed project site's property frontage. This includes the north side of Santa Monica Blvd, the east side of Orange Grove Ave, and the west side of Ogden Drive. The project Architect and Civil Engineer should engage the County of Los Angeles Fire Department to determine if public or private fire hydrants are required to be installed as part of this project. If hydrants are required, the proposed hydrants must meet a minimum flow of 1,750 gpm at 20 psi per the LA County Fire Code requirement for a Type 1A building (assumed) with a proposed fire sprinkler system and the three largest successive building floors equating to 108,642 square feet.

For the purposes of this report we are assuming the total water usage per day will be equal to the total sewage discharge per day for the project. Based on the sewage discharge estimates in the next section we anticipate the daily water demand to be approximately 26,679 GPD as shown in the table below.

Anticipated Water Generation and Demand				
Facility Description	**Building Program**	**Units**	**Flow (gpd) per unit**	**Avg Load, Q_{AF} (gpd)**
Restaurant (Indoor)	230	Seat	30	6,900
Restaurant (Outdoor)	21	Seat	18	378
Hotel Amenity Space	2066	SF	0.5	1,033
Art Galley	1381	SF	0.02	28
Residential Lobby	1850	SF	0.08	148
Studio Apartments	46	Unit	80	3,680
1-Bedroom Apartments	21	Unit	120	2,5200
2-Bedroom Apartments	15	Unit	160	2,400
3-Bedroom Apartments	13	Unit	200	2,600
Hotel Lobby	1567	SF	0.08	125
Hotel Rooms	45	Room	130	5,850
Hotel Back-of-House	6211	SF	0.08	497
Fitness Area	650	SF	0.8	520
TOTAL				**26,679**

Wastewater (Sewer)

There is an existing 8-inch public sewer main that runs north to south on North Orange Grove Ave, and a 12-inch public sewer main that runs east to west on Santa Monica Blvd. A separate Sewer Capacity Study has been prepared for submittal and approval through West Hollywood Public Works. See separate "Sewer Capacity Study" report dated 04/05/2019.

Using the Sanitation District No. 4 Sewer Load Table and the proposed uses of the project, the following table was created outlining the total estimated proposed sewer load.

Anticipated Sewer Generation and Demand						
Facility Description	**Building Program**	**Units**	**Flow (gpd) per unit**	**Avg Load, Q_{AF} (gpd)**	**Avg Load, Q_{AF} (cfs)**	**Peak Flow, Q_{PF} (cfs)**
Restaurant (Indoor)	230	Seat	30	6,900	0.011	0.0267
Restaurant (Outdoor)	21	Seat	18	378	0.001	0.0015
Hotel Amenity Space	2066	SF	0.5	1,033	0.002	0.0040
Art Galley	1381	SF	0.02	28	0.000	0.0001
Residential Lobby	1850	SF	0.08	148	0.000	0.0006
Studio Apartments	46	Unit	80	3,680	0.006	0.0142
1-Bedroom Apartments	21	Unit	120	2,520	0.004	0.0097
2-Bedroom Apartments	15	Unit	160	2,400	0.004	0.0093
3-Bedroom Apartments	13	Unit	200	2,600	0.004	0.0101
Hotel Lobby	1567	SF	0.08	125	0.000	0.0005
Hotel Rooms	45	Room	130	5,850	0.009	0.0226
Hotel Back-of-House	6211	SF	0.08	497	0.001	0.0019
Fitness Area	650	SF	0.8	520	0.001	0.0020
TOTAL				**26,679**	**0.041**	**0.103**

Existing sewer loads and capacity were generated based on City of West Hollywood Requirements as laid out in the Sewer Flow Report (Appendix D). The following table summarizes the Sewer Capacity Study Results:

Sewer Analysis Summary Table		
	Orange Grove Ave	**Santa Monica Blvd**
Pipe Diameter	8-inch	12-inch
Slope	3.32%	0.32%
Manning N	0.013	0.013
50% Full Capacity	1.10 cfs	1.00 cfs
Monitored Daily Flow	0.020 MGD / 0.031 cfs	0.150 MGD / 0.232 cfs
Existing Peak Flow	0.077 cfs	0.580 CFS
Existing % Pipe Full	12.80%	11.60%
Additional Generated Peak Flow(cfs)	0.103	0.103
Total Proposed Peak Flow (cfs)*	0.188	0.691
Proposed % full*	**13.13%**	**12.60%**

***assuming entire project sewer load connects to single sewer**

Both the 8” sewer main in North Orange Grove Ave and the 12” sewer main in Santa Monica Blvd are below 50% full with the addition of the project’s proposed sewer loads, which meets City of West Hollywood requirements. The 8" sewer main in North Orange Grove Ave and the 12” sewer main in Santa Monica Blvd have adequate capacity for this project. See Attachment D for the complete Sewer Capacity Study.

Gas and Power

Gas for the project will be supplied by Southern California Gas. A will-serve letter from Southern California Gas Company can be found in Attachment F. Specific gas demands will need to be determined by the project plumbing engineer.

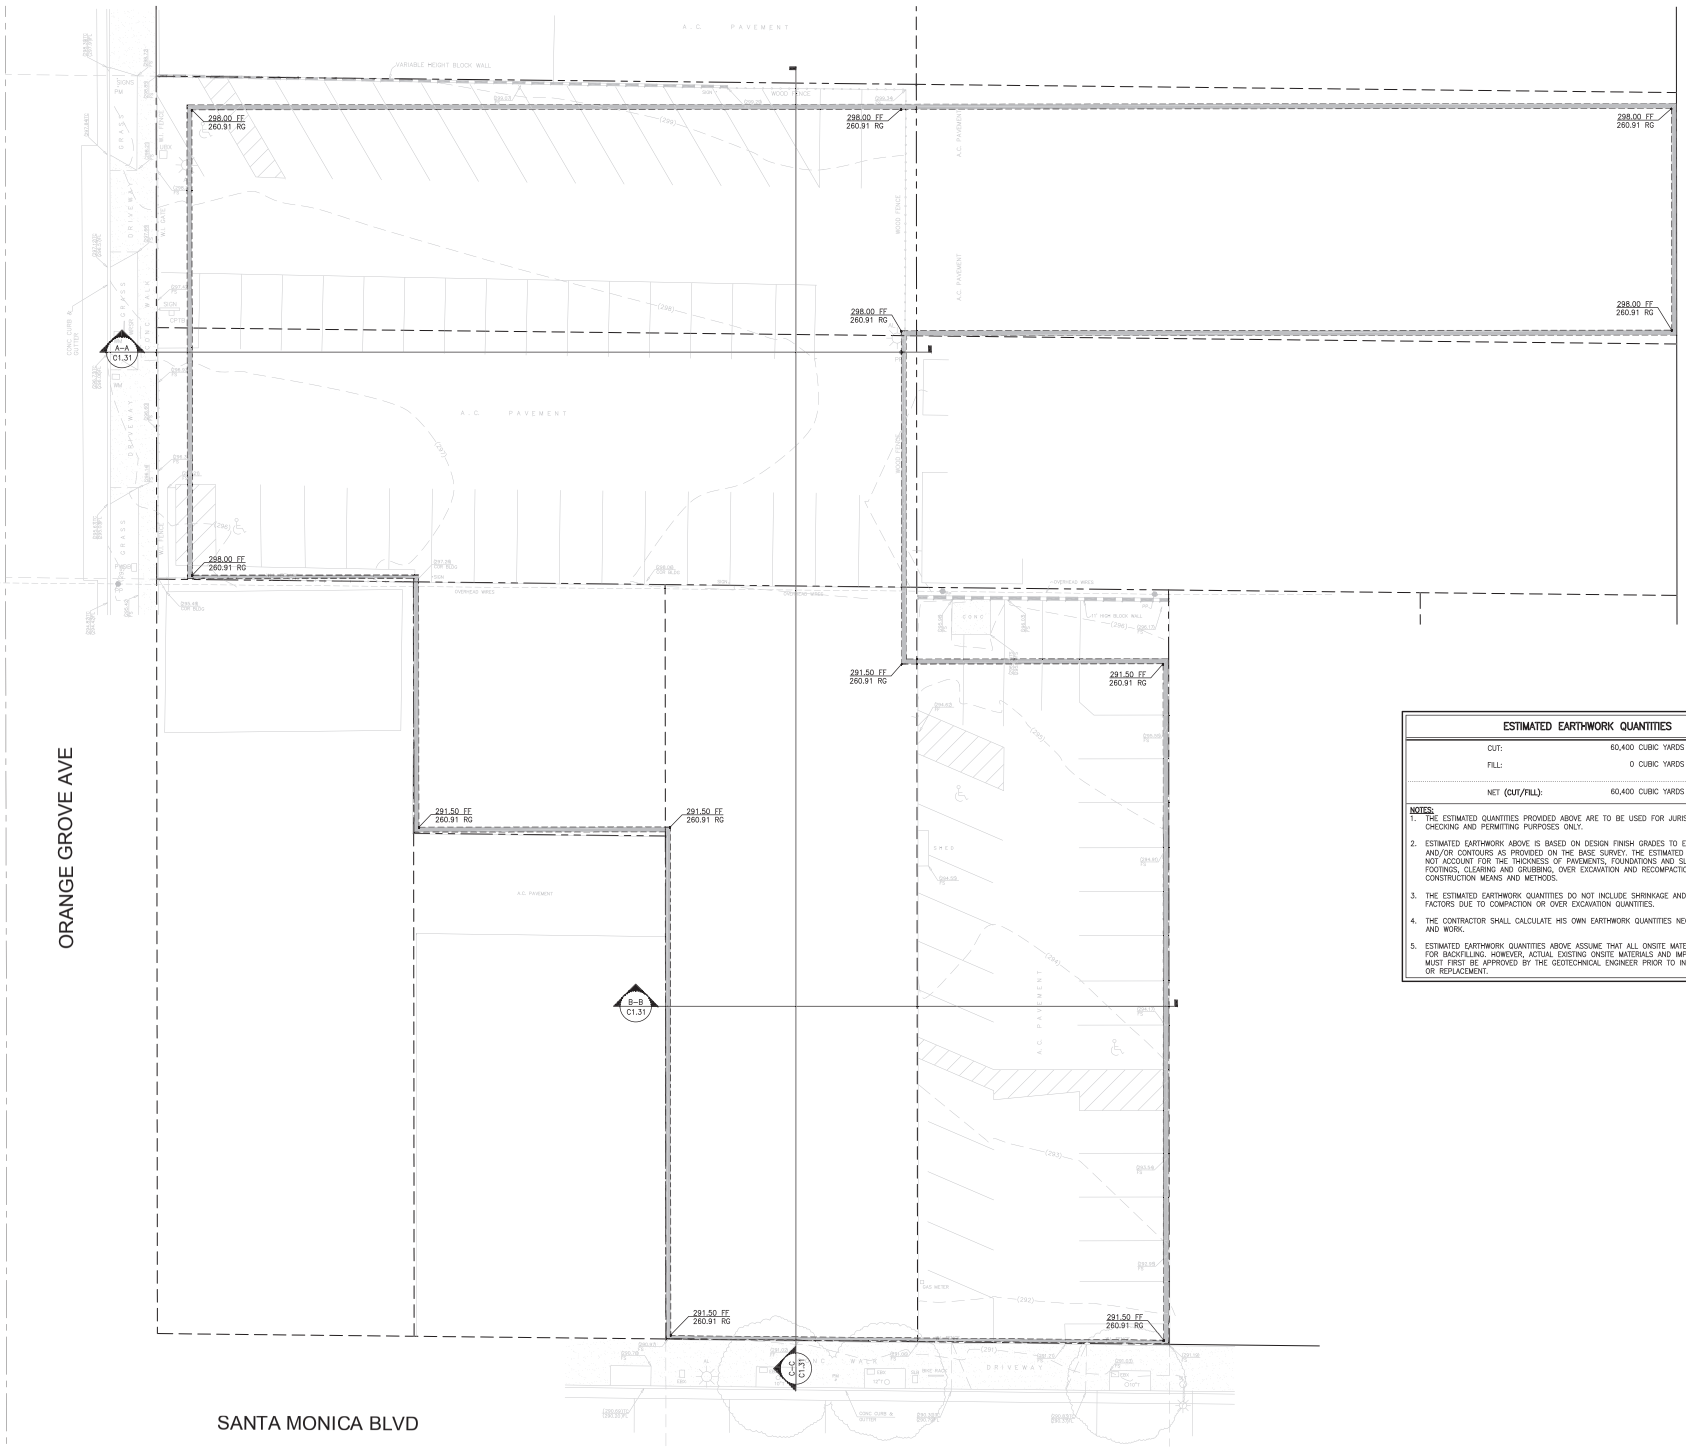
Electrical service will be supplied by Southern California Edison. A letter from Southern California Edison can be found in Attachment E. Specific electrical requirements for the project will need to be determined by the project electrical engineer.

Offsite Improvements

The limit of off-site improvements will be dependent upon the City’s requirements set forth in the Conditions of Approval, or similar documents. At a minimum, we expect the scope to include replacement of all curb, gutter, and sidewalk in property frontage. All offsite improvements will be handled through a separate permit with the City of West Hollywood.

ATTACHMENT A

ROUGH GRADING



ESTIMATED EARTHWORK QUANTITIES

CUT:	60,400 CUBIC YARDS
FILL:	0 CUBIC YARDS
NET (CUT/FILL):	60,400 CUBIC YARDS

NOTES:

1. THE ESTIMATED QUANTITIES PROVIDED ABOVE ARE TO BE USED FOR JURISDICTIONAL PLAN CHECKING AND PERMITTING PURPOSES ONLY.
2. ESTIMATED EARTHWORK ABOVE IS BASED ON DESIGN FINISH GRADES TO EXISTING GRADES AND/OR CONTOURS AS PROVIDED ON THE BASE SURVEY. THE ESTIMATED EARTHWORK DOES NOT ACCOUNT FOR THE THICKNESS OF PAVEMENTS, FOUNDATIONS AND SLABS ON GRADE, FOOTINGS, CLEARING AND GRUBBING, OVER EXCAVATION AND RECOMPACTION, AND CONSTRUCTION MEANS AND METHODS.
3. THE ESTIMATED EARTHWORK QUANTITIES DO NOT INCLUDE SHRINKAGE AND/OR EXPANSION FACTORS DUE TO COMPACTION OR OVER EXCAVATION QUANTITIES.
4. THE CONTRACTOR SHALL CALCULATE HIS OWN EARTHWORK QUANTITIES NECESSARY FOR HIS BID AND WORK.
5. ESTIMATED EARTHWORK QUANTITIES ABOVE ASSUME THAT ALL ONSITE MATERIALS ARE SUITABLE FOR BACKFILLING. HOWEVER, ACTUAL EXISTING ONSITE MATERIALS AND IMPORTED MATERIALS MUST FIRST BE APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO INSTALLATION, REMOVAL, OR REPLACEMENT.

ZONING INFORMATION

Listed below are Setback, Height, and Floor Space Area Restrictions as disclosed by applicable Zoning or Building Codes unless "None" is stated below. The source of this information is: Stephanie DeWolfe, City of West Hollywood; ph: 323-848-6475

Zoning Designation:
"CC2" COMMUNITY COMMERCIAL 2 DISTRICT

Building Height: 45 Feet or 4 Stories; Minimum Lot Area: 5,000 sq. ft.

Building Setbacks:
Front: 0
Street Side: 0
Side: 10 ft. if adjacent to a residential zone.
Rear: None

Parking Requirements: 3.5 spaces per 1,000 sq. f. for the first 25,000 sq. ft. plus 3 spaces for each additional 1,000 sq. ft. Handicapped: Per ADA requirements.

FLOOD ZONE

A FIELD SURVEY WAS NOT CONDUCTED TO DETERMINE THE FLOOD ZONE AREAS. ANY FLOOD ZONE LINES DISTINGUISHING BETWEEN FLOOD AREAS ARE GRAPHICALLY PLOTTED FROM FEMA FLOOD INSURANCE RATE MAPS (FIRM). A FLOOD ELEVATION CERTIFICATE MAY BE NEEDED TO DETERMINE OR VERIFY THE LOCATION OF THE FLOOD AREAS. THE SUBJECT PROPERTY'S COMMUNITY DOES PARTICIPATE IN THE PROGRAM. IT IS DETERMINED THAT THE SUBJECT PROPERTY RESIDES IN THE FOLLOWING FLOOD ZONE(S) "X + AS DETERMINED BY OR SHOWN BY FIRM COMMUNITY PANEL NO. 06037C1605F DATED 9/26/2008 AND IS NOT IN A SPECIAL FLOOD ZONE. THE FLOOD INSURANCE RATE PROGRAM WAS CONTACTED ON 11/4/2015 BY TELEPHONE OR EMAIL (www.fema.gov)

N4 *THE TABLE BELOW DESCRIBES THE TYPE AND NUMBER OF PARKING STALLS ENTIRELY WITHIN PROPERTY BOUNDARY. STALLS THAT ARE PARTIALLY WITHIN BOUNDARY ARE LISTED UNDER THE HEADING "PARTIAL". PARTIAL STALLS ARE NOT COUNTED IN THE TOTAL*

PARKING				
REGULAR	HANDICAPPED	GARAGE	PARTIAL	TOTAL
0	N/A	N/A	N/A	0

N5 *THERE WAS NO OBSERVABLE EVIDENCE OF EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILD ADDITIONS WITHIN RECENT MONTHS.*

N6 *THERE WAS NO CHANGES IN STREET RIGHT-OF-WAY LINES EITHER COMPLETED OR PROPOSED, AND AVAILABLE FROM CONTROLLING JURISDICTION OR EVIDENCE OF RECENT STREET OR SIDEWALK CONSTRUCTION REPAIRS.*

N7 *THERE WAS NO OBSERVABLE EVIDENCE OF SITE USE AS A SOLID WASTE DUMP, SUMP, SANITARY LANDFILL OR CEMETERY. NOTE: THERE IS AN EXISTING CEMETERY ABUTTING THE SOUTHERLY LINE OF TRACT 1, AS SHOWN HEREON.*

N8 *NO EVIDENCE OF POTENTIAL WETLANDS WERE OBSERVED ON THE SUBJECT PROPERTY AT THE TIME OF THE SURVEY WAS CONDUCTED, NOR HAVE WE RECEIVED ANY DOCUMENTATION OF ANY WETLANDS BEING LOCATED ON THE SUBJECT PROPERTY.*

N9 *THIS SURVEY MAP CORRECTLY REPRESENTS THE FACTS AT THE TIME OF THE SURVEY.*

N10 *THERE ARE NO DISCREPANCIES BETWEEN THE BOUNDARY LINES OF THE PROPERTY AS SHOWN ON THIS SURVEY MAP AND AS DESCRIBED IN THE LEGAL DESCRIPTION PRESENTED IN THE TITLE COMMITMENT.*

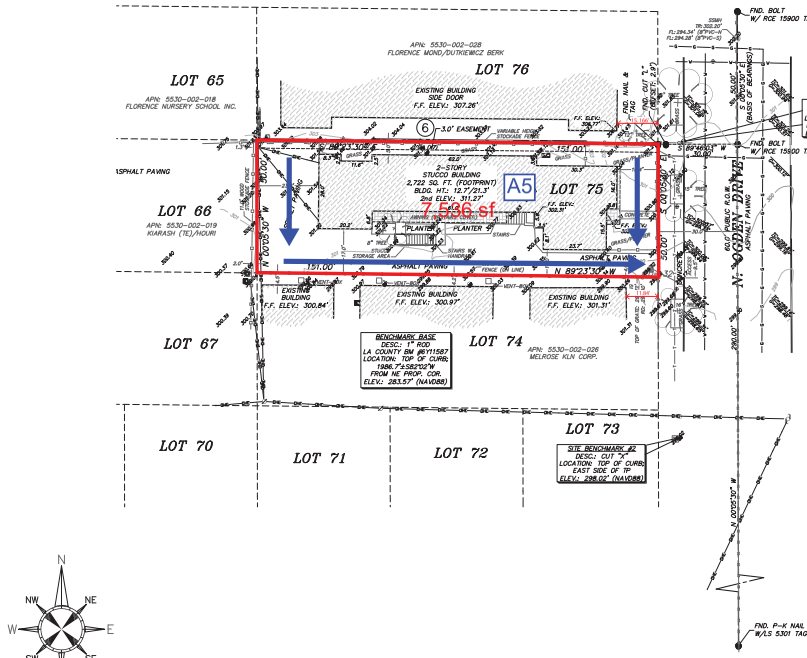
N11 *THE BOUNDARY LINES OF THE PROPERTY ARE CONTIGUOUS WITH THE BOUNDARY LINES OF ALL ADJOINING STREETS, HIGHWAYS, RIGHTS OF WAY AND EASEMENTS, PUBLIC OR PRIVATE, AS DESCRIBED IN THEIR MOST RECENT RESPECTIVE LEGAL DESCRIPTIONS OF RECORD.*

N12 *THE SUBJECT PROPERTY:*
APN: 5530-002-027; OWNER(S): VIKEN & APELIA MOURADIAN; CONTAINS: 7,549± SQUARE FEET OR 0.1733± ACRES, MORE OR LESS.

N13 *ELEVATIONS SHOWN HEREON ARE BASED ON NAVD88 DATUM.*

UTILITY NOTE

The aboveground utilities shown have been located from field survey information only. The surveyor makes no guarantee that the utilities shown comprise all such utilities in the area, either in service or abandoned. The surveyor further certifies that they are located as accurately as possible from the field information obtained. Subsurface utilities shown are per field evidence and/or obtain plans. The survey does not guarantee that the lines depicted actually exist.



LEGAL DESCRIPTION(S)

All that certain real property situated in the County of Los Angeles, State of California, described as follows:

Lot 75 of the Hollywood Valley View Tract, in the City of West Hollywood, County of Los Angeles, State of California, as per map recorded in Book 10, Page 192 of Maps, in the office of the County Recorder of said County.
Assessor's Parcel Number: 5530-002-027

The above described land and shown hereon, is the same as described in Lawyers Title Company's Preliminary Report No. 115083560, bearing an effective date of: N/A.

SURVEY RELATED ITEMS CORRESPONDING TO SCHEDULE B TITLE COMMITMENT

The following is the same as noted in the title report prepared by Lawyers Title Company's Preliminary Report No. 115083560.

(2) *2. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, sexual orientation, familial status, marital status, disability, handicap, national origin, ancestry, source of income, gender, gender identity, gender expression, medical condition or genetic information, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document Recording No: In Book 474, Page 307 and in Book 482, Page 186, both of Deeds. AFFECTS AND THE PROPERTY IS SUBJECT TO THE CONDITIONS AS SET FORTH WITH DOCUMENT. BLANKET IN NATURE; NOT PLOTTABLE.*

(3) *3. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, sexual orientation, familial status, marital status, disability, handicap, national origin, ancestry, source of income, gender, gender identity, gender expression, medical condition or genetic information, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document Recording No: in Book 4056, Page 97, of Deeds. AFFECTS AND THE PROPERTY IS SUBJECT TO THE CONDITIONS AS SET FORTH WITH DOCUMENT. BLANKET IN NATURE; NOT PLOTTABLE.*

(4) *4. Easement(s) for the purpose(s) shown below and rights incidental thereto as reserved in the above document; Purpose: Pipe lines. Affects: a Portion of said land. NO DOCUMENT NOTED AND/OR PROVIDED.*

(6) *6. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document: In favor of: The Pacific Telephone and Telegraph Company; Purpose: Underground telephone, telegraph and communication structures; Recording Date: November 17, 1964; Recording No: 4739, of Official Records; Affects: the Northerly 3 feet of said land. AFFECTS AND PLOTTED HEREON.*

(7) *7. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document. Redevelopment Agency: City of West Hollywood, Recording Date: June 12, 1997; Recording No: 97-878019, of Official Records; and Recording Date: November 28, 2007; and Recording No: 20072619385, of Official Records. AFFECTS; NON-SURVEY ISSUE AND NOT PLOTTABLE.*

Map No. 144-177

Mr. James Rice
KPFF Consulting Engineers
6080 Center Drive, Suite 700
Los Angeles, California 90045

Dear Mr. Rice:

Subject: Water Availability – Will Serve
1114 North Orange Grove Avenue, 7811 Santa Monica Boulevard
APN: 5530-002-019, 5530-002-067, Hollywood Valley View Tract, Lots 66 and 67
Lot N 50 ft. of Lot 69 and all of Lots 70 and 71

This is in reply to your request regarding water availability for the above-mentioned property. This property can be supplied with water from the municipal system subject to the Water System rules of the Los Angeles Department of Water and Power (LADWP). It is also subject to all conditions set by LADWP.

Should you require additional information, please contact Ms. Dolores Welsh at (213) 367-1301. Correspondence may be addressed to:

LADWP
P.O. Box 51111, Room 1425

APPENDICES

Appendix A	Project Vicinity Map
Appendix B	City of West Hollywood Zoning Map and General Land Use Plan
Appendix C	City of West Hollywood Master Plan of Sewers and Sewer Facilities Data
Appendix D	City of West Hollywood Sewer Capacity Study Requirements & LA County Sanitation District No. 4 Mean Loading Table
Appendix E	Hydraulic Calculations
Appendix F	Utility Systems Science & Software Sewer Flow Monitoring Report

1. Project Description

The Santa Monica and Orange Grove project consists of the design and construction of a mixed-use development at 7811 Santa Monica Blvd, 1114 North Orange Grove Ave, and 1125 North Ogden Drive in the City of West Hollywood, California. The development site currently consists of existing commercial buildings, residential buildings, and parking lots. The site is zoned Commercial, Community 2 (CC2) and Residential, Multi-Family Medium-Density (R3B) per the City of West Hollywood Zoning Map and General Land Use Plan (Appendix B). All existing buildings and hardscape will be removed as part of the proposed project, which includes three parking levels, ground level restaurant space, an 82 unit apartment, and a 74 room hotel.

2. Site Description

The existing site consists of size lots at 7811 Santa Monica Blvd, 1114 North Orange Grove Ave, and 1125 North Ogden Drive in the City of West Hollywood, California. The project site is approximately 44,200 square feet (0.92 acres) and appears to be 100% impervious. Refer to Appendix A for the Project Vicinity Map.

3. Existing Sewer Analysis

Per the City of West Hollywood Master Plan of Sewers and Sewer Facilities Data (Appendix C), there is an existing 8-inch public sewer main that runs north to south on North Orange Grove Ave, and a 12-inch public sewer main that runs east to west on Santa Monica Boulevard. As requested by the City of West Hollywood, a sewer manhole on North Orange Grove Ave was examined to ensure that the proposed project will not overload any sewer lines. Flow monitoring radars were installed in the manhole and data was collected over a one-week period, from October 25, 2014 to November 2, 2014. (See Appendix F for sheets from the Sewer Flow Monitoring Report compiled by Utility Systems Science & Software.)

Pipe Capacity (Q_{CAP}) was calculated using Manning's Formula, per City of West Hollywood Sewer Capacity Study Requirements (Appendix D). See Appendix E for pipe hydraulic calculations.

8-inch sewer on North Orange Grove Ave:

$$Q_{CAP} = 1.09\ CFS$$

12-inch sewer on Santa Monica Blvd:

$$Q_{CAP} = 1.00\ CFS$$

Peak flow (Q_{PF}) rate was calculated by taking the measured average daily flowrate, multiplied by a factor of 2.5, per City of West Hollywood Requirements, (Appendix D). The

average measured flow for the manhole on North Orange Grove, during the one-week period was 0.020 MGD, or 0.031 CFS:

$$Q_{PF} = 2.5 * 0.031\ CFS = 0.077\ CFS$$

4. Proposed Flow Generation

The anticipated sewer load generation for the proposed development was calculated using the County Sanitation District No. 4 of Los Angeles Mean Loading Table (see Appendix D).

Anticipated Sewer Generation and Demand						
Facility Description	**Building Program**	**Units**	**Flow (gpd) per unit**	**Avg Load, Q_{AF} (gpd)**	**Avg Load, Q_{AF} (cfs)**	**Peak Flow, Q_{PF} (cfs)**
Restaurant (Indoor)	230	Seat	30	6,900	0.011	0.0267
Restaurant (Outdoor)	21	Seat	18	378	0.001	0.0015

Office/Admin	2,001	SF	0.15	300	0.000	0.0012
TOTAL				26,401	0.041	0.102

5. Results

Below is a summary of the existing sewer analysis, additional generated load, and future condition hydraulics.

Sewer Analysis Summary Table	
	Orange Grove Ave
Pipe Diameter	8-inch
Slope	3.32%
Manning N	0.013
50% Full Capacity	1.09 cfs
Monitored Daily Flow	0.020 MGD / 0.031 cfs
Existing Peak Flow	0.077 cfs
Existing % Pipe Full	12.80%
Additional Generated Peak Flow(cfs)	0.102
Total Proposed Peak Flow (cfs)*	0.179
Proposed % full*	**19.30%**

***assuming entire project sewer load connects to single sewer**

Based on the results in the table above the 8" main has adequate capacity for our project. The 8" main leads into a 12" main located in Santa Monica Blvd. Given that the project's impact on the 8" main is very minimal it is assumed that the 12" main will also have capacity for the project.

APPENDIX D

City of West Hollywood Sewer Capacity Study
Requirements & LA County Sanitation District No. 4
Mean Loading Table

City of West Hollywood
California 1984

City of West Hollywood
Department of Public Works
Engineering Division

Sewer Capacity Study Requirements

1. The sewer capacity study shall be certified by a California licensed Civil Engineer.

2. Project Description: The study should have a project description describing what is being proposed on the development site. The current land uses and proposed land uses of the development shall also be indentified.

3. Site Description: The site description shall describe the project's location, the approximate acreage of the project site, and contain a vicinity map to identify the project's location.

4. Existing Sewer Pipe Capacity Analysis: This section shall identify any existing connections to the sewer system. A 7-day flow monitoring study will be required to obtain the existing flow capacity. This shall be done at the downstream sewer manhole, or at a location that makes sense to adequately determine existing flow capacity. Additional monitoring locations may be required to verify downstream capacity of the local sewer network as well as if the project will connect to a nearby trunk line. The City of Los Angeles sewers located downstream may be impacted by a proposed development project. Therefore, the sewer study may need to include monitoring locations in the City of Los Angeles. The existing average daily flow (Q_{exist}) and peak flow shall be determined in cubic feet per second.

5. Proposed Flow Generation: This section shall include the proposed land use(s). Flow generation shall be determined by the user category that most closely matches the County Sanitation District No. 4 of Los Angeles County mean loading table. This will determine your average daily flow (Q_{AF}) in gallons per day (gpd) that shall then be converted to cubic feet per second (cfs).

   The City of West Hollywood was an unincorporated area of Los Angeles County until 1984; therefore the sewer system was designed to the County of Los Angeles Department of Public Works standards, where all pipes are designed for peak flow.

   $n = 0.013$
   $D/d \leq 0.50$ for $d \leq 15$"
   $D/d \leq 0.75$ for $d > 15$"

   These assumptions will determine the Q_{cap} = Sewer pipe capacity.

The peak flow (Q_{PF}) for this study shall be calculated in cubic feet per second (cfs) by $Q_{PF} = 2.5 \times Q_{AF}$ where 2.5 is the peaking factor used to determine the maximum peak flow rate for sewer diameters less than 15". The peaking factor shall be 2.0 for diameters greater than 15".

6. Conclusion: The conclusion shall identify the sewer capacity of the pipe as a flow rate (Q_{cap}). The calculations shall demonstrate that the sewer mainline has the capacity for the existing flow and the added flow at average and peak conditions. If the sewer is found to be inadequate, recommendations shall be provided to handle the increase in sewer flow. If this is a large site that has several sewer connection options, the conclusion shall address those options and make a recommendation for the project. The recommendations will be incorporated into the mitigation measures for the project.

AN ORDINANCE PRESCRIBING THE CONNECTION FEE RATE AND MEAN LOADINGS PER UNIT OF USAGE FOR COUNTY SANITATION DISTRICT NO. 4 OF LOS ANGELES COUNTY

THE BOARD OF DIRECTORS OF COUNTY SANITATION DISTRICT NO. 4 OF LOS ANGELES COUNTY ORDAINS AS FOLLOWS:

SECTION 1.0 - USER CATEGORIES AND MEAN LOADINGS

Pursuant to Section 3.03(2) of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the following shall constitute the User Categories and mean loadings per Unit of Usage for flow, Biochemical Oxygen Demand (BOD), and Suspended Solids:

USER CATEGORY	UNIT OF USAGE	FLOW (Gallons per Day)	BOD (Pounds per Day)	SUSPENDED SOLIDS (Pounds per Day)
Acupuncture Office/Clinic	1000 Sq.Ft.	150	0.16	0.10
Arcade - Video Games	1000 Sq.Ft.	80	0.10	0.10
Auditorium	Seat	4	0.01	0.01
Auto Parking	1000 Sq.Ft.	20	0.03	0.03
Auto Body/Mech. Repair Shop	1000 Sq.Ft.	80	0.12	0.19

SECTION 2.0 - CONNECTION FEE RATE

Pursuant to Section 3.02 of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the Connection Fee Rate shall be $1,710.00 per capacity unit.

SECTION 3.0 - COST ALLOCATION FACTORS

Pursuant to Section 3.03(2) of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the proportions of the capital improvement component of the connection fee rate which are attributable to flow, BOD, and Suspended Solids, designated as X, Y, and Z, respectively, shall be:

X = 0.6567 Y = 0.1992 Z = 0.1441

SECTION 4.0 - BASIC RESIDENTIAL UNIT

Pursuant to Section 3.03(2) of the *Master Connection Fee Ordinance for County Sanitation District No. 4 of Los Angeles County*, the loadings from a basic residential unit shall be:

$Flow_{bru}$	=	260 gallons per day of Wastewater flow
BOD_{bru}	=	0.466 pounds per day of BOD
SS_{bru}	=	0.445 pounds per day of Suspended Solids.

SECTION 5.0 - EFFECTIVE DATE

This Ordinance shall become effective on July 1, 1999.

Chairperson, Board of Directors
County Sanitation District No. 4
of Los Angeles County

ATTEST:

Clerk, Board of Directors
County Sanitation District No. 4
of Los Angeles County

SOUTHERN CALIFORNIA EDISON
PROCESS EXPLANATION LETTER

Will Serve Letter Only

SOUTHERN CALIFORNIA EDISON
An *EDISON INTERNATIONAL* Company

June 8, 2015

KPFF Consulting Engineers

Will serve letter - 7811 Santa Monica Blvd. and 1114 North Orange Grove Ave., West Hollywood

Your project is located in Southern California Edison (SCE) service territory. SCE will serve the above subject project's electrical requirements per the California Public Utilities Commission and Federal Energy Regulatory Commission tariffs.

SCE may need to conduct utility studies, where applicable, to assess whether additions or modifications to the existing electric infrastructure are required to serve this project. Where applicable, SCE has attached Appendix (B) which not only describes the study, and permitting, but includes a Project Information Sheet that will need to be completed by you and submitted to SCE if your project is at a point where SCE has to determine the required electrical utility work. This Will-Serve letter does not imply that either: (i) these studies have been completed, or (ii) that any required California Environmental Quality Act (CEQA) analysis of project-related electric utility impacts has been conducted.

I am the SCE Design Representative currently assigned to this project. SCE or Applicant will design and construct all required electrical infrastructure to serve this project provided you enter into the applicable contractual agreements with SCE identify scope of electrical utility work required, and supply the following information:

- Site plans as required
- Required contracts and agreements (fully executed)
- Applicable fees
- Local permits
- Required easement documents

Your project will be scheduled for construction once SCE has all the necessary information for your project and you have submitted or agreed to the applicable requirements as stated above, and paid any necessary fees.

If your project will not require SCE services, please notify us so that we can update our records.

SCE appreciates your business. If you have any questions, please feel free to call me at (310) 315-3220.

Sincerely,

SCE Design Representative

Appendix B

SOUTHERN CALIFORNIA EDISON

An *EDISON INTERNATIONAL* Company

June 8, 2015

KPFF Consulting Engineers

7811 Santa Monica Blvd. and 1114 North Orange Grove Ave., West Hollywood

As your Southern California Edison (SCE) Design Representative for this project, I am committed to providing you with excellent customer service. The following information is intended to help explain SCE's planning and permitting process for the electric infrastructure needed to serve your Project.

Depending on the scope of work necessary to serve your project (electric facility installation, removal, relocation, rearrangement and/or replacement), it may be necessary for you to submit an Advanced Engineering Fee. This Fee will be applied to certain expenses associated with preliminary design and engineering work required to estimate the cost for SCE to perform the electric work associated with your project. Please note: Depending on factors such as resource constraints, construction or relocation of SCE facilities requirements, the need for environmental review, and so forth, delays in meeting your projected completion date may occur. To help minimize the potential for delays it is imperative that you provide all requested information as early as possible.

If the project results in the need for SCE to perform work on SCE electrical facilities that operate at between 50 and 200 kilovolts (kV), please be advised these facilities are subject to the California Public Utilities Commission's (CPUC's) General Order 131-D (GO 131-D) Permit to Construct (PTC) requirements. For the CPUC PTC review, the CPUC acts as the lead agency under the California Environmental Quality Act (CEQA). Depending on the scope of SCE's work, certain exemptions to the PTC requirements may be available. If no exemptions are available, the PTC application preparation and environmental approval process could take a minimum of 24 - 48 months.

If you anticipate that your project will require work to be performed on SCE electrical facilities operated at between 50 kV and 200 kV, please inform me at your earliest possible convenience for further assistance to determine the potential G.O.131-D permitting requirements and/or permitting exemption(s).

In order for SCE to determine the required electrical utility work necessary to support your project, and to determine any permitting requirements and costs associated with constructing these facilities, project plans and a completed Customer Project Information Sheet will need to be submitted.

If you have any additional questions, please feel free to call me at (310) 315-3220.

Sincerely,

SCE Design Representative

SOUTHERN CALIFORNIA GAS WILL SERVE LETTER

Southern California Gas Company

A Sempra Energy utility®

June 3, 2015

KPFF Consulting Engineers
6080 Center Drive, Suite 700
Los Angeles, CA 90045

Attn: James Rice

RE: Will Serve Letter Request for – Job I.D. #43-2015-05-00015
7811 Santa Monica Blvd; 1114 North Orange Grove Ave, West Hollywood

Dear Mr. Rice:

Thank you for inquiring about the availability of natural gas service for your project. We are pleased to inform you that Southern California Gas Company (SoCalGas) has facilities in the area where the above named project is being proposed. The service would be in accordance with SoCalGas' policies and extension rules on file with the California Public Utilities Commission (Commission) at the time contractual arrangements are made.

This letter should not be considered a contractual commitment to serve the proposed project, and is only provided for informational purposes only. The availability of natural gas service is based upon natural gas supply conditions and is subject to changes in law or regulation. As a public utility, SoCalGas is under the jurisdiction of the Commission and certain federal regulatory agencies, and gas service will be provided in accordance with the rules and regulations in effect at the time service is provided. Natural gas service is also subject to environmental regulations, which could affect the construction of a main or service line extension (for example, if hazardous wastes were encountered in the process of installing the line). Applicable regulations will be determined once a contract with SoCalGas is executed.

If you need assistance choosing the appropriate gas equipment for your project, or would like to discuss the most effective applications of energy efficiency techniques, please contact our area Service Center at 800-427-2200.

Thank you again for choosing clean, reliable, and safe natural gas, your best energy value.

Sincerely,

Zakee Singleton

Subject: Will Serve - 5530-002-019 & 5530-002-067 7811 Santa Monica Blvd and 1114 North Orange Grove Ave West Hollywood, CA 90046

Thank you for inquiring about the availability of natural gas service for your project. We are pleased to inform you that Southern California Gas Company (SoCalGas) has facilities in the area where the above named project is being proposed. The service would be in accordance with SoCalGas' policies and extension rules on file with the California Public Utilities Commission (CPUC) at the time contractual arrangements are made.

This letter should not be considered a contractual commitment to serve the proposed project, and is only provided for informational purposes only. The availability of natural gas service is based upon natural gas supply conditions and is subject to changes in law or regulation. As a public utility, SoCalGas is under the jurisdiction of the Commission and certain federal regulatory agencies, and gas service will be provided in accordance with the rules and regulations in effect at the time service is provided. Natural gas service is also subject to environmental regulations, which could affect the construction of a main or service line extension (for example, if hazardous wastes were encountered in the process of installing the line). Applicable regulations will be determined once a contract with SoCalGas is executed.

If you need assistance choosing the appropriate gas equipment for your project, or would like to discuss the most effective applications of energy efficiency techniques, please contact our area Service Center at 800-427-2200.

Thank you again for choosing clean, reliable, and safe natural gas, your best energy value.

Sincerely,

William Perez
