Design Maps Detailed Report

ASCE 7-10 Standard (34.2077°N, 119.1554°W)

Site Class D – "Stiff Soil", Risk Category I/II/III

Section 11.4.1 — Mapped Acceleration Parameters

Note: Ground motion values provided below are for the direction of maximum horizontal spectral response acceleration. They have been converted from corresponding geometric mean ground motions computed by the USGS by applying factors of 1.1 (to obtain S_S) and 1.3 (to obtain S_1). Maps in the 2010 ASCE-7 Standard are provided for Site Class B. Adjustments for other Site Classes are made, as needed, in Section 11.4.3.

From Figure 22-1 [1]	S_S = 2.596 g
From Figure 22-2 [2]	S_1 = 0.938 g

Section 11.4.2 — Site Class

The authority having jurisdiction (not the USGS), site-specific geotechnical data, and/or the default has classified the site as Site Class D, based on the site soil properties in accordance with Chapter 20.

Table 20.3–1 Site Classification

Site Class	$\bar{v}_s$	$\bar{N}$ or $\bar{N}_{ch}$	$\bar{s}_u$
A. Hard Rock	>5,000 ft/s	N/A	N/A
B. Rock	2,500 to 5,000 ft/s	N/A	N/A
C. Very dense soil and soft rock	1,200 to 2,500 ft/s	>50	>2,000 psf
D. Stiff Soil	600 to 1,200 ft/s	15 to 50	1,000 to 2,000 psf
E. Soft clay soil	<600 ft/s	<15	<1,000 psf
	Any profile with more than 10 ft of soil having the characteristics: • Plasticity index PI > 20, • Moisture content w ≥ 40%, and • Undrained shear strength $\bar{s}_u$ < 500 psf		
F. Soils requiring site response analysis in accordance with Section 21.1	See Section 20.3.1		

For SI: 1ft/s = 0.3048 m/s 1lb/ft² = 0.0479 kN/m²

Section 11.4.3 — Site Coefficients and Risk–Targeted Maximum Considered Earthquake (MCE_R) Spectral Response Acceleration Parameters

Table 11.4–1: Site Coefficient F_a

Site Class	Mapped MCE $_R$ Spectral Response Acceleration Parameter at Short Period				
	$S_S \leq 0.25$	$S_S = 0.50$	$S_S = 0.75$	$S_S = 1.00$	$S_S \geq 1.25$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.2	1.2	1.1	1.0	1.0
D	1.6	1.4	1.2	1.1	1.0
E	2.5	1.7	1.2	0.9	0.9
F	See Section 11.4.7 of ASCE 7				

Note: Use straight–line interpolation for intermediate values of S_S

For Site Class = D and S_s = 2.596 g, F_a = 1.000

Table 11.4–2: Site Coefficient F_v

Site Class	Mapped MCE $_R$ Spectral Response Acceleration Parameter at 1–s Period				
	$S_1 \leq 0.10$	$S_1 = 0.20$	$S_1 = 0.30$	$S_1 = 0.40$	$S_1 \geq 0.50$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.7	1.6	1.5	1.4	1.3
D	2.4	2.0	1.8	1.6	1.5
E	3.5	3.2	2.8	2.4	2.4
F	See Section 11.4.7 of ASCE 7				

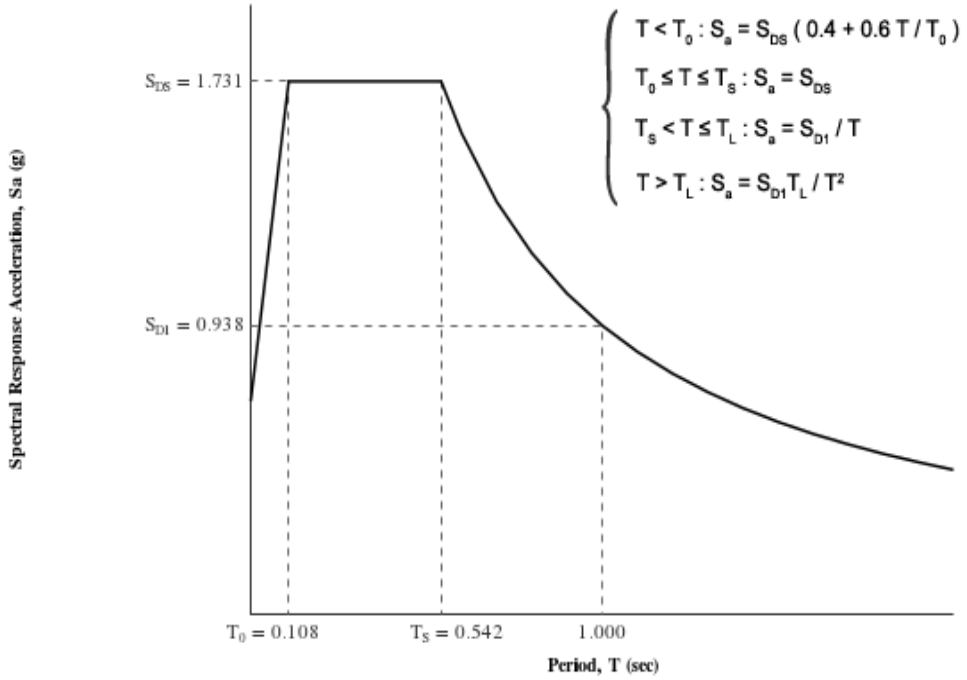
Note: Use straight–line interpolation for intermediate values of S_1

For Site Class = D and S_1 = 0.938 g, F_v = 1.500

Equation (11.4–1): $S_{MS} = F_a S_S = 1.000 \times 2.596 = 2.596$ g

Equation (11.4–2): $S_{M1} = F_v S_1 = 1.500 \times 0.938 = 1.407$ g

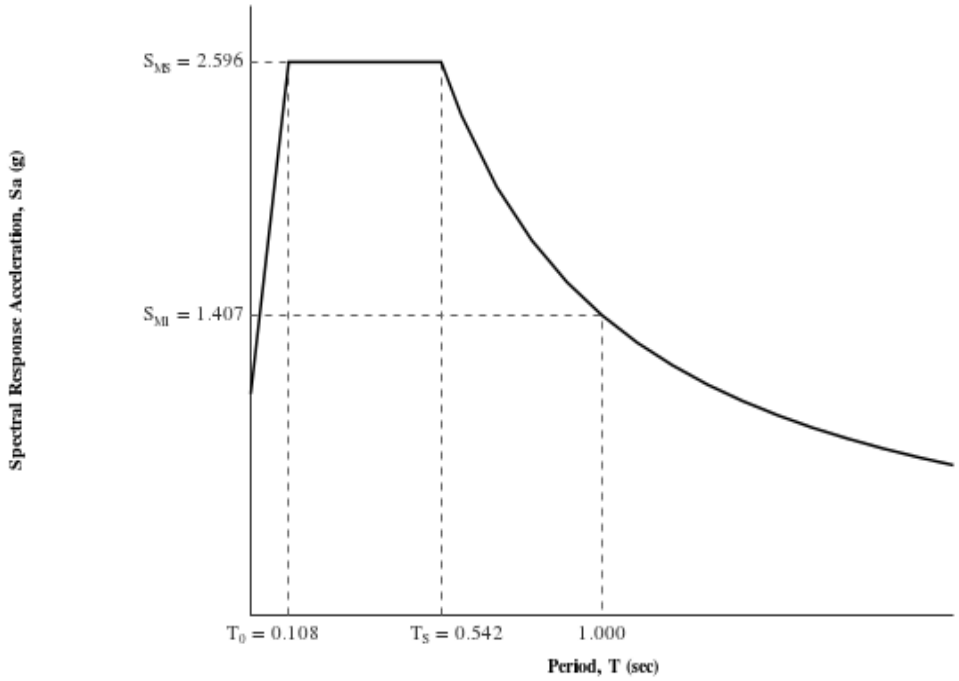
Section 11.4.4 — Design Spectral Acceleration Parameters



Equation (11.4–3): $S_{DS} = ⅔ S_{MS} = ⅔ \times 2.596 = 1.731$ g

Equation (11.4–4): $S_{D1} = ⅔ S_{M1} = ⅔ \times 1.407 = 0.938$ g

Section 11.4.5 — Design Response Spectrum



From Figure 22-12 [3] $T_L = 8$ seconds

Figure 11.4–1: Design Response Spectrum

Section 11.4.6 — Risk-Targeted Maximum Considered Earthquake (MCE_R) Response Spectrum

The MCE_R Response Spectrum is determined by multiplying the design response spectrum above by 1.5.

Section 11.8.3 — Additional Geotechnical Investigation Report Requirements for Seismic Design Categories D through F

From Figure 22-7 [4] PGA = 1.020

Equation (11.8–1): $PGA_M = F_{PGA}PGA = 1.000 \times 1.020 = 1.02$ g

Table 11.8–1: Site Coefficient F_{PGA}

Site Class	Mapped MCE Geometric Mean Peak Ground Acceleration, PGA				
	PGA ≤ 0.10	PGA = 0.20	PGA = 0.30	PGA = 0.40	PGA ≥ 0.50
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.2	1.2	1.1	1.0	1.0
D	1.6	1.4	1.2	1.1	1.0
E	2.5	1.7	1.2	0.9	0.9
F	See Section 11.4.7 of ASCE 7				

Note: Use straight–line interpolation for intermediate values of PGA

For Site Class = D and PGA = 1.020 g, F_{PGA} = 1.000

Section 21.2.1.1 — Method 1 (from Chapter 21 – Site-Specific Ground Motion Procedures for Seismic Design)

From Figure 22-17 [5] C_{RS} = 0.910

From Figure 22-18 [6] C_{R1} = 0.909

Section 11.6 — Seismic Design Category

Table 11.6-1 Seismic Design Category Based on Short Period Response Acceleration Parameter

VALUE OF S_{DS}	RISK CATEGORY		
	I or II	III	IV
$S_{DS} < 0.167g$	A	A	A
$0.167g \le S_{DS} < 0.33g$	B	B	C
$0.33g \le S_{DS} < 0.50g$	C	C	D
$0.50g \le S_{DS}$	D	D	D

For Risk Category = I and S_{DS} = 1.731 g, Seismic Design Category = D

Table 11.6-2 Seismic Design Category Based on 1-S Period Response Acceleration Parameter

VALUE OF S_{D1}	RISK CATEGORY		
	I or II	III	IV
$S_{D1} < 0.067g$	A	A	A
$0.067g \le S_{D1} < 0.133g$	B	B	C
$0.133g \le S_{D1} < 0.20g$	C	C	D
$0.20g \le S_{D1}$	D	D	D

For Risk Category = I and S_{D1} = 0.938 g, Seismic Design Category = D

Note: When S_1 is greater than or equal to 0.75g, the Seismic Design Category is **E** for buildings in Risk Categories I, II, and III, and **F** for those in Risk Category IV, irrespective of the above.

Seismic Design Category ≡ "the more severe design category in accordance with Table 11.6-1 or 11.6-2" = E

Note: See Section 11.6 for alternative approaches to calculating Seismic Design Category.

U.S. Geological Survey - Earthquake Hazards Program

Unified Hazard Tool

Please do not use this tool to obtain ground motion parameter values for the design code reference documents covered by the U.S. Seismic Design Maps web tools (e.g., the International Building Code and the ASCE 7 or 41 Standard). The values returned by the two applications are not identical.

1.0 INTRODUCTION

Tetra Tech, Inc. (Tetra Tech) has prepared this Phase I Geologic and Environmental Hazards Assessment Report (GEHA) for the Oxnard Union High School District (OUHSD) for the proposed High School No. 8 located in the City of Oxnard in Ventura County, California (Figure 1). The proposed High School No. 8 is hereinafter referred to as the "Site." The project will include the construction of new parking areas, driveways, buildings, and athletic facilities on properties currently owned by the Maulhardt Family.

This Phase I GEHA was prepared on behalf of the OUHSD to provide information required to obtain California Department of Education (CDE) project approval in accordance with the requirements of Appendix H of the *School Site Selection and Approval Guide* (CDE 2016). The ultimate goal of completing this Phase I GEHA is to achieve approval from the CDE, California Department of the State Architect (DSA), and California Geological Survey (CGS) for the proposed High School No. 8 site.

1.1 SCOPE OF WORK

This Phase I GEHA evaluates the items listed on the CDE Environmental Hazards Checklist (CDE 2007b) including the following the potential hazards to the Site:

- Surface fault rupture;
- Seismic ground motion;
- Liquefaction;
- Earthquake-induced landslides/slope instability;
- Subsidence;
- Tsunami;
- Seiche inundation;
- Flooding;
- Reservoir failure inundation;
- Expansive soils;
- Asbestos containing serpentine rocks;
- Hazardous or solid waste disposal;
- Water/Fuel Storage Tanks;
- Traffic Corridors;
- Airports/Heliports;
- Railroad Tracks Right of Ways;
- Impacted soil and groundwater;
- Hazardous air emissions;
- High pressure pipelines;

- Electromagnetic radiation from public utility power lines; and
- Oil and gas fields.

1.2 LOCATION, DESCRIPTION, AND HISTORICAL SUMMARY

The Site located within the Maulhardt Ranch at 1853 Camino Del Sol in the City of Oxnard, California in the 93030-zip code area (Figure 1). The Site is a 48.6-acre (approximate) portion of the Maulhardt Ranch (APN 214-002-059), a 107.25-acre property in the City of Oxnard, California (Figures 1 and 2). Book 214 page 2 of the County of Ventura's Assessor Map indicates that the Site comprises approximately the southernmost 48 Acres of Parcel 59, within the Rancho El Rio Santa Clara O'La Colonia Portion A of Subdivision 26 in the city of Oxnard. The geographic coordinates of the Site are approximately Latitude 34° 12' 27.76" North, Longitude 119° 9' 19.44" West (EDR 2017).

The Site is located in the central area of the Oxnard plain. The Site topography is a relatively flat with surface that gently slopes to the south. Surface elevations at the Site range from approximately 60 feet above mean sea level (msl) in the north to 52 feet above msl on the south (Google Earth 2018).

Currently, the Site is used for the cultivation of strawberries. Historical aerial photographs, Google Earth images, and information from the Site owners indicate that the Site has been used for cultivation of row crops from as early as 1869 to the present.

The Site is located in an area that is developed for commercial, residential, park, and agricultural land use and is situated in the southern portion of the Maulhardt Ranch excluding the 11.59 acre residential and farmyard areas (Figure 2). The Site is bounded by Camino Del Sol on the south with residential and commercial development on the south side of Camino Del Sol, North Rose Avenue on the west with residential development to the west of North Rose Avenue, the residential and farmyard portions of Maulhardt Ranch to the southwest, and areas developed in strawberry cultivation on the Maulhardt Ranch to the north. A residential neighborhood is located to the east of the Site. Del Sol Park is located southwest of the Site across the intersection of Camino Del Sol and North Rose Avenue. The entire Maulhardt Ranch (APN 214-002-059) is bound by Camino Del Sol on the south, North Rose Avenue on the west, Cesar Chavez Drive on the north, and Gibraltar Street, the park adjacent to the west side of Rio Rosales Elementary School, and a residential neighborhood on the east. Commercial development consisting of a Carl's Jr. restaurant, 4-Way Meat Market, and the Trinity Community Church is located at the southeast corner of the of Camino Del Sol and North Rose Avenue. High density residential development consisting of blocks of apartment buildings are located on the south side of Camino Del Sol immediately south of the Site, and neighborhoods of single-family housing are located to the east and west of the Site.

1.3 PROPOSED SCHOOL DEVELOPMENT

Tetra Tech's knowledge of the proposed project improvements is limited as of this time and is based on the Overall Site Plan Oxnard High School District High School No. 8 prepared by WLC Architects (WLC Architects 2019) (Figure 2). The Site Plan is summarized in Table 1.

Table 1
Overall Site Plan Summary

Building	Building Area ft^{2} [a]	No. Stories
A - Administration, Library, Nurse, 1st Floor	13,959	Two-Story
A - Administration, Library, Nurse, 2nd Floor	16,823

JV Baseball Field	110,050	Turf
Varsity Softball Field	55,420	Turf
JV Softball Field	53,695	Turf
Sports Field	163,395	Turf
Basketball Courts	52,960	Paved
Tennis Courts	46,200	Paved
Pool	10,275	Paved
Total	**792,565**	

Notes:
a – Area estimates are approximate.
ft^{2} - Square Foot

The proposed buildings will be of wood or metal frame construction or cast in place concrete tilt up construction with concrete slab-on-grade foundations. No other structures are planned. The proposed grading plan for the project and finish floor elevations were not provided to Tetra Tech for the preparation of this report. It is anticipated that the final grade will be similar to the existing grade and that the grading required to achieve the building pad subgrade will be minor and necessary only to provide adequate foundation and slab support and positive drainage away from the structures.

It is assumed that surface and subsurface improvements will also be constructed. Surface improvements will include concrete flat work for pedestrian use. Subsurface improvements will include underground utility conduits.

1.4 PREVIOUS INVESTIGATIONS

Tetra Tech has reviewed the following previous studies that were previously prepared for the Site:

- *Final Phase I Environmental Site Assessment, Proposed Oxnard High School No. 8, APN 214-002-059 on North Rose Avenue, Oxnard, California* (Tetra Tech 2018a) (Phase I ESA);
- *Preliminary Foundation Design Parameters and Infiltration Testing Report* (Earth Systems Pacific [ESP] 2018a);
- *Technical Memorandum Field Sampling Plan Proposed High School No. 8 APN 214-002-059 on North Rose Avenue, Oxnard, California* (Tetra Tech 2018b) (FSP);
- *Geotechnical Engineering Report, Oxnard High School No. 8, Northeast of Camino Del Sol and North Rose Avenue, Oxnard, California* (ESP 2018b) (Geotechnical Report);
- *Geohazard Assessment/Geotechnical Investigation High School No. 8 APN 214-002-059 on North Rose Avenue, Oxnard, California* (Tetra Tech 2018c) (Geohazard Report);

- *Draft Preliminary Environmental Assessment High School No. 8 APN 214-002-059 on North Rose Avenue, Oxnard, California* (Tetra Tech 2018d) (PEA);

- *Technical Memorandum, Supplemental Site Investigation Field Sampling Plan, Proposed High School No. 8 APN 214-002-059 on North Rose Avenue, Oxnard, California 93030* (Tetra Tech 2019a) (SSI FSP);

- *Technical Memorandum, Maulhardt Ranch High School No. 8 Water Pipeline Safety Hazard Assessment TETR-02.0* (Water Pipeline Safety Hazard Assessment) (Placeworks 2019);

- *Supplemental Site Investigation, Proposed High School No. 8 APN 214-002-059 on North Rose Avenue, Oxnard, California 93030* (SSI) (Tetra Tech 2019b);

- *Recommendations for Shear Wave Velocity* (ESP 2010); and

- *Second Addendum Report, Geohazard Assessment/Geotechnical Investigation High School No. 8 APN 214-002-059 on North Rose Avenue, Oxnard, California* (Tetra Tech 2019c) (Second Addendum Report).

This page intentionally left blank.

2.0 GEOLOGIC SETTING

2.1 REGIONAL GEOLOGY

The Site is located on the Oxnard Plain of the central Ventura Basin within the Western Transverse Ranges geomorphic province of California. The Transverse Ranges Province is a series of ranges and intervening valleys that extends for 325 miles "directly across the structural grain of California" (Oakeshott 1978). The province extends from Point Arguello and San Miguel Island eastward to the Pinto and Eagle Mountains which end in the Mojave and Colorado Deserts respectively. The province ranges in width from 10 to 50 miles. The narrowest points are at the western extreme in the Santa Ynez Mountains and at the Cajon Pass which separates the San Gabriel and San Bernardino Mountains. The province's broadest point is the distance from the Santa Monica coast, across the Santa Monica, Topatopa and Pine Mountains, to the Tehachapi Mountains.

The Ventura Basin is large synclinal structure situated between the Santa Ynez Range and Topatopa Mountains on the north, the Channel Islands and Santa Monica Mountains on the south, the San Gabriel Fault on the east, and extending to the western end of the Santa Barbara Channel (Norris and Webb 1990). Structure in the Oxnard Plain is characterized by a series of broadly folded west-trending and east-northeast–trending anticlines and synclines associated with thrust and reverse faults that formed in the Saugus Formation and may have also deformed the overlying older alluvium (CGS 2002a).

2.2 SITE GEOLOGY

The geology of the Site area is shown on Figures 4A and 4B (Gutierrez, et al. 2008). The Site is located in the Oxnard Plain of the Ventura Basin. The Ventura Basin, including its offshore continuation into the Santa Barbara Channel, is filled with a thick sequence of Cenozoic sedimentary rocks estimated to be more than 20,000 feet in total thickness. Major east trending folds and reverse faults reflect regional north-south compression and are characteristic of the basin (Norris and Webb 1990). The Oxnard Plain is underlain by several thousand feet of Pleistocene-age sediments of the San Pedro Formation. The San Pedro Formation consists of marine and continental deposits of clay, silt, and gravel (Turner, et al 1975). The predominant surface materials in this region include Pleistocene to Recent age alluvial, floodplain, and near-shore deposits, some of which have been uplifted, folded, and faulted.

2.3 EARTH MATERIALS

2.3.1 Stratigraphy

The geology of the Site surface is shown on Figure 3. The geology of the Site subsurface was constructed from the geotechnical soil boring logs in ESP's 2018 Geotechnical Engineering Report (ESP 2018b) and is depicted on Figure 5A (Cross Section A – A') and Figure 5B (Cross Section B – B'). Based on the geologic map in Figure 3 (Gutierrez, et al. 2008) and information in *Ventura County Water Resources Management Study, Geologic Formations, Structure and History in the Santa Clara-Calleguas Area* (Turner, et al 1975), the Site is underlain at the ground surface by Holocene deltaic alluvium and wash fan deposits to approximately 70 feet below ground surface (bgs). These are conformably underlain by upper Pleistocene alluvial sand and gravel deposits to approximately 400 feet bgs, and the marine – non-marine clays and gravels of the Lower Pleistocene San Pedro formation to approximately 2,000 feet bgs.

2.3.2 U.S. Department of Agriculture, Soil Conservation Service Data

The U.S. Department of Agriculture, Soil Conservation Service (USDA) data identifies the native soil types at the Site to be Mocho loam, Pico sandy loam and sandy loam substratum, Hueneme sandy loam, and Camarillo sandy loam. These soils are nearly level and occur on alluvial fans and flood plains. Permeability is rapid and surface runoff is very slow, such that there is no hazard of erosion by water (USDA 1970).

2.3.3 Earth Systems Pacific April and July 2018 Soil Boring Data

ESP completed 53 geotechnical soil borings to depths ranging from 10 feet bgs to 51.5 feet bgs during April and July 2018 for the OUHSD to collect soil samples and soil blow-count density data for use in development of the High School No. 8 (Figures 3, 5A, and 5B). The general subsurface profile observed in the borings consisted of silty sand at the ground surface extending to approximately 3 to 8 feet bgs, underlain by interbedded poorly to well graded sand and occasional gravel with clay and silt layers that are exposed in the borings completed for this project to 51.5 feet bgs. These alluvium and wash deposits were deposited by the Santa Clara River. Groundwater was encountered at depths ranging from approximately 20 to 25 feet bgs in the deeper borings completed for this project. The soils were in a slightly moist to moist condition above the water table and wet below the water table. The sandy soils have a loose to very dense consistency while the silt and clay soils were medium stiff to stiff. Several of these soil layers also had varying amounts of fine to coarse gravel and cobbles. Based on the subsurface profile described above, the Site Class per Chapter 20 Table 20.3-1 (ASCE 2013) is "D", a "Stiff Soil Profile" (ESP 2018b).

2.4 GROUNDWATER

2.4.1 Hydrogeology

The Site is located in the northern portion of the Oxnard Plain Pressure Basin within the Santa Clara River Hydrologic Unit (Turner, et al 1975; Ventura County Public Works Department [VCPWA] 1975). The Oxnard Plain Basin is a relatively flat alluviated area, which ranges in elevation from sea level to approximately 100 feet. The water bearing zones of the Oxnard Plain Basin are grouped into three major units; 1) the semi-perched aquifer and clay cap, 2) the Upper Aquifer System (UAS), and 3) the Lower Aquifer System (LAS).

The semi-perched aquifer and clay cap consists of all of the alluvial materials above the Oxnard aquifer. In the Site area, the semi-perched aquifer extends to depths of approximately 75 feet bgs and the clay cap from approximately 75 feet bgs to 150 feet bgs (Turner, et al 1975). The semi-perched aquifer consists primarily of geologically Recent-aged stream deposited sands and gravels with minor silt and clay interbeds. Sand and gravel deposits are generally parallel to the deltaic channel complex of the ancestral Santa Clara River and form lenses perpendicular to the channels of the ancestral Santa Clara River (Figures 4A and 4B). The depth to the historically highest groundwater elevation for the Site area shown on Plate 1.2 of the *Seismic Hazard Zone Report for the Oxnard 7.5-Minute Quadrangle. Ventura County, California* (CGS 2002a) is approximately 8 feet bgs. The "clay cap" underlies the semi-perched groundwater zone separating it from the underlying Oxnard aquifer of the UAS. This clay cap acts as an aquitard. Based on topographic controls, groundwater in the Site vicinity is expected to flow toward the south to south-southwest.

The UAS system consists of the Oxnard and underlying Mugu aquifer zones. These two water bearing units were combined due to their similar, planar structure. Both the Oxnard and Mugu aquifers are composed of sediments deposited largely by the ancestral Santa Clara River during the Upper Pleistocene.

The Oxnard aquifer zone extends from approximately 150 to 200 feet bgs in the Site area and is a laterally continuous layer gravel and cobbles and coarse to fine sand, with local fine-grained lenses deposited in non-marine environment. The underlying Mugu aquifer zone extends from approximately 200 to 400 feet bgs in the Site area and consists of laterally continuous sand and gravel deposited in a shallow marine embayment on an erosional unconformity on top of the San Pedro formation that forms the top of the LAS.

The LAS system in the Site area, in descending order, consists of the Hueneme and Fox Canyon aquifer zones. The sediments in the LAS are more structurally complex than the UAS resulting from folding and faulting. Both the Hueneme and Fox Canyon aquifer zones are composed of lower Pleistocene age San Pedro Formation.

2.4.2 Groundwater Levels Recorded by ESP During April and July 2018

Groundwater was encountered at depths ranging from approximately 20 to 25 feet bgs in the deeper borings completed for this project during April and July 2018 (ESP 2018b).

2.4.3 Groundwater Quality

Groundwater in the borings completed for this project in the semi-perched zone is generally considered to be of poorer quality and of limited beneficial use (Turner, et al 1975). The groundwater in the underlying UAS system, the Oxnard and underlying Mugu aquifer zones is generally of good quality and serves as a major source of water for agriculture, municipal, and industrial use in the Oxnard area.

2.4.4 Aquifers Impacted by Site Releases

Tetra Tech evaluated potential for impacts to the groundwater of the semi-perched zone from fuel formerly stored in underground storage tanks in the Maulhardt Ranch farmyard area as part of the PEA. Soil and groundwater samples were collected from the area of the Site adjacent to farmyard area and tested for fuel related volatile organic compound (VOCs) and total petroleum hydrocarbons (TPH). The PEA groundwater assessment did not identify any evidence of a release fuel release from the Site to groundwater (Tetra Tech 2018c).

2.5 SURFACE WATER

No surface water was observed at the Site during the reconnaissance performed on July 2, 2018. It is likely that during periods of moderate rainfall, free surface water that accumulates on the Site may flow south and southwest and possibly into gutters along Camino Del Sol and North Rose Avenue (Figures 1 and 2). However, the U.S. Department of Agriculture, Soil Conservation Service report indicates that soil permeability at the Site is moderate to rapidly moderate and surface runoff is very slow, such that there is a low hazard of erosion by water (USDA 1970).

2.6 SEISMICITY

2.6.1 Regional Earthquake Fault Analysis

The high rate of seismic activity in California and the Site area is the result of large-scale earth processes in which the Pacific plate slides northwestward relative to the North American plate at about 2 inches/year. This plate motion results in horizontal slip (primarily on the San Andreas “strike-slip” fault) and crustal block rotation and compression within a restraining bend of the San Andreas Fault, that has

created the series of the prominent mountain ranges and intervening valleys situated between Santa Monica and Santa Barbara and associated thrust and reverse faults (CGS 2002a). Although slower moving than the strike-slip faults of the San Andreas system, these numerous thrust and reverse faults account for over half of the significant earthquakes that have occurred in southern California during the past century, including the damaging 1971 M 6.6 San Fernando, 1994 M 6.7 Northridge, and 2003 M 6.5 San Simeon earthquakes (Ross *et al.* 2004).

Active and potentially active faults in the Site area were evaluated by reviewing the *Fault Activity Map of California and Adjacent Areas* (Jennings 1994), *Map No. 0-6 California Geological Survey 150th Anniversary Fault Activity Map of California* (Jennings, *et* al. 2010), *Draft Background Report, City of Oxnard General Plan* (City of Oxnard 2006), Figures 2.2.1b, 2.2.2 and 2.2.3b of the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013), and *Earthquake Zones of Required Investigation Maps for the Saticoy Quadrangle* (CDMG 1978), *Camarillo Quadrangle* (CDMG 1998a), and *Santa Paula Quadrangle* (CDMG 1998b), and *Oxnard Quadrangle* (CGS 2002a; 2002b). Active faults are defined as those faults with evidence of displacement within the last 11,000 years and potentially active faults are defined as those with evidence of displacement within the last 1.6 million years (CGS 2007). The faults shown on Figures 6A through 6D are from the *Fault Activity Map of California and Adjacent Areas* (Jennings 2010). The terms active and inactive faults have been interpreted differently by geologists, seismologists, and agencies. For this report, active faults are defined as having evidence of surface displacement within the last 11,000 years and potentially active faults are defined as having evidence of surface displacement in the last 1.6 million years (CGS 2007). The fault classification terms shown on Figures 6A through 6D are specific to 2010 Fault Activity Map and will not be considered for design purposes.

Table 2 contains a summary of earthquake faults within approximately 100 kilometers (km) (62.1 miles) listed in *Appendix A: California Fault Parameters for the National Seismic Hazards Map and Working Group on California Earthquake Probabilities* (U.S. Geological Survey [USGS] and CGS 2007) (Appendix A CFP). Most of these faults are shown on the 2010 Fault Activity Map.

The earthquake faults located nearest to the Site are the Springville Fault, located approximately 5.4 km (3.3 miles) east of the Site, the Wright Road Fault, located approximately 6.1 km (3.7 miles) north of the Site, the Oak Ridge Fault, located approximately 7.3 km (4.5 miles) north of the Site, the Camarillo Fault located approximately 8.3 km (5.1 miles) east of the Site, and the Ventura-Pitas Point Fault, located approximately 8.9 km (5.5 miles) north of the Site.

The Oak Ridge Fault System (Reference Number 335 on the 2010 Fault Activity Map 2010 in Figure 6A) is a Late Quaternary dip slip fault dipping at approximately 65 degrees to the south that extends from the Santa Susana Mountains where it has been overridden by the north-dipping Santa Susana Thrust Fault, westward along the southerly side of the Santa Clara River Valley and thence into the Oxnard Plain. The Oak Ridge Fault System is an active reverse fault with a slip rate of 3.0 millimeter (mm)/year, a maximum moment magnitude of 6.9 and a recurrence interval of 299 years. It does not have a surface expression nor have any been shown to cut near-surface sediments (alluvium). It is conceivable that past movement of this fault system in the Oxnard Plain area has not resulted in surface displacements but, instead, has resulted in only broad warping or tilting of the near-surface alluvial sediments. The lack of surface evidence of fault displacement in the Oxnard Plain is not necessarily indicative of activity in the recent geologic past as surface features could easily have been obscured by fluvial processes (erosion or deposition of alluvium). Several recorded earthquake epicenters in the offshore as well as mainland area during historic time may have been associated with the Oak Ridge Fault System or within close proximity and associated with it (County of Ventura 2013).

The Ventura-Pitas Point Fault (Reference Number 336 on the 2010 Fault Activity Map 2010 in Figure 6A) is a Holocene, oblique left lateral reverse fault, dipping at approximately 64 degrees to the north that extends along the base of the foothills on the north side of the Santa Clara River from Santa Paula westerly to the mouth of the Ventura River, thence westerly into the Santa Barbara Channel area. Evidence for the existence of the Ventura-Pitas Point Fault is based mainly upon minor faulting of terrace deposits north of San Buenaventura and evidence of faulting from the Tidewater Oil Company corehole #5. It has slip rate of 1.0 mm/year, a maximum moment magnitude of 6.8 and a recurrence interval of 1,112 years (County of Ventura 2013).

The Wright Road Fault (Reference Number 536 on the 2010 Fault Activity Map 2010 in Figure 6A) is considered to be an active "tear" fault, terminating the west end of the Camarillo and Springville anticlines. It may be interpreted as a structural boundary between the Ventura Anticline on the west and South Mountain to the east (Treiman 1997). This fault was not included in the Appendix A CFP (or included in Table 2), or discussed in the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013), so characteristics such as the configuration, slip rate, and maximum moment magnitude were not reviewed for this report.

The Springville Fault Zone (Reference Number 348 on the 2010 Fault Activity Map 2010 in Figure 6A) marks the southern edge of the Camarillo Hills, which are largely the expression of the Camarillo Anticline. This fold is relatively young, having developed within the last few hundred thousand years above young, concealed thrust faults of the Springville Fault Zone, which may be a back thrust off of the Oakridge Fault Zone. The Springville Fault Zone is approximately 5.5 miles long. The southern trace is largely concealed, extends approximately 2.5 miles east from the west end of the Camarillo Hills, and it is considered to be an active, Holocene fault, with an estimated an average earthquake recurrence interval of 900 years with a displacement of 0.6 to 11 meters per event. The northern trace lies along the main body of the Camarillo Hills extending approximately 5.5 miles east from the west end of the Camarillo Hills, is considered to be an active fault, and marks the southern margin of the Camarillo Anticline (Treiman 1997). This fault was not included in the Appendix A CFP (or included in Table 2), so characteristics such as the configuration, slip rate, and maximum moment magnitude were not reviewed for this report.

The Camarillo Fault (Reference Number 349 on the 2010 Fault Activity Map 2010 in Figure 6A) is expressed by an east-west anticlinal ridge approximately 5.5 miles long located southwest of Camarillo. This fault extends in an east-west direction immediately south of Camarillo from Calleguas Creek to Camarillo Airport. The present of the fault is based primarily upon the abrupt uplifted sediments along the north side of the fault that resulted in the long linear hill of the southern portion of Camarillo just south of the 101 Freeway (County of Ventura 2013). Limited trenching has not revealed a surface trace for this fault, however the straight planar nature of most of the escarpment and the steepening of bedding near the base of the slope strongly suggests a surface fault. Although there is no hard evidence for Holocene activity on this fault, the step in the Calleguas Creek flood plain across the fault trace appears to be Holocene. Therefore, this fault is considered to be active (Treiman 1997). This fault was not included in the Appendix A CFP (or included in Table 2), so characteristics such as the configuration slip rate, and maximum moment magnitude were not reviewed for this report.

2.6.2 Analysis of Historical Earthquakes

The rate of seismic activity for the Site areas summarized in Table 3 was estimated from the USGS Earthquake Hazards Program Search Earthquake Catalogue website for the Site area from 1900 through 2018 (USGS 2018b).

According to the USGS database, 119 earthquakes with magnitudes exceeding 4.5 have occurred within 63 miles (100 kilometers) of the Site since 1900 (Table 3). Significant historical earthquakes of the Oxnard region include the 1812 earthquake that effected most of southern California (Richter Magnitude [M_L] 7.0), the 1827 Ventura Earthquake (M_L 7.0), the 1857 Fort Tejon Earthquake (M_L 7.1), the 1952 Tehachpi Earthquake (M_L 7.7), and the 2004 Northridge Earthquake (M_L 6.7). While all of these earthquakes were felt in the Site area, no historical earthquakes have caused a great amount of property damage or loss of human life in the Site area. However, the historical earthquake record of California spans a little over 200 years and provides only a partial indication of seismic hazards. The absence of earthquakes on many recognized active faults and fault-related folds in California probably reflects recurrence intervals greater than the historical record.

3.0 GEOLOGIC HAZARDS

The following geologic hazard assessment was performed in general accordance with the guidelines contained in the CGS Note 48 (CGS 2013), *Guidelines for Evaluating and Mitigating Seismic Hazards in California, Special Publication 117A* (CGS 2008), and the 2016 California Building Code (CBC) (ICC 2017). It is based on published information on the regional and local geologic conditions along with data from the geotechnical assessments of the Site performed by ESP (ESP 2018b).

3.1 ALQUIST-PRIOLO EARTHQUAKE FAULT ZONES

The Site is not located within a designated Alquist-Priolo Earthquake Fault Zone (AP Zone) (CGS 2007). Because the Site is not located within an AP Zone and there are no known active faults with the potential for surface rupture beneath or trending toward the Site, the probability of surface rupture due to faulting at the Site is considered low. Based on review of the Earthquake Fault Zone Maps for the Saticoy (CDMG 1978), Camarillo (CDMG 1998a), and Santa Paula (CDMG 1998b) Quadrangles, and Figure 2.2.3b of the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013), the nearest AP Zones are located at the Springville Fault, located approximately 5.4 km (3.3 miles) east of the Site, the Wright Road Fault, located approximately 6.1 km (3.7 miles) north of the Site, the Camarillo Fault located approximately 8.3 km (5.1 miles) east of the Site, and the Ventura-Pitas Point Fault, located approximately 8.9 km (5.5 miles) north of the Site.

3.2 SITE RECONNAISSANCE/AERIAL PHOTOGRAPH REVIEW

Tetra Tech performed a reconnaissance of the Site on July 2, 2018 to evaluate the Site geomorphology and surface geology to assist in preparation of the Site Plan/Geologic Map presented in Figure 3. The potential for surface fault rupture at the Site was also evaluated through review of historical aerial photographs available from EDR (EDR 2017), and visual evaluation of the Site geomorphology during the July 2, 2018 reconnaissance. No evidence for surface fault rupture at the Site (such as scarps, lineations, or other geomorphic features) was observed during the July 2, 2018 Site reconnaissance or in historical aerial photographs dating from 1927, 1938, 1947, 1959, 1967, 1978, 1985, 1994, 2005, 2009, 2010, and 2012 (EDR 2017). The Site is generally flat. It is shown as being used for various types of row crop agricultural development in all of the aerial photographs reviewed. Relict lineations of braided stream channel morphology from former flood events of the ancestral Santa Clara River are visible on the Site and surrounding areas in the aerial photographs dating from 1927, 1938, 1947, and 1959.

3.3 SITE SPECIFIC EARTHQUAKE GROUND MOTION ANALYSIS

The Site is in a region of generally high seismicity and has the potential to experience strong ground shaking from earthquakes on regional or local causative faults. According to the 2016 CBC Section 1616A.1.3 (ICC 2017), the Site should be assigned to Seismic Design Category E or F, as the Site's mapped spectral response acceleration parameter at a 1-second period (S_1) is 0.938 g, which is greater than 0.75 g (see Table 1 ASCE 7-10 Standard Acceleration Parameters later in this section). Based on this S_1 parameter, a site-specific response analysis is warranted to analyze the ground motion hazard at the Site. The site-specific response analysis is intended to be in general conformance with ASCE Standard 7-10, Chapter 21, Site Specific Ground Motion Procedures for Seismic Design, Sections 21.1.1 through 21.5.3 (ASCE 2013).

ASCE 7-10 (ASCE 2013) requires that the following site-specific seismic information be developed: 1) Risk-Targeted Maximum Considered Earthquake (MCE_R) Probabilistic and Deterministic response

curves; 2) Site-Specific MCE_R spectral response curve; 3) Site Design Response Curve (2/3 Site-Specific Maximum Considered Earthquake [MCE]); and 4) Site Design Acceleration Parameters.

The MCE_R is defined as an event having a 2 percent chance of exceedance in 50 years, with a return period of approximately 2,475 years, which is expected to achieve a 1 percent probability of partial or total structure collapse within a 50-year period. The deterministic and probabilistic ground motions were calculated using the USGS 2008 Lower 48 California outside of Cascadia seismic source database and Next Generation Attenuations (NGA) from the EZ-FRISK program Version 7.65 by Fugro (Fugro 2019). The NGAs used for this ground motion analysis consider Maximum Rotated Component (MRC) accelerations and were as follows: 1) Boore & Atkinson, 2008 NGA USGS MRC; 2) Campbell & Bozorgnia, 2008 NGA USGS MRC; and 3) Chiou & Young, 2007 NGA USGS MRC, all of which are applicable to shallow crustal earthquakes in the western United States. These three NGAs were used for determining the Probabilistic MCE_R and Deterministic MCE_R.

3.3.1 Site Specific Shear Wave Velocity (V_{S30})

ASCE 7-10 (ASCE 2013) Section 20.1 requires that site soils shall be classified in accordance with Table 20.3-1 and Section 20.3 based on the upper 100 feet (30 meters) of the site profile. ESP developed a Site-Specific Shear Wave Velocity (V_{S30}) for the geologic profile of the Site from upper 100 feet (30 meters) using the average of the sampler blow counts from the seven deeper borings B-1, B-2, B-16, B-22, B-35, B-43, and B-51. Cal sampler blow counts were converted to equivalent SPT blow counts by using a reduction factor of 0.63 (ESP 2019).

The average field standard penetration resistance (SPT N) blow counts were determined by using the equation listed in Section 20.4-2 of Chapter 20 of the ASCE 7-10 (ASCE 2013). Two analyses of the blow count information were performed. One analysis only considered the upper approximately 50 feet of soil and the other used the same information from the upper 50 feet of soil and then used the deepest SPT N blow counts to extrapolate information down to a depth of 100 feet. The results of the analyses yielded average SPT N blow counts of approximately 17 for the 50-foot analysis and 21 for the 100-foot analysis.

Based on the analyses, ESP recommended using the higher average SPT N blow count of 21 for estimating the shear wave velocity as this will likely lead to a higher ground acceleration than using the lower average SPT N blow count of 17. Table 20.3-1 of ASCE 7-10 (ASCE 2013) indicates that the V_{S30} for Class D Soils ranges from 600 feet/second to 1,200 feet/second. Comparing the average SPT N blow count of 21 to the information listed in Table 20.3-1 Site Classification of ASCE 7-10, a V_{S30} shear wave velocity of 705 feet/second (215 meters/second) was estimated for the Site-Specific Ground Motion Analysis. This V_{S30} value of 705 feet/second (215 meters/second) was used in the ground motion analyses performed by Fugro's EZ-FRISK program Version 7.65.

3.3.2 Probabilistic (MCE_R) Ground Motions

To develop the probabilistic MCE_R spectrum for the Site, the EZ-FRISK program Version 7.65 by Fugro was used (Fugro 2019). Mapped faults within a 105-kilometer radius (65 miles) were selected from the program database. The peak horizontal ground acceleration (PGA) and spectral accelerations, at 5 percent damped for a Site Class "D" (ASCE, 2013), were estimated using the NGAs mentioned above. The MRC of these three generated curves was used as the probabilistic MCE_R response spectrum. The ordinates of the probabilistic ground motions were then computed using Method 1 of ASCE 7-10 Section 21.2.1.1 (ASCE, 2013). To obtain the probabilistic MCE_R spectrum using this method, at each spectral response period for which the acceleration is computed, the ordinates of the probabilistic ground motion are determined as the product of the risk coefficient C_R, and the spectral response acceleration from a 5

percent damped acceleration response spectrum having a two percent probability of exceedance within a 50-year period. The value of the risk coefficient C_R is determined using the values of C_{RS} (0.910) and C_{R1} (0.909) from Figures 22-17 and 22-18 of ASCE 7-10 (ASCE, 2013) that were obtained from the USGS Earthquake Hazards Program website (USGS 2018a) (Appendix A). The ground motions were multiplied by the mapped risk coefficient C_{RS} (0.910) at periods up to 0.2 seconds, and C_{R1} the mapped risk coefficient (0.909) at periods greater than or equal to 1 second. At response spectral periods greater than 0.2 seconds and less than 1.0 seconds, C_R was based on linear interpolation of C_{RS} and C_{R1}. The Probabilistic Response Spectra (MCE_R) are included in a single graph presented in Figure 7. The Probabilistic MRC with Risk Component PGA (MCE_G) is 0.943g (includes risk factor), which is the PGA with a 2 percent probability of exceedance within a 50-year period.

3.3.3 Deterministic (MCE_R) Ground Motions

A deterministic analysis using the NGAs was performed using the EZ-FRISK program Version 7.65 by Fugro (Fugro 2019) in accordance with ASCE 7-10 (ASCE, 2013). The parameters used in this analysis included the stiff soil classification (Site Class "D"), and the controlling seismic source being the late Quaternary Oak Ridge—Connected-Fault with a maximum magnitude of 7.40 and 5.04 kilometers from the Site and the Oak Ridge (Onshore)-Fault with a maximum magnitude of 7.20 and 5.72 kilometers from the Site. Values for the three spectral NGA curves were calculated using EZ-FRISK. The MRC of the obtained values was used as the basis for calculating the Deterministic Response Spectrum (MCE_R) presented on the graph in Figure 8. The Deterministic (MCE_R) Lower Limit was calculated using F_a = 1.00 and F_v = 1.50, obtained from the USGS Earthquake Hazards Program website (USGS 2018a) (Appendix A). The Deterministic Response Spectra (MCE_R) are included in a single graph presented in Figure 8.

ASCE 7-10 Section 21.2.2 (ASCE, 2013) requires that the ordinates of the deterministic ground motion response spectrum shall not be less than the corresponding ordinates of the Deterministic Lower Limit determined in accordance with Figure 21.2.1. The ordinates of the Deterministic MRC (MCE_R) spectrum are higher than or equal to the corresponding ordinates of the Deterministic Lower Limit response spectrum at all spectral periods. Therefore, it is our opinion that the Deterministic MRC spectrum curve should comprise the Deterministic Site Specific (MCE_R) curve at all spectral periods. This Deterministic Site-Specific (MCE_R) is indicated by the red dashed line on the Deterministic Response Spectra graph presented in Figure 8.

The Deterministic MRC (MCE_R) PGA is 1.03g, which was calculated from the largest source earthquake from the Oak Ridge-Connected-Fault.

3.3.4 Site-Specific (MCE_R)

The Site-Specific (MCE_R) was developed in accordance with ASCE 7-10 (ASCE 2013). The Site-Specific (MCE_R) is defined by ASCE 7-10, Section 21.2.3 (ASCE 2013) as the lesser of the Probabilistic (MCE_R) and the Deterministic (MCE_R). A review of the Probabilistic and Deterministic MRC Response Spectra graphs presented in Figure 9 indicates that the Probabilistic (MCE_R) spectral response acceleration curve is the lesser curve for periods less than 0.13 seconds and greater than 0.23 seconds and the Deterministic MRC spectral response acceleration curve is the lesser curve for periods greater than 0.13 seconds and less than 0.23 seconds. Therefore, the Site-Specific (MCE_R) should consist of the Probabilistic MRC with Risk Coefficient spectral response curve for periods less than 0.13 seconds and greater than 0.23 seconds and the Deterministic MRC spectral response acceleration for periods greater than 0.13 seconds and less than 0.23 seconds. The Probabilistic MRC with Risk Coefficient curve, Deterministic Site Specific (MCEr) curve, and Site-Specific (MCE_R) curve are presented in Figure 9.

3.3.5 ASCE 7-10 Standard Acceleration Parameters

The Site coefficients, mapped, and design seismic ground motions that could occur at the Site were analyzed based on the CBC (ICC 2017) and ASCE 7-10 Standard method (ASCE 2013). The Site coordinates used in this analysis were latitude 34.2077 north and longitude 119.1554 west (Google Earth 2018), with a Site Classification of "D". The ASCE 7-10 Standard method available on the USGS Earthquake Hazards Program website (USGS 2018a) was used (Appendix A). The results of the seismic ground motion analysis are presented in Table 4.

Table 4
ASCE 7-10 Standard Acceleration Parameters

Mapped Acceleration Values for Site Class "B"		**Site Coefficients and Adjusted MCE_R Design Response Spectrum Acceleration Parameters For Site C ass "D"**					
Seismic Parameters	**Values (g)**	**Site Coefficients**	**Values**	**Seismic Parameters**	**Values (g)**	**Seismic Parameters**	**Values (g)**
S_S	2.596	F_a	1.000	S_{MS}	2.596	S_{DS}	1.731
S_1	0.938	F_v	1.500	S_{M1}	1.407	S_{D1}	0.938

3.3.6 Design Response Spectrum

The Site Design Response Spectra were developed in accordance with ASCE 7-10 (ASCE 2013). Per ASCE 7-10 Section 21.3 (ASCE 2013), the Site Design Response Spectra is obtained by taking 2/3 of the Site-Specific (MCE_R), except that the ordinates shall not be less than those obtained from 80% of the ASCE 7-10 Standard adjusted Design Response Spectra values per ASCE 7-10 Section 11.4.5 (ASCE, 2013). The accelerations for 2/3 of the Site-Specific (MCE_R) were lower than 80% of the ASCE 7-10 Standard adjusted Design Response Spectra for periods between 0.013 and 0.63 seconds, and higher for periods lower than 0.013 seconds and greater than 0.63 seconds, as shown on the Site Design Response Spectra graph presented in Figure 10. Therefore, the Governing Site Design Response Spectrum should consist of the ground accelerations for 80% of the ASCE 7-10 Standard adjusted Design Response Spectrum for periods between 0.013 and 0.63 seconds, and the ground accelerations for 2/3 of the Site-Specific (MCE_R) for periods lower than 0.013 seconds and greater than 0.63 seconds. This Governing Site Design Response Spectrum combination is indicated by the red dashed line on the Site Design Response Spectra graph presented in Figure 10.

Note that ASCE 7-10, Section 21.4 (ASCE 2013), requires that the parameter S_{DS} shall be obtained from site-specific spectra as the spectral acceleration S_a, determined in accordance with ASCE 7-10, Section 21.3, at a period of 0.2 second (1.385g), except it shall not be taken as less than 90 percent of the peak acceleration, S_a, at any period larger than 0.2 seconds. In this case, S_a is greater than 90 percent of the peak acceleration spectral acceleration at any period larger than 0.2 seconds. The parameter S_{D1} shall be taken as the greater of the spectral acceleration, S_a, at a period of 1 second (1.020g) or two times the spectral acceleration, S_a, at 2 seconds (0.602g). In this case, the value at two times the spectral acceleration, S_a, at a period of 2 seconds is higher (2 x 0.602g = 1.204g), and therefore, 1.204g shall be used as the value for S_{D1}. The parameters S_{MS} and S_{M1} were taken as 1.5 times S_{DS} and S_{D1}, respectively. The Site Design Response Parameters are provided in Table 5.

Table 5
Site Design Response Parameters

80% of the ASCE 7-10 Design Response Spectrum Acceleration Values for Site Class "D"				Site Design Response Spectrum Acceleration Values for Site Class "D"			
Seismic Parameters	**Values (g)**	**Seismic Parameters**	**Values (g)**	**Seismic Parameters**	**Values (g)**	**Seismic Parameters**	**Values (g)**
S_{MS}	2.077	S_{DS}	1.385	S_{MS}	2.077	S_{DS}	1.385
S_{M1}	1.125	S_{D1}	0.750	S_{M1}	1.805	S_{D1}	1.204

3.3.7 Maximum Considered Earthquake MRC (MCE_G) Peak Ground Acceleration

3.3.7.1 Probabilistic (MCE_G) Peak Ground Acceleration

The Probabilistic MRC PGA (MCE_G) is 0.943g (includes risk factor), taken as the MRC PGA with a 2% probability of exceedance over a 50-year period.

3.3.7.2 Deterministic (MCE_G) Peak Ground Acceleration

The Deterministic MCE_G MRC PGA is 1.03g, taken as the MRC peak ground acceleration of the largest 84th percentile earthquake, which was the late Quaternary Age Oak Ridge—Connected-Fault located approximately 5.04 km north of the Site and the Oak Ridge (Onshore)-Fault located approximately 5.72 km north the Site.

ASCE 7-10, Section 11.8.3 (ASCE 2013) indicates that the Site PGA for evaluation of potential liquefaction and soil strength loss shall be determined based on the peak ground acceleration adjusted for site class effects (PGA_M) from equation 11.8-1 ($PGA_M = F_{PGA}$ PGA) using the coefficient F_{PGA} from Table 11.8-1. The PGA value is based on the mapped Maximum Considered Earthquake (MCE) ground motion peak ground acceleration shown on Figure 22-7 of ASCE 7-10 (1.02g) that was obtained from the USGS Earthquake Hazards Program website (USGS 2018) (Appendix A). For Site Class = D, PGA = 1.02g, and F_{PGA} = 1.0. Therefore, PGA_M = 1.02g and should be used as the Deterministic MCE_G MRC PGA.

3.3.7.3 Site-Specific (MCE_G) Peak Ground Acceleration

ASCE 7-10 Section 21.5.3 indicates that the Site-Specific MCE_G PGA is the lesser of the Probabilistic (MCE_G) and the Deterministic (MCE_G) except that it cannot be less than 80 percent of the PGA_M determined from ASCE 7-10 Equation 11.8-1. In this case, the Probabilistic (MCE_R) MRC PGA of 0.943g is the lesser PGA. The Probabilistic (MCE_R) MRC PGA of 0.943g is greater than 80 percent of the PGA_M = 1.02g X 80% = 0.816g determined from ASCE 7-10 Eq. 11.8-1 (ASCE, 2013). Therefore, the Site-Specific MCE_G PGA should be Probabilistic (MCE_R) MRC PGA of 0.943g (ASCE 2013).

3.3.8 Deaggregated Seismic Parameters

A seismic hazards analysis procedure was used to estimate the probabilistic modal magnitude at the Site using the USGS Unified Hazard Tool available at the USGS Earthquake Hazards Program Website (USGS 2018c) (Appendix A). The Probabilistic Maximum Considered Earthquake (MCE) was used in the analysis. The MCE is defined as having a 2 percent chance of exceedance in 50 years, with a return

period of approximately 2,475 years. The results of this analysis indicate that the Site could experience a probabilistic mean magnitude of 7.01 at a distance of 10.78 km.

3.3.9 Seismic Design Category

The S_1 calculated for the Site is 0.938g (Appendix A; USGS 2018a). CBC Section 1613A.3.5 (ICC 2017) states that structures assigned to Risk Category I, II, or III where the $S_1 \geq 0.75g$ should be assigned to Seismic Design Category E. If structures are assigned to Risk Category IV, they should be assigned to Seismic Design Category F.

3.4 LIQUEFACTION

Liquefaction is the significant loss of soil strength due to pore pressure increase (CGS 2008). Ground shaking reorients the unconsolidated sediment grains into a more compact arrangement. If the water table is close to the surface during this reorientation, the grain-to-grain contacts are reduced, and the load is temporarily transferred to the pore water. This increases pore pressure and decreases the soil strength, and the deposit then behaves like a liquid (Costa and Baker 1981). Liquefaction may occur when groundwater is present within the potentially liquefiable material (granular soils within a specific range of grain sizes in a relatively loose state of low relative density). If these conditions are present and strong ground motion occurs, portions of the soil column could liquefy, depending on the intensity and duration of the strong ground motion. Soils most susceptible to liquefaction are saturated, very loose to loose, fine grained sandy and silty soils. Liquefaction may manifest itself at the surface as lateral spreading, sand boils, lurching and ground fissuring, loss of bearing strength, and settlement. Any structures founded on or above potentially liquefiable soils may experience settling (both total and differential) and loss of foundation support during ground shaking.

3.4.1 Regional Conditions

Generally, there is a potential for liquefaction when the following three conditions are met: (1) a site is located on Holocene age, unconsolidated, coarse-grained sediments; (2) the site is in area of potentially strong ground motion; and (3) groundwater is less than 50 bgs. The *Seismic Hazards Zone Report for the Oxnard 7.5-Minute Quadrangle, Ventura County California* (CGS 2002a), *State of California Seismic Hazard Zones Oxnard Quadrangle, Revised Official Map* (CGS 2002b), and Figure 2.4b of the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013) indicates that the Site is located in a recognized geological hazard zone for earthquake induced liquefaction. The findings in these data are based on the assumptions that the Site area is underlain by coarse grained Holocene age sediments, which are generally considered have a significant liquefaction potential, because the depth to groundwater for the Site area is less than 50 feet bgs with a historic high groundwater elevation of approximately 8 feet bgs (CGS 2002a). Groundwater was encountered in exploratory soil borings drilled at the Site by ESP in April and July 2018 at depths ranging from approximately 20 to 25 feet bgs, which is much shallower than the 50 feet bgs depth used as the maximum depth criterion for potentially liquefiable conditions.

3.4.2 2018 Earth Systems Pacific Liquefaction Analysis

ESP evaluated the liquefaction potential at the Site in accordance with the 2016 CBC (ICC 2017) and the methods in Special Publication 117A (CGS 2008). ESP has analyzed the boring data for this project and utilized methods suggested in Special Publication 117A, and based on this analysis, concluded that due to the presence of groundwater in the upper 50 feet of soil (measured at 20 to 25 feet bgs) and the density of sand and silt soils, there appears to be a potential for both liquefaction and seismically induced settlement of dry sand to occur at the Site (ESP 2018b). Tetra Tech concurs with this finding.

ESP evaluated the potential effects of liquefaction by performing analysis of the CPT data using the site-specific PGA from the site-specific ground motion analysis, an earthquake modal magnitude of 7.01 g (USGS 2018a), an assumed historical high groundwater depth of 8 feet bgs (CGS 2002a), and the approximate existing groundwater depth of approximately 20 feet bgs. Based on the analyses presented in ESP's 2018 report, it appears liquefaction occurs in relatively thin discontinuous soil layers as shown on in the cross sections on Figures 5A and 5B. Total liquefaction induced dynamic settlement assuming a groundwater depth of 8 feet bgs ranged between 0.2 to 1.2 inches, and 0.1 to 0.6 inches for a groundwater depth of 20 feet bgs (ESP 2018b).

3.5 SEISMICALLY INDUCED SETTLEMENT OF DRY SAND

Seismically induced settlement of dry sand is also caused by a significant seismic event and may occur in lower density and sand and silt soils that are not saturated by groundwater. During a major earthquake, the void spaces between the unsaturated soil particles that are filled with air tend to compress which translates to a decrease in volume or settlement (ESP 2018b).

ESP evaluated seismically induced settlement of dry sand as part of the liquefaction evaluation using a reduced or modified PGA value of 2/3 (0.969 g) = 0.646 g. Additionally, the upper 30 inches of soil were neglected in the analyses because the upper 2 to 3 feet of the surface soils had been recently ripped and plowed as part of the on-going agriculture operations at the Site, and these soils will ultimately be removed and replaced as moisture conditioned compacted fill as part of future Site development as recommended later in the "Grading" section ESP's 2018 report. Total seismically induced settlement of dry sand assuming a groundwater depth of 8 feet bgs ranged between 0 to 0.2 inches, and 0.1 to 0.2 inches for a groundwater depth of 20 feet bgs (ESP 2018b).

3.6 LANDSLIDES/SLOPE INSTABILITY

The Site is relatively flat and is surrounded by flat terrain away from slopes on all sides. Based on the July 2, 2018 Site reconnaissance and review of the CGS Seismic Hazards Map for the 7.5 Minute Series Oxnard Quadrangle (CGS 2002b), Figure 2.7.1b of the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013), and Section 6.2.2 of the *City of Oxnard General Plan Draft Background Report* (City of Oxnard 2006), the Site is not in an area prone to landslides and slope instability.

3.7 LATERAL SPREADING

Lateral spreading can occur when a soil mass either slides laterally on liquefied soil layers towards a free slope face, or when a soil mass moves downslope on gently sloping ground. Based on the results ESP's liquefaction analysis, the potential for loss of soil bearing strength and lateral spreading was determined to be very low. ESP developed the assessment for loss of soil bearing strength by comparing the thickness of the overlying non-liquefiable soils with respect to the depth, the relatively thin thickness, and the discontinuous nature of the underlying liquefiable soils. Lateral spreading can occur when a soil mass either slides laterally on liquefied soil layers towards a free slope face, or when a soil mass moves downslope on sloping ground. ESP stated that since a free slope face does not exist within or near the Site, they focused on the sloping ground aspect of lateral spreading. ESP deduced from the Google Earth website that the Site slopes at approximately 0.35 percent from the north to the south. The assessment for lateral spreading was developed by considering the relatively flat to very gently sloping ground surface with respect to the discontinuous nature of the underlying liquefiable soils. ESP concluded that the conditions needed for lateral spreading to occur do not appear to exist at the Site. Tetra Tech concurs with this finding.

3.8 SUBSIDENCE

Subsidence is any settling or sinking of the ground surface over a regional area arising from surface or subsurface causes, such as earthquakes or groundwater and/or oil extraction. Figure 2.8 of the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013) and Section 6.2.2 of the *City of Oxnard General Plan Draft Background Report* (City of Oxnard 2006) indicates that the Site is located in an area susceptible to subsidence. The subsidence has been caused by overdraft of the groundwater aquifers that underlie the Oxnard Plain. Although it could occur, it is considered to be an insignificant risk due to the absence of reported problems.

3.9 GROUND LURCHING

Ground lurching occurs when the ground is accelerated during a seismic event. Ground lurching occurs due to detachment of underlying stratigraphic units, allowing near-surface soil to move differentially from underlying soil. Because the Site is within a seismically active area, there is a potential for ground lurching to occur.

3.10 FLOODING

3.10.1 FEMA Map Data

According to the FEMA Flood Insurance Rate Map No. 06111C0910E the western half of the Site is located in Zone X (Other Areas) and is defined as areas determined to be outside the 0.2% (500-yr) annual chance floodplain , while the eastern portion of the Site is located in Zone X (Other Flood Areas) and is defined as areas of 0.2% (500-yr) annual chance of flood; areas of 1%(100-yr) annual chance flood with average depths of less than one foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% (100-yr) annual chance flood (FEMA, 2010).

3.11 RESERVOIR FAILURE INUNDATION

A dam that stores more than 1,000 acre-feet of water, is higher than 150 feet, and has the potential to cause downstream property damage is classified as a high hazard dam by FEMA. A review of Section 2.11 and Figures 2.11.1 and 2.11.2 of the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013) and Section 4.3.3.1 and Tables 4-5, 4-6, and, 4-7, and Figure 4-3 of the *Multi-Jurisdictional Hazard Mitigation Plan for Ventura County, California* (County of Ventura 2005) indicates that there are four major reservoirs in the Santa Clara River watershed upstream of the Site that are FEMA high hazard dams that would inundate the Site area in the event of a reservoir failure (Figure 11). Information for each of these four dams is summarized below.

Santa Felicia Dam: The Santa Felicia Dam (Lake Piru) is operated by the United Water Conservation District (UWCD), can hold up to 100,000 acre-feet of water, and is located on Piru Creek approximately 32 miles upstream of the Site (Figure 11). Data provided by the UWCD indicates that the Site would be inundated by flood waters approximately 4 hours after the dam failure (UWCD 1974).

Castaic Dam. The Castaic Dam is operated by the California Department of Water Resources (CDWR), can hold up to 325,000 acre-feet of water, and is located on Castaic Creek approximately 42 miles upstream of the Site (Figure 11). Data provided by the CDWR indicates that the Site would be inundated by flood waters approximately 4 hours after a failure of the Castaic Dam (CDWR 1975a).

Pyramid Dam. The Pyramid Dam is operated by the CDWR, can hold up to 179,000 acre-feet of water, and is located on Piru Creek approximately 20 miles upstream of the Santa Felicia Dam and 52 miles

upstream of the Site (Figure 11). Data provided by the CDWR indicates that the Site would be inundated by flood waters to depths of 10 to 20 feet approximately 4 hours after a failure of the Pyramid Dam (CDWR 1975b).

Bouquet Canyon Dam. The Bouquet Canyon Dam is operated by the Los Angeles Department of Water and Power (LADWP), can hold up to 36,500 acre-feet of water, and is located approximately 57 miles upstream of the Site (Figure 11). Data provided by the LADWP indicates that the Site would be inundated by flood waters approximately 4.5 hours after a failure of the Bouquet Canyon Dam (LADWP 2015).

The need for dam failure disaster planning was demonstrated by the midnight collapse in March 1928 of the St. Francis Dam in Los Angeles County, which occurred after the newly constructed cement arched dam was completely filled for the first time. The ensuing flooding from the dam's total collapse resulted in the loss of over 400 lives in Ventura County as floodwaters washed out homes and structures along the banks of the Santa Clara River. The communities of Piru, Fillmore, Santa Paula, Bardsdale, Saticoy, Montalvo and El Rio sustained extensive life and property loss from the flood (County of Ventura 2013).

More recently, the San Fernando Earthquake in 1971 resulted in ground shaking in the vicinity of the Van Norman Dam in Los Angeles County. As a result of the earthquake, structural damage threatened the dam's immediate collapse. Approximately 80,000 residents in the San Fernando Valley had to be evacuated to areas of safety in the midst of many other earthquake-related emergencies (County of Ventura 2013).

The California's Dam Safety Act (Section 8589.5 California Emergency Services Act) requires the preparation of dam inundation maps showing areas of potential flooding in the event of sudden or total dam failure as well as emergency procedures for notification and evacuation of nearby residents (County of Ventura 2013).

In Ventura County, disaster coordination and planning are the responsibility of the Sheriff's Department through its Office of Emergency Services (OES). Within California's emergency management organizational structure, each county serves as an Operational Area. In this role, Sheriff's OES acts as an agent between Cal OES and the cities (including the City of Oxnard), special districts and unincorporated areas of Ventura County. OES is responsible for countywide disaster planning, mitigation, response and recovery activities. The OES serves as the depository for the County's Dam Inundation Maps and is charged with ongoing maintenance of the County's Dam Failure Response Plan which was adopted by the Board of Supervisors on September 13, 1983. The Dam Failure Response Plan was currently updated by the OES during 2013 (County of Ventura 2013).

3.12 TSUNAMIS

The Site is not likely to be inundated by tsunamis because it is located at an elevation higher than approximately 60 to 65 feet above msl and over 12 miles from the ocean, therefore, tsunamis are not a concern. This finding is supported by information on Figure 2.6 of the *Ventura County General Plan, Hazards Appendix* (County of Ventura 2013).

3.13 SEICHE INUNDATION

As there are no large bodies of water near the Site, seiche is not a concern.

3.14 EXPANSIVE SOILS

3.14.1 USDA Soil Survey

The *Soil Survey, Ventura Area, California* (USDA 1970) indicates that the Hueneme sandy loam, and Camarillo sandy loam are non-plastic, have no coefficient of linear extensibility, and no percent expansion rating. Mocho loam, Pico sandy loam and sandy loam substratum have a liquid limit of 25 to 35 percent and a plasticity index of 5 to 10.

3.14.2 2018 ESP Report

The 2018 ESP geotechnical report concluded the upper Site soils were judged to be generally nonexpansive; therefore, no special measures with respect to expansive soils are considered necessary (ESP 2018b).

3.15 CORROSIVE SOILS

ESP retained Cerco Analytical to perform laboratory testing for resistivity, chloride, and sulfate soil content. Based on the testing performed by Cerco Analytical, the upper Site soils were classified as "corrosive" to certain construction materials that will be in contact with the soils. The ESP report recommended that the architect/engineer should refer to the Cerco Analytical report presented in the 2018 ESP report for use in determining appropriate mitigation measures for the soil's corrosivity (ESP 2018b).

3.16 ASBESTOS-CONTAINING ROCKS

Tetra Tech has reviewed available topographic and geologic maps for the Site area and *A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos* (CDMG 2000) for potential sources of naturally occurring asbestos (NOA) and believes the risk for NOA at the proposed High School No. 8 Site is low. The nearest sources of NOA are in the Santa Ynez River watershed in the Santa Ynez Mountains, approximately 30 miles northwest of the Site. NOA sources are not known to exist in the Santa Clara River watershed.

3.17 CALIFORNIA GEOLOGICAL SURVEY

In the letters dated April 5 and June 5, 2019, the CGS concluded that the information presented in the Geohazard Report (Tetra Tech 2018c), Geotechnical Report (ESP 2018b), and the Addendum Report (Tetra Tech 2019c) had adequately addressed the engineering geology and seismology issues at the Site and no further information was requested (CGS 2019a; 2019b).

4.0 PREVIOUS ENVIRONMENTAL ASSESSMENTS

The Phase I ESA (Tetra Tech 2018a), FSP (Tetra Tech 2018b), and PEA (Tetra Tech 2018c) were prepared for the OUHSD for the proposed High School No. 8 Site under regulatory oversight from the California Department of Toxic Substances Control (DTSC). The Phase I ESA identified the following Recognized Environmental Concerns (RECs) for the Site: potential impacts to shallow soil from former agricultural production land use; potential toxic soil gas from the underlying the Oxnard Oil Field; potential impacts to soil gas, soil, and groundwater from above storage tanks (ASTs) and underground storage tanks (USTs) used for motor fuel and herbicide storage in the areas of the Site adjacent to the Maulhardt Ranch residential and farmyard areas; potential impacts to soil gas, soil, and groundwater from materials stored in buildings in the areas of the Site adjacent to the Maulhardt Ranch farmyard area; potential polychlorinated biphenyl (PCB) impacts to shallow soils from a pole-mounted electrical transformer; and potential hazards posed by high volume water pipelines underlying the streets adjacent to the Site. Tetra Tech recommended that a PEA be performed under DTSC oversight to evaluate these RECs including a hazardous pipeline assessment in accordance with the *Guidance Protocol for School Site Pipeline Risk Analysis* (CDE 2007a). The Water Pipeline Safety Hazard Assessment (Placeworks 2019) was prepared as recommended in the PEA to evaluate hazardous pipelines in vicinity of the Site and is included in Appendix B. The findings, conclusions, and recommendations from these reports are summarized below.

4.1 2018 PHASE I ENVIRONMENTAL ASSESSMENT

Tetra Tech completed a Phase I ESA for the High School No. 8 site in March 2018 in accordance with American Society for Testing and Materials International (ASTM) Standard Practice E1527-13 document entitled, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2013) (Tetra Tech 2018a). The purpose of this Phase I ESA was to evaluate RECs associated with the Site. Pursuant to the updated ASTM standard effective November 1, 2013, ASTM defines RECs as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The Phase I ESA identified the following six RECs at the Site.

4.1.1 Oxnard Oil Field

The Site is located within the Oxnard Oil Field. No oil wells are present on the Site and no evidence for oil production activities at the Site or current Maulhardt Ranch property was noted in the historical aerial photographs. The presence of oil wells and historical oil production activities within 0.25 mile of the Site from 1934 through 2000 are well documented in the historical topographic maps, and DOGGR records (DOGGR 2001; 2018). This information indicates that there is a potential that the Site soils may have been impacted from toxic hydrogen sulfide or methane gas from the underlying Oxnard Oil Field.

4.1.2 Former Agricultural Land Use

Potential impacts to Site soils from former pesticide applications associated with former agricultural land use practices is a REC for the Site. The Site owners indicated that the Site has been used for agricultural production since at least 1869 and that legal pesticides in common use were applied to the Site, including organochlorine pesticides (OCPs) or heavy metals. The historical aerial photographs and Google images reviewed for this report indicate that the Site was used for crop production from at least 1927 through 2017. OCPs and heavy metals from pesticides were commonly used for crop production from the 1940s through the 1960s and were detected in soil samples collected for the 2002 PEA conducted for Rio

Rosales Elementary School Site (ENSR 2002) located on a property adjacent to the east side of the Site. Therefore, there was a potential that the Site soil was impacted with OCPs and heavy metals from pesticides.

The Site owners indicated that smudge pots fueled by heating oil were formerly throughout the cultivated areas of the Site for frost abatement when they were planted with citrus groves. There is a potential that soil at the Site have been impacted with fuel oil that contains semivolatile organic compounds (SVOCs) and polyaromatic hydrocarbons (PAHs).

4.1.3 Above Ground and Underground Storage Tanks

Potential impacts to shallow soil, soil gas, and groundwater were identified in the areas of the Site adjacent to the Maulhardt Ranch residential and farmyard areas from former ASTs and USTs formerly used for the storage of motor fuel and herbicides in these areas:

- A former 250-gallon (approximate) gasoline UST site located near the southeast corner of the Apartment;
- A former 500-gallon (approximate) gasoline AST site located near the southwest corner of the Garage;
- A former 500-gallon (approximate) diesel fuel UST site located near the southeast corner of the Garage; and
- A former 250-gallon (approximate) weed oil AST located near the northwest corner of the Garage.

4.1.4 Hazardous Substances and Petroleum Products

Potentially impacts to the Site from hazardous substances and petroleum products that were used and stored in the Tin Shed, Horse Barn, Garage, and Storage Shed on the Maulhardt Ranch that may have impacted shallow soil, soil gas, and groundwater in the areas of the Site adjacent to the Maulhardt Ranch farmyard area. Pesticides/herbicides/fertilizers were historically stored and mixed within the Storage Shed at the western edge of the farm yard and within the Tin Shed and outside the southwest corner of the Tin Shed. Discussion with the Site owners and review of historical aerial photographs and Google Earth images dating from 1943 through 2015 indicate that the Site was used for crop production throughout that time period and that OCPs were in use.

4.1.5 PCB-Containing Transformers and Equipment

One pole-mounted transformer is currently located onsite along the southern Site boundary along Camino Del Sol. Potential impacts to surface soil were identified from PCBs that may have been used in this pole mounted transformer.

4.1.6 Pipelines

California Code of Regulation (CCR) Title 5, Section 14010(h) requires that new school sites shall not be located or within 1,500 feet of the easement of an above ground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional. Hazardous pipelines are defined as:

- Pipelines carrying chemical products, natural gas, and other hydrocarbon products that are operating at a pressure of 80 per square inch gauge (psig) or higher; and

- High-volume water lines, which are defined as water lines 12 inches or greater in diameter and include open aqueducts of comparable and greater volume handling capacity.

Four hazardous high-volume water transmission pipelines as defined by CCR Title 5, Section 14010(h) were identified within 1,500 feet of the Site:

- The City of Oxnard maintains a 12-inch diameter PVC water pipeline routed north-south beneath North Rose Avenue immediately west of the Site (Figure 2);

- The City of Oxnard maintains a 12-inch diameter asbestos concrete pipe (ACP) water pipeline routed east-west beneath Camino Del Sol immediately south of the Site (Figure 2);

- The UWCD maintains a 42-inch water pipeline beneath North Rose Avenue immediately west of the Site (Figure 2); and

- The Maulhardt Ranch maintains a 12-inch diameter PVC water pipeline routed east to west underlying the dirt access road just south of the northern boundary of the Maulhardt Ranch, approximately 920 feet north of the Site. This pipeline is connected to two buried 12-inch diameter PVC water pipelines that are routed north-south beneath and just west of the main north-south road approximately 450 to 460 feet east of Rose Avenue through the Site to the farmyard/residential area of the Maulhardt Ranch (Figure 2).

4.1.7 Phase I ESA Recommendations

Based on the Phase I ESA findings, Tetra Tech recommended that a PEA be performed under DTSC oversight to evaluate the six RECs identified in the Phase I ESA at the Site. The hazardous pipeline assessment should be evaluated in accordance with the *Guidance Protocol for School Site Pipeline Risk Analysis* (CDE 2007a) as part of the PEA.

4.1.8 DTSC Phase I ESA Approval Letter

In a letter dated April 24, 2018, the DTSC approved the Phase I ESA (Tetra Tech 2018a) and concurred with the recommendation to perform a PEA under DTSC oversight. DTSC indicated they would prepare an Environmental Oversight Agreement (EOA) for the PEA for review and signature by the OUHSD and indicated a project manager would contact OUHSD to schedule a PEA scoping meeting (DTSC 2018a).

4.2 PEA

In accordance with Senate Bill 162 and the CEC, the State of California has adopted an environmental policy requiring that all new school sites obtain "No Further Action" designation before proceeding with acquisition and/or construction. Tetra Tech completed a PEA for the High School No. 8 site in November 2018 (Tetra Tech 2018c) under DTSC oversight to evaluate the RECs identified in in Phase I ESA (Tetra Tech 2018a) with the objective of obtaining a "No Further Action" designation from DTSC for the High School No. 8. This PEA Report was prepared, and work at the Site was conducted, in accordance with the guidelines of the DTSC, as detailed in the *Preliminary Endangerment Assessment Guidance Manual* (DTSC 2015).

Based on the background data collected for the PEA, the objectives of the sampling program, as detailed in the FSP (Tetra Tech 2018b), were as follows:

- Assess the potential presence and/or migration of methane, hydrogen sulfide, and fixed gases (carbon dioxide, carbon monoxide, oxygen, and nitrogen) in soil gas due to the underlying Oxnard Oil Field;

- Assess the potential presence of OCP residues, arsenic, SVOCs, PAHs, and total petroleum hydrocarbon diesel extended (TPHde) in surface soil due to former crop production activities;

- Assess the potential presence of PCBs in surface soil beneath the pole-mounted electrical transformer located onsite adjacent to Camino Del Sol; and

- Assess the potential VOC, SVOC, gasoline phase total petroleum hydrocarbons (TPHg), and TPHde impacts to soil gas, shallow subsurface soil, and groundwater in the areas of the Site adjacent to the Maulhardt Ranch residential and farmyard areas from former ASTs and USTs formerly used for the storage of motor fuel and herbicides in these areas.

Pursuant to California Code of Regulations, Title 5, Section 14010 [h], a pipeline risk assessment was performed by Placeworks in accordance with *Guidance Protocol for School Site Pipeline Risk Analysis* (CDE 2007a) under subcontract to Tetra Tech to determine whether the four high volume water transmission pipelines pose a safety hazard. The pipeline risk assessment is summarized in Section 4.2.6.

4.2.1 PEA FSP

Tetra Tech conducted a PEA scoping meeting on July 25, 2018 with DTSC and the OUHSD to review the background research for the Site in the High School No. 8 Phase I ESA (Tetra Tech 2018a) and discuss the proposed field program for the PEA to be presented in the FSP. The FSP (Tetra Tech 2018b) was prepared following the scoping meeting to evaluate the six RECs identified in the Phase I ESA. The FSP sampling program is described in Section 4.2.2.

4.2.2 PEA Sampling Program

4.2.2.1 Soil Gas Sampling Locations and Rationale

A soil gas survey was conducted by to assess potential oil field–related toxic gases in soil gas beneath the Site using direct push drilling methods. Sixty soil gas samples were collected at depths of 5 feet bgs and 15 feet bgs from temporary soil gas wells in 30 direct-push borings (SV-1 through SV-30) configured in a grid pattern across the Site (Figure 12). Soil gas samples were collected to assess potential toxic gas contamination associated with the underlying Oxnard Oil Field from borings SV-1 through SV-25, and to assess potential risks from VOC and TPHg impacts to soil gas in the areas of the Site adjacent to the Maulhardt Ranch residential and farmyard areas from borings SV-26 through SV-30. Soil gas samples were analyzed onsite in an onsite mobile laboratory for methane, hydrogen sulfide (H_2S), VOC, and TPHg gas. Soil gas samples were also analyzed for fixed gases (carbon dioxide, oxygen, nitrogen, and carbon monoxide) at a stationary laboratory offsite. The soil gas samples were analyzed for methane by EPA method 8015B, for H_2S using a Jerome H_2S Analyzer Model 631-X hand held portable gas analyzer instrument, VOCs by EPA method 8260B, TPHg by LUFT GCMS, and fixed gases by ASTM Method D-1946. Six field duplicate samples were collected for quality assurance/quality control (QA/QC) purposes. The soil gas survey was conducted in accordance with *Advisory – Active Soil Gas Investigations* (DTSC and Los Angeles Regional Water Quality Control Board [LARWQCB] 2015).

4.2.2.2 Surface Soil Sampling Locations and Rationale

Sixty-one surface soil samples were collected at the Site by Tetra Tech using hand sampling methods to assess potential OCP and arsenic contamination associated with agricultural activities, to assess potential hydrocarbon contamination from former smudge pot frost abatement activities (samples SS-1 through SS-60), and to assess potential PCB contamination in the surface soil beneath the pole-mounted electrical transformer located onsite adjacent to Camino Del Sol (sample SS-61) (Figure 12). Following guidelines recommended in *Interim Guidance for Sampling Agricultural Fields for School Sites* (Ag Guidance) (DTSC 2008), surface soil samples were collected on an approximate grid pattern at a density of approximately 1.2 sample locations per acre for a total of 60 locations: SS-1 through SS-60 (Figure 12) to assess potential OCP impacts and were analyzed for OCPs using EPA method 8081A. Surface soil samples were collected from 15 locations (SS-1, SS-4, SS-6, SS-9, SS-16, SS-23, SS-29, SS-34, SS-35, SS-38, SS-42, SS-44, SS-47, SS-57, and SS-60) to assess potential impacts to from arsenic following using EPA method 6061B and potential impacts from smudge pot fuel (for SVOCs using EPA method 8270C, PAHs using EPA method 8310, and TPHde using EPA method 8015B). Surface soil sample SS-61 was collected from beneath the pole-mounted electrical transformer located onsite adjacent to Camino Del Sol to assess the potential PCBs impacts using EPA method 8082.

4.2.2.3 Subsurface Soil Sampling Locations and Rationale

Ten subsurface soil samples were collected using direct push drilling methods at depths of 10 and 20 feet bgs from five direct-push borings (SV-26 through SV-30) in the areas of the Site adjacent to the Maulhardt Ranch residential and farmyard areas to assess potential VOC, SVOC, TPHg, and TPHde impacts from ASTs and USTs formerly used for the storage of motor fuel and herbicides in these areas. The ten subsurface soil samples were analyzed for VOCs via EPA method 8260B, TPHg (C_4-C_{12} carbon range) via EPA method 8015B, and TPHde via EPA method 8015B. The TPHde analysis is broken out as C_{13}-C_{22} carbon range (TPHd), C_{23}-C_{40} carbon range (TPHmo), and C_{13}-C_{40} carbon range (TPHde).

4.2.2.4 Groundwater Sampling Locations and Rationale

Five hydropunch groundwater samples were collected using direct push drilling methods at 20 feet bgs from 5 direct-push borings (SV-26 through SV-30) in the areas of the Site adjacent to the Maulhardt Ranch residential and farmyard areas to assess potential VOC, TPHg, and TPHde impacts from ASTs and USTs formerly used for the storage of motor fuel and herbicides in these areas. The groundwater samples were analyzed for VOCs via EPA method 8260B and TPHg (C_4-C_{12} carbon range) via EPA method 8015B, and TPHde via EPA method 8015B. The TPHde analysis is broken out as C_{13}-C_{22} carbon range (TPHd), C_{23}-C_{40} carbon range (TPHmo), and C_{13}-C_{40} carbon range (TPHde).

4.2.3 PEA Sampling Results

4.2.3.1 Soil Gas Survey Analytical Results

For the 50 soil gas samples collected to assess potential toxic gas contamination associated with the underlying Oxnard Oil Field from borings SV-1 through SV-25, methane, H_2S, carbon monoxide, and carbon dioxide gas, were not detected in any soil gas samples. The oxygen content ranged between 22.4 and 10.3%, and the nitrogen content ranged between 66.6 and 90.6%.

For the ten soil gas samples collected to assess potential fuel related compounds in soil gas from the former ASTs and USTs in the adjacent Maulhardt Ranch farmyard and residential areas from borings SV-26 through SV-30, toluene was detected at concentrations below the DTSC Screening Level (310

micrograms per liter [µg/L]) ranging from 0.030 µg/L in samples SV-26-15, SV-26-15 Dup, SV-27-15, SV-28-5, SV-29-5, SV-29-15, SV-30-5, and SV-30-15 to 0.070 µg/L in sample SV-26-5. Naphthalene was detected at concentrations below the DTSC Screening Level (11 µg/L) in samples SV-27-15, SV-28-15, and SV-30-5 at 0.020 µg/L.

No significant impacts to soil gas from the Oxnard Oil Field or the AST and UST sites in the Maulhardt Ranch farmyard and residential areas was identified.

4.2.3.2 Surface Soil Samples Analytical Results

OCPs were detected in all 60 of the discrete surface oil samples and the nine duplicate samples collected for OCP analysis. The OCP toxaphene was detected at concentrations exceeding its respective DTSC Screening Level (490 micrograms per kilogram [µg/kg]) in 33 surface soil samples at concentrations ranging from 510 µg/kg in sample SS-32 to 2,600 µg/kg in sample SS-49 (Soil Dupe 3-1) (Figure 13). Deildrin was detected at concentrations exceeding its respective DTSC Screening Level (34 µg/kg) in three surface soil samples at concentrations of 37.20 µg/kg in sample SS-49 (Soil Dupe 3), 34.70 µg/kg is sample SS-51 (Soil Dupe 3-3), and 40.40 µg/kg in sample 40.40 µg/kg (Figure 13). No other OCPs were detected at concentrations exceeding their respective DTSC Screening Levels.

Arsenic was detected in one sample (sample SS 42-0) at 2.65 milligrams per kilogram (mg/kg). Arsenic was not detected at concentrations above the laboratory method detection limit (MDL) (2.5 mg/kg) or the DTSC arsenic screening value for soil at California School Sites (DTSC-ASL) (DTSC 2008) of 12 mg/kg in any other of the 16 surface soil samples. No significant impacts to the Site from arsenic in surface soil were identified.

SVOCs were not detected at concentrations above their respective laboratory MDLs or DTSC Screening Levels in any of the 17 samples. The PAHs fluoranthene and phenanthrene were detected in sample Soil Dup 3, the duplicate sample for SS-29 at concentrations of 0.0100 mg/kg (0.0117 mg/kg), respectively. The DTSC Screening Level for fluoranthene is 2,400 mg/kg and there is no DTSC Screening Level for phenanthrene. TPH as diesel fuel (C9-C22 carbon range) was detected in surface soil sample SS-35 (8 mg/kg) as compared to the DTSC Screening Level of 230 mg/kg. TPH as heavy hydrocarbons (C22-C40 carbon range) was detected in surface soil samples SS-4 (4.3 mg/kg), SS-29 (9.9 mg/kg), the duplicate sample for SS-29, Soil Dup 3 (11.3 mg/kg), SS-35 (19.1 mg/kg), SS-57 (12.6 mg/kg), and the duplicate sample for SS-57, Soil Dup 5 (5.8 mg/kg) as compared to the DTSC Screening Level of 5,100 mg/kg. TPH as diesel and heavy hydrocarbons (C9-C40 carbon range) was detected in surface soil samples SS-4 (4.3 mg/kg), SS-29 (9.9 mg/kg), the duplicate sample for SS-29, Soil Dup 3 (11.3 mg/kg), SS-35 (27.1 mg/kg), SS-57 (12.6 mg/kg) and the duplicate sample for SS-57, Soil Dup 5 (5.8 mg/kg) as compared to the DTSC Screening Level of 230 mg/kg. TPH was not detected in any other surface soil samples. No significant impacts to Site surface soils from SVOCs, PAHs, TPHde, and TPHg were identified.

PCBs were not detected at a concentration above its respective laboratory MDL or DTSC Screening Level in surface soil sample SS-61. No significant impacts to Site surface soils from PCBs were identified.

4.2.3.3 Subsurface Soil Analytical Results for VOCs, SVOCs, and TPHde

VOCs and SVOCs were not detected in any of the soil samples collected from borings SV-26 though SV-30 at concentrations above their respective MDLs or DTSC Screening Levels. Gasoline (C4-C12 carbon range), diesel (C9-C22 carbon range), and diesel and heavy hydrocarbons range (C9-C40 carbon range) TPH were detected in sample SV-28-20 at concentrations of 0.128 mg/kg, 2.7 mg/kg, and 2.7 mg/kg, respectively. TPH was not detected in any other subsurface soil samples.

4.2.3.4 Groundwater Analytical Results for VOCs, TPHg, and TPHde

VOCs, TPHg, and TPHde were not detected in any of the groundwater samples collected from borings SV-26 though SV-30 at concentrations above their respective MDLs or DTSC Screening Levels. No significant impacts to Site groundwater from VOCs, TPHg, and TPHde were identified.

4.2.4 PEA Human Health Screening Evaluation

A screening level human health risk evaluation was conducted for residential exposures to the chemicals of potential concern (COPCs) identified in soil and soil gas at the proposed High School No. 8 Site. All of the detected organic chemicals at the Site, including OCPs, TPHde, TPHg, and VOCs, were selected as COPCs and are evaluated in this screening-level evaluation. As previously indicated, only arsenic was analyzed for in soil and was only detected in one sample at a concentration well below the DTSC screening level of 12 mg/kg. Based on this data, arsenic was not selected as a COPC. Exposures to these COPCs were evaluated for direct dermal contact with soils, incidental ingestion of soils, inhalation of airborne dusts from soils, and inhalation of vapors migrating from soil gas into indoor air. The COPCs identified in soil gas included VOCs, and the COPCs identified in soils at the Site include metals, OCPs, and VOCs. Exposures to these COPCs were evaluated for direct dermal contact with soils, incidental ingestion of soils, inhalation of airborne dusts from soils, and inhalation of vapors migrating from soil gas into indoor air. Receptors were evaluated for (1) carcinogenic risks and (2) noncarcinogenic hazards. Assumed exposures at the Site result in a maximum cumulative carcinogenic risk estimate (8×10^{-6}) that exceeds the point of departure of 1×10^{-6} for potential residential receptors. Noncarcinogenic hazard from assumed exposures to the COPCs in soil and soil gas at the Site (HI = 0.2) is well below the threshold level of 1.

The estimated risk is primarily attributable to toxaphene (71%) and dieldrin (16%). No other chemicals were detected at concentrations that exceeded the corresponding screening levels. Toxaphene was detected at 34 sampling locations at levels that exceeded the corresponding residential screening level of 490 µg/kg. Dieldrin was detected at three sampling locations (SS-49, SS-51, and SS-59) with concentrations ranging from (34.7 µg/kg to 40.4 µg/kg) that slightly exceeded the corresponding residential screening level of 34 µg/kg.

4.2.5 PEA Ecological Screening Evaluation

Ecological risks were evaluated qualitatively. This assessment consisted of identifying on-site habitats, ecological receptors, and the likelihood that sensitive receptors could be exposed to Chemicals of potential ecological concern (COPECs). Currently, the Site does not support any aquatic habitat. In addition, the Site does not support any vegetation that would present attractive habitat for terrestrial wildlife populations. Species likely to be exposed at the Site are common, abundant species that are frequently observed in row crop fields of central California. Many of these species are introduced and are highly tolerant of human disturbance. Special-status species that occur within the Oxnard USGS 7 1/2-minute quadrangle special-status species are unlikely to occur at the Site. Given current conditions, ecological exposure pathways related to groundwater, surface water, and air are considered to be incomplete or insignificant. Exposure pathways to metals and organic compounds including OCPs and VOCs in soils are considered to be complete. However, wildlife bioaccumulation of OCPs and metals at the Site are considered to be limited because wildlife observed at the Site are likely to be infrequent visitors. Thus, ecological impacts from the Site are considered to be insignificant or negligible.

4.2.6 Pipeline Risk Assessment

Based on the information summarized in Section 4.1.6, four potentially hazardous pipelines as defined in CCR Title 5, Section 14010(h) were identified within 1,500 feet of the Site (Figure 2). These pipelines are described in Section 4.1.6.

Pursuant to California Code of Regulations, Title 5, Section 14010 [h], a pipeline risk assessment was performed by Placeworks in accordance with *Guidance Protocol for School Site Pipeline Risk Analysis* (CDE 2007a) under subcontract to Tetra Tech to determine whether the four high-volume water transmission pipelines pose a safety hazard. Placeworks' Water Pipeline Safety Hazard Assessment (Placeworks 2019) is presented in Appendix B.

The Water Pipeline Risk Analysis Report concluded that the pipeline risk analysis results indicate that no meaningful level of risk would be posed to persons at the proposed Site from two high-volume water transmission pipelines operated by the City of Oxnard that are located beneath North Rose Avenue and Camino Del Sol, and the high-volume water transmission pipeline operated by the UWCD located beneath North Rose Avenue.

The high-volume water pipelines located on the Maulhardt Ranch that are and owned operated by the Maulhardt Ranch (Figure 2) will be removed from the Site and surrounding areas prior to the development of the High School No. 8. Therefore, these pipelines were not included in the pipeline Placeworks Water Pipeline Safety Hazard Assessment.

4.2.7 PEA Recommendations

The surface soil sampling performed for the PEA has adequately defined the lateral extent of OCP-impacted soil at the Site at concentrations exceeding DTSC Screening Levels. The PEA recommended that a Supplemental Site Investigation (SSI) workplan be developed and implemented at the Site under DTSC oversight to assess the depth of OCP-impacted soil at the Site at concentrations exceeding DTSC Screening Levels (specifically toxaphene and dieldrin). A remedy for the OCP-impacted soil at the Site will be developed following completion of the SSI.

4.2.8 DTSC PEA Concurrence Letter

In a letter dated December 27, 2018, the DTSC concurred with the adequacy of the PEA (Tetra Tech 2018c) pending review of public comment (DTSC 2018b).

4.2.9 Public Review Period and DTSC PEA Approval Letter

The Public Review Period for the Draft PEA Report was held from February 1 through March 4, 2019. The Public Hearing for the Draft PEA Report was held by the OUHSD on February 13, 2019 at the OUHSD District Office Board Room at 220 South K Street in Oxnard, California. No public comments were received by the OUHSD at the Public Hearing and during the Public Review Period on the subject Draft PEA Report. In the letter dated March 12, 2019, the DTSC approved the Draft PEA Report and concurred with the recommendation in the Draft PEA Report to perform a SSI to determine the nature and extent of OCP-impacted soil at the Site (DTSC 2019a).

4.3 SSI

4.3.1 SSI Rationale and Field Sampling Program

A SSI was performed under DTSC oversight to further delineate the nature and extent of OCPs in soil at concentrations above screening levels as recommended in the PEA (Tetra Tech 2018c). The SSI field sampling assessment consisted of a subsurface soil sample collection program using hand auger sampling methods. Soil samples were collected at the locations where the 10 highest surface soil OCP concentrations were detected in the PEA sampling program (sample locations SS-41, SS-43, SS-45, SS-48, SS-49, SS-50, SS-51, SS-53, SS-56, and SS-59) (Figure 14). Subsurface soil samples were collected at depths of 1.0 feet bgs, 1.5 feet bgs, and 2.0 feet bgs. A total of 21 discrete and three duplicate soil samples were collected. For each of the ten sample locations, the subsurface soil samples collected from 1.0-foot bgs plus one duplicate soil sample was initially analyzed. The soil samples collected at 1.5 feet bgs were analyzed if the corresponding sample from 1.0-foot bgs contained OCPs at concentrations that exceed the screening levels. Nine of the discrete soil samples and a duplicate soil sample collected at 1.0-foot bgs contained toxaphene at concentrations that exceeded the screening levels (soil samples SS-41-1, SS-43-1, SS-48-1, SS-49-1, SS-50-1, SS-51-1, SS-53-1, SS-56-1, SS-59-1, and Soil Dup 1). The soil samples collected at 2.0 feet bgs were analyzed if the corresponding sample from 1.5 feet bgs contained toxaphene at concentrations that exceed the screening levels. Two of the discrete soil samples collected from 1.5 feet bgs contained OCPs at concentrations that exceeded the screening levels (soil samples SS-43-1.5 and SS-53-1.5). The corresponding discrete samples collected at 2.0 feet bgs were analyzed for OCPs (soil samples SS-43-2 and SS-53-2).

In the 11 samples analyzed from 1.0-foot bgs, toxaphene was detected in nine discrete and one duplicate sample at concentrations above the screening level (490 µg/kg) (soil samples SS-41-1, SS-43-1, SS-48-1, SS-49-1, SS-50-1, SS-51-1, SS-53-1, SS-56-1, SS-59-1, and Soil Dup 1). In the 11 samples collected from 1.0-foot bgs with toxaphene at concentrations above the screening level, the toxaphene concentrations ranged from 992 µg/kg in sample SS-51-1 to 3,110 µg/kg in the duplicate sample for SS-56-1, Soil Dup 1 (Figure 14).

For the nine discrete and one duplicate soil sample analyzed from 1.5 feet bgs, (soil samples SS-41-1.5, SS-43-1.5, SS-48-1.5, SS-49-1.5, SS-50-1.5, SS-51-1.5, SS-53-1.5, SS-56-1.5, SS-59-1.5, and Soil Dup 2), two soil samples (soil samples SS-43-1.5 and SS-53-1.5) contained toxaphene at concentrations above the screening level (490 µg/kg). Soil sample SS-43-1.5 contained 2,240 µg/kg toxaphene and soil sample SS-53-1.5 contained 898 µg/kg toxaphene (Figure 14).

Toxaphene was not detected at concentrations above the screening level in the two discrete and one duplicate soil sample analyzed from 2.0 feet bgs (soil samples SS-43-2, SS-53-2, and Soil Dup 3) (Figure 14).

4.3.2 SSI Risk Characterization Summary

Risks were characterized for potential residential and school-based student receptors using the ratio of concentrations measured at the Site to the RBSLs identified for each environmental medium. This evaluation consisted of three steps: (1) specifying the target risk and hazard quotient to use in calculating the RBSLs; (2) estimating EPCs for each environmental medium (i.e., the maximum detected concentration or the 95% upper confidence limit (95% UCL) of the arithmetic mean concentration; and (3) comparing the EPCs to the RBSLs to estimate risks and hazards for potential receptors.

School children and staff at the proposed High School are the receptor groups most likely to be exposed to any chemicals potentially present at the Site. The human health risk was evaluated assuming unrestricted residential land use (residential scenario), regardless of current and future uses. School-based receptors (students and teachers) were also evaluated for potential exposures to chemicals in soil. As the proposed site is intended to serve as a high school (grades 9-12), students associated with grades 9-12 and teachers were evaluated in the human health screening evaluation. For this evaluation, it was conservatively assumed that students attended school on a year-round basis (233 days per year) rather than a 9-month school year (180 days per year).

The results of the risk characterization for the residential scenario based on the maximum detected concentrations indicate that toxaphene levels detected in soil result in an estimated risk that exceed the residential target risk level (1×10^{-6}). However, the estimated cumulative risks for the school-based student scenario (range from 2×10^{-7} to 4×10^{-7}) were well below the student target risk level (1×10^{-6}). For the school-based teacher scenario, the estimated cumulative risks ranged from 7×10^{7} to 2×10^{-6}, which are well below the target risk level for teachers (1×10^{-5}). It is noteworthy, that for the teacher scenario, only the estimated risk based on the maximum detected concentrations (2×10^{-6}) exceeded the low end of the USEPA target risk range of 10^{-6} to 10^{-4}. The estimated risks based on the 95% UCL concentrations and modified soil screening level for toxaphene were equal to, or lower than the low end of the USPEA target risk range of 10^{-6} to 10^{-4}. The school-based scenarios best represent the conditions that will be encountered by students and teachers at the High School site. Therefore, the results of this human health risk evaluation indicate that it is unlikely that the COPCs detected in soil gas and soil are present at levels that would be expected to result in adverse health effects under the school-based scenarios evaluated in the SSI report.

4.3.3 SSI Conclusions and Recommendations

The lateral extent of OCPs in surface soils at the Site at concentrations exceeding Screening Levels was defined in the PEA sampling event and comprises approximately 24 acres (Tetra Tech 2018d). This SSI was performed to assess the depth of OCP-impacted soil at the Site at concentrations exceeding screening levels (specifically toxaphene and dieldrin). Based on the results of the SSI sampling program, the maximum depth of OCP-impacted soil at the Site at concentrations exceeding screening levels has been defined and is between approximately 1.5 and 2.0 feet bgs.

The results of the SSI risk characterization for the residential scenario based on the maximum detected concentrations indicate that toxaphene levels detected in soil result in estimated risk that exceed the residential target risk level (1×10^{-6}). However, the estimated cumulative risks for the school-based student scenario (range from 2×10^{-7} to 4×10^{-7}) were well below the student target risk level (1×10^{-6}). For the school-based teacher scenario, the estimated cumulative risks ranged from 7×10^{-7} to 2×10^{-6}, which are well below the target risk level for teachers (1×10^{-5}). It is noteworthy, that for the teacher scenario, only the estimated risk based on the maximum detected concentrations (2×10^{-6}) exceeded the low end of the USEPA target risk range of 10^{-6} to 10^{-4}. The estimated risks based on the 95% UCL concentrations and modified soil screening level for toxaphene were equal to, or lower than the low end of the USPEA target risk range of 10^{-6} to 10^{-4}. The school-based scenarios best represent the conditions that will be encountered by students and teachers at the High School site. Therefore, the results of this human health risk evaluation indicate that it is unlikely that the COPCs detected in soil gas and soil are present at levels that would be expected to result in adverse health effects under the school-based scenarios evaluated in this SSI report.

Based on the results of the SSI risk characterization, Tetra Tech recommended a No Further Action determination by DTSC for the High School No. 8 site.

4.3.4 DTSC SSI Approval Letter

In the letter dated April 26, 2019, the DTSC approved the SSI Report and concurred with the recommendation in the SSI Report for a No Further Action determination the Site (DTSC 2019b).

This page intentionally left blank.

5.0 ENVIRONMENTAL HAZARDS

5.1 HAZARDOUS AND SOLID WASTE DISPOSAL

Based on the information contained in the EDR Radius Report (EDR 2017), the Site has not been used for hazardous or solid waste disposal and there are no hazardous or solid waste disposal sites located within one mile of the Site.

No evidence of solid waste disposal was observed at the Site during the Site reconnaissance. Domestic trash collection and disposal is managed by the City of Oxnard.

5.2 HAZARDOUS AIR EMISSIONS

Tetra Tech evaluated the neighborhood during the Site reconnaissance for facilities or businesses considered likely to emit hazardous air pollutants; none were observed in the Site vicinity. Based on observations of surrounding properties, review of the EDR Radius Report (EDR 2017), which tracks the emissions database inventory of the California Air Resources Board, there are no hazardous air emission sources within 0.25 mile of the Site and it is unlikely that the Site would be impacted by hazardous air emissions.

5.3 HAZARDOUS PIPELINES

Information on potentially hazardous pipelines within 1,500 feet of the Site is documented in Sections 4.1.6 and 4.2.6. Four high-volume water transmission, hazardous pipelines as defined in CCR Title 5, Section 14010(h), were identified within 1,500 feet of the Site (Figure 2): A Water Pipeline Risk Analysis was performed in accordance with *Guidance Protocol for School Site Pipeline Risk Analysis* (CDE 2007a) to evaluate the potential hazards posed to the Site by the high volume water transmission, hazardous pipelines located within 1,500 feet of the Site. The Water Pipeline Risk Analysis Report concluded that the pipeline risk analysis results indicate that no meaningful level of risk would be posed to persons at the proposed Site from the high-volume water transmission pipelines (Placeworks 2019).

5.4 WATER/FUEL STORAGE TANKS

Based on review of the EDR Radius Report (EDR 2017) interviews with the Site owners (the Maulhardt family), and observations made during the Site reconnaissance, no water or fuel storage tanks are located onsite.

No drums or other containers that may store hazardous substances or petroleum products were observed at the Site.

The following former AST and UST sites were identified during the Site reconnaissance in the farmyard and residential areas of the Maulhardt Ranch near to the Site:

- A 500-gallon (approximate) gasoline fuel above ground storage tank (AST) removed in 1980's near the southwest corner of the Garage (Figure 15 and Table 6 Item 11);

- A 500-gallon (approximate) diesel fuel UST removed in 1980's near the southeast corner of the Garage (Figure 15 and Table 6 Item 12):

- An Oil Change Sump inside of the Garage (Figure 15 and Table 6 Item 13);

- A 500-gallon (approximate) weed oil AST removed in the 1970's near the northwest corner of the Garage (Figure 15 and Table 6 Item 15); and

- A 250-gallon (approximate) gasoline UST at the southeast corner of the Apartment building (Figure 15 and Table 6 Item 23).

5.5 FREEWAYS AND BUSY TRAFFIC CORRIDORS

Senate Bill 352 created a requirement to determine whether a school site is located within 500 feet of a freeway or busy traffic corridor would create a health hazard from exposure to high levels of criteria pollutants. Freeways and busy traffic corridors are defined as roadways with average daily traffic in excess of 50,000 vehicles in rural areas and 100,000 daily vehicles in urban areas. Based on review of the Oxnard, California Quadrangle, USGS 7.5-minute topographic series map (USGS 2015), a Google Earth Image dated November 19, 2018, and information from the City of Oxnard Traffic Engineering Department (City of Oxnard 2019) there are no freeways or other busy traffic corridors located within 500 feet of the Site. Highway 101 is located approximately 1 mile north of the Site.

5.6 RAILROAD TRACK EASMENTS

Title 5 of the California Code of Regulations (CCR) stipulates that a railroad safety study must be completed for any proposed school site located within 1,500 feet of a railway track easement. Based on review of the Oxnard, California Quadrangle, USGS, 7.5-minute topographic series map (USGS 2015), and a Google Earth Image dated January 5, 2015, the Site is not located within 1,500 feet of a railroad track easement. The railroad track easement located nearest to the Site is approximately 0.6 miles south of the Site.

5.7 AIRPORTS/HELIPORTS

California Code of Regulations Title 21 requires the State Department of Transportation to review any proposed school site that is located within 2 nautical miles of a runway. There are no airports within two nautical miles of the Site. Based on review of a Google Earth Image date January 5, 2015, and AirNav.com (AirNav.com 2017), no airports are located within two nautical miles of the Site. The closest airport to the Site is the Oxnard Airport, which is approximately 2.4 nautical miles west of the Site. In addition, the Camarillo Airport is located approximately 3.2 nautical miles east of the Site.

Based on review of data from AirNav.com, the Site is located within two nautical miles of a heliport. The St John's Regional Medical Center Heliport is located approximately 0.6 nautical miles north of the Site (AirNav.com 2017).

5.8 ZONING

Based on review of the City of Oxnard Zoning Map (City of Oxnard 2017), most of the Site is zoned as Single Family Residential Planned Development (R1PD). The very northernmost area of the Site is zoned Community Reserve (CR).

5.9 OIL AND GAS FIELDS

Tetra Tech reviewed DOGGR Map 214 (DOGGR 2001), the online DOGGR Well Finder (DOGGR 2018), and associated well history documents to evaluate potential presence of oil fields or wells within the Site vicinity. Records indicate that the Site is located within the Oxnard Oil Field; however, no known active or abandoned oil wells are present on the Site. Additionally, no oil wells are present on

107.25-acre Maulhardt Ranch (APN 214-002-059) where the Site is located. Several plugged abandoned oil wells are located within one quarter mile of the Site. The nearest plugged and abandoned well is Maulhardt Community No. 11A, located approximately 850 feet south southwest of the Site on Imperial Street near the intersection of San Luis Street. Plugged and abandoned well Maulhardt Community No. 10 is located approximately 870 feet west of the Site just north of Camino Del Sol. Plugged and abandoned well Maulhardt Community No. 3 is located approximately 1,350 feet west southwest of the Site on North Lombard Street. Plugged and abandoned well Maulhardt Community No. 7 is located approximately 1,500 feet west northwest of the Site. Plugged and dry well Standard Schoelle No. 1 is located approximately 1,570 feet north east of the Site on Ribera Place. Plugged dry well A. Pfeiler Est. No. 1 is located approximately 1,600 feet northwest of the Site in West Village Park. Plugged and abandoned well Maulhardt No. 9 is located approximately 1,750 feet east of the Site. Numerous other abandoned wells are present further south and east of the site but were not described in this report.

5.10 ELECTRICAL UTILITY EASEMENTS AND POWER LINES

Title 5 of the California Code of Regulations (CCR) stipulates that a school site shall not be within the following distances from a high-power electric transmission line:

- 100 feet from a 50-133 kilovolt (kV) line;
- 150 feet from a 220-230 kV line; or
- 350 feet from a 500-550 kV line.

Pole-mounted electrical power lines located within 350 feet of the Site that are owned and operated by Southern California Edison in the Site area are shown on Figure 2. These power lines are:

- Located along the north side of Camino Del Sol at the southern Site boundary; and
- Routed through the Site a north-south alignment approximately 210 feet east of North Rose Avenue.

Southern California Edison indicated that all of these pole-mounted power lines are rated at 16 kV (Wall 2017).

6.0 DISCLAIMER

This report was compiled based partially on information supplied to Tetra Tech from outside sources and other information that is in the public domain. The conclusions and recommendations herein are based solely on the information Tetra Tech obtained in compiling the report. Documentation for the statements made in the report is on file at Tetra Tech's offices in Santa Barbara, California. Tetra Tech makes no warranty as to the accuracy of statements made by others that may be contained in the report, except that is has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services. As the facts forming the basis for the report are subject to professional interpretation, differing conclusions could be reached. Tetra Tech does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations or suggestions does not assure elimination of hazards or the fulfillment of client's obligation under local, state, or federal laws or any modifications or changes to such laws. This report is not a Geologic Hazards Assessment/Geotechnical Soils Study and does not satisfy the requirements for completion of a Geologic Hazards Assessment/Geotechnical Soils Study prior to construction of new school sites.

None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature but shall be representation of findings of fact from records examined.

Respectfully submitted,

TETRA TECH, INC.

GEOLOGIC MAP OF THE EAST HALF SANTA BARBARA 30' × 60' QUADRANGLE, CALIFORNIA

Compiled by

Carlos I. Gutierrez[1], Siang S. Tan[1], and Kevin B. Clahan[1]

2008

Digital preparation by

Carlos I. Gutierrez[1] and Karen Toman-Sager[1]

1. Department of Conservation, California Geological Survey

ABBREVIATED EXPLANATION

Approximate stratigraphic relationships only;
see pamphlet for more detailed information

Holocene

af	Artificial fill (Holocene)
alf	Artifical levee fill (Holocene)
Qb	Active beach deposits (Holocene)
Qe	Active coastal eolian (sand dune) deposits (Holocene)
Qes	Active coastal estuarine deposits (Holocene)
Qw	Active wash deposits within major river channels (Holocene)
Qw_1	Historically active wash deposits adjacent to active channel (Holocene)
Qhw_3	Wash deposits Unit 3 (Holocene), associated with units Qht_3 and Qha_3
Qhw_2	Wash deposits Unit 2 (Holocene), associated with unit Qha_2
Qhw_1	Wash deposits Unit 1 (Holocene), associated with units Qht_1 and Qha_1
Qhfy	Alluvial fan deposits (latest holocene)
Qhf	Alluvial fan deposits (Holocene)
Qhff	Alluvial fan deposits, fine facies (Holocene)
Ql	Lacustrine deposits (Holocene)
Qls	Landslide deposits (Holocene to Pleistocene)
Qha	Alluvial deposits and colluvial deposits, associated with Qw (Holocene)
Qha_3	Unit 3, associated with unit Qhw_3
Qha_2	Unit 2, associated with unit Qhw_2
Qha_1	Unit 1, associated with unit Qhw_1
Qht	Stream terrace deposits, associated with unit Qw (latest Holocene)
Qht_3	Unit 3, associated with unit Qhw_3
Qht_1	Unit 1, associated with unit Qhw_1
Qhps	Paralic deposits of the Sea Cliff marine terrace (Holocene)

Pleistocene

Qf	Alluvial fan deposits (late Pleistocene)
Qppp	Paralic deposits of Punta Gorda marine terrrace (Pleistocene)
Qpmw	Undivided mass-wasting deposits (Pleistocene)
Qpa	Alluvial deposits, undivided (late Pleistocene)
Qpa_2	Unit 2
Qpa_1	Unit 1
Qpf	Alluvial fan deposits (late to middle Pleistocene)
Qpf_2	Unit 2
Qpf_1	Unit 1
Qoa	Alluvial deposits (early to middle Pleistocene)
Qca	Casitas Formation (Pleistocene)
Qs	Saugus Formation (Pleistocene)
Qlp	Las Posas Formation (Pleistocene)
Qsb / Qsbc	Santa Barbara Formation (Pleistocene) Qsbc - conglomerate

Pliocene

Tps / Tpsc (Tp)	Pico Formation (Pliocene) Tp - undivided Tps -sandstone Tpsc - sandstone and conglomerate
Tsq	Sisquoc Formation (Pliocene-Miocene)

Miocene

Ta	Andesite sill (Miocene)
Tcvai	Conejo Volcanics, andesitic (middle Miocene)
Tcvdi	Conejo Volcanics, dacitic (middle Miocene)
Tcvb	Conejo Volcanics, basaltic (middle Miocene)
Tcvbs	Conejo Volcanics, interbedded with sandstone and siltstone (middle Miocene)
Tcvbb	Conejo Volcanics, basaltic flow breccias (middle Miocene)
Tcvab	Conejo Volcanics, andesitic flow breccias (middle Miocene)
Tcvdb	Conejo Volcanics, dacitic flow breccias (middle Miocene)
Tcvadb	Conejo Volcanics, mix of andesitic and dacitic flow breccias (middle Miocene)
Tdb	Undivided diabase and mafic hypabyssal intrusive rocks (Miocene)
Tmyu / Tmyl (Tmy)	Monterey Formation (middle and late Miocene) Tmy - undivided Tmyu - upper Tmyl - lower
Tm / Tmb	Modelo Formation (Miocene) Tmb - burnt rock
Tr	Rincon Shale (Miocene)
Tt / Tts	Topanga Formation (middle to early Miocene) Tts - dominantly sandstone
Tv / Tvs	Vaqueros Sandstone (early Miocene) Tvs - dominantly sandstone

Oligocene

Ts	Sespe Formation (Oligocene)

Eocene

Tcw / Tcwsh	Coldwater Sandstone (late Eocene) Tcwsh - dominantly shale
Tcd	Cozy Dell Shale (late Eocene)
Tma / Tmash	Matilija Sandstone (middle to late Eocene) Tmash - micaceous shale
Tj / Tjs	Juncal Formation (early to middle Eocene) Tjs - dominantly arkosic sandstone

Cretaceous

Ku	Unnamed conglomerate (late Cretaceous)

SYMBOL EXPLANATION

Contact between map units - Solid where accurately located, dashed where approximately located; dotted where concealed; queried where uncertain.

Fault - Solid where accurately located, dashed where approximately located; short dash where inferred; dotted where concealed, queried where uncertain. Ball and bar on downthrown block. Arrow and number indicate direction and angle of dip of fault plane.

Contact between similar map units; approximately located.

Inferred shoreline angle of marine terraces.

Erosional scarps in terraced alluvial units; hatchures point towards topograhically lower surfaces

Anticline - Solid where accurately located, dashed where approximately located, dotted where concealed, queried where uncertain, arrow indicates direction of plunge.

Overturned Anticline - Solid where accurately located, dotted where concealed, queried where uncertain.

Syncline - Solid where accurately located, dotted where concealed, queried where uncertain arrow indicates direction of plunge.

Overturned Syncline - Solid where accurately located, dotted where concealed, queried where uncertain.

Strike and dip of sedimentary beds:

- Inclined bedding
- Vertical bedding
- Overturned bedding

Landslide - arrow indicates principal direction of movement; hachured where headscarp is mappable. The existence of some landslides may be questionable; .

Prepared in cooperation with the U.S. Geological Survey, Southern California Areal Mapping Project.

* Quaternary now recognized as extending to 2.6 Ma (Walker and Geissman, 2009). Quaternary faults in this map were established using the previous 1.6 Ma criterion.

EXPLANATION

Fault traces on land are indicated by solid lines where well located, by dashed lines where approximately located or inferred, and by dotted lines where concealed by younger rocks or by lakes or bays. Fault traces are queried where continuation or existence is uncertain. Concealed faults in the Great Valley are based on maps of selected subsurface horizons, so locations shown are approximate and may indicate structural trend only. All offshore faults based on seismic reflection profile records are shown as solid lines where well defined, dashed where inferred, queried where uncertain.

FAULT CLASSIFICATION COLOR CODE
(Indicating Recency of Movement)

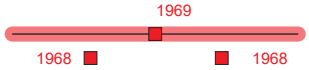
Fault along which historic (last 200 years) displacement has occurred and is associated with one or more of the following:

(a) a recorded earthquake with surface rupture. (Also included are some well-defined surface breaks caused by ground shaking during earthquakes, e.g. extensive ground breakage, not on the White Wolf fault, caused by the Arvin-Tehachapi earthquake of 1952). The date of the associated earthquake is indicated. Where repeated surface ruptures on the same fault have occurred, only the date of the latest movement may be indicated, especially if earlier reports are not well documented as to location of ground breaks.

(b) fault creep slippage - slow ground displacement usually without accompanying earthquakes.

(c) displaced survey lines.

A triangle to the right or left of the date indicates termination point of observed surface displacement. Solid red triangle indicates known location of rupture termination point. Open black triangle indicates uncertain or estimated location of rupture termination point.



Date bracketed by triangles indicates local fault break.

No triangle by date indicates an intermediate point along fault break.

Fault that exhibits fault creep slippage. Hachures indicate linear extent of fault creep. Annotation (creep with leader) indicates representative locations where fault creep has been observed and recorded.

Square on fault indicates where fault creep slippage has occured that has been triggered by an earthquake on some other fault. Date of causative earthquake indicated. Squares to right and left of date indicate terminal points between which triggered creep slippage has occurred (creep either continuous or intermittent between these end points).

Holocene fault displacement (during past 11,700 years) without historic record. Geomorphic evidence for Holocene faulting includes sag ponds, scarps showing little erosion, or the following features in Holocene age deposits: offset stream courses, linear scarps, shutter ridges, and triangular faceted spurs. Recency of faulting offshore is based on the interpreted age of the youngest strata displaced by faulting.

Late Quaternary fault displacement (during past 700,000 years). Geomorphic evidence similar to that described for Holocene faults except features are less distinct. Faulting may be younger, but lack of younger overlying deposits precludes more accurate age classification.

Quaternary fault (age undifferentiated). Most faults of this category show evidence of displacement sometime during the past 1.6 million years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age. Unnumbered Quaternary faults were based on Fault Map of California, 1975. See Bulletin 201, Appendix D for source data.

Pre-Quaternary fault (older that 1.6 million years) or fault without recognized Quaternary displacement. Some faults are shown in this category because the source of mapping used was of reconnaissnce nature, or was not done with the object of dating fault displacements. Faults in this category are not necessarily inactive.

ADDITIONAL FAULT SYMBOLS

Bar and ball on downthrown side (relative or apparent).

Arrows along fault indicate relative or apparent direction of lateral movement.

Arrow on fault indicates direction of dip.

Low angle fault (barbs on upper plate). Fault surface generally dips less than 45° but locally may have been subsequently steepened. On offshore faults, barbs simply indicate a reverse fault regardless of steepness of dip.

OTHER SYMBOLS

Numbers refer to annotations listed in the appendices of the accompanying report. Annotations include fault name, age of fault displacement, and pertinent references including Earthquake Fault Zone maps where a fault has been zoned by the Alquist-Priolo Earthquake Fault Zoning Act. This Act requires the State Geologist to delineate zones to encompass faults with Holocene displacement.

Structural discontinuity (offshore) separating differing Neogene structural domains. May indicate discontinuities between basement rocks.

Brawley Seismic Zone, a linear zone of seismicity locally up to 10 km wide associated with the releasing step between the Imperial and San Andreas faults.

SANTA ROSA ISLAND	100.6	B	6.9	1	DS

Notes: - The data presented in this table are from the data file "CDMGUBCR" from the UBCSEIS computer program (Blake 1998). The data file is based on information from *Maps of Known Active Fault Near-Source Zones in California and Adjacent Parts of Nevada to be Used with the 1997 Uniform Building Code* (ICBO 1998).

A - Faults with a MwMax ≥ 7 and a slip rate ≥ 5 mm/yr.

B - Faults with a MwMax ≥ 7 and a slip rate < 5 mm/yr, MwMax < 7 and a slip rate > 2, or MwMax ≥ 6.5 and a slip ra

BT - blind thrust fault

DS - dip slip fault

ICBO - International Conference of Building Officials

mm/yr - millimeters per year

Mmax - Fault segment earthquake maximum magnitude as defined in *Maps of Known Active Fault Near-Source Zones in California and Adjacent Parts of Nevada to be Used with the 1997 Uniform Building Code* (ICBO 1998).

MwMax - Maximum earthquake moment magnitued (Mw) where Mw is equal to the rigidity of the earth times the average amount of slip on the fault times the amount of fault area that slipped

SS - strike slip fault

Summary

Earthquake Magnitude Range (M_L):	
Minimum	4.00
Maximum	9.00
Site Coordinates:	
Latitude:	34.9284
Longitude:	120.4236
Search Time Period:	1800 - 2012
Approx. Search Radius in mi(km):	62.2 (100)
Nearest Earthquake Distance in mi(km):	3.7 (6.0)
Largest Earthquake Magnitude (M_L):	7.9
Largest Estimated Site Acceleration (g)	0.322

Earthquake Magnitudes and Exceedances

Earthquake Magnitude (M_L)	Number of Times Exceeded	Cumulative No./Year	Cumulative Estimated Recurrence Interval (years)
4	152	0.71362	1.40
4.5	58	0.2723	3.67
5	36	0.16901	5.92
5.5	18	0.08451	11.83
6	8	0.03756	26.62
6.5	3	0.01408	71.02
7	2	0.00939	106.50
7.5	2	0.00939	106.50

Table 3
Historic Earthquake Catalogue Data Summary

Notes: - **Red Bold** text indicates the maximum magnitude (7.9 ML from the 1857 Fort Tejon Earthquake) and maximum site acceleration (0.322 g from the 1927 Lompoc Earthquake) .

- The data presented in this table are from the data file "ALLQUAKE" from the EQSEARCH computer program (Blake 2000). The data file is based on information from the California Geologic Survey (CGS) computerized historic earthquake catalogue for the State of California compiled through December 2012.

g - Standard acceleration of gravity where g = 9.81 meters/second as estimated using a deterministic method.

km - kilometer

mi - mile

MM - Modified Mercalli Scale. An earthquake intensity scale having twelve divisions ranging from I (not felt by people) to XII (damage nearly total).

IV	- Felt indoors by many to all people, and outdoors by few people. Some awakened. Dishes, windows, and doors disturbed, and walls make cracking sounds. Chandeliers and indoor objects shake noticeably. The sensation is more like a heavy truck striking building. Standing automobiles rock noticeably. Dishes and windows rattle alarmingly. Damage none.
V	- Felt by nearly everyone; many awakened. Some dishes, windows, etc., broken; a few instances of cracked plaster; unstable objects overturned. Disturbance of trees, poles, and other tall objects sometimes noticed. Pendulum clocks may stop.
VI	- Felt by all; many frightened and run outdoors. Some heavy furniture moved; a few instances of fallen plaster or damaged chimneys. Damage slight.
VII	- Everybody runs outdoors. Damage negligible in buildings of good design and construction slight to moderate in well built ordinary structures; considerable in poorly built or badly designed structures. Some chimneys broken. Noticed by persons driving motor cars.
VIII	- Damage slight in specially designed structures; considerable in ordinary substantial buildings, with partial collapse; great in poorly built structures. Panel walls thrown out of frame structures. Fall of chimneys, factory stacks, columns, monuments, walls. Heavy furniture overturned. Sand and mud ejected in small amounts. Changes in well water. Persons driving motor cars disturbed.
IX	- Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb; great in substantial buildings, with partial collapse. Buildings shifted off foundations. Ground cracked conspicuously. Underground pipes broken.

M_L - Richter Scale. A logarithmic scale of earthquake magnitude where the magnitude is the logarithm to base ten of the maximum seismic wave amplitude (in thousandths of a millimeter) measured on a standard seismograph 100 kilometers from the earthquake epicenter.

PGA - Peak Ground Acceleration from the probabilistic method in EQSEARCH (Blake 2000) using the ground attenuation method for a California Buildingd Code Site Class “D” stiff soil profile (Boore et. al, 1997).

This page intentionally left blank.

Table 6
Site Reconnaissance Features

Number	Item	Location
1	Series of active concrete residential septic tanks.	East of Main Residence near kitchen window.
2	Potential abandoned septic tank	Underlying driveway east of the Main Residence.
3	Underground laundry room wastewater septic tank.	Under northeast corner of Main Residence.
4	Abandoned cesspool	Near northeastern corner of orchard on the east side of the Main Residence.
5	Pole mounted transformer	In citrus orchard south of eastern Mobile Home.
6	Eastern Mobile Home septic tank	Approximately 10-15 feet east of eastern Mobile Home.
7	Abandoned water well	Southwest of Workshop.
8	Power pole and former location of three pole mounted transformers	Northwest of Workshop.
9	Abandoned septic tank	South of Horse Barn.
10	Bonfire area	North of Horse Barn and south of Tin Shed.
11	Former location of removed 500-gallon (approximate) gasoline fuel above ground storage tank (AST) removed in 1980's.	Southwest corner of Garage.
12	Former location of 500-gallon (approximate) diesel fuel UST removed in 1980's.	Southeast corner of Garage.
13	Oil Change Sump.	Inside of Garage.
14	Former location of two 2-story Bunkhouses removed in 1970's. Abandoned septic tank and cesspool likely present.	In orchard west of Garage and Storage Shed.
15	Former 500-gallon (approximate) weed oil AST removed in the 1970's without a removal permit.	Located along northwest corner of Garage.
16	Former pesticide mixing area.	Located near southwest corner of Tin Shed.
17	Smudge Pot	Inside of Tin Shed at northwest corner.
18	Soil/ floor staining observed.	Located inside of Tin Shed.
19	Old concrete footing from removed wind electric machine.	Located north of Tin Shed.
20	Abandoned septic tank.	North of Office.
21	Abandoned redwood septic tank	Northwest of Office.
22	Apartment septic tank	North of Apartment.
23	Oil residue under Apartment garage. Area was backfilled with concrete slurry.	Inside Apartment garage at southeast corner.
24	Former location of 250-gallon (approximate) gasoline UST and pump.	South of the Apartment.
25	500-gallon (approximate) propane AST owned and operated by AAA Propane Services, Inc. (AAA).	Northwest corner of Apartment.
26	Septic Tank	East of western Mobile Home.
27	500-gallon (approximate) propane AST owned and operated by AAA	West of Main Residence.
28	Abandoned 500-gallon (approximate) heating oil AST.	West of Main Residence.
29	Pole mounted transformer	In orchards west of Main Residence.
30	500-gallon (approximate) propane AST owned and operated by AAA	North of eastern Mobile Home.
31	Recreational Vehicle	East of the Horse Barn.

Design Maps Detailed Report

ASCE 7-10 Standard (34.2077°N, 119.1554°W)

Site Class D – "Stiff Soil", Risk Category I/II/III

Section 11.4.1 — Mapped Acceleration Parameters

Note: Ground motion values provided below are for the direction of maximum horizontal spectral response acceleration. They have been converted from corresponding geometric mean ground motions computed by the USGS by applying factors of 1.1 (to obtain S_S) and 1.3 (to obtain S_1). Maps in the 2010 ASCE-7 Standard are provided for Site Class B. Adjustments for other Site Classes are made, as needed, in Section 11.4.3.

From Figure 22-1 [1]	S_S = 2.596 g
From Figure 22-2 [2]	S_1 = 0.938 g

Section 11.4.2 — Site Class

The authority having jurisdiction (not the USGS), site-specific geotechnical data, and/or the default has classified the site as Site Class D, based on the site soil properties in accordance with Chapter 20.

Table 20.3–1 Site Classification

Site Class	$\bar{v}_s$	$\bar{N}$ or $\bar{N}_{ch}$	$\bar{s}_u$
A. Hard Rock	>5,000 ft/s	N/A	N/A
B. Rock	2,500 to 5,000 ft/s	N/A	N/A
C. Very dense soil and soft rock	1,200 to 2,500 ft/s	>50	>2,000 psf
D. Stiff Soil	600 to 1,200 ft/s	15 to 50	1,000 to 2,000 psf
E. Soft clay soil	<600 ft/s	<15	<1,000 psf
	Any profile with more than 10 ft of soil having the characteristics: • Plasticity index PI > 20, • Moisture content w ≥ 40%, and • Undrained shear strength $\bar{s}_u$ < 500 psf		
F. Soils requiring site response analysis in accordance with Section 21.1	See Section 20.3.1		

For SI: 1ft/s = 0.3048 m/s 1lb/ft² = 0.0479 kN/m²

Section 11.4.3 — Site Coefficients and Risk–Targeted Maximum Considered Earthquake (MCE_R) Spectral Response Acceleration Parameters

Table 11.4–1: Site Coefficient F_a

Site Class	Mapped MCE $_R$ Spectral Response Acceleration Parameter at Short Period				
	$S_S \leq 0.25$	$S_S = 0.50$	$S_S = 0.75$	$S_S = 1.00$	$S_S \geq 1.25$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.2	1.2	1.1	1.0	1.0
D	1.6	1.4	1.2	1.1	1.0
E	2.5	1.7	1.2	0.9	0.9
F	See Section 11.4.7 of ASCE 7				

Note: Use straight–line interpolation for intermediate values of S_S

For Site Class = D and S_s = 2.596 g, F_a = 1.000

Table 11.4–2: Site Coefficient F_v

Site Class	Mapped MCE $_R$ Spectral Response Acceleration Parameter at 1–s Period				
	$S_1 \leq 0.10$	$S_1 = 0.20$	$S_1 = 0.30$	$S_1 = 0.40$	$S_1 \geq 0.50$
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.7	1.6	1.5	1.4	1.3
D	2.4	2.0	1.8	1.6	1.5
E	3.5	3.2	2.8	2.4	2.4
F	See Section 11.4.7 of ASCE 7				

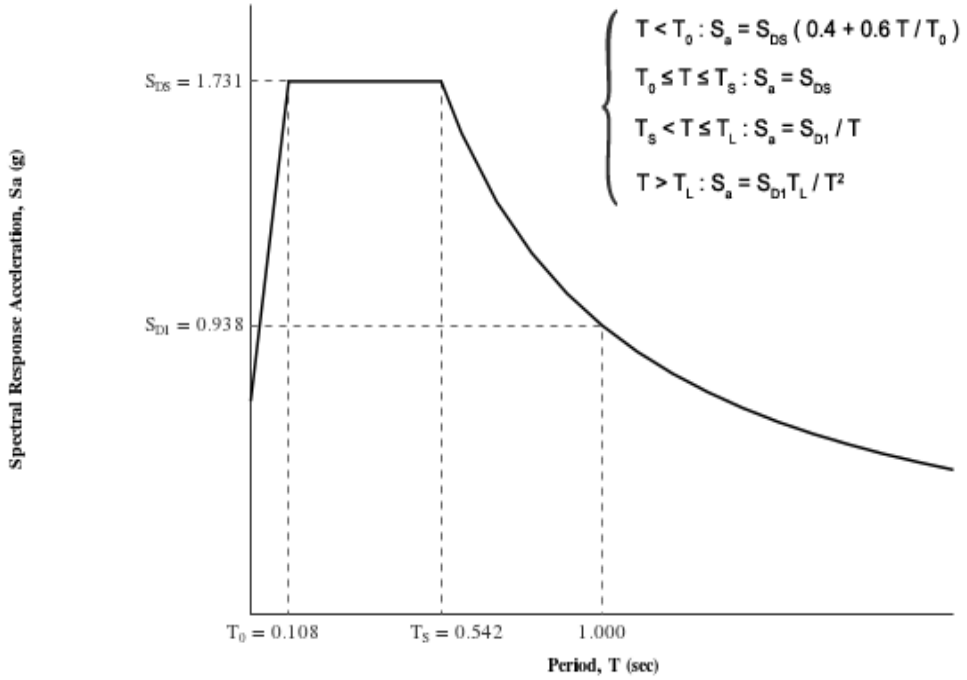
Note: Use straight–line interpolation for intermediate values of S_1

For Site Class = D and S_1 = 0.938 g, F_v = 1.500

Equation (11.4–1): $S_{MS} = F_a S_S = 1.000 \times 2.596 = 2.596$ g

Equation (11.4–2): $S_{M1} = F_v S_1 = 1.500 \times 0.938 = 1.407$ g

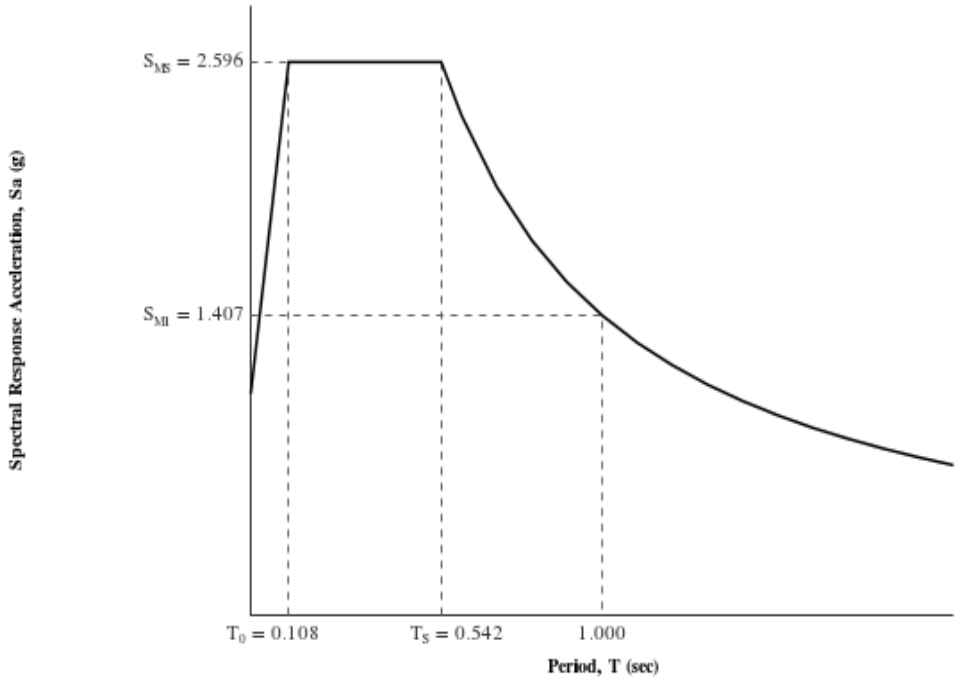
Section 11.4.4 — Design Spectral Acceleration Parameters



Equation (11.4–3): $S_{DS} = ⅔ S_{MS} = ⅔ \times 2.596 = 1.731$ g

Equation (11.4–4): $S_{D1} = ⅔ S_{M1} = ⅔ \times 1.407 = 0.938$ g

Section 11.4.5 — Design Response Spectrum



From Figure 22-12 [3] $T_L = 8$ seconds

Figure 11.4–1: Design Response Spectrum

Section 11.4.6 — Risk-Targeted Maximum Considered Earthquake (MCE_R) Response Spectrum

The MCE_R Response Spectrum is determined by multiplying the design response spectrum above by 1.5.

Section 11.8.3 — Additional Geotechnical Investigation Report Requirements for Seismic Design Categories D through F

From Figure 22-7 [4] PGA = 1.020

Equation (11.8–1): $PGA_M = F_{PGA}PGA = 1.000 \times 1.020 = 1.02$ g

Table 11.8–1: Site Coefficient F_{PGA}

Site Class	Mapped MCE Geometric Mean Peak Ground Acceleration, PGA				
	PGA ≤ 0.10	PGA = 0.20	PGA = 0.30	PGA = 0.40	PGA ≥ 0.50
A	0.8	0.8	0.8	0.8	0.8
B	1.0	1.0	1.0	1.0	1.0
C	1.2	1.2	1.1	1.0	1.0
D	1.6	1.4	1.2	1.1	1.0
E	2.5	1.7	1.2	0.9	0.9
F	See Section 11.4.7 of ASCE 7				

Note: Use straight–line interpolation for intermediate values of PGA

For Site Class = D and PGA = 1.020 g, F_{PGA} = 1.000

Section 21.2.1.1 — Method 1 (from Chapter 21 – Site-Specific Ground Motion Procedures for Seismic Design)

From Figure 22-17 [5] C_{RS} = 0.910

From Figure 22-18 [6] C_{R1} = 0.909

Section 11.6 — Seismic Design Category

Table 11.6-1 Seismic Design Category Based on Short Period Response Acceleration Parameter

VALUE OF S_{DS}	RISK CATEGORY		
	I or II	III	IV
$S_{DS} < 0.167g$	A	A	A
$0.167g \le S_{DS} < 0.33g$	B	B	C
$0.33g \le S_{DS} < 0.50g$	C	C	D
$0.50g \le S_{DS}$	D	D	D

For Risk Category = I and S_{DS} = 1.731 g, Seismic Design Category = D

Table 11.6-2 Seismic Design Category Based on 1-S Period Response Acceleration Parameter

VALUE OF S_{D1}	RISK CATEGORY		
	I or II	III	IV
$S_{D1} < 0.067g$	A	A	A
$0.067g \le S_{D1} < 0.133g$	B	B	C
$0.133g \le S_{D1} < 0.20g$	C	C	D
$0.20g \le S_{D1}$	D	D	D

For Risk Category = I and S_{D1} = 0.938 g, Seismic Design Category = D

Note: When S_1 is greater than or equal to 0.75g, the Seismic Design Category is **E** for buildings in Risk Categories I, II, and III, and **F** for those in Risk Category IV, irrespective of the above.

Seismic Design Category ≡ "the more severe design category in accordance with Table 11.6-1 or 11.6-2" = E

Note: See Section 11.6 for alternative approaches to calculating Seismic Design Category.

PLACEWORKS

TECHNICAL MEMORANDUM

DATE January 14, 2019

TO James R. Steele, P.G., C.E.G., C.H.G.
Associate Director

Tetra Tech, Inc.
5383 Hollister Avenue, Suite 130
Santa Barbara, CA 93111

FROM Steve Bush, P.E., Senior Engineer

SUBJECT Maulhardt Ranch High School No. 8
Water Pipeline Safety Hazard Assessment
TETR-02.0

Introduction

PlaceWorks was retained by Tetra Tech Inc. on behalf of the Oxnard Union High School District (District) to conduct a Water Pipeline Safety Hazard Assessment (WPSHA) for Maulhardt Ranch High School No. 8. The District proposes to develop a new high school on an approximately 48.2-acre site within the 108-acre Maulhardt Ranch property at 1853 Camino Del Sol in the City of Oxnard. Four large volume (12-inch diameter and larger) water pipelines were identified within 1,500 feet of the project site. The WPSHA evaluates potential flooding impacts to the project site, and was conducted as required by California Code of Regulations (CCR), Title 5, Section 14010(h).

1.1 PROJECT LOCATION

The project site is located at the northeast corner of N. Rose Avenue and Camino Del Sol in the City of Oxnard, Ventura County, California (Figure 1). The site is relatively flat; gently sloping from northeast to southwest. Site elevations are between approximately 60 and 70 feet above mean sea level (amsl). The property is bounded by Camino Del Sol to the south, N. Rose Avenue to the west, and predominately residences to the north and east. Rio Rosales Elementary School is also located east of the proposed school site. Commercial and residential uses are located to the south across from Camino Del Sol. The remaining land uses within the Maulhardt Ranch property include residences, open space, parks, and neighborhood commercial. US Route 101 is approximately 1 mile to the north of the school site.

2. Water Pipeline Safety Hazard Assessment

2.1 REGULATORY REQUIREMENTS

Under Education Code Section 17251, the California Department of Education (CDE) has authority to approve the acquisition of proposed school sites. The school district must obtain CDE approval for sites to receive state funds under the state's School Facilities Program administered by the State Allocation Board. CDE standards and regulations for this process are presented in CCR, Title 5, Sections 14010, 14011, and 14012. Information on assessing safety hazard related to pipelines is discussed in Section 14010 (h):

> *The site shall not be located near an above-ground water or fuel storage tank or within 1,500 feet of the easement of an above-ground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional, which may include certification from a local public utility commission.*

No high pressure natural gas pipelines or hazardous liquid pipelines were identified within 1,500 feet of the project site.[1] The CDE School Site Selection and Approval Guide also contains provisions for evaluating high-pressure water pipelines:[2]

> *To ensure the protection of students, faculty, and school property if the proposed school site is within 1,500 feet of the easement of an aboveground or underground pipeline that can pose a safety hazard, the school district should obtain the following information from the pipeline owner and operator:*
>
> - *Pipeline alignment, size, type of pipe, depth of cover,*
> - *Operating water pressures in pipelines near the proposed school site,*
> - *Estimated volume of water that might be released from the pipeline should a rupture occur on the site, and*
> - *Owner's assessment of the structural condition of the pipeline.*

[1] National Pipeline Mapping System (NPMS), 2018. Hazardous liquids pipeline map produced by the NPMS Public Viewer at https://pvnpms.phmsa.dot.gov/PublicViewer/. Accessed on January 4, 2019.

[2] California Department of Education (CDE), 2000. Resources for School Facilities Planning, School Selection and Approval Guide. Prepared by School Facilities Planning Division, CDE, Sacramento, CA.

2.2 ASSESSMENT METHODOLOGY

To meet the requirements of CCR Title 5 Sections 14010 (d) and (h) and CDE's policy on pipelines, this WPSHA is designed to meet the following objectives:

» Identify all high pressure/high volume water pipelines within 1,500 feet of the proposed school site and evaluate the potential for flooding, and
» Where appropriate, identify and develop mitigation measures to reduce flooding impacts to acceptable levels.

The CDE has developed risk analysis procedures for evaluating flooding associated with releases from large diameter water pipelines, as described in CDE's Guidance Protocol for School Site Pipeline Risk Analysis.[3] A safety issue associated with large diameter water pipelines is the potential for flooding. Also, releases from underground water pipelines can cause subterranean erosion of saturated soil, leading to subsidence or formation of a sinkhole. The most likely cause of failure is a large magnitude earthquake and associated strong ground shaking.

Although no specific criteria have been established by the CDE as a threshold of significance for flooding at a project site, a water depth of 12 inches or greater is a trigger that could warrant further evaluation.[4]

2.3 PIPELINE LOCATION AND OPERATIONAL DATA

Based on maps provided by Tetra Tech and United Water Conservation District (UWCD), there are four high volume (≥12 inch diameter) water pipelines within 1,500 feet of the project site, as summarized in Table 1. The alignments of the pipelines are shown on Figure 1.

Table 1 Water Pipelines

PIPELINE DIAMETER	PIPELINE LOCATION	OWNER	MATERIAL OF CONSTRUCTION
12- inch	N. Rose Avenue	City of Oxnard	Polyvinyl chloride (PVC)
12- inch	Camino Del Sol	City of Oxnard	Asbestos Cement Pipe (ACP)
12- inch	Kohala Street	City of Oxnard	ACP
42-inch	N. Rose Avenue	United Water Conservation District	Cement Mortar Lined and Coated (CCLC) Steel Pipe

[3] California Department of Education (CDE), 2007. Guidance Protocol for School Site Pipeline Risk Analysis, Prepared by URS Corporation. Dated February 2007.

[4] Ibid.

2.4 WATER PIPELINE FLOODING ANALYSIS

The CDE requires that the risk of releases from large volume (≥12 inches) water pipelines be evaluated. The CDE Guidance Protocol for School Pipeline Risk Analysis provides a methodology for evaluating the potential for flooding. A probability analysis is not required.

All water pipelines listed in Table 1 are located beneath streets. According to the preliminary grading and site plan for the project, curbing will be installed on all the streets surrounding the development, including the east side of N. Rose Avenue. Additionally, N. Rose Avenue will undergo improvements and street widening with project implementation.

A pipeline flooding analysis was conducted for these pipelines to determine the depth and location of water flow within the street in the event of a pipeline leak or rupture. For this worst-case analysis, it was conservatively assumed that all of the water flowing through the pipelines at their maximum capacity would reach the surface. In addition, no credit was taken for the presence of storm drains along these streets. Release impacts were calculated based on the procedures specified in the CDE manual. The release rate was determined by multiplying the pipe area by an assumed velocity of 5 feet per second (fps). Then the release rate was compared to the carrying capacity of the street, taking into account longitudinal slope, to determine if the water would be contained within the confines of the street curbing.[5] The result is provided in Table 2.

Table 2 Street Flow

PIPELINE DIAMETER	PIPELINE LOCATION	RELEASE RATE (CFS)	STREET WIDTH (FT)	DEPTH OF FLOW IN STREET (IN)	EXCEEDS STREET CARRYING CAPACITY?[1]
12- inch	N. Rose Avenue	3.93	104	3.8	No
12- inch	Camino Del Sol	3.93	72	4.1	No
12- inch	Kohala Street	3.93	40	4.1	No
42-inch	N. Rose Avenue	48.1	104	9.8	Yes

[1] Assuming 8-inch curbing for arterial streets and 6-inch curbing for residential streets.

Assuming a standard 8-inch curb for arterial roadways (e.g., N. Rose Avenue and Camino Del Sol) and 6-inch curb for all residential streets (e.g., Kohala Street), the water released from a full-flow rupture of the 12-inch water mains would be entirely contained within the confines of the curbing and would not result in flooding at the school site. However, a release from the 42-inch UWCD pipeline along N. Rose Avenue would exceed the carrying capacity of the street, and could potentially impact the project site.

The predicted worst-case depth of flow in the street was 9.8 inches for a full release of the 42-inch water line. Assuming a standard 8-inch curb for N. Rose Avenue, released water from the 42-inch

[5] Jeffers & Associates, 2006. Modified Manning's Equation Solver. Version 3.0.

water line would exceed the carrying capacity of the street by 1.8 inches. However, the CDE has postulated a level of concern as a water depth of 12 inches or greater at the school site. Therefore, the calculated water depth of 1.8 inches would be less than CDE's level of concern and would not pose a significant risk to occupants at the project site in the unlikely event of a water pipeline break.

For this worst-case analysis, it was conservatively assumed that all of the water flowing through the pipelines at their maximum capacity would reach the surface. Given that the pipeline is buried approximately 2 to 3 feet bgs, only a portion of the water released from the pipeline would reach the surface.[6] In addition, no credit was taken for the existing surface topography and the presence of storm drains along the streets.

3. Conclusions

In summary, a potential break in any of the water pipelines located within 1,500 feet of the site would not result in significant flooding at the project site.

Respectfully submitted,

PlaceWorks

Hello Ms. Chammas,

I am responding to your inquiry regarding the 42-inch UWCD-owned pipeline on Rose Ave. The pipeline material is cement mortar lined and coated cylindrical steel with spirally wound reinforcing rods. Attached are drawings for your reference. If you have any additional questions, please do not hesitate to contact me.

Thank you and respectfully,

Subject: Fwd: Water Pipeline Information Request - 1853 Camino Del Sol, Oxnard

Engineers,
Can you provide the requested OH pipeline information to Ms. Chammas please?

Michael Ellis
Chief Operations Officer
United Water Conservation District

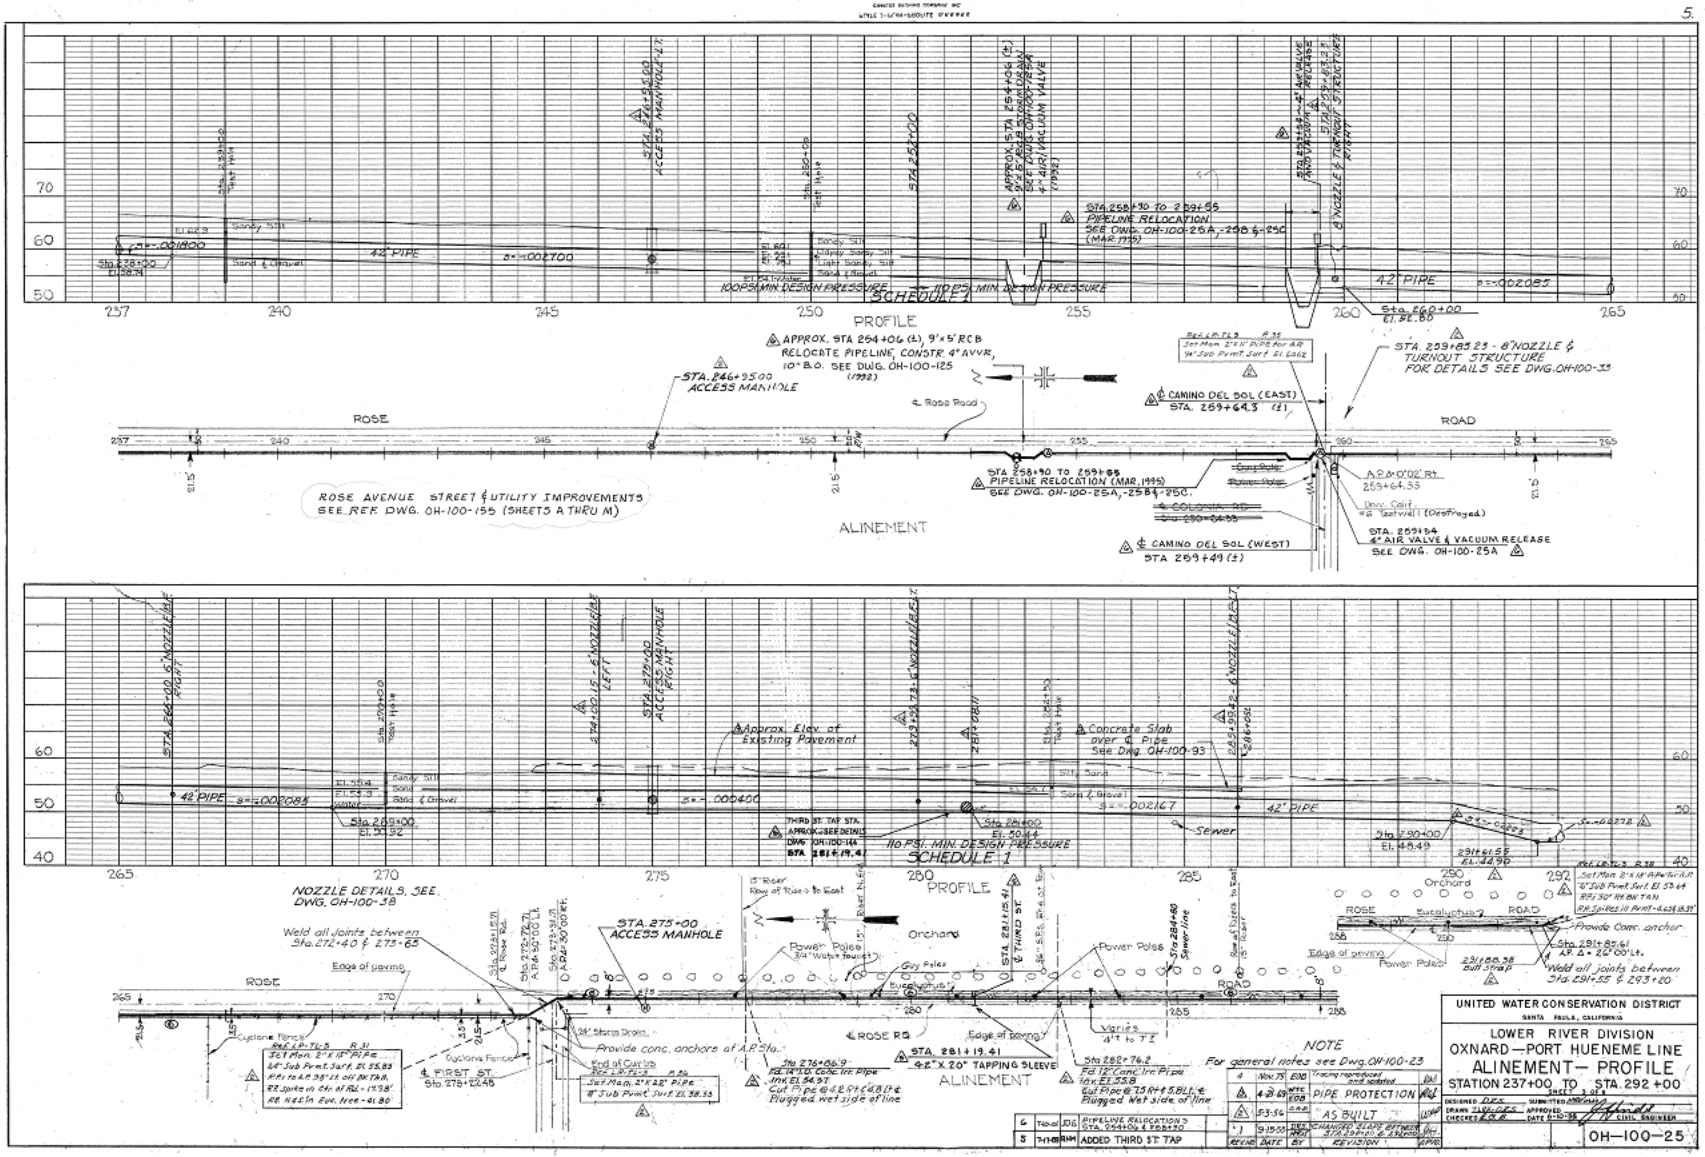
> **Subject: Water Pipeline Information Request - 1853 Camino Del Sol, Oxnard**
>
> Good morning,

The Oxnard Union High School District is evaluating a site for a proposed school campus, located at 1853 Camino Del Sol in the City of Oxnard. In compliance with CCR Title V Section 14010 (h), the District has contracted the services of PlaceWorks to complete a safety hazard assessment related to water pipelines 12-inches in diameter or greater located within a 1,500-foot radius of the school site. The water atlas attached shows a UWCD 42" water pipeline in North Rose Avenue directly west of the proposed school site.

Would it be possible to get more information regarding the pipeline material?



Thank you in advance,

DINA EL CHAMMAS GASS
Project Engineer/Planner, Environmental Services

1.0 INTRODUCTION

1.1 SUMMARY

This report presents the findings of a Phase I Environmental Site Assessment (ESA) prepared for the Oxnard Union High School District (OUHSD) to evaluate an approximate 48.6-acre portion of assessor's parcel number (APN) 214-002-059, a 107.25-acre property, located in the city of Oxnard California (hereinafter referred to as the Site). The Site location is shown on Figure 1. Figures 2 depicts the Site plan showing existing conditions, approximate boundary of the proposed school, and other property details. Figure 3 depicts the adjacent Maulhardt Ranch farmyard and residential areas. A conceptual plan of the proposed school is included in Appendix A (WLC Architects 2018). The Site is under consideration for acquisition by OUHSD for the proposed Oxnard High School No. 8.

This Phase I ESA was performed by Tetra Tech, Inc. (Tetra Tech), under contract with OUHSD, in accordance with ASTM International (ASTM) Standard Practice E1527-13 document entitled, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2013). In addition, as a conservative measure the assessment was conducted in accordance with the guidelines of proposed Title 40, Code of Federal Regulations (40 CFR) Part 312, *Standards and Practices for All Appropriate Inquiries* (AAI) (Federal Register 2015).

1.2 PURPOSE AND SCOPE

The purpose of this Phase I ESA was to evaluate potential Recognized Environmental Concerns (RECs) associated with the Site. Pursuant to the updated ASTM standard effective November 1, 2013, ASTM defines RECs as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions." This study was conducted to identify, to the extent possible and based on available information, whether former activities at or near the Site may have involved or resulted in the use, storage, disposal, and/or release of hazardous or potentially hazardous substances to the environment. Using professional judgement, Tetra Tech has developed an opinion regarding the potential for environmental concerns at the Site.

The scope of services performed for this project included the following tasks:

- Research and review of pertinent and readily available geologic and hydrogeologic literature and available historical aerial photographs and topographic maps of the Site and surrounding area;
- A reconnaissance of the Site and surrounding properties;
- Interviews with the current property owner, employees, and tenants;
- Evaluation of on-Site hazardous substance use, storage, and/or disposal;
- Interaction with appropriate municipal, regional, and state agencies to review available records and permits;
- Acquisition and review of a regulatory agency database report; and

- Preparation and submittal of this report summarizing the results of the Phase I ESA and presenting interpretations and recommendations.

1.3 METHODS OF INVESTIGATION

Literature Review. Available published and unpublished geologic, hydrogeologic, and environmental reports were reviewed. A list of these reports is presented in Section 10.0 of this report.

Topographic Map Review. Historical topographic maps obtained through Environmental Data Resources, Inc. (EDR) (EDR 2017) were reviewed to evaluate past land use and site development. These topographic maps are provided in Appendix B.

Aerial Photograph Survey. Historical aerial photographs obtained through EDR were reviewed and incorporated into this report (EDR 2017). This review consisted of examining the photographs for evidence of previous activities that may affect the environmental condition of the Site. The aerial photographs are provided in Appendix C.

Site Reconnaissance. Site reconnaissance, consisting of a walk-through visit of the Site and surrounding area. During the reconnaissance, visible indications of hazardous substance use, storage, and/or disposal practices were evaluated at the Site and adjacent areas. Photographs of the Site taken during the reconnaissance are provided in Appendix D.

Interviews. Interviews were conducted by email, telephone, or in person with various regulatory agency representatives (see below), and current Site occupants (business owners/managers) to obtain information on the Site history, land use, surrounding land use, and regulatory agency data.

Agency Contacts. During the course of this assessment, the following agencies/organizations were contacted via email, telephone, personal interviews, and/or record searches for information relating to the Site:

- California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR);
- County of Ventura Environmental Health Division (VCEHD);
- City of Oxnard Fire Department Certified Unified Program Agency (CUPA);
- California Environmental Protection Agency (Cal EPA), Department of Toxic Substances Control (DTSC);
- County of Ventura Agricultural Commissioner (VCOAC);
- Office of the California State Fire Marshal (CSFM);
- National Pipeline Mapping System (NPMS);
- Ventura County Air Pollution Control District (VCAPCD);
- Los Angeles Regional Water Quality Control Board (LARWQCB);

- County of Ventura Assessors Office;
- City of Oxnard Public Works; and
- Federal Emergency Management Agency (FEMA).

Documentation of these contacts is provided in Appendix E.

Regulatory Agency Database and Sanborn Map Search. EDR maintains comprehensive environmental information databases and historical information, including Sanborn Maps, City Directories, and Building Permits, and specializes in providing such data for use in real estate and environmental documents. EDR performed a search of multiple databases containing specific government records, each within a prescribed search radius of the Site. The search radii varied from 0.25 to 1 mile depending on the database. The specific search radii for each database are listed in the EDR report (Appendix F). EDR also reviewed their Sanborn Map and City Directory collection for coverage in the Site area (EDR 2017).

1.4 SIGNIFICANT ASSUMPTIONS, LIMITATIONS, AND EXCEPTIONS, SPECIAL TERMS AND CONDITIONS

1.4.1 Significant Assumptions

Information provided by others to Tetra Tech is assumed to be accurate and complete. When provided, Tetra Tech has made reasonable inquiry into the accuracy of such information. Unless such inquiry indicated otherwise, the information was considered to be accurate and complete. As discussed below in Section 1.4.2, there are limitations to this assumption.

There were no other significant assumptions made during the conduct of this Phase I ESA.

1.4.2 Limitations and Exceptions

Tetra Tech did not significantly delete or deviate from the scope and limitations set forth in the ASTM Standard Practice E1527-13 document entitled, "Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process," except for:

- A limited visual survey of the Site for the presence of suspect asbestos containing materials (ACMs), lead based paint (LBP) and other lead containing materials (LCMs), and obvious mold/microbial growth/moisture accumulation or water damage. Tetra Tech's limited visual inspection for suspect ACMs, suspect LBP and other LCMs, and obvious mold conditions or water damage included observations in readily and physically accessible areas. The limited visual survey was not a formal survey and was not performed by a certified asbestos, LBP/LCM, and mold inspector.

- A specific search for environmental liens and activity use limitations (AULs) was not performed for the Site parcels; however, the EDR RadiusMap™ Report with Geocheck® (EDR 2017) (which contains regulatory agency database listings for environmental liens) was reviewed for such information.

Our professional services have been performed, our findings obtained, and our conclusions prepared in accordance with customary principles and practices in the fields of environmental science and

engineering. This warranty is in lieu of all other warranties either expressed or implied. Tetra Tech is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, Site inspection, and/or laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn from information obtained from limited research and Site evaluation. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surficial observations. Additionally, the passage of time may result in a change in the environmental characteristics at this Site and surrounding properties. This report does not warrant against future operations or conditions, nor does this warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit.

This study is not intended to assess if any soil contamination, waste emplacement, or groundwater contamination exists by subsurface sampling through the completion of soil borings and the installation of monitoring wells. The scope of work, determined by the client, did not include these activities.

Tetra Tech reviewed past ownership of the Site with the intent to evaluate past Site usage. Tetra Tech is not a professional title insurance firm and makes no guarantee, either explicit or implied, that the listing which was reviewed represented a comprehensive delineation of past Site ownership or tenancy for legal purposes.

Certain information contained in this report may have been rightfully provided to Tetra Tech by third parties or other outside sources. When provided, Tetra Tech has made reasonable inquiry into the accuracy of such information; however, Tetra Tech does not make any warranties or representations, either expressed or implied, regarding the accuracy of such information, and shall not be held accountable or responsible in the event that any such inaccuracies are present.

1.4.3 Special Terms and Conditions

There were no special terms or conditions associated with this Phase I ESA.

1.5 USER RELIANCE

It is Tetra Tech's understanding that this Phase I ESA is being requested in conjunction with due diligence activities by the OUHSD. Tetra Tech recognizes that this report is to be used exclusively by OUHSD, and it is a report upon which OUHSD can rely, in accordance with the provisions of the contract between OUHSD and Tetra Tech.

1.6 STATEMENT OF QUALIFICATIONS

Tetra Tech is a leading provider of specialized management consulting and technical services in three principal business areas: resource management, infrastructure and communications. The Company's clients include a diverse base of public and private sector organizations serviced through more than 400 offices located in the United States and internationally.

Our technical staff have demonstrated competence and ability in preparing environmental assessments through long-term working relationships with local commercial firms and government agencies.

Tetra Tech has conducted environmental assessments at a wide variety of properties including industrial, manufacturing, commercial, and residential sites. Tetra Tech has performed Phase I ESAs for banks, private developers, county and city agencies, and commercial firms.

Tetra Tech personnel are well trained and have extensive experience in the acquisition and interpretation of the collected data. Data gathering efforts focus on historic aspects of site activities that would contribute to spills, leakage or disposal of hazardous materials and petroleum products. Identifying contaminant issues that could impede development of the site, through either high costs or extended time periods for remedial actions, is a goal of data gathering and interpretation. Tetra Tech also identifies potential sources of contamination in the areas adjacent to the site, such as leaking underground storage tanks that could impact the site, and therefore become a REC.

THIS PAGE INTENTIONALLY LEFT BLANK

2.0 SITE DESCRIPTION AND HISTORY

2.1 SITE LOCATION

The Site located within the Maulhardt Ranch at 1853 Camino Del Sol in the City of Oxnard, California in the 93030-zip code area (Figure 1). The Site is a 48.6-acre (approximate) portion of the Maulhardt Ranch (APN 214-002-059), a 107.25-acre property in the City of Oxnard, California (Figures 1 and 2). Book 214 page 2 of the County of Ventura's Assessor Map (Appendix E) indicates that the Site comprises approximately the southernmost 45 Acres of Parcel 59, within the Rancho El Rio Santa Clara O'La Colonia Portion A of Subdivision 26 in the city of Oxnard. The geographic coordinates of the Site are approximately Latitude 34° 12' 23.08" North, Longitude 119° 9' 31.40" West. Surface elevations at the Site are approximately 63 feet above mean sea level (EDR 2017).

2.2 SITE VICINITY CHARACTERISTICS

The Site is located in an area that is developed for commercial, residential, park, and agricultural land use (Figure 2). The Site is situated in the southern portion of the Maulhardt Ranch excluding the 11.59 acre residential and farmyard areas (Figure 2). The Site is bounded by Camino Del Sol on the south with residential and commercial development on the south side of Camino Del Sol, North Rose Avenue on the west with residential development to the west of North Rose Avenue, the residential and farmyard portions of Maulhardt Ranch to the southwest, and areas developed in strawberry cultivation on the Maulhardt Ranch to the north. A residential neighborhood is located to the east of the Site. Del Sol Park is located southwest of the Site across the intersection of Camino Del Sol and North Rose Avenue. The entire Maulhardt Ranch (APN 214-002-059) is bound by Camino Del Sol on the South, North Rose Avenue on the west, Cesar Chavez Drive on the north, and Gibraltar Street, the park adjacent to the west side of Rio Rosales Elementary School, and a residential neighborhood on the east. Commercial development consisting of a Carl's Jr. restaurant, 4-Way Meat Market, and the Trinity Community Church is located at the southeast corner of the of Camino Del Sol and North Rose Avenue. High density residential development consisting of blocks of apartment buildings are located on the south side of Camino Del Sol immediately south of the Site, and neighborhoods of single family housing are located to the east and west of the Site.

2.3 CURRENT AND PAST USES OF THE SITE

Currently, the Site is used for the cultivation of strawberries (Figures 2 and 3). Historical aerial photographs and Google Earth images indicate that the Site was previously used for cultivation of row crops from as early as 1927 to the present.

2.4 DESCRIPTION OF STRUCTURES, ROADS, AND OTHER IMPROVEMENTS

2.4.1 Site

At the time of the October 23, 2017 Site reconnaissance, the Site contained an approximate 48.6-acre area devoted to strawberry cultivation (Figures 2 and 3). PVC irrigation pipe is stored in a 0.18-acre area of the Site just north of the Maulhardt Ranch farmyard. The Site contains eight internal unpaved access roads. The Site drains from north to south along the furrows between the rows of strawberries to east-west drainage channels along the north sides of the east-west road ways that are routed to a central north-south drainage channel along the east side of the north-south road through the Site that empties into a storm drain inlet at the southern Site boundary along Camino Del Sol. No structures are located on the Site.

2.4.2 Adjacent Residential and Farmyard Areas

The residential and farmyard areas of the Maulhardt Ranch as located adjacent to the Site on the south and west. The residential area contains the Main Residence, Apartment, and two Mobile Homes, and an Office (Figure 3). The residential area is surrounded by citrus orchards. The farm yard area is located north of the residential area and contains the Carriage House, Horse Barn, Tin Shed, Garage, Storage Shed, Workshop, covered livestock pen, a storage building, and three sheds. Agricultural fields of the Site that are used for strawberry cultivation are present to the west, north, and east of the residential and farmyard areas. Access to the Site and to the residential and farmyard areas of the Maulhardt Ranch is through a gated paved driveway along Camino Del Sol. Unpaved access roads intersect the agricultural plots throughout the Site with two additional utility entrance gates located along Camino Del Sol. The utility providers for the Maulhardt Ranch and the Site are summarized below:

Utility	Provider
Electricity	Southern California Edison
Natural Gas	Southern California Gas Company (Sempra Energy)[a]
Potable Water	Private Well owned and operated by the Maulhardt family located at the northeast corner of APN 214-002-059
Propane	AAA Propane Services, Inc.
Sewage Disposal	Onsite septic systems operated by the Maulhardt family
Solid Waste Disposal	City of Oxnard

Note:
a:- Although Sempra Energy provides natural gas to the Site area, it does not provide natural gas to the Site. The buildings in the residential and farmyard areas of the Maulhardt Ranch are provided with propane for cooking and heating from storage tanks located onsite owned and serviced by AAA Propane Services, Inc.

2.5 HISTORICAL RECORDS REVIEW

Past uses of the Site and surrounding properties were evaluated by reviewing available historical map coverage, historical aerial photographs, and information obtained from various agencies identified in Section 1.3. The information collected is summarized in the following sections.

2.5.1 Sanborn Map and City Directory Review

While the geographic coverage of Sanborn Maps is comprehensive for many major cities, many rural areas and small towns are not covered. There were no Sanborn Maps for the Site area in the EDR collection (EDR 2017). A City Directory report provided by EDR (EDR 2017) was reviewed and is provided in Appendix F. The address of 1853 Camino Del Sol Oxnard, CA 93030, and adjacent properties 440 Rose Avenue, 480 Rose Avenue, and 1900 Camino Del Sol were researched for the years between 1926 and 2014. The Site was listed in the City Directory report provided by EDR under agricultural info systems use for years 2005, 2010, and 2014.

2.5.2 Topographic Map Review

The following historical United States Geological Survey (USGS) topographic maps were obtained from EDR (EDR 2017): 15-Minute Topographic Series, Hueneme map dated 1904, 1943, and 1947; and 7.5 Minute Topographic Series, Oxnard map dated 1949, 1951, 1967, and 2012. Copies of the maps are provided in Appendix B. The maps were reviewed to evaluate previous development of the Site, adjoining properties, and surrounding areas.

The 1904 Hueneme map shows the Site located northeast of the intersection of Colonia Road and Rose Road. Three structures are seen on the residential and farmyard areas of the Maulhardt Ranch property that is adjacent to the Site with road entering the west side of the Site from Rose Road. The area surrounding the Site appears to be developed in large land holdings typical of areas of agricultural development with largely vacant land and individual farm houses and other structures spaced approximately one half to one mile apart within a network of roads also spaced approximately one half to one mile apart. The Southern Pacific Railway tracks are visible approximately six tenths of a mile south of the Site trending east-west, curving around to a north-south alignment approximately one mile southwest of the Site, then trending north-south 1 mile west of the Site with Oxnard Boulevard immediately west of the railroad tracks. Ventura Boulevard is present approximately one mile north of the Site trending northwest-southeast and Rice Avenue is present approximately six tenths of a mile east of the Site in a north-south alignment. The town of Oxnard is adjacent to the curve in the railway south-west of the Site and the town of El Rio is located at the intersection of Oxnard Boulevard and Ventura Boulevard approximately one and three quarters miles northwest of the Site.

On the 1943 and 1947 Hueneme maps minimal changes are seen at the Site and surrounding area. A single structure is present in the residential and farmyard areas of the Maulhardt Ranch property at the location of the current Main Residence with orchards in the northwest area of the Site and clear areas devoted to row crops in the remainder of the Site. The general road and railroad networks are similar to the 1904 map with "Alt Highway 101" (Oxnard Boulevard) depicted one mile west and Ventura Boulevard one mile north of the Site, and the Southern Pacific Railroad south and west of the Site. Fifth Street is now present just south of the south railroad tracks. To the southwest of the Site, the road network in the City of Oxnard has expanded to the north and south with residential/commercial development. The road network in El Rio has also expanded eastward with three additional roads. New residential development is present approximately one-mile northeast of the Site at Nyland, northeast of the intersection of Rice Road, Ventura Boulevard, and Santa Clara Avenue.

On the 1949 and 1951 Oxnard maps, structures are seen in residential and farmyard areas of the Maulhardt Ranch property at the current locations of the Main Residence, Apartment, Carriage House, Horse Barn, and Tin Shed. Orchards are present on the Site to the west and north of the residence-farm yard areas with open areas devoted to row crops in the remainder of the Site. The general road and railroad networks, and development of the Site area is similar to the 1943 and 1947 maps. One oil well is depicted within 0.25 mile of the Site, the Standard Schoelle No. 1 oil well, located approximately 1,000 feet north of the Site. The area surrounding the Site is developed in agricultural land use with orchards and open areas devoted to row crops. Development in the City of Oxnard has expanded further to the south and east with the city limit depicted approximately two tenths of a mile west of the Site.

The 1967 Oxnard map shows no changes at the Site and the areas to the west, north, and east of the Site from the 1949 and 1951 Oxnard maps. Residential development has expanded to the east from the City of Oxnard in a three tenths of a mile to four tenths of a mile wide area along the south side of Colonia Road to one tenth of a mile east of the Site. The 101 Freeway has been constructed just south of Ventura Boulevard approximately 1 mile north of the Site and Rose Road has been realigned between two tenths of a mile and one half mile north of the Site eliminating two ninety degree turns with and s-curve. The Standard Schoelle No. 1 oil well is shown approximately 1,000 feet north of the Site and the Maulhardt No. 3 oil well is shown approximately 1,300 feet east of the Site.

On the 2012 Oxnard map no structures are shown on the Site or residential and farmyard areas of the Maulhardt Ranch property. The area comprising the 107.25-acre Maulhardt Ranch (APN 214-002-059) and the current site of Rio Rosales Elementary School and associated park to the east of the Site are shown as vacant land. The road networks and general development of the surrounding area is similar to

the present with residential development present in the areas to the north, east, and west of the Maulhardt Ranch and the Site. Colonia Road has been renamed Camino Del Sol and Rose Road has been renamed North and South Rose Avenue. The oil wells shown on the 1967 map are not present.

2.5.3 Aerial Photograph Review

A review of historical aerial photographs obtained from EDR included photographs dated 1927, 1938, 1947, 1959, 1967, 1978, 1985, 1994, 2005, 2009, 2010, and 2012 (EDR 2017). The photographs are included in Appendix C. A summary of the data from the aerial photography is provided below.

The 1927 photograph is a negative impression black and white photograph at a scale of one inch equals 500 feet with blurred imagery. The majority of the Site and surrounding areas appear graded and developed for agricultural land use. The land to the south, west, and north of the Site appear to be open fields planted in grain or row crops and areas north-northeast and east of the Site are planted in orchards. Colonia Road (the future site of Camino Del Sol) is visible directly south of the Site, and Rose Road (the future site of North Rose Avenue) is visible immediately west of the Site. The Main Residence, Apartment, Carriage House, Horse Barn, Tin Shed, Garage, and Storage structures are visible on the residential and farmyard areas of the Maulhardt Ranch property. A row of eucalyptus trees is visible along the east side of Rose Road extending approximately 550 feet to the north of Colonia Road. There are five unpaved roads entering the Maulhardt Ranch property. Four roads enter the residence-farmyard area. One road enters the Maulhardt Ranch property from the west along Rose Road approximately 550 feet north of Colonia Road and extends approximately 400 feet east into the farm yard area at the north end of the residential area and turns north for 200 along the west edge of the farm yard. Eucalyptus trees are located along the western edge of the farm yard. Three roads enter the residential and farmyard areas of the Maulhardt Ranch property from Colonia Road at approximately 300, 400, 550 feet east of Rose Road extending into the residential area. The residential area is defined by the western and eastern roads that are lined with eucalyptus trees and extend approximately 550 and 400 feet north from Colonia Road, respectively. The central road entering the residential-farmyard areas from Colonia Road bifurcates into an oval loop approximately 100 feet north of Colonia Road that extends 150 feet to the main residence. Another road is located just east of a row of eucalyptus trees trending north to south approximately 700 feet east of the Horse Barn that extends across the entire length of current Maulhardt Ranch property and the Site. The cultivated area of the Site appears to be planted in grain or row crops on the west side of the row of eucalyptus trees and a citrus orchard east of them. Another farmhouse compound with surrounding trees is visible approximately 400 feet southwest of the Site across the intersection of Rose Road and Colonia Road. A second farmhouse compound is visible approximately 700 feet southeast of the Site across Colonia Road.

The 1938 photograph is a black and white photograph at a scale of one inch equals 500 feet with slightly blurred imagery. The Site and surrounding area appear similar to the 1927 photograph, developed in agricultural land use. The road entering the residential and farmyard areas of the Maulhardt Ranch property from Rose Road shown in the 1927 photograph is gone and is planted in row crops. The same structures at the residential and farmyard areas of the Maulhardt Ranch property and surrounding areas noted in the 1927 photograph are clearly visible. The western and eastern quarter of the Site and current Maulhardt Ranch property, and the area of the Site between the residential-farmyard areas and the row of eucalyptus trees approximately 700 feet east of the residential-farmyard areas are planted in row crops. Orchards are no longer present in the eastern portion of the Site. New rows of young eucalyptus trees have been planted along the east side of Rose Road along the entire western boundary of the current Maulhardt Ranch property and the Site. New rows of young eucalyptus trees have also been planted within the Maulhardt Ranch and Site at 400 and 800 feet east of Rose Road extending approximately 1,550 and 1,600 feet south from the current northern boundary of the Maulhardt Ranch. Young orchard

trees are visible on the Maulhardt Ranch and Site in the area between the new rows of young eucalyptus trees located 400 and 800 feet east of Rose Road. No other significant changes are seen on the Site or surrounding areas.

The 1947 photograph is a black and white photograph at a scale of one inch equals 500 feet with slightly blurred imagery. The Site and surrounding area appear similar to the 1938 photograph except that entire eastern quarter of Maulhardt Ranch and Site are now developed in orchards. Two new structures approximately 350 square feet in size are visible just east of the Carriage House in the farmyard area of the Maulhardt Ranch. One of the Site owners, Richard Maulhardt, indicated that chicken coops were formerly located here. No other significant changes from the 1938 photograph were noted.

The 1959 photograph is a black and white photograph at a scale of one inch equals 500 feet with clear imagery. The Site and surrounding area appear generally similar to the 1947 photograph except for the changes noted below. The residential area of the Maulhardt Ranch has been reconfigured and reduced with a single entrance road off of Colonia Road at its current location. The eucalyptus tree lined roads entering the Site from Colonia Road are gone and the eucalyptus trees formerly along the western edge of the farm yard are gone with orchards now occupying the area south of the main residence. The row of eucalyptus trees formerly located approximately 700 feet east of the Horse Barn is gone. Pole mounted power lines are visible trending east-west along the south side of Colonia Road with a north-south trending trunk line entering the residential and farmyard area of the Maulhardt Ranch approximately 550 feet east of Rose Road and extending approximately 375 into the Site. Two additional structures of approximately 350 square feet each are visible along the western edge of the farm yard. One of the Site owners, Richard Maulhardt, indicated that two worker bunk houses were formerly located here as long ago as the 1930s into the early 1980s. They were not observed in earlier photographs because they were obscured by the eucalyptus trees formerly located here. A small circular structure approximately 15 feet in diameter is visible in the open area between the Horse Barn and Tin Shed structures. This was noted to be the location of a recreational fire pit by the Site owner, Richard Maulhardt. New residential development is visible approximately 700 feet south of the Site along the west side of Rose Road. No other significant changes from the 1947 photograph were noted.

The 1967 photograph is a black and white photograph at a scale of one inch equals 500 feet, with slightly blurred imagery. The Site and area north of Colonia Road appear similar to the 1959 photograph except for the changes noted below. The Site and surrounding area is developed in agricultural (orchards) and residential use. The farmhouse compound formerly located southwest the intersection of Rose Road and Colonia Road is gone. New residential development is visible immediately south of Colonia Road to the south of the Site along newly constructed Gibralter Street, San Gorgonio Avenue, and San Jose Street. The 15-acre lot immediately south of the Site southeast of the intersection of Rose Road and Colonia Road was vacant and undeveloped. Rose Road has been realigned between 0.2 and 0.5 mile north of the Site eliminating two ninety degree turns with an s-curve. No other significant changes are seen on the Site or adjacent area since 1959.

The 1978 photograph is a black and white photograph at a scale of one inch equals 500 feet with clear imagery. The Site and surrounding area appear generally similar to the 1967 photograph except for the changes noted below. Two Mobile Homes, the Work Shop, and adjacent Shed next to the eastern Mobile Home have been erected in the residential area of the Maulhardt Ranch. The three chicken coop structures to the east of the Carriage House have been replaced by a single structure. The entire cultivated area of the Site and Maulhardt Ranch is now planted in orchards. It is assumed that the name of Rose Road has been changed to North Rose Avenue and Colonia Road to Camino Del Sol. Colonia Road has been realigned on the west side of North Rose Avenue to its current configuration as Camino Del Sol, curving north then west. The eastern portion of the previously undeveloped parcel south of the site across

Camino Del Sol has been developed into an apartment complex and the southern portion along the north side of San Gorgonio Avenue into single family homes. A six-acre lot immediately south of the Site southeast of the intersection of Rose Road and Colonia Road was vacant and undeveloped. No other significant changes are seen on the Site or adjacent areas since 1967.

The 1985 photograph is a thermal infrared image. It is at a scale of one inch equals 500 feet and features are somewhat blurred. The Site and surrounding area appear generally similar to the 1978 photograph except for the changes noted below. A swimming pool is visible to the north of the Main Residence in the residential area of the Maulhardt Ranch. The two bunk houses formerly located at the western edge of the farm yard are gone. The rows of eucalyptus trees formerly located 400 and 800 feet east of North Rose Avenue that extended approximately 1,550 and 1,600 feet south from the current northern boundary of the Maulhardt Ranch have been removed. The orchards have been cleared from a 2.3-acre area immediately east of the farm yard and a 9.9-acre area of the eastern Maulhardt Reach, including the 3.2-acre area in the northeast portion of the Site. An agricultural compound and number of associated buildings are visible approximately 625 feet northeast of the Site. Del Sol Park is visible southwest of the Site across the intersection of Camino Del Sol and North Rose Avenue. No other significant changes are seen on the Site or adjacent areas since 1978.

The 1994 photograph is a black and white photograph at a scale of one inch equals 500 feet and features are relatively clear. The Site and surrounding area appear generally similar to the 1985 photograph except for the changes noted below. Agricultural use changes are visible at the Site with the conversion of orchards to row crops notably in the eastern portion of the site. Vacant land to the north of parcel APN 214-002-059 has been developed into the St. Johns Regional Hospital. Additional commercial buildings are present southwest of the Site along the south side of Camino Del Sol. No other significant changes are seen on the Site or adjacent areas since 1985.

The 2005 photograph is color photograph at a scale of one inch equals 500 feet and features are relatively clear. Significant changes have occurred to the Site and surrounding areas since 1994. The development of the Site and surrounding areas appear similar to the present. Most of the cultivated areas of the Maulhardt Ranch and Site have been converted to row crop cultivation of strawberries with the internal roads and drainages that are presently on the Site. Orchards are still present in the area surrounding the residences. The driveway accessing the Maulhardt Ranch from the south has been paved and the unpaved roads have been established within the Site that currently dissect strawberry fields. New residential development is present immediately to the north, south, west, and east of the Maulhardt Ranch property (APN 214-002-059) except along the eastern boundary at the future site of the Rio Rosales Elementary School and park where vacant land and a paved area with portable structures are visible adjacent to the northeast corner of the Site. Two large canvas roofed structures and various associated small circular storage tanks can be seen at the northeast corner of the Maulhardt Ranch where a water production well has been constructed.

The 2009 photograph is a color photograph at a scale of one inch equals 500 feet and features are slightly blurry. The conditions of the Site and surrounding areas are similar to those observed in the 2005 photograph. The paved area with portable structures that were adjacent to the northeast corner of the Site have been removed and the structures of the Rio Rosales Elementary School that currently occupies the site are visible.

The 2010, and 2012 images are color photographs at a scale of one inch equals 500 feet. The features on each of the photographs are relatively clear. The appearance of the Site and surrounding areas has not changed from the 2009 photograph.

2.5.4 Agency Records Review

The following is a summary of information obtained from correspondence with agencies during the course of this assessment. These agencies were contacted via email, telephone, and/or records searches for information relating to the Site and surrounding areas. Documentation obtained from the various agencies is included in Appendix E.

2.5.4.1 California Department of Conservation, Division of Oil, Gas, and Geothermal Resources

Tetra Tech reviewed DOGGR Map 214 (DOGGR 2001), the online DOGGR Well Finder (Appendix E) (DOGGR 2017), and associated well history documents to evaluate potential presence of oil fields or wells within the Site vicinity. Records indicate that the site is located within the Oxnard Oil Field, however no known active or abandoned oil wells are present on the Site. Additionally, no oil wells are present on 107.25-acre Maulhardt Ranch (APN 214-002-059) where the Site is located. Several plugged abandoned oil wells are located within one quarter mile of the Site. The nearest plugged and abandoned well is Maulhardt Community No. 11A, located approximately 850 feet south southwest of the Site on Imperial Street near the intersection of San Luis Street. Plugged and abandoned well Maulhardt Community No. 10 is located approximately 870 feet west of the Site just north of Camino Del Sol. Plugged and abandoned well Maulhardt Community No. 3 is located approximately 1,350 feet west southwest of the Site on North Lombard Street. Plugged and abandoned well Maulhardt Community No. 7 is located approximately 1,500 feet west northwest of the Site. Plugged and dry well Standard Schoelle No. 1 is located approximately 1,570 feet north east of the Site on Ribera Place. Plugged dry well A. Pfeiler Est. No. 1 is located approximately 1,600 feet northwest of the Site in West Village Park. Plugged and abandoned well Maulhardt No. 9 is located approximately 1,750 feet east of the Site. Numerous other abandoned wells are present further south and east of the site but were not described in this report.

2.5.4.2 California State Water Resources Control Board

Tetra Tech reviewed online resources at the California Environmental Protection Agency (Cal EPA) State Water Resources Control Board (SWRCB) Geotracker database (SWRCB 2017) for any records pertaining to the Site. No records for the Site or other portions of the 107.25-acre property where the Site is located were found in the Geotracker database. According to the Geotracker database a closed Leaking Underground Storage Tank (LUST) Cleanup Site GTE (T0611100137) is located adjacent to the Site at 751 N Rose Avenue. However, further research using the Ventura County Environmental Health Department database indicate that the actual address for GTE (T0611100137) LUST cleanup site is 751 S Rose Avenue such that the listing is outside of the relevant search radius and does not pose any risk to the Site. In addition, the Geotracker database search identified a completed case closed voluntary cleanup program site, Arenales/Kohala Property (clan/meth LAB) (T0611182768) located approximately 700 feet west of the site in a nearby residential neighborhood. Five other complete case-closed LUST sites are also located within one quarter to one half mile downgradient of the site. These records are discussed further in Section 5.3.

2.5.4.3 Department of Toxic Substances Control

Tetra Tech reviewed online resources provided by the California Environmental Protection Agency - Department of Toxic Substances Control (DTSC) for any records pertaining to the Site. No records of the Site were located in the DTSC EnviroStor database aside from those located in the Geotracker database and described in Section 2.5.4.2.

2.5.4.4 County of Ventura Environmental Health Division

A request was submitted by email to the VCEHD for the research and review of all the records pertaining to the Site. According to the response received there was one prior record of septic activity at the Site and one record of hazardous materials inventories pertaining to the Eclipse Berry Ranch No. 9 that cultivates strawberries at the Maulhardt Ranch, which includes the Site (Appendix E).

There were VCEHD records dating from July through November 1994 documenting the permitting of two residential septic systems present in the residential area of the Maulhardt Ranch, one located 60 feet east of the main residence, and a second one located 25 feet east of a second mobile home structure. The records include a questionnaire dated July 25, 1994 on the property condition that was completed by Richard Maulhardt, a memorandum dated August 29, 1994 from the VCEHD indicating the application was incomplete and requesting a scaled plot plan showing the septic systems and a septic pumping tank report, a memorandum dated November 14, 1994 from the VCEHD indicating that the application was complete, a VCEHD septic tank pumping inspection report dated August 31, 1994, indicating the system was in good condition, a scaled plot plan showing the septic systems, and an analytical report for water from FGL Environmental Laboratory for coliform bacteria that indicated they were not present.

A Hazardous Materials Inventory Report provided by VCEHD dated September 19, 2017 provided the following information for materials by the Eclipse Berry Farm at Ranch No. 9 (the Maulhardt Ranch, including the Site):

Common Name	Maximum Daily Amount Stored
calcium nitrate	500 gallons
diesel fuel	250 gallons
sulfuric acid	500 gallons

These materials are currently stored for use at the northeast corner of the Maulhardt Ranch (APN 214-002-059) approximately 1,050 feet north of the Site. No additional records for the Site were located using VCEHD online records database.

2.5.4.5 City of Oxnard Fire Department Certified Unified Program Agency

A request was submitted by email to the City of Oxnard Fire Department Certified Unified Program Agency (CUPA) for the research and review of all records pertaining to the Site. According to the response received there have been no prior records of CUPA cases associated with the Site (Mattern 2017) (Appendix E).

2.5.4.6 Ventura County Agricultural Commissioner

Pesticide use records on file with the VCOAC indicate that the Site and 107.25-acre APN 214-002-059 lot which the Site is located within was actively farmed between January 2011 and February 2016 (Appendix E). The VCOAC does not generally maintain records for longer than approximately 4 to 5 years, however records for the Site were available through 2011 (Enriquez-Pratt 2017). However, due to evidence of ongoing agricultural activities from historical aerial photographs, and information contained in the disclosure provided by the property owners (Appendix G) it can be assumed that there was pesticide use prior to January 2011.

2.5.4.7 California Code of Regulations Hazardous Pipeline Requirements

California Code of Regulations (CCR) Title 5, Section 14010(h) requires that new school sites shall not be located or within 1,500 feet of the easement of an above ground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional. Hazardous pipelines are defined as:

- Pipelines carrying chemical products, natural gas, and other hydrocarbon products that are operating at a pressure of 80 psig or higher; and

- High-volume water lines, which are defined as water lines 12 inches or greater in diameter, and include open aqueducts of comparable and greater volume handling capacity.

The NPMS, Office of the California State Fire Marshall, City of Oxnard Utilities-Sewer, Trash, and Water Department, and Maulhardt Ranch were contacted for information on hazardous pipelines within 1,500 feet of the Site.

National Pipeline Mapping System

The U.S Department of Transportation (DOT) Pipeline and Hazardous Materials Safety Administration NPMS website is an interactive database that maps the locations of hazardous liquid and gas transmission pipelines under DOT jurisdiction. Tetra Tech reviewed the NPMS website for information on hazardous liquid and gas transmission pipelines in the Site area. The NPMS data base indicated that no hazardous liquid pipelines are located within 1,500 feet of the Site (Appendix E). The nearest natural gas pipeline transmission pipeline under NPSM jurisdiction is located approximately 0.65 miles east and south from the Site along North Rice Avenue and West Fifth Street respectively (NPMS 2017).

Office of the California State Fire Marshal

Tetra Tech contacted the CSFM for information concerning potential high pressure petroleum product or natural gas transmission pipelines in the Site vicinity. According to the response received there have been no prior records of hazardous pipelines within 1,500 feet of the Site (Henigan 2017) (Appendix E)

City Oxnard Public Works

The City of Oxnard Public Works Water Division is the water purveyor for the Site area. Tetra Tech contacted the City of Oxnard Public Works Water Division for information on water pipelines within 1,500 feet of the Site and was provided with the City of Oxnard Water Atlas pages showing water pipelines within 1,500 feet of the Site (City of Oxnard 2010; 2011). The City of Oxnard Water Atlas indicated that there were two water pipelines located within 1,500 feet of the Site that were 12 inches or greater in diameter:

- A 12-inch diameter polyvinyl chloride (PVC) water pipeline routed north-south beneath North Rose Avenue directly west of the Site (Figure 2); and

- A 12-inch diameter Asbestos Concrete Pipe (ACP) water pipeline routed east-west beneath Camino Del Sol immediately south of the Site (Figure 2)

Copies of the City of Oxnard Public Works Water Division Water Atlas pages for the Site area are included in (Appendix E).

United Water Conservation District.

The United Water Conservation District (UWCD) manages the water resources of the Santa Clara River and its associated aquifers and provides water to Ventura County and the cities of Oxnard, Port Hueneme, Ventura, Santa Paula, and Fillmore. The Oxnard Water Atlas indicates that the UWCD maintains a 42-inch water pipeline beneath North Rose Avenue west of the Site (Figure 2) (Appendix E).

Maulhardt Ranch.

The Maulhardt Ranch is supplied with water from a groundwater production well located at the northeast corner of the Maulhardt Ranch (APN 214-002-059) that is owned and operated by the Maulhardt Ranch. The well is connected to a buried 12-inch diameter PVC water pipeline located approximately 920 feet north of the Site just south of the northern boundary of Maulhardt Ranch (Maulhardt 2018). This pipeline is connected to two buried 12-inch diameter PVC water pipelines that are routed north-south beneath and just west of the main north-south road approximately 450 to 460 feet east of Rose Avenue through the Site to the farmyard/residential area of the Maulhardt Ranch (Figures 2 and 3). The groundwater production well is also connected to a network of 10-inch and smaller PVC pipelines that provide water to the strawberry fields of the Maulhardt Ranch and the Site.

2.5.4.8 Ventura County Air Pollution Control District

A request was submitted by email to the VCAPCD. According to the response received there has been no prior or current records pertaining to the Site (Penhart 2017) (Appendix E).

2.5.4.9 Federal Emergency Management Agency

Tetra Tech obtained the Flood Insurance Rate Map No. 06111C0910E for the Site vicinity from the FEMA website for information regarding the current location of flood zones. This information is summarized in Section 3.3.2.

2.5.4.10 Ventura County Planning and Development, City of Oxnard Community Development Department

An EDR Building Permit Report (EDR 2017) that searched building department records of Ventura County and the City of Oxnard was reviewed for building permit record information pertaining to the Site. No permits found were associated with the surrounding 107.25-acre site.

3.0 PHYSICAL SETTING AND CONDITIONS

The Site is depicted on the Oxnard, California Quadrangle U.S. Geological Survey (USGS) 7.5-minute topographic series map (USGS 2015) (Figure 1). The approximate latitude and longitude of the Site is 34°12'23.08" north and 119°9'31.40" west. The USGS 7.5 topographic series map indicates that the Site is at an elevation between 60 and 70 feet above mean sea level (amsl). The EDR report indicates that the Site elevation is approximately 63 feet amsl. The topographic gradient of the site is generally flat with a gentle slope to the south (EDR 2017).

3.1 REGIONAL GEOLOGY

The Site is located on the Oxnard Plain of the central Ventura Basin within the Western Transverse Ranges geomorphic province of California. The Transverse Ranges Province is a series of ranges and intervening valleys that extends for 325 miles "directly across the structural grain of California" (Oakeshott 1978). The province extends from Point Arguello and San Miguel Island eastward to the Pinto and Eagle Mountains which end in the Mojave and Colorado Deserts respectively. The province ranges in width from 10 to 50 miles. The narrowest points are at the western extreme in the Santa Ynez Mountains and at the Cajon Pass which separates the San Gabriel and San Bernardino Mountains. The province's broadest point is the distance from the Santa Monica coast, across the Santa Monica, Topatopa and Pine Mountains, to the Tehachapi Mountains.

The Ventura Basin is large synclinal structure situated between the Santa Ynez Range and Topatopa Mountains on the north, the Channel Islands and Santa Monica Mountains on the south, the San Gabriel Fault on the east, and extending to the western end of the Santa Barbara Channel (Norris and Webb 1990). Structure in the Oxnard Plain is characterized by a series of broadly folded west-trending and east-northeast–trending anticlines and synclines associated with thrust and reverse faults that formed in the Saugus Formation and may have also deformed the overlying older alluvium (Department of Conservation, California Geological Survey [CGS] 2002).

3.2 LOCAL GEOLOGY

The Site is located in the Oxnard Plain of the Ventura Basin. The Ventura Basin, including its offshore continuation into the Santa Barbara Channel, is filled with a thick sequence of Cenozoic sedimentary rocks estimated to be more than 20,000 feet in total thickness. Major east trending folds and reverse faults reflect regional north-south compression and are characteristic of the basin (Norris and Webb 1990). The Oxnard Plain is underlain by several thousand feet of Pleistocene-age sediments of the San Pedro Formation. The San Pedro Formation consists of marine and continental deposits of clay, silt, and gravel (Turner, et al 1975). The predominant surface materials in this region include Pleistocene to Recent age alluvial, floodplain, and near-shore deposits, some of which have been uplifted, folded, and faulted.

Based on the Geologic Map of the Oxnard 7.5' Quadrangle, Ventura County, California the Site is underlain at the ground surface by Holocene deltaic alluvial fan deposits composed predominantly of clay with interbeds of sand and occasional gravel that were deposited by the Santa Clara River and extend to approximately 70 feet below ground surface (bgs) (Clahan, et al 2003; Turner, et al 1975). These are conformably underlain by upper Pleistocene alluvial sand and gravel deposits to approximately 400 feet bgs, and the marine – non marine clays and gravels of the Lower Pleistocene San Pedro formation to approximately 2,000 feet bgs.

3.3 HYDROLOGY

3.3.1 Hydrogeology

The Site is located in the northern portion of the Oxnard Plain Pressure Basin within the Santa Clara River Hydrologic Unit (Turner, et al 1975). The Oxnard Plain Basin is a relatively flat alluviated area, which ranges in elevation from sea level to approximately 100 feet. The water bearing zones of the Oxnard Plain Basin are grouped into three major units including 1) the semi-perched aquifer and clay cap, 2) the Upper Aquifer System, and 3) the Lower Aquifer System.

The semi-perched aquifer and clay cap consists of all of the alluvial materials above the Oxnard aquifer zone and extends to depths of approximately 75 feet bgs (Turner, et al 1975). This aquifer consists primarily of geologically Recent-aged stream deposited sands and gravels with minor silt and clay interbeds. Sand and gravel deposits are generally parallel to the Santa Clara River and form lenses perpendicular to the Santa Clara River. Groundwater in the semi-perched zone is generally considered to be of poorer quality and of limited beneficial use. Groundwater is generally expected within approximately 10 feet of the surface. However, groundwater may be shallower during periods of high precipitation or in heavily irrigated areas. The "clay cap" underlies the semi-perched groundwater zone separating it from the underlying Upper Aquifer System. This clay cap acts as an aquitard. Based on topographic controls, groundwater in the site vicinity is expected to flow toward the south to south-southwest.

3.3.2 Flood Zoning

According to the FEMA Flood Insurance Rate Map No. 06111C0910E the Western half of the Site is located in Zone X (Other Areas) and is defined as areas determined to be outside the 0.2% (500-yr) annual chance floodplain , while the eastern portion of the site is located in Zone X (Other Flood Areas) and is defined as areas of 0.2% (500-yr) annual chance of flood; areas of 1%(100-yr) annual chance flood with average depths of less than one foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% (100-yr) annual chance flood (FEMA, 2010).

3.3.3 Wetlands

The EDR report indicates the Site area is covered in the National Wetlands Inventory prepared by the U. S. Fish and Wildlife Service (USFW) (EDR 2017) (Appendix F). The U.S. Fish and Wildlife Service maintains the National Wetlands Inventory (NWI), a Geographic Information System (GIS)-based relational database of wetlands that have been mapped throughout the country. Based on the information provided in the EDR Report and review of the USFW map for the area surrounding the Site, the nearest wetland is located within approximately 1.33 miles southeast of the Site (USFW 2015). Additional larger delineated wetlands are present along the Santa Clara River which lies approximately 2.8 miles northwest of the Site. These wetlands are not considered to be a concern to the Site.

3.3.4 Asbestos Containing Rocks

Tetra Tech has reviewed available topographic and geologic maps for the Site area and *A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos* (CDMG 2000) for potential sources of naturally occurring asbestos (NOA) and believes the risk for NOA at the proposed Oxnard High School No. 8 Site is low. The nearest sources of NOA are in the Santa Ynez River watershed in the Santa Ynez Mountains, approximately 35 miles northwest of the Site. NOA sources are not known to exist in the Santa Clara River watershed.

4.0 SITE RECONNAISSANCE AND INTERVIEWS

On October 23, 2017, Tetra Tech performed a visual reconnaissance of the Site property and conducted interviews with the Site owners Lynn and Richard Maulhardt. The purpose of the reconnaissance was to evaluate the Site and neighboring properties for visible indications of potential hazardous substance use, storage, and disposal, including the presence of underground storage tanks (USTs), above ground storage tanks (ASTs), asbestos-containing materials, polychlorinated biphenyl (PCB) containing transformers or electrical equipment, and/or evidence of soil staining, stressed vegetation, ponds, pits, sumps, suspicious odors, fill and depressions, drums and barrels, or any other condition indicative of potential contamination. A Site reconnaissance checklist is included in Appendix H.

4.1 SITE RECONNAISSANCE

The Site reconnaissance consisted of walking around the Site accompanied by the Site owners Lynn and Richard Maulhardt and interviewing them about the items observed. Photographs were taken to document current conditions. Copies of the Site photographs are included in Appendix D. Items of concern noted during the Site reconnaissance are shown as numbered items on Figure 3.

4.1.1 Storage Tanks and Drum Storage

No evidence for existing or past use of storage tanks (UST or ASTs) or drum storage was observed on the Site during the Site reconnaissance.

4.1.2 Hazardous Substances and Petroleum Products

No hazardous substances were observed at the Site during the reconnaissance.

4.1.3 PCB-Containing Transformers and Equipment

One pole-mounted transformer was observed onsite along the southern Site boundary on the north side of Camino Del Sol (Figures 2 and 3). No evidence of transformers leakage, such as soil staining, was observed during the Site reconnaissance.

4.1.4 Stained Soils/Stains/Stressed Vegetation

During the Site reconnaissance no evidence of stained soils/stains/stressed vegetation was observed at the Site.

4.1.5 Asbestos-Containing Materials

The environmental professional preparing this report has reviewed the site history and performed a site inspection such that an educated opinion could be rendered. This opinion shall in no means constitute confirmation of the presence or absence of asbestos-containing building materials (ACBM). For confirmation, a complete survey with sampling and analysis would need to be performed. The use of ACBM was generally discontinued after 1980 with certain types of insulation, fireproofing, and acoustical materials banned by 1978.

During the Site reconnaissance no buildings or structures were identified at the Site thus an asbestos survey was not necessary and therefore not conducted.

4.1.6 Lead-Based Paint

The environmental professional preparing this report has reviewed the site history and performed a site inspection such that an educated opinion could be rendered. This opinion shall in no means constitute confirmation of the presence or absence of LBP. For confirmation, a complete survey with sampling and analysis would need to be performed. The use of LBP was banned in 1978.

During the Site reconnaissance no buildings or structures were identified at the Site thus a LBP survey was not necessary and therefore not conducted.

4.1.7 Maulhardt Ranch Water Distribution System

The Maulhardt Ranch is supplied with water from a groundwater production well located at the northeast corner of the Maulhardt Ranch (APN 214-002-059) that is owned and operated by the Maulhardt Ranch. The well is connected to a buried 12-inch diameter PVC water pipeline located approximately 920 feet north of the Site just south of the northern boundary of Maulhardt Ranch (Maulhardt 2018). This pipeline is connected to two buried 12-inch diameter PVC water pipelines that are routed north-south beneath and just west of the main north-south road approximately 450 to 460 feet east of Rose Avenue through the Site to the farmyard/residential area of the Maulhardt Ranch (Figures 2 and 3). The groundwater production well is also connected to a network of 10-inch and smaller PVC pipelines that provide water to the strawberry fields of the Maulhardt Ranch and the.

4.1.8 Electromagnetic Radiation

Title 5 of the California Code of Regulations (CCR) stipulates that a school site shall not be within the following distances from a high power electric transmission line:

- 100 feet from a 50-133 kilovolt (kV) line;
- 150 feet from a 220-230 kV line; or
- 350 feet from a 500-550 kV line.

Pole-mounted electrical power lines located within 350 feet of the Site that are owned and operated by Southern California Edison in the Site area are shown on Figures 2 and 3. These power lines are:

- Located along the north side of Camino Del Sol at the southern Site boundary; and
- Routed through the Site a north-south alignment approximately 210 feet east of North Rose Avenue.

Southern California Edison indicated that all of these pole-mounted power lines are rated at 16 kV (Wall 2017).

4.1.9 Hazardous Air Emitters

Tetra Tech evaluated the neighborhood during the Site reconnaissance for facilities or businesses considered likely to emit hazardous air pollutants; none were observed in the Site vicinity. Based on observations of surrounding properties, review of the EDR Radius Report (EDR 2017) (Appendix F), which tracks the emissions database inventory of the California Air Resources Board, there are no

hazardous air emission sources located within 0.25 mile of the Site and it is unlikely that the Site would be impacted by hazardous air emissions.

4.1.10 Railways

Title 5 of the California Code of Regulations (CCR) stipulates that a railroad safety study must be completed for any proposed school site located within 1,500 feet of a railway track easement. Based on review of the Santa Maria, California Quadrangle, USGS, 7.5-minute topographic series map (USGS 2015), and a Google Earth Image dated October 2, 2016, the Site is not located within 1,500 feet of a railroad track easement. The railroad track easement located nearest to the Site is approximately 0.6 miles south of the Site.

4.1.11 Freeways and Busy Traffic Corridors

Senate Bill 352 created a requirement to determine whether a school site is located within 500 feet of a freeway or busy traffic corridor would create a health hazard from exposure to high levels of criteria pollutants. Freeways and busy traffic corridors are defined as roadways with average daily traffic in excess of 50,000 vehicles in rural areas and 100,000 daily vehicles in urban areas. Based on review of the Oxnard, California Quadrangle, USGS 7.5-minute topographic series map (USGS 2015), and a Google Earth Image dated January 5, 2015, there are no freeways or other busy traffic corridors located within 500 feet of the Site. Highway 101 is located approximately 1 mile north of the Site.

4.1.12 Airports

California Code of Regulations Title 21 requires the State Department of Transportation to review any proposed school site that is located within 2 nautical miles of a runway. There are no airports within two nautical miles of the Site. Based on review of a Google Earth Image date January 5, 2015, and AirNav.com (AirNav.com 2017) (Appendix E), no airports are located within two nautical miles of the Site. The closest airport to the Site is the Oxnard Airport, which is approximately 2.4 nautical miles west of the Site. In addition, the Camarillo Airport is located approximately 3.2 nautical miles east of the site.

Based on review of data from AirNav.com, the Site is located within two nautical miles of a heliport. The St John's Regional Medical Center Heliport is located approximately 0.6 nautical miles north of the Site (AirNav.com 2016) (Appendix E).

4.1.13 Pesticides/Herbicides/Fertilizers

During the site visit the property owners disclosed that agricultural chemicals associated with the current strawberry cultivation activities performed on the Maulhardt Ranch and the Site are stored offsite at the northern end of the parcel. The VCOAC was contacted regarding past pesticide use for the Site, their response is discussed in Section 2.5.4.6. Discussion with the site owners and review of historical aerial photographs and Google Earth images dating from 1943 through 2015 indicate that the Site was used for crop production throughout the time period and that organochlorine pesticides (OCPs) were in use, and that OCPs were used at the Site.

4.1.14 Rodents

During the Site reconnaissance no evidence of rodents was observed at the Site.

4.1.15 Potable Water Supply/Wells

No wells were observed during Site reconnaissance. The Site property owners indicated that the Maulhardt Ranch owns and operates an active water well offsite at the northeast corner of the Maulhardt Ranch property (Section 2.5.4.7).

4.1.16 Wastewater

During Site reconnaissance, no industrial wastewater generation was observed.

4.1.17 Storm Water

Storm water runoff on the Maulhardt Ranch and Site drains to the south in furrows between the raised strawberry beds to shallow east west trending drainage channels along the east-west trending farm roads where it is routed to central drainage ditch located along the east side of the main north-south farm road in the eastern area of the Site (Figure 2). The central drainage ditch flow to the south and empties into the storm drain beneath Camino Del Sol through an inlet at the south boundary of the Site.

4.1.18 Wetlands/Intertidal Lagoon

The EDR report indicates that the Site is covered in the National Wetlands Inventory prepared by the USFW (EDR 2017) (Appendix F). Based on the information provided in the EDR report and by the USFW, the nearest delineated wetland is located within approximately 1.3 miles southeast of the Site (EDR 2017; USFS 2015).

4.1.19 Sewage Disposal System/Septic Systems

No evidence of septic systems was noted at the Site during the reconnaissance.

4.1.20 Drains/Sumps/Vaults/Pools

No drains, sumps, vaults, pools or similar receptacles where liquids drain, collect, or are stored were observed during the Site reconnaissance.

4.1.21 Solid Waste

No evidence of solid waste disposal was observed at the Site. Domestic trash collection and disposal is managed by the City of Oxnard.

4.2 OTHER SITE-SPECIFIC ENVIRONMENTAL CONDITIONS

There were no other Site specific environmental conditions noted during the site reconnaissance.

4.3 VICINITY RECONNAISSANCE

The land use of the area surrounding Site is depicted on Figures 2 and 3. The Maulhardt Ranch residential and farmyard areas are adjacent to the Site on the south and west (Figure 3). Areas of residential development are present to the west, south, and east of the Site. A strip mall is located south of the Site across Camino Del Sol at the southeast corner of Camino Del Sol and North Rose Avenue. Del Sol Park is located at the southeast corner of Camino Del Sol and North Rose Avenue and a park and

Rio Rosales Elementary School are located across Jacinto Drive from the northeast corner of the Site. The area immediately north of the Site on Maulhardt Ranch is developed for strawberry cultivation. The Maulhardt Ranch farmyard and residential areas are immediately south and west of the Site.

A search of the Geotracker database identified two adjacent properties having previous remediation cases (SWRCB 2017). Eleven other previous remediation cases were identified within a 1 mile radius of the site in the EDR report (EDR 2017). These cases are discussed in Section 5.3.

4.3.1 Maulhardt Ranch Residential and Farmyard Areas

The Maulhardt Ranch residential and farmyard areas that are adjacent to the Site on the south and west are described in detail in this Section due to their close proximity to the Site (Figure 3). Table 1 lists the numbered items identified on Figure 3.

4.3.1.1 Tin Shed

The Tin Shed is a single story warehouse-like structure that occupies approximately 5,140 square feet. It was reportedly originally constructed in the early 1900s (Maulhardt 2017) (Figure 3). It is of gable roofed wood frame construction covered in sheet metal, with walls approximately 8.5 feet high and an open beam ceiling approximately 20 feet high at the roof ridge line. The Maulhardts indicated that the floor was partially paved with concrete, however, it was covered in soil at the time of the reconnaissance. Shelves, workbenches, cupboards full of various pieces of equipment and supplies are located along the north, west, and southwest walls of the building. The Tin Shed is used to store various pieces of farming equipment and farming equipment maintenance items and supplies. The general housekeeping was of random organization. Items observed in this building included two tractors, a lima bean planting device fabricated by the Maulhardts, acetylene welding equipment and supplies (gas cylinders), a steel anvil, PVC irrigation pipe, aluminum ladders, three poly pesticide-fertilizer distribution tanks (approximately 100 to 300 gallon capacity), various pieces of aluminum greenhouse framework, several plastic portable fuel containers (approximately 5 to 20 gallon capacity), an old smudge pot, various lengths of rubber and plastic hose, an air compressor, mountain bike, various smaller gasoline and diesel fuel powered farm equipment, hand tool (shovels, rakes, etc.…), a drill press, grinding wheel, a used automobile battery, automotive maintenance equipment (jacks, engine hoist, a 150-gallon (approximate) waste oil drum with a “Back Gold” label, two empty 20-gallon (approximate) oil drums, and other items. Stained soil was observed in the central area of the Tin Shed, and more may be present beneath the equipment and materials stored in the building. The Tin Shed is depicted in photographs 18 through 31 of Appendix D.

4.3.1.2 Horse Barn

The Horse Barn is a two story warehouse-like structure that occupies approximately 7,740 square feet. It was reportedly originally constructed in 1908 (Maulhardt 2017) (Figure 3). It is of gable roofed wood frame construction covered in wood siding. The first story floor walls are approximately 8.5 feet high and an open beam-joist construction. The Maulhardts indicated that the first story floor was partially paved with concrete, however, it was covered in soil at the time of the reconnaissance. Horses are housed in the southern half of the first floor. The northern half is used for storage of various items including three vintage nonoperational automobiles, and a small (10-foot long) fishing boat. The second story is accessed by a ten foot wide wooden ramp that can be accessed by automobiles. The second story has a wood floor with an open ceiling and exposed post and beam construction with walls approximately eight-feet high on the north and south and 20 feet high on the gable ends. Three bales of hay, a motorcycle, and a 12-foot long boat were observed in this area. The general housekeeping was reasonably organized. The Horse Barn area is depicted in photographs 45 through 50 of Appendix D.

4.3.1.3 Garage

The Garage is a single-story structure that occupies approximately 700 square feet (Figure 3). It was reportedly originally constructed in the early 1900s (Maulhardt 2017). It is of gable roofed wood frame construction covered in sheet metal, with walls approximately 7 feet high and an open beam ceiling approximately 12 feet high at the roof ridge line. It has a concrete floor with a concrete lined mechanics pit on the south side that was used for automotive repair and maintenance. Two vintage automobiles and a motorcycle were parked inside of the garage during the reconnaissance and various automotive equipment and maintenance items were stored inside. The general housekeeping was of random organization. A fuel storage AST and UST were formerly located adjacent to this building (Section 4.3.1.10) and the fuel dispenser equipment associated with them is still present in the eastern wall of the building interior. The Garage is depicted in photographs 10 through 14 of Appendix D.

4.3.1.4 Storage Shed

The Garage is a single-story structure that occupies approximately 400 square feet (Figure 3). It was reportedly originally constructed in the early 1900s (Maulhardt 2017). It is of gable roofed wood frame construction covered in wood siding, with walls approximately 8.5 feet high and an open beam ceiling approximately 10 feet high at the roof ridge line. It has a concrete floor. Various farming equipment and supplies were observed in the Storage Shed during the Site reconnaissance. The Maulhardts indicated that pesticides were formerly stored in this building. The Storage Shed is depicted in photographs 15 and 16 of Appendix D.

4.3.1.5 Carriage House and Shed

The Carriage House is a single-story structure that occupies approximately 500 square feet (Figure 3). It was reportedly originally constructed in 1880 (Maulhardt 2017). It is of gable roofed wood frame construction covered in wood siding, with walls approximately 8.5 feet high and an open beam ceiling approximately 10 feet high at the roof ridge line. It has a concrete floor. It was empty during the Site reconnaissance. The Maulhardts indicated that horse carriages and automobiles were formerly stored in this building. The shed on the east side of the Carriage House is a former chicken coop originally constructed in the 1930s. It is single-story, occupies approximately 100 square feet, of shed roofed wood frame construction, and covered in wood siding with a dirt floor. It was reportedly used as a chicken coop and for storage of various farm supplies.

4.3.1.6 Covered Livestock Pen

The Covered Livestock Pen is a single-story structure that occupies approximately 450 square feet. Review of historical aerial photographs indicates it was originally constructed between 2012 and the present (Figure 3). It is gable roofed, of wood frame construction, with open sides, with a dirt floor. It has been reportedly used to house pigs (Maulhardt 2017). The Covered Livestock Pen is depicted in photograph 50 of Appendix D.

4.3.1.7 Workshop and Shed

The Workshop and adjacent Shed are single-story structures that occupies approximately 200 and 440 square feet, respectively (Figure 3). Review of historical aerial photographs indicates they were originally constructed between 1967 and 1978. They are roofed, of wood frame construction, covered in wood siding, with concrete floors. The general housekeeping of the Workshop was well organized. Various woodworking tools and supplies were observed in the Workshop during the Site reconnaissance.

The Workshop is depicted in photograph 19 of Appendix D. The interior of the Shed was not observed during the reconnaissance. It is reportedly used for storage of various farm supplies.

4.3.1.8 Office

The Office is a single-story structure that occupies approximately 2,300 square feet (Figure 3). The north central portion was reportedly originally constructed in in the early 1900s and gradually added onto with four additions (Maulhardt 2017). It is of gable-shed roofed, wood frame construction covered in stucco and wood siding. It has a raised foundation. It was originally a laundry and has been used as a residence and the main office for the Maulhardt Ranch. The interior was divided into a back utility room, two bedrooms, a kitchen, and a sitting-parlor room area. During the reconnaissance, numerous old computers, printers, and various office related electronic equipment and supplies were stored throughout the building. The general housekeeping was of random organization. The Office is depicted in photograph 33 of Appendix D.

4.3.1.9 Residential Structures

The residential structures adjacent to the Site are the Main Residence (approximately 4,420 square feet), Apartment (approximately 780 square feet), and two Mobile Homes (approximately 3,040 square feet each) (Figure 3). The Main Residence and Apartment were constructed in 1917 (Maulhardt 2017). The Main Residence and Apartment are two-story structures. The Main Residence is constructed with concrete walls and a stucco exterior with a roof that is hip-framed and covered with tile around the exterior of the building with a flat roofed interior area covered with asphaltic roofing material. The Apartment is constructed with either concrete walls or wood framed walls and a stucco exterior. The roof is hip-framed and covered with tile. The Apartment has a garage on the first floor with living quarters on the second floor. The two Mobile Homes were constructed between 1967 and 1978 and are of wood frame construction with flat roofs. Tetra Tech did not access the interior of the residential structures during the Site reconnaissance because they were occupied.

4.3.1.10 Storage Tanks and Drum Storage

Based on information provided by the Maulhardts, two fuel storage USTs and one fuel storage AST were formerly located within the residential and farmyard areas of the Maulhardt Ranch and removed in the 1970's or 1980's. The USTs and AST were operated and removed without permits from the County of Ventura that the Maulhardts believed were not required at that time. A 500-gallon (approximate) AST formerly used to store gasoline and 500-gallon UST (approximate) formerly used to store diesel fuel were located adjacent to the Garage or "gas house", and removed approximately 30 years ago (Figure 3; Table, 1 Item 11). A gasoline 250-gallon (approximate) UST was formerly located adjacent to the southeast corner of the two story Apartment and was removed 20-30 years ago (Figure 3; Table, 1 Item 24). According to the Maulhardts, no known fuel releases occurred from either the AST or USTs. No evidence for spills or stained soils were observed at the former AST or UST locations during the reconnaissance (Appendix D, Photographs 10, 11, 36, and 37).

Four existing 500-gallon (approximate) propane ASTs owned and operated by AAA Propane Services, Inc. (AAA) were observed near to the Main Residence, Apartment, eastern Mobile Home, and western Mobile Home (Figure 3; Table 1, Items 25, 27, 30, and 32) (Appendix D, Photograph 35, and 41).

An existing abandoned 500-gallon (approximate) heating oil AST is present immediately west of the Main Residence (Figure 3; Table 1, Item 28); Appendix D, Photograph 40). The heating oil AST was

formerly used to provide heating oil for an oil furnace to heat the Main Residence. The Main Residence is now heated with a natural gas furnace.

According to the property owners, a 500-gallon (approximate) weed oil AST was formerly located adjacent to the northwest corner of the Garage that was removed over 30 years ago. This AST was operated and removed without permits from the County of Ventura that the Maulhardts believed were not required at that time. The Maulhardts indicated that the AST likely leaked in the past and that stained soils were observed during removal (Figure 3; Table 1, Item 15).

One 30-gallon storage drum (approximate) was observed partially covered with debris near the southern wall inside of the Storage Shed (Appendix D, Photograph 16). Several trailer mounted pesticide and fertilizer distribution tanks of various sizes were observed inside of the Tin Shed building (Appendix D, Photographs 18-24). A heavily stained waste oil tank with a "Black Gold" label on it was observed within the Tin Shed (Appendix D, Photographs 22). Several small five gallon plastic portable fuel containers and an empty 25 gallon (approximate) waste oil drum were observed at the western end of the Tin Shed (Appendix D, Photograph 14). The drum was labeled however it was not legible due to age and condition.

4.3.1.11 Hazardous Substances and Petroleum Products

Small quantities of household hazardous chemicals, agricultural chemicals, petroleum products, and waste oil were observed within the Tin Shed, Garage, and Storage Shed (Appendix D, Photographs 14, 16, 18-20, 22, 24, 25 and 27-30). Lynn Maulhardt indicated that waste oil was discovered in the soil underlying the Apartment garage floor, and that this area was filled with concrete slurry over 40 years ago (Figure 3, Item 23).

Records reviewed for this report indicate that hazardous substances including pesticides, herbicides, and various petroleum products, may have been stored in the Maulhardt Ranch farmyard area. According to the property owners, the current chemical storage area for the Maulhardt Ranch strawberry farm is located at the northern end of the parcel, which is not within the boundary of the Site.

4.4 INTERVIEWS

4.4.1 Interview with Owner

Two of the current owners of the property, Lynn and Richard Maulhardt were interviewed by Tetra Tech during the October 23, 2017 Site reconnaissance. The Maulhardt brothers indicated that the Site is part of the 107.25-acre property located at the southeast corner of North Rose Avenue and Camino Del Sol that is currently being considered for sale and redevelopment. The past and current use of the Site was for agricultural purposes. The Maulhardt brothers indicated that their family has owned and occupied the property since 1869. The Maulhardt brothers indicated that various septic tanks, ASTs, and USTs are present or have been removed at the residential and farmyard areas of the Maulhardt Ranch over the years. These items were discussed during the Site reconnaissance and are included in the disclosure letter discussed in Section 5.7 (Appendix G). The approximate locations and descriptions of these items provided during the onsite interview are shown in Figure 3 and Table 1.

4.4.2 Interview with Site Manager

The Site is managed by the Maulhardt family as represented by Lynn and Richard Maulhardt. The interview with Lynn and Richard Maulhardt is discussed in Section 4.4.1.

4.4.3 Interview with Occupants

Richard Maulhardt, who currently lives on the Site was interviewed. Richard and Lynn's mother Ms. Ruth Maulhardt has occupied the Main Residence since 1952. Mrs. Maulhardt was not available to be interviewed.

4.4.4 Interview with Past Owners and Occupants

The Maulhardt family has owned the Site since 1869. Therefore, there are no other past owner-occupants to interview.

4.4.5 Interview with Local Government Officials

Tetra Tech contacted local government officials at agencies where records for the Site were available and reviewed by Tetra Tech. Additional information from interviewed government officials, if any, is included in the discussion in previous sections of this report.

4.4.6 Interview with Others

No other interviews were conducted with individuals other than those cited above in this section of the Report.

THIS PAGE INTENTIONALLY LEFT BLANK

5.0 ENVIRONMENTAL RECORDS REVIEW

As part of this assessment, Tetra Tech retained the services of EDR, a Connecticut-based company that maintains comprehensive environmental information databases and specializes in providing such data for use in real estate and environmental documents, such as this Phase I ESA. EDR performed a database search of the target property in accordance with current ASTM standards. A copy of this report is included as Appendix F.

Among the environmental databases searched were National Priorities List (NPL) sites; Resource Conservation and Recovery Information System (RCRIS) facilities; Superfund Enterprise Management System (SEMS) sites; Cal-Sites; California Hazardous Materials Incident Report System (CHMIRS); Spills, Leaks, Investigation and Cleanup Cost Recovery System (SLIC); Facility Index System/Facility Identification Initiative Program Summary Report (FINDS); Facility Inventory Database (CA FID UST); Hazardous Substance Storage Container Database (HIST UST); California Environmental Protection Agency/Office of Emergency Information (CORTESE); and California Leaking Underground Storage Tank (LUST) sites. Each of the databases was searched at a radius appropriate for ASTM E1527-13. Sites identified in the databases are listed and plotted in the complete environmental database report provided in Appendix F. The following includes a summary of information regarding the Site itself, properties immediately adjacent to the Site, and/or properties that have the potential to affect the Site based on their proximity to the Site.

5.1 ON-SITE EDR LISTINGS

Listings for the target property were in three databases in the EDR-Radius Map report. Eclipse Berry Ranch #9 with the address listed as 1853 Camino Del Sol, Oxnard, CA was listed in the FINDS database. FINDS contains both facility information and references to other sources that contain more detail. EDR included the following FINDS databases in their report: (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System). Further research indicated that Eclipse Berry Ranch #9 was listed on the Cal EPA regulated site portal. According to the Cal EPA site portal the Site is currently in compliance with Hazardous Materials Release Response Plans (HMRRP) requirements, however one minor citation was listed for June 19, 2017 for failing to meet the annual deadline for business plan submittal. Records reviewed from the Cal-EPA site portal confirmed information documented in The Hazardous Materials Inventory Report provided by VCEHD indicating that hazardous agricultural chemicals and fuels are used and stored on the Maulhardt Ranch property for the Eclipse Berry Ranch #9 (Appendix E). According to the owners of the Maulhardt Ranch, the Eclipse Berry Ranch #9 stores these materials at the northeast corner of the Maulhardt Ranch (APN 214-002-059) approximately 550 feet north of the Site.

5.2 SITE-ADJACENT EDR LISTINGS

- Maulhardt Farms with the address, 1853 Camino Del Sol, Oxnard, CA was listed in the Ventura County Business Plan, Hazardous Waste Producers, and Operating Underground Tanks (Ventura Co. BWT) and Facility and Manifest (HAZNET) Databases. The Ventura County BWT list indicates by site address whether the Environmental Health Division has a Business Plan (B), is a Waste Producer (W), and or any Underground Tank (T) information. The EDR findings indicate that a Farm-Business plan is on record with the VCEHD, confirming past and present agricultural use of the Site. A search

on the VCEHD online database returned record of two septic tanks associated with residential properties located in the Maulhardt Ranch residential area which are considered low risk and are described in Section 2.5.4.4. The HAZNET database is made up of extracted data from copies of hazardous waste manifests received each year by the DTSC (Department of Toxic Substances Control). The EDR report identified HAZNET waste records from 1999 that indicated several waste streams originating at the site including organic solids, unspecified oil-containing waste, and unspecified solvent mixtures. These records confirm waste generation from historical agricultural activities at the Maulhardt Ranch and likely pesticide use at the Site.

- Vineyard Plaza Cleaners, is listed on the EDR Hist Cleaner database at the address of 1944 Camino Del Sol. This location is in the Holiday Manor apartments that are located south of the Site along Camino Del Sol. EDR searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed include, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as High Risk Historical Records (HRHR). EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records. The EDR report indicates that Vineyard Plaza Cleaners operated from 2011 through 2013. No additional records were found associated with this listed property indicating the release of hazardous materials, response, or enforcement actions. 1944 Camino Del Sol is located downgradient from the Site. This listing is not considered to be a REC to the Site.

- Rio Rosales Elementary School is listed on the EDR DTSC ENVIROSTOR database at Kohala and Jacinto streets in Oxnard CA 93030. A Phase 1 Environmental Site Assessment, and Preliminary Environmental Assessment (PEA) were completed for this site during 2002 prior to the construction of the Rio Rosales Elementary School. The current site status is no further action. Relevant findings of the PEA are described in this Section 5.4.1. This is not considered a REC for the Site.

- Superior Carpet Cleaning, with the address listed 633 Ursula, Drive, Oxnard, CA 93030, was also listed on the EDR Hist Cleaner database. The listed address is located in a single family home in a residential neighborhood approximately 477 feet west of the Site. The EDR report indicates that this business operated in 2008. No additional records were found associated with this listed property indicating the release of hazardous materials, response, or enforcement actions. In general, this site is expected to be cross gradient from the Site. This listing is not considered a REC for the site.

5.3 EDR LISTINGS IN THE SITE VICINITY

5.3.1 Properties Between One Eighth and One Quarter Mile From the Site

Four listings were identified by the EDR Report database search located one eighth to one quarter mile from the Site.

- Arenales/Kohala Property, located at 765 Kohala Street, 670 feet east of the Site, was listed on the EDR LUST SLIC and CDL databases. The database indicates that this site was an illicit methamphetamine lab. The case was completed through the voluntary cleanup program in 2007. The case is closed. This listing is not considered a REC for the Site.

- Continental Heritage Corp, located at 275 Rose Avenue, 0.181 mile south of the site, was listed on the Ventura Co. UST database as an inactive site and is located downgradient from the Site. This listing is not considered a REC for the site.

- Maulhardt Farm, located at 1953 E Colonia Road, 0.237 miles west of the Site, was listed on the Hazardous Substance Storage Container database (HIST UST) maintained by the State Water Resource Control Board. The Record indicated that 500 gallons of Diesel fuel used for agricultural activities was stored at the site. Records did not indicate past spills or releases at this property, therefore this listing is not a REC for the site.

- McCaslin Oil Company, located at 2425 Colonia Road, 0.237 miles west of the Site, was listed on the ENVIROSTOR, LUST, HIST UST, HIST CORTESE, SWEEPS UST, and CA FID UST databases. The site case was closed as of October 13, 1998. Given the distance from the Site, completed remedial actions, and no further action status this listing is unlikely to pose any risk to the Site. This listing is not a REC for the site.

5.3.2 Properties Between One Quarter and One Half Mile From the Site

Eight State and Tribal Leaking Storage tank listings were listed in the EDR database at elevation equal or higher than the Site at distances from one quarter to one half mile from the Site. All of these listings were completed or case closed sites and not considered RECs to the Site. These site listings are summarized below.

- Wilma Pacific Inc., located at Bernoulli Circle, 0.280 miles east of the Site, was listed on the LUST database.

- Oxnard Fire Station #5, located at 1450 Colonia Avenue, 0.283 miles west of the Site was listed on the LUST database.

- Standard Pacific of Ventura, located at 1191 Colonia Road, 0.411 miles west of the Site, was listed on the LUST, UST, and HIST CORTESE databases.

- Jones Intercable, located at 721 Maulhardt Avenue, 0.488 miles east of the Site, was listed on the LUST and HIST CORTESE databases.

- Maul-Graves Leasing Co., located at 833 Maulhardt Avenue, 0.487 miles east of the Site, was listed on the LUST, HIST UST, and HIST CORTESE databases.

- Certified Freight lines, located at 965 Maulhardt Avenue, 0.488 miles east of the Site, was listed on the LUST database.

- System 99, located at 965 Maulhardt Avenue, 0.488 miles east of the Site, was listed on the LUST and HIST UST databases.

- Mission Linen, located at 505 Maulhardt Ave, 0.489 miles east of the Site, was listed on the LUST, DRYCLEANERS, and HIST CORTESE databases.

Seven State and Tribal Leaking Storage tank records were identified at elevation lower than the Site at distances of one quarter to one half mile from the Site. None of these listings were considered RECs to the Site. These site listings are summarized below.

- Four records associated with the address 121 Rose Avenue, 0.291 miles south of the Site were identified. The first was associated with Exxon (Sanchez) and listed on the LUST and HIST CORTESE databases. This site gained regulatory closure in 1996. Three other records associated with Mobile Oil SS#18-P7C were listed on the LUST database. Two of these gained regulatory closure in 1996, and the third one in 2007. Based on the distance from the Site and downgradient location, these sites are not considered to be RECs to the Site.

- Oxnard (City) Treatment Plant, located at Perkins Road, 0.395 miles west of the Site, was listed on the LUST and HIST CORTESE databases. This site gained regulatory closure in 1992. Based on the distance from the Site and downgradient location, this site is not considered to be a REC to the Site.

- Two records associated with Oxnard (City), located at 300 Marquita N, 0.397 miles west of the Site was listed on the LUST database. These sites gained regulatory closure in 1994. Based on the distance from the Site and downgradient location, these sites are not considered to be RECs to the Site.

One SLIC site was identified that is located from one quarter to one half mile of the Site.

- Nishimori Farms / Cambridge Development Co., located Southeast of Williams Drive, Soccorro Way, and Wankel Way, 0.432 miles north of the Site was listed on the SLIC database. This listing obtained completed – case closed status in 1999 and is not considered a REC to the Site.

Several other sites, including "orphan" (i.e. unmappable sites) were listed within ASTM recommended search distances. However, due to the type of listing, distance from the Site, location of the Site with respect to assumed regional groundwater flow, topographical features, and/or status of the listed sites, these nearby sites are not considered to be RECs in connection with the Site.

5.4 PREVIOUS INVESTIGATIONS

5.4.1 2002 Preliminary Environmental Assessment for the Rio Rosales Elementary School

ENSR International (ENSR) completed a PEA for the Rio School District in 2002 under DTSC oversight prior to construction of the Rio Rosales Elementary School (ENSR 2002). The Rio Rosales Elementary School is located adjacent to the northeast corner of the Site at Jacinto Drive and Kohala Street (Figure 2). The PEA evaluated potential OCP, arsenic, and lead residuals in soil from past farming practices, polyaromatic hydrocarbons (PAHs) in soil from oil production, methyl bromide in soil and the ambient air from applications at the Maulhardt property located immediately to the west, methane and hydrogen sulfide gas in soil from oil field activities, and potential hydrocarbons, PAHs , and metals from a crushed drum that was observed at the site in 2000. The sampling program comprised:

- Seven soil vapor probes were completed using direct push drilling to depths ranging from 6.5 to 10 feet bgs to collect soil vapor samples that were analyzed for volatile organic compounds (VOCs) using EPA method TO-15, methane using EPA method TO-3, and hydrogen sulfide using EPA method 16;

- Thirty soil samples were collected using direct push drilling to depths ranging from 12 to 16.5 feet bgs to collect soil samples at depths ranging from the ground surface to 15 feet bgs that were analyzed for OCPs using EPA method 8081A, arsenic and lead using EPA methods 7060 and 7421, CAM 17 metals using EPA method 6010B, hexavalent chrome using EPA method 7196, semivolatile organic compounds (SVOCs) using EPA method 8270C, VOCs

using EPA method 8260B, PCBs using EPA method 8082, and total petroleum hydrocarbons (TPH) – fuel fingerprinting (TPH-ff) using EPA method 8015M;

- One ambient air sample was collected and analyzed for VOCs using EPA method TO-15 and methane using EPA method TO-3; and

- Two groundwater samples were collected at approximately 14 feet bgs and analyzed for OCPs using EPA method 8081A, CAM 17 metals using EPA methods 6000/7000, SVOCs using EPA method 8270C, VOCs using EPA method 8260B.

The results of the PEA sampling program indicated the following:

- Low concentrations of VOCs were detected in soil vapor samples across the site at concentrations that were comparable to the ambient air sample;

- Methane gas was detected at low concentrations in approximately one half of the soil vapor samples. It was concluded that the methane was generated by decaying plant matter in the soil;

- Hydrogen sulfide was not detected in the soil vapor samples;

- The pesticides toxaphene, DDT, DDE, and DDE were detected in soil samples from different depths and locations across the site. The SVOCs fluoranthene and phenanthrene were detected at low concentrations in one sample, and the metals beryllium, silver, and thallium were detected at concentrations higher than the background values; and

- No pesticides, SVOCs, and VOCs were detected in the groundwater samples. Selenium and molybdenum were detected in groundwater samples at concentration below DTSC action levels.

The PEA sample results were used to perform a site screening evaluation of chronic human health risk. Toxaphene, DDT, DDE, DDD, fluoranthene, phenanthrene, beryllium, silver, and thallium in soil were selected as chemicals of potential concern (COPCs) for the site screening evaluation of chronic human health risk. The PEA concluded that based on model assumptions, the inhalation pathway does not provide a significant excess cancer risk for soils impacted with the COPCs. The site screening evaluation of chronic human health risk indicated that the hazard quotient was less than one (total hazard between 0.0065 and 0.084) and the excess lifetime cancer risk was 2.7 X 10-6 for soil ranging in depth from the ground surface to 9 feet bgs. Based on these results, ENSR concluded that the results of the site screening evaluation of chronic human health risk indicated that the site-wide risk was sufficiently protective of human health to allow the site to be used as a school site. ENSR recommended that no further investigation be conducted and that the DTSC concur by issuing a "No Further Action" determination for the site.

The DTSC provided their evaluation of the ENSR PEA for the Rio Rosales Elementary School site in a letter dated June 26, 2002, and concluded that they concurred with ENSR's recommendations that no further investigation was required for the Rio Rosales Elementary School site and approved the PEA (DTSC 2002).

5.5 ENVIRONMENTAL CLEANUP LIENS

No environmental cleanup liens are known to have been filed against the Site under federal, state, or local laws.

5.6 RADON

Radon is a naturally occurring, odorless, colorless gas produced by certain geologic materials. It is known to be a human carcinogen and can pose a cancer risk greater than one in one million in humans at concentrations equal to or greater than 4 picoCuries per liter (pCi/L).

The EDR environmental database search indicated that Ventura County is in a Radon Zone 1 area. Zone 1 areas have a predicted average indoor screening level greater than 4 pCi/L. The EDR database search reported that of 38 sites listed in the California Radon database that have been tested for the zip code of 93030, one had radon at levels greater than 4 pCi/L. The Federal Area Radon Information database reported 9 sites tested for radon in the 93454 zip code. The average concentration of tested sites was 0.478 pCi/L in first floor living areas (EDR 2017).

The EDR report gives a passing result for the Site with no further action required. These findings suggest there are no health concerns related to radon at the Site.

5.7 PROPERTY OWNER DISCLOSURE OF EXISTING CONDITIONS

The Maulhardt Ranch property owner's attorney Mr. Kenneth M. High. Jr. of Lowthrop Richards provided Tetra Tech with a memorandum dated October 5, 2017, *Memorandum, Disclosure of Existing Conditions Affecting Phase I Environmental Report* (High 2017) through Sage. The memorandum describes the Maulhardt Ranch property owners' recollection of existing conditions at the property with information that is relevant to this Phase I Environmental Assessment Report (Appendix G). The memorandum is summarized below.

Farming Operations

Since the property was acquired by the Maulhardt Family ancestors about 1869, it has been used for farming operations with various crops over the years, including various dry farming crops in the early days, lemons and avocadoes, row crops and currently strawberries. Those operations involved the application of all the pesticides, herbicides, fertilizers, and other chemicals customarily used and/or permitted in such operations over the decades. No known sites of any spills or tanks or pits, or other locations where any particular concentration of chemicals existed or exists, except the metal building along the northern edge of the home site was historically used to store tractors and farm equipment and it has a hard packed dirt and/or concrete floor not evenly distributed, which could have absorbed gas, diesel fuel, oil or other chemicals resulting from such use.

Gasoline, Diesel, and Herbicide Tanks

The following gasoline, diesel, and herbicide tanks exist or formerly existed at the Maulhardt Ranch farmyard and residential areas.

- A heating oil 500-gallon (approximate) AST is located adjacent to the west side of the big Main Residence. It was formerly used to store heating oil for a furnace located in the basement of the Main

Residence. It is no longer in use. The Main Residence is currently heated with propane supplied by AAA.

- A 250-gallon (approximate) gasoline UST was removed about 20-30 years ago from the southeast corner of the Apartment. No known leak has occurred from this UST. No permits were obtained from any agency for the operation or removal of this UST, although it is believed none was required when the UST was operated and removed.

- A 500-gallon (approximate) gasoline AST was formerly located adjacent to the southwest corner of the Garage. It was removed about 30 plus years ago, without any removal permit, although it is believed that none was required. No known leak occurred.

- A 500-gallon (approximate) diesel fuel UST was formerly located adjacent to the southeast corner of the Garage. It was removed about 30 plus years ago, without any removal permit, although it is believed that none was required. No known leak occurred.

- A 250-gallon (approximate) weed oil AST was formerly located at the northwest corner of the Garage. It was removed about 30 plus years ago, without any removal permit, although it is believed that none was required. It is believed to have leaked and the last memory of it is that the dirt was stained before the hole was filled in.

- A concrete lined mechanics pit is located in the floor of the Garage, like those in oil change facilities. It was used to change the oil and/or do mechanical work on tractors, farm equipment and vehicles.

- Propane storage ASTs (approximately 500-gallon capacity) are located near the Main Residence, Apartment, western Mobile Home, and eastern Mobile Home (five propane storage ASTs total). They are owned and filled periodically by AAA.

Septic Systems

The following septic systems are currently or formerly were present at the residential area of the Maulhardt Ranch. For the most part, these were installed and operated without permits, which the Maulhardts believed were not necessary.

- A currently operating septic tank is present at the northeast corner of the Main Residence just outside the kitchen window. The top is visible on the surface of the ground. The leach field for this 100 year old system is located to the east in the road and/or in the orchard.

- A formerly operating septic tank is present in the road east of the Main Residence southeast of the kitchen window. It was abandoned in place and not filled about 30 plus years ago, without a permit, which the Maulhardts believed was necessary.

- A currently operating prefabricated concrete septic tank is present near the northeast corner of the Main Residence and east of the driveway into the property. The leach field for this system is located south of the tank.

- A formerly operating septic tank is located adjacent to Office north of the Main Residence and east of the Apartment. It was abandoned in place and filled with dirt and scrap concrete about 20 plus years ago.

- A formerly operating wooden septic tank is located adjacent to the Office. It is located in the lawn about 10 feet north and 8 feet west of the front door. It was abandoned and filled with dirt about 30 years ago.

- A formerly operating septic tank is located outside to the west of the Office, outside of the kitchen window. It was abandoned and filled with dirt about 30 years ago.

- A formerly operating cesspool is located approximately three to four feet north of the Apartment. It was abandoned and filled with dirt about 15 or more years ago.

- A currently operating septic tank is located about eight feet north of the Apartment. It was installed about 20 years ago. The leach field is located south of the tank. Whether there was a permit obtained is unknown.

- A currently operating septic tank is located about 16 feet behind and about the middle of the eastern Mobile Home. One leach field extends due east, which was abandoned about 20-25 years ago. Another leach field that is in service extends south into the orchard.

- A currently operating septic tank is located about 15 to 20 feet east of the western Mobile Home. It was installed in 1973. The leach field for this system extends south, with an offshoot added later to either the east or west.

- A septic tank was formerly located west of the Garage, that used to service a bunk house for farm workers that was located to the west of the Garage where a lemons orchard is now located. There was a cesspool crushed in place when the bunk house was removed about 30 or more years ago.

- A four-foot diameter vertical concrete irrigation pipe is located at the southeast corner of the Horse Barn that was formerly used for sewage from a trailer located there for one year and removed 43 years ago. It is capped now. No leach field existed.

- An abandoned washing machine septic tank may be located east of the jacaranda tree by the back porch of the Main Residence. If so, it was believed to have been filled in about 25 or more years ago.

- An abandoned septic tank may be located west of power pole to the east of the northeast corner of the Main Residence. If so, it was believed to have been filled in about 25 or more years ago.

- An abandoned septic tank may be located west of the Apartment. If so, it was believed to have been filled in about 25 plus years ago.

- There was a hole in the floor of the Apartment garage that may have had oil deposited in it. It was plugged with concrete over 40 years ago to level the floor.

Water Wells, Pipelines, and Wind Machines

- An existing above ground horizontal water tank is located east of the driveway into the home site before it reaches the garage. South of that tank, there was a water well at the same location which was abandoned and properly backfilled, with a permit from Ventura County about 25 plus years ago.

- There is an existing buried 12" PVC water pipeline routed west from the water well along the northern Maulhardt Ranch property boundary. The pipeline is split into two PVC pipes a few feet apart that are routed to the south directly beneath or near the north-south farm road approximately 480 feet east of Rose Avenue (Figure 2).

- There is also a separate irrigation PVC pipeline system extending from the water well at the northeast corner of the Maulhardt Ranch property throughout the strawberry fields.

- There are no existing wind machines and all previously removed wind machines were electric.

THIS PAGE INTENTIONALLY LEFT BLANK

6.0 USER PROVIDED INFORMATION

Mr. Sid Albaugh, Assistant Superintendent for OUHSD completed the User Questionnaire for Phase I ESAs as required by ASTM Standard E1527-05 and it is included in Appendix I. The findings of the User Questionnaire for Phase I ESAs for the Site are summarized below.

6.1 LAND TITLE AND JUDICIAL RECORDS FOR ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

For Item 1 of the User Questionnaire, Environmental Cleanup Liens, Mr. Albaugh indicated that they have no information regarding environmental liens for the Site.

6.2 ACTIVITY AND USE LIMITATIONS

For Item 2 of the User Questionnaire, Activity and Use Limitations (AULs), Mr. Albaugh indicated that there are no known AULs for the Site and that this issue would be further reviewed upon opening of escrow and review of the preliminary title reports.

6.3 SPECIALIZED KNOWLEDGE

For Item 3 of the User Questionnaire, Specialized Knowledge, Mr. Albaugh indicated they have no specialized knowledge of any environmental issues that might affect the Site.

6.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

For Item 4 of the User Questionnaire, Fair Market Value, Mr. Albaugh indicated that the property purchase price was not significantly below fair market value.

6.5 OBVIOUS INDICATORS

For Item 5 of the User Questionnaire, Obvious Indicators, Mr. Albaugh indicated that they did not know of any obvious indicators of possible contamination on or near the Site.

6.6 COMMON KNOWLEDGE

For Item 5 of the User Questionnaire, Obvious Indicators, Mr. Albaugh responded as indicated in the underlined text below:

- Describe paste uses of the property: Resident, Agriculture, and Barn.
- Describe specific chemicals that may have been present at the property: To be determined (TBD).
- Describe any other information that may help us in identifying possible contamination: Not Applicable.

6.7 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The current owner of the Site is the Maulhardt Family. The Maulhardts are the current occupants on the Site. Eclipse Berry Farms is leasing the Site from the Maulhardt Ranch for strawberry cultivation.

6.8 REASONS FOR PHASE I ESA PERFORMANCE

It is Tetra Tech's understanding that this Phase I ESA is being requested in conjunction with due diligence activities by OUHSD.

7.0 FINDINGS

Based on the information discussed in this Phase I ESA and Tetra Tech's understanding of current regulatory guidelines and judgment, the following six RECs have been identified for the Site that might pose a risk to future Site occupants (students, teachers, and school district employees).

7.1 OXNARD OIL FIELD

The Site is located within the Oxnard Oil Field. No oil wells are present on the Site and no evidence for oil production activities at the Site or current Maulhardt Ranch property was noted in the historical aerial photographs. The presence of oil wells and historical oil production activities within 0.25 mile of the Site from 1934 through 2000 are well documented in the historical topographic maps, and DOGGR records. This information indicates that there is a potential that the Site soils may have been impacted from toxic hydrogen sulfide or methane gas from the underlying Oxnard Oil Field.

7.2 FORMER AGICULTURAL LAND USE

Potential impacts to Site soils from former pesticide applications associated with former agricultural land use practices is a REC for the Site. The Site owners indicated that the Site has been used for agricultural production since at least 1869 and that legal pesticides in common use were applied to the Site, including OCPs or heavy metals. The historical aerial photographs and Google images reviewed for this report indicate that the Site was used for crop production from at least 1927 through 2017. OCPs and heavy metals from pesticides were commonly used for crop production from the 1940s through the 1960s and were detected in soil samples collected for the 2002 Preliminary Environmental Assessment conducted for Rio Rosales Elementary School Site (ENSR 2002) on property that was formerly part of the Maulhardt Ranch. Therefore, there is a potential that the Site soil is impacted with OCPs and heavy metals from pesticides.

The Site owners indicated that smudge pots fueled by heating oil were formerly throughout the cultivated areas of the Site for frost abatement when they were planted with citrus groves. There is a potential that soil at the Site have been impacted with fuel oil that contains SVOCs and PAHs.

7.3 ABOVE GROUND AND UNDERGROUND STORAGE TANKS

There are potential impacts to shallow soil, soil gas, and groundwater in the areas of the Site adjacent to the Maulhardt Ranch residential and farmyard areas from former ASTs and USTs formerly used for the storage of motor fuel and herbicides in these areas:

- A former 250-gallon (approximate) gasoline UST site located near the southeast corner of the Apartment;
- A former 500-gallon (approximate) gasoline AST site located near the southwest corner of the Garage;
- A former 500-gallon (approximate) diesel fuel UST site located near the southeast corner of the Garage; and
- A former 250-gallon (approximate) weed oil AST located near the northwest corner of the Garage.

7.4 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

Potentially hazardous substances and petroleum products have been used and stored in the Tin Shed, Horse Barn, Garage, and Storage Shed on the Maulhardt Ranch that may have impacted shallow soil, soil gas, and groundwater in the areas of the Site adjacent to the Maulhardt Ranch farmyard area. Pesticides/herbicides/fertilizers were historically stored and mixed within the Storage Shed at the western edge of the farm yard and within the Tin Shed and outside the southwest corner of the Tin Shed. Discussion with the Site owners and review of historical aerial photographs and Google Earth images dating from 1943 through 2015 indicate that the Site was used for crop production throughout that time period and that OCPs were in use.

7.5 PCB-CONTAINING TRANSFORMERS AND EQUIPMENT

One pole-mounted transformer is currently located onsite along the southern Site boundary along Camino Del Sol. There is a potential that this pole mounted transformer contained PCBs that may have been released to the soils beneath them.

7.6 PIPELINES

CCR Title 5, Section 14010(h) requires that new school sites shall not be located or within 1,500 feet of the easement of an above ground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional. Hazardous pipelines are defined as:

- Pipelines carrying chemical products, natural gas, and other hydrocarbon products that are operating at a pressure of 80 psig or higher; and

- High-volume water lines, which are defined as water lines 12 inches or greater in diameter, and include open aqueducts of comparable and greater volume handling capacity.

Four hazardous pipelines as defined by CCR Title 5, Section 14010(h) were identified within 1,500 feet of the Site:

- The City of Oxnard maintains a 12-inch diameter PVC water pipeline routed north-south beneath North Rose Avenue immediately west of the Site (Figure 2) (Appendix E);

- The City of Oxnard maintains a 12-inch diameter ACP water pipeline routed east-west beneath Camino Del Sol immediately south of the Site (Figure 2) (Appendix E);

- The UWCD maintains a 42-inch water pipeline beneath North Rose Avenue immediately west of the Site (Figure 2) (Appendix E); and

- The Maulhardt Ranch maintains a 12-inch diameter PVC water pipeline routed east to west underlying the dirt access road just south of the northern boundary of the Maulhardt Ranch, approximately 920 feet north of the Site. This pipeline is connected to two buried 12-inch diameter PVC water pipelines that are routed north-south beneath and just west of the main north-south road approximately 450 to 460 feet east of Rose Avenue through the Site to the farmyard/residential area of the Maulhardt Ranch (Figures 2 and 3).

8.0 RECOMMENDATIONS

In the professional opinion of Tetra Tech, an appropriate level of inquiry has been made into the previous ownership and uses of the Site consistent with good commercial and customary practice with the intent to minimize environmental liability. Based on the information cited in this assessment and Tetra Tech's understanding of current regulatory guidelines and judgment, it is Tetra Tech's recommendation that a Preliminary Environmental Assessment (PEA) be performed under DTSC oversight to evaluate the six RECs described in Section 7.0. A hazardous pipeline assessment should also be conducted in accordance with the *Guidance Protocol for School Site Pipeline Risk Analysis* (CDE 2007) as part of the PEA.

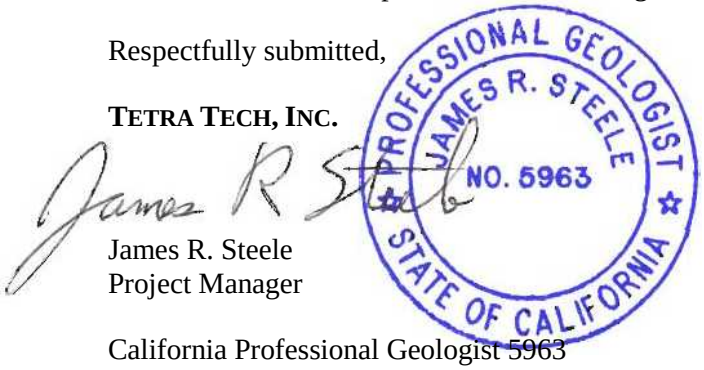
9.0 DISCLAIMER



This report was compiled based partially on information supplied to Tetra Tech from outside sources and other information that is in the public domain. The conclusions and recommendations herein are based solely on the information Tetra Tech obtained in compiling the report. Documentation for the statements made in the report is on file at Tetra Tech's offices in Santa Barbara, California. Tetra Tech makes no warranty as to the accuracy of statements made by others which may be contained in the report, nor are any other warranties or guarantees, expressed or implied, included or intended by the report, except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services. Since the facts forming the basis for the report are subject to professional interpretation, differing conclusions could be reached. Tetra Tech does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations or suggestions does not assure elimination of hazards or the fulfillment of client's obligation under federal, state, or local laws or any modifications or changes to such laws.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the AAI in conformance with the standards and practices set forth in 40 CFR Part 312.

None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature, but shall be a representation of findings of fact from records examined.

Respectfully submitted,

TETRA TECH, INC.

THIS PAGE INTENTIONALLY LEFT BLANK

Table 1
Site Reconnaissance Features

Number	Item	Location
1	Series of active concrete residential septic tanks.	East of Main Residence near kitchen window.
2	Potential abandoned septic tank	Underlying driveway east of the Main Residence.
3	Underground laundry room wastewater septic tank.	Under northeast corner of Main Residence.
4	Abandoned cesspool	Near northeastern corner of orchard on the east side of the Main Residence.
5	Pole mounted transformer	In citrus orchard south of eastern Mobile Home.
6	Eastern Mobile Home septic tank	Approximately 10-15 feet east of eastern Mobile Home.
7	Abandoned water well	Southwest of Workshop.
8	Power pole and former location of three pole mounted transformers	Northwest of Workshop.
9	Abandoned septic tank	South of Horse Barn.
10	Bonfire area	North of Horse Barn and south of Tin Shed.
11	Former location of removed 500-gallon (approximate) gasoline fuel above ground storage tank (AST) removed in 1980's.	Southwest corner of Garage.
12	Former location of 500-gallon (approximate) diesel fuel UST removed in 1980's.	Southeast corner of Garage.
13	Oil Change Sump.	Inside of Garage.
14	Former location of two 2-story Bunkhouses removed in 1970's. Abandoned septic tank and cesspool likely present.	In orchard west of Garage and Storage Shed.
15	Former 500-gallon (approximate) weed oil AST removed in the 1970's without a removal permit.	Located along northwest corner of Garage.
16	Former pesticide mixing area.	Located near southwest corner of Tin Shed.
17	Smudge Pot	Inside of Tin Shed at northwest corner.
18	Soil/ floor staining observed.	Located inside of Tin Shed.
19	Old concrete footing from removed wind electric machine.	Located north of Tin Shed.
20	Abandoned septic tank.	North of Office.
21	Abandoned redwood septic tank	Northwest of Office.
22	Apartment septic tank	North of Apartment.
23	Oil residue under Apartment garage. Area was backfilled with concrete slurry.	Inside Apartment garage at southeast corner.
24	Former location of 250-gallon (approximate) gasoline UST and pump.	South of the Apartment.
25	500-gallon (approximate) propane AST owned and operated by AAA Propane Services, Inc. (AAA).	Northwest corner of Apartment.
26	Septic Tank	East of western Mobile Home.
27	500-gallon (approximate) propane AST owned and operated by AAA	West of Main Residence.
28	Abandoned 500-gallon (approximate) heating oil AST.	West of Main Residence.
29	Pole mounted transformer	In orchards west of Main Residence.
30	500-gallon (approximate) propane AST owned and operated by AAA	North of eastern Mobile Home.
31	Recreational Vehicle	East of the Horse Barn.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Tetra Tech, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Box No 40678

PROJECT DESCRIPTION QUESTIONNAIRE
(Residential/Agricultural)

A. EXISTING PROJECT SITE

1. Assessors Parcel No(s): 214-020-450

2. Location (nearest public road, cross street, community, etc.):
1853 CAMINO DEL SOL
CROSS STREET — ROSE AVE.

3. Existing Land Use(s): AGRICULTURAL ~ AVOCADO TREES AND LEMON TREES

4. LCA Contract No. 49-1,1 Contract-specified agricultural use(s) (illegible)

Assessor Parcel Numbers Within Contract

5. Distinctive Physical Features on the Property (rock outcroppings, barrancas, etc.): LEVEL FARM LAND PLANTED TO ORCHARDS

6. Has the property been surveyed by an archaeologist? Yes___ No✓ Unknown___ If yes, what was the result?

7. Existing Drainage Direction(s): SOUTH

8. Existing Drainage/Flood Control Facilities (culverts, retention basins, etc.): NO DRAINAGE FACILITIES

9. Existing Water Supply (if any): WELL

10. Existing Sanitation (Sewage Disposal) Facilities (if any):
SEPIC TANK WITH LEACH LINE

11. Describe the type and size of all existing signs (if any):
N/A

12. Is your property on the State's list of identified hazardous waste and/or hazardous substance sites? (Copy of list is kept at Planning Division public counter.) NO

B. SURROUNDING PROPERTY

1. Land Uses

North: FARM LAND East: FARM LAND
South: OPEN FIELD/LOW INCOME HOUSING West: ROSE AVE. / FARM LAND

2. Distinctive Physical Features

North: OPEN FIELDS, FARMING
South: OPEN LOT, APARTMENTS
East: STRAWBERRY FIELDS
West: ROSE AVE, STRAWBERRIES

3. Vegetation

North: CELERY East: STRAWBERRIES
South: OPEN LOT West: STRAWBERRIES

C. PROJECT DESCRIPTION

1. Describe in detail the proposed use(s):
EXTENSION OF EXISTING PERMIT

2. Describe access to site from a public road:
PRIVATE GATE ON CAMINO DEL SOL

3. Will project be developed in phases? _____ If so, describe each phase in detail:
N/A

4. Describe type and size of all proposed signs: NONE

5. If applicable, will existing signs be removed? N/A If so, describe:

6. Describe any potential noise sources associated with the project. If applicable, also describe what methods would be used to reduce the noise such that it would not be objectionable to surrounding uses (attach sheets if necessary):
N/A

7. Describe any uses or operations producing significant light or glare. If applicable, describe what methods would be used to shield, enclose or otherwise control light or glare such that it would not be objectionable to surrounding uses (attach sheets if necessary):
N/A

8. Grading

Area to be graded: N/A sq.ft./acres

Total volume to be moved: N/A cu. yds.

Slope ratio of steepest finished slope (horiz. feet/ea. vert. foot):
N/A

Height of highest finished slope (from toe to top): N/A feet

Disposition of excavated material:

9. Number of trees to be removed (count trees with 5" dia. or more at 3' above root crown) by species: N/A

10. Drainage

Describe how increased runoff will be handled both onsite and offsite:
N/A

Will the project require the installation or replacement of storm drains or channels? NO If yes, indicate length _____, size _____ and capacity _____.

D. PROPOSED SERVICES

1. Water Supply

Water Source (check): _____ Well ✓ Water Purveyor

Will the project necessitate the installation or replacement of new water service mains? N/A If yes, indicate length _____, size _____, and capacity _____.

2. Sanitation

Sanitation will be provided by (check):

Private onsite septic system ✓ Public sewers _____

3. Fire Protection

Indicate number and capacity of existing and/or proposed fire hydrants and distance from proposed buildings:
PRIVATE WELL / SWIMMING POOL WITHIN 200 FT.

I certify that the foregoing information is complete and correct to the best of my knowledge.

M E M O R A N D U M

TO: Paul Merrett **DATE:** Aug 29, 1994

FROM: Darrell Siegrist

SUBJECT: CUP 3462 MOD 2 (MAULHARDT)

The Environmental Health Division considers the subject application incomplete:

* Please submit a scaled plot plan which includes the existing septic tanks and leach lines (or seepage pits), water well, and the footprint of the existing structures.

* Please submit a septic tank pumping report for the primary residence.

If you have any questions, please contact me at ex. 2811.

TO: Paul Merrett **DATE:** Nov 14, 1994

FROM: Darrell Siegrist

SUBJECT: CUP 3462 MOD 2 (MAULHARDT)

The Environmental Health Division now considers the subject application complete.

PROJECT CONDITION:

* Only domestic waste as defined in the County Building Code Ordinance shall be discharged into the on-site individual sewage disposal systems (septic systems).

If you have any questions, please contact me at ex. 2811.

COUNTY OF VENTURA

SEPTIC TANK PUMPING INSPECTION REPORT

Name of Property Owner: Richard Maulhardt Ranch

Location of Pumping: 1853 Camino Del Sol, Ox.

Assessor's Parcel Number: 214-0-020-4500

Date of Pumping: 8-31-94 Gallons Pumped: ~~1200~~

Type of on-site disposal system (please check one of the following):

- [x] septic tank/absorption field or seepage pit
- [ ] cesspool
- [ ] other (explain): _____

Estimated capacity of septic tank or cesspool: 1250 gallons

Internal dimensions of septic tank (length, width and depth) 8'X4'X5'

Construction of septic tank or cesspool (please check one of the following):

- [x] concrete
- [ ] fiberglass
- [ ] steel
- [ ] wood
- [ ] other (explain): _____

Condition of tank (please answer yes or no for each question):

	Yes	No
Inlet tee present?	[x]	[ ]
Outlet tee present?	[x]	[ ]
Two compartments?	[x]	[ ]
Tank structure deteriorated?*	[ ]	[x]

*If yes, briefly explain: _____

While pumping the tank, did effluent flow back into tank from the absorption system? [ ] Yes [x] No

Prior to pumping, was the liquid level in the tank above the outlet tee? [ ] Yes [x] No

Using the grid on the back of this page, please sketch the location of the septic tank, the house, and if possible, the soil absorption system.

Additional Comments: This septic tank is proper for this house also leach line is in good working order.

I CERTIFY UNDER PENALTY OF PERJURY THAT THE FOREGOING IS TRUE AND ACCURATE:

CUPA FILE REVIEW REQUEST

CUPA is an acronym for Certified Unified Program Agency. CUPA files contain information for: hazardous materials, hazardous wastes, underground storage tanks, aboveground storage tanks and the California Accidental Release Prevention (Cal-ARP) Program. ***There is no fee assessed for reviewing the program files. Allow for 48 hour advanced notice for appointments to review files.***

Site Information
Business name/Property Owner: Maulhardt Ranch
Site Address: 1825 Camino Del Sol Oxnard CA, 93030

Party Requesting File Review
Requestor's Name: Jason Dane
Requestor's Business or Organization Name: Tetra Tech
Requestor's Business, Organization, or Home Address: 5383 Hollister Avenue, Suite 130, Santa Barbara, CA 93111
Requestor's Business, Organization, or Home Phone Number: 805-681-1527
Requestor's Fax Number: 805-681-3108

CUPA Program Files Requested:

- ☑ ***Business Plan***
- ☑ ***Hazardous Waste***
- ☑ ***Underground Storage Tanks***
- ☑ ***Cal-ARP***

Contact Ventura County Environmental Health for Information regarding UST Closures and site cleanups. Electronic files may be found at http://www.vcenvhealth.org or by phone: 805/654-2813.

Instruction for file review:

1. Information or documents must not be removed from the files (except for photocopy purposes).
2. If you would like us to make photocopies of any documents in the files, please request this service from the City of Oxnard Fire Department administrative staff. Please note there is a fee for photocopies.
3. Fax copy of completed file review request to (805) 385-8009, Attention CUPA.

I certify that I will comply with the aforementioned file review procedures and that no documents will be removed from the file(s) reviewed (except for photocopy purposes).

Applicant Signature: Jason Dane Date: 09/13/2017

CUPA Representative Findings: ☑ No CUPA records found. ☐ Records available for review.

Subject: Ventura County Request to Inspect Public Records
Attachments: Maulhardt Ranch.xlsx

Good morning Jason,

Please find the attached information which you requested on September 18, 2017. This is the information that is currently in our Calagpermits system.

If recent paper pesticide use reports have been submitted, those reports may not have been reflected at the time of your request. Also, our county may be possibly a couple of months behind in entering this submitted paper pesticide use reports since that information must be enter manually.

Should you have any questions please do not hesitate to contact me.

Best Regards,
Blanca Enriquez-Pratt

Subject: FW: 17-P-750 FW: Public Records Request for Phase 1 ESA

Good Afternoon Mr. Dane:

The Department of Forestry and Fire Protection, CAL FIRE, has searched its records and has found no documents in response to your request.

Sincerely,

Anne Henigan
CAL FIRE Legal Office

Subject: Public Records Request for Phase 1 ESA

Good morning,

I am currently conducting a Phase 1 Environmental Site Assessment for a property located in Oxnard, CA . I am writing to request information on any pipelines that are located near the property listed below within 1,500 feet:

1825 Camino Del Sol Oxnard, CA, 93030
APN: 214-002-059

Any additional information including distance, direction from the property, direction the pipeline is running, whether the pipeline is active, and pipeline size/ depth would be greatly appreciated. Feel free to contact me with any questions.

Sincerely,

Jason Dane | Environmental Engineer II

Standard Facility Information Request

Facility Name:		
Facility Address:		
City:	State:	Zip Code:
Facility Number(s):		

Information Requested (Check All That Are Applicable):

- ☐ Copy of Current Facility Permit to Operate with Facility Permitted Emissions
- ☐ Inspection Summary (1996 to Present)
- ☐ Notice of Violation Summary (1996 to Present)
- ☐ Notice to Comply Summary (1996 to Present)
- ☐ Complaint Summary (1996 to Present)
- ☐ Other (Describe Below)

Requests for records must be for clearly identifiable records in the District's possession, and for facilities within the District's jurisdiction. The District is not required by law to create a new record or list from an already existing record.

Copying costs are $0.17 per page for requests that are 10 pages or more in length. If the "Other" box is checked, an additional charge for labor may be added to the invoice for the information requested.

Subject: Request for Public information under the Public Records Act

Good morning,

I am currently conducting a Phase 1 Environmental Site Assessment for a property located in Oxnard, CA . I am writing to request any records pertaining to the property listed below:

1825 Camino Del Sol Oxnard, CA, 93030
APN: 214-002-059
Historical and current use of the property is agricultural.

Any and all records on this property would be greatly appreciated. In addition we are only concerned with this property and not surrounding properties. Feel free to contact me with any questions.

Sincerely,

Jason Dane | Environmental Engineer II

Subject: Public Records Request for Phase 1 ESA

Good morning,

I am currently conducting a Phase 1 Environmental Site Assessment for a property located in Oxnard, CA . I am writing to request information on any pipelines that are located near the property listed below within 1,500 feet:

1825 Camino Del Sol Oxnard, CA, 93030
APN: 214-002-059

Any additional information including distance, direction from the property, direction the pipeline is running, whether the pipeline is active, and pipeline size/ depth would be greatly appreciated. Feel free to contact me with any questions.

Sincerely,

Jason Dane | Environmental Engineer II

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/31/2017 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 07/31/2017 has revealed that there is 1 SCH site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

SIC Code 2:	Not reported
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils,

SA RECYCLING (Continued) **S101482916**

rubble and concrete are examples of this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110012221513

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

OXNARD HIGH SCHOOL #8
1853 CAMINO DEL SOL
OXNARD, CA 93030

TARGET PROPERTY COORDINATES

Latitude (North):	34.206412 - 34° 12' 23.08''
Longitude (West):	119.158724 - 119° 9' 31.41''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	301108.0
UTM Y (Meters):	3786954.8
Elevation:	63 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5619402 OXNARD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

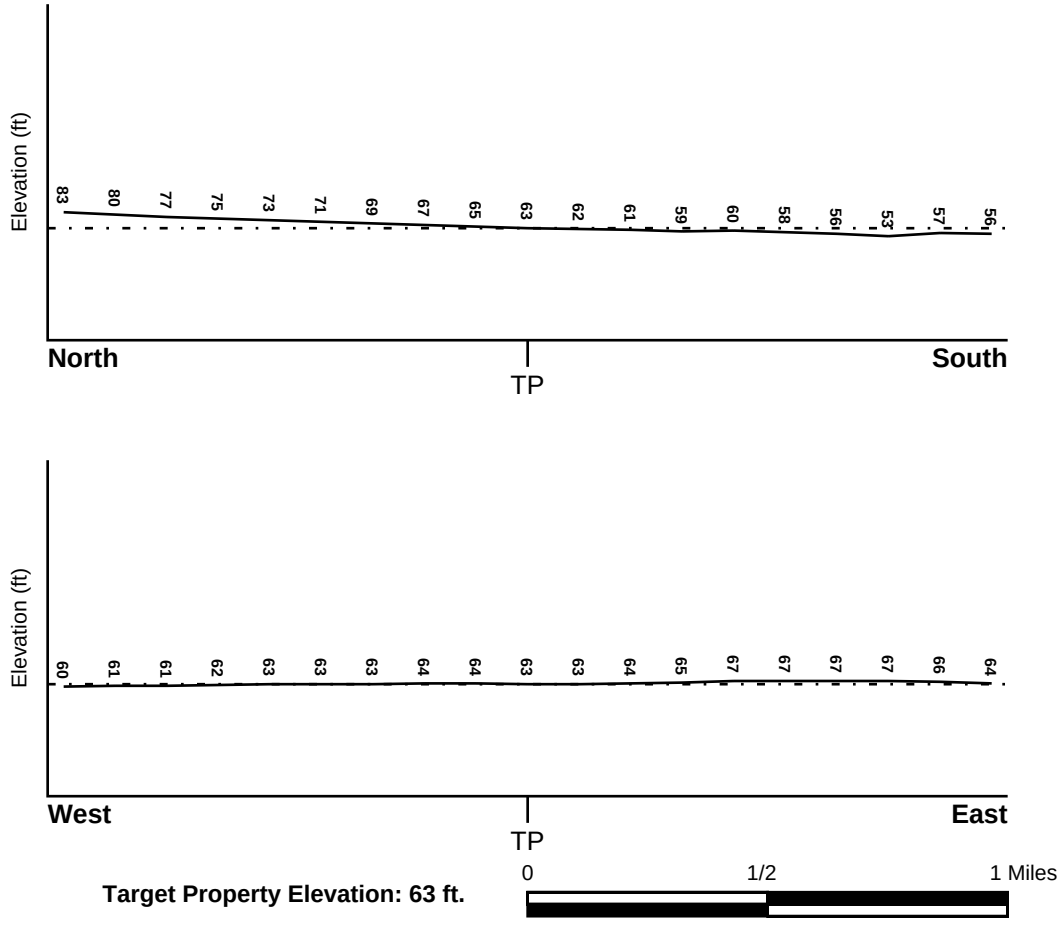
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06111C0910E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
OXNARD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PICO

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	14 inches	29 inches	stratified sandy loam to loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	29 inches	59 inches	stratified gravelly sand to stony sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: MOCHO

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	16 inches	59 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: HUENEME

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	16 inches	64 inches	stratified sand to silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	7 inches	59 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 5

Soil Component Name: PICO

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

2	14 inches	53 inches	stratified sandy loam to loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	53 inches	59 inches	stratified gravelly sand to gravelly loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Water System Information:

Prime Station Code:	01N/22W-03F08 S	User ID:	TAP
FRDS Number:	5610007021	County:	Ventura
District Number:	06	Station Type:	WELL/AMBNT/MUN/INTAKE
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	341203.8 1190927.5	Precision:	1,000 Feet (10 Seconds)
Source Name:	WELL 23 (1990)		
System Number:	5610007		
System Name:	OXNARD WATER DEPT		
Organization That Operates System:			
	251 SOUTH HAYES AVE. OXNARD, CA 93030		
Pop Served:	151500	Connections:	30588
Area Served:	OXNARD CITY		
Sample Collected:	05-JAN-11	Findings:	240. MG/L
Chemical:	ALKALINITY (TOTAL) AS CACO3		
Sample Collected:	05-JAN-11	Findings:	240. MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	05-JAN-11	Findings:	660. MG/L
Chemical:	HARDNESS (TOTAL) AS CACO3		
Sample Collected:	05-JAN-11	Findings:	170. MG/L
Chemical:	CALCIUM		
Sample Collected:	05-JAN-11	Findings:	58. MG/L
Chemical:	MAGNESIUM		
Sample Collected:	05-JAN-11	Findings:	560. MG/L
Chemical:	SULFATE		
Sample Collected:	05-JAN-11	Findings:	0.51 MG/L
Chemical:	FLUORIDE (F) (NATURAL-SOURCE)		
Sample Collected:	05-JAN-11	Findings:	95. UG/L
Chemical:	MANGANESE		
Sample Collected:	05-JAN-11	Findings:	1200. MG/L
Chemical:	TOTAL DISSOLVED SOLIDS		
Sample Collected:	05-JAN-11	Findings:	13. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	03-FEB-11	Findings:	240. MG/L
Chemical:	ALKALINITY (TOTAL) AS CACO3		
Sample Collected:	03-FEB-11	Findings:	240. MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	03-FEB-11	Findings:	630. MG/L
Chemical:	HARDNESS (TOTAL) AS CACO3		

Sample Collected:	03-FEB-11	Findings:	160. MG/L
Chemical:	CALCIUM		
Sample Collected:	03-FEB-11	Findings:	54. MG/L
Chemical:	MAGNESIUM		
Sample Collected:	03-FEB-11	Findings:	540. MG/L
Chemical:	SULFATE		
Sample Collected:	03-FEB-11	Findings:	0.58 MG/L
Chemical:	FLUORIDE (F) (NATURAL-SOURCE)		
Sample Collected:	03-FEB-11	Findings:	54. UG/L
Chemical:	MANGANESE		
Sample Collected:	03-FEB-11	Findings:	1100. MG/L
Chemical:	TOTAL DISSOLVED SOLIDS		
Sample Collected:	03-FEB-11	Findings:	15. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	02-MAR-11	Findings:	260. MG/L
Chemical:	ALKALINITY (TOTAL) AS CACO3		
Sample Collected:	02-MAR-11	Findings:	260. MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	02-MAR-11	Findings:	660. MG/L
Chemical:	HARDNESS (TOTAL) AS CACO3

CA WELLS **683**

Water System Information:

Prime Station Code:	01N/22W-03F05 S	User ID:	TAP
FRDS Number:	5610007018	County:	Ventura
District Number:	06	Station Type:	WELL/AMBNT/MUN/INTAKE
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	341214.0 1191028.0	Precision:	1,000 Feet (10 Seconds)
Source Name:	WELL 20		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

System Number: 5610007
System Name: OXNARD WATER DEPT
Organization That Operates System:
251 SOUTH HAYES AVE.
OXNARD, CA 93030
Pop Served: 151500 Connections: 30588
Area Served: OXNARD CITY

Sample Collected:	01-FEB-12	Findings:	140. MG/L
Chemical:	CALCIUM		
Sample Collected:	01-FEB-12	Findings:	45. MG/L
Chemical:	MAGNESIUM
