Following the passage of Senate Bill 743 (SB 743), the State of California's Governor's Office of Planning and Research (OPR) was tasked with developing new guidelines for evaluating transportation impacts under CEQA. These guidelines are intended to promote the reduction of greenhouse gas emissions and develop multimodal and diverse transportation networks by shifting the transportation performance metric from automobile delay and level of service (LOS) to vehicle miles traveled (VMT). As a result, OPR determined that under the proposed update to the CEQA guidelines, VMT would be established as the primary metric for evaluating environmental and transportation impacts.

In response to the updates to the CEQA guidelines, the City of Claremont and the City of Upland, respectively, updated the City of Claremont Transportation Study Guidelines in August 2020 and the City of Upland Traffic Impact Analysis Guidelines in July 2020 to conform to the requirements of SB 743. These guidelines shift the performance metric for evaluating transportation impacts under the CEQA from LOS to VMT for studies completed within the cities. The CEQA guidelines also require an evaluation of the Project's potential impacts on public transit, pedestrian facilities and travel, and bicycle facilities and travel using the following criteria:

- A significant impact occurs if the project conflicts with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

Therefore, an evaluation of whether the Project is consistent with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities follows the guideline updates and is presented in the following sections. This analysis also considers any impact on the performance or safety of such facilities. Existing public transit is mentioned in Section 4.2 in this report.

7.1.1 Bicycle Facilities

According to the Los Angeles County Bikeways Map and San Bernardino County Active Transportation Plan (2020), there are limited bicycle facilities provided in both counties. Bike paths are provided along Thompson Creek and towards Mt. Baldy. Baseline Road and Foothill Boulevard provide various bike facilities east-west through Claremont and Upland. Bike lanes that travel north-south along Towne Avenue connect Baseline Road and Foothill Boulevard to a network of bike routes and bike lanes around the Claremont Colleges. North-south bicycle connection through Upland is provided by bike lanes along Euclid Avenue and a bike route along N. Campus Avenue. The Pacific Electric Inland Empire Trail is a 20-mile-long Class I bike path that starts along Claremont Boulevard in Upland and extends east to Rialto. Adjacent to the Project site, Class II (on-street marked) bike lanes are provided along Claremont Boulevard, Foothill Boulevard, and Monte Vista Avenue. The existing bicycle infrastructure serving the cities is depicted in **Figure 7.1**.

The City of Upland provides Metrolink Bicycle Locker Rentals at the Upland Metrolink Station. The City of Claremont in partnership with San Gabriel Valley Council of Governments (SGVCOG) and ActiveSGV offers an E-Bike Share Program for residents of the city.

7.1.2 Pedestrian Facilities

An inventory was conducted of the pedestrian infrastructure within an approximate one-half mile radius of the site. An overview of these study area facilities is geographically depicted in **Figure 7.2**. ADA-compliant curb ramps are provided at most intersections in the Project vicinity, with numerous ramps featuring tactile warning strips. Marked crosswalks are provided at major intersections along Foothill Boulevard, Claremont Boulevard, Monte Vista Avenue, E. 6th Street, and W. Arrow Highway. A majority of these crosswalks have continental markings to improve crosswalk visibility for motorists. Pedestrian pushbuttons are provided at most signalized marked crosswalks.

The Project is located central to the Claremont Colleges, several commercial areas, and four of the eleven City of Upland Specific Plans (College Park, College Commerce Center, Harvest at Upland, and The Enclave). These attractors are located within reasonable walking distance of the Project and implementation of the Project could increase connectivity between attractors.

7.2 ADOPTED POLICIES, PLANS, AND PROGRAMS

Both the City of Claremont and the City of Upland have adopted policies, plans, and programs for their respective jurisdictions. The review of the applicable policies, plans, and programs included the Claremont General Plan, Upland General Plan, Claremont Municipal Code, Upland Municipal Code, and Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS). These are discussed in further detail below.

Based on the reviews below, the Project will support and not preclude the implementation of the counties and cities transportation-related goals and policies. Therefore, the Project will not have a significant impact regarding compliance with adopted policies, plans, and programs.

7.2.1 Claremont General Plan

The Project would embrace the objectives of the Claremont General Plan, which contains the Community Mobility Element.

The Community Mobility Element designates Claremont Boulevard, the roadway boarding the Project to the west, as a secondary arterial. This designation entails a 40- to 60-foot wide roadway or 28- to 36-foot half-widths of the roadway with a 10-foot median. The segment of Claremont Boulevard adjacent to the Project site presently has 46-foot half-widths and an approximately 13-foot median within the roadway exceeding the roadway's classified dimensions. The Project, therefore, is not required to make additional improvements to Claremont Boulevard through a dedication to meet these standards as the roadway meets the roadway's ultimate right-of-way. Claremont Boulevard has existing Class II bike lanes. The existing Development Agreement between CMC and the City of Claremont provides for improvements along the east side of Claremont Boulevard adjacent to the Project site, and at the intersection with Ninth Street, and these improvements will be constructed as part of the proposed Project.

The Community Mobility Element designates Foothill Boulevard, the roadway boarding the Project to the north, as a major arterial. This designation entails a 72- to 88-foot-wide roadway or 36- to 44-foot half-widths of the roadway with a 12-foot median. The segment of Foothill Boulevard adjacent to the Project site presently has an approximately 30-foot half-width, and an approximately 13-foot wide median within the roadway, exceeding the roadway's classified dimensions. Per the Community Mobility Element, Foothill Boulevard has implemented Class II bike lanes as proposed in 2007.

In summary, the Project is consistent with the Claremont General Plan for development of bicycle facilities and public right-of-way classification standards/dedications.

7.2.2 Upland General Plan

The Project would embrace the objectives of the Upland General Plan, which contains the Circulation Element and the Healthy Community Element.

The Circulation Element designates Monte Vista Avenue, the roadway boarding the Project to the east, as a secondary arterial. This designation entails traffic volumes ranging between 10,000 and 30,000 vehicles per day and a typical 35- to 85-foot curb to curb roadway width. The segment of Monte Vista Avenue adjacent to the Project site presently has 110-foot curb to curb roadway width exceeding the roadway's classified dimensions. The Project, therefore, is not required to make additional improvements to Monte Vista Avenue through a dedication to meet these standards as the roadway meets the roadway's ultimate right-of-way. Monte Vista Avenue has existing Class II bike lanes. Monte Vista Avenue, adjacent to the Project site, is classified as a Pedestrian Needs Priority Area identified by the City of Upland as an area not conducive to pedestrian use. The existing Development Agreement between CMC and the City of Upland provides for improvements along the west side of Monte Vista Avenue adjacent to the Project site and these improvements will be constructed as part of the proposed Project.

The Circulation Element designates W. Arrow Route, the roadway boarding the Project to the south, as a secondary arterial. This designation entails traffic volumes ranging between 10,000 and 30,000 vehicles per day and a typical 35- to 85-foot curb to curb roadway width. The segment of W. Arrow Route adjacent to the Project site presently has 64-foot curb to curb roadway width meeting the roadway's classified dimensions. The Project, therefore, is not required to make additional improvements to W. Arrow Route through a dedication to meet these standards as the roadway meets the roadway's ultimate right-of-way.

W. Arrow Route, adjacent to the Project site, is classified as a Pedestrian Needs Priority Area identified by the City of Upland as an area not conducive to pedestrian use. The existing Development Agreement between CMC and the City of Upland provides for improvements along the north side of Arrow Route adjacent to the Project site, and these improvements will be constructed as part of the proposed Project.

The Healthy Community Element is meant to prioritize health in the City of Upland's plans for future growth and development. The Plan is guided by principles of holistic health, the link between community design and health, and active transportation, among other principles. Goal HC-1, promotes incorporating and prioritizing health and wellness principles in City planning decisions affecting transportation. Policies relating to this goal involve the creation of multi-modal corridors and accessible services as features of a safe and healthy city. Goal HC-2, promotes an active living environment that offers ample parks, community facilities, recreation activities, multiuse pedestrian and bicycle trails, and development types that encourage a healthy and active lifestyle. The development of the Project will not preclude the Plan's goals of promoting active transportation and a healthy city. As a collegiate athletic development, that will substantially improve the streetscape and general aesthetics of the existing site, the Project will be conducive to promoting active living and travel for residents, employees, and guests alike.

In summary, the Project is consistent with the Upland General Plan for the development of pedestrian facilities, bicycle facilities, and public right-of-way classification standards/dedications.

7.2.3 Claremont Municipal Code

Vehicle parking rates for the athletic facility land use are not specified in the Claremont Municipal Code. However, the parking requirements for Claremont McKenna College are addressed in the college's Master Plan and the college as a whole will comply with applicable requirements.

The current TDM requirements in Claremont Municipal Code § 16.136.080 outlines TDM measures that a development must implement and comply with which includes displaying mobility information, designating parking for carpool/vanpools, and providing bicycle parking. The Project, as part of the Claremont McKenna College campus, will be in compliance with the Code. This may include designating a portion of the parking supply for employees, providing bicycle parking spaces, and/or incorporating other trip-reducing measures.

The Project driveways will fulfill the specifications and requirements in compliance with § 12.16.060. The Project driveways will also provide sufficient site distance in order to identify conflicting vehicles, bicycles, and pedestrians.

In reviewing the abovementioned Claremont Municipal Code requirements, the Project does not conflict with the applicable parking or TDM policies.

7.2.4 Upland Municipal Code

The Upland Municipal Code § 17.11.030 requires the provision on-site vehicle parking spaces at a rate of 5 to 8 spaces per acre depending on spectator seating accommodations for athletic field land uses. The Project would meet the on-site vehicle parking requirements by providing 790 vehicle parking spaces in the various parking facilities. Upland Municipal Code § 17.11.030 requires the provision of short-term bicycle parking spaces at 10 percent of the number of required automobile parking spaces and long-term bicycle parking spaces at a rate of at least one space per 20 vehicle spaces. The Project will, therefore, provide convenient and adequate bicycle parking facilities.

In reviewing the abovementioned requirements, the Project does not conflict with the bicycle or vehicle policies.

7.2.5 SCAG RTP/SCS

The SCAG RTP/SCS balances future mobility and housing needs with economic, environmental, and public health goals in a long-term plan that are laid out for the period from 2020-2045. The Project is consistent with the SCAG RTP/SCS because the Project would not result in a significant VMT impact as detailed further in the VMT Analysis in Section 9 of this Traffic Impact Analysis.

7.3 CEQA MITIGATION MEASURES AND RECOMMENDED ACTIONS

As indicated in the preceding analyses, the Project would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities of the respective jurisdictions. Thus, no CEQA transportation-related mitigation measures for this element are required for the Project.

8.0 NON-CEQA PROJECT IMPACTS

8.1 OPENING YEAR 2027 IMPACTS

Table 8.1 provides a summary of Level of Service (LOS) at the study intersection(s) for the Opening Year 2027 With Project scenario, indicating where a projected intersection LOS is not compliant with either the City of Upland's TIA guidelines or the City of Claremont Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment.

Under the Opening Year Plus Project (Practice and Game Day) traffic conditions, one (1) of the key study intersections is forecast to operate at unacceptable levels of service based on the LOS impact criteria mentioned in this report. The remaining key study intersections are forecast to operate at an acceptable level of service during the AM and PM peak hours for the Opening Plus Project traffic conditions. The location forecast to operate at an adverse LOS is as follows:

TABLE 8.1 UNACCEPTABLE LEVEL OF SERVICE (LOS) – OY 2027 WITH PROJECT

Key Intersection Jurisdiction	Jurisdiction	Practice Day		Game Day	
		AM Peak Hour		AM Peak Hour	
		LOS	Delay	LOS	Delay
Base Line Rd & I-210 Ramps	Claremont/Caltrans	F	151.2	F	151.2

This intersection would have an unacceptable LOS when measured against the LOS criteria identified in this report. The implementation of recommended (non-CEQA) offsite improvements outlined in this report would alleviate the adverse LOS condition associated with Opening Year Plus Project (Practice and Game Day) traffic conditions, and restore the affected intersections to acceptable projected conditions.

Under the Opening Year Plus Project (Game Day [Fall] and [Spring]) traffic conditions, all other key study intersections will operate at acceptable levels of service during the AM and PM peak hours.

Appendix C contains the Level of Service (LOS) Worksheets for the Opening Year (2027) without project conditions.

8.2 HORIZON YEAR 2045 IMPACTS

Table 8.2 provides a summary of Level of Service (LOS) at the study intersection(s) for the Horizon Year 2045 With Project scenario, indicating where a projected intersection LOS is not compliant with either the City of Upland's TIA guidelines or the City of Claremont Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment.

Under the Horizon Year Plus Project (Practice Day, Game Day, Game Day [Fall], and Game Day [Spring]) traffic conditions, four (4) of the key study intersections are forecast to operate at unacceptable levels of service based on the LOS impact criteria identified in this report. The remaining key study intersections are forecast to operate at an acceptable level of service during the AM and PM peak hours for the Horizon Plus Project traffic conditions. The locations forecast to operate at an adverse LOS is as follows:

TABLE 8.2 UNACCEPTABLE LEVEL OF SERVICE (LOS) – HY 2027 WITH PROJECT

Key Intersection Jurisdiction	Practice Day				Game Day				Game Day (Fall)				Game Day (Spring)			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay
6. Base Line Rd & I-210 Ramps	-	-	-	-	-	-	-	-	F	86.7	-	-	F	85.7	-	-
13. 6th St & Indian Hill Blvd	E	54.9	F	77.1	E	54.9	E	85.3	E	74.5	F	148.3	E	73.1	F	127.8
14. 6th St & College Ave	-	-	E	42.5	-	-	E	44.1	-	-	E	45.2	-	-	E	42.3
20. 1st St & College Ave	-	-	F	80.5	-	-	F	81.3	-	-	E	45.4	-	-	E	44.3

These intersections listed in Table 8.2 would have an unacceptable LOS when measured against the LOS criteria identified in this report. The implementation of recommended (non-CEQA) offsite improvements outlined in this report would alleviate the adverse LOS condition associated with the Horizon Year Plus Project (Practice Day, Game Day, Game Day [Fall], and Game Day [Spring]) traffic conditions, and restore the affected intersections to acceptable projected conditions.

Under the Horizon Year Plus Project (Practice and Game Day [Fall] & [Spring]) traffic conditions, all other key study intersections will operate at acceptable levels of service during the AM and PM peak hours.

Appendix E contains the Level of Service (LOS) Worksheets for Horizon Year (2045) without project conditions.

PART 3 – CEQA TRANSPORTATION ASSESSMENT

9.0 VMT ANALYSIS

The City of Claremont and the City of Upland have both developed VMT analysis guidelines which allow certain projects to screen out of VMT analysis based on certain characteristics of a project's location and uses. The City of Claremont published *Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment* in August 2020, while the City of Upland published the *Traffic Impact Analysis Guidelines* in July 2020.

Both the City of Claremont and the City of Upland provide the same three screening criteria, listed below, to determine if a VMT analysis will be required for a development project:

1. Transit Priority Area (TPA) Screening
2. Low VMT Area Screening
3. Project Type Screening

These screening criteria were applied to the proposed Project uses to determine if further analysis would be required to evaluate the Project's VMT impact.

The San Gabriel Valley Council of Governments (SGVCOG) and San Bernardino County Transportation Authority (SBCTA) have developed online mapping tools which can be used to determine whether projects can be screened from further VMT analysis. These tools (the SGVCOG VMT Evaluation Tool and the SBCTA VMT Screening Tool) were used to determine whether the Project can be presumed to result in a less-than-significant VMT impact based on its location. The screening results from the SGVCOG VMT Evaluation Tool and the SBCTA VMT Screening Tool are presented in **Appendix H** and **I**, respectively.

Transit Priority Screening

Per both the City of Claremont's and the City of Upland's Guidelines, projects located within a TPA may be presumed to have a less-than-significant VMT impact based on their access to transit options. A TPA is defined as within one-half mile of an existing major transit stop or an existing stop along a high-quality transit corridor which are defined by the California Public Resources Code:

- § Pub. Resources Code, § 21064.3: A "major transit stop" means a site containing any of the following: (a) an existing rail or bus rapid transit station, (b) a ferry terminal served by either a bus or rail transit service, (C) the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.
- § Pub. Resources Code, § 21155: For the purposes of this section, a high-quality transit corridor means a corridor with fixed-route bus service with service intervals of no longer than 15 minutes during peak commute hours.

Based on the SGVCOG VMT Evaluation Tool, the Project parcels located in the City of Claremont are not located within ½-mile of a major transit stop or a stop along high-quality transit corridor and therefore, do not qualify for screening per the TPA criteria.

However, per the SBCTA VMT Screening Tool, the southeastern portion of the site in the City of Upland is located within ½-mile of the Montclair Transit Station, which provides commuter rail and bus service from

multiple transit agencies. The Foothill Transit Silver Streak bus line operates with weekday peak-hour headways of 15 minutes with a stop provided at the transit center. This route provides connections to Pomona, El Monte, and Downtown Los Angeles. The transit center is also served by the Metrolink San Bernardino Line, connecting Redlands to Los Angeles. A map depicting the SCAG Transit Priority Areas is shown in **Figure 9.1**.

Both the City of Claremont's and the City of Upland's Guidelines state that the TPA screening criteria is not applicable for projects that meet any of the following criteria:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the City;
- Is inconsistent with the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

As the Project consists of athletic facilities with few buildings proposed on the Project site, it has an FAR of less than 0.75 and thus the TPA screening criteria is not applicable. Thus, despite the Project's location near high-quality transit options, the Project was conservatively assumed to not be screened from further VMT analysis based on the TPA screening criterion.

FIGURE 9.1 SCAG TRANSIT PRIORITY AREAS

Low VMT Area Screening

The second screening criterion presented in both the City of Claremont's and the City of Upland's Guidelines allows residential and office projects located in low-VMT generating areas to be presumed to have a less-than-significant VMT impact if the proposed uses are expected to generate VMT at a similar rate to the existing uses in the area. Since the proposed Project land uses are not residential or office in nature, this screening criterion does not apply.

To be comprehensive, the SGVCOG VMT Evaluation Tool and the SBCTA VMT Screening Tool were used to determine whether the Project is located in a low-VMT area. As shown in **Attachment H**, per the SGVCOG VMT Evaluation Tool, the Project parcels within the City of Claremont have existing uses that generate VMT above the City's threshold of 15% below the SGVCOG Northeast subarea average. Additionally, per **Attachment I**, the SBCTA VMT Screening Tool outputs show that the Project parcels located in the City of Upland have existing uses that generate VMT at a rate above the threshold of the citywide average. Therefore, per both the City of Claremont's and the City of Upland's low VMT area screening criteria, the Project is not located in a low-VMT area and cannot be screened from further VMT analysis based on this criterion.

Project Type Screening

Finally, the City of Claremont's and the City of Upland's Guidelines provide lists of project types that can be considered local serving, and therefore can be presumed to reduce VMT. The land use types below are those identified in each jurisdiction's guidelines as being local serving in nature:

City of Claremont

- Local-serving K-12 schools
- Local parks
- Day care centers
- Local-serving retail uses less than 50,000 square feet (e.g., gas stations, banks, restaurants, shopping centers, etc.)
- Local-serving hotels (e.g., non-destination hotels)
- Local-serving assembly uses (e.g., places of worship, community organizations)
- Community institutions (e.g., public libraries, fire stations, local government)
- Affordable, supportive, or transitional housing
- Assisted living facilities
- Senior housing (as defined by HUD)
- Local serving community colleges that are consistent with the assumptions noted in the RTP/SCS
- Student housing projects on or adjacent to a college campus
- Other local serving uses as approved by the City Traffic Engineer
- Projects generating less than 110 daily vehicle trips

City of Upland

- Local parks
- Day care centers
- Local-serving retail uses less than 50,000 square feet (e.g., gas stations, banks, restaurants, shopping centers, etc.)
- Student housing projects on or adjacent to college campuses
- Local-serving assembly uses (e.g., places of worship, community organizations)
- Community institutions (e.g., public libraries, fire stations, local government)
- Local serving community colleges that are consistent with the assumptions noted in the RTP/SCS
- Hotels (non-destination or resort; no banquet or special event space)
- Affordable or supportive housing
- Assisted living facilities
- Senior housing (as defined by HUD)
- Projects generating less than 250 daily vehicle trips

As shown above, both the City of Claremont and the City of Upland established trip-based screening criteria to determine when a project can be considered small enough to not result in a significant VMT impact. As shown, the City of Claremont established this threshold at 110 daily trips while the City of Upland established this threshold at 250 daily trips. Per the Project trip generation table in **Table 5.3**, the Project is expected to exceed these thresholds, therefore the Project was assumed to not meet the trip-based screening criteria for determining when further VMT analysis is required.

However, while the City of Claremont's and the City of Upland's Guidelines do not list the Project's proposed collegiate athletic facilities land use as one of the project types that can screen from further VMT analysis, similar recreational and/or collegiate uses are included in the list of local-serving project types (e.g., local parks, local-serving community colleges, local-serving assembly uses, and student housing). Like these uses, the Project's proposed facilities would cater primarily to the students and faculty of the adjacent colleges and provide them with proximate facilities for athletic practices and games which would not require the use of an automobile to access.

Since the proposed athletic facilities will be utilized by students/staff at the college, a high proportion of trips to and from the site will not occur by private automobile. As shown in the trip generation notes in Attachment C, approximately 50% of all trips are expected to be walk-in trips. This accounts for both the student athletes and faculty walking to the Project site for games and practice, as well as spectators walking from the college on game days.

As the proposed athletic facilities will service the CMC population, the Project's proposed land use is expected to be local serving and can be considered to meet the project type VMT screening criteria for both the City of Claremont and the City of Upland. Thus, the Project can be presumed to result in a less-than-significant VMT impact.

VMT Screening Analysis Conclusion

Given that the Project will primarily serve the student and faculty population of the adjacent CMC campus, the proposed Project uses can be considered to be local-serving and will reduce VMT within the surrounding community. Thus, based on the proposed project type, the Project meets the City of Claremont's and the City of Upland's VMT screening requirements and is not required to prepare additional VMT analysis. It should also be noted that most of the proposed Project athletic facilities will replace existing facilities at other locations on the CMC campus and the trips generated by the proposed Project facilities will primarily shift from these existing facilities. Nonetheless, to provide a comprehensive VMT analysis for the Project, a quantitative VMT analysis has been prepared for the proposed Project uses to demonstrate that the Project will generate VMT below the region average.

9.1 VEHICLE MILES TRAVELED ANALYSIS METHODOLOGY AND THRESHOLD

Both the City of Claremont and the City of Upland have developed VMT analysis guidelines for their respective jurisdictions. The City of Claremont published the *Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment* in August 2020, while the City of Upland published the *Traffic Impact Analysis Guidelines* in July 2020. Both sets of guidelines recommend the use of the local travel demand model (the Southern California Association of Governments [SCAG] Travel Model or the San Bernardino Transportation Analysis Model [SBTAM]) for analyzing VMT impacts. However, the athletic facilities proposed by the Project cannot be easily input into the model socioeconomic data assumptions. Thus, an alternative methodology was developed to estimate the VMT generated by the proposed Project land uses.

This VMT Analysis assumes an Opening Year of 2027. However, some uses on the site will activate prior to 2027. This analysis takes a conservative approach by analyzing 2027 in order to evaluate the impacts of a fully operational site; it can be assumed that, if the fully operational site is below VMT thresholds, and trip generation closely correlates with service population (as it does in this case), then a partially operational site will be below VMT thresholds as well.

The total VMT generated by the proposed Project land uses was calculated based on the number and average length of vehicle trips arriving to and departing from the Project site. The number of daily vehicle trips was calculated using rates from the ITE *Trip Generation Manual* (11th Edition, 2021) and based on estimates of daily athletic team participants and spectators expected on the Project site. The trip generation rates and assumptions used to estimate the number of trips traveling to and from the Project site are presented in Table 5.3.

Average trip lengths for the Project site were calculated using local travel demand models. Since the Project site spans parcels in both the City of Claremont and the City of Upland, two travel demand models are applicable for the Project site: the SCAG Travel Model (Los Angeles County) and the SBTAM (San Bernardino County). Using the person trip matrices and the skim length matrices, weighted average trip lengths were calculated using data from each model for the Project site for the home-based college/university trip type. This trip type was selected as the most appropriate trip type for determining an average trip length for the site, as participants and spectators at the athletic facilities are expected to be drawn from a similar area as the students at the CMC campus.

To determine the average trip lengths for the Project, the VMT associated with the Project TAZ⁸ was calculated for the home-based college/university trip purpose and divided by the total daily home-based college/university trips. The Production-Attraction (PA) methodology was used to calculate the VMT as it allows for the calculation of the VMT associated with specific trip types. This methodology consists of converting the peak (PK) and off-peak (OP) PA matrices from person trips to vehicles trips using average vehicle occupancy rates. This process replicated the model process of converting PA matrices to origin-destination (OD) matrices; however it was conducted only for the home-based college/university trip type while keeping departure and return trips distinct. The PK and OP skim length matrices were then multiplied by the custom-calculated home-based college/university vehicle trip matrices to estimate VMT. The custom-calculated trip matrices and VMT matrices were then summed to combine PK and OP VMT estimates for departure and return trips to determine the daily home-based college/university trips and VMT for the Project TAZ. This process was repeated for the base and future model files for both the SCAG Travel Model and the SBTAM. **Table 9.1** presents a summary of the trip and VMT estimates calculated for the Project site from the two models.

TABLE 9.1 SCAG TRAVEL MODEL AND SBTAM DAILY VMT AND TRIP METRICS

Model Year	Daily VMT	Daily Trips	Average Trip Length (mi)
SCAG Travel Model			
Base Year (2016)	14,606	2,461	5.94
Future Year (2040)	17,323	2,299	7.53
SBTAM			
Base Year (2016)	26,840	3,038	8.83
Future Year (2040)	17,833	3,298	5.41

Using this data, average Project trip lengths for the anticipated opening year of 2027 were estimated by interpolating between the trip lengths calculated from the model base year (2016) and future year (2040)

⁸ It should be noted that for the SBTAM, no home-based college/university trips traveled to or from the Project parcel as it is currently does not contain any university-related land uses. Therefore, the TAZ associated with the CMC campus was used to represent the Project TAZ for the SBTAM as it is assumed that the CMC campus and the CMC Roberts Campus East athletic facilities would draw students and visitors from a similar catchment area.

data. This interpolation is performed by assuming a linear growth between 2016 and 2040 and calculating a value for 2027 along this slope. The results shown below in **Table 9.2** are the assumed trip lengths for the Project upon completion and were used to determine the total VMT associated with the Project uses.

TABLE 9.2 PROJECT OPENING YEAR AVERAGE TRIP LENGTH

Model	Average Trip Length (mi)
SCAG Travel Model	6.67
SBTAM	7.26

The average trip lengths calculated from the travel demand models were then multiplied by the total number of daily trips for the Project site shown in Table 5.3 to determine the total daily VMT associated with the site. The same trip length was applied to all trips. Daily VMT estimates were calculated for the four scenarios outlined in the trip generation table (Weekday Practice Day, Weekday Game Day, Weekend Game Day [Fall], and Weekend Game Day [Spring]). The total VMT for the site was then divided by the total number of daily users (service population) for the corresponding scenario to determine the daily VMT per service population metric for the Project. Assumptions for the daily number of athletic facility participants and spectators used to determine the service population for the Project are outlined in **Table 9.3**.

Because the Project site is located partially in both the City of Upland and the City of Claremont, with both cities in different counties, the Project's VMT metrics were compared against the VMT impact criteria for both jurisdictions.

Per the City of Claremont *Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment* a significant VMT impact is determined if a Project meets one of the following conditions:

- The baseline project generated VMT per service population exceeds 15% below the San Gabriel Valley Council of Governments (SGVCOG) Northeast Subarea baseline VMT per service population;
- The cumulative project generated VMT per service population exceeds 15% below the SGVCOG Northeast Subarea baseline VMT per service population;

Per the City of Upland *Traffic Impact Analysis Guidelines*, a significant VMT impact is determined if a Project meets one of the following conditions:

- The baseline project-generated VMT per service population exceeds the City of Upland General Plan Buildout VMT per service population;
- The cumulative project-generated VMT per service population exceeds the City of Upland General Plan Buildout VMT per service population;

TABLE 9.3 PROJECT SERVICE POPULATION ASSUMPTIONS

	Weekday Practice Day			Weekday Game Day			Weekend Game Day (Fall)			Weekend Game Day (Spring)		
	Participants	Spectators	Service Population	Participants	Spectators	Service Population	Participants	Spectators	Service Population	Participants	Spectators	Service Population
Multi-Purpose Field ^[1]	36	0	36	36	0	36	56	0	56	56	0	56
Baseball Field ^[2]	30	0	30	60	250	310	-	-	-	60	250	310
Softball Field ^[2]	20	0	20	40	250	290	-	-	-	40	250	290
Football or Track and Field ^[2]	100	0	100	100	100	200	200	1800	2000	-	-	-

Total	251	0	251	276	600	876	336	1900	2236	261	600	861

^[1] Daily participant estimates for the Multi-Purpose Field were conservatively estimated based on the number of daily trips associated with the land use, assuming each vehicle makes one inbound and one outbound trip a day with an average vehicle ridership (AVR) of 1.0.

^[2] Participant estimates for the listed athletic teams based on the team sizes below (including coaches). Participant numbers doubled on game days to account for visiting team players and coaches.

Baseball: 30 team members

Softball: 20 team members

Football or Track and Field: 100 team members

Soccer or Rugby: 40 team members

Golf: 25 team members

9.2 VEHICLE MILES TRAVELED ANALYSIS RESULTS

Using the methodology described previously, estimates for daily VMT and VMT per service population were calculated for the Project uses based on the SCAG Travel Model and SBTAM average trip length data. A summary of the VMT calculations is provided in **Table 9.4**.

TABLE 9.4 PROJECT VMT PER SERVICE POPULATION SUMMARY

Scenario	Daily Project Trips	Average Trip Length (mi)	Project Daily VMT	Service Population (SP)	VMT per Service Population	VMT Threshold	Significant?
SCAG Travel Model							
Weekday Practice Day	179	6.67	1,194	251	4.76	30.61	No
Weekday Game Day	379	6.67	2,528	876	2.89	30.61	No
Weekend Game Day (Fall)	764	6.67	5,095	2,236	2.28	30.61	No
Weekend Game Day (Spring)	381	6.67	2,541	861	2.95	30.61	No
SBTAM							
Weekday Practice Day	179	7.26	1,300	251	5.18	24.60	No
Weekday Game Day	379	7.26	2,753	876	3.14	24.60	No
Weekend Game Day (Fall)	764	7.26	5,549	2,236	2.48	24.60	No
Weekend Game Day (Spring)	381	7.26	2,767	861	3.21	24.60	No

Table 9.5 below compare the Project impacts to the Claremont and Upland VMT impact thresholds.

As shown, based on data from the SCAG Travel Model, the Project is estimated to generate VMT at a rate between 2.28 and 4.76 VMT per service population for the four trip generation scenarios analyzed for the Project. This rate is much lower than the City of Claremont VMT threshold of 30.61 VMT per service population, which is shown on the screening results worksheets from the SGVCOG VMT Evaluation Tool in **Attachment H**. Thus, the Project is not expected to result in a significant VMT impact per the City of Claremont *Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment*.

TABLE 9.5 PROJECT VMT PER SERVICE POPULATION COMPARED TO THRESHOLD

Jurisdiction	Worst-Case VMT per Service Population	Jurisdiction VMT Baseline	Jurisdiction VMT Threshold	Significant?
Claremont	4.76	36.02	30.61 (15% below)	No
Upland	5.18	24.60	24.60	No

Additionally, based on data from the SBTAM, the Project is estimated to generate VMT at a rate between 2.48 and 5.18 VMT per service population for the four trip generation scenarios analyzed for the Project. This rate is much lower than the City of Upland VMT threshold of 24.60 VMT per service population, which is shown on the screening results output from the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool in **Attachment I**. Thus, the Project is not expected to result in a significant VMT impact per the City of Upland *Traffic Impact Analysis Guidelines*.

Both sets of guidelines additionally contain language that considers a project to have no cumulative VMT impact if it is consistent with the local RTP/SCS. This project is an infill project that reduces the urban heat island effect and is in close proximity to most of its users on the adjacent college campus. As a result, this Project has no significant cumulative project generated VMT impact.

Based on the analysis herein, the Project is expected to generate VMT well below the thresholds set by the Cities of Claremont and Upland. Therefore, the Project will not result in a significant VMT impact under CEQA.

PART 4 – CONCLUSION

10.0 NON-CEQA FINDINGS AND RECOMMENDATIONS

This section of the report summarizes the improvements and associated costs required to address “Non-CEQA” traffic impacts, to meet the Cities of Claremont and Upland’s level of service requirements for the analyses in Section 8. The improvement costs have been estimated using cost guidelines contained in **Appendix G** of the San Bernardino County CMP, 2005 Update, with some price escalation factors to account for economic and inflationary considerations. While originating in the San Bernardino County CMP, this cost menu is frequently employed in other settings. The Project’s fair-share contribution to the improvements at each location is identified in **Section 10.3** of this report.

The following offsite improvements are recommended to offset the Project’s area-wide “Non-CEQA” traffic impacts in conjunction with each “With-Project” scenario. The timing and phasing to construct such improvements will be contingent on each agency’s available project development capabilities and schedules, including collection of fair-share funds, project programming, design and construction.

- 6. Base Line Road & I-210 Ramps (Claremont): Widen and/or restripe the southbound approach of the I-210 Southbound On/Off-Ramp at Base Line Road to provide a second (dual) southbound right-turn lane. Modify the existing traffic signal to accommodate and optimize the additional lane and traffic volume demand.
- 13. 6th Street & Indian Hill Boulevard: Reconfigure the northbound approach lanes by adding a dedicated right-turn (curbside) lane. Implement active traffic management measures during Game Day events to divert westbound (outbound) event traffic away from the Indian Hill Boulevard/^{6th} Street intersection, to travel south along Yale Avenue toward the traffic signal at 5th Street and Indian Hill Boulevard. Reconfigure the northbound approach lanes by adding a dedicated right-turn (curbside) lane. Restripe the westbound approach lanes from a single shared left/through/right-turn lane to one (1) left and one (1) shared through/right lane.
- 14. 6th Street & College Avenue: Modify the southbound, westbound and eastbound approaches on 6th Street and College Avenue to provide a shared through-right turn while maintaining one left-turn lane.
- 20. 1st Street & College Avenue: Widen and/or restripe the northbound and southbound approach lanes provide a dedicated left-turn lane, through lane, and shared through/right-turn lane, as well as two receiving lanes. Adjust the existing bicycle lanes to accommodate the proposed geometry.

It should be noted that the improvement costs and the corresponding fair-share costs presented in the following sections are preliminary and are subject to being updated to account for current costs. Improvement measures, specifics, and cost estimates would require final approval from the respective City Engineer(s), and where Caltrans jurisdiction is required, involve coordination with Caltrans District 7 and relevant regional planning agencies.

For those intersections where forecast traffic volumes—both from pre-Project and Project-related traffic sources—are expected to result in unacceptable operating conditions, this report recommends roadway improvements that would serve to improve intersection operations, lane geometry, increase capacity and/or reduce traffic delays. These capacity improvements involve a variety of roadway widening, traffic signal modification, and re-striping improvements to add lanes to specific approaches of impacted key intersections. The identified improvements are concluded to:

- Address the impact of existing traffic, Project traffic, and future non-project (ambient traffic growth and cumulative projects) traffic; and
- Improve Levels of Service to an acceptable range and/or to pre-project conditions.

10.1 NON-CEQA RECOMMENDED OFFSITE IMPROVEMENTS – OPENING YEAR 2027

Under the Opening Year 2027 With Project conditions, the following offsite improvements described in sub-sections 10.1.1 and 10.1.2 below are recommended to restore the affected intersections to projected satisfactory operations.

10.1.1 Opening Year 2027 Cumulative Plus Project (Practice Day) Gross Improvement Costs

Table 10.1 presents the improvements and their respective costs to alleviate the Year 2027 Cumulative Plus Project (Practice Day) (non-CEQA) traffic impacts at the one (1) impacted key study intersection. A review of Table 10.1 shows that the improvements recommended at the one (1) impacted intersection in the City of Claremont would cost approximately **\$627,000** before any consideration of fair-share allocations. This improvement estimate includes bridge modification costs on the southbound approach of the I-210 On/Off-Ramps at Baseline Road. The relative scope and

TABLE 10.1 OPENING YEAR 2027 CUMULATIVE PLUS PROJECT (PRACTICE DAY) IMPROVEMENTS AND COSTS

Key Intersection	Jurisdiction	Improvement Description	Improvement Cost
Base Line Rd & I-210 Ramps	Claremont/Caltrans	- Bridge Modification.	\$462,000
		- Construct 2nd SB right-turn lane.	\$66,000
		- Modify existing traffic signal.	\$99,000
		<i>Total</i>	<i>\$627,000</i>
City of Claremont Total Costs of Year 2027 Cumulative Plus Project (Practice Day) Improvements			\$627,000

10.1.2 Opening Year 2027 Cumulative Plus Project (Game Day) Gross Improvement Costs

Table 10.2 presents the improvements and their respective costs to alleviate the Year 2045 Cumulative Plus Project (Game Day) (non-CEQA) traffic impacts at the one (1) impacted key study intersection. A review of Table 10.2 shows that the improvements recommended at the one (1) impacted intersections in the City of Claremont would cost approximately **\$627,000** before any consideration of fair-share allocations. This improvement estimate includes bridge modification costs on the southbound approach of SR-210 Ramps at Baseline Road.

TABLE 10.2 OPENING YEAR 2027 CUMULATIVE PLUS PROJECT (GAME DAY) IMPROVEMENTS AND COSTS

Key Intersection	Jurisdiction	Improvement Description	Improvement Cost
Base Line Rd & I-210 Ramps	Claremont/Caltrans	- Bridge Modification.	\$462,000
		- Construct 2nd SB right-turn lane.	\$66,000
		- Modify existing traffic signal	\$99,000
		Total	\$627,000
City of Claremont Total Costs of Year 2027 Cumulative Plus Project (Game Day) Improvements			\$627,000

10.2 NON-CEQA RECOMMENDED OFFSITE IMPROVEMENTS – HORIZON YEAR 2045

Under the Horizon Year 2045 With Project conditions, the following offsite improvements described in sub-sections 10.2.1 and 10.2.2 below are recommended to restore the affected intersections to projected satisfactory operations.

10.2.1 Horizon Year 2045 Cumulative Plus Project (Practice Day) Gross Improvement Costs

Table 10.3 presents the recommended offsite improvements, and their respective costs, to alleviate the Year 2045 Cumulative Plus Project (Practice Day) (non-CEQA) traffic impacts at the three (3) affected key study intersections. A review of Table 10.3 shows that the additional improvements recommended at the three (3) affected intersections in the City of Claremont would cost approximately **\$250,000** before any consideration of fair-share allocations. This improvement estimate includes lane modifications and additions.

TABLE 10.3 HORIZON YEAR 2045 CUMULATIVE PLUS PROJECT (PRACTICE DAY) IMPROVEMENTS AND COSTS

Key Intersection	Jurisdiction	Improvement Description	Improvement Cost
6th St & Indian Hill Blvd	Claremont	Reconfigure approach lanes: - Install NB right-turn lane; - Reconfigure WB approach lanes as 1 Left + 1 Through/Right	\$25,000
			\$25,000
		Total	\$50,000
6th St & College Ave	Claremont	- Construct shared thru-right turn lane in SB, WB & EB directions	\$150,000
		Total	\$150,000
1st St & College Ave	Claremont	- Restripe NB/SB approach lanes to provide a dedicated left, through and through/right-turn lane, as well as two receiving lanes. Adjust existing bicycle lanes to accommodate the proposed geometry	\$100,000
		Total	\$100,000
City of Claremont Total Costs of Year 2045 Cumulative Plus Project (Practice Day) Improvements			\$300,000

10.2.2 Horizon Year 2045 Cumulative Plus Project (Game Day) Gross Improvement Costs

Table 10.4 presents the recommended offsite improvements, and their respective costs, to alleviate the Year 2045 Cumulative Plus Project (Game Day) (non-CEQA) traffic impacts at the three (3) affected key study intersections. Review of Table 10.4 shows that the improvements recommended at the three (3) affected intersections in the City of Claremont would cost approximately **\$250,000** before any consideration of fair-share allocations. This improvement estimate includes lane modifications and additions.

TABLE 10.4 HORIZON YEAR 2045 CUMULATIVE PLUS PROJECT (GAME DAY) IMPROVEMENTS AND COSTS

Key Intersection	Jurisdiction	Improvement Description	Improvement Cost
6th St & Indian Hill Blvd	Claremont	Reconfigure approach lanes: - Install NB right-turn lane; - Reconfigure WB approach lanes as 1 Left + 1 Through/Right	\$25,000
			\$25,000
		Total	\$50,000
6th St & College Ave	Claremont	- Construct shared thru-right turn lane in SB, WB & EB directions	\$150,000
		Total	\$150,000
1st St & College Ave	Claremont	- Restripe NB/SB approach lanes to provide a dedicated left, through and through/right-turn lane, as well as two receiving lanes. Adjust existing bicycle lanes to accommodate the proposed geometry	\$100,000
		Total	\$100,000
City of Claremont Total Costs of Year 2045 Cumulative Plus Project (Practice Day) Improvements			\$300,000

10.3.7 Horizon Year 2045 Cumulative Plus Project (Game Day: Fall) Gross Improvement Costs

Table 10.5 presents the recommended offsite improvements, and their respective costs, to alleviate the Year 2045 Cumulative Plus Project (Game Day: Fall) (non-CEQA) traffic impacts at the four (4) affected key study intersections. A review of Table 10.5 shows that the improvements recommended at the four (4) affected intersections in the City of Claremont would cost approximately **\$725,000** before any consideration of fair-share allocations. This improvement estimate includes lane modifications and additions.

TABLE 10.5 HORIZON YEAR 2045 CUMULATIVE PLUS PROJECT (GAME DAY: FALL) IMPROVEMENTS AND COSTS

Key Intersection	Jurisdiction	Improvement Description	Improvement Cost
Base Line Rd & I-210 Ramps	Claremont/ Caltrans	- Bridge Modification	\$462,000
		- Construct 2nd SB right-turn lane	\$66,000
		- Modify existing traffic signal	\$99,000
		<i>Total</i>	<i>\$627,000</i>
6th St & Indian Hill Blvd	Claremont	Reconfigure approach lanes: - Install NB right-turn lane;	\$25,000

		- Reconfigure WB approach lanes as 1 Left + 1 Through/Right	\$25,000

6th St & College Ave	Claremont	- Construct shared thru-right turn lane in SB, WB & EB directions	\$150,000
		<i>Total</i>	<i>\$150,000</i>
1st St & College Ave	Claremont	- Restripe NB/SB approach lanes to provide a dedicated left, through and through/right-turn lane, as well as two receiving lanes. Adjust existing bicycle lanes to accommodate the proposed geometry	\$100,000
		<i>Total</i>	<i>\$100,000</i>
City of Claremont Total Costs of Year 2045 Cumulative Plus Project (Game Day: Fall) Improvements			\$927,000

10.3.8 Horizon Year 2045 Cumulative Plus Project (Game Day: Spring) Gross Improvement Costs

Table 10.6 presents the improvements and their respective costs to alleviate the Year 2045 Cumulative Plus Project (Game Day: Spring) (non-CEQA) traffic impacts at the four (4) impacted key study intersections. A review of Table 10.6 shows that the improvements recommended at the four (4) impacted intersections in the City of Claremont would cost approximately **\$725,000** before any consideration of fair-share allocations. This improvement estimate includes lane modifications and additions.

Figure 10.1 graphically illustrates the updated level of service results for the affected intersections after implementation of the recommended improvements.

FIGURE 10.1 H.Y. WITH PROJECT RECOMMENDED IMPROVEMENTS

10.3 FAIR-SHARE ANALYSIS

The (non-CEQA) LOS transportation impacts associated with the development of the Project were determined based on a comparative analysis of "Pre-Project" conditions (i.e., Year 2027 Without Project, and Year 2045 Without Project) versus "With Project" conditions. Based on the results of these analyses, the Project may be expected to construct improvements and/or pay a proportional "fair-share" of the improvement costs to alleviate the total (non-CEQA) traffic impact incurred at each affected intersection, resulting from background traffic growth, cumulative development project traffic, and the Project's own generated trips. These fair-share calculations are consistent with typical traffic engineering practice as well as the recommended methodology contained in the San Bernardino County CMP as carried over to this setting.

10.3.1 Opening Year 2027 Plus Project

The Project fair-share percentages (based on greatest peak hour impact) at the one (1) impacted intersection for the Opening Year Plus Project (Practice and Game Day) traffic conditions are shown below in **Table 10.7** and **Table 10.8**:

TABLE 10.7
INTERSECTION PROJECT FAIR-SHARE CONTRIBUTION – OY 2027 PLUS PROJECT (PRACTICE DAY)

Key Intersection	Jurisdiction	Affected Time Period	Existing Traffic	Year 2027 Cumulative Traffic	Year 2027 Cum. + Project Traffic	Net Project Percent Increase	Total Improvement Cost	Project Fair-Share Contribution
6. Base Line Rd & I-210 Ramps	Claremont /Caltrans	AM	3,367	3,970	3,986	3%	\$627,000	\$ 17,000

TABLE 10.8

CITIES OF CLAREMONT & UPLAND MOUs

TRAFFIC ANALYSIS - MEMORANDUM OF UNDERSTANDING (MOU) Revised February 14, 2024

This MOU acknowledges that the traffic analysis for the following project will be prepared in accordance with the latest traffic study policies and guidelines of the Cities of Claremont and Upland. There will be one traffic study for the entire Project which will cover both jurisdictions.

A. Project Information:

Project Name: Claremont-McKenna College Roberts Campus East (East Campus Update): Traffic Impact Study and VMT Analysis

Project Address: NE Corner of W Arrow Route and Claremont Boulevard

Project Description: Claremont McKenna College plans to modify and refine the site plan and entitlements for the Roberts Campus East, which is an existing inert debris landfill. The site has existing entitlements approved by the cities of Upland and Claremont in 2016. The proposed modification will include fields for baseball, softball, soccer, three multi-purpose fields, football/track, and golf practice, all to be used solely by CMC and it does not propose changes in the type of use or increase the intensity or density. The City of Upland served as the lead agency in 2016 and will continue to do so for this Project. CMC proposes two alternative site plans (Scenario 2, and Scenario 2B), each of which are provided in Attachment A. Each alternative site plan contains the same uses and programming, but the layout and vehicular access and circulation differ among the three scenarios.

B. Geographic Distribution: N 25 % S 25 % E 15 % W 35 %

Attachment B provides a graphic illustrating the overall project trip distribution. Trip distribution is similar across the two scenarios.

Trip Generation Rate(s): Soccer Complex (Land Use Code #488, ITE 11th Edition), Multi-Purpose Fields, Baseball Field, Softball Field, Football/Track & Field/Lacrosse, and Rugby/Soccer. The College provides the spectator and participant numbers, which are utilized to identify the number of trips. The trip generation table in Attachment C provides a description of the proposed land uses, ITE rates, estimated morning, and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. The project trip generation is summarized in the table below:

Day	Activity	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Weekday	Practice Day	1	0	1	11	149	160
	Game Day	1	0	1	11	249	260
Weekend	Game Day (Fall)	358	19	377	6	529	535
	Game Day (Spring)	218	19	237	6	315	321

C. Analysis Scenarios:

- Existing Year (2023) Conditions
- Opening Year (2027) Conditions
 - Opening Year Without Project Conditions
 - Opening Year Plus Project Conditions
- Future/Horizon Year (2045) Conditions
 - Future/Horizon Year Without Project Conditions
 - Future/Horizon Year Plus Project Conditions

Related Projects List attached?

☐ No ☒ Yes

[See attachment]

Capacity Analysis Methodologies: Signalized and unsignalized intersections will be analyzed using the latest HCM operational analysis methodologies and present the analysis results in Level-of-Service (LOS) and Delay, as per the City of Claremont's *Draft Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment* (August 2020).

Study Intersections:

Study Intersection ID, Location and Jurisdiction*					
1.) Base Line Rd. & Indian Hill Blvd.	C	11.) Foothill Blvd. & Monte Vista Ave.	U	21.) 1st St. & Claremont Blvd.	C
2.) Base Line Rd. & Mills Ave	C	12.) Foothill Blvd. & Central Ave.	U	22.) Arrow Hwy. & Indian Hill Blvd.	C
3.) Base Line Rd. & Monte Vista Ave./Padua Ave.	C	13.) 6th St. & Indian Hill Blvd.	C	23.) Arrow Hwy. & College Ave.	C
4.) Base Line Rd. & I-210 Ramps	C	14.) 6th St. & College Ave.	C	24.) Arrow Hwy. & Claremont Blvd./Mills Ave.	C
5.) Claremont Blvd. & Monte Vista Ave.	C	15.) 6th St. & Mills Ave.	C	25.) Claremont Blvd. & 9th St.	C
6.) Foothill Blvd. & Indian Hill Blvd.	C	16.) 6th St./Arrow Rte. & Claremont Blvd.	U	26.) Foothill Blvd. & Project Dwy. N	C
7.) Foothill Blvd. & College Ave.	C	17.) Arrow Rte. & Monte Vista Ave.	U	27.) Claremont Blvd. & Project Dwy. SW	C
8.) Foothill Blvd. & Dartmouth Ave.	C	18.) Harrison Ave./5th St. & Indian Hill Blvd.	C	28.) Monte Vista Ave. & Project Dwy. SE	U
9.) Foothill Blvd. & Mills Ave.	C	19.) 1st St. & Indian Hill Blvd.	C	29.) (Ex. three-way & Future four-way intersection)	U
10.) Foothill Blvd. & Claremont Blvd.	C	20.) 1st St. & College Ave.	C		

* C = City of Claremont; U = City of Upland

Highlighted intersections are located within the jurisdiction of the City of Claremont

Study Roadways:

Study Roadway Segment ID, Location and Local Jurisdiction*					
A.) Foothill Boulevard east of Monte Vista Avenue	U	E.) 9th Street west of Claremont Boulevard	C	I.) Arrow Route between College Park Dr. & Monte Vista Ave.	U
B.) Monte Vista Ave between Foothill Boulevard & 11th Street	U	F.) Claremont Boulevard between 9th Street & 6th St./Arrow Rt.	C	J.) Claremont Boulevard south of 6th Street / Arrow Route	C
C.) Claremont Boulevard between Foothill Boulevard & 9th Street	C	G.) 6th Street west of Mills Avenue	C	K.) 1st Street between Claremont Blvd. & Monte Vista Ave. (future segment)	U
D.) 9th Street east of Mills Avenue	C	H.) Arrow Route between Claremont Bl. & College Park Dr.	U		

* C = City of Claremont; U = City of Upland

Highlighted Roadway segments are located within the jurisdiction of the City of Claremont

	Yes	No
Transit Usage		X
Transportation Demand Management		X
Existing Active Land Use		X ¹
Previous Land Use		X

¹ Existing site is currently vacant land. All proposed athletics facilities, fields, and programs, however, are existing and will be relocated from the adjacent CMC Campus (located just to the west of Claremont Blvd.) to the subject project site.

Additional Sections: Other project-related analyses will be provided in the traffic study, such as event traffic control, ingress, egress, accessibility, public and emergency access, and on-site parking.

D. Vehicle Miles Travelled (VMT) Assessment

As outlined in the City's guidelines, a VMT screening will be conducted to determine whether the project will need to provide further detailed VMT analyses.

VMT Screening Analysis – KOA will prepare a VMT screening assessment for the project based on both the City of Claremont's *Transportation Study Guidelines* and the City of Upland's *Traffic Impact Analysis Guidelines*. Current VMT guidelines allow for projects that are local-serving in nature and presumed to have a less-than-significant VMT impact, including, without limitation, local-serving parks, community colleges, and university student housing projects. While the proposed project does not explicitly match any of the above-listed project types, the proposed project uses are:

- 1) Currently existing and do not include any expanded programs; and
- 2) Can be considered as local serving, as they will primarily cater to the students and faculty of Claremont McKenna College and potentially Pitzer College.

As most of the proposed project facilities will serve as relocations from the existing campus, and all facilities will accommodate uses that currently exist on the campus, the Project will likely generate a relatively low number of "new" trips. KOA will prepare a technical memorandum providing a qualitative screening analysis discussing the local-serving nature of the project uses, and the application of the presumed less-than-significant VMT impact.

Quantitative VMT Analysis – Notwithstanding the findings and conclusions of the VMT screening analysis described above, KOA proposes to conduct a quantitative VMT analysis for the proposed project. Most of the facilities proposed as part of the project may be considered local serving uses in accordance with each agency's adopted VMT guidelines as discussed above. However, as a conservative measure, KOA will also prepare a quantitative VMT analysis for the project. This analysis will include the calculation of the VMT per service population (students, faculty, spectators, etc.) metric for the project, as well as the calculation of the cumulative link-level boundary Citywide VMT per service population under Without Project and Plus Project conditions. The SGVCOG VMT Evaluation Tool and SBCTA VMT Screening Tool will be used for the Project's VMT screening evaluation and the quantitative VMT analysis.

E. Traffic Data

KOA has collected traffic volume counts for the majority the locations identified in Section C, above. New traffic counts will be collected for the additional locations requested by the Cities of Claremont and Upland, based on recent correspondences. In order to provide a consistent and correlative traffic engineering/planning study effort, it is assumed that no further traffic count locations will be added to this scope. Any potential additional study locations shall require collaborative discussion with the Project Team and Agency(ies).

TRAFFIC ANALYSIS - MEMORANDUM OF UNDERSTANDING (MOU)

Revised February 14, 2024

This MOU acknowledges that the traffic analysis for the following project will be prepared in accordance with the latest traffic study policies and guidelines of the Cities of Claremont and Upland. There will be one traffic study for the entire Project which will cover both jurisdictions.

A. Project Information:

Project Name: Claremont-McKenna College Roberts Campus East (East Campus Update): Traffic Impact Study and VMT Analysis

Project Address: NE Corner of W Arrow Route and Claremont Boulevard

Project Description: Claremont McKenna College plans to modify and refine the site plan and entitlements for the Roberts Campus East, which is an existing inert debris landfill. The site has existing entitlements approved by the cities of Upland and Claremont in 2016. The proposed modification will include fields for baseball, softball, soccer, three multi-purpose fields, football/track, and golf practice, all to be used solely by CMC and it does not propose changes in the type of use or increase the intensity or density. The City of Upland served as the lead agency in 2016 and will continue to do so for this Project. CMC proposes two alternative site plans (Scenario 2, and Scenario 2B), each of which are provided in Attachment A. Each alternative site plan contains the same uses and programming, but the layout and vehicular access and circulation differ among the three scenarios.

B. Geographic Distribution: N 25 % S 25 % E 15 % W 35 %

Attachment B provides a graphic illustrating the overall project trip distribution. Trip distribution is similar across the two scenarios.

Trip Generation Rate(s): Soccer Complex (Land Use Code #488, ITE 11th Edition), Multi-Purpose Fields, Baseball Field, Softball Field, Football/Track & Field/Lacrosse, and Rugby/Soccer. The College provides the spectator and participant numbers, which are utilized to identify the number of trips. The trip generation table in Attachment C provides a description of the proposed land uses, ITE rates, estimated morning, and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. The project trip generation is summarized in the table below:

Day	Activity	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Weekday	Practice Day	1	0	1	11	149	160
	Game Day	1	0	1	11	249	260
Weekend	Game Day (Fall)	358	19	377	6	529	535
	Game Day (Spring)	218	19	237	6	315	321

C. Analysis Scenarios:

- Existing Year (2023) Conditions
- Opening Year (2027) Conditions
 - Opening Year Without Project Conditions
 - Opening Year Plus Project Conditions
- Future/Horizon Year (2045) Conditions
 - Future/Horizon Year Without Project Conditions
 - Future/Horizon Year Plus Project Conditions

Capacity Analysis Methodologies: Signalized and unsignalized intersections will be analyzed using the latest HCM operational analysis methodologies and present the analysis results in Level-of-Service (LOS) and Delay, as per the City of Claremont's *Draft Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment* (August 2020).

Study Intersections:

Study Intersection ID, Location and Jurisdiction*					
1.) Base Line Rd. & Indian Hill Blvd.	C	11.) Foothill Blvd. & Monte Vista Ave.	U	21.) 1st St. & Claremont Blvd.	C
2.) Base Line Rd. & Mills Ave	C	12.) Foothill Blvd. & Central Ave.	U	22.) Arrow Hwy. & Indian Hill Blvd.	C
3.) Base Line Rd. & Monte Vista Ave./Padua Ave.	C	13.) 6th St. & Indian Hill Blvd.	C	23.) Arrow Hwy. & College Ave.	C
4.) Base Line Rd. & I-210 Ramps	C	14.) 6th St. & College Ave.	C	24.) Arrow Hwy. & Claremont Blvd./Mills Ave.	C
5.) Claremont Blvd. & Monte Vista Ave	C	15.) 6th St. & Mills Ave.	C	25.) Claremont Blvd. & 9th St.	C
6.) Foothill Blvd. & Indian Hill Blvd.	C	16.) 6th St./Arrow Rte. & Claremont Blvd.	U	26.) Foothill Blvd. & Project Dwy. N	C
7.) Foothill Blvd. & College Ave.	C	17.) Arrow Rte. & Monte Vista Ave.	U	27.) Claremont Blvd. & Project Dwy. SW	C
8.) Foothill Blvd. & Dartmouth Ave.	C	18.) Harrison Ave./5th St. & Indian Hill Blvd.	C	28.) Monte Vista Ave. & Project Dwy. SE	U
9.) Foothill Blvd. & Mills Ave	C	19.) 1st St. & Indian Hill Blvd	C	29.) Monte Vista Ave. & 1st St./Richton St. (Ex. three-way & Future four-way intersection)	U
10.) Foothill Blvd. & Claremont Blvd.	C	20.) 1st St. & College Ave.	C		

* C = City of Claremont; U = City of Upland

Highlighted intersections are located within the jurisdiction of the City of Claremont

Study Roadways:

Study Roadway Segment ID, Location and Local Jurisdiction*								
A.)	Foothill Boulevard east of Monte Vista Avenue	U	E.)	9th Street west of Claremont Boulevard	C	I.)	Arrow Route between College Park Dr. & Monte Vista Ave.	U
B.)	Monte Vista Ave bewtween Foothill Boulevard & 11th Street	U	F.)	Claremont Boulevard between 9th Street & 6th St/Arrow Rt	C	J.)	Claremont Boulevard south of 6th Street/ Arrow Route	C
C.)	Claremont Boulevard between Foothill Boulevard & 9th Street	C	G.)	6th Street west of Mills Avenue	C	K.)	1st Street between Claremont Blvd. & Monte Vista Ave. (future segment)	U
D.)	9th Street east of Mills Avenue	C	H.)	Arrow Route between Claremont Bl. & College Park Dr.	U			

* C = City of Claremont; U = City of Upland

Highlighted Roadway segments are located within the jurisdiction of the City of Claremont

	Yes	No
Transit Usage		X
Transportation Demand Management		X
Existing Active Land Use		X ¹
Previous Land Use		X

¹ Existing site is currently vacant land. All proposed athletics facilities, fields, and programs, however, are existing and will be relocated from the adjacent CMC Campus (located just to the west of Claremont Blvd.) to the subject project site.

Additional Sections: Other project-related analyses will be provided in the traffic study, such as event traffic control, ingress, egress, accessibility, public and emergency access, and on-site parking.

D. Vehicle Miles Travelled (VMT) Assessment

As outlined in the City's guidelines, a VMT screening will be conducted to determine whether the project will need to provide further detailed VMT analyses.

VMT Screening Analysis – KOA will prepare a VMT screening assessment for the project based on both the City of Claremont's *Transportation Study Guidelines* and the City of Upland's *Traffic Impact Analysis Guidelines*. Current VMT guidelines allow for projects that are local-serving in nature and presumed to have a less-than-significant VMT impact, including, without limitation, local-serving parks, community colleges, and university student housing projects. While the proposed project does not explicitly match any of the above-listed project types, the proposed project uses are:

- 1) Currently existing and do not include any expanded programs; and
- 2) Can be considered as local serving, as they will primarily cater to the students and faculty of Claremont McKenna College and potentially Pitzer College.

As most of the proposed project facilities will serve as relocations from the existing campus, and all facilities will accommodate uses that currently exist on the campus, the Project will likely generate a relatively low number of "new" trips. KOA will prepare a technical memorandum providing a qualitative screening analysis discussing the local-serving nature of the project uses, and the application of the presumed less-than-significant VMT impact.

Quantitative VMT Analysis – Notwithstanding the findings and conclusions of the VMT screening analysis described above, KOA proposes to conduct a quantitative VMT analysis for the proposed project. Most of the facilities proposed as part of the project may be considered local serving uses in accordance with each agency's adopted VMT guidelines as discussed above. However, as a conservative measure, KOA will also prepare a quantitative VMT analysis for the project. This analysis will include the calculation of the VMT per service population (students, faculty, spectators, etc.) metric for the project, as well as the calculation of the cumulative link-level boundary Citywide VMT per service population under Without Project and Plus Project conditions. The SGVCOG VMT Evaluation Tool and SBCTA VMT Screening Tool will be used for the Project's VMT screening evaluation and the quantitative VMT analysis.

Cumulative Development Projects List						
No.	Project Name or Firm	Address	City	Description	City Project Planner	Project Status
1	Arbor Pointe SFRs	210 @ Monte Vista (SWC)	Claremont	Tentative Tract Map and Design Review for 13 lot subdivision consisting of 13 SFRs, 13 JADUs, and 11 detached ADUs.	CP	No activity since July 2022. Project inquiry email sent 1/3/23.
2	CGU Master Plan	Generally bounded by Foothill Blvd, Dartmouth Avenue, Seventh Street, and College Avenue	Claremont	Potential addition of up to 475 regularly enrolled students, and 39 faculty and staff, and expansion, remodeling, and replacement of campus facilities, resulting in a potential increase in building area of approximately 170,000 assignable square feet	JD	No activity on this project since early 2017.
3	Doubletree Hotel/Old School House Specific Plan	North of Foothill Blvd. and west of Indian Hill Blvd.	Claremont	126-unit residential condominiums/townhomes (30 in building with new 240-space parking structure and 96 on Colby Circle)	CV/NH	30 units and parking structure completed March 2023. Substantial progress on 96 units currently under construction with all slated for completion over next 4-6 months.
4	Harvey Mudd College 2015 Master Plan Amendment	South of E. Foothill Blvd. and north of Platt Blvd, between N. Dartmouth Avenue and N. Claremont Blvd.	Claremont	Proposed HMC 2015 Master Plan Amendment includes increasing current building floor area from 738,079 GSF to 902,411 903,911 GSF, and increasing HMC enrollment entitlement from 800 students to 900 students.	CV	70,000 square foot academic building (Shanahan Learning Center) completed and occupied Sept. 2013 (net 50K) 48,550 sq.ft. dormitory (Drinkwater Dormitory) Completed 2015. 33,000 square foot academic building (McGregor Computer Science) completed and occupied Mar 2021. Approx 35,000 square feet remaining in plan for future academic building to be constructed at SEC of Dartmouth Road South Hill of
5	Keck Science Center Expansion	925 N Mills Avenue (to the west of existing KSC at NW intersection of Ninth Ave and Mills on Scripps campus)	Claremont	70,000-square foot, three-story, semi detached ground up building for Keck Science Center labs and classrooms. Located on existing surface level parking lot. Connected to existing KSC.	NH/CV	Construction nearly complete occupancy anticipated for Spring 2024
6	Knight's Inn Redevelopment (formerly proposed as new Hampton Inn & Suites)	701 S Indian Hill Blvd	Claremont	Originally proposed to include renovation of the two-story, 65-unit motel and construction of a four-story, 121-unit hotel. Specific Plan has been adopted.	CV	Plans for new 120-room Residence Inn by Marriott approved March 2023. Final entitlements granted by AC 3/29/23. Demo of Knights Inn completed Dec 2023. Construction expected to begin in early 2024.
7	La Popular Restaurant & Drezner Lofts	235 N Yale Ave	Claremont	New 3,000-SF restaurant with 850-SF new outdoor dining area. The Mexican restaurant would occupy the former Rhino Records space. 1,660 s.f. Coffee Shop to occupy rear ground floor tenant space. 5 new studio apts to be constructed through conversion of existing mezzanine and two new stories above rear tenant space. Total	NH	CUP for restaurant with alcohol approved in Sept 2022. Design Review approved in November 2022. Construction commenced March 2023. Restaurant completed and opened October 23,2023.
8	Med Density Housing Per Gen Plan Housing Element Update.	Citywide	Claremont	1,711 New Housing Units Planned for through Oct 15, 2029		Final approval of Housing Element Update adopted in July 2023. Rezoning of housing element opportunity sites to follow in January and February 2022.
9	Olson 56 Unit Townhomes	1030 W Foothill Blvd.	Claremont	56 Attached Townhomes with 12 Live work units 350 sf each work live		Entitlements approved in Sept and Oct 2023. Submittal of construction documents in early 2023. Construction anticipated to commence in 2023 and to be
10	Pomona College 2015 Master Plan	Campus-Wide	Claremont	Includes increase of 50 students, 60 staff and faculty, and 205,400 new square feet of campus	CV	No projects currently proposed.
11	Senior Low Income Housing	956 W. Base Line Road	Claremont	15 unit low income senior housing project	JD	Application submitted in Dec 2020. Project approved by AC Feb 2021. Project currently awaiting funding sources to proceed.

12	South Village Development Project	Indian Hill to Bucknell, Rail ROW to Arrow Highway.	Claremont	Mixed-Use, Transit-oriented Development designed to expand the Claremont Village. Project plans include: 610 Residential Apartments in Mixed-use buildings 103 Flat-style Residential condos 21 Townhome residences 34,000 sq.ft. restaurants 52,000 sq.ft. retail 26,000 sq.ft. office space 1,195 parking spaces in structures or garages.	CV	Preliminary review of Architecture reviewed by AC in 3 phases Dec 2021 - May 2022. Two Tentative Tract Maps currently being reviewed by City and LA Co Fire. (TTM83439 & TTM83463). Construction to begin late 2024 and end late 2029. Final VTTM and Entitlements completed Dec 2022 and Jan 2023. Project awaiting investor funding.
13	Trumark Homes	2323 Forbes Ave	Claremont	56 SFR detached Units with 6 internal ADUs	EN	Draft EIR complete April 2023. Construction commences Q4 2024
14	City Ventures Townhomes	840 S Indian Hill Blvd	Claremont	65 townhomes. Proposed total Net SF is 92,880-SF	NH	Preliminary plans submitted for 65-unit townhome development at tennis courts near NE intersection of Indian Hill Boulevard and American Avenue. 2.67-acre site. Site needs to be rezoned as Housing Element. Project requires Parcel Map, Tract Map and Architectural and Site Plan Approval. AC Preliminary review to take
15	Larkin Place - Jamboree Permanent Supportive	731 Harrison Ave	Claremont	33-unit permanent supportive housing development.	CV	Project entitled June 1, 2023. Building permits expected to be issued by Jan 2024.
16	TCCS Student Services Building	800 N Dartmouth Ave	Claremont	New Student Services Building for Claremont Colleges students. Located at Mudd Quadrangle on Dartmouth south of 10th Street. Approx 30,000-SF	NH	Preliminary plans submitted for new Student Services Building. Preliminary Architectural Commission review completed in Nov 2023. Approvals anticipated in Spring 2024.
17	Mercy Housing Affordable Housing	1364 N Towne Avenue	Claremont	74-unit 100% Affordable Housing Development (Veteran Housing)	BJ/NH	100% Affordable Housing Development to reviewed in streamlined process pursuant to SB 35. Currently in community outreach stage.
18	TTM62814	365 San Jose Ave	Claremont	13 new residential townhomes at 365 W. San Jose	LC/CV	AC approved final design on December 11, 2019. Plans submitted for plan check, approvable pending approval/recording of Inclusionary Housing Agreement. After period of downtime, building permit application resubmitted in spring 2023. Building permit plan check is
19	Wendy's Remodel	187 S. Mountain Avenue	Upland	Facade and interior remodel of existing Wendy's restaurant		-Entitlement application was approved on July 3, 2023 -Construction plans for interior and exterior remodel have been submitted and are under review
20	Quick Quak Car Wash	950 Monte Vista Avenue	Upland	2,596 square foot automated drive-thru car wash with ancillary vacuum stations		Entitlement application and associated technical studies are currently under review
21	Bridge Point Upland Project	NEC of Central/Foothill	Upland	A 201,096 square foot warehouse/parcel delivery service building		-Pending outcome of appeal in California Courts of appeal - Construction documents are currently under review
22	Lennar at the Enclave	W. Foothill Boulevard	Upland	Development of 192 residential units comprised of 116 detached condominium units and 76 attached condominium units on 15.6 acres		-Entitlement application were approved by the planning commission on February 24, 2021 -Project is under construction
23	Mixed Commercial/Industrial Development	1750-1780 W. Foothill Blvd	Upland	A 3,570 square foot retail building and four industrial condominium units within two multi-tenant industrial buildings 45,476 square feet and 55,616 square feet in size on 6.05 acres		Application is currently under review
24	T & T Industrial	1701 W. 11th Street	Upland	2 office and warehouse buildings totaling 56,000 square feet		Construction documents are approved
25	Yellow Iron	2068 W. 11th Street	Upland	5 building light industrial park totaling approximately 77,000 square feet, including a 6-lot subdivision		-Entitlement application were approved by the planning commission on February 23, 2022 -Development is currently under construction

26	Rose Glen Specific Plan	1400 E. Arrow Hwy	Upland	64 two-story single family detached residential homes	-Entitlement applications were approved by the City council on October 10, 2022 -Construction plans are currently under review
27	Bullwinkle's Family Fun Center	1500 W. 7th Street	Upland	Remodel of existing amusement park, including facade, parking lot, and interior improvements.	-Entitlement application were approved by the planning commission on August 23, 2023 -Construction plans are currently under review
28	Citrus Village Senior Living	911 W. Arrow Highway	Upland	Potential senior housing development with 42 affordable housing units, 98 independent living units, 74 assisted living units, and a 30-bed facility for memory care residents.	A preliminary review application was submitted for feedback and guidance on January 19, 2023. Awaiting submittal formal entitlement applications.
29	The Courtyard at Upland	1968 W. 7th Street	Upland	The partial reconstruction of 36 apartment units within an existing legally non-conforming multi-family apartment complex, damaged by fire	-Entitlement application were approved by the planning commission on May 24, 2023 -Construction plans are currently under review.
30	Huntington Drive Apartments	1910 Huntington Drive	Upland	An 84-unit, 3-story, multi-family residential apartment development on 1.38 acres. The developer proposes that 14 units are to be designated at the low-income affordability level	Applications are currently under review
31	Upland Reliability Project	1975 N. Benson Ave	Upland	Construction and operation of a new battery energy storage system facility. The project includes the placement of battery energy storage enclosures and associated electrical equipment on concrete foundations, including medium voltage transformers and power conversion system, on an area approximately 12 acres in size	Applications have been submitted and are currently under review
32	9th Street Apartments	1739 9th Street	Upland	A request to construct a 19-unit, 2-story apartment complex, with a density bonus, and 2 units made available at the low-income	Entitlement applications are under review
33	McDonalds	1590 W. Foothill Boulevard	Upland	Demolition of an existing 1,471 square foot McDonald's restaurant and construction of a new 4,266 square foot McDonald's restaurant with indoor dining and dual order point drive-through	-Entitlement application was approved by the planning commission on October 25, 2023 -Pending submittal of construction plans

Cumulative Development Projects List						
No.	Project Name or Firm	Address	City	Description	City Project Planner	Project Status
1	Arbor Pointe SFRs	210 @ Monte Vista (SWC)	Claremont	Tentative Tract Map and Design Review for 13 lot subdivision consisting of 13 SFRs, 13 JADUs, and 11 detached ADUs.	CP	No activity since July 2022. Project inquiry email sent 1/3/23.
2	CGU Master Plan	Generally bounded by Foothill Blvd., Dartmouth Avenue, Seventh Street, and College Avenue	Claremont	Potential addition of up to 475 regularly enrolled students, and 99 faculty and staff, and expansion, remodeling, and replacement of campus facilities, resulting in a potential increase in building area of approximately 170,000 assignable square feet	JD	No activity on this project since early 2017.
3	Doubletree Hotel/Old School House Specific Plan	North of Foothill Blvd. and west of Indian Hill Blvd.	Claremont	126-unit residential condominiums/townhomes (30 in building with new 240-space parking structure and 96 on Colby Circle)	CV/NH	30 units and parking structure completed March 2023. Substantial progress on 96 units currently under construction with all slated for completion over next 4-6 months
4	Harvey Mudd College 2015 Master Plan Amendment	South of E. Foothill Blvd. and north of Platt Blvd, between N. Dartmouth Avenue and N. Claremont Blvd.	Claremont	Proposed HMC 2015 Master Plan Amendment includes increasing current building floor area from 738,079 GSF to 902,411 903,911 GSF, and increasing HMC enrollment entitlement from 800 students to 900 students.	CV	70,000 square foot academic building (Shanahan Learning Center) completed and occupied Sept. 2013.(net 50K) 48,550 sq.ft. dormitory (Drinkward Dormitory) Completed 2015. 33,000 square foot academic building (McGregor Computer Science) completed and occupied Mar 2021. Approx 35,000 square feet remaining in plan for future academic building to be constructed at SEC of Dartmouth and Foothill Blvd.
5	Keck Science Center Expansion	925 N Mills Avenue (to the west of existing KSC at NW intersection of Ninth Ave and Mills on Scripps campus	Claremont	70,000-square foot, three-story, semi detached ground up building for Keck Science Center labs and classrooms. Located on existing surface level parking lot. Connected to existing KSC.	NH/CV	Construction nearly complete occupancy anticipated for Spring 2024
6	Knight's Inn Redevelopment (formerly proposed as new Hampton Inn & Suites)	701 S Indian Hill Blvd	Claremont	Originally proposed to include renovation of the two-story, 65-unit motel and construction of a four-story, 121-unit hotel. Specific Plan has been adopted.	CV	Plans for new 120-room Residence Inn by Marriott approved March 2023. Final entitlements granted by AC 3/29/23. Demo of Knights Inn completed Dec 2023. Construction expected to begin in early 2024.
7	La Popular Restaurant & Drezner Lofts	235 N Yale Ave	Claremont	New 3,000-SF restaurant with 850-SF new outdoor dining area. The mexican restaurant would occupy the former Rhino Records space. 1,660 s.f. Coffee Shop to occupy rear groundfloor tenant space. 5 new studio apts to be constructed through conversion of existing mezzanine and two new stories above rear tenant space. Total	NH	CUP for restaurant with alcohol approved in Sept 2022. Design Review approved in November 2022. Construction commenced March 2023. Restaurant completed and opened October 23,2023.
8	Med Density Housing Per Gen Plan Housing Element Update.	Citywide	Claremont	1,711 New Housing Units Planned for through Oct 15, 2029		Final approval of Housing Element Update adopted in July 2023. Rezoning of housing element opportunity sites to follow in January and February 2022.
9	Olson 56 Unit Townhomes	1030 W Foothill Blvd.	Claremont	56 Attached Townhomes with 12 Live work units 350 sf each work live		Entitlements approved in Sept and Oct 2023. Submittal of construction documents in early 2023. Construcion anticipated to commence in 2023 and to be
10	Pomona College 2015 Master Plan	Campus-Wide	Claremont	Includes increase of 50 students, 60 staff and faculty, and 205,400 new square feet of campus	CV	No projects currently proposed.
11	Senior Low Income Housing	956 W. Base Line Road	Claremont	15 unit low income senior housing project	JD	Application submitted in Dec 2020. Project approved by AC Feb 2021. Project currently awaiting funding sources to proceed.

12	South Village Development Project	Indian Hill to Bucknell, Rail ROW to Arrow Highway.	Claremont	Mixed-Use, Transit-oriented Development designed to expand the Claremont Village. Project plans include: 610 Residential Apartments in Mixed-use buildings 103 Flat-style Residential condos 21 Townhome residences 34,000 sq.ft. restaurants 52,000 sq.ft. retail 26,000 sq.ft. office space 1,195 parking spaces in structures or garages.	CV	Preliminary review of Architecture reviewed by AC in 3 phases Dec 2021 - May 2022. Two Tentative Tract Maps currently being reviewed by City and LA Co Fire. (TTM83439 & TTM83463). Construction to begin late 2024 and end late 2029. Final VTTM and Entitlements completed Dec 2022 and Jan 2023. Project awaiting investor funding.
13	Trumark Homes	2323 Forbes Ave	Claremont	56 SFR detached Units with 6 internal ADUs	EN	Draft EIR complete April 2023. Construction commences Q4 2024
14	City Ventures Townhomes	840 S Indian Hill Blvd	Claremont	65 townhomes. Proposed total Net SF is 92,880-SF	NH	Preliminary plans submitted for 65-unit townhome development at tennis courts near NE intersection of Indian Hill Boulevard and American Avenue. 2.67-acre site. Site needs to be rezoned as Housing Element. Project requires Parcel Map, Tract Map and Architectural and Site Plan Approval. AC Preliminary review to take
15	Larkin Place - Jamboree Permanent Supportive	731 Harrison Ave	Claremont	33-unit permanent supportive housing development.	CV	Project entitled June 1, 2023. Building permits expected to be issued by Jan 2024.
16	TCCS Student Services Building	800 N Dartmouth Ave	Claremont	New Student Services Building for Claremont Colleges students. Located at Mudd Quadrangle on Dartmouth south of 10th Street. Approx 30,000-SF	NH	Preliminary plans submitted for new Student Services Building. Preliminary Architectural Commission review completed in Nov 2023. Approvals anticipated in Spring 2024.
17	Mercy Housing Affordable Housing	1364 N Towne Avenue	Claremont	74-unit 100% Affordable Housing Development (Veteran Housing)	BJ/NH	100% Affordable Housing Development to reviewed in streamlined process pursuant to SB 35. Currently in community outreach stage.
18	TTM62814	365 San Jose Ave	Claremont	13 new residential townhomes at 365 W. San Jose	LC/CV	AC approved final design on December 11, 2019. Plans submitted for plan check, approvable pending approval/recording of Inclusionary Housing Agreement. After period of downtime, building permit application resubmitted in spring 2023. Building permit plan check is
19	Wendy's Remodel	187 S. Mountain Avenue	Upland	Façade and interior remodel of existing Wendy's restaurant		-Entitlement application was approved on July 3, 2023 -Construction plans for interior and exterior remodel have been submitted and are under review
20	Quick Quak Car Wash	950 Monte Vista Avenue	Upland	2,596 square foot automated drive-thru car wash with ancillary vacuum stations		Entitlement application and associated technical studies are currently under review
21	Bridge Point Upland Project	NEC of Central/Foothill	Upland	A 201,096 square foot warehouse/parcel delivery service building		-Pending outcome of appeal in California Courts of appeal - Construction documents are currently under review
22	Lennar at the Enclave	W. Foothill Boulevard	Upland	Development of 192 residential units comprised of 116 detached condominium units and 76 attached condominium units on 15.6 acres.		-Entitlement application were approved by the planning commission on February 24, 2021 -Project is under construction
23	Mixed Commercial/Industrial Development	1750-1780 W. Foothill Blvd	Upland	A 3,570 square foot retail building and four industrial condominium units within two multi-tenant industrial buildings 45,476 square feet and 55,616 square feet in size on 6.05 acres.		Application is currently under review
24	T & T Industrial	1701 W. 11th Street	Upland	2 office and warehouse buildings totaling 56,000 square feet		Construction documents are approved
25	Yellow Iron	2068 W. 11th Street	Upland	5 building light industrial park totaling approximately 77,000 square feet, including a 6-lot subdivision		-Entitlement application were approved by the planning commission on February 23, 2022 -Development is currently under construction

26	Rose Glen Specific Plan	1400 E. Arrow Hwy	Upland	64 two-story single family detached residential homes		-Entitlement applications were approved by the City council on October 10, 2022 -Construction plans are currently under review
27	Bullwinkle's Family Fun Center	1500 W. 7th Street	Upland	Remodel of existing amusement park, including façade, parking lot, and interior improvements.		-Entitlement application were approved by the planning commission on August 23, 2023 -Construction plans are currently under review
28	Citrus Village Senior Living	911 W. Arrow Highway	Upland	Potential senior housing development with 62 affordable housing units, 98 independent living units, 74 assisted living units, and a 30-bed facility for memory care residents.		A preliminary review application was submitted for feedback and guidance on January 19, 2023. Awaiting submittal formal entitlement applications.
29	The Courtyard at Upland (P)	968 W. 7th Street	Upland	The partial reconstruction of 36 apartment units within an existing legally non-conforming multi-family apartment complex, damaged by fire		-Entitlement application were approved by the planning commission on May 24, 2023 -Construction plans are currently under review.
30	Huntington Drive Apartments	1910 Huntington Drive	Upland	An 84-units, 3-story, multi-family residential apartment development on 1.38 acres. The developer proposes that 14 units are to be designated at the low-income affordability level		Applications are currently under review
31	Upland Reliability Project	1975 N. Benson Ave	Upland	Construction and operation of a new battery energy storage system facility. The project includes the placement of battery energy storage enclosures and associated electrical equipment on concrete foundations, including medium voltage transformers and power conversation system, on an area approximately 12 acres in size		Applications have been submitted and are currently under review
32	9th Street Apartments	1739 9th Street	Upland	A request to construct a 19-unit, 2-story apartment complex, with a density bonus, and 2 units made available at the low-income		Entitlement applications are under review
33	McDonalds	1590 W. Foothill Boulevard	Upland	Demolition of an existing 1,471 square foot McDonald's restaurant and construction of a new 4,266 square foot McDonald's restaurant with indoor dining and dual order point drive-through		-Entitlement application was approved by the planning commission on October 25, 2023 -Pending submittal of construction plans

TRAFFIC ANALYSIS - MEMORANDUM OF UNDERSTANDING (MOU) Revised February 14, 2024

This MOU acknowledges that the traffic analysis for the following project will be prepared in accordance with the latest traffic study policies and guidelines of the Cities of Claremont and Upland. There will be one traffic study for the entire Project which will cover both jurisdictions.

A. Project Information:

Project Name: Claremont-McKenna College Roberts Campus East (East Campus Update): Traffic Impact Study and VMT Analysis

Project Address: NE Corner of W Arrow Route and Claremont Boulevard

Project Description: Claremont McKenna College plans to modify and refine the site plan and entitlements for the Roberts Campus East, which is an existing inert debris landfill. The site has existing entitlements approved by the cities of Upland and Claremont in 2016. The proposed modification will include fields for baseball, softball, soccer, three multi-purpose fields, football/track, and golf practice, all to be used solely by CMC and it does not propose changes in the type of use or increase the intensity or density. The City of Upland served as the lead agency in 2016 and will continue to do so for this Project. CMC proposes two alternative site plans (Scenario 2 and Scenario 2B), each of which are provided in Attachment A. Each alternative site plan contains the same uses and programming, but the layout and vehicular access and circulation differ among the three scenarios.

B. Geographic Distribution: N 25 % S 25 % E 15 % W 35 %

Attachment B provides a graphic illustrating the overall project trip distribution. Trip distribution is similar across the two scenarios.

Trip Generation Rate(s): Soccer Complex (Land Use Code #488, ITE 11th Edition), Multi-Purpose Fields, Baseball Field, Softball Field, Football/Track & Field/Lacrosse, and Rugby/Soccer. The College provides the spectator and participant numbers, which are utilized to identify the number of trips. The trip generation table in Attachment C provides a description of the proposed land uses, ITE rates, estimated morning, and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. The project trip generation is summarized in the table below:

Day	Activity	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Weekday	Practice Day	1	0	1	11	149	160
	Game Day	1	0	1	11	249	260
Weekend	Game Day (Fall)	358	19	377	6	529	535
	Game Day (Spring)	218	19	237	6	315	321

C. Analysis Scenarios:

- Existing Year (2023) Conditions
- Opening Year (2027) Conditions
 - Opening Year Without Project Conditions
 - Opening Year Plus Project Conditions
- Future/Horizon Year (2045) Conditions
 - Future/Horizon Year Without Project Conditions
 - Future/Horizon Year Plus Project Conditions

Related Projects List attached?

☐ No ☒ Yes

[See attachment]

Capacity Analysis Methodologies: Signalized and unsignalized intersections will be analyzed using the latest HCM operational analysis methodologies and present the analysis results in Level-of-Service (LOS) and Delay, as per the City of Upland's *Traffic Impact Analysis Guidelines* (July 2020).

Study Intersections:

Study Intersection ID, Location and Jurisdiction*					
1.) Base Line Rd. & Indian Hill Blvd.	C	11.) Foothill Blvd. & Monte Vista Ave.	U	21.) 1st St./Huntington Dr. & Claremont Blvd.	C
2.) Base Line Rd. & Mills Ave	C	12.) Foothill Blvd. & Central Ave.	U	22.) Arrow Hwy. & Indian Hill Blvd.	C
3.) Base Line Rd. & Monte Vista Ave./Padua Ave.	C	13.) 6th St. & Indian Hill Blvd.	C	23.) Arrow Hwy. & College Ave.	C
4.) Base Line Rd. & I-210 Ramps	C	14.) 6th St. & College Ave.	C	24.) Arrow Hwy. & Claremont Blvd./Mills Ave.	C
5.) Claremont Blvd. & Monte Vista Ave	C	15.) 6th St. & Mills Ave.	C	25.) Claremont Blvd. & 9th St.	C
6.) Foothill Blvd. & Indian Hill Blvd.	C	16.) 6th St./Arrow Rte. & Claremont Blvd.	U	26.) Foothill Blvd. & Project Dwy. N	C
7.) Foothill Blvd. & College Ave	C	17.) Arrow Rte. & Monte Vista Ave.	U	27.) Claremont Blvd. & Project Dwy. SW	C
8.) Foothill Blvd. & Dartmouth Ave.	C	18.) Harrison Ave./5th St. & Indian Hill Blvd.	C	28.) Monte Vista Ave. & Project Dwy. SE	U
9.) Foothill Blvd. & Mills Ave.	C	19.) 1st St. & Indian Hill Blvd.	C	29.) Monte Vista Ave. & 1st St./Richton St. (Ex. three-way & Future four-way intersection)	U
10.) Foothill Blvd. & Claremont Blvd.	C	20.) 1st St. & College Ave.	C		

* C = City of Claremont; U = City of Upland

Highlighted Roadway segments are located within the jurisdiction of the City of Upland

Study Roadways:

Study Roadway Segment ID, Location and Local Jurisdiction*					
A.) Foothill Boulevard east of Monte Vista Avenue	U	E.) 9th Street west of Claremont Boulevard	C	I.) Arrow Route between College Park Dr. & Monte Vista Ave.	U
B.) Monte Vista Ave between Foothill Boulevard & 11th Street	U	F.) Claremont Boulevard between 9th Street & 6th St/Arrow Rt.	C	J.) Claremont Boulevard south of 6th Street / Arrow Route	C
C.) Claremont Boulevard between Foothill Boulevard & 9th Street	C	G.) 6th Street west of Mills Avenue	C	K.) 1st Street between Claremont Blvd. & Monte Vista Ave. (future segment)	U
D.) 9th Street east of Mills Avenue	C	H.) Arrow Route between Claremont Bl. & College Park Dr.	U		

* C = City of Claremont; U = City of Upland

Highlighted Roadway segments are located within the jurisdiction of the City of Upland

	Yes	No
Transit Usage		X
Transportation Demand Management		X
Existing Active Land Use		X ¹
Previous Land Use		X

¹ Existing site is currently vacant land. All proposed athletics facilities, fields, and programs, however, are existing and will be relocated from the adjacent CMC Campus (located just to the west of Claremont Blvd.) to the subject project site.

Additional Sections: Other project-related analyses will be provided in the traffic study, such as event traffic control, ingress, egress, accessibility, public and emergency access, and on-site parking.

D. Vehicle Miles Travelled (VMT) Assessment

As outlined in the City's guidelines, a VMT screening will be conducted to determine whether the project will need to provide further detailed VMT analyses.

VMT Screening Analysis – KOA will prepare a VMT screening assessment for the project based on both the City of Claremont's *Transportation Study Guidelines* and the City of Upland's *Traffic Impact Analysis Guidelines*. Current VMT guidelines allow for projects that are local-serving in nature and presumed to have a less-than-significant VMT impact, including, without limitation, local-serving parks, community colleges, and university student housing projects. While the proposed project does not explicitly match any of the above-listed project types, the proposed project uses are:

- 1) Currently existing and do not include any expanded programs; and
- 2) Can be considered as local serving, as they will primarily cater to the students and faculty of Claremont McKenna College and potentially Pitzer College.

As most of the proposed project facilities will serve as relocations from the existing campus, and all facilities will accommodate uses that currently exist on the campus, the Project will likely generate a relatively low number of "new" trips. KOA will prepare a technical memorandum providing a qualitative screening analysis discussing the local-serving nature of the project uses, and the application of the presumed less-than-significant VMT impact.

Quantitative VMT Analysis – Notwithstanding the findings and conclusions of the VMT screening analysis described above, KOA proposes to conduct a quantitative VMT analysis for the proposed project. Most of the facilities proposed as part of the project may be considered local serving uses in accordance with each agency's adopted VMT guidelines as discussed above. However, as a conservative measure, KOA will also prepare a quantitative VMT analysis for the project. This analysis will include the calculation of the VMT per service population (students, faculty, spectators, etc.) metric for the project, as well as the calculation of the cumulative link-level boundary Citywide VMT per service population under Without Project and Plus Project conditions. The SGVCOG VMT Evaluation Tool and SBCTA VMT Screening Tool will be used for the Project's VMT screening evaluation and the quantitative VMT analysis.

E. Traffic Data

KOA has collected traffic volume counts for the majority of the locations identified in Section C, above. New traffic counts will be collected for the additional locations requested by the Cities of Claremont and Upland, based on recent correspondence. In order to provide a consistent and correlative traffic engineering/planning study effort, it is assumed that no further traffic count locations will be added to this scope. Any potential additional study locations shall require collaborative discussion with the Project Team and Agency(ies).

Cumulative Development Projects List						
#	Project Name or Item	Address	City	Description	City Planning Process	Project Status
1	Arbor Pointe SFRs	216 @ Monte Vista (SWC)	Claremont	Tentative Tract Map and Design Review for 13 lot subdivision consisting of 13 SFRs, 13 JADUs, and 11 detached ADUs.	CP	No activity since July 2022. Project inquiry email sent 1/3/23.
2	CGU Master Plan	Generally bounded by Foothill Blvd., Dartmouth Avenue, Seventh Street, and College Avenue	Claremont	Potential addition of up to 475 regularly enrolled students, and 99 faculty and staff, and expansion, remodeling, and replacement of campus facilities, resulting in a potential increase in building area of approximately 170,000 assignable square foot	JD	No activity on this project since early 2017.
3	Doubletree Hotel/Old School House Specific Plan	North of Foothill Blvd. and west of Indian Hill Blvd.	Claremont	126-unit residential condominiums/townhomes (30 in building with new 240-space parking structure and 96 on Colby Circle)	CV/NH	30 units and parking structure completed March 2023. Substantial progress on 96 units currently under construction with all slated for completion over next 4-6 months.
4	Harvey Mudd College 2015 Master Plan Amendment	South of E. Foothill Blvd. and north of Plant Blvd. between N. Dartmouth Avenue and N. Claremont Blvd.	Claremont	Proposed HMC 2015 Master Plan Amendment includes increasing current building floor area from 738,079 GSF to 962,411 903,911 GSF, and increasing HMC enrollment entitlement from 800 students to 900 students.	CV	70,000 square foot academic building (Shanahan Learning Center) completed and occupied Sept. 2013 (net 50K) 48,550 sq.ft. dormitory (Drinkwater Dormitory) Completed 2015. 35,000 square foot academic building (McGregor Computer Science) completed and occupied Mar 2021 Approx 35,000 square feet remaining in plan for future academic building to be constructed at SEC of Dartmouth
5	Keck Science Center Expansion	925 N Mills Avenue (to the west of existing KSC at NW intersection of Ninth Ave and Mills on Scripps campus)	Claremont	70,000-square foot, three-story, semi-detached ground up building for Keck Science Center labs and classrooms. Located on existing surface level parking lot. Connected to existing KSC.	NH/CV	Construction nearly complete occupancy anticipated for Spring 2024
6	Knight's Inn Redevelopment (formerly proposed as new Hampton Inn & Suites)	701 S Indian Hill Blvd	Claremont	Originally proposed to include renovation of the two-story, 65-unit motel and construction of a four-story, 121-unit hotel. Specific Plan has been adopted.	CV	Plans for new 120-room Residence Inn by Marriott approved March 2023. Final entitlements granted by AC 3/25/23. Demo of Knight's Inn completed Dec 2023. Construction expected to begin in early 2024.
7	La Popalar Restaurant & Dreamer Lofts	295 N Yale Ave	Claremont	New 3,000-SF restaurant with 850-SF new outdoor dining area. The Mexican restaurant would occupy the former Rhino Records space. 1,660 s.f. Coffee Shop to occupy rear ground floor tenant space. 5 new studio apts to be constructed through conversion of existing mezzanine and two new stories above rear tenant space. Total	NH	CUP for restaurant with alcohol approved in Sept 2022. Design Review approved in November 2022. Construction commenced March 2023. Restaurant completed and opened October 23, 2023.
8	Med Density Housing Per Gen Plan Housing Element Update.	Citywide	Claremont	1,711 New Housing Units Planned for through Oct 15, 2022		Final approval of Housing Element Update adopted in July 2023. Rezoning of housing element opportunity sites to follow in January and February 2022.
9	Olson 56 Unit Townhomes	1030 W Foothill Blvd.	Claremont	56 Attached Townhomes with 12 Live work units 350 sf each work live		Entitlements approved in Sept and Oct 2023. Submittal of construction documents in early 2023. Construction anticipated to commence in 2023 and to be
10	Pomona College 2015 Master Plan	Campus-Wide	Claremont	Includes increase of 50 students, 60 staff and faculty, and 205,400 new square feet of campus	CV	No projects currently proposed.
11	Senior Low Income Housing	956 W. Base Line Road	Claremont	15 unit low income senior housing project	JD	Application submitted in Dec 2020. Project approved by AC Feb 2021. Project currently awaiting funding sources to proceed.

12	South Village Development Project	Indian Hill to Bucknell, Rail ROW to Arrow Highway.	Claremont	Mixed-Use, Transit-oriented Development designed to expand the Claremont Village. Project plans include: 610 Residential Apartments in Mixed-use buildings 103 Flat-style Residential condos 21 Townhome residences 34,000 sq ft restaurants 52,000 sq ft retail 26,000 sq ft office space 1,155 parking spaces in structures or garages.	CV	Preliminary review of Architecture reviewed by AC in 5 phases Dec 2021 - May 2022. Two Tentative Tract Maps currently being reviewed by City and LA Co Plr. (TTM/83439 & TTM/83463). Construction to begin late 2024 and end late 2029. Final VTTM and Entitlements completed Dec 2022 and Jan 2023. Project awaiting investor funding.
13	Trumark Homes	2323 Forbes Ave	Claremont	56 SFR detached Units with 6 internal ADUs	EN	Draft EIR complete April 2023. Construction commences Q4 2024
14	City Ventures Townhomes	840 S Indian Hill Blvd	Claremont	65 townhomes. Proposed total Net SF is 92,880-SF	NH	Preliminary plans submitted for 65-unit townhome development at Kern's courts near NE Intersection of Indian Hill Boulevard and American Avenue. 2.67-acre site. Site needs to be rezoned as Housing Element. Project requires Parcel Map, Tract Map and Architectural and Site Plan Approval. AC Preliminary review to take
15	Larkin Place - Jamboree Permanent Supportive	731 Harrison Ave	Claremont	35-unit permanent supportive housing development.	CV	Project entitled June 1, 2023. Building permits expected to be issued by Jan 2024
16	TCCS Student Services Building	800 N Dartmouth Ave	Claremont	New Student Services Building for Claremont Colleges students. Located at Mudd Quadrangle on Dartmouth south of 10th Street. Approx 30,000-SF	NH	Preliminary plans submitted for new Student Services Building. Preliminary Architectural Commission review completed in Nov 2023. Approvals anticipated in Spring 2024
17	Mercy Housing Affordable Housing	1364 N Towne Avenue	Claremont	74-unit 100% Affordable Housing Development (Veteran Housing).	BL/NH	100% Affordable Housing Development to reviewed in streamlined process pursuant to SB 35. Currently in community outreach stage.
18	TTM62814	365 San Jose Ave	Claremont	13 new residential townhomes at 365 W. San Jose	LC/CV	AC approved final design on December 11, 2019. Plans submitted for plan check, approvable pending approval/recording of Indemnity Housing Agreement. After period of downtime, building permit application resubmitted in spring 2023. Building permit plan check is
19	Wendy's Remodel	187 S. Mountain Avenue	Upland	Facade and interior remodel of existing Wendy's restaurant		-Entitlement application was approved on July 3, 2023 -Construction plans for interior and exterior remodel have been submitted and are under review
20	Quick Quik Car Wash	950 Monte Vista Avenue	Upland	2,595 square foot automated drive-thru car wash with ancillary vacuum stations		Entitlement application and associated technical studies are currently under review
21	Bridge Point Upland Project	NEC of Centre/Foothill	Upland	A 201,096 square foot warehouse/parcel delivery service building		-Pending outcome of appeal in California Courts of appeal - Construction documents are currently under review
22	Lennox at the Enclave	W. Foothill Boulevard	Upland	Development of 192 residential units comprised of 115 detached condominium units and 76 attached condominium units on 15.5 acres		-Entitlement application were approved by the planning commission on February 24, 2021 -Project is under construction
23	Mixed Commercial/Industrial Development	1750-1760 W. Foothill Blvd	Upland	A 3,570 square foot retail building and four industrial condominium units within two multi-tenure industrial buildings 45,476 square feet and 55,616 square feet in size on 6.05 acres.		Application is currently under review
24	I & T Industrial	1701 W. 11th Street	Upland	2 office and warehouse buildings totaling 56,000 square feet		Construction documents are approved
25	Yellow Iron	2068 W. 11th Street	Upland	5 building light industrial park totaling approximately 77,000 square feet, including a 6 lot subdivision		Entitlement application were approved by the planning commission on February 23, 2022 -Development is currently under construction

26	Rose Glen Specific Plan	1400 E. Arrow Hwy	Upland	54 two-story single family detached residential homes	Entitlement applications were approved by the City Council on October 10, 2022. -Construction plans are currently under review.
27	Bullwinkle's Family Fun Co	1500 W. 7th Street	Upland	Remodel of existing amusement park, including facade, parking lot, and interior improvements.	-Entitlement application were approved by the planning commission on August 23, 2022. -Construction plans are currently under review.
28	Citrus Village Senior Living	311 W. Arrow Highway	Upland	Potential senior housing development with 62 affordable housing units, 58 independent living units, 74 assisted living units, and a 30-bed facility for memory care residents.	A preliminary review application was submitted for feedback and guidance on January 19, 2023. Awaiting submittal formal entitlement applications.
29	The Courtyard at Upland	1968 W. 7th Street	Upland	The partial reconstruction of 36 apartment units within an existing legally non-conforming multi-family apartment complex, damaged by fire.	-Entitlement application were approved by the planning commission on May 24, 2023. -Construction plans are currently under review.
30	Huntington Drive Apartments	1910 Huntington Drive	Upland	An 84-unit, 3-story, multi-family residential apartment development on 1.38 acres. The developer proposes that 14 units are to be designated at the low-income affordability level.	Applications are currently under review.
31	Upland Reliability Project	1975 N. Benson Ave	Upland	Construction and operation of a new battery energy storage system facility. The project includes the placement of battery energy storage enclosures and associated electrical equipment on concrete foundations, including medium voltage transformers and power conversion system, on an area approximately 12 acres in size.	Applications have been submitted and are currently under review.
32	9th Street Apartments	1739 9th Street	Upland	A request to construct a 19-unit, 2-story apartment complex, with a density bonus, and 2 units made available at the low-income.	Entitlement applications are under review.
33	McDonalds	1580 W. Foothill Boulevard	Upland	Demolition of an existing 1,471 square foot McDonald's restaurant and construction of a new 4,266 square foot McDonald's restaurant with indoor dining and dual order point drive-through.	Entitlement application was approved by the planning commission on October 25, 2023. -Pending submittal of construction plans.

Subject: Queuing Analysis for Claremont McKenna College Roberts Campus Sports Bowl/Roberts Campus East: Base Line Road at SR-210 (Caltrans intersection), and at Project driveways

INTRODUCTION

The following technical memorandum has been prepared to document the queuing analysis conducted for the Claremont-McKenna College Roberts Campus Sports Bowl/Roberts Campus East Project. Peak hour vehicle queuing was analyzed for the signalized Caltrans intersection of Base Line Road at the SR-210 On/Off-Ramps, as well as for the proposed Project driveways along the perimeter of the project site. Intersection queuing was evaluated using Synchro and SimTraffic (version 11) traffic modeling and simulation software. The 95th percentile queues under the “With Project” condition were compared with the available storage for each respective movement to evaluate if the provided lane storage will be adequate.

CALTRANS INTERSECTION: BASE LINE ROAD AT SR-210 RAMP QUEUING ANALYSIS

Opening Year (2027) With Project Vehicle Queuing Analysis

A queuing analysis was conducted for the study intersection at Base Line Road and the SR-210 East/West Ramps, to determine if traffic queues generated on the off-ramps during the peak hour period would exceed the available capacity in the Project’s Opening Year (OY 2027). The intersection was modeled in Synchro, using the existing lane geometrics and OY 2027 With Project traffic volumes (which considers baseline existing traffic, ambient growth to the Year 2027, related/cumulative project traffic, plus site traffic derived from the Roberts Campus Sports Bowl project). The 95th percentile queue, which represents the maximum back of the queue with 95th percentile traffic volumes during the peak hour, was evaluated for the purposes of determining the necessary traffic lane storage lengths. The 95th percentile queue is based on statistical calculations and was verified in the SimTraffic analysis. The results of the queuing analysis were used to confirm the storage capacity and adequacy of the existing off-ramp lanes.

The vehicle queuing analysis was conducted for the four different scenarios: Practice Day (Weekday), Game Day (Weekday), Game Day [Fall] (Weekend), and Game Day [Spring] (Weekend). The northbound and southbound turn pocket are summarized in **Table 1**. Based on the findings of the Synchro/Sim Traffic analysis, the average and 95th percentile queues for the SR-210 off-ramp at Base Line Road would be shorter than the lengths of the available vehicle storage capacities, and no spillback of off-ramp traffic would occur upstream onto the freeway mainline. **Figure 1** illustrates the results of the queuing analysis during the Opening Year 2027 With Project conditions.

Detailed vehicle queuing analysis worksheets are provided in **Appendix A**.

Game Day [Fall]

Game Day [Spring]

Horizon Year (2045) With Project Vehicle Queuing Analysis

A vehicle queuing analysis for the SR-210 Ramps at Base Line Road was also conducted for the Horizon Year (2045) With Project conditions, during the AM and PM peak hours for each the Practice Day, Game Day, Game Day [Fall] and Game Day [Spring] scenarios. The queue lengths illustrated in **Figure 2** represent the average and 95th percentile queue lengths. Queuing analysis worksheets are provided in **Appendix B**. The vehicle queuing results are summarized in **Table 2**.

TABLE 2 QUEUING ANALYSIS – HORIZON YEAR 2045 WITH PROJECT

Horizon Year 2045 With Project – 95 th Percentile Queue (ft)									
Direction	Storage length (ft)	Practice Day		Game Day		Game Day [Fall]		Game Day [Spring]	
		AM	PM	AM	PM	AM	PM	AM	PM
NBL	1,365	166	143	430	218	188	208	232	110

Game Day [Spring]

VEHICLE QUEUING ANALYSIS AT PROJECT DRIVEWAYS

A vehicle queuing analysis was conducted for the four (4) proposed project driveway intersections—including one proposed signalized and one uncontrolled driveway on Claremont Boulevard (i.e., intersections #25 & #27), one uncontrolled driveway on Foothill Boulevard (i.e., intersection #26), and one uncontrolled driveway on Monte Vista Avenue (i.e., intersection #28)—which provide direct access to the CMC East Roberts Campus site:

- #25 Claremont Boulevard and 9th Street = 9th Street Dwy
- #26 Foothill Boulevard and Project Driveway N = N- Dwy
- #27 Claremont Boulevard and Project Driveway SW = SW-Dwy
- #28 Monte Vista Avenue and Project Driveway SE = SE-Dwy

The analysis assesses whether the inbound traffic movements entering the site driveways would result in traffic queuing that could interfere with adjacent traffic on the public roadway. The vehicle queuing analysis was conducted using traffic volume data for the Opening Year With Project and Horizon Year With Project scenarios, during Practice Day, Game Day, Game Day [Fall], and Game Day [Spring] events for both AM and PM peak periods. These scenarios were selected due to their representation of the highest traffic volumes among all evaluated conditions.

Table 3 summarizes the vehicle queuing analysis results. The vehicle queues are based on the average queues and 95th percentile queues. Synchro reports the 95th percentile queue length in feet, which can be compared against the available lane storage lengths at driveway intersections, or be used as a basis to determine the required storage length for planned intersection improvements. The table shows that the 95th percentile vehicle queues for all key turning movements at the proposed project site access points would be shorter than the vehicle queuing capacities at those locations, provided that 125 feet of storage length is provided at the proposed Intersection #25 (Claremont Boulevard at 9th Street) for the southbound left-turn inbound movement during the AM peak hour, and the westbound left-turn outbound movement during the PM peak hour.

Appendix C shows the result of the queuing analysis of project driveways during the Opening Year with the project and Horizon Year with project conditions.

Detailed vehicle queuing analysis worksheets are available in **Appendix D**.

Based on the results from Table 3, the critical 95th percentile queue lengths at the proposed signalized intersection of Claremont Boulevard and 9th Street are as follows:

Westbound Left Turn (site exiting traffic)

- *Opening Year 2027*
 - Game Day – PM peak hour = 117-ft queue
 - Game Day [Fall] – PM peak hour = 121-ft queue
- *Horizon Year 2045*
 - Practice Day – PM peak hour = 99-ft queue
 - Game Day – PM peak hour = 71-ft queue

Southbound Left Turn (site entering traffic)

- *Opening Year 2027*
 - Game Day [Fall] – AM peak hour = 106-ft queue
- *Horizon Year 2045*
 - Game Day [Fall] – AM peak hour = 106-ft queue

The analysis shows that lane capacities for the above two left-turning movements (i.e., southbound and westbound) at the proposed signalized intersection of Claremont Boulevard and 9th Street, at the Project's main entrance driveway, should be designed with a minimum storage of 125 feet. The initial concept design plan for this intersection previously provided 60 and 100-foot turn pockets, respectively, but the proposed design plan will be updated to propose the 125-foot turn pockets identified in this analysis. The 125-foot turn pockets will provide adequate storage capacity to accommodate queue lengths for each turning movement.

TABLE 3 QUEUING ANALYSIS FOR PROJECT DRIVEWAYS
