| Driver population adjustment, fP | 1.00 | 1.00 | 1.00 | 1.00 | |
| Flow rate, v | 8712 | 506 | 780 | 27 | pc/h |
| Volume ratio, VR | | 0.128 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 2 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 1 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 1286 | lc/h |
| Weaving lane changes, LCW | 1766 | lc/h |
| Non-weaving vehicle index, INW | 961 | |
| Non-weaving lane change, LCNW | 1433 | lc/h |
| Total lane changes, LCALL | 3199 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.525 | |
| Average weaving speed, SW | 51.1 | mi/h |
| Average non-weaving speed, SNW | 51.1 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 51.1 | mi/h |
| Weaving segment density, D | 39.2 | pc/mi/ln |
| Level of service, LOS | E | |
| Weaving segment v/c ratio | 0.915 | |
| Weaving segment flow rate, v | 10025 | pc/h |
| Weaving segment capacity, cW | 10468 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 3816 | 1100 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2192 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.915 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

| Driver population adjustment, fP | 1.00 | 1.00 | 1.00 | 1.00 | |
| Flow rate, v | 5143 | 1838 | 479 | 254 | pc/h |
| Volume ratio, VR | | 0.300 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 3 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 0 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 1838 | lc/h |
| Weaving lane changes, LCW | 2347 | lc/h |
| Non-weaving vehicle index, INW | 648 | |
| Non-weaving lane change, LCNW | 799 | lc/h |
| Total lane changes, LCALL | 3146 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.483 | |
| Average weaving speed, SW | 52.1 | mi/h |
| Average non-weaving speed, SNW | 49.4 | mi/h |

## Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 50.1 | mi/h |
| Weaving segment density, D | 30.8 | pc/mi/ln |
| Level of service, LOS | D | |
| Weaving segment v/c ratio | 0.706 | |
| Weaving segment flow rate, v | 7714 | pc/h |
| Weaving segment capacity, cW | 9414 | veh/h |

## Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 4022 | 1200 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2184 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.706 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Conversion to pc/h Under Base Conditions

| | Volume Components | | | | |
|---|---|---|---|---|---|
| | VFF | VRF | VFR | VRR | |
| Volume, V | 2570 | 570 | 290 | 30 | veh/h |
| Peak hour factor, PHF | 0.95 | 0.95 | 0.95 | 0.95 | |
| Peak 15-min volume, v15 | 676 | 150 | 76 | 8 | |
| Trucks and buses | 13 | 2 | 2 | 2 | % |
| Recreational vehicles | 1 | 1 | 1 | 1 | % |
| Trucks and buses PCE, ET | 1.5 | 1.5 | 1.5 | 1.5 | |
| Recreational vehicle PCE, ER | 1.2 | 1.2 | 1.2 | 1.2 | |
| Heavy vehicle adjustment, fHV | 0.937 | 0.988 | 0.988 | 0.988 | |
| Driver population adjustment, fP | 1.00 | 1.00 | 1.00 | 1.00 | |
| Flow rate, v | 2887 | 607 | 309 | 32 | pc/h |
| Volume ratio, VR | | 0.239 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 2 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 1 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 916 | lc/h |
| Weaving lane changes, LCW | 1145 | lc/h |
| Non-weaving vehicle index, INW | 496 | |
| Non-weaving lane change, LCNW | 945 | lc/h |
| Total lane changes, LCALL | 2090 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.266 | |
| Average weaving speed, SW | 58.4 | mi/h |
| Average non-weaving speed, SNW | 57.3 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 57.5 | mi/h |
| Weaving segment density, D | 22.2 | pc/mi/ln |
| Level of service, LOS | C | |
| Weaving segment v/c ratio | 0.594 | |
| Weaving segment flow rate, v | 3835 | pc/h |
| Weaving segment capacity, cW | 6051 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 4937 | 1700 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2152 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.594 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Inputs

| | | |
|---|---|---|
| Segment Type | Freeway | |
| Weaving configuration | One-Sided | |
| Number of lanes, N | 3 | ln |
| Weaving segment length, LS | 2000 | ft |
| Freeway free-flow speed, FFS | 70 | mi/h |
| Minimum segment speed, SMIN | 15 | mi/h |
| Freeway maximum capacity, cIFL | 2400 | pc/h/ln |
| Terrain type | Level | |
| Grade | - | % |
| Length | - | mi |

## Conversion to pc/h Under Base Conditions

| | Volume Components | | | | |
|---|---|---|---|---|---|
| | VFF | VRF | VFR | VRR | |
| Volume, V | 2790 | 1330 | 1170 | 70 | veh/h |
| Peak hour factor, PHF | 0.95 | 0.95 | 0.95 | 0.95 | |
| Peak 15-min volume, v15 | 734 | 350 | 308 | 18 | |
| Trucks and buses | 5 | 5 | 5 | 2 | % |
| Recreational vehicles | 1 | 1 | 1 | 1 | % |
| Trucks and buses PCE, ET | 1.5 | 1.5 | 1.5 | 1.5 | |
| Recreational vehicle PCE, ER | 1.2 | 1.2 | 1.2 | 1.2 | |
| Heavy vehicle adjustment, fHV | 0.974 | 0.974 | 0.974 | 0.988 | |
| Driver population adjustment, fP | 1.00 | 1.00 | 1.00 | 1.00 | |
| Flow rate, v | 3016 | 1438 | 1265 | 75 | pc/h |
| Volume ratio, VR | | 0.467 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 3 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 0 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 1438 | lc/h |
| Weaving lane changes, LCW | 1690 | lc/h |
| Non-weaving vehicle index, INW | 618 | |
| Non-weaving lane change, LCNW | 1143 | lc/h |
| Total lane changes, LCALL | 2833 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.297 | |
| Average weaving speed, SW | 57.4 | mi/h |
| Average non-weaving speed, SNW | 50.4 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 53.4 | mi/h |
| Weaving segment density, D | 36.2 | pc/mi/ln |
| Level of service, LOS | E | |
| Weaving segment v/c ratio | 0.918 | |
| Weaving segment flow rate, v | 5794 | pc/h |
| Weaving segment capacity, cW | 6146 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 5872 | 2000 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2103 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.918 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Inputs

| | | |
|---|---|---|
| Segment Type | Freeway | |
| Weaving configuration | One-Sided | |
| Number of lanes, N | 4 | ln |
| Weaving segment length, LS | 1060 | ft |
| Freeway free-flow speed, FFS | 70 | mi/h |
| Minimum segment speed, SMIN | 15 | mi/h |
| Freeway maximum capacity, cIFL | 2400 | pc/h/ln |
| Terrain type | Level | |
| Grade | - | % |
| Length | - | mi |

## Conversion to pc/h Under Base Conditions

| | Volume Components | | | | |
|---|---|---|---|---|---|
| | VFF | VRF | VFR | VRR | |
| Volume, V | 5059 | 244 | 515 | 12 | veh/h |
| Peak hour factor, PHF | 0.95 | 0.95 | 0.95 | 0.95 | |
| Peak 15-min volume, v15 | 1331 | 64 | 136 | 3 | |
| Trucks and buses | 6 | 2 | 3 | 2 | % |
| Recreational vehicles | 1 | 1 | 1 | 1 | % |
| Trucks and buses PCE, ET | 1.5 | 1.5 | 1.5 | 1.5 | |
| Recreational vehicle PCE, ER | 1.2 | 1.2 | 1.2 | 1.2 | |
| Heavy vehicle adjustment, fHV | 0.969 | 0.988 | 0.983 | 0.988 | |
| Driver population adjustment, fP | 1.00 | 1.00 | 1.00 | 1.00 | |
| Flow rate, v | 5496 | 260 | 551 | 13 | pc/h |
| Volume ratio, VR | | 0.128 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 2 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 1 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 811 | lc/h |
| Weaving lane changes, LCW | 1111 | lc/h |
| Non-weaving vehicle index, INW | 584 | |
| Non-weaving lane change, LCNW | 939 | lc/h |
| Total lane changes, LCALL | 2050 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.380 | |
| Average weaving speed, SW | 54.8 | mi/h |
| Average non-weaving speed, SNW | 56.6 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 56.3 | mi/h |
| Weaving segment density, D | 28.0 | pc/mi/ln |
| Level of service, LOS | D | |
| Weaving segment v/c ratio | 0.722 | |
| Weaving segment flow rate, v | 6320 | pc/h |
| Weaving segment capacity, cW | 8484 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 3817 | 1060 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2189 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.722 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Inputs

| | | |
|---|---|---|
| Segment Type | Freeway | |
| Weaving configuration | One-Sided | |
| Number of lanes, N | 5 | ln |
| Weaving segment length, LS | 740 | ft |
| Freeway free-flow speed, FFS | 70 | mi/h |
| Minimum segment speed, SMIN | 15 | mi/h |
| Freeway maximum capacity, cIFL | 2400 | pc/h/ln |
| Terrain type | Level | |
| Grade | - | % |
| Length | - | mi |

## Conversion to pc/h Under Base Conditions

| | Volume Components | | | | |
|---|---|---|---|---|---|
| | VFF | VRF | VFR | VRR | |
| Volume, V | 6484 | 1216 | 536 | 214 | veh/h |
| Peak hour factor, PHF | 0.95 | 0.95 | 0.95 | 0.95 | |
| Peak 15-min volume, v15 | 1706 | 320 | 141 | 56 | |
| Trucks and buses | 4 | 17 | 2 | 2 | % |
| Recreational vehicles | 1 | 1 | 1 | 1 | % |
| Trucks and buses PCE, ET | 1.5 | 1.5 | 1.5 | 1.5 | |
| Recreational vehicle PCE, ER | 1.2 | 1.2 | 1.2 | 1.2 | |
| Heavy vehicle adjustment, fHV | 0.978 | 0.920 | 0.988 | 0.988 | |
| Driver population adjustment, fP | 1.00 | 1.00 | 1.00 | 1.00 | |
| Flow rate, v | 6975 | 1391 | 571 | 228 | pc/h |
| Volume ratio, VR | | 0.214 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 3 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 0 | lc/pc |
| Minimum FR lane changes, LCFR | 1 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 571 | lc/h |
| Weaving lane changes, LCW | 927 | lc/h |
| Non-weaving vehicle index, INW | 533 | |
| Non-weaving lane change, LCNW | 922 | lc/h |
| Total lane changes, LCALL | 1849 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.465 | |
| Average weaving speed, SW | 52.5 | mi/h |
| Average non-weaving speed, SNW | 57.1 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 56.0 | mi/h |
| Weaving segment density, D | 32.7 | pc/mi/ln |
| Level of service, LOS | D | |
| Weaving segment v/c ratio | 0.826 | |
| Weaving segment flow rate, v | 9165 | pc/h |
| Weaving segment capacity, cW | 10851 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 3115 | 740 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2218 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.826 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 6307 | 1950 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2067 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.872 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

|---|---|---|
| Weaving segment speed, S | 58.0 | mi/h |
| Weaving segment density, D | 21.3 | pc/mi/ln |
| Level of service, LOS | C | |
| Weaving segment v/c ratio | 0.709 | |
| Weaving segment flow rate, v | 6181 | pc/h |
| Weaving segment capacity, cW | 8492 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 5319 | 1250 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2089 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.709 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.216 | |
| Average weaving speed, SW | 60.2 | mi/h |
| Average non-weaving speed, SNW | 63.3 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 62.5 | mi/h |
| Weaving segment density, D | 13.4 | pc/mi/ln |
| Level of service, LOS | B | |
| Weaving segment v/c ratio | 0.407 | |
| Weaving segment flow rate, v | 4184 | pc/h |
| Weaving segment capacity, cW | 9998 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 4884 | 1850 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2168 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.407 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Freeway Data

| | | |
|---|---|---|
| Type of analysis | Merge | |
| Number of lanes in freeway | 2 | |
| Free-flow speed on freeway | 70.0 | mph |
| Volume on freeway | 4120 | vph |

## On Ramp Data

| | | |
|---|---|---|
| Side of freeway | Right | |
| Number of lanes in ramp | 1 | |
| Free-Flow speed on ramp | 35.0 | mph |
| Volume on ramp | 690 | vph |
| Length of first accel/decel lane | 1500 | ft |
| Length of second accel/decel lane | | ft |

## Adjacent Ramp Data (if one exists)

| | | |
|---|---|---|
| Does adjacent ramp exist? | Yes | |
| Volume on adjacent ramp | 1236 | vph |
| Position of adjacent ramp | Upstream | |
| Type of adjacent ramp | Off | |
| Distance to adjacent ramp | 2000 | ft |

## Conversion to pc/h Under Base Conditions

| Junction Components | Freeway | Ramp | Adjacent Ramp | |
|---|---|---|---|---|
| Volume, V (vph) | 4120 | 690 | 1236 | vph |
| Peak-hour factor, PHF | 0.95 | 0.95 | 0.95 | |
| Peak 15-min volume, v15 | 1084 | 182 | 325 | v |
| Trucks and buses | 5 | 8 | 5 | % |
| Recreational vehicles | 1 | 1 | 1 | % |
| Terrain type: | Level | Level | Level | |
| Grade | % | % | % | |
| Length | mi | mi | mi | |
| Trucks and buses PCE, ET | 1.5 | 1.5 | 1.5 | |
| Recreational vehicle PCE, ER | 1.2 | 1.2 | 1.2 | |
| Heavy vehicle adjustment, fHV | 0.974 | 0.960 | 0.974 | |
| Driver population factor, fP | 1.00 | 1.00 | 1.00 | |
| Flow rate, vp | 4454 | 757 | 1336 | pcph |

## Estimation of V12 Merge Areas

$L_{EQ}$ = (Equation 13-6 or 13-7)

P = 1.000 Using Equation 0

$v_{12} = v_F (P_{FM}) = 4454$ pc/h

## Capacity Checks

| | Actual | Maximum | LOS F? |
|---|---|---|---|
| $v_{FO}$ | 5211 | 4800 | Yes |

$v_3$ or $v_{av34}$ 0 pc/h (Equation 13-14 or 13-17)

Is $v_3$ or $v_{av34}$ > 2700 pc/h? No

Is $v_3$ or $v_{av34}$ > 1.5 $v_{12}$ /2 No

If yes, $v_{12A}$ = 4454 (Equation 13-15, 13-16, 13-18, or 13-19)

## Flow Entering Merge Influence Area

| | Actual | Max Desirable | Violation? |
|---|---|---|---|
| $v_{R12}$ | 5211 | 4600 | Yes |

## Level of Service Determination (if not F)

Density, $D_R = 5.475 + 0.00734 v_R + 0.0078 v_{12} - 0.00627 L_A$ = 36.4 pc/mi/ln

Level of service for ramp-freeway junction areas of influence F

## Speed Estimation

| | | |
|---|---|---|
| Intermediate speed variable, | $M_S$ = 0.931 | |
| Space mean speed in ramp influence area, | $S_R$ = 43.9 | mph |
| Space mean speed in outer lanes, | $S_0$ = N/A | mph |
| Space mean speed for all vehicles, | $S$ = 43.9 | mph |

## Estimation of V12 Diverge Areas

$L_{EQ}$ = (Equation 13-12 or 13-13)

P = 0.436 Using Equation 8

$$v_{12} = v_R + (v_F - v_R) P_{FD} = 4011 \text{ pc/h}$$

## Capacity Checks

| | Actual | Maximum | LOS F? |
|---|---|---|---|
| $v_{Fi} = v_F$ | 8271 | 9600 | No |
| $v_{FO} = v_F - v_R$ | 7554 | 9600 | No |
| $v_R$ | 717 | 2000 | No |
| $v_3$ or $v_{av34}$ | 2130 pc/h | (Equation 13-14 or 13-17) | |
| Is $v_3$ or $v_{av34}$ | > 2700 pc/h? | No | |
| Is $v_3$ or $v_{av34}$ | > 1.5 $v_{12}$ /2 | No | |

If yes, $v_{12A}$ = 4011 (Equation 13-15, 13-16, 13-18, or 13-19)

## Flow Entering Diverge Influence Area

| | Actual | Max Desirable | Violation? |
|---|---|---|---|
| $v_{12}$ | 4011 | 4400 | No |

## Level of Service Determination (if not F)

Density, $D_R = 4.252 + 0.0086\, v_{12} - 0.009\, L_D$ = 36.0 pc/mi/ln

Level of service for ramp-freeway junction areas of influence E

## Speed Estimation

Intermediate speed variable, $D_S$ = 0.493

Space mean speed in ramp influence area, $S_R$ = 56.2 mph

Space mean speed in outer lanes, $S_0$ = 72.4 mph

Space mean speed for all vehicles, $S$ = 63.5 mph

## Speed Inputs and Adjustments

| | | |
|---|---|---|
| Lane width | - | ft |
| Right-side lateral clearance | - | ft |
| Total ramp density, TRD | - | ramps/mi |
| Number of lanes, N | 4 | |
| Free-flow speed: | Measured | |
| FFS or BFFS | 70.0 | mi/h |
| Lane width adjustment, fLW | - | mi/h |
| Lateral clearance adjustment, fLC | - | mi/h |
| TRD adjustment | - | mi/h |
| Free-flow speed, FFS | 70.0 | mi/h |

## LOS and Performance Measures

| | | |
|---|---|---|
| Flow rate, vp | 1287 | pc/h/ln |
| Free-flow speed, FFS | 70.0 | mi/h |
| Average passenger-car speed, S | 69.9 | mi/h |
| Number of lanes, N | 4 | |
| Density, D | 18.4 | pc/mi/ln |
| Level of service, LOS | C | |

Overall results are not computed when free-flow speed is less than 55 mph.

| Flow rate, v | 5412 | 1968 | 249 | 338 | pc/h |
| Volume ratio, VR | | 0.278 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 2 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 1 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 2217 | lc/h |
| Weaving lane changes, LCW | 2852 | lc/h |
| Non-weaving vehicle index, INW | 978 | |
| Non-weaving lane change, LCNW | 1143 | lc/h |
| Total lane changes, LCALL | 3995 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.443 | |
| Average weaving speed, SW | 53.1 | mi/h |
| Average non-weaving speed, SNW | 46.4 | mi/h |

## Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 48.1 | mi/h |
| Weaving segment density, D | 33.1 | pc/mi/ln |
| Level of service, LOS | D | |
| Weaving segment v/c ratio | 0.924 | |
| Weaving segment flow rate, v | 7967 | pc/h |
| Weaving segment capacity, cW | 8398 | veh/h |

## Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 5352 | 1700 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2121 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.924 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

| Total lane changes, LCALL | 1772 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.470 | |
| Average weaving speed, SW | 52.4 | mi/h |
| Average non-weaving speed, SNW | 57.9 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 57.0 | mi/h |
| Weaving segment density, D | 27.8 | pc/mi/ln |
| Level of service, LOS | C | |
| Weaving segment v/c ratio | 0.740 | |
| Weaving segment flow rate, v | 7931 | pc/h |
| Weaving segment capacity, cW | 10342 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 4033 | 700 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2145 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.740 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 3 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 0 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 396 | lc/h |
| Weaving lane changes, LCW | 1008 | lc/h |
| Non-weaving vehicle index, INW | 1275 | |
| Non-weaving lane change, LCNW | 1545 | lc/h |
| Total lane changes, LCALL | 2553 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.327 | |
| Average weaving speed, SW | 56.5 | mi/h |
| Average non-weaving speed, SNW | 58.7 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 58.5 | mi/h |
| Weaving segment density, D | 30.2 | pc/mi/ln |
| Level of service, LOS | D | |
| Weaving segment v/c ratio | 0.743 | |
| Weaving segment flow rate, v | 8823 | pc/h |
| Weaving segment capacity, cW | 10504 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 1945 | 1600 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2374 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.743 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

| Heavy vehicle adjustment, fHV | 0.873 | 0.885 | 0.962 | 0.962 | |
| Driver population adjustment, fP | 1.00 | 1.00 | 1.00 | 1.00 | |
| Flow rate, v | 5926 | 1537 | 764 | 74 | pc/h |
| Volume ratio, VR | | 0.277 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 2 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 1 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 2301 | lc/h |
| Weaving lane changes, LCW | 3060 | lc/h |
| Non-weaving vehicle index, INW | 1380 | |
| Non-weaving lane change, LCNW | 1705 | lc/h |
| Total lane changes, LCALL | 4765 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.402 | |
| Average weaving speed, SW | 54.2 | mi/h |
| Average non-weaving speed, SNW | 45.5 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 47.6 | mi/h |
| Weaving segment density, D | 34.9 | pc/mi/ln |
| Level of service, LOS | D | |
| Weaving segment v/c ratio | 0.959 | |
| Weaving segment flow rate, v | 8301 | pc/h |
| Weaving segment capacity, cW | 7562 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 5341 | 2300 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2168 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.959 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

| Flow rate, v | 6989 | 457 | 896 | 23 | pc/h |
| Volume ratio, VR | | 0.162 | | | |

## Configuration Characteristics

| | | |
|---|---|---|
| Number of maneuver lanes, NWL | 3 | ln |
| Interchange density, ID | 1.0 | int/mi |
| Minimum RF lane changes, LCRF | 1 | lc/pc |
| Minimum FR lane changes, LCFR | 0 | lc/pc |
| Minimum RR lane changes, LCRR | | lc/pc |
| Minimum weaving lane changes, LCMIN | 457 | lc/h |
| Weaving lane changes, LCW | 719 | lc/h |
| Non-weaving vehicle index, INW | 617 | |
| Non-weaving lane change, LCNW | 1151 | lc/h |
| Total lane changes, LCALL | 1870 | lc/h |

## Weaving and Non-Weaving Speeds

| | | |
|---|---|---|
| Weaving intensity factor, W | 0.410 | |
| Average weaving speed, SW | 54.0 | mi/h |
| Average non-weaving speed, SNW | 56.7 | mi/h |

Weaving Segment Speed, Density, Level of Service and Capacity

| | | |
|---|---|---|
| Weaving segment speed, S | 56.2 | mi/h |
| Weaving segment density, D | 37.2 | pc/mi/ln |
| Level of service, LOS | E | |
| Weaving segment v/c ratio | 0.921 | |
| Weaving segment flow rate, v | 8365 | pc/h |
| Weaving segment capacity, cW | 8714 | veh/h |

Limitations on Weaving Segments

If limit reached, see note.

| | Minimum | Maximum | Actual | Note |
|---|---|---|---|---|
| Weaving length (ft) | 300 | 2583 | 880 | a,b |
| | | Maximum | Analyzed | |
| Density-based capacty, cIWL (pc/h/ln) | | 2400 | 2270 | c |
| | | Maximum | Analyzed | |
| v/c ratio | | 1.00 | 0.921 | d |

Notes:

a. In weaving segments shorter than 300 ft, weaving vehicles are assumed to make only necessary lane changes.
b. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, 'Freeway Merge and Diverge Segments.'
c. The density-based capacity exceeds the capacity of a basic freeway segment, under equivalent ideal conditions.
d. Volumes exceed the weaving segment capacity. The level of service is F.

## Estimation of V12 Merge Areas

$L_{EQ}$ = (Equation 13-6 or 13-7)

P = 0.126 Using Equation 4

$v_{12} = v_F (P_{FM}) = 757$ pc/h

## Capacity Checks

| | Actual | Maximum | LOS F? |
|---|---|---|---|
| $v_{FO}$ | 6746 | 9600 | No |
| $v_3$ or $v_{av34}$ | 2627 pc/h | (Equation 13-14 or 13-17) | |
| Is $v_3$ or $v_{av34}$ > 2700 pc/h? | | No | |
| Is $v_3$ or $v_{av34}$ > 1.5 $v_{12}$ /2 | | Yes | |

If yes, $v_{12A} = 2404$ (Equation 13-15, 13-16, 13-18, or 13-19)

## Flow Entering Merge Influence Area

| | Actual | Max Desirable | Violation? |
|---|---|---|---|
| $v_{R12}$ | 3139 | 4600 | No |

## Level of Service Determination (if not F)

Density, $D = 5.475 + 0.00734 v_R + 0.0078 v_{12} - 0.00627 L_A = 25.2$ pc/mi/ln

Level of service for ramp-freeway junction areas of influence C

## Speed Estimation

| | | |
|---|---|---|
| Intermediate speed variable, | $M_S = 0.362$ | |
| Space mean speed in ramp influence area, | $S_R = 59.9$ | mph |
| Space mean speed in outer lanes, | $S_0 = 65.3$ | mph |
| Space mean speed for all vehicles, | $S = 62.7$ | mph |

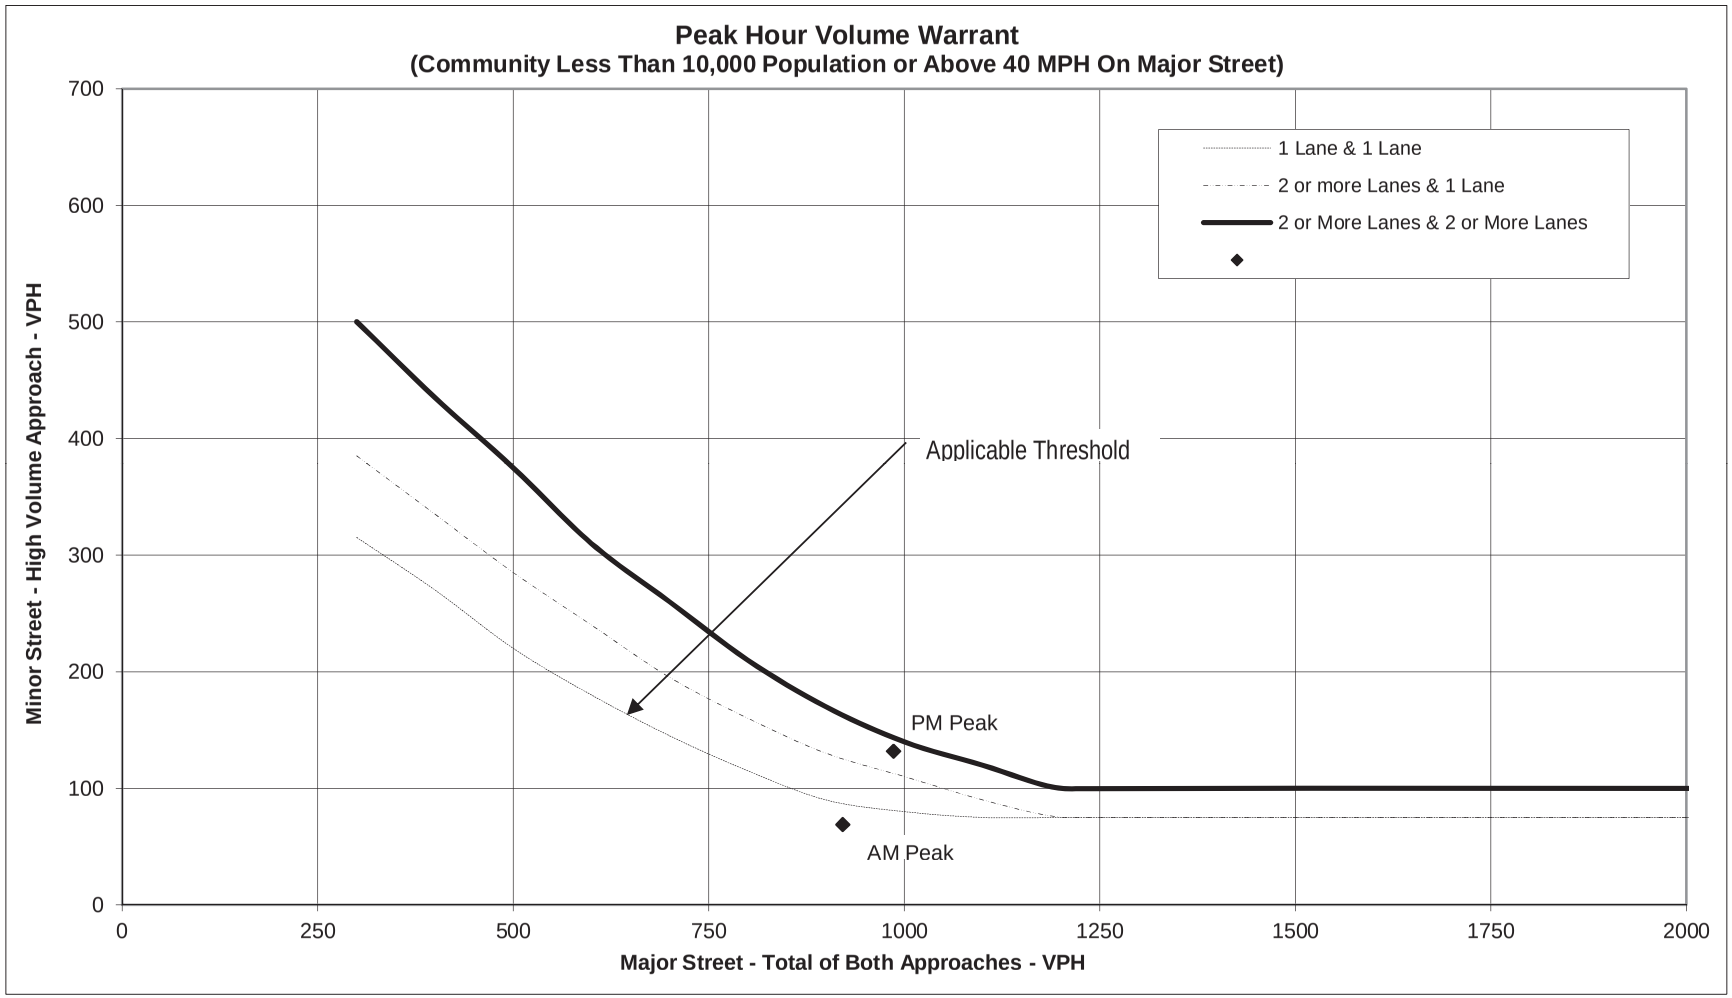
# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 3 - Alessandro Blvd & Theodore St
Type: 1 Lane & 1 Lane
Major Street (Orientation): Theodore St (NB-SB)
Minor Street (Orientation): Alessandro Blvd (WB)

| | Minor Street Approach Volume (Alessandro) | | | Major Street Approach Volume (Theodore) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 0 | 99 | 99 | 100 | 15 | 115 | No |
| PM Peak | 0 | 61 | 61 | 162 | 45 | 207 | No |

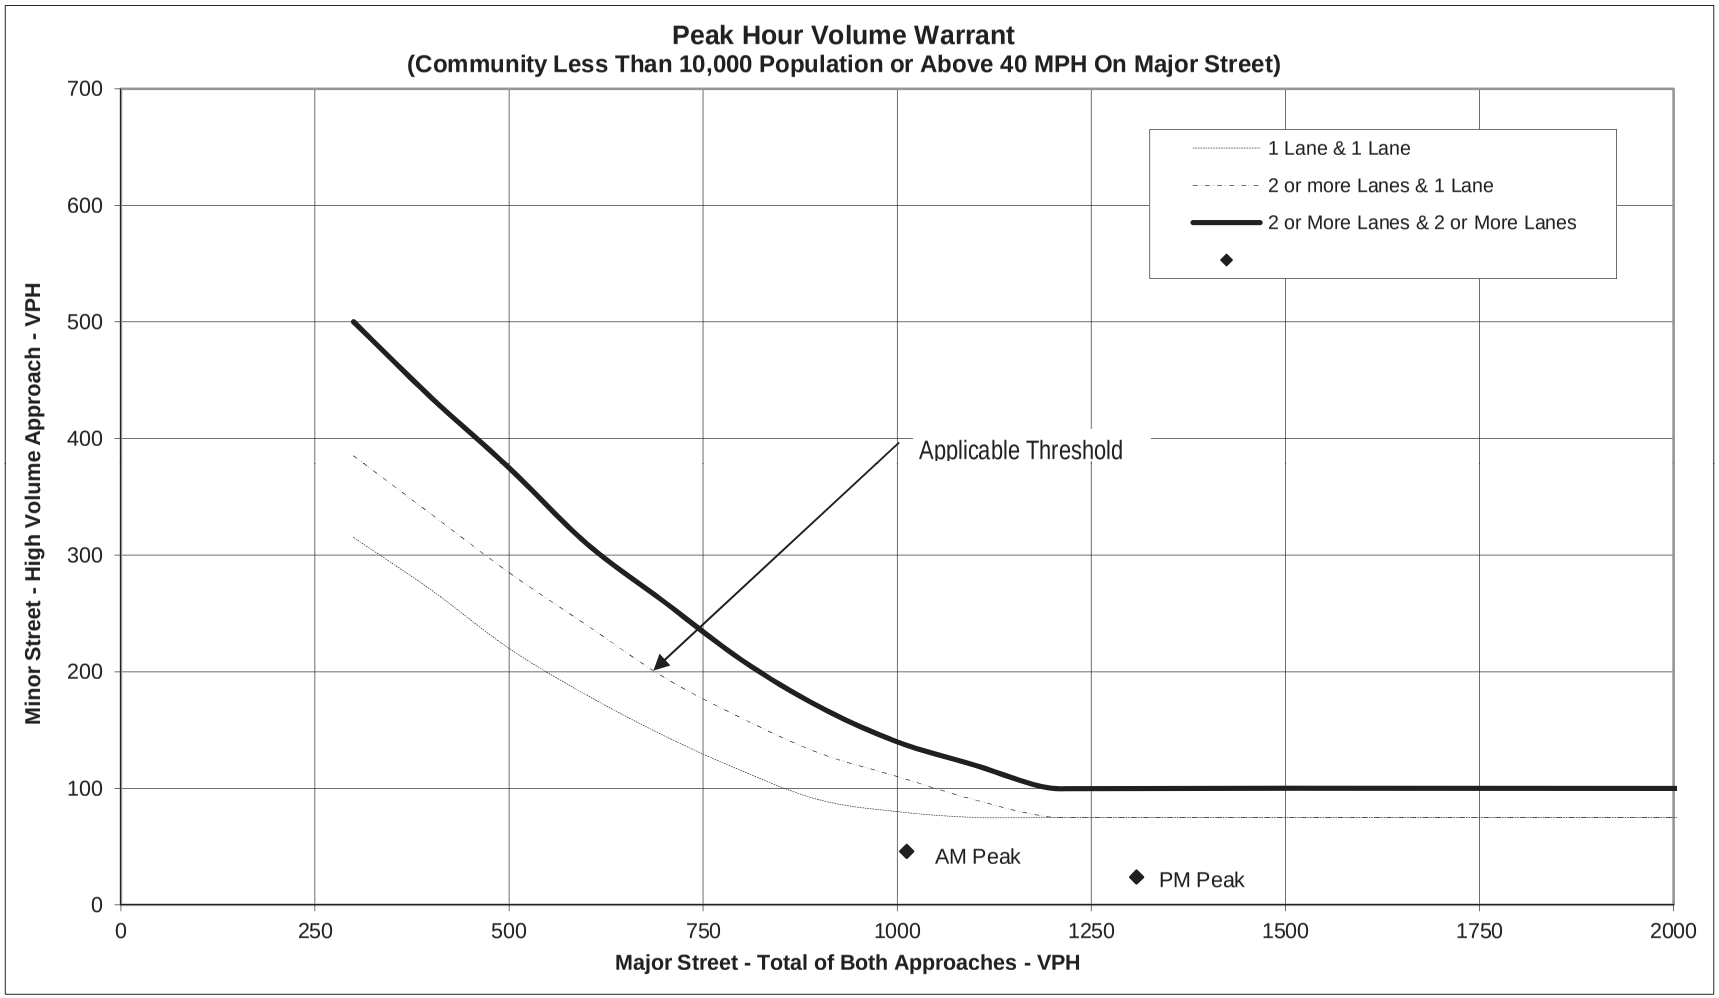


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 6 - Alessandro Blvd & Gilman Springs Rd
Type: 1 Lane & 1 Lane
Major Street (Orientation): Gilman Springs Rd (NB-SB)
Minor Street (Orientation): Alessandro Blvd (EB)

| | Minor Street Approach Volume (Alessandro) | | | Major Street Approach Volume (Gilman Springs) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 69 | 0 | 69 | 680 | 241 | 921 | No |
| PM Peak | 132 | 0 | 132 | 372 | 614 | 986 | Yes |

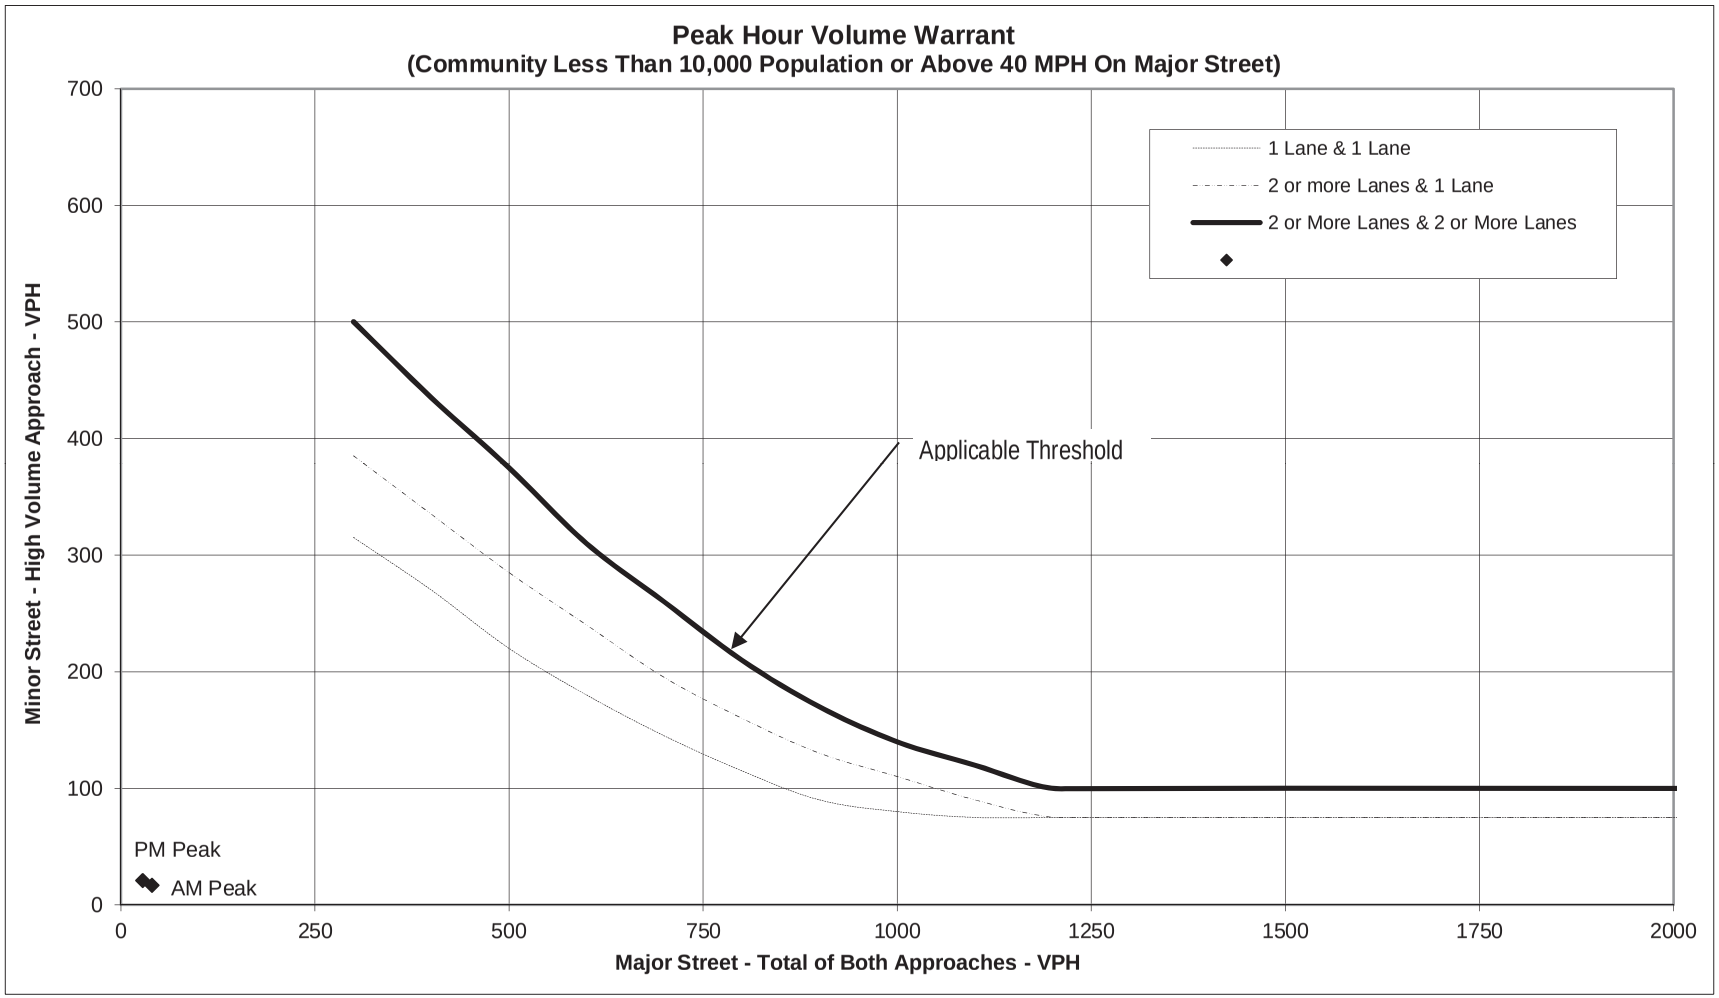


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 10 - Locust Ave & Rredlands Blvd.
Type: 2 or more Lanes & 1 Lane
Major Street (Orientation): Redlands Blvd (NB-SB)
Minor Street (Orientation): Locust (EB-WB)

| | Minor Street Approach Volume (Locust) | | | Major Street Approach Volume (Redlands) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 46 | 2 | 46 | 601 | 411 | 1,012 | No |
| PM Peak | 24 | 6 | 24 | 549 | 759 | 1,308 | No |

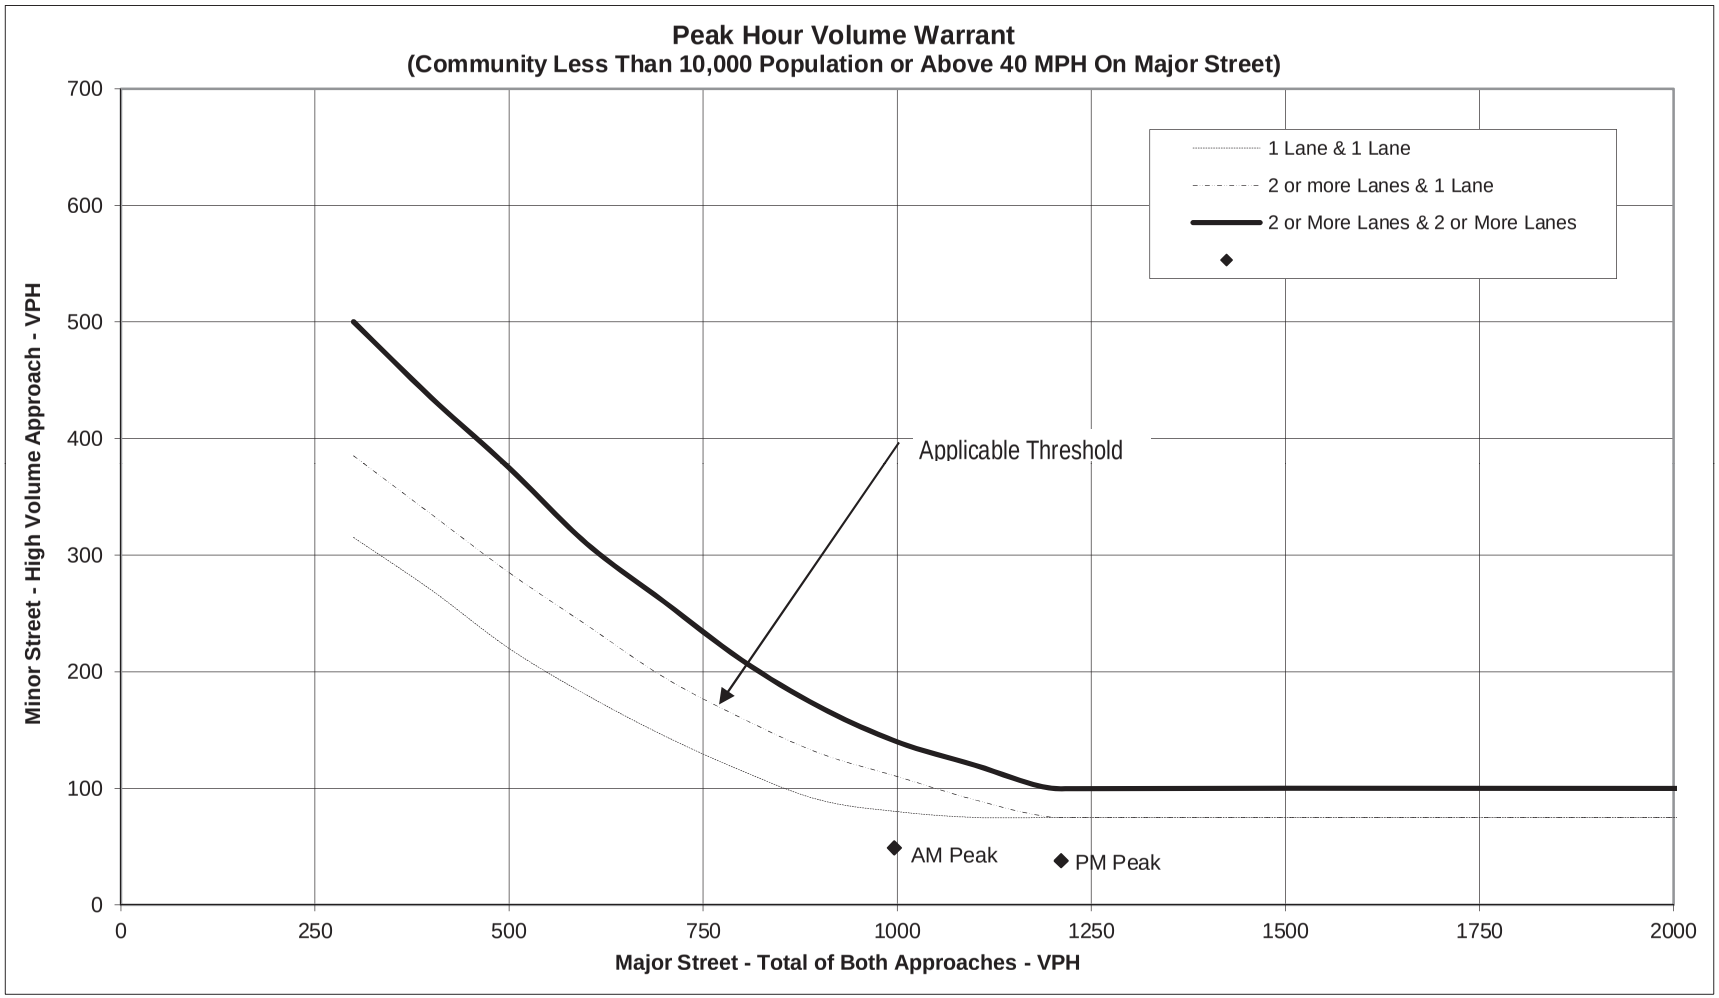


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 12 - Ironwood Ave. & Theodore St
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Theodore St (NB)
Minor Street (Orientation): Ironwood Ave (EB-WB)

| | Minor Street Approach Volume (Ironwood) | | | Major Street Approach Volume (Theodore) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 17 | 11 | 17 | 40 | 0 | 40 | No |
| PM Peak | 16 | 21 | 21 | 28 | 0 | 28 | No |

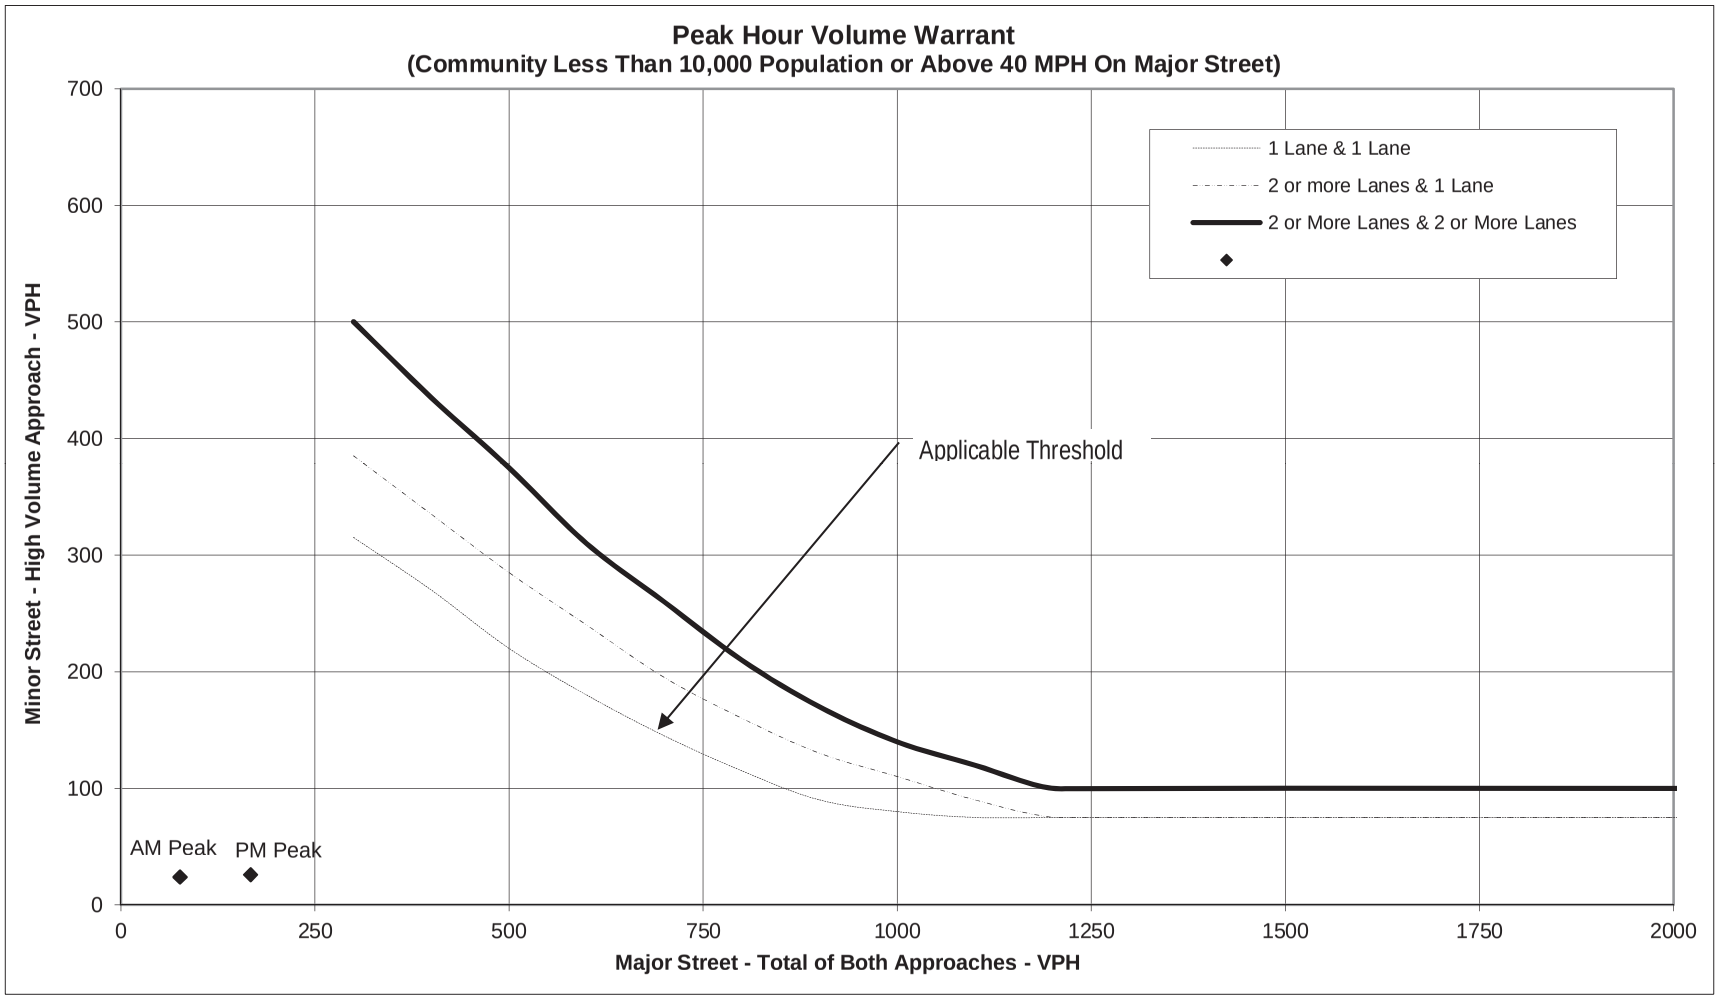


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 13 - SR-60 WB Ramps & Redlands Blvd
Type: 2 or more Lanes & 1 Lane
Major Street (Orientation): Redlands Blvd (NB-SB)
Minor Street (Orientation): SR-60 WB Ramps (EB-WB)

| | Minor Street Approach Volume (SR-60 WB Ramp | | | Major Street Approach Volume (Redlands) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 6 | 49 | 49 | 609 | 387 | 996 | No |
| PM Peak | 9 | 38 | 38 | 598 | 613 | 1,211 | No |

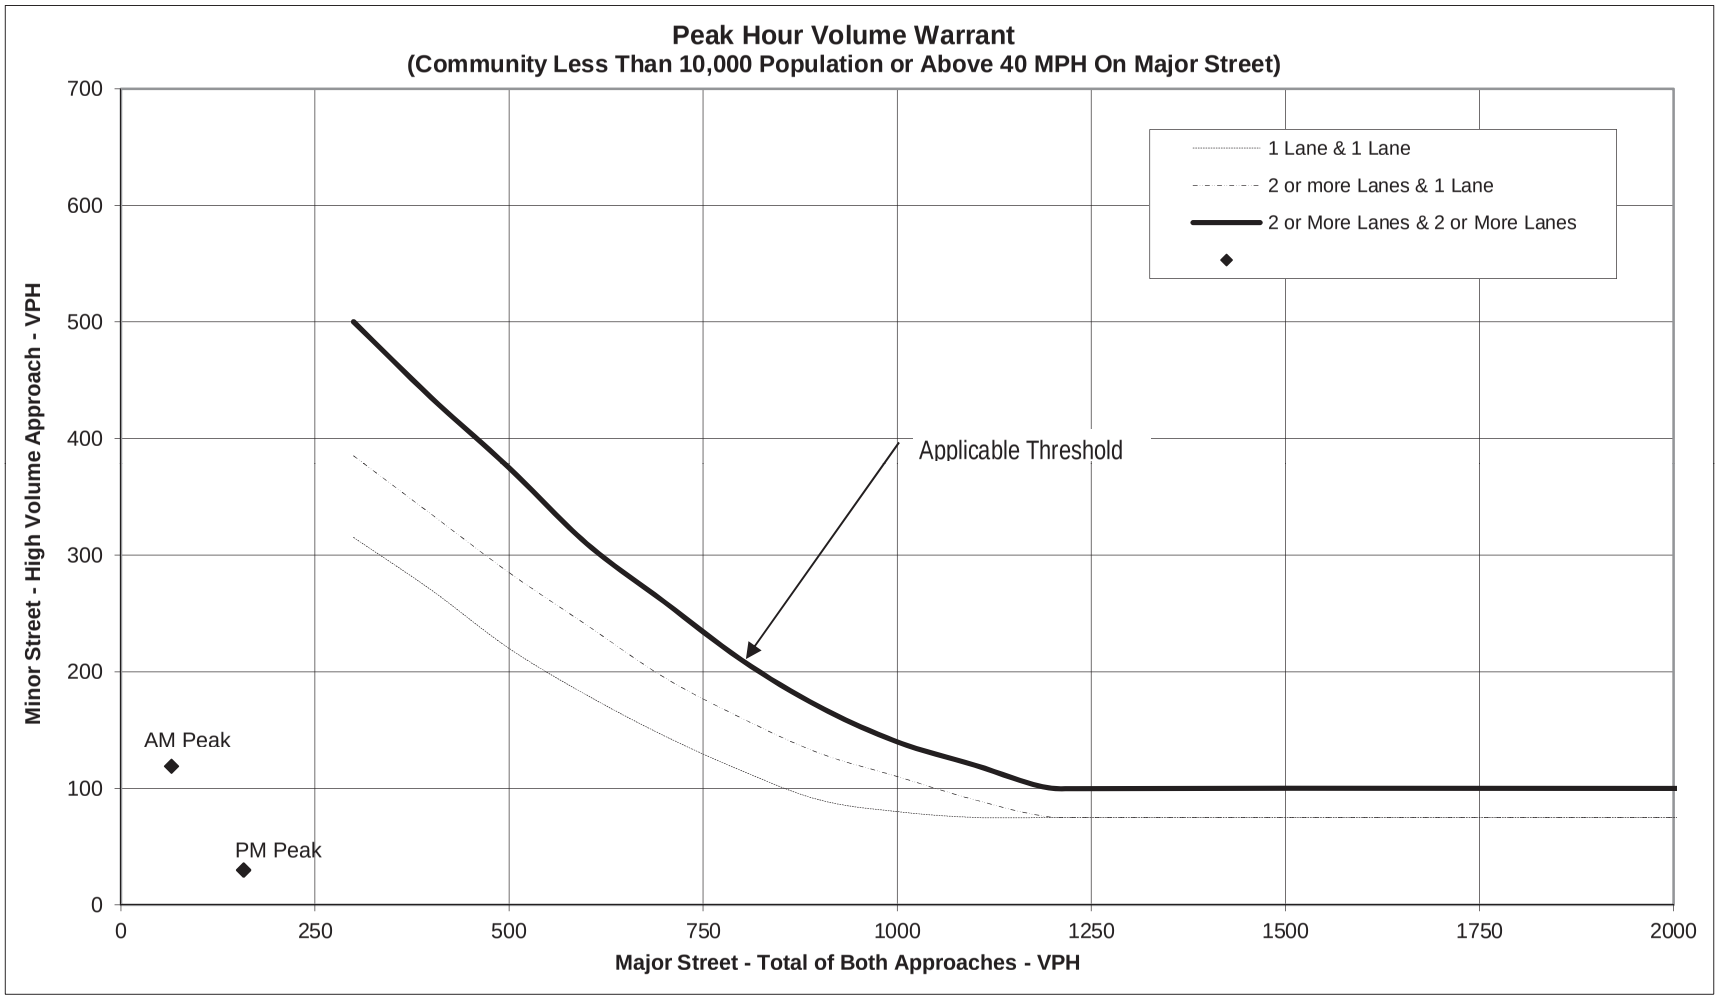


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 15 - SR-60 WB Ramps & Theodore St.
Type: 1 Lane & 1 Lane
Major Street (Orientation): Theodore St (NB-SB)
Minor Street (Orientation): SR-60 WB Ramps (WB)

| | Minor Street Approach Volume (SR-60) | | | Major Street Approach Volume (Theodore) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 0 | 24 | 24 | 50 | 26 | 76 | No |
| PM Peak | 0 | 26 | 26 | 140 | 27 | 167 | No |

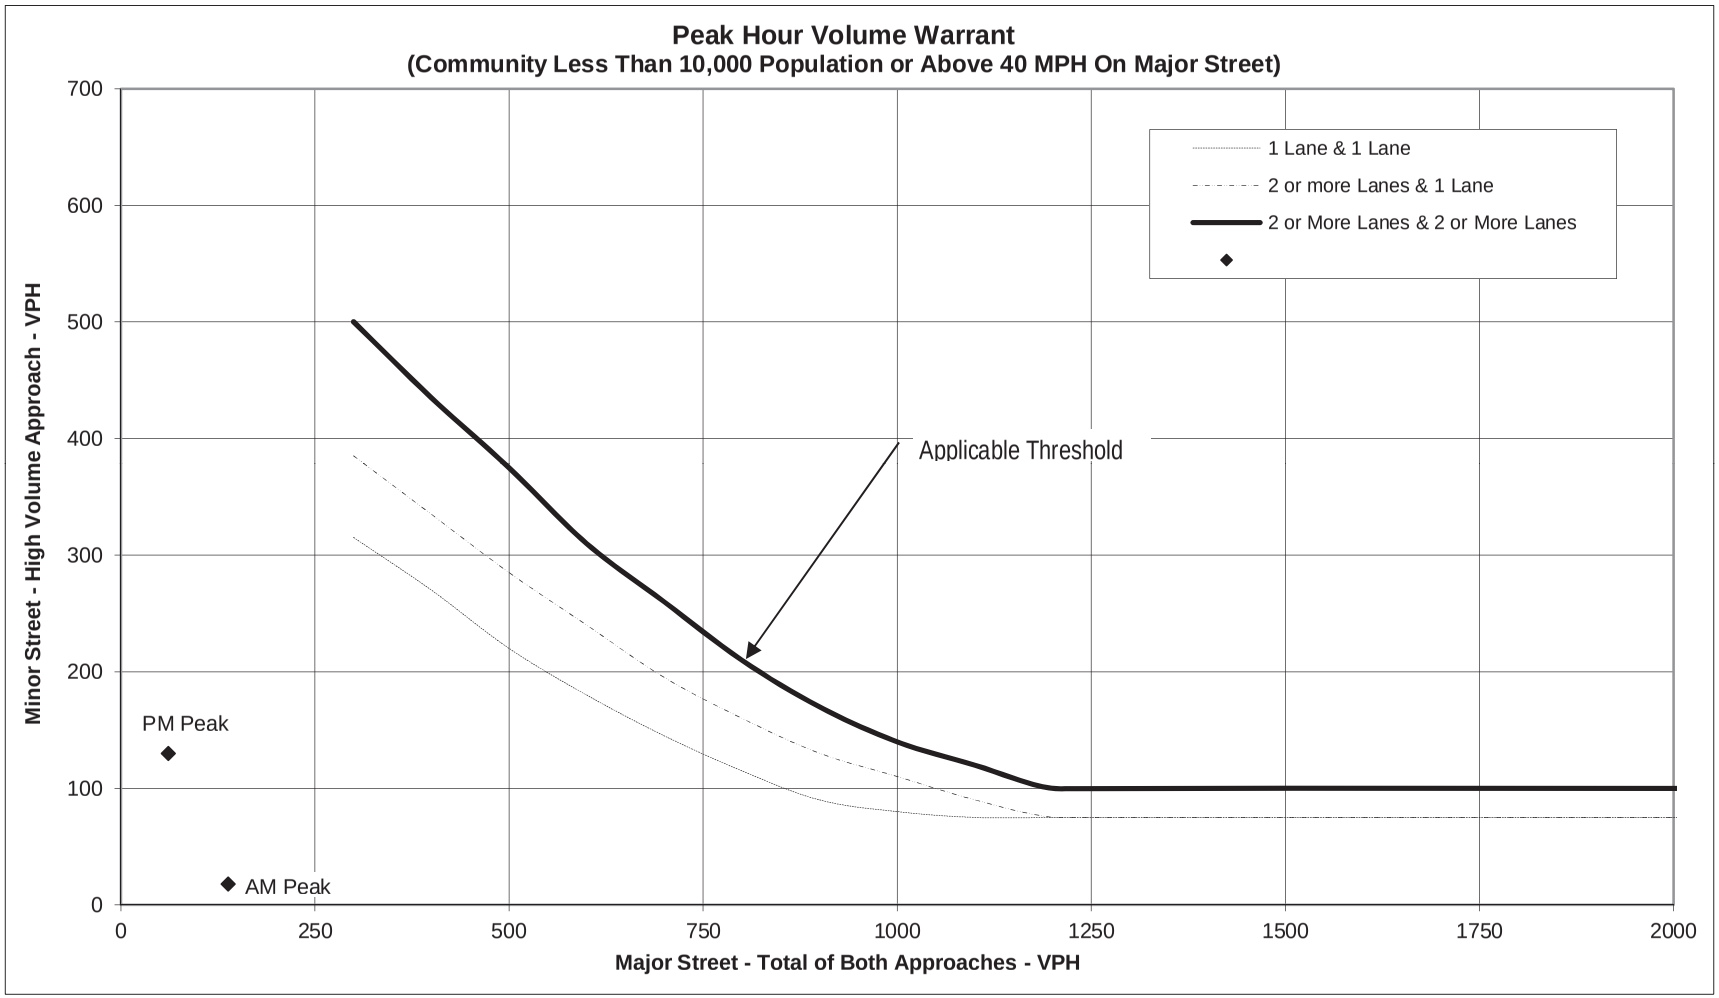


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 16 - SR-60 EB Ramps & Theodore St.
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Theodore St (NB-SB)
Minor Street (Orientation): SR-60 EB Ramps (EB)

| | Minor Street Approach Volume (SR-60) | | | Major Street Approach Volume (Theodore) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 119 | 0 | 119 | 44 | 21 | 65 | No |
| PM Peak | 30 | 0 | 30 | 131 | 27 | 158 | No |

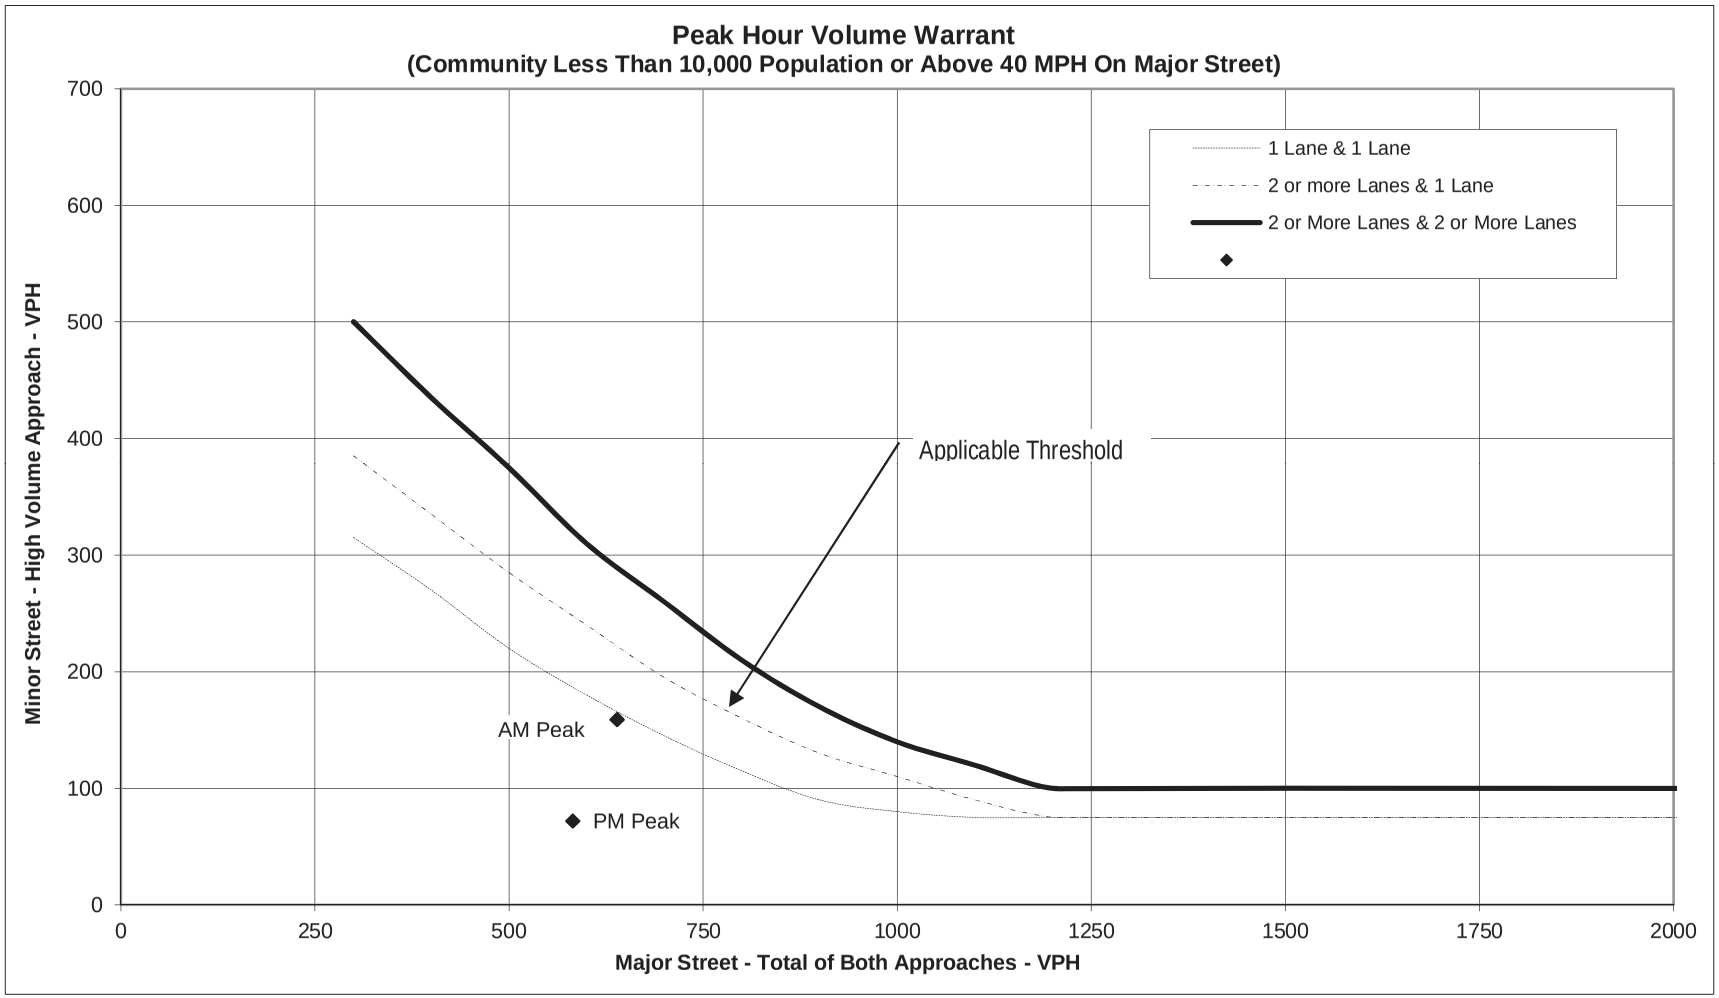


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 19 - Eucalyptus Ave & Theodore St.
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Theodore St (NB-SB)
Minor Street (Orientation): Eucalyptus Ave (EB)

| | Minor Street Approach Volume (Eucalyptus Ave | | | Major Street Approach Volume (Theodore) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 18 | 0 | 18 | 36 | 102 | 138 | No |
| PM Peak | 130 | 0 | 130 | 26 | 35 | 61 | No |

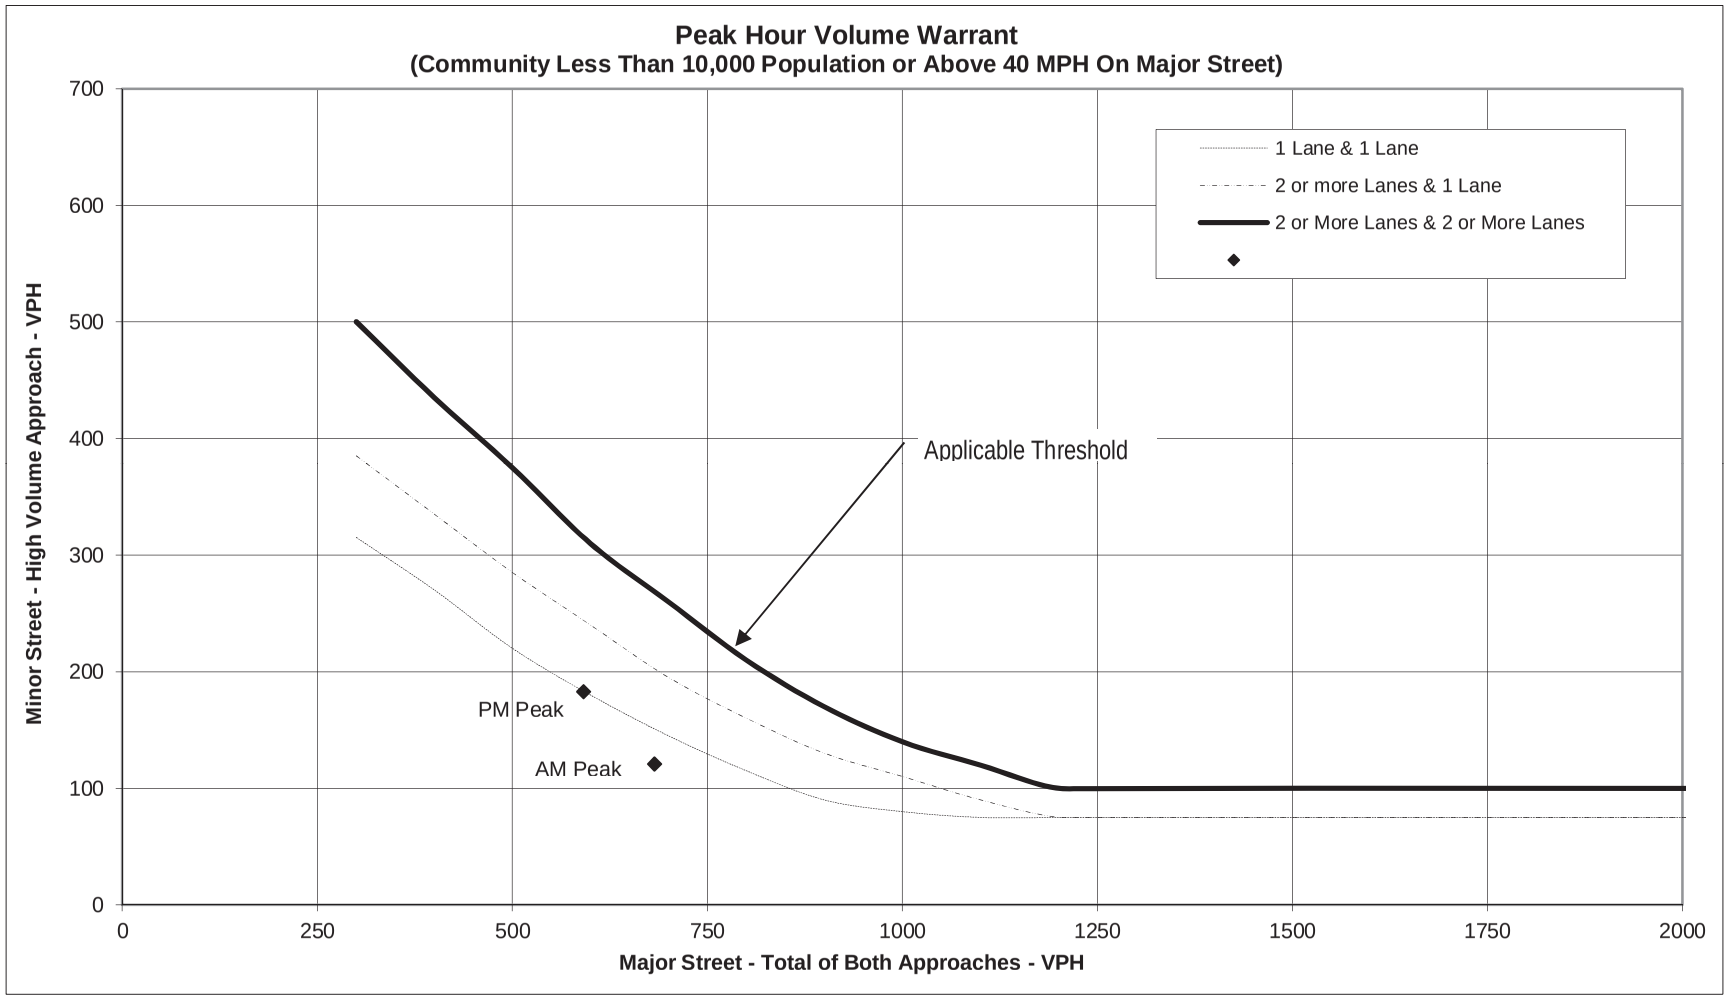


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 20 - Alessandro Blvd. & Oliver St.
Type: 2 or more Lanes & 1 Lane
Major Street (Orientation): Alessandro Blvd (EB-WB)
Minor Street (Orientation): Oliver St (NB-SB)

| | Minor Street Approach Volume (Oliver St) | | | Major Street Approach Volume (Alessandro) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | NB | SB | High Vol Approach | EB | WB | EB+WB | Warrant 3? |
| AM Peak | 159 | 2 | 159 | 227 | 412 | 639 | No |
| PM Peak | 72 | 0 | 72 | 346 | 236 | 582 | No |

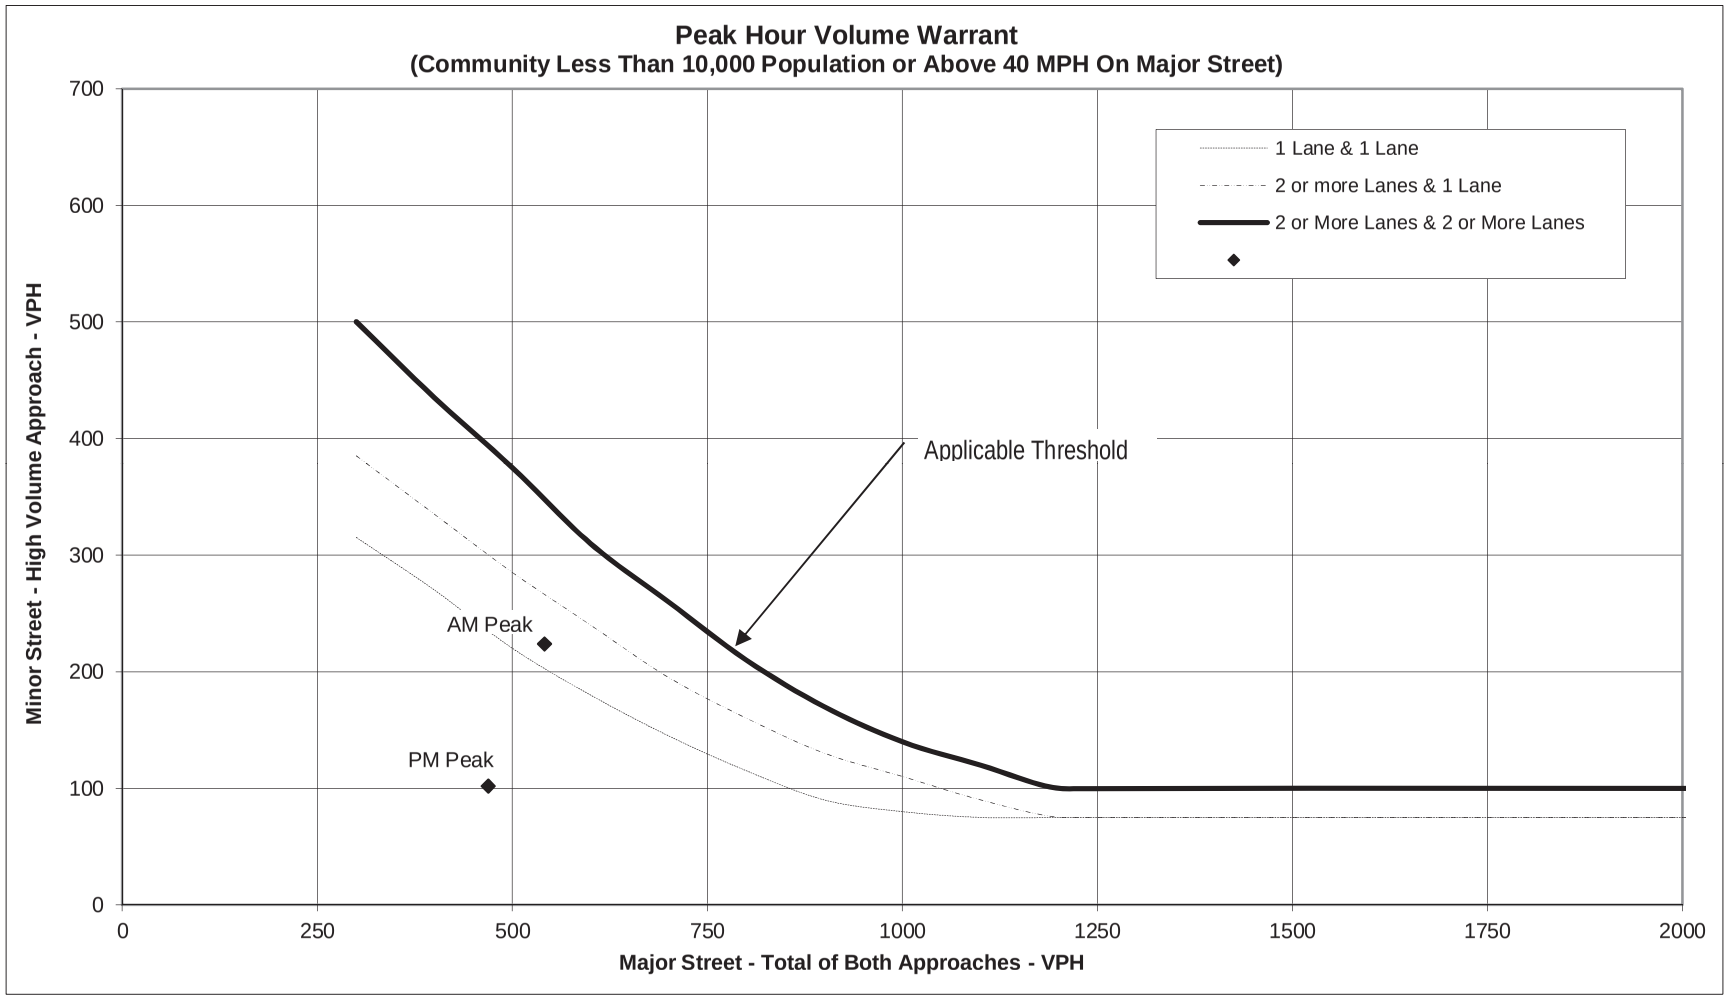


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 23 - Alessandro Blvd. & Redlands Blvd
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Redlands (NB-SB)
Minor Street (Orientation): Alessandro Blvd (EB-WB)

| | Minor Street Approach Volume (Alessandro) | | | Major Street Approach Volume (Redlands) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 114 | 121 | 121 | 438 | 244 | 682 | No |
| PM Peak | 183 | 90 | 183 | 221 | 370 | 591 | No |

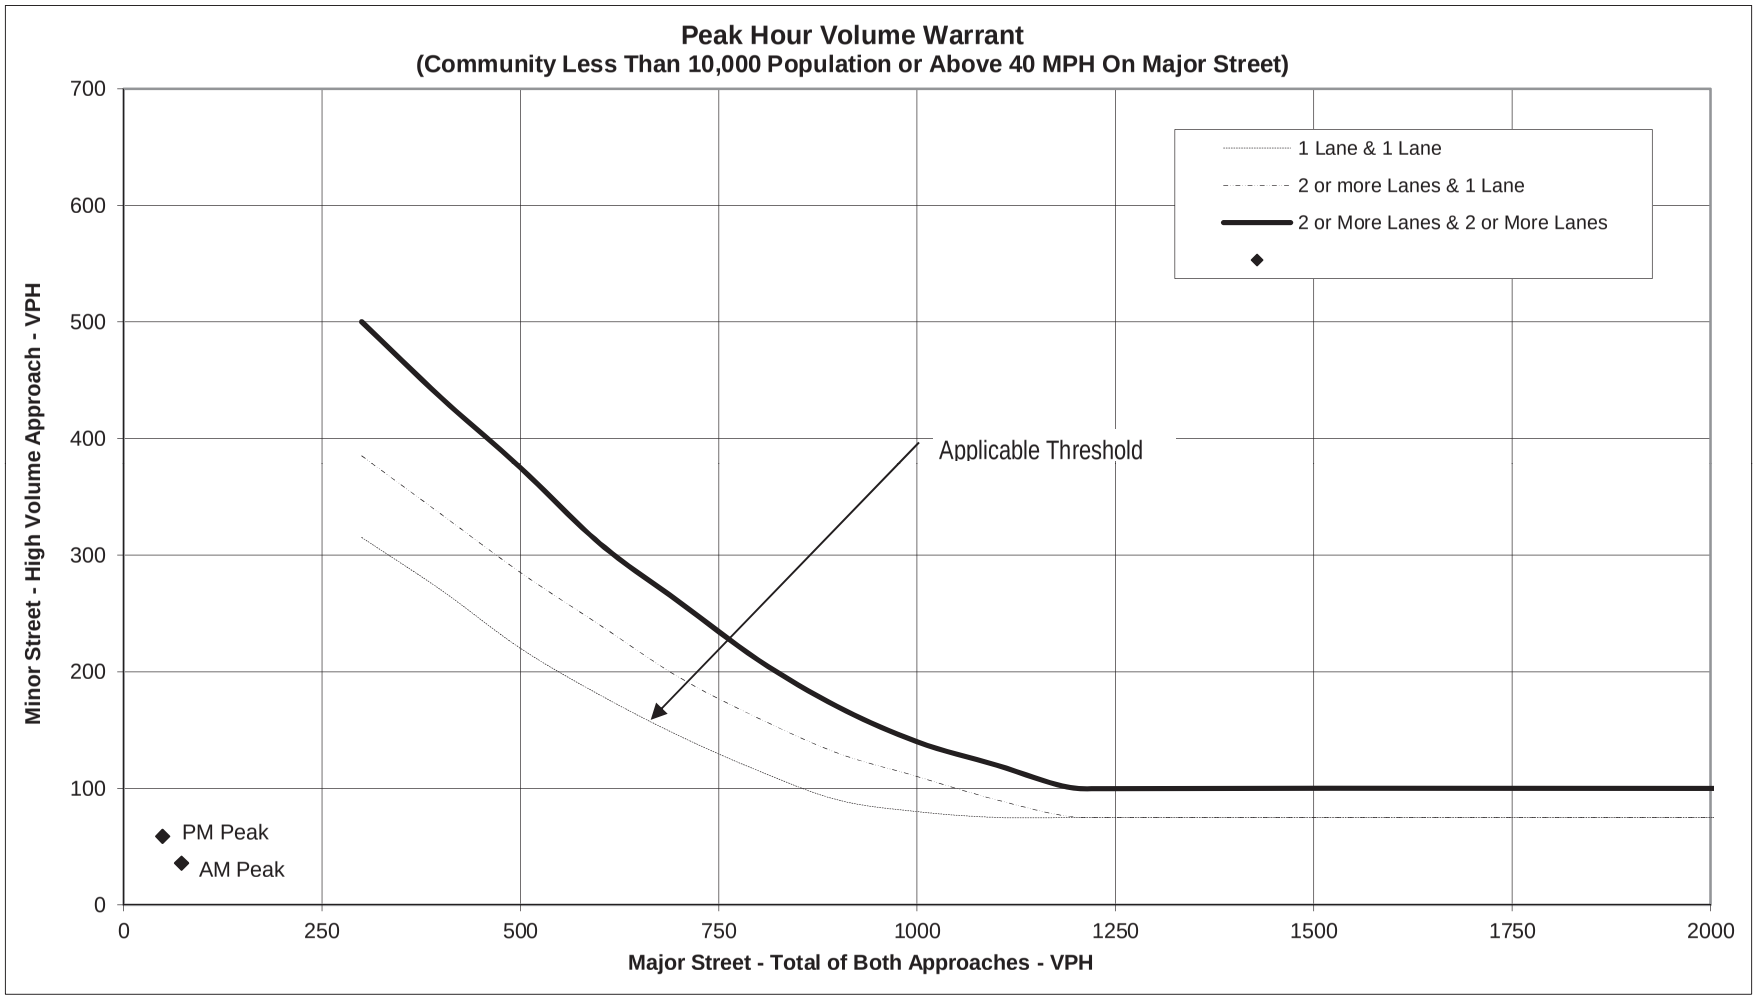


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 27 - Cactus Ave. & Redlands Blvd
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Redlands Blvd. (NB-SB)
Minor Street (Orientation): Cactus Ave. (EB-WB)

| | Minor Street Approach Volume (Cactus) | | | Major Street Approach Volume (Redlands) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB+SB | Warrant 3? |
| AM Peak | 224 | 23 | 224 | 271 | 270 | 541 | No |
| PM Peak | 102 | 10 | 102 | 132 | 337 | 469 | No |

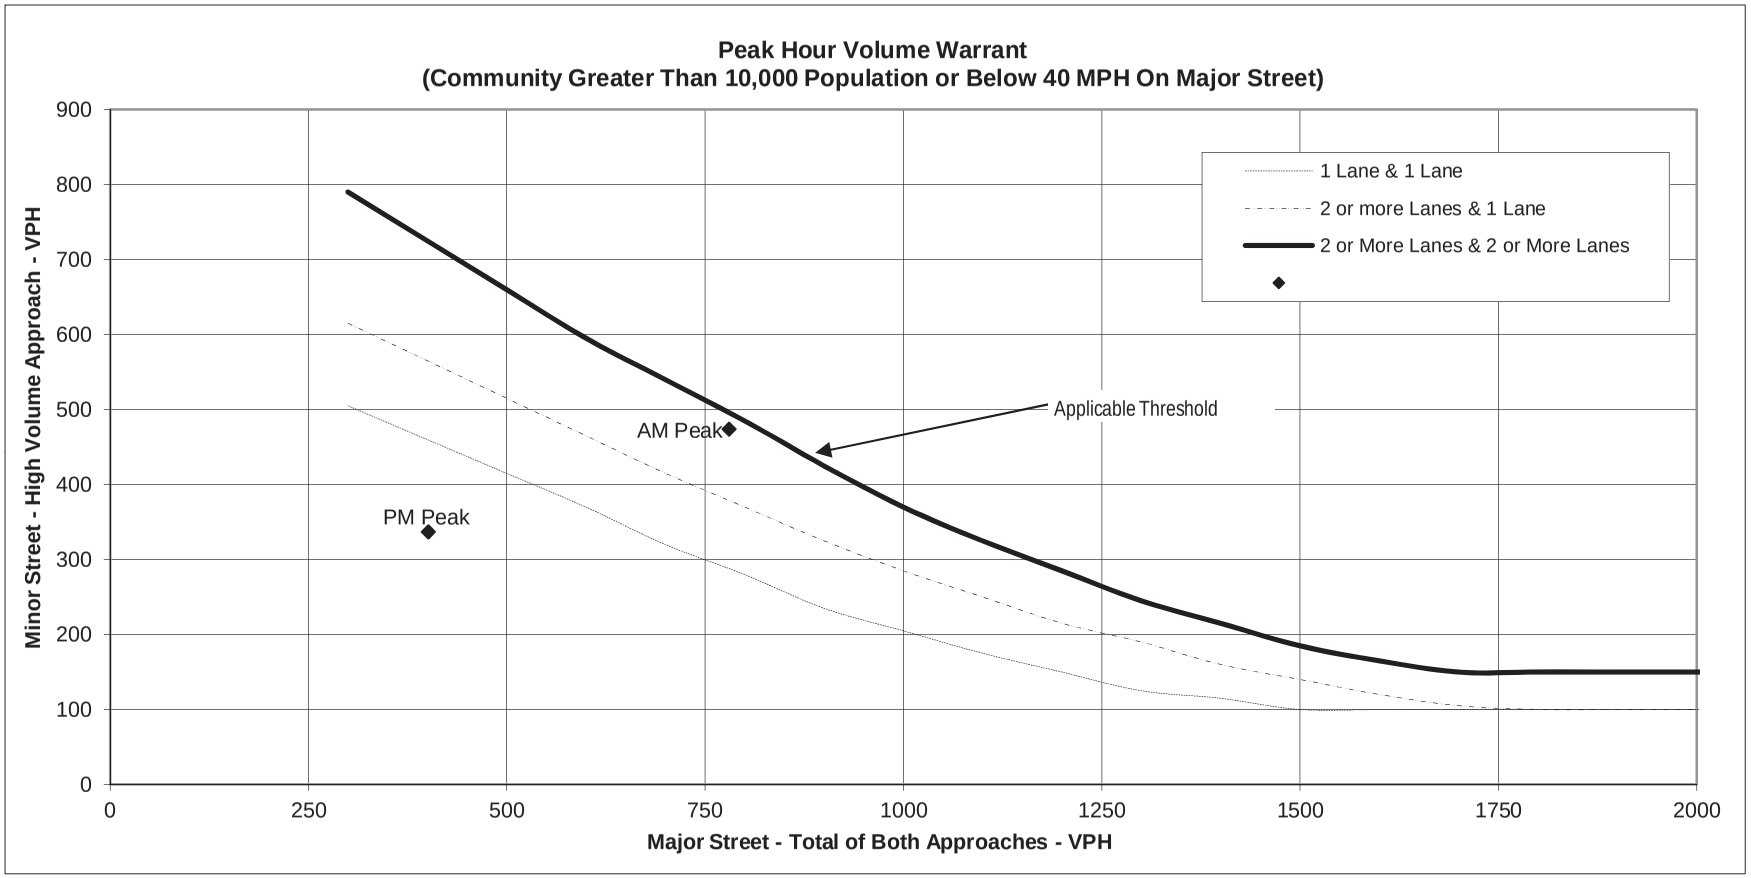


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 35 - Locust Ave & Moreno Beach Dr
Type: 1 Lane & 1 Lane
Major Street (Orientation): Locust Ave (EB-WB)
Minor Street (Orientation): Moreno Beach Dr. (NB)

| | Minor Street Approach Volume (Moreno Beach) | | | Major Street Approach Volume (Locust) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | NB | SB | High Vol Approach | EB | WB | EB+WB | Warrant 3? |
| AM Peak | 36 | 0 | 36 | 7 | 66 | 73 | No |
| PM Peak | 59 | 0 | 59 | 6 | 43 | 49 | No |

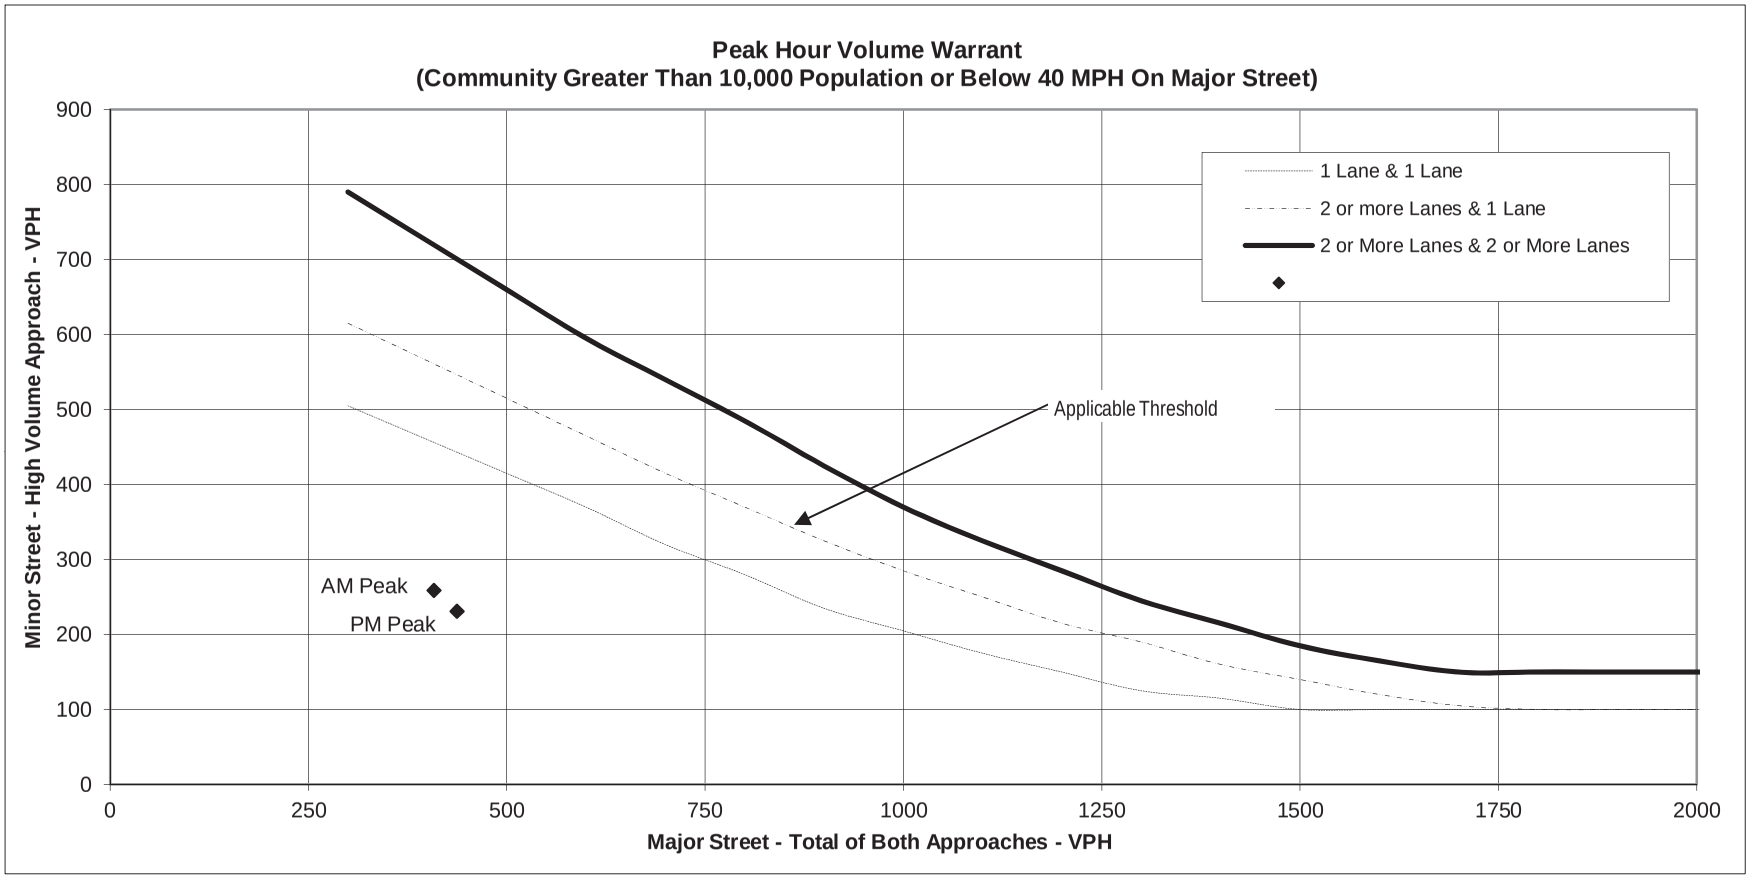


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 85 - Martin Luther King Blvd. & SR-60 WB on Ramp
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Martin Luther King (EB)
Minor Street (Orientation): SR-60. (NB)

| | Minor Street Approach Volume (SR-60) | | | Major Street Approach Volume (MLK) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | NB | SB | High Vol Approach | EB | WB | EB + WB | Warrant 3? |
| AM Peak | 474 | 0 | 474 | 780 | 0 | 780 | No |
| PM Peak | 337 | 0 | 337 | 401 | 0 | 401 | No |

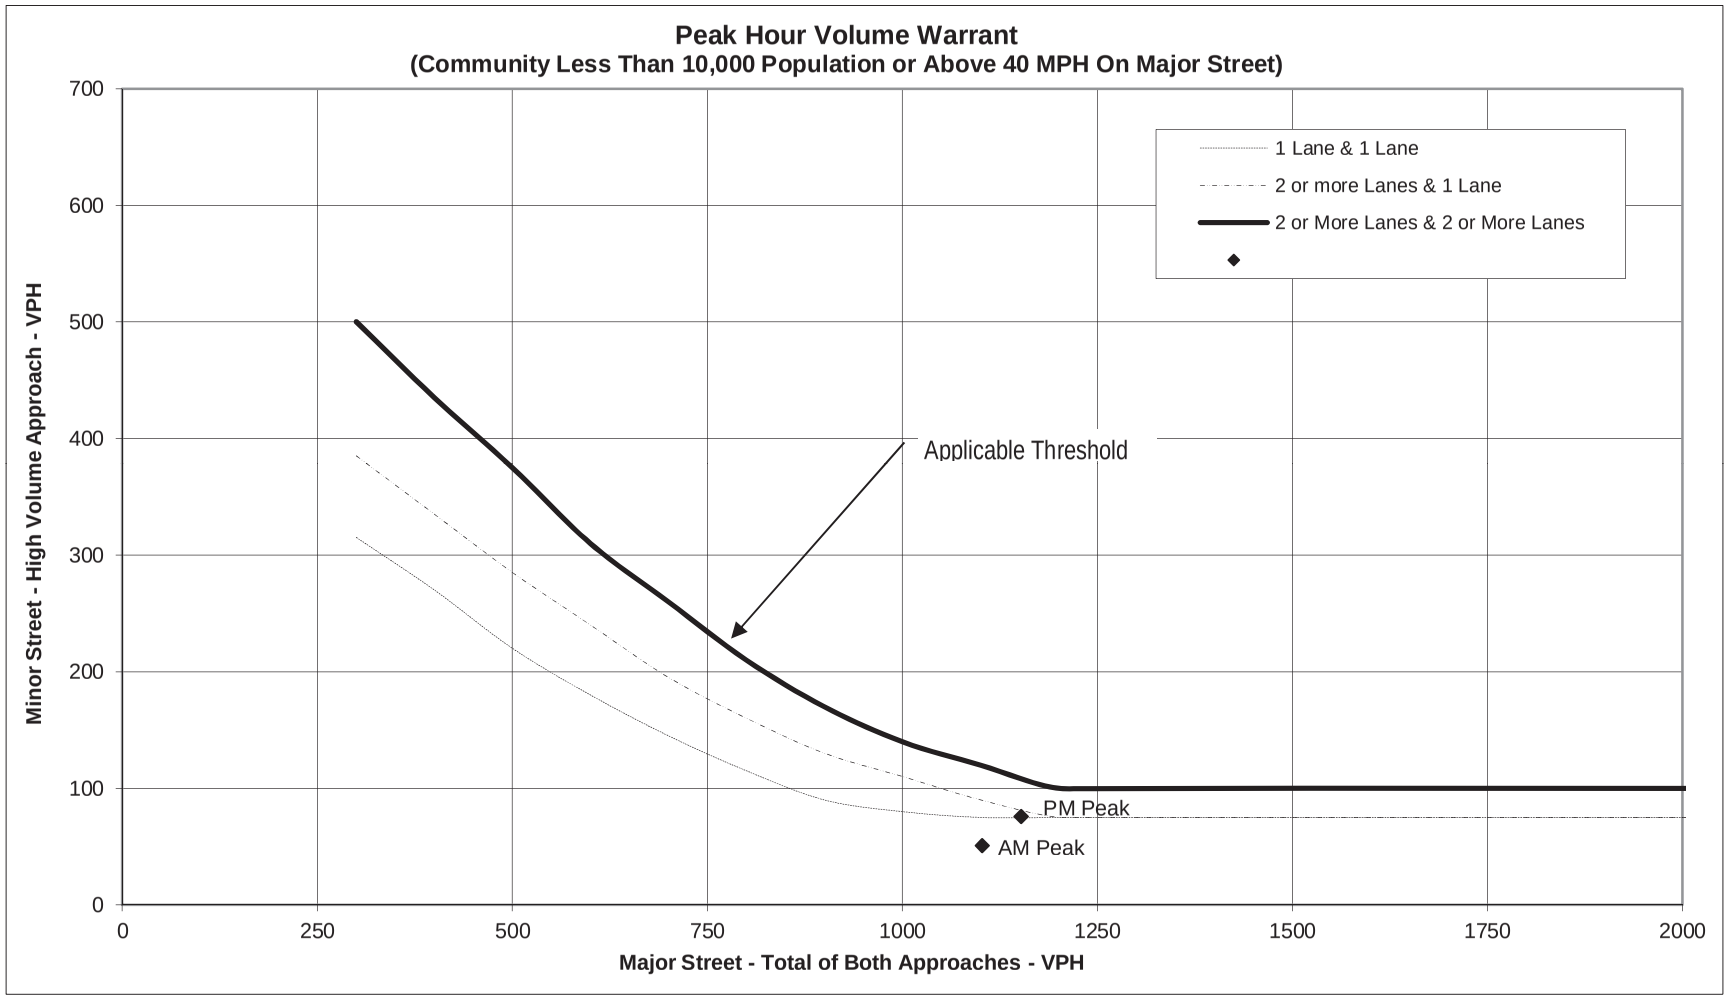


Note: 150 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 100 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 114 - Orange Ave. & Evans Rd.
Type: 2 or more Lanes & 1 Lane
Major Street (Orientation): Evans Rd. (NB-SB)
Minor Street (Orientation): Orange Ave. (EB-WB)

| | Minor Street Approach Volume (Orange) | | | Major Street Approach Volume (Evans) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB + SB | Warrant 3? |
| AM Peak | 259 | 254 | 259 | 223 | 185 | 408 | No |
| PM Peak | 231 | 106 | 231 | 211 | 226 | 437 | No |

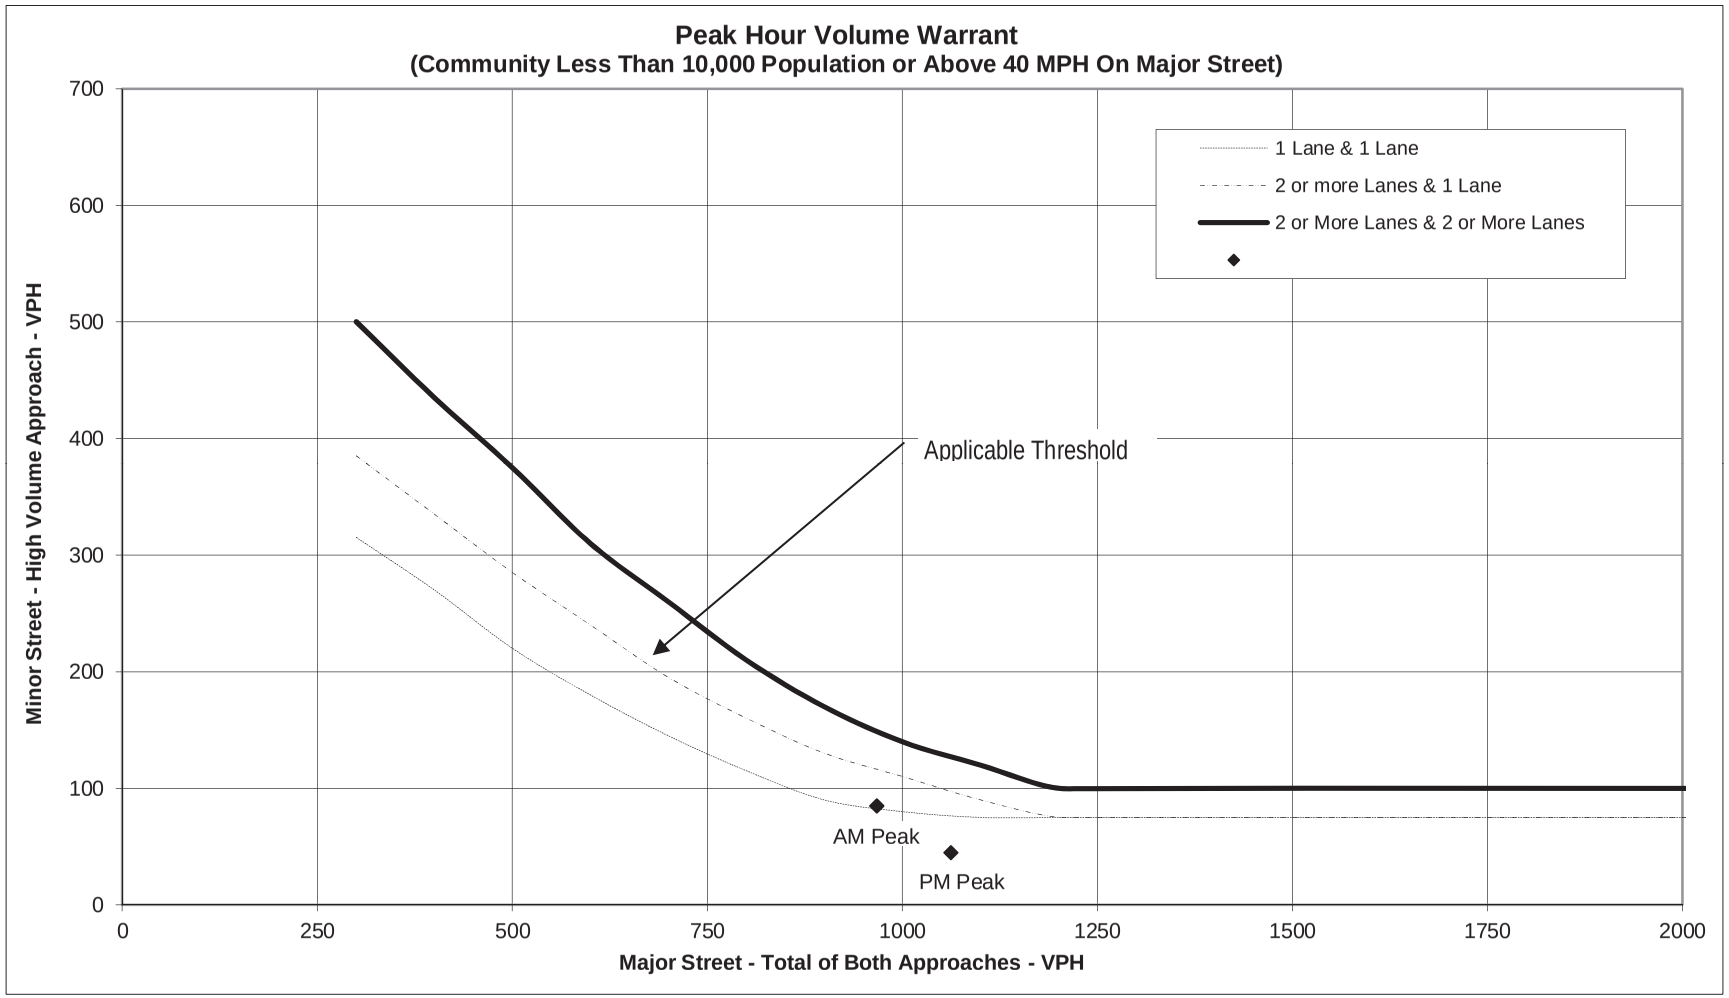


Note: 150 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 100 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 122 - Ramona Expy & Bridge St.
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Ramona Expy (EB-WB)
Minor Street (Orientation): Bridge St. (SB)

| | Minor Street Approach Volume (Bridge) | | | Major Street Approach Volume (Ramona) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | NB | SB | High Vol Approach | EB | WB | EB + WB | Warrant 3? |
| AM Peak | 0 | 51 | 51 | 465 | 637 | 1,102 | No |
| PM Peak | 0 | 76 | 76 | 688 | 464 | 1,152 | No |

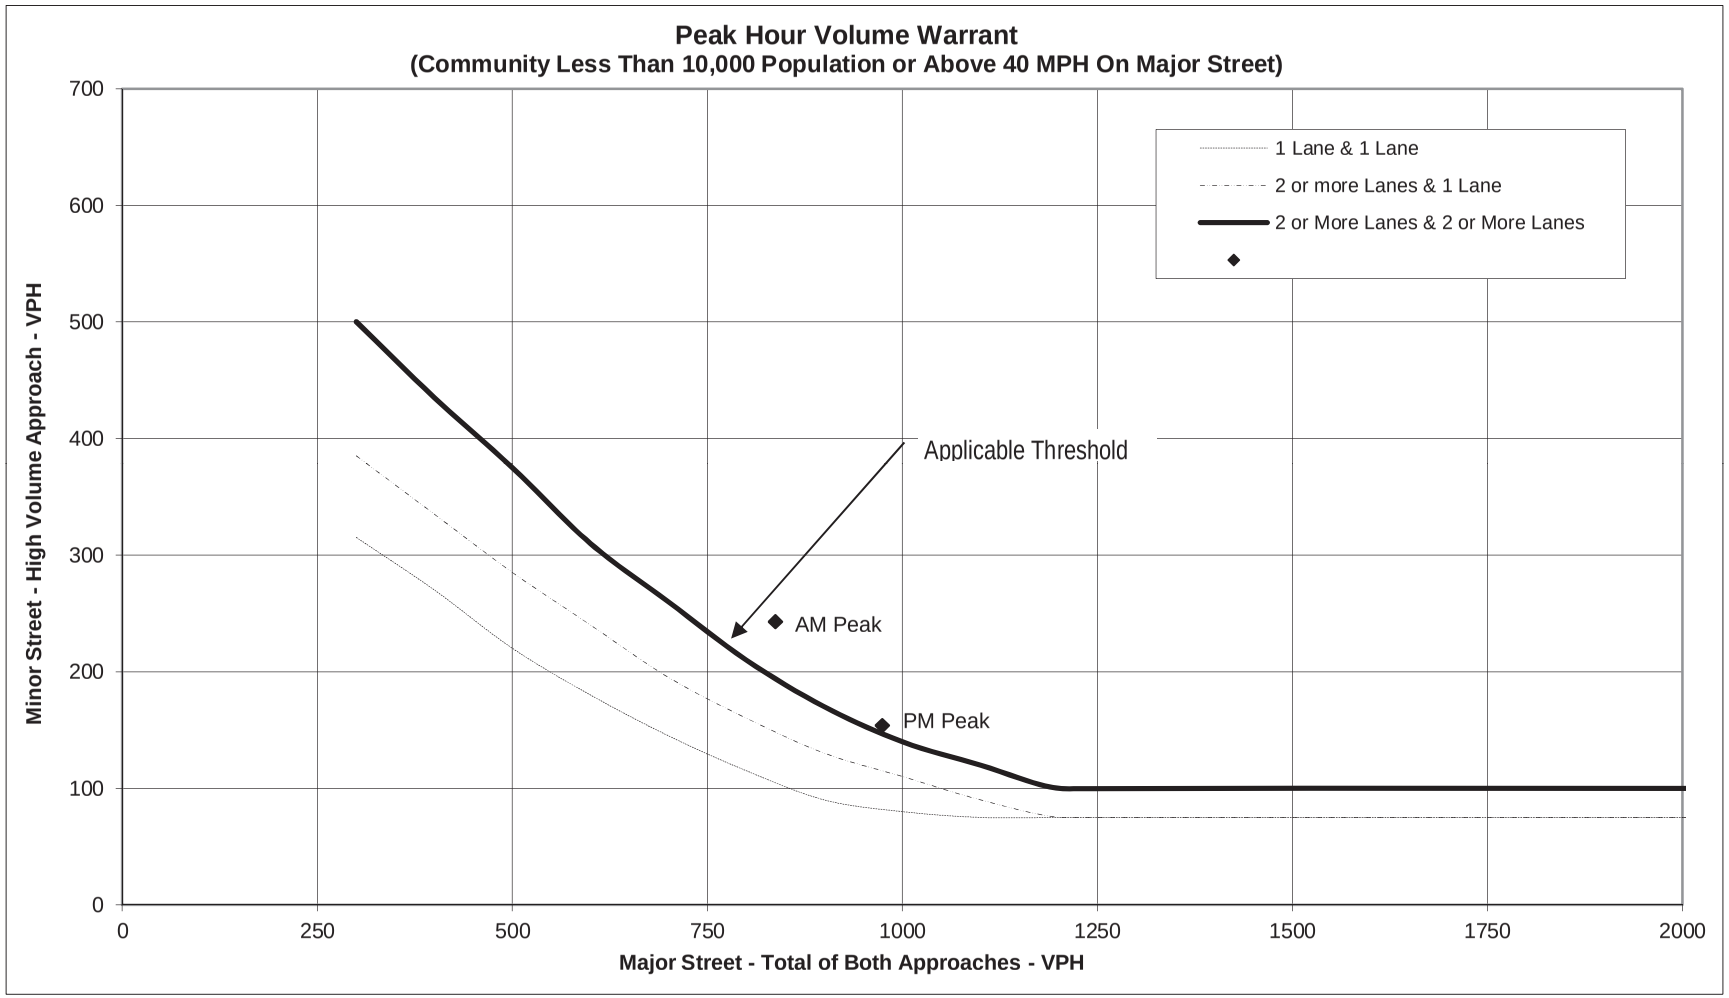


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 123 - Bridge St. & Gilman Springs Rd.
Type: 2 or more Lanes & 1 Lane
Major Street (Orientation): Gilman Springs (NB-SB)
Minor Street (Orientation): Bridge St. (EB)

| | Minor Street Approach Volume (Bridge) | | | Major Street Approach Volume (Gilman) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | EB | WB | High Vol Approach | NB | SB | NB + SB | Warrant 3? |
| AM Peak | 85 | 0 | 85 | 623 | 344 | 967 | No |
| PM Peak | 45 | 0 | 45 | 356 | 706 | 1,062 | No |

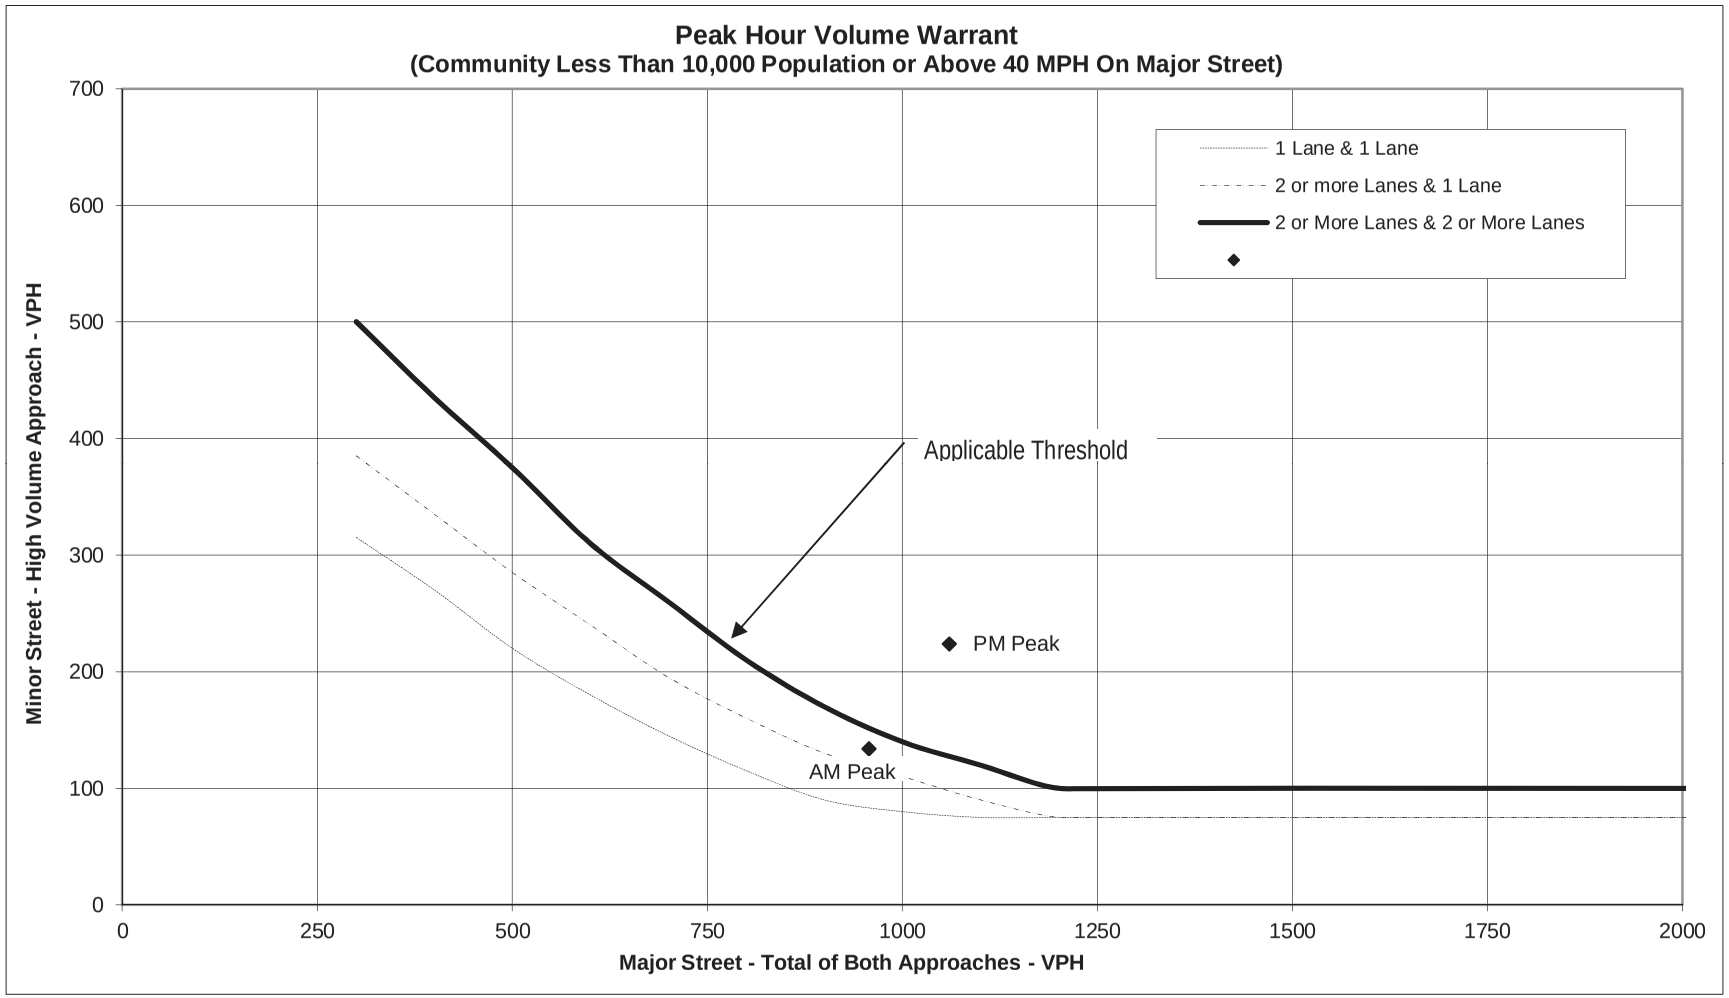


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 124 - Gilman Springs Rd. & SR-79 NB Ramps
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Gilman Springs (EB-WB)
Minor Street (Orientation): SR-79 Ramps (NB)

| | Minor Street Approach Volume (SR-79) | | | Major Street Approach Volume (Gilman) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | NB | SB | High Vol Approach | EB | WB | EB + WB | Warrant 3? |
| AM Peak | 243 | 0 | 243 | 284 | 553 | 837 | Yes |
| PM Peak | 154 | 0 | 154 | 590 | 384 | 974 | Yes |

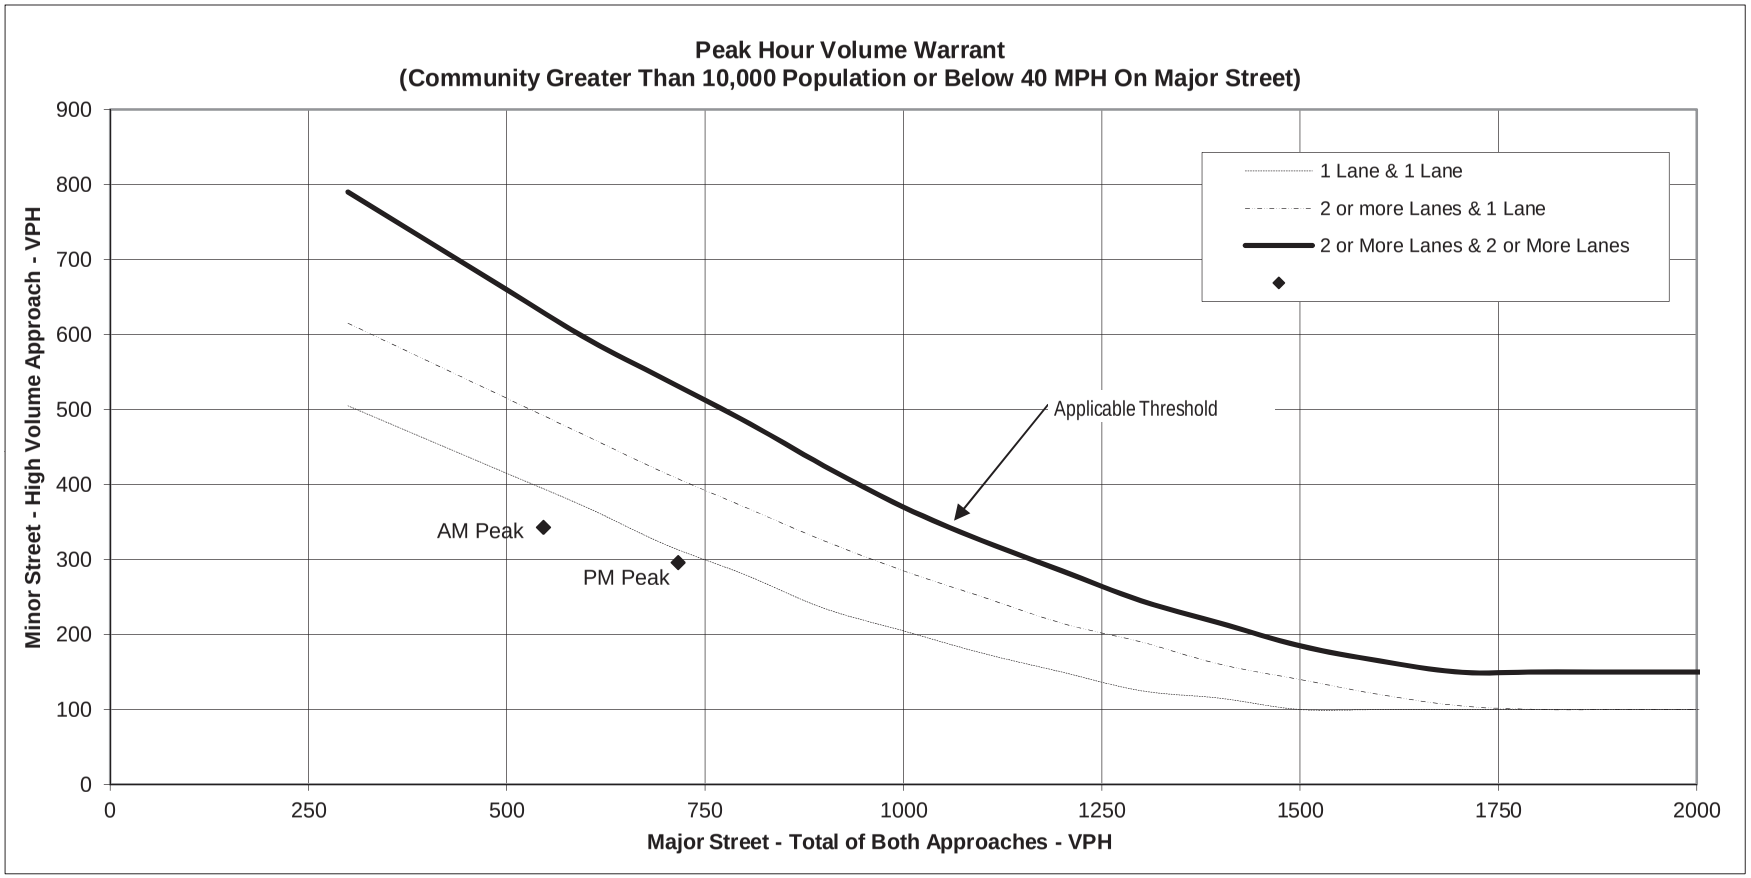


Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 125 - Gilman Springs Rd. & SR-79 SB Ramps
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): Gilman Springs (EB-WB)
Minor Street (Orientation): SR-79 Ramps (SB)

| | Minor Street Approach Volume (SR-79) | | | Major Street Approach Volume (Gilman) | | | Satisfies |
|---|---|---|---|---|---|---|---|
| Time | NB | SB | High Vol Approach | EB | WB | EB + WB | Warrant 3? |
| AM Peak | 0 | 134 | 134 | 349 | 608 | 957 | No |
| PM Peak | 0 | 224 | 224 | 698 | 362 | 1,060 | Yes |



Note: 100 VPH applies as the lower threshold for minor street approach with 2 or more lanes & 75 VPH as the threshold for a minor street approach with one lane

# PEAK HOUR VOLUME SIGNAL WARRANT ANALYSIS

Scenario: Existing
Intersection: 129 - 6th st & California Ave.
Type: 2 or more Lanes & 2 or more Lanes
Major Street (Orientation): 6th St. (EB-WB)

## World Logistics Center Specific Plan & EIR

TO: Thomas Jelenić, Highland Fairview

FROM: Don Hubbard, TE, AICP

DATE: July 15, 2014

SUBJECT: **High School #5 and the WLC**

Recent discussion of the Draft EIR for High School #5[1] has raised concerns about whether there may be unforeseen traffic problems if both the high school and the WLC are approved. These concerns arise from the fact that the EIR for the high school did not assume construction of the WLC and that the traffic analysis for the WLC did not assume a school at this location. In each case the traffic study correctly followed City-approved assumptions, as will be explained below, but the combination of the two projects has not been analyzed up to now.

We therefore performed an analysis intended to find out what cumulative traffic conditions would be like if both the high school and the World Logistics Center (WLC) were constructed as planned. This analysis builds on the previous work done for the WLC and on Appendix I (Traffic Impact Analysis) of the Draft EIR for the high school. Our analysis is based on the assumption that the high school will be built at School Site 2, which is on the north side of Ironwood Avenue between Redland Boulevard and Quincy Street (see Exhibit 1).

*Traffic Impact Study for the High School*

The traffic impact analysis for High School No. 5 was done somewhat differently than the one for the WLC. Key differences include:

- The two studies used different methodologies to forecast future ambient traffic. The high school study added the effect of a number of proposed projects within a mile of the school site 2 (see Table 2 of their TIA) plus an assumed background growth of 2% per year. The WLC analysis also assumed the known projects, but modeled full build-out of the city's general plan rather than an assumed uniform growth rate. The results were nevertheless similar in terms overall traffic volumes in the cumulative condition. For example, the high school study assumed that 605 vehicles would pass in front of the school in the AM peak hour while the WLC assumed that 610 would use this section of Ironwood Avenue.
- The WLC studies assumed that School Site No. 2 would be built as single-family dwellings, in accordance with the zoning in the General Plan.
- The analysis for the high school only covered the AM peak hour when traffic to and from the school occurs at the same time as peak commute hours for other traffic. The preparers reasoned that traffic leaving the school would occur between 2:30 and 3:30 in the afternoon when ambient traffic is light, and that the school would have a minimal impact during the PM peak hour. We concur with this reasoning.

It is not clear from the high school study whether they assumed that some students and teachers would live in the Moreno Highlands Specific Plan area; i.e. the site of the WLC. The project trip distribution figure appears to show 35%-to-40% of trips to the school would come from areas east of Redlands Boulevard (see Exhibit 1) and the school district's facilities master plan appears to show potential new students living with the WLC site. So it seems possible that at least some of the school traffic shown in the school's traffic analysis will not materialize if the residential development in the Moreno Highland Specific Plan is replaced with warehouse development in the WLC Specific Plan.

[1] *High School No. 5 Alternate Sites Environmental Impact Report*, prepared for the Moreno Valley Unified School District by The Planning Center, November 2009.

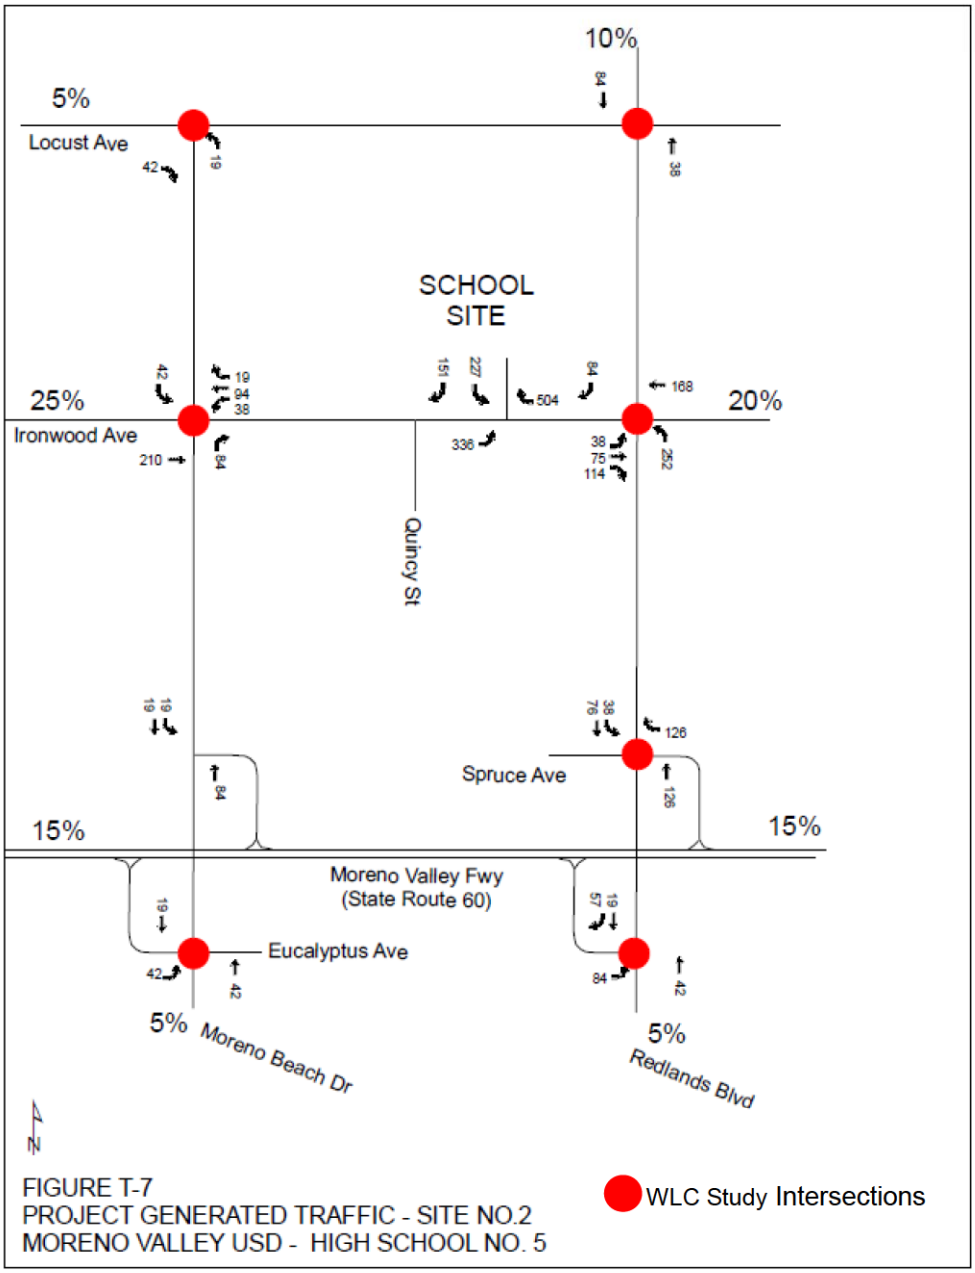

**Exhibit 1: Distribution of Traffic to and from High School No. 5**

(source: *High School No. 5 Alternate Sites Environmental Impact Report, Appendix I)*

The traffic study for the high school found that it would have significant impacts at two intersections and recommended improvements to those, with the main impacts and improvements occurring at the intersection of Redlands Blvd. and Ironwood Ave (see Exhibit 3[3]).

[3] Note that Exhibit 3 includes some improvements that are not considered mitigation measures

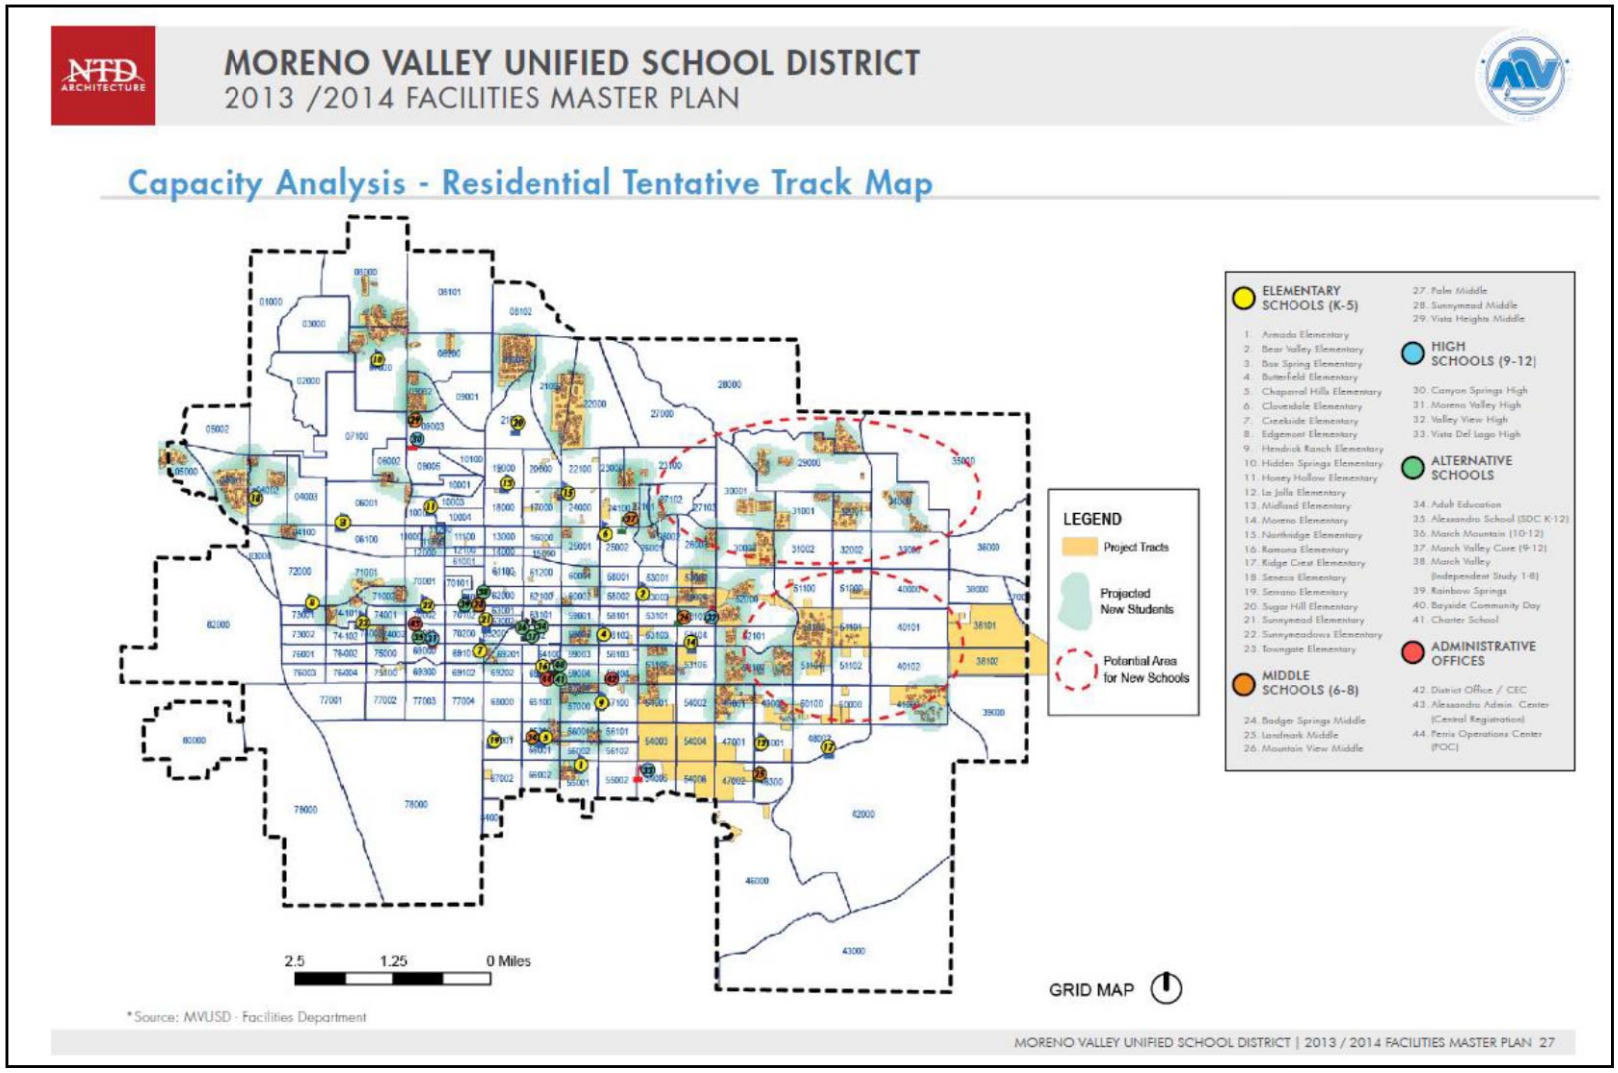

**Exhibit 2: Residential Tentative Tract Map for Moreno Valley Unified School District**

(Source: Moreno Valley Unified School District 2013/2014 Facilities Master Plan)

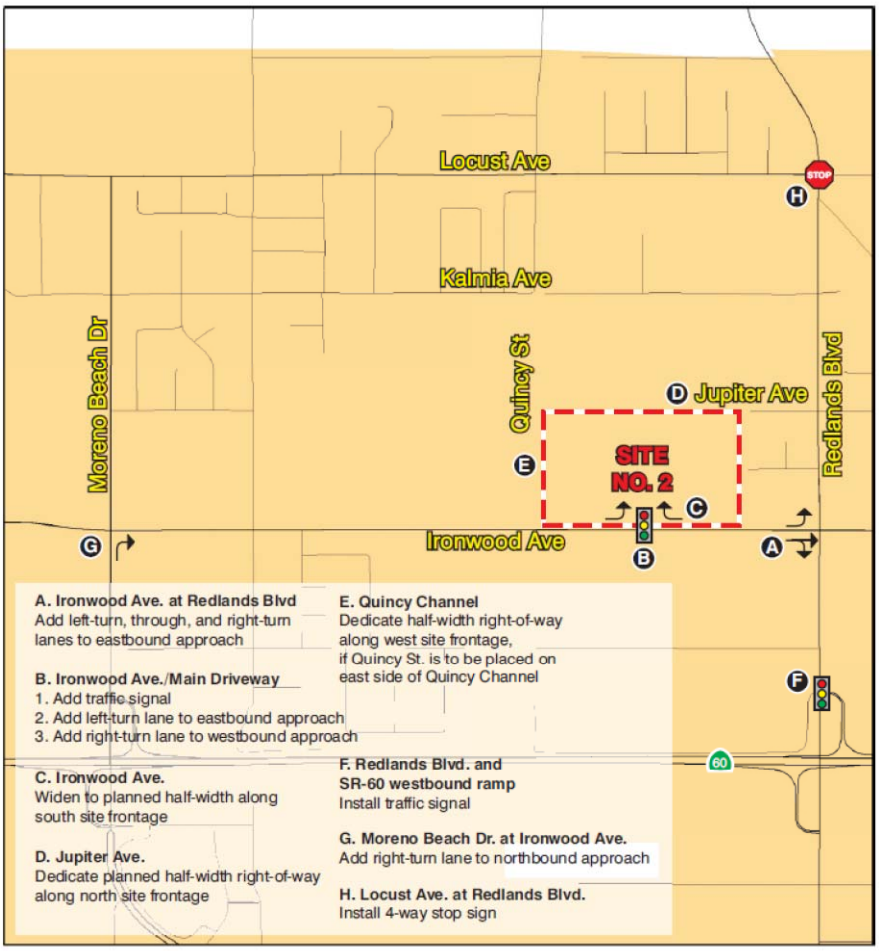

**Exhibit 3: Roadway Improvements Proposed for High School No. 5**

(Source: *High School No. 5 Alternate Sites Environmental Impact Report)*

*Cumulative Traffic Conditions with both High School No. 5 and WLC*

Traffic conditions in 2035 with both the WLC and High School No. 5 were analyzed by manually adding the school-related traffic shown in Exhibit 1 to the Cumulative Plus Project traffic in the WLC traffic analysis. The key results from this analysis were:

- Exhibit 4 shows that the addition of High School #5 to would result in new cumulatively significant impacts in the AM peak hour at two locations, namely the Redlands Blvd/Ironwood Intersection and the Moreno Beach Drive/Ironwood Avenue intersection (see Column K in Exhibit 4). These are the approaches to the school from the east and the west, respectively. However, if the mitigation measures identified in the high school's EIR are implemented in conjunction with the high school then the impacts of both the school and the WLC at these two locations in the AM peak hour would be fully mitigated (see Column N).
- Exhibit 5 shows the analysis from the WLC traffic study for the same intersections but for the PM peak hour. Note that both the Redlands/Ironwood and Moreno Beach/Ironwood intersections, which were identified in Exhibit 4 as having new impacts in the AM peak hour, were going to be impacted by the WLC in the PM peak hour in any case (Column K). Mitigation measures were identified in the WLC study (Column M) that would bring about an acceptable LOS in the PM peak hour (Column N).

"CSS" means cross-street is stop-controlled

Indicates LOS exceeds the target level

Indicates Significant Impact Not Found in WLC Traffic Impact Analysis

**Exhibit 5: Intersection LOS in 2035 PM Peak Hour with WLC Mitigations**

- The traffic conditions forecast for 2035 for the PM peak hour are significantly worse than the conditions forecast for the AM peak hour (compared Column J in Exhibit 4 with Column H in Exhibit 5). As a result, the mitigation measures identified in the WLC traffic study for the PM peak hour (Column M in Exhibit 5) would also suffice to mitigate the AM peak hour impacts of both the WLC and High School #5 combined even in the absence of the school's mitigation measures (see Column M in Exhibit 6).

*Conclusions*

Our analysis found that if High School No. 5 and the WLC were both built there would be cumulatively significant impacts in the AM peak hour at the Redlands/Ironwood and Moreno Beach/Ironwood intersections where such impacts were not found in the traffic analysis for the WLC. In each case the impacts of both the school and the WLC would be fully mitigated if the school district to implement the measures identified in the high school's EIR in conjunction with the development of the school.

Our analysis also found that even if the mitigation measures identified in the high school's EIR were not implemented the mitigation measures already identified in WLC traffic study would suffice to mitigate the impacts of both the WLC and High School No. 5.

Our conclusion therefore is that as long as the mitigation measures identified in the WLC EIR are implemented then the traffic impacts arising from the combination of the two projects would be fully mitigated without any further measures being required.

SUBJECT: Approve and Authorize a Water Supply Assessment for the World Logistics Center Specific Plan in Moreno Valley

**RECOMMENDATION**

It is recommended that the Board, by Minute Order, approve and authorize the attached Water Supply Assessment for the World Logistics Center Specific Plan in Moreno Valley, in accordance with the provisions of Senate Bill 221 (SB 221) and Senate Bill 610 (SB 610). The following Water Supply Assessment Proposal was presented to the Board Planning Committee on February 21, 2012, and received its full concurrence.

## BACKGROUND

Senate Bills 221 and 610 require the District respond to requests for a statement that adequate water supplies are or will be available to meet the water demands associated with proposed land development. Senate Bill 610 focuses on the content of a water supply agency's Urban Water Management Plan and stipulates that, when an Environmental Impact Report is required in connection with a project, the appropriate water supply agency must provide an assessment of whether its total projected water supplies will meet the projected water demands associated with the proposed project. Senate Bill 221 also requires water supply verification when a tentative map, parcel map or development agreement for a project is submitted to a land-use agency for approval. Senate Bill 221 applies to proposed residential development of more than 500 dwelling units with some exceptions. Senate Bill 610 applies to a proposed residential development of more than 500 dwelling units, or large commercial, industrial or mixed-use development.

This assessment is prepared for the World Logistics Center Specific Plan in Moreno Valley proposed by Highland Fairview. The project proposes 41.6 million square-feet of logistics facilities on 2,655 acres of light industrial development. The project is located in the eastern part of the City of Moreno Valley and is generally bounded by Gilman Spring Road, Redlands Boulevard and the Moreno Valley freeway. The projected demand for the project is estimated to be 1,991.25 AFY. Exhibit "A" shows the location of this project.

Providing an accurate and timely response to a request for a water supply assessment supports the Strategic Plan Objective I (Community Relations) to, "Promote and sustain effective communication between the District and its stakeholders."

# Water Supply Assessment Report for the World Logistics Center Specific Plan in Moreno Valley

March 21, 2012

## Section I - Introduction

### *1.1 Purpose*

*Water Code 10910 (a)(b)(c)*

The purpose of the "Water Supply Assessment Report" is to satisfy the requirements under Senate Bill 610 (SB 610), Water Code Section 10910 et seq., and Senate Bill 221 (SB 221), Government Code Section 66473.7, that adequate water supplies are or will be available to meet the water demand associated with the proposed development. SB 610 focuses on the content of a water supply agency's Urban Water Management Plan (UWMP). It also stipulates that, when an environmental impact report is required in connection with a project, the appropriate water supply agency must provide an assessment of whether its total projected water supplies will meet the projected water demand associated with the proposed project. SB 221 requires water supply verification when a tentative map, parcel map, or development agreement for a project is submitted to a land use agency for approval. Senate Bill 221 applies to proposed residential development of more than 500 dwelling units with some exceptions. Senate Bill 610 applies to a proposed residential development of more than 500 dwelling units, or large commercial, industrial, or mixed-use development. The need for an assessment or verification is determined by the lead agency for the project.

### *1.2 Project Description*

This assessment is prepared for the World Logistics Center Specific Plan in Moreno Valley proposed by Highland Fairview. The project proposes 41.6 million square-feet of logistics facilities on 2,655 acres of light industrial development. The project is located in the eastern part of the City of Moreno Valley and is generally bounded by Gilman Spring Road, Redlands Boulevard and the Moreno Valley freeway. The projected demand for the project is estimated to be 1,991.25 AFY. Exhibit "A" shows the location of this project.

### *1.3 Requirements*

The City of Moreno Valley requested that Eastern Municipal Water District (EMWD) prepare this Water Supply Assessment Report. EMWD has confirmed that the demand from the proposed project is within the limits of demand accounted for in the EMWD 2010 UWMP adopted in June of 2011. Accordingly, the District has elected to incorporate information from the 2010 UWMP in the preparation of this Water Supply Assessment Report as authorized by Water Code Section 10910 (c)(2). The 2010 UWMP is attached as Appendix A.

In accordance with Water Code Section 10910(d) – (f), the Water Supply Assessment shall:

1. Identify any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and provide a description of the quantities of water received in prior years by the public water system, under existing water supply entitlements, water rights, or water service contracts;

2. If no water has been received in prior years by the public water system, identify other public water systems or water service contract holders that receive a water supply or have existing water supply entitlements, water rights, or water service contracts to the same source of water as the public water system.

3. If groundwater is included in the proposed supply, identify the groundwater basin or basins from which the proposed project will be supplied; and include any applicable documentation of adjudicated rights to pump. If the basin is not adjudicated, regardless of whether the basin has been identified as over-drafted; provide a detailed description and analysis of the amount and location of groundwater pumped by the public water system for the past five (5) years from any groundwater basin from which the proposed project will be supplied; and provide a detailed description and analysis of the amount and location of groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project.

If the proposed project includes a "subdivision" of more than 500 residential dwelling units as defined by Government Code Section 66473.7(a)(1), the public water system shall also provide verification as to whether the public water system is able or unable to provide a sufficient water supply based upon an analysis of whether water supplies available during normal, single-dry, and multiple-dry years within a 20-year projection, will meet the projected demand associated with the proposed subdivision which considers:

1. The historical record for at least 20 years;
2. The applicability of any urban water shortage contingency analysis;
3. The reduction in water supply for "specific water use sector" per an adopted resolution, ordinance or contract; and
4. The amount of water that can be reasonably relied upon from specified supply projects.

This assessment is a technical, informational, advisory opinion only. It is a supporting document for an environmental impact report and is not a commitment by EMWD to supply water for the proposed project. The information included is based on information available at the time of the report and changing circumstances could affect EMWD's water supply evaluation presented in this document.

This assessment does not specifically address funding of new or existing supplies. The cost of water supplies will increase over time. The developer of this project will be required to fund the acquisition of new supplemental supplies, treatment or recycled water facilities and water efficiency measures for existing customers. The extent of additional funding will be determined by EMWD and may take the form of a new component of connection fees or a separate charge. New customers may also be required to pay a higher commodity rate for water used than existing customers. This would offset the rising costs of new supplies.

Prior to project construction, the developer of this project is required to meet with EMWD staff to develop a plan of service. The plan of service will detail water, wastewater and recycled water requirements to serve the projects. If there is a change in the circumstances detailed in this assessment, EMWD will address the changes in the plan of service for the project. Modifications at the plan of service stage could reduce the amount of water available to serve this project.

## 1.4 *Background*

Eastern Municipal Water District was formed in 1950 and annexed into The Metropolitan Water District of Southern California (MWD) in 1951 to deliver imported water. With the acquisition of the Fruitvale Mutual Water Company in 1971, EMWD assumed the role of a groundwater producer. Presently, EMWD's supply portfolio includes desalted groundwater and recycled water in addition to imported water and potable groundwater.

EMWD's service area encompasses 540 square miles with an estimated population of over 755,000. The service area includes areas where EMWD provides retail water directly or indirectly through the following agencies:

City of Hemet Water Department
City of Perris Water System
City of San Jacinto Water Department
Lake Hemet Municipal Water District (LHMWD)
North Perris Water System
Nuevo Water Company
Rancho California Water District (RCWD)

## 1.5 *Urban Water Management Plan*

*Water Code 10910 (c) (1)*

In June of 2011, the EMWD Board of Directors adopted the 2010 UWMP. This plan details EMWD's demand projections and provides information regarding EMWD's supply. The majority of EMWD's existing and future planned demand is met through imported water delivered by MWD. EMWD's 2010 UWMP relies heavily on information and assurances included in the 2010 MWD Regional Urban Water Management Plan (2010 RUWMP) when determining supply reliability. Demand for EMWD included in the 2010 UWMP is calculated across the District and is not project-specific. The 2010 RUWMP is attached as Appendix B.

## 1.6 *Population Projection*

EMWD used the Riverside County Center for Demographic Research (RCCDR) 2010 Projection to estimate the future population. RCCDR considers land use and land agency information to develop projections. The RCCDR projection has been adopted by the Western Riverside Council of Governments.

As evidenced by the population projection, EMWD is located in a developing area. Approximately 40 percent of EMWD's service area remains undeveloped. As population and the associated water demand increase, EMWD will increase the amount of water imported through MWD to meet demands.

**Table 1 - Projected Population – 2015 – 2035**

| | 2015 | 2020 | 2025 | 2030 | 2035 |
|---|---|---|---|---|---|
| EMWD Retail Service Area | 548,718 | 628,918 | 709,729 | 785,810 | 849,059 |
| City Of Perris Water Department | 9,151 | 9,464 | 9,906 | 10,312 | 10,699 |
| North Perris Water Company | 4,977 | 4,977 | 4,977 | 4,977 | 4,977 |
| Nuevo Water Company | 7,781 | 8,580 | 6,903 | 5,902 | 5,346 |
| City of San Jacinto Water Department | 19,706 | 21,467 | 22,738 | 23,635 | 24,341 |
| City of Hemet Water Department | 27,474 | 29,363 | 31,273 | 33,181 | 35,217 |
| Lake Hemet Municipal Water District | 47,446 | 50,865 | 54,296 | 57,742 | 59,167 |
| Rancho California Water District | 114,604 | 116,969 | 120,231 | 122,259 | 122,923 |
| **Total** | **779,857** | **870,603** | **960,053** | **1,043,818** | **1,111,729** |

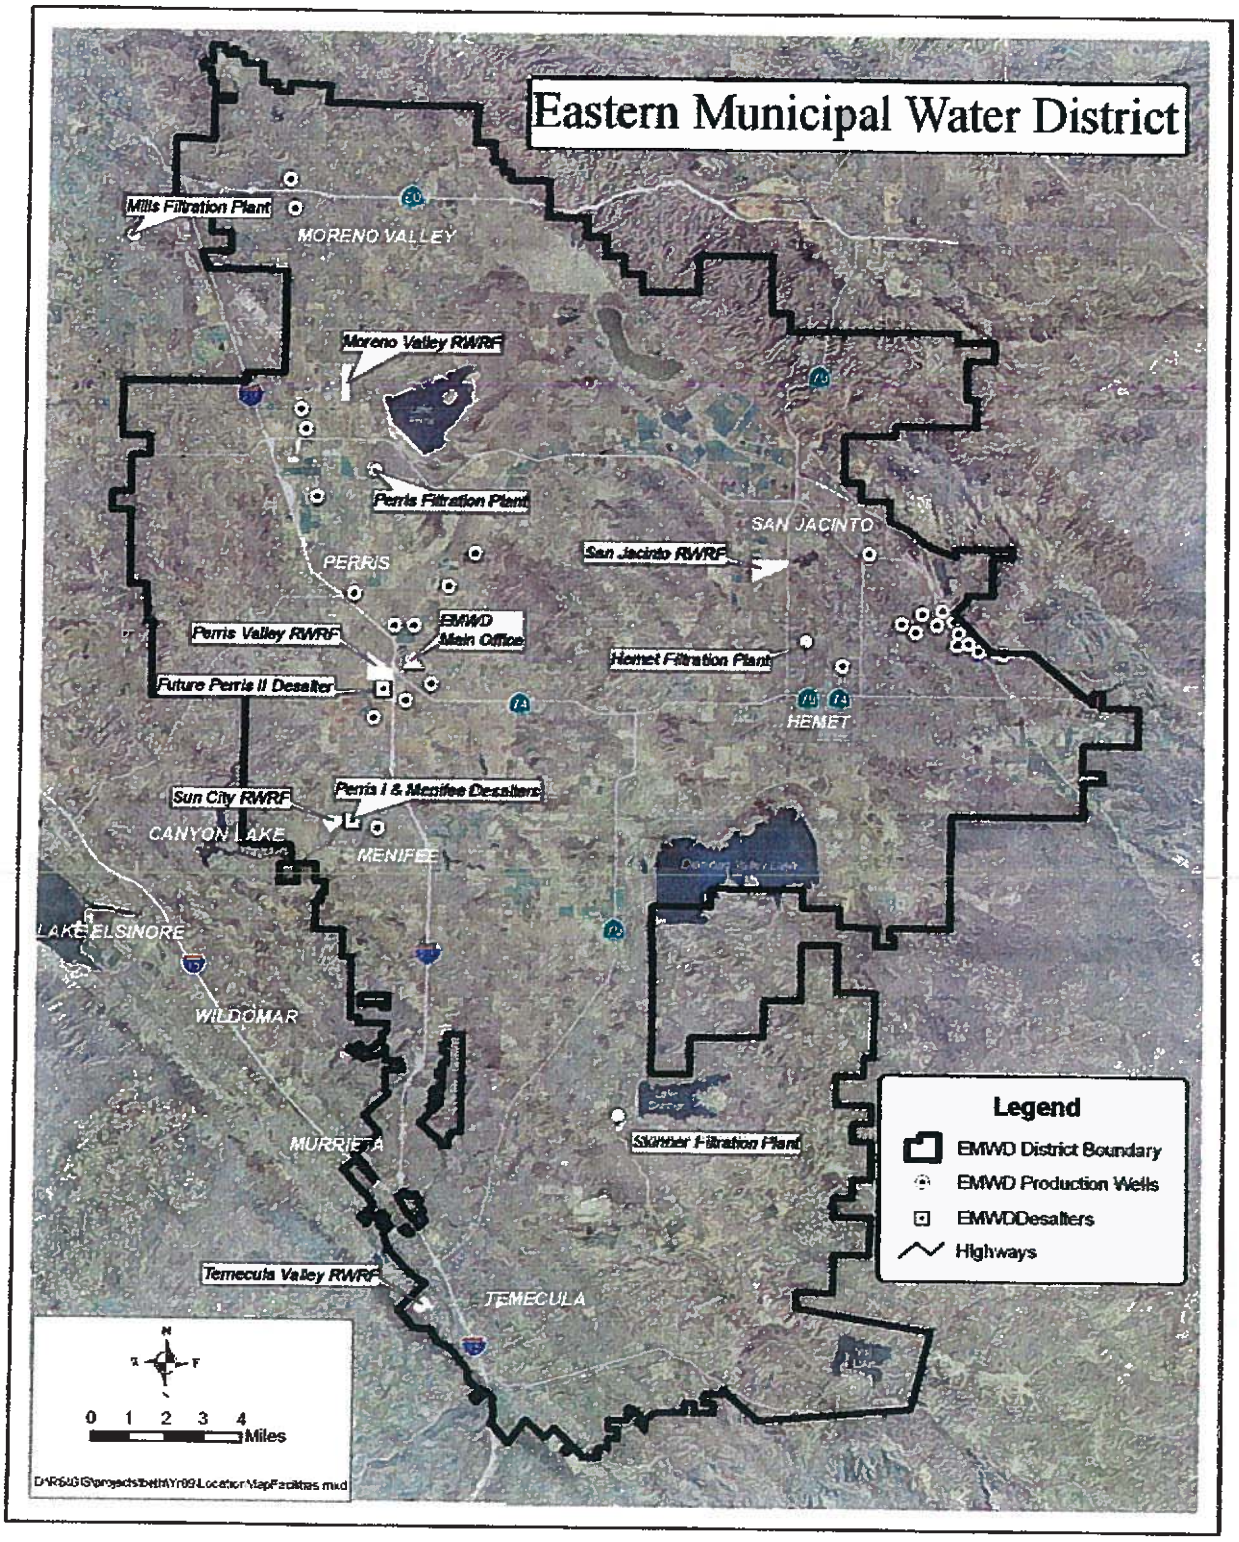
## Section 2 - Identification of Supply and Quantity

*Water Code 10910 (d) (1)*



### *2.1 Overview of Supplies*

EMWD has four (4) sources of water supply: imported water purchased from MWD, local potable groundwater, local desalted groundwater and recycled water. Imported water accounts for approximately 65 percent, local potable groundwater is approximately 11 percent, desalted groundwater is 3 percent, and recycled water is 21 percent of supply. Table 2, with information taken from the 2010 UWMP, lists the past supply quantities by source. Figure 1 shows the location of EMWD supplies.

**Table 2 - Water Supply (AFY) – 2006 – 2010**

| Type | Source | 2006 | 2007 | 2008 | 2009 | 2010 |
|---|---|---|---|---|---|---|
| Imported | Metropolitan Water District | 110,400 | 109,900 | 94,400 | 84,200 | 75,000 |
| Imported – Locally Treated | Metropolitan Water District | 8,400 | 17,300 | 16,600 | 17,000 | 16,600 |
| Groundwater | West San Jacinto Management Area | 19,600 | 19,500 | 20,000 | 18,100 | 15,800 |
| Desalination | West San Jacinto Management Area | 4,800 | 4,800 | 3,000 | 4,800 | 5,800 |
| Recycled Water | EMWD Regional Water Reclamation Facilities | 28,800 | 38,600 | 35,100 | 39,200 | 41,500 |
| **Total** | | **172,000** | **190,100** | **169,100** | **163,300** | **154,700** |

**Figure 1 - Location of Supply Sources**

It is anticipated that the majority of the water demands within EMWD's jurisdiction caused by future development will be met through additional water imports from MWD recognizing the conditions described in this document. Imported sources will be supplemented by an increase in desalination of brackish groundwater, recycled water use and water use efficiency. In the 2010 RUWMP, MWD analyzed the reliability of water delivery through the State Water Project (SWP) and the Colorado River Aqueduct (CRA) and concluded that with the storage and transfer programs developed by MWD, MWD will have a reliable source of water to serve its member agencies' needs through 2030 during normal, historic single-dry and historic multiple-dry years within a 20-year projection. Unprecedented shortage will be addressed through the principles of the Water Surplus and Drought Management Plan as described in the MWD RUWMP.

**Table 3 - Existing Water Supply Resources – Average Year Hydrology – 2015 – 2035**

| | 2015 | 2020 | 2025 | 2030 | 2035 |
|---|---|---|---|---|---|
| Metropolitan Water District | 149,300 | 170,700 | 190,700 | 210,000 | 226,200 |
| Recycled Water | 43,900 | 50,000 | 53,900 | 54,900 | 55,300 |
| Groundwater | 13,200 | 13,200 | 13,200 | 13,200 | 13,200 |
| Existing Desalter | 7,500 | 7,500 | 7,500 | 7,500 | 7,500 |
| **Total Existing Supplies** | **213,900** | **241,400** | **265,300** | **285,600** | **302,200** |

Based on a average of 2004- 2009 conditions

To supplement existing water supplies, EMWD has identified several projects that would supplement imported supplies, retrofit of potable water landscape customers, indirect potable recharge and additional water use efficiency. These projects will offset the demand of existing water and free up resources for new development. Table 4 provides a summary of additional potential local supplies.

**Table 4 - Potential Water Supply – 2015 - 2035**

| | 2015 | 2020 | 2025 | 2030 | 2035 |
|---|---|---|---|---|---|
| Additional Recycled Water | 6,100 | 13,500 | 16,400 | 22,200 | 28,200 |
| Desalination | 4,500 | 4,500 | 4,500 | 4,500 | 4,500 |
| Planned Additional Conservation | 0 | 0 | 1,300 | 4,300 | 6,400 |
| Water Transfers/Exchanges | 0 | 0 | 0 | 0 | 0 |
| **Total** | **10,600** | **18,000** | **22,200** | **31,000** | **39,100** |

These projects are in the planning stage of development and costs and implementation timelines are subject to change. New development will be required to help fund new water supply sources. The extent of additional funding will be determined by the EMWD and may take the form of a new component of connection fees or a separate charge. Details about funding will be developed with the plan of service

## 2.2 *Wholesale Water Supplies*

### 2.2a *Written Contracts or Other Proof of Entitlement*
*Water Code Section 10910 (d) (2) (A)*

EMWD is one of the 26 member agencies that make up MWD. The statutory relationship between MWD and its member agencies establishes the scope of EMWD's entitlements from MWD. Typically there are no set limits on supply quantities to member agencies and MWD has provided evidence in the 2010 RUWMP that its supplies will meet member agency demands during normal, historic single-dry and historic multiple-dry years within a 20-year projection.

During unprecedented shortage events, the MWD Water Supply Plan (WSAP) is implemented, requiring a reduction in demand by member agencies. The allocation plan takes into account member agency population growth and investments in local resources. Member agencies are allocated a portion of their anticipated demand with the assurance that a member agency will not see a retail shortage greater than the regional shortage. Water supply is not limited under the allocation plan but water use above a member agency's allocation is charged at a much higher rate. Several years of dry conditions and limitations on State Water Project operations required MWD to implement the allocation plan at a 10 percent regional shortage level from July of 2009 through April of 2011. This action follows the principles in the Water Surplus and Drought Management Plan as described in the 2010 RUWMP. During the allocation from MWD, EMWD implemented demand reduction strategies as outlined in its Water Shortage Contingency Plan and reduced imported demand below the allocation level.

### 2.2b *Metropolitan Water District of Southern California Supply*

EMWD relies on MWD to provide the majority of its potable water supply and a small percent of its non-potable water supply. The majority of EMWD's potable water is supplied in the northern part of EMWD by the Mills MWD Water Treatment Facility and in the southeastern portion of EMWD by the MWD Lake Skinner Water Treatment Facility. Untreated water from MWD is treated at EMWD's Perris and Hemet Microfiltration Plants for use as a potable source of water.

It is anticipated that the majority of the water demands within EMWD's jurisdiction caused by future development, will be met through additional water imports from MWD recognizing the conditions described in this document. Imported sources will be supplemented by an increase in desalination of brackish groundwater, recycled water use and water use efficiency. In the 2010 RUWMP, MWD analyzed the reliability of water delivery through the State Water Project (SWP) and the Colorado River Aqueduct. The RUWMP concluded that with programs developed, MWD will have a reliable source of water to serve its member agencies' needs through 2035. The analysis included in the UWMP included reliability data for historic single-dry and historic multiple-dry years. Unprecedented shortage will be addressed through the Water Supply Allocation Plan as described in the MWD RUWMP.

### 2.2c *MWD Regional Urban Water Management Plan*

The 2010 RUWMP provides information about MWD supply reliability and demand. MWD does not provide supply projections for each member agency; instead MWD uses a regional approach to developing projections. MWD calculates the demand for the entire region, as discussed in Appendix A.1 of the 2010 RUWMP, and then, using information about existing and proposed local projects, determines the amount of imported water that will be needed in the future. EMWD staff worked with MWD on the 2010 RUWMP, exchanging information about demand, local supply and projects, and clarification on boundary information and population

projections. Based on this information and additional data provided by other member agencies, MWD states it is able to meet the projected demands of all member agencies through 2035. The information supplied in the 2010 RUWMP provides assurance that MWD will have a reliable water supply available to deliver the demand required by all the member agencies including EMWD through 2035, even during dry periods. Under extreme conditions, water supply could be allocated to member agencies using the WSAP to preserve storage. The 2010 RUWMP is included as Attachment B of this assessment.

### *2.3 Local Resources*
*Water Code 10910 (d) (1)*

In an effort to reduce dependency on imported water from MWD, EMWD has developed several programs designed to take advantage of local resources. High-quality groundwater is a source of water for local customers in the Hemet/San Jacinto Area. In the West San Jacinto Basin, groundwater is blended with imported water for use in the western portion of EMWD. EMWD has also constructed two (2) desalination facilities to recover poor quality groundwater with high total dissolved solids (TDS) levels in the West San Jacinto groundwater basin areas. The product water from the desalters enters EMWD's potable distribution system. A third desalter is now in the final stages of design.

### *2.4 Groundwater*
*Water Code Section 10910 (f)*

Groundwater information is included in this assessment to assist the lead agency in determining the adequacy of EMWD's total supply. Groundwater is not being proposed to serve this project. New developments, including this project, will be supplied with imported water – (1) treated imported water directly from The Metropolitan Water District of Southern California (MWD); (2) untreated imported water from MWD subsequently treated by EMWD; or (3) untreated imported water treated by EMWD and recharged into the basin for later withdrawal.

### *2.4a Urban Water Management Plan Review*
*Water Code Section 10910 (f) (1)*

The 2010 UWMP discusses projected groundwater use in EMWD and explains assumptions made about groundwater. In the following sections, portions of the 2010 UWMP are included with information about groundwater resources. The water supply for the proposed project will not include groundwater. The following information regarding EMWD's groundwater supply is for informational purposes only.

### 2.4b San Jacinto Watershed - Groundwater Management Zones in EMWD's Service *Area*
*Water Code Section 10910 (f) (2)*

The San Jacinto Watershed covers an area of approximately 728 square miles, measured above a point just downstream from Railroad Canyon Dam. The groundwater management zones of the San Jacinto Watershed lie within alluvium-filled valleys carved into the elevated bedrock plateau of the Perris Block. Collectively, the groundwater management zones are nearly surrounded by impermeable bedrock mountains and hills. Internally, island-like masses of granite and metamorphic bedrock rise above the valley floor.

The San Jacinto Fault Zone, which contains the Claremont and Casa Loma faults, is the major geologic feature that bounds and/or crosscuts many of the groundwater management zones, and

typically provides effective barriers to groundwater flow. The area between the Claremont and Casa Loma faults is a deep, alluvium-filled graben of tectonic origin, commonly referred to as the San Jacinto Graben. The effective base of freshwater in the graben is known to be quite deep but has not been precisely determined. The San Jacinto Graben consists of a forebay area in the southeast where surface water recharge primarily occurs, and a pressure area in the northwest where deep aquifers exist under confined conditions. To the east, the San Jacinto mountain range is the dominant geographic feature of the region, rising to a height of 10,805 feet.

Groundwater management zones were delineated based on major impermeable boundaries, constrictions in impermeable bedrock, groundwater divides, and internal flow systems. The eight groundwater management zones in the San Jacinto Watershed within EMWD's service area include the Canyon, San Jacinto Upper Pressure, San Jacinto Lower Pressure, Lakeview/Hemet North, Hemet South, Perris South, Perris North, and Menifee Management Zones.

Detailed descriptions of each Management Zone are included in the 2010 UWMP under Section 3 attached as Appendix A of this report.

### *2.4c Groundwater Management*

*Water Code 10910 (f) (2)*

In the Hemet/San Jacinto Water Management Plan area, EMWD's groundwater production is currently constrained by the 1954 Fruitvale Judgment and Decree. Under that Judgment and Decree, EMWD, as successor-in-interest to the Fruitvale Mutual Water Company, may extract the subsurface waters of the Canyon Basin for use over or outside the entire basin without restriction, as long as the static water level in a specific well is not over 25 feet below a specific elevation. If the water level in the well is more than 25 feet below the specified elevation, EMWD's extraction is limited to 4,500 AFY. The District may extract from the Entire Basin, a total of not more than 12,000 AFY from the Entire Basin for use outside the basin, subject to the 4,500 AFY Canyon Basin extraction limit. The perimeters of the Canyon Basin and Entire Basin are defined in the Judgment and Decree. The Hemet/San Jacinto area contains good quality water and is a major source of municipal as well as private production, although water levels are in serious decline.

Since 2001, the Cities of Hemet and San Jacinto, Lake Hemet Municipal Water District (LHMWD), EMWD, and representatives of the private groundwater producers, with DWR acting as an impartial mediator, have been working on a groundwater management plan for the Hemet/San Jacinto Water Management Plan area. Over the past several years, the group has discussed and resolved several controversial issues, including San Jacinto Tunnel seepage water, the Fruitvale Judgment and Decree, export of groundwater from the basins, and how to maximize the use of recycled water. As a result of their efforts, a final Hemet/San Jacinto Water Management Plan (HSJWMP) was completed in 2007 and a Stipulated Judgment is scheduled to be final in 2012. Once the Stipulated Judgment for the Hemet/San Jacinto Water Management Plan is in effect, it will supersede the Fruitvale Judgment and Decree.

The Hemet/San Jacinto Water Management Plan:

- Limits the amount of water being extracted from the basin to a sustainable yield.
- Implements continued recharge of the basin using imported water through the Integrated Recharge and Recovery Project (IRRP).
- Insures settlement claims by the Soboba Band of Luiseño Indians are facilitated and accommodated.

- Expands existing water production and water services system to meet future urban growth through the use of imported water recharged into the basin.
- Protects and/or enhances water quality in the management plan area.
- Supports cost-effective water supplies and treatment by the public agencies.
- Eliminates groundwater overdraft and enhances basin yield.
- Continues the monitoring program to promote and provide for best management and engineering principles to protect water resources.

Long term groundwater management includes plans for artificial recharge using MWD replenishment water via permanent facilities through the IRRP. An agreement with the Soboba Band of Luiseño Indians requires that, on average, an annual delivery of 7,500 acre-feet of water from MWD for the next 30 years to EMWD, LHMWD, and the Cities of Hemet and San Jacinto as part of an effort to recharge groundwater in the Hemet/San Jacinto area, fulfilling the Soboba Tribe's water rights and addressing chronic groundwater overdrafts.

EMWD's rights under the Hemet/San Jacinto Water Management Plan will be a base groundwater production right of 10,869 AFY. Any pumping above that amount is subject to replenishment fees.

In the West San Jacinto area, a cooperative groundwater management plan is already in place to insure the reliability and quality of the water supply. In June 1995, EMWD adopted the West San Jacinto Groundwater Basin Management Plan (WSJGBMP) in accordance with the statutes in the State Water Code Sections 10750 through 10755 resulting from the passage of Assembly Bill 3030 (AB 3030). The plan was adopted after extensive public outreach and meetings with interested individuals and agencies.

Implementation of the WSJGBMP began directly after its adoption. Initial efforts to implement the WSJGBMP included establishing an advisory committee; prioritizing the management zones; evaluating groundwater resources including establishing groundwater quality, level, and extraction monitoring programs; and conducting hydro-geophysical investigations. The West San Jacinto Groundwater Basin Management Plan Annual Report, documenting the implementation of the plan and activities in the groundwater management zones, has been published annually since 1996.

### *2.4d Groundwater Recharge*

Through pilot programs and using temporary facilities, EMWD has recharged groundwater in the Hemet/San Jacinto area with imported surplus water from MWD since 1990. In April of 2004, EMWD, LHMWD, and the Cities of Hemet and San Jacinto executed a Memorandum of Understanding (MOU) for an Interim Water Supply Plan. The purpose of the plan was to address the deteriorating situation in the Hemet/San Jacinto area by providing recharge of imported water from the SWP into the aquifer at two sites – the Conjunctive Use Ponds in the Intake portion of the San Jacinto Upper Pressure Management Zone, and the Grant Avenue Ponds in the Canyon Management Zone. From 2004 through 2007, 20,819 AF of imported water from the SWP was recharged into the aquifer. Due to dry conditions, environmental restriction, and the level of demands in its service area, MWD curtailed Replenishment Service effective as of May 1, 2007. Since then, permits to recharge water at the two sites have expired. To replace the temporary recharge facilities, long term facilities are being designed and built as part of the IRRP, an integral piece of the water management plan and the Soboba settlement. The IRRP initially consists of 35 acres of basins or ponds for recharging State Project Water; three extraction wells; three monitoring wells; modification to two existing pump stations; and pipelines within, and adjacent to, the San Jacinto River.

EMWD is also contributing to the replenishment of the basin by providing recycled water in lieu of groundwater production. The Recycled In-Lieu Program supplies recycled water for agricultural irrigation in-lieu of pumping native groundwater. The project can deliver up to 8,540 acre-feet per year to local agricultural water producers. The project costs are jointly funded by EMWD, LHMWD, and the Cities of Hemet and San Jacinto. Agreements that set limits on groundwater production, and provide for a payment of a portion of the operation and maintenance costs have been in place since 2008.

### *2.4e Groundwater Pumping Rights*
*Water Code 10910 (f)*

In the eastern portion of EMWD's service area or Hemet/San Jacinto area, EMWD's groundwater production is currently constrained by the 1954 Fruitvale Judgment and Decree. Under that Judgment and Decree, EMWD, as successor-in-interest to the Fruitvale Mutual Water Company, may extract the subsurface waters of the Canyon Basin for use over or outside the Entire Basin without restriction as long as the static groundwater level in a specific well is not over 25 feet below a specific elevation. If the groundwater level in the well is more than 25 feet below the specified elevation, EMWD's extraction is limited to 4,500 AFY. EMWD may extract a total of not more than 12,000 AFY from the Entire Basin for use outside the basin, subject to the 4,500 AFY Canyon Basin extraction limit. The perimeters of the Canyon Basin and Entire Basin are defined in the Judgment and Decree but they basically cover the east side of the Hemet/San Jacinto Valley, from Bridge Street on the northwest to the Park Hill area on the southeast. The Hemet/San Jacinto area contains good quality groundwater and is a major source of municipal as well as private production, although groundwater levels are in serious decline. Once the Stipulated Judgment for the HSJWMP is in effect, it will supersede the Fruitvale Judgment and Decree. EMWD's rights under the HSJWMP will be a base groundwater production right of 10,869 AFY. Any pumping above that amount is subject to replenishment fees.

### *2.4f Surface Water Diversion Rights*
*License No. 10667*

EMWD holds a right to divert up to 5,760 AFY of San Jacinto River flows for recharge and subsequent use from November 1 through June 30 each year. EMWD's diversion and recharge of San Jacinto River surface water to the Canyon Management Zone takes place at EMWD's Grant Avenue Ponds in the Valle Vista area. EMWD's diverted water is recharged into the groundwater aquifer of the Canyon Management Zone and is not used for direct use or sale. The San Jacinto River is an ephemeral river and, consequently, river flows may be insufficient for any diversion at all. In 2010, river flows were sufficient to divert 4,423 AF of surface water. Additional information about surface water diversion is available in Chapter 3 of the Annual Report.

### *2.4g Past Groundwater Extraction*
*Water Code 10910 (f) (3)*

Table 2 depicts the total potable groundwater extracted by EMWD from 2006 through 2010. The majority of EMWD's groundwater is extracted from the Hemet/San Jacinto area. The remaining groundwater is extracted from the area covered by the WSJGBMP, including brackish groundwater extraction for the desalters. The location of wells used to pump groundwater and the desalters can be seen on Map 1.

### *2.4h Projected Groundwater Extraction*
*Water Code 10910 (f) (4)*

Table 3 lists the amount of potable groundwater that EMWD is projecting will be supplied. Groundwater extraction in the Hemet/San Jacinto area, currently covered by the Fruitvale Agreement, will decrease as the HSJWMP is implemented. The Perris/Moreno Valley wells in the WSJGBMP area are projected to continue to produce 6,000 AFY. The desalters are part of managing the WSJGBMP area and will reduce salinity in the groundwater management zones with the added benefit of providing a source of potable water. The well locations shown on Map 1 should remain consistent in the future.

### *2.4i Analysis of the Sufficiency of Groundwater*
*Water Code 10910 (f) (5)*

Protecting the available groundwater supply is an important part of EMWD's planning efforts. EMWD is actively working with other agencies and groups to insure that groundwater will be a reliable resource far into the future. Part of managing groundwater responsibly requires the replacement of groundwater extracted beyond the safe yield. Groundwater extraction in Hemet/San Jacinto area will be replaced with imported water as the HSJWMP is implemented, and groundwater extraction in the WSJGBMP area will remain static. Although the desalters will provide an additional supply of water, the amount of water produced is not sufficient to accommodate the proposed growth within EMWD. The majority of the increased water demand caused by this project will be met by increasing the use of imported water from MWD recognizing the conditions of approval outlined in this document.

### *2.5 Recycled Water*
*Water Code 10910 (d) (1)*

Recycled water is extensively used in EMWD's service area in place of potable water. To offset municipal demand, recycled water is used to irrigate landscape and for industrial purposes. The majority of EMWD's agricultural customers also use recycled water. In some cases, recycled water is used by agricultural customers in lieu of groundwater production, increasing the amount of groundwater available for municipal use without increased recharge.

The supply of recycled water will continue to grow with EMWD's population growth. The four (4) regional water reclamation facilities that EMWD is currently operating are all either in the process of expansion or have an expansion planned in the near future. Recycled water is currently used for both municipal and agricultural purposes. Municipal customers use recycled water for landscape irrigation and industrial process water. Agricultural customers use recycled water for irrigation of crops. A portion of agricultural demand of recycled water is in lieu of using groundwater. Currently, the use of recycled water is limited by the amount available to serve during peak demands and with livestream discharge occurring in off peak periods. EMWD has developed plans to eliminate discharge and use all of the recycled water available within the District, and to offset demand of existing potable customers, including retrofit of potable water landscape customers and indirect potable recharge.

### *2.6 Water Use Efficiency Measures*

The Water Conservation Act of 2009, Senate Bill 7x-7, set a requirement for water agencies to reduce their per capita water use by the year 2020. The overall goal is to reach a state wide reduction of per capita urban water use of 20 percent by December 31, 2020, with an intermediate 10 percent reduction by December 31, 2015. Demand reduction can be achieved

through both conservation and the use of recycled water as a potable demand offset. EMWD will reduce potable water demand to meet the goals of SB7x-7 two ways; using recycled water to offset potable water demand and reducing demand for water through conservation. Three methods have been identified for conserving water: 1) a budget based tiered rate, 2) requirements for water efficiency in new construction, and 3) an active conservation program. Water use reduction will be focused on outdoor demand reduction by all customer types. Table 5 summarizes water savings by type.

**Table 5 - Water Efficiency Savings (AFY) – 2005 - 2035**

| Saving Type | 2005 | 2010 | 2015 | 2020 | 2025 | 2030 | 2035 |
|---|---|---|---|---|---|---|---|
| Recycled Water Potable Offset | 3,601 | 4,041 | 5,000 | 6,300 | 11,500 | 13,900 | 14,300 |
| Tiered Rate | 0 | 8,700 | 8,700 | 8,700 | 8,700 | 8,700 | 8,700 |
| New Construction | 0 | 200 | 2,000 | 4,100 | 6,100 | 8,000 | 9,600 |
| Active Conservation | 1,500 | 3,400 | 6,500 | 9,500 | 10,700 | 11,700 | 12,600 |
| **Total** | **5,101** | **16,341** | **22,200** | **28,600** | **37,000** | **42,300** | **45,200** |

Recycled water will be used to offset potable demand through the expansion of the existing recycled water system.

Tiered Rate savings are an estimate of water saved by customers, after the implementation of a budget based tiered rate. In April 2009, EMWD implemented a tiered rate billing structure for its residential and landscape customers. Customers are provided an allocation for reasonable water use and are required to pay a higher rate for water use over their allocated limit. Water savings by existing customers has been estimated. Actual water demand since the implementation of the tiered rate has been lower than the estimated amounts, likely as a result of several factors and not the tiered rate implementation alone.

Water Use Efficiency Requirements in New Development includes installing lower water use landscape and interior fixtures. Water use efficiency is mandated statewide through existing ordinances, plumbing codes and legislation. To enforce water use efficiency in new development EMWD has lowered the water budget allocations for new development. Any residential or dedicated landscape account installed after January 1, 2011 has an outdoor budget allocation based on only 70 percent of ET, compared to up to 100 percent of ET for older accounts. Water use savings shown in Table 5 are calculated assuming lower budgets allocation will result in a reduction in a proportionate reduction in water use. Actual savings will be measured based on average use by new meters.

Active Conservation savings are the result of water use efficiency programs implemented by EMWD. EMWD encourages the replacement of inefficient devices and includes monetary rebate, distribution and direct installation programs. Water savings are based on estimated water savings for each device and takes into account the lifetime of each device.

Through the above three methods of reducing water use, and recycled water use, EMWD anticipates the reduction of potable water demand to meet the requirements of SB7x-7.

## 2.7 *Local Resources Documentation*

### 2.7a *Written Contracts or Other Proof*
*Water Code 10910 (d) (2) (A)*

Below is a list of documents related to EMWD's local water supply:

- **EMWD 2010 Urban Water Management Plan (June 2010)** - EMWD's 2010 Urban Water Management Plan is attached as Appendix A. This plan supplies additional information on EMWD, its service area, and water management and supply capabilities.
- **West San Jacinto Groundwater Basin Management Plan 2010 Annual Report on the Status of the Groundwater Subbasins (June 2011)** - Detailed information on the history and progress of groundwater basin management and the Groundwater Monitoring Program can be found in the 2008 Annual Report on the Status of the Groundwater Subbasins, located on EMWD's Website (www.emwd.org).
- **The Fruitvale Agreement (June 1954)** – A Judgment and Decree (No. 54546) filed in Riverside County which quantifies EMWD's groundwater extraction in the Hemet/San Jacinto area.
- **Hemet/San Jacinto Water Management Area 2010 Annual Report (June 2011)** - Detailed information on the history and progress of the Water Management Plan and Groundwater Monitoring Program can be found in the 2008 Annual Report on the Status of the Groundwater Subbasins, located on EMWD's Website (www.emwd.org).
- **Hemet/San Jacinto Groundwater Management Area Water Management Plan** – This plan was developed by the stakeholders in the Hemet/San Jacinto area to provide a foundation to guide and support responsible water management into the future. The plan was finalized in 2007 and an EIR was approved for the project on November 21, 2007 by EMWD's Board of Directors.

With regard to EMWD's ownership and use of reclaimed/recycled water, California Water Code Section 1210 states:

The owner of a waste water treatment plant operated for the purpose of treating wastes from a sanitary sewer system shall hold the exclusive right to the treated waste water as against anyone who has supplied the water discharged into the waste water collection and treatment system, including a person using water under a water service contract, unless otherwise provided by agreement.

With regard to the Water Use Efficiency Ordinance that will result in additional supplies through conservation:

The County of Riverside Board of Supervisors approved an update to Ordinance No. 859 on October 20, 2009, requiring water efficient landscaping in any new development requiring a permit.

EMWD's Board of Directors approved Ordinance 72.25 for implementation on January 1, 2011, requiring water efficient landscaping in new developments and requiring water efficiency enforced through tiered rates. Ordinance 72.25 can be found on EMWD's website www.emwd.org.

### *2.7b EMWD's Capital Improvement Plan*
*Water Code 10910 (d) (2) (B)*

EMWD maintains and periodically updates a comprehensive Water Facilities Master Plan (WFMP). This working plan defines water supply, transmission mains, and storage facilities required for the accommodation of projected growth within EMWD. On a yearly basis, a five-year Capital Improvement Plan (CIP) is prepared, which is based on a further refinement of the WFMP. The CIP outlines specific projects and their funding source. Each project is also submitted individually to the Board for authorization and approval. This allows EMWD to accurately match facilities' needs with development trends. Financing information for the desalter plant construction, regional water reclamation facilities expansion, and well replacement can also be found in the CIP.

### *2.7c Federal, State and Local Permits Needed for Construction*
*Water Code 10910 (d) (2) (C)*

As part of EMWD's CIP, an Environmental Review Committee has been established. This Committee, made up of representatives from the Engineering, Planning, and Environmental and Regulatory Compliance Departments, discuss each project and the steps needed to comply with regulatory requirements. EMWD works with various government agencies, including the U.S. Department of Fish and Wildlife, the U.S. Army Corps of Engineers, the California Department of Public Health, the California State Water Resources Board, the California Air Quality Management District, and the California Department of Fish & Game to obtain permits when necessary. The Engineering Department procures additional construction permits on a case-by-case basis. EMWD has already, or is in the process of, obtaining Environmental Impact Reports or other environmental documents necessary for desalter construction, regional water reclamation facilities expansion, and well replacements. Any necessary permits secured by EMWD are kept on file at the District office.

### *2.7d Regulatory Approvals*
*Water Code 10910 (d) (2) (D)*

The Department of Public Health (DPH) has issued a system-wide permit for EMWD's water supply system. EMWD's Environmental and Regulatory Compliance Department conforms to specific regulations and obtains any additional necessary approvals. As new facilities are constructed by EMWD, they are subject to inspection and testing by regulatory agencies and the DPH permit is amended.

## Section 3 - Demand

### *3.1 Demand Projections*
*Water Code 10910 (c) (2), 10631 (e) (1)*

EMWD's primary retail customers can be divided into residential, commercial, industrial, institutional and landscape sectors. Although the residential section is by far EMWD's largest customer segment, each market segment plays a role in the growth and development of EMWD's service area. See Table 6 for water use by various customer types.

## Table 6 - Retail Water Deliveries by Customer Type – 2005 - 2035

| Year /Type | Units | Single family Res. | Multi-family Res. | Comm-ercial | Indus-trial | Inst/ gov. | Land-scape | Agri-culture | Total |
|---|---|---|---|---|---|---|---|---|---|
| 2005 | No. of accounts | 114,100 | 1,000 | 1,500 | 100 | 40 | 1,500 | 200 | **118,440** |
| Actual | Volume (AF) | 62,300 | 5,500 | 3,900 | 400 | 2,900 | 7,500 | 2,400 | **84,900** |
| 2010 | No. of accounts | 129,400 | 4,300 | 2,100 | 100 | 500 | 2,200 | 100 | **138,700** |
| Actual | Volume (AF) | 54,000 | 6,100 | 4,200 | 400 | 2,300 | 8,900 | 1,800 | **77,700** |
| 2015 | No. of accounts | 140,600 | 5,700 | 2,300 | 1,200 | 100 | 3,300 | 100 | **153,300** |
| Projected | Volume (AF) | 74,400 | 8,300 | 5,600 | 600 | 3,600 | 18,500 | 2,800 | **113,800** |
| 2020 | No. of accounts | 150,200 | 6,100 | 2,400 | 1,300 | 100 | 3,500 | 85 | **163,685** |
| Projected | Volume (AF) | 79,600 | 8,800 | 5,900 | 600 | 3,800 | 19,600 | 2,400 | **120,700** |
| 2025 | No. of accounts | 169,600 | 6,900 | 2,700 | 1,400 | 100 | 4,000 | 85 | **184,785** |
| Projected | Volume (AF) | 89,800 | 10,000 | 6,700 | 700 | 4,300 | 22,200 | 2,400 | **136,100** |
| 2030 | No. of accounts | 187,700 | 7,700 | 3,000 | 1,500 | 100 | 4,400 | 85 | **204,485** |
| Projected | Volume (AF) | 99,400 | 11,000 | 7,400 | 800 | 4,800 | 24,500 | 2,400 | **150,300** |
| 2035 | No. of accounts | 202,800 | 8,200 | 3,300 | 1,700 | 100 | 4,700 | 85 | **220,885** |
| Projected | Volume (AF) | 107,400 | 11,900 | 8,000 | 800 | 5,200 | 26,500 | 2,400 | **162,200** |

Note: Water Quantities include raw water to agricultural customers but does not include recycled water deliveries.

Table 7 shows sub-agency water use and Table 8 shows other water uses. Total water use is shown in Table 9.

## Table 7 - Wholesale to Other Agencies – 2005 - 2035

| | Actual Sales (AF) | | Projected Sales (AF) | | | | |
|---|---|---|---|---|---|---|---|
| Water distributed | 2005 | 2010 | 2015 | 2020 | 2025 | 2030 | 2035 |
| City of Hemet | 100 | 0 | 0 | 0 | 0 | 0 | 0 |
| City of Perris | 1,900 | 1,700 | 1,700 | 1,800 | 1,900 | 2,000 | 2,100 |
| City of San Jacinto | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Lake Hemet MWD[1] | 100 | 1,300 | 1,100 | 1,100 | 1,000 | 1,100 | 1,100 |
| North Perris Water Company | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Nuevo Water Company | 800 | 600 | 800 | 1,600 | 1,700 | 1,700 | 1,700 |
| Murrieta Water Company | 100 | 1,600 | 0 | 0 | 0 | 0 | 0 |
| Rancho California Water District | 26,300 | 21,900 | 36,500 | 48,600 | 50,800 | 53,000 | 55,200 |
| Hemet/San Jacinto Basin Plan Water Master | 0 | 0 | 7,500 | 8,500 | 9,600 | 11,200 | 12,300 |
| Total | 29,300 | 27,100 | 47,600 | 61,600 | 65,000 | 69,000 | 72,400 |

1. Sales of water to Lake Hemet are for non-potable supplies used to meet agricultural demand.

## Table 8 - Other Water Uses – 2005 – 2035

| | Actual Use (AF) | | Projected Use (AF) | | | | |
|---|---|---|---|---|---|---|---|
| | 2005 | 2010 | 2015 | 2020 | 2025 | 2030 | 2035 |
| Recycled Water | 32,600 | 41,500 | 43,900 | 50,000 | 53,900 | 54,900 | 55,300 |
| Recharge Water [1] | 7,000 | 0 | 0 | 0 | 0 | 0 | 0 |
| Distribution System Water Loses | 7,600 | 8,200 | 8,400 | 8,900 | 10,100 | 11,200 | 12,100 |
| Treatment Water Losses | 100 | 200 | 200 | 200 | 200 | 200 | 200 |
| Total | 47,300 | 49,900 | 52,500 | 59,100 | 64,200 | 66,300 | 67,600 |

1. Future recharge will be through the Hemet/San Jacinto Basin Plan Water Master as seen in Table 8.

## Table 9 - Water Demand (AFY) – 2005 - 2035

| | Actual | | Projected | | | | |
|---|---|---|---|---|---|---|---|
| | 2005 | 2010 | 2015 | 2020 | 2025 | 2030 | 2035 |
| Retail Potable Water Sales | 84,900 | 77,700 | 113,800 | 120,700 | 136,100 | 150,300 | 162,200 |
| Water Sales to Other Agencies | 29,400 | 27,100 | 47,600 | 61,600 | 65,000 | 69,000 | 72,400 |
| Other Water Uses/Losses | 47,300 | 49,900 | 52,500 | 59,100 | 64,200 | 66,300 | 67,600 |
| Total | 161,600 | 154,700 | 213,900 | 241,400 | 265,300 | 285,600 | 302,200 |

### *3.2 Project Demand*

This assessment is prepared for the World Logistics Center Specific Plan in Moreno Valley proposed by Highland Fairview. The project proposes 41.6 million square-feet of logistics facilities on 2,655 acres of light industrial development. The project is located in the eastern part of the City of Moreno Valley and is generally bounded by Gilman Spring Road, Redlands Boulevard and the Moreno Valley freeway. The projected demand for the project is estimated to be 1,991.25 AFY. Exhibit "A" shows the location of this project.

**Table 10 – Project Demand**

| Type | Acres | AF Demand per Acre | AFY |
|---|---|---|---|
| Light Industrial [1] | 2,655 | 0.75 | 1,991.25 |

(1) Per project description

The demand for this project is estimated based demand from similar landuse. A majority of the estimated demand would be for landscape irrigation. The developers of this project are proposing very low water use landscaping which would reduce the projected project demand significantly. The demand for this project is within the limits of projected demand accounted for in the 2010 UWMP and would be included in the projected demand shown in Table 9 of this water supply assessment report.

### *3.3 Database of Proposed Projects*

*Water Code 10910 (c) (3)*

To develop the projections used in this Water Supply Assessment, EMWD uses a development-tracking database that assesses future water demands for specific projects. EMWD uses this database to help plan for future water supply and infrastructure needs by monitoring new projects through various stages of development. Subject to the Board of Director's approval of this assessment, information associated with this project will be included in the supply and demand projections EMWD uses for planning. Changes in density and land use are also tracked in this database for planning purposes. The developer is required to notify EMWD if any changes to project density or land use occur.

## *Section 4 Evaluation of Supply and Demand*

*Water Code 10910 (c) (2)*

### *4.1 Supply and Demand Evaluation under Historic Conditions*

Tables 11, 12 and 13, taken from the 2010 UWMP, are an estimate of EMWD's demand during average, single and multiple dry years.

**Table 11 - Existing Water Supply Resources – Average Year Hydrology – 2015 - 2035**

| | 2015 | 2020 | 2025 | 2030 | 2035 |
|---|---|---|---|---|---|
| Metropolitan Water District | 149,300 | 170,700 | 190,700 | 210,000 | 226,200 |
| Recycled | 43,900 | 50,000 | 53,900 | 54,900 | 55,300 |
| Groundwater | 13,200 | 13,200 | 13,200 | 13,200 | 13,200 |
| Existing Desalter | 7,500 | 7,500 | 7,500 | 7,500 | 7,500 |
| **Total Existing Supplies** | **213,900** | **241,400** | **265,300** | **285,600** | **302,200** |
| **Total Projected Demands** | **213,900** | **241,400** | **265,300** | **285,600** | **302,200** |
| **Shortfall/Surplus** | **0** | **0** | **0** | **0** | **0** |

Based on a repeat of 2004- 2009 conditions

**Table 12 - Existing Water Supply Resources – Dry Year Hydrology – 2015 – 2035**

| | 2015 | 2020 | 2025 | 2030 | 2035 |
|---|---|---|---|---|---|
| Metropolitan Water District | 155,300 | 177,600 | 198,300 | 218,300 | 235,100 |
| Recycled | 45,500 | 51,800 | 55,800 | 56,900 | 57,300 |
| Groundwater | 13,200 | 13,200 | 13,200 | 13,200 | 13,200 |

| **Total Existing Supplies** | **221,500** | **250,100** | **274,800** | **295,900** | **313,100** |
| **Total Projected Demands** | **221,500** | **250,100** | **274,800** | **295,900** | **313,100** |
| **Shortfall/Surplus** | **0** | **0** | **0** | **0** | **0** |

Note: Based on a repeat of 1977 conditions

**Table 13 - Existing Water Supply Resources – Multi - Dry Year – 2015 - 2035**

| | 2015 | 2020 | 2025 | 2030 | 2035 |
|---|---|---|---|---|---|
| Metropolitan Water District | 156,600 | 179,000 | 199,800 | 219,900 | 236,900 |
| Recycled | 45,800 | 52,200 | 56,200 | 57,300 | 57,700 |
| Groundwater | 13,200 | 13,200 | 13,200 | 13,200 | 13,200 |
| Existing Desalter | 7,500 | 7,500 | 7,500 | 7,500 | 7,500 |
| **Total Existing Supplies** | **223,100** | **251,900** | **276,700** | **297,900** | **315,300** |
| **Total Projected Demands** | **223,100** | **251,900** | **276,700** | **297,900** | **315,300** |
| **Shortfall/Surplus** | **0** | **0** | **0** | **0** | **0** |

Note: Based on a repeat of 1990-1992 conditions

EMWD's 2010 UWMP discusses the supply reliability for EMWD during dry years. It is anticipated that the majority of water for future development will be supplied by imported water from MWD during single dry years. Typically, MWD does not place imported water limits on a member agency, but predicts the future water demand based on regional growth information. MWD stated in its 2010 RUWMP that with the addition of all water supplies, existing and planned, MWD would have the ability to meet all of its member agencies' projected supplemental demand through 2035, even under a repeat of historic drought scenarios.

### *4.2 Contingency Planning*

Included in the 2010 UWMP is a copy of EMWD's Water Shortage Contingency Plan (WSCP). In the case of unprecedented shortage EMWD will reduce demand using significant penalties for wasteful water use. EMWD's WSCP details the plan for demand reduction for several stages of shortage up to 50 percent. Additional information about contingency planning is included in Section 5 of EMWD's 2010 UWMP.

## Section 5 - Water Supply Assessment

### *5.1 Potable Water*

From a facilities perspective, the proposed project would be conditioned to construct off-site and on-site water facilities needed to distribute water throughout the project area. A plan of service for the proposed project should be created, and after approval by EMWD, be consulted for specific improvements. See Exhibit "B" for existing water facilities in relation to the project.

With respect to water supply, as discussed above, the project will be served using imported water from MWD supplemented with new local supply projects during multi-dry years, if needed. However, if the City of Perris succeeds in obtaining a permit from the State Water Resources Control Board to develop the available local resources, EMWD may be unable to supplement MWD supplies in times of shortage. Allocation from MWD may result in water supplies being made available at a significantly higher cost depending on circumstances.

### *5.2 Recycled Water*

EMWD policy recognizes recycled water as the preferred source of supply for all non-potable water demands, including irrigation of recreation areas, green-belts, open space common areas, commercial landscaping, and supply for aesthetic impoundment or other water features. The proposed project is near an existing recycled water line and in the future recycled water may be available for the project.

According to EMWD policy, the project may be conditioned to construct a recycled water system physically separated from the potable water system. The system will need to be constructed to recycled water standards. The project may also be conditioned to construct off-site recycled water facilities. EMWD will make a final determination on requirements for recycled water use and facilities during the plan of service phase of the project.

### *5.3 Duration of Approval – 3 Year Maximum*

This assessment will be reviewed every three years until the project begins construction. The project applicant shall notify EMWD when construction has begun. The review will insure that the information included in this assessment remains accurate and no significant changes to either the project or EMWD's water supply have occurred. If neither the project applicant nor the lead agency contacts EMWD within three years of approval of this WSA, it will be assumed that the proposed project no longer requires the estimated water demand calculated, the demand for this project will not be considered in assessments for future projects, and the assessment provided by this document will become invalid.

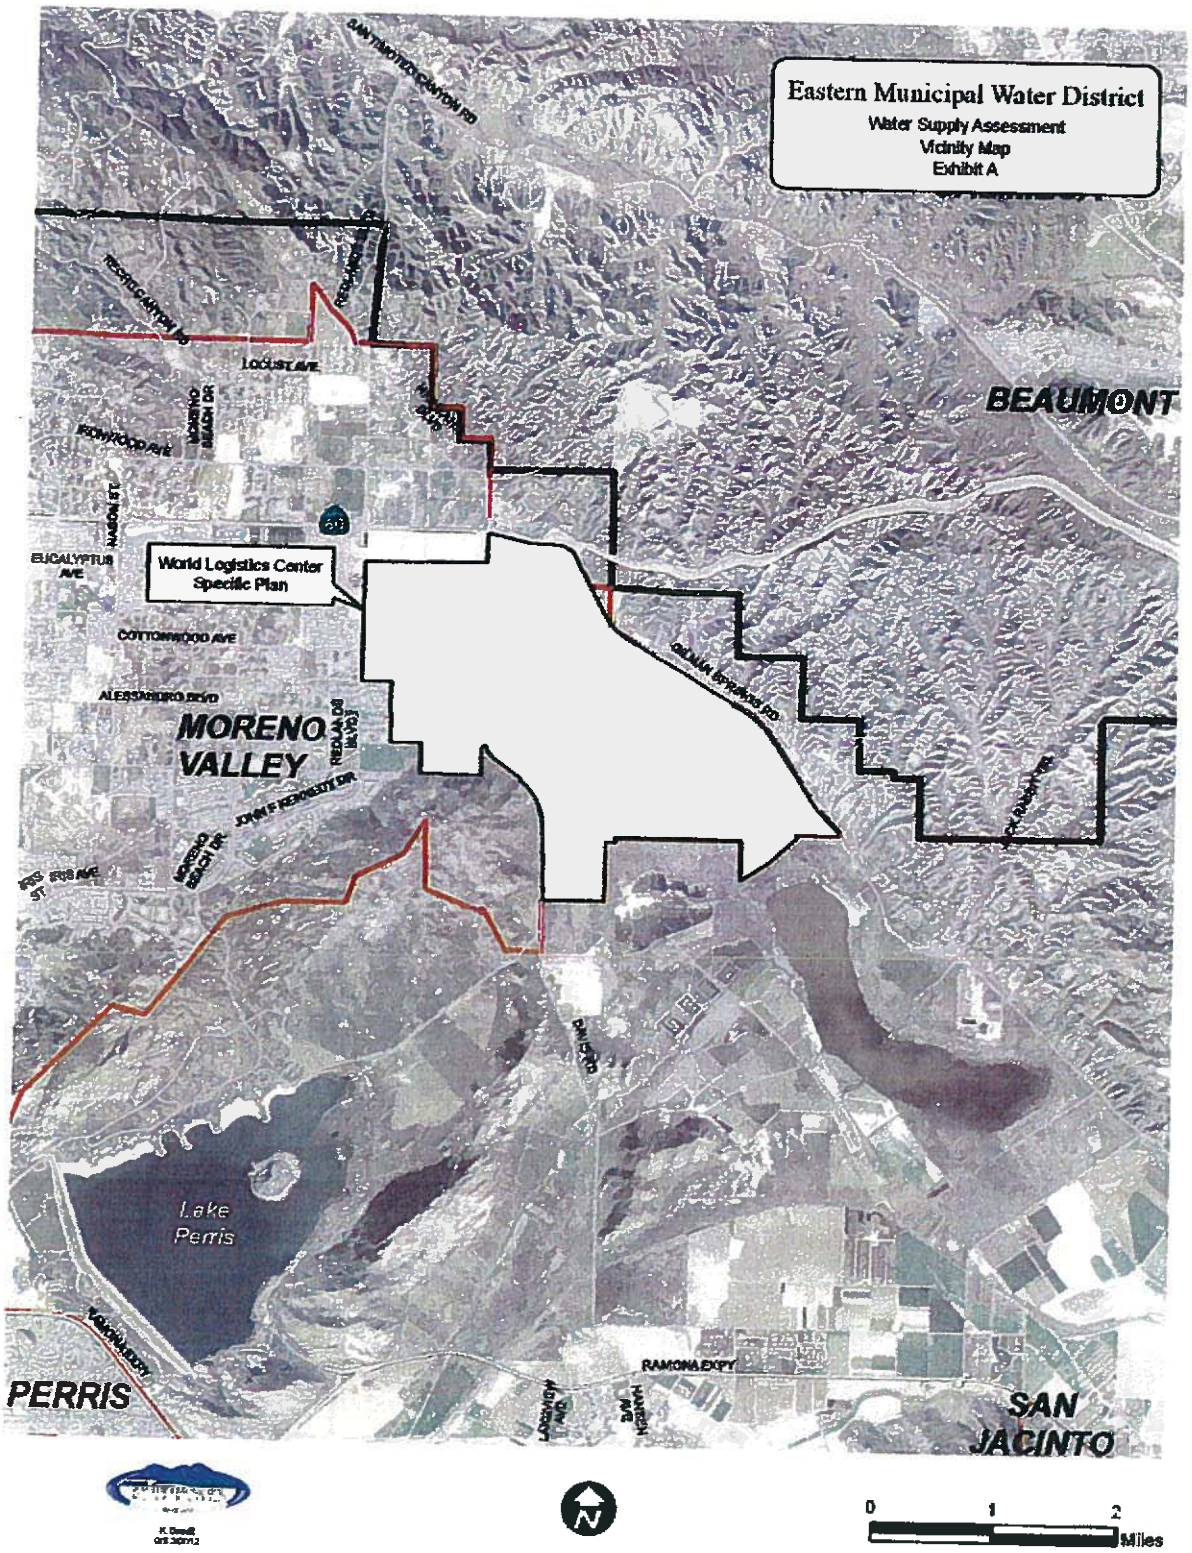
### 5.4 Conclusion

EMWD relies on MWD to meet the needs of its growing population. MWD stated in its 2010 RUWMP that with the addition of all water supplies, existing and planned, MWD would have the ability to meet all of its member agencies' projected supplemental demand through 2035, even under a repeat of historic multi-year drought scenarios.

Based on present information and the assurance that MWD is engaged in identifying solutions that, when combined with the rest of its supply portfolio, will ensure a reliable long-term water supply for its member agencies, EMWD has determined that it will be able to provide adequate water supply to meet the potable water demand for this project as part of its existing and future demands.

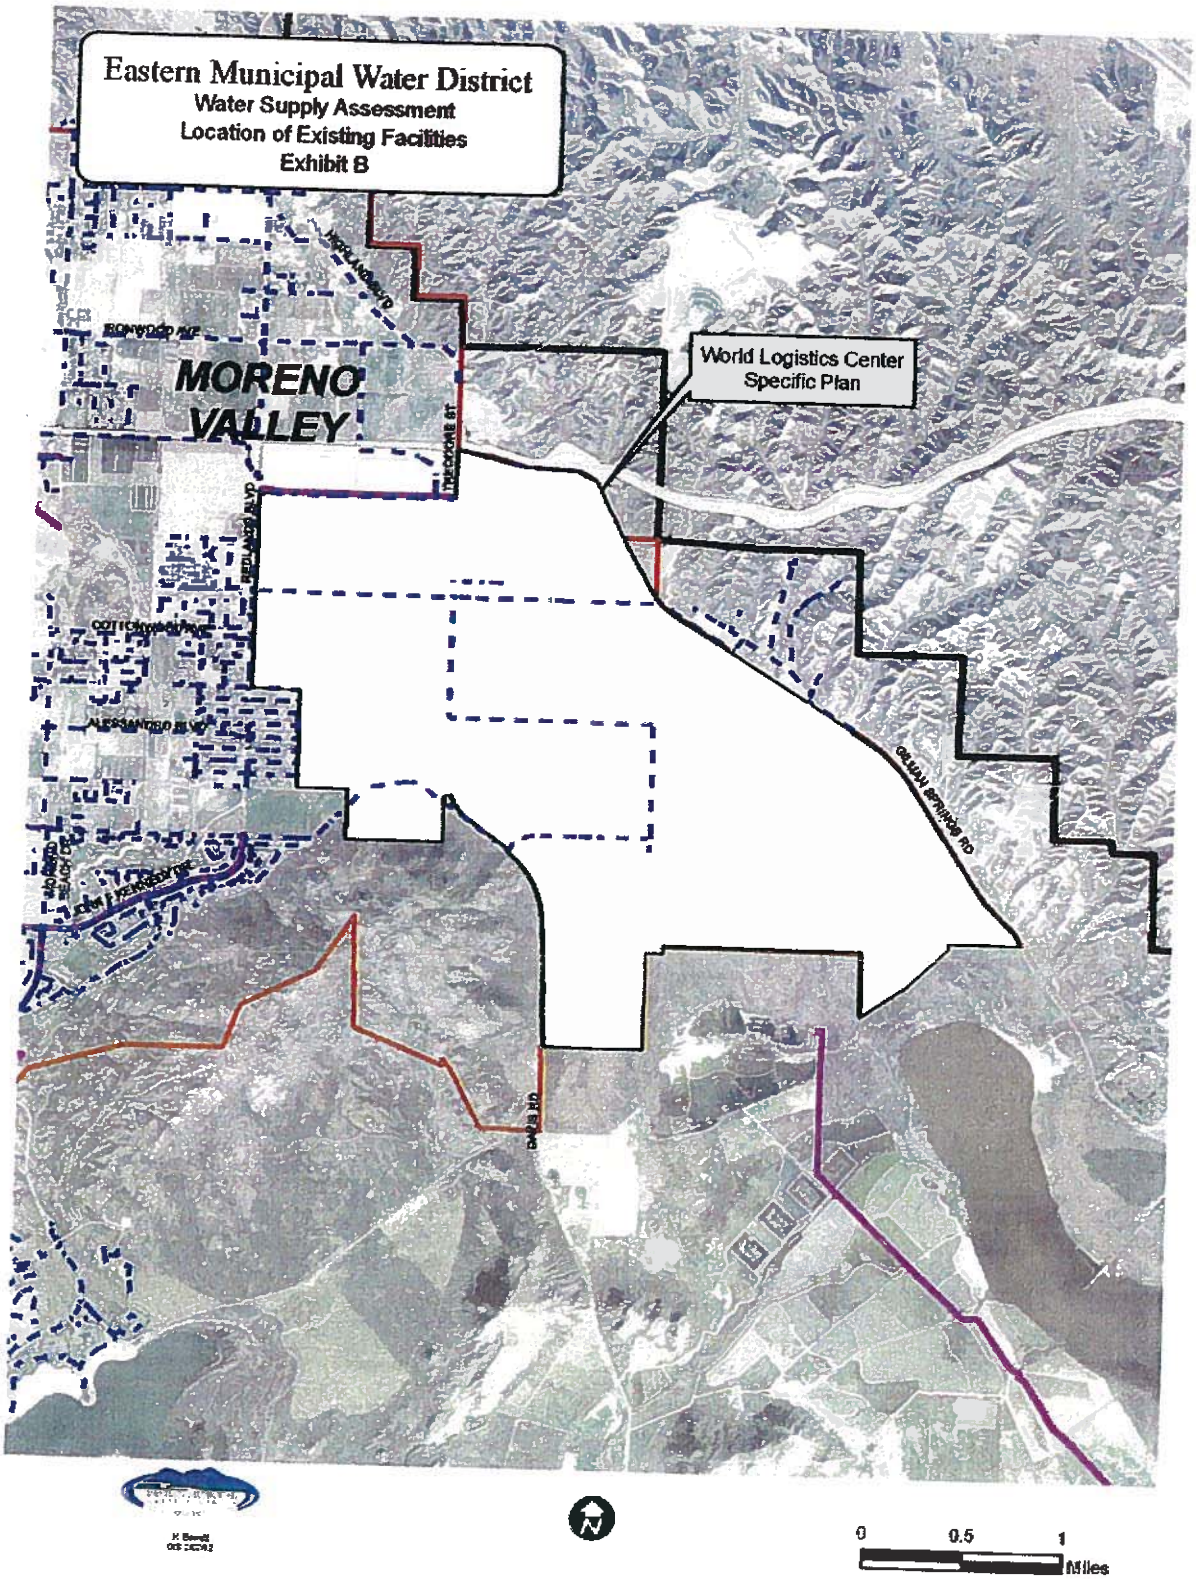
In the event the lead agency determines adequate water supply exists for this project, the developer of this project is required to meet with EMWD staff to develop a plan of service. The plan of service will detail water, wastewater and recycled water requirements to serve the projects. An agreement developed prior to construction will determine additional funding required to reduce existing customer demand on imported supplies through the expansion of local resources. The reduction of existing customer demand on imported water supplies will free up allocated imported water to be used to serve this project under multiple dry year conditions. The amount of funding will be determined by the EMWD and may take the form of a new component of connection fees or a separate charge. The estimated cost of desalinated water is between $1,400 and $1,700 per AF. These costs are expected to increase over time.

If there is a change in the circumstances detailed in this assessment, EMWD will address the changes in the plan of service for the project. Modifications at the plan of service stage could reduce the amount of water available to serve this project.



## Section 6 - Conditions of Approval

This assessment is not a commitment to serve the project, but a review of EMWD supplies based on present information available. This assessment is conditioned on MWD's ability to continue to supply imported water to meet EMWD's requirements, including the requirements for this project. This project is subject to any special or additional requirements imposed by MWD or EMWD on such deliveries, including increased pricing or a different pricing structure.



The lead agency for the project is responsible to evaluate the adequacy of the water supply assessment and make the ultimate decision of the sufficiency of the water supply. The developer for the project is responsible for keeping EMWD informed about progress in the planning and development of the project so that a review can be completed. If the lead agency determines adequate water supply exists for this project, the project applicant shall notify EMWD on the status of this project, and the lead agency shall request a review and update of this WSA every three (3) years until the project starts construction.

If the lead agency determines adequate water supply exists for this project, to the greatest extent possible, recycled water shall be used on the proposed project. Details about the feasibility of recycled water use shall be included in the plan of service for the project.

# World Logistics Center Specific Plan Water System Analysis

PREPARED FOR: Highland Fairview

PREPARED BY: CH2M HILL

DATE: September 2014

## Summary of Modifications

Modifications to the water system analysis have been made to reflect changes in the Project Description. These modifications are reflected throughout the memo and in Figures 4 and 5.

## Introduction

The proposed World Logistics Center Specific Plan (WLC) is a master plan for the development of logistics warehouse distribution facilities on approximately 2,610 acres of land in the Rancho Belago area of eastern Moreno Valley. The Specific Plan proposes the development of 40.4 million square feet of high-cube logistics facilities on 2,382.8 acres, 200,000 square feet of light logistics facilities on 37.1 acres, an in-project fueling station, 115.8 acres of street right-of-way and 74.3 acres of permanent open space.

The Specific Plan area is situated southerly of State Route 60, generally between Redlands Boulevard and Gilman Springs Road (the easterly City limit). The Specific Plan extends to, but does not include, the San Jacinto Wildlife Area (SJWA). The General Plan Amendment and Zone Change which accompany the Specific Plan includes a portion of the SJWA property in order to designate that land for open space use.

The World Logistics Center is located within the water service area of Eastern Municipal Water District (EMWD). The purpose of this analysis is to determine the hydraulic infrastructure necessary to provide water supply to the development.

## Analysis Criteria

The criterion used to evaluate system performance was adopted from EMWD Water Facilities Master Plan (WFMP) document (CH2M HILL, 2009). The criterion is summarized below.

### Pressure Requirements

System pressure is an indication of system performance. Minimum and maximum pressure requirements help determine if the system is functioning optimally. Table 1 details the pressure requirements used for hydraulic analysis.

TABLE 1
Pressure Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Condition | Pressure Required (psi) |
|---|---|
| Minimum Dynamic Pressure at downstream of RPDA[a] | 40 |
| Minimum Dynamic Pressure from tank low water level to upstream of meter | 50 |
| Minimum Static Pressure from tank low water level to upstream of meter[b] | 60 |
| Minimum Static Pressure from tank high water level to upstream of meter | 75 |
| Maximum Static Pressure from tank high water level to upstream of meter[c] | 110 |
| Minimum Pressure anywhere in the system during MDD+FF | 20 |

psi = pounds per square inch
[a] If no Reduced-Pressure Principle Detector Assembly (RPDA), then downstream of meter.
[b] Tank low water level is based on 5 feet above tank bottom.
[c] Assumes a full tank and a pressure limit that accounts for pressure surging that may occur to prevent pressures exceeding 125 psi.

## Piping Requirements

Excessive velocities and head losses are indicators of inefficient operations. The head loss requirements presented in Table 2 and the velocity requirements presented in Table 3 were used as guidelines for analysis of the World Logistics Center.

TABLE 2
Head-Loss Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Design Criteria | Allowable Head Loss |
|---|---|
| Flows less than 20 cfs | 3.0 feet/1,000 feet |
| Flows 20 to 50 cfs | 2.0 feet/1,000 feet |
| Flows greater than 50 cfs | 1.0 foot/1,000 feet |

cfs = cubic feet per second

TABLE 3
Velocity Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Design Criteria | Allowable Velocity (fps) |
|---|---|
| MDD | <5 |
| PHD | <10 |
| FF | <15 |

MDD = Maximum-Day Demand
PHD = Peak-Hour Demand
FF = fire flow
fps – feet per second

## Source Capacity

Source capacity is considered to be any source of water supply to a pressure zone via direct connections, pump stations, regulators, or wells. Source capacity for the World Logistics Center was measured against the criteria presented in Table 4.

TABLE 4
Source Capacity Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Design Criteria | Required Capacity |
|---|---|
| Minimum Capacity | MDD + maximum fire flow in each pressure zone |

MDD = Maximum-Day Demand

## Pumping Capacity

The pump stations involved in the World Logistics Center analysis were analyzed against the criteria presented in Table 5.

TABLE 5
Pumping Capacity Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Pump Station/Zone Type | Required Capacity |
|---|---|
| All pump stations | 1 Stand-by pump |
| No time of use | MDD |
| Time of use | 1.33 x MDD |
| No equalization storage available | Peak-hour demands |
| No fire storage available | FF capacity |

MDD = Maximum-Day Demand
FF = fire flow

## Storage Capacity

Distribution and storage systems are designed to provide adequate water supply for customers as well as to help equalize fluctuations between supply and demand, provide water for firefighting and to meet demands during emergencies or unplanned outages of major supply sources. Three types of storage were considered in the World Logistics Center analysis: operational storage, fire storage, and emergency storage.

Operational storage consists of equalization storage, time-of-use, and pump-through storage. The criterion for each operational storage category is presented in Table 6.

TABLE 6
Operational Storage Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Storage Type | Design Criteria |
|---|---|
| Equalization | 0.25 x MDD |
| Time of Use | 0.25 x MDD |
| Pump Through | 0.10 x flow pumped to higher pressure zone |

MDD = Maximum-Day Demand

Fire Storage is dependent on the instantaneous flow rate required to fight the fire, the duration of the fire flow, and the number of fire flows that occur before the volume can be replenished. The World Logistic Center analysis required a fire flow of 4,000 gpm for 4 hours. The required storage volumes are listed in Table 7.

TABLE 7
Fire Storage Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Land Use Category | Minimum Fire Flow Required (gpm) | Duration (Hours) | Number of Fire Hydrants | Required Fire Storage Volume (MG) |
|---|---|---|---|---|
| Single Family (Residential) | 1,500 | 2 | 1 | 0.18 |
| Multifamily – five or more units per acre (Residential) | 3,000 | 3 | 3 | 0.36 |
| Light Commercial/Industrial (including schools) | 3,000 | 3 | 3 | 0.54 |
| World Logistics Center | 4,000 | 4 | 3 | .96 |
| Heavy Commercial/Industrial | 5,000 | 4 | 4 | 1.20 |

gpm = gallons per minute
MG = million gallons

Emergency storage is a dedicated source of water that can be used as backup supply in the event a major supply source is interrupted. The emergency storage criteria are presented in Table 8.

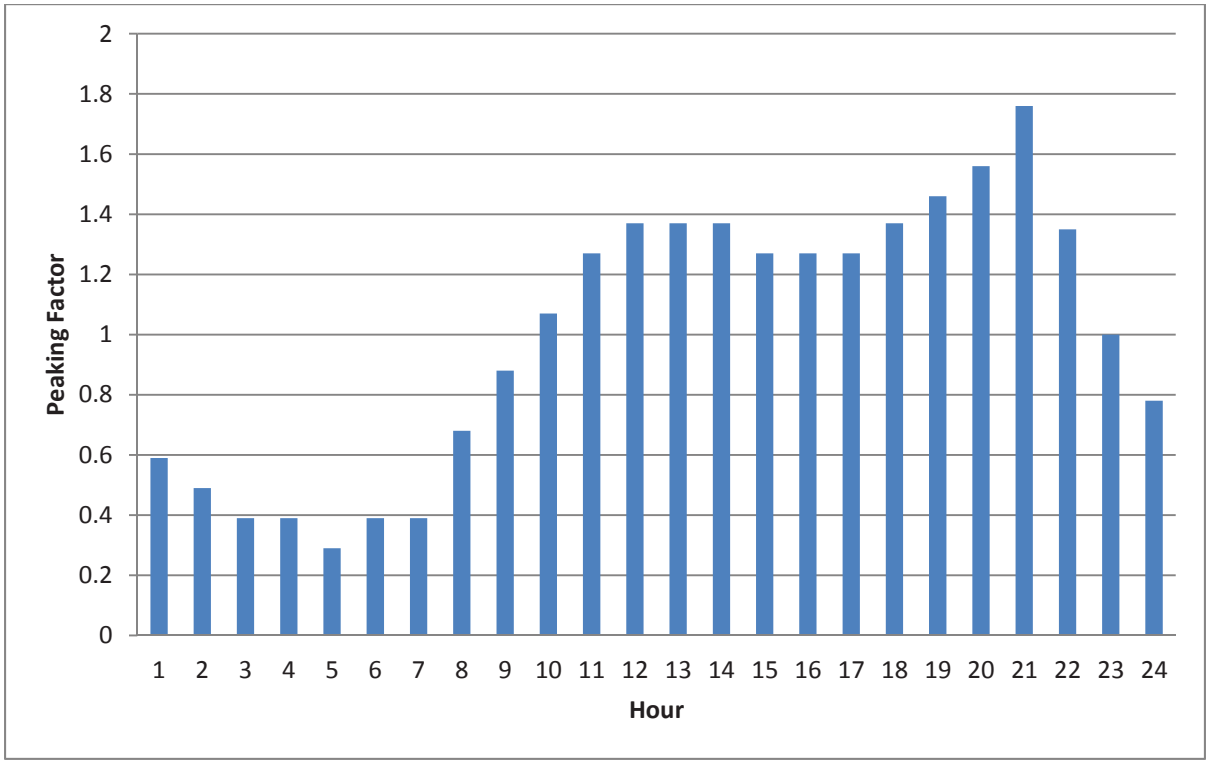
TABLE 8
Emergency Storage Requirements
*Adopted from EMWD WFMP Appendix A - Water Facilities Master Plan Design Criteria Evaluation*

| Zone Type | Storage Volume Requirement |
|---|---|
| Zone with multiple pump stations | 0.5 x (MDD minus flow from remaining pump stations) |
| Minimum volume for zone with multiple pump stations | 0.25 x MDD |
| Zone with single pump station | 0.50 x MDD |

MDD = Maximum-Day Demand

For the hydraulic analysis portion of this study, an extended-period simulation of max-day-demand was used.

# Water Demand Factors



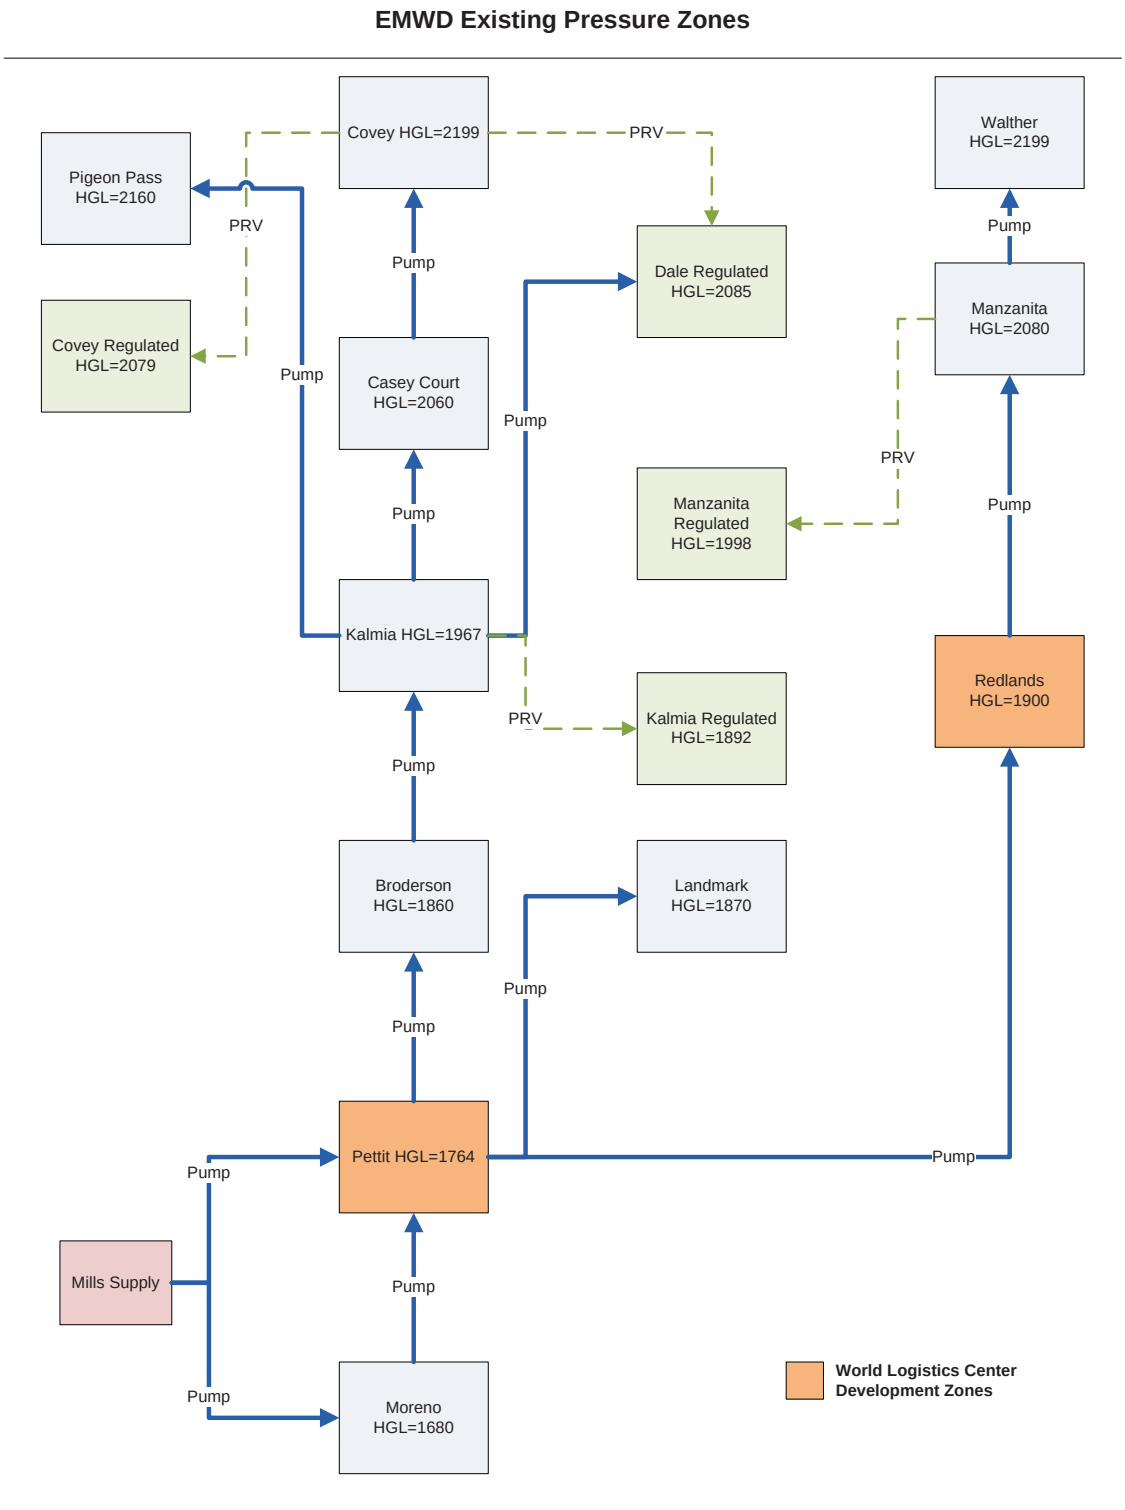
A Water Supply Assessment was prepared by EMWD that evaluated metered data from similar logistics facilities within the District. The water supply assessment includes the entire water use for these facilities including building and irrigation demand. Based on this analysis, EMWD concluded that 670 gallons per day per acre is an appropriate water demand for these types of logistics facilities.

The WLC is proposing a plant palette that relies on native landscaping and virtually zero irrigation. Because of this a building water demand analysis and benchmarking study was conducted as outlined in the Technical Memorandum entitled *World Logistics Center Water Demands and Waste Water Generation for Buildings* dated September 10, 2013. Based on this analysis, it was determined that an appropriate water demand factor for Logistics Developments is equivalent to 0.01 gpd/sf of building or 436 gpd/acre. Since this study is at a preliminary stage and is for programmatic planning purposes and because there is a potential that building and/or irrigation demands could change in the future, it was decided to use the 670 gpd/acre for this analysis. At the time a plan of service is prepared for the project the water demand factors will be refined and developed for the specific buildings being built and will be based on the 0.01 gpd/sf of building or other appropriate factors, including irrigation, if any.

## Extended Period Simulation Diurnal Curve

In an extended period model simulation run, a diurnal curve is applied to the demand to simulate water usage over a 24 hour period. The peaking factor dictated in the diurnal curve is multiplied by the demand at each node in the model to generate the estimated demand for each hour during the extended period simulation model run. The diurnal curve used in the EMWD WFMP has been used for the World Logistics Center Analysis. This diurnal curve is presented below in Figure 1.

FIGURE 1
*Model Diurnal Curve*



# Existing Water System

The existing water system in Moreno Valley consists of an intricate network of pipe, pumps, valves, wells, and storage tanks. There are approximately 625 miles of pipeline ranging in diameter from 6 to 54 inches. Water is provided to the Moreno Valley area through the 54-inch Mills pipeline and 48-inch Cactus Transmission Main. A total of 25 pumping stations, 20 regulating stations, and 25 in-zone storage tanks work together to facilitate movement of water throughout the system.

The topography of the area varies greatly with the lowest service elevation at approximately 1,465 feet above mean sea level (msl) and the highest service elevation at approximately 2,138 feet msl. To handle varying elevations and maintain adequate pressures throughout the distribution system, the Moreno Valley area is divided into 15 hydraulic regions or pressure zones. Figure 2 is a schematic diagram of the existing system pressure zones.

The proposed location of the World Logistics Center falls within the existing Pettit (1764) and Redlands (1900) Zones. Water supply provided from the Moreno (1680) Zone and Pettit (1764) Zone travels through the existing pipeline infrastructure to supply the Redlands (1900) area.

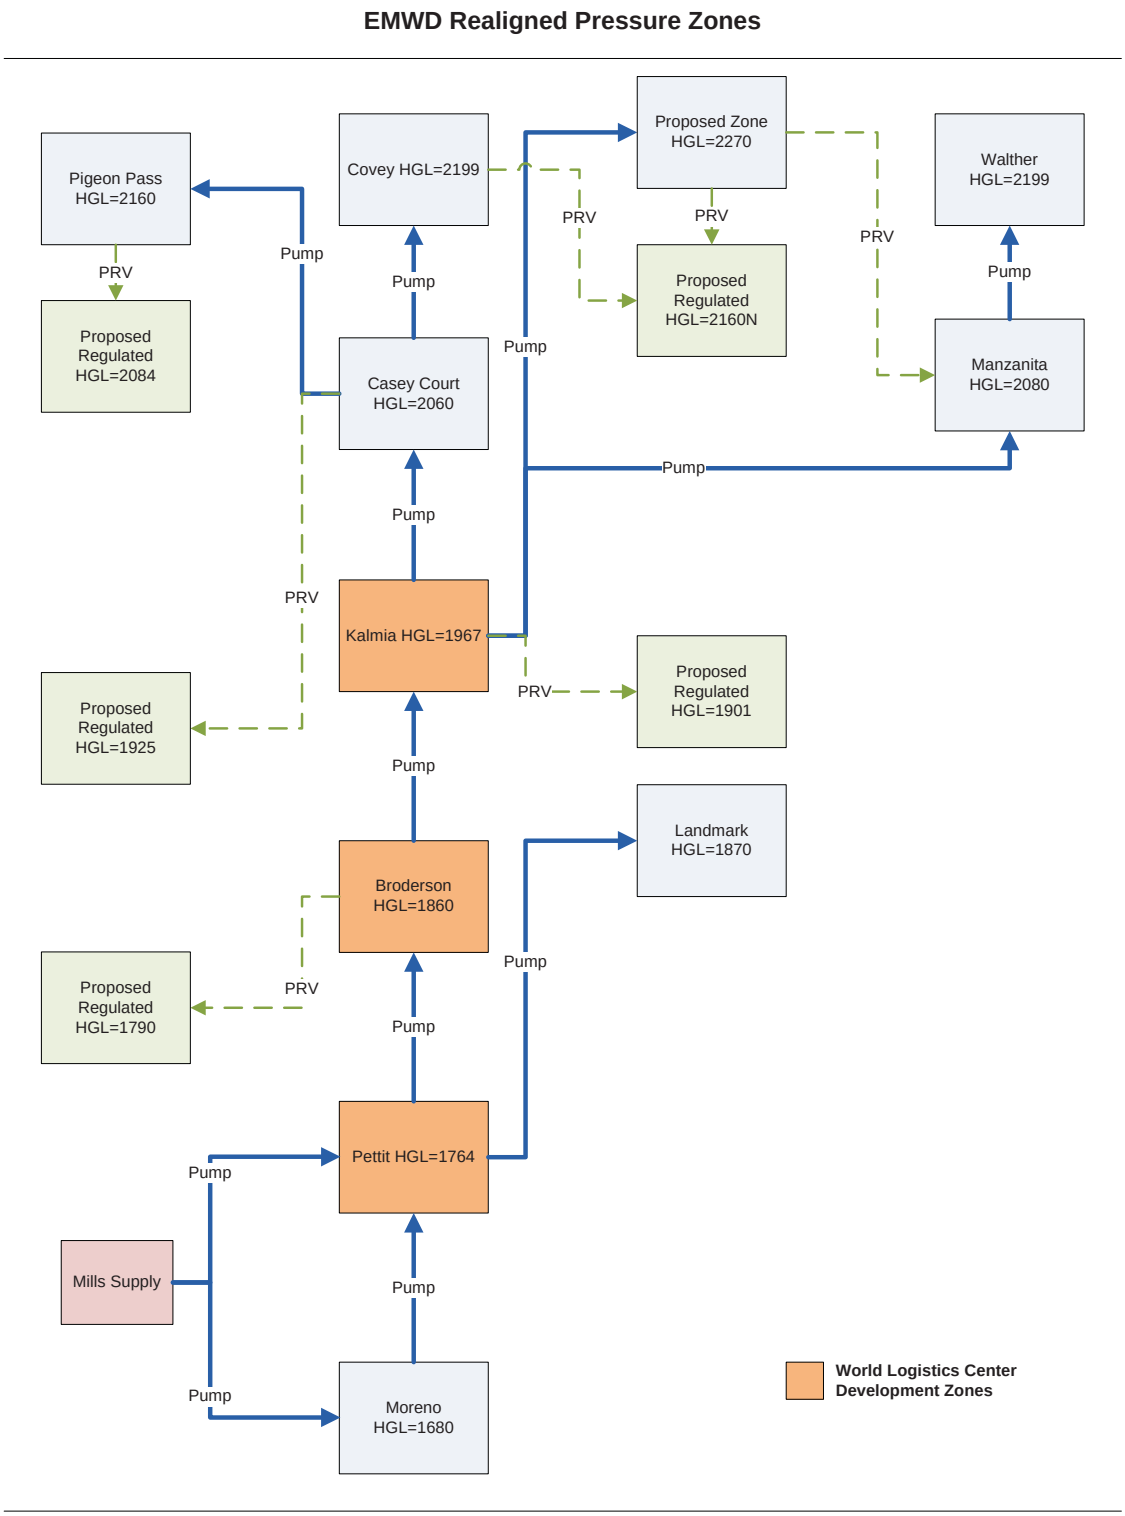


Figure 2
*Existing System Diagram*

The current pressure zone configuration in the Moreno Valley System creates low static pressures ranging from approximately 26 pounds per square inch (psi) to 57 psi and high static pressures ranging from approximately 68 psi to 154 psi. These pressures do not reflect EMWD pressure design criteria of 40 psi to 110 psi. This is due to high and low elevation areas at zone boundaries. EMWD is aware of this issue and has explored options to remedy the situation. One of EMWD's options is documented in The Moreno Valley Zone Realignment (MVZR) (CH2M HILL, 2009). This document explores options for improving pressures in low and high elevation areas by realigning zone boundaries.

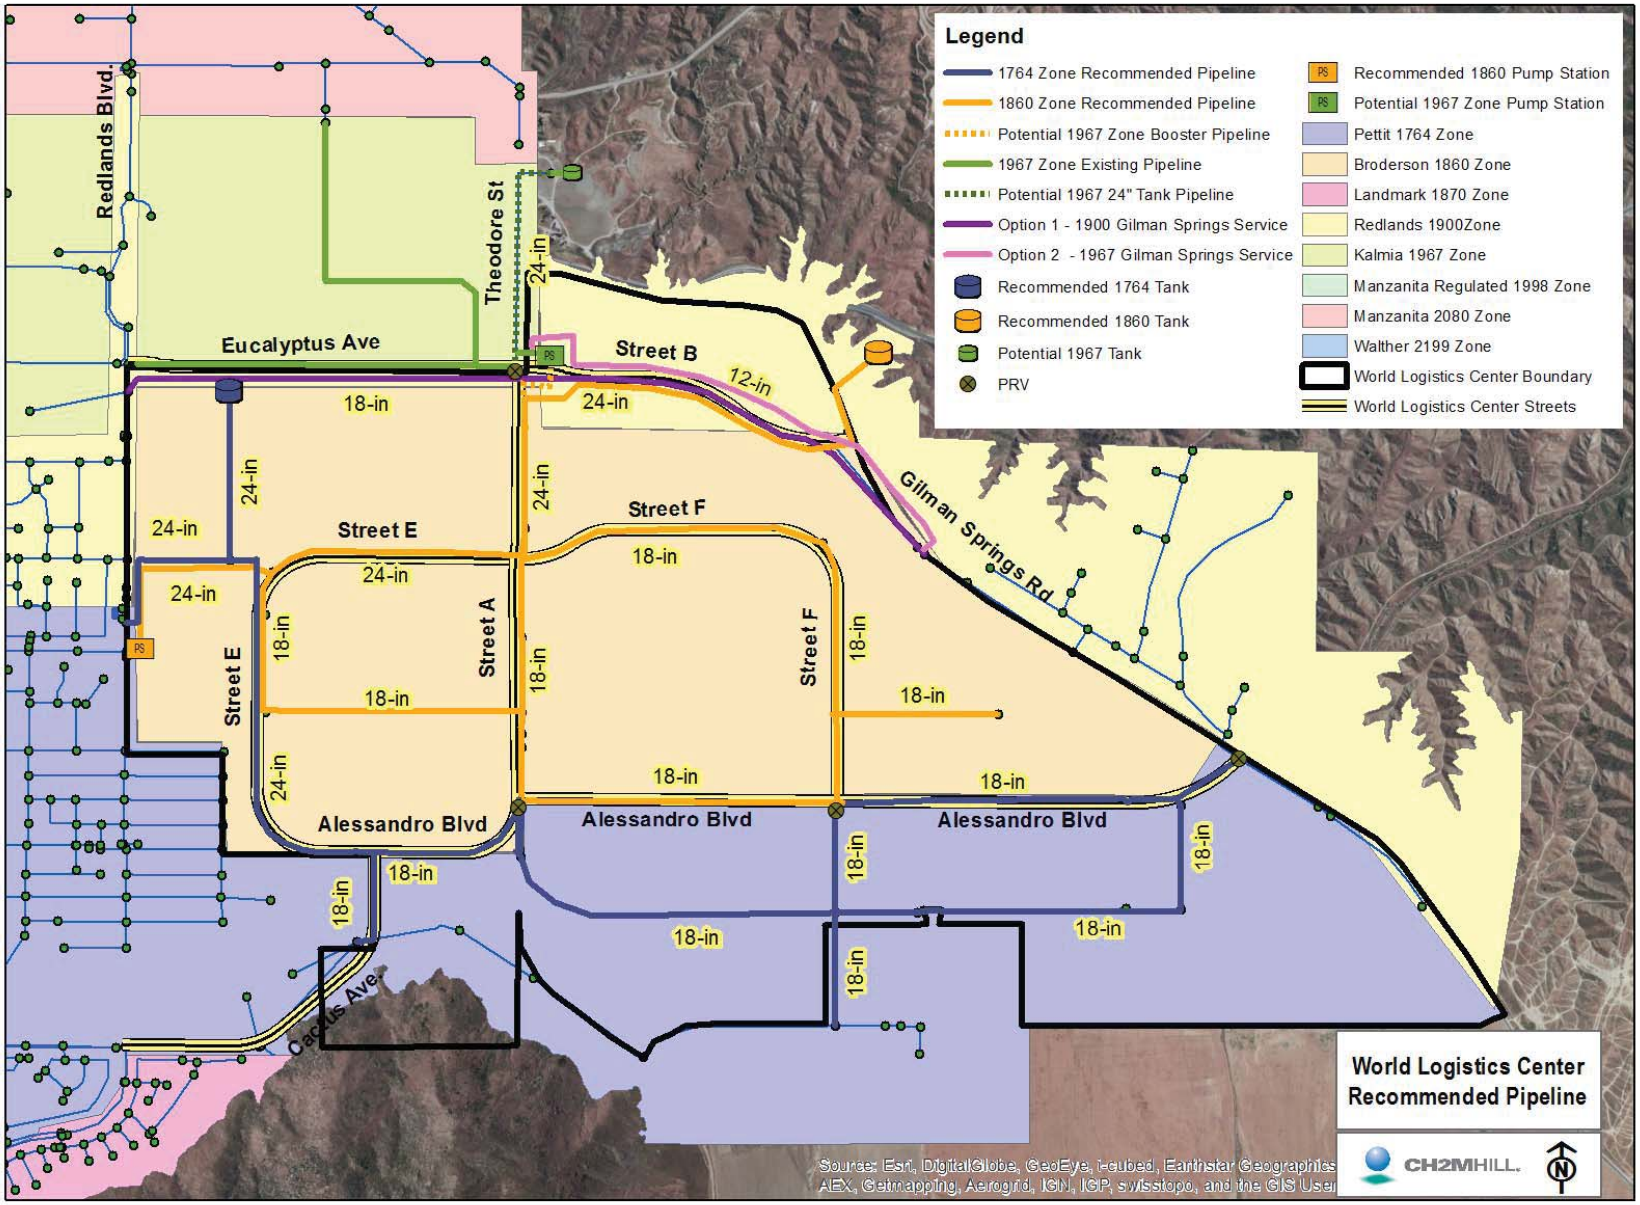
The World Logistics Center is located within the area planned for zone boundary realignment. The realigned zone boundaries recommended in the MVZR were taken into consideration when planning the build out scenario for the World Logistics Center. The proposed location of the World Logistics Center will fall in the Pettit (1764), Broderson (1860), and Kalmia (1967) Pressure Zones. Figure 3 presents EMWD's realigned pressure zone schematic diagram along with World Logistics Center development zones.

Figure 3
*Realigned System Diagram*

# Analysis

In order to analyze the impact of the World Logistics Center Development on the existing Moreno Valley System, the existing system hydraulic model was obtained from EMWD. The 2008 scenario within the model was considered existing and was the scenario used for hydraulic analysis. The storage analysis was completed utilizing EMWD's supply and storage spreadsheets, which were developed as part of the WFMP.

## Hydraulic Analysis



The first step in the World Logistics Center Hydraulic Analysis was to determine the pipeline network which would connect the proposed system to the existing Moreno Valley distribution system. Estimated World Logistic Center demands were distributed to junction nodes within the model using a demand factor of 670 gallons per day (gpd) per acre. Plans for the World Logistics Center span three pressure zones. The majority of the development will be serviced from the 1860 zone. Service for the south side of the development will be from the 1764 zone, and the small portion of the development north and south of Street B will be served from the existing Redlands (1900) Zone or the future Kalmia (1967) Zone. Table 9 provides the summary of demand by pressure zone.

Table 9
*Demands by Pressure Zone*

| Pressure Zone (Realigned Zones after Grading) | ADD (gpm) | MDD (gpm) |
|---|---|---|
| 1764 (30%) | 403 | 806 |
| 1860 (65%) | 690 | 1,380 |
| 1967 (5%) | 57 | 114 |
| **Totals** | **1,150** | **2,300** |

Utilizing the proposed street layout and the existing pressure zone alignment, pipelines were added to connect the junction demand nodes. The pipeline was sized to meet EMWD criteria, during a fire flow situation of 4,000 gpm at max day demand, peak hour. For purposes of this analysis, the Redlands (1900) zone was assumed to remain in place, with a new alignment, to provide service to existing customers. Two options for providing service to the existing Redlands (1900) Zone are presented below. Figure 4 shows the recommended pipeline by pressure zone for the World Logistics Center development.

Figure 4
*World Logistics Center Recommended Pipeline*

## Analysis Recommendations and Results

The majority of the World Logistics Center development will be served from the Broderson (1860) Zone. The low elevation area of the development on the south side of the system will be served by the Pettit (1764) Zone. The area directly north and south of Street B will be served by the existing Redlands (1900) Zone or the Future Kalmia (1967) Zone. The existing Redlands Booster Station is planned to remain in service, to provide flow to adjacent customers currently in the Redlands (1900) Zone. Options for providing service to Gilman Springs Road customers who are also currently served by the Redlands (1900) Zone are presented below.

### Gilman Springs Road Service Options

The existing Redlands Booster Station is planned to remain in service to provide flow to adjacent customers. As suggested in the MVZR, EMWD may retire this station at some time in the future, and service to these customers will be provided from the Broderson (1860) Zone. Existing customers along Gilman Springs Road also receive service from the existing Redlands (1900) Zone. The MVZR suggests that at some point in the future EMWD may realign these customers to the Kalmia (1967) Zone. The 12-inch pipeline currently serving the customers on Gilman Springs Road runs under the planned World Logistics Center Development area. For ease of construction of the World Logistic Center Development, the existing 12-inch pipeline is planned to be removed. The following two options are presented as alternatives to maintain service to the existing customers on Gilman Springs Road. These options are shown on Figure 4, and Option 1 was utilized for the analysis results presented in this report.

**Option 1 –**This option keeps Gilman Springs on the existing Redlands (1900) Zone. A new 18-inch pipeline would be installed parallel to the existing pipe in Eucalyptus Ave, and a 12-inch pipeline would be constructed along Street B, connecting to the existing 8-inch pipeline on Gilman Springs. Flow would be provided by the existing Redlands booster station. With this option in place, the planned World Logistics Center Development north and south of Street B would be served from the Redlands (1900) Zone. A 12-inch pipeline is adequate to serve the existing development along Gilman Springs Road, however an 18-inch pipeline along Eucalyptus Avenue would be needed to provided fire flow to the potential World Logistics Center development north and south of Street B. Fire flow cannot be provided through a PRV from the Kalmia (1967) Zone because there is not adequate capacity in the Kalmia (1967) Zone unless a new storage tank is constructed.

**Option 2 –** This option provides flow to the Gilman Springs area by connecting to the existing Kalmia (1967) Zone. This option aligns with the MVZR plan; however the existing Kalmia Zone cannot support additional demand at this time. A new Kalmia (1967) Zone tank and booster station would need to be constructed in order for this option to be feasible. With this option in place, the planned World Logistics Center Development north and south of Street B would be served from the Kalmia (1967) Zone.

### Results

The minimum fire flow available to the World Logistics Center, with the recommended pipe alignment, is approximately 10,800 gpm with a residual system pressure of 20 psi. Within

the Specific Plan area pressures in the Pettit (1764) Zone range from a low of 65 psi to a high of 110 psi and pressures in the Broderson (1860) Zone range from a low of 45 psi to a high of 110 psi. The recommended pipeline aligns with EMWD future zone realignment plans; therefore, no special considerations will need to be taken regarding future zone realignment.

## Specific Plan Infrastructure Planning

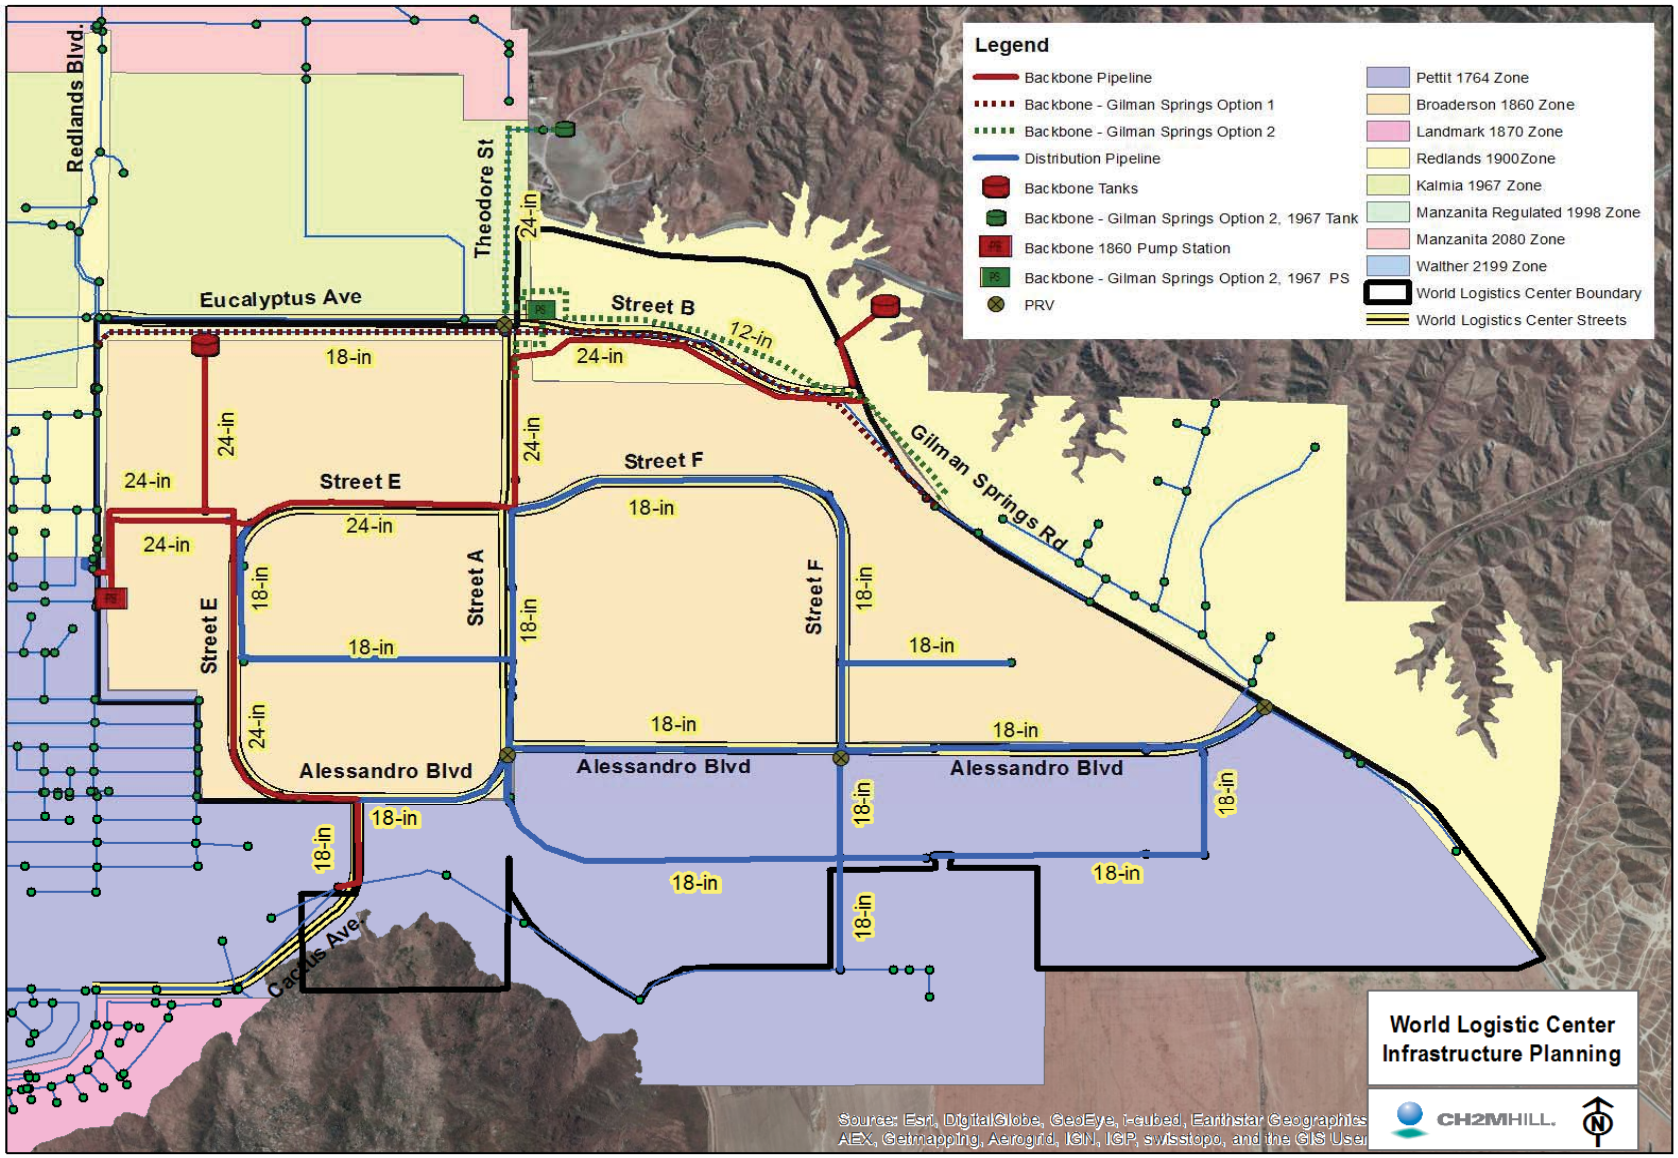
Two types of infrastructure need to be constructed as part of the World Logistics Center build-out: the backbone infrastructure and the distribution infrastructure.

- Backbone infrastructure consists of tanks, booster stations and transmission pipeline to expand supply capability within service areas.
- Distribution infrastructure consists of pipeline needed to supply customers within service areas.

EMWD has existing backbone infrastructure, as discussed above and shown in Figure 2, *Existing System Diagram*. The backbone infrastructure recommended as part of this memorandum was designed to provide adequate water supply service to the World Logistics Center development at build-out. It is unrealistic to assume all recommended backbone infrastructure will be in place before any development takes place within the World Logistics Center. In order to provide service to building sites before all backbone infrastructure is in place, a water supply analysis will need to be conducted to determine if service is feasible with existing infrastructure. As each building in the World Logistics Center is planned for development, the water supply analysis will be conducted to identify the plan of service for that individual building. The analysis will take into consideration both the existing EMWD backbone infrastructure and newly developed backbone infrastructure, to determine the best plan of water supply service for the building site. These water supply analysis studies will be needed until all recommended backbone infrastructure is in place. Therefore, when the backbone infrastructure recommended below is complete, water supply service plans for individual buildings will no longer be needed and the distribution infrastructure can be built out as planned.

### Backbone

The backbone infrastructure consists of tanks, booster stations, and transmission pipeline to provide additional capacity in the Pettit (1764) Zone, Broderson (1860) Zone, and Kalmia (1967) Zone. The majority of the World Logistics Center development will be supplied from the Broderson (1860) Zone. In order for supply to be provided by the Broderson (1860) Zone, a tank and booster pump station will need to be constructed. To supply water to the recommended Broderson pump station and tank, improvements will need to be made to EMWD facilities in lower pressure zones to support providing flow to the Broderson (1860) Zone. One recommended improvement is the addition of a Pettit (1764) Tank. The recommended Pettit Tank supports World Logistics Center Development build out by providing support for the Broderson (1860) Zone, and will also support the area of the World Logistics Center Development served from the Pettit (1764) Zone by being an in-zone supply source. The Pettit (1764) tank will be supplied from existing pipeline within the zone, so no booster station is needed. These two tanks, along with a booster station supply for the Broderson (1860) Tank and connecting pipeline are part of the recommended backbone improvements. Backbone improvements will also consist of one of the options to keep the



existing Gilman Springs customers online. Once these improvements are in place, World Logistics Center Development distribution pipeline can be added as needed to meet customer demands. As mentioned above, buildings within the World Logistics Center development that go online before the backbone infrastructure is complete will need a plan of service analysis to determine the optimal service and infrastructure needs for the individual site.

### Distribution

Distribution improvements are all the pipeline recommendations to support projected development. Once the backbone infrastructure is in place, pipelines can be built out as needed to support customer demand. A water supply plan of service analysis will be needed for buildings that go online before the backbone infrastructure is complete.

Backbone and distribution improvements are shown in Figure 5.

Figure 5
*World Logistics Center Infrastructure Planning*

## Storage Analysis

The storage analysis was completed using a spreadsheet model based on EMWD's storage criteria, presented above. The total storage requirements for the World Logistics Center were determined based on a demand of 670 gpd per acre as discussed previously. Because the World Logistics Center spans over three zones (1764, 1860, and 1967) storage analysis was performed for each zone. For each zone analysis, storage was calculated as follows:

- Operational storage (equalization) = 25% of MDD
- Fire flow storage = 0.96 MG (4,000 gpm for 4 hours)
- Emergency storage = Time of Use (25% of MDD)[a] + Emergency (25% of MDD)

[a] Per EMWD, Time of Use is not included in the Pettit (1764) zone

From this analysis the storage requirements for the World Logistics Center will be 1.6 MG in the Pettit (1764) Zone, and 2.4 MG in the Broderson (1860) Zone. Kalmia (1967) Zone has a storage requirement of 1.1 MG, which is mainly for fire flow purposes. The results from the storage analysis for each zone are presented in Table 10.

TABLE 10
*Storage Analysis by Zone*

| | | Zone | | |
|---|---|---|---|---|
| **Description** | **Unit** | **Pettit (1764)** | **Broderson (1860)** | **Kalmia (1967)** |
| ADD | gpm | 403 | 690 | 57 |
| MDD | gpm | 806 | 1380 | 114 |
| Total Storage Required | MG | 1.5 | 2.5 | 1.1 |

gpm = gallons per minute
MG = million gallons

## Storage Tank Locations

The 1.5 MG recommended Pettit (1764) Zone tank is currently being proposed for construction southeast of the intersection of Redlands Blvd and Eucalyptus Ave. Service to the tank is provided by the existing 24-inch pipeline in Cactus Ave and existing pipeline in the 1764 zone.

The 2.5 MG proposed Broderson (1860) Zone storage tank is located on the east side of the World Logistics Center development. A pump station near the existing Redlands Booster Station is needed to fill the proposed tank. A 24-inch pipeline along Street E is recommended to connect the pump station to the World Logistics Center pipe network.

Storage for the Kalmia (1967) Zone is needed for Gilman Springs Road service option 2 (if chosen). Based on the World Logistics Center demands serviced from this zone, the potential tank would be 1.1 MG. Water would be pumped from the Broderson (1860) Zone to fill this tank. A transmission main from the booster station to the tank would be built along Theodore Street. Table 11 summarizes the recommended tanks.

Table 11
*Storage Tank Summary*

| Tank Description | Tank Size | Pump Station Required | Estimated Pipeline (ft) | Location |
|---|---|---|---|---|
| 1764 Zone | 1.6 MG | No | 2,300(1) | Southeast of Intersection of Redlands Blvd and Eucalyptus Ave |
| 1860 Zone | 2.4 MG | Yes | 7,100(2) | East of WLC Development, North of Gilman Springs Rd |
| 1967 Zone | 1.1 MG | Yes | 3,050 | East of Theodore, South of Ironwood |

(1) Estimated pipeline is only the mainline from Street E to the tank location. The remaining pipeline needed to connect the tank to the system is listed below in Table 12.

(2) Estimated pipeline is only the mainline from Street F to the tank location. The remaining pipeline needed to connect the tank to the system is listed below in Table 12.

## Pumping Analysis

Two pump stations are recommended for the World Logistics Center Development. One station is required to supply the recommended Broderson (1860) Zone tank, and the other pump station is needed to support the Kalmia (1967) Zone with additional storage. Both will fill the recommended/proposed tanks and supply demands. The results below are based on initial analysis and may need to be updated if the pump station location or tank size is changed.

For this analysis, the 1860 Zone Pump Station was placed near the existing Redlands Booster Station. The flow requirement is based on the criteria outlined in Table 5 for a "time of use" pump station. The recommended 2.5 MG 1860 Zone Tank will require one active pump with a flow of 1,742 gpm with a head gain of 105 feet. An additional pump with the same flow and head is recommended to be placed at the station as a backup pump.

The 1.1 MG potential 1967 Zone Tank will require one active pump with a flow of 230 gpm and a head gain of 107 feet. Due to the small size of this zone, using peak hour (2 x MDD) as the flow criteria from Table 5 was more appropriate for this station to fill the tank in a timely manner. An additional pump with the same flow and head is recommended to be placed at the station as a backup pump. For purposes of this study, the 1967 Zone Pump Station was located at the intersection of Theodore Street and Street B. This station would suction from the Broderson (1860) Zone. This pump station is only required if the 1967 tank is constructed.

The planned 1764 Tank receives flow from the existing Cactus Pump Station, therefore, no additional pump station was recommended for this tank.

## Analysis Summary

Table 12 details the approximate length of the recommended pipeline along with the diameter and location within the system. Improvements are labeled as backbone infrastructure or distribution infrastructure.

Table 12
*Proposed Specific Plan Pipeline*

| Length (ft) | Diameter (inch) | Backbone, or Distribution | Pressure Zone | Location |
|---|---|---|---|---|
| 2,300(1) | 24 | Backbone | 1764 | 1764 Tank Pipeline |
| 4,850 | 24 | Backbone | 1764 | South of 1764 Tank along Street E |
| 2,250 | 24 | Backbone | 1764 | Supply pipeline to 1764 Tank |
| 1,850 | 18 | Backbone | 1764 | Connection to existing system south of Alessandro Blvd on Cactus Ave |
| 5,000 | 18 | Backbone | 1900 | Option 1 – Gilman Springs, south of Eucalyptus |
| 7,000 | 12 | Backbone | 1900 | Option 1 – Gilman Springs Street B |
| 7,000 | 12 | Backbone | 1967 | Option 2 – Gilman Springs |
| 3,050(1) | 24 | Backbone | 1967 | Option 2 – Gilman Springs 1967 Tank Pipeline |
| 1,450 | 24 | Backbone | 1860/1967 | Option 2 – Gilman Springs 1967 Booster Pipeline |
| 7,100(1) | 24 | Backbone | 1860 | 1860 Tank Pipeline |
| 2,900 | 24 | Backbone | 1860 | Booster station supply pipeline to Street E |
| 3,550 | 24 | Backbone | 1860 | Street E |
| 3,500 | 18 | Distribution | 1860 | Street A, Between the Intersections of Street E and the loop pipeline |
| 5,700 | 18 | Distribution | 1860 | Street E loop pipeline |
| 12,000 | 18 | Distribution | 1860 | Street F loop pipeline, to dead-end east of Street F |
| 2,000 | 18 | Distribution | 1860 | Dead – end east of Street F |
| 8,600 | 18 | Distribution | 1860 | Along Alessandro Blvd, connecting at Street A loop and Street F dead-end |
| 3,500 | 18 | Distribution | 1764 | Alessandro Blvd, east of Cactus Ave to Street A intersection |
| 10,000 | 18 | Distribution | 1764 | South of Alessandro Blvd |
| 7,000 | 18 | Distribution | 1764 | Alessandro Blvd, east of Street F, to Gilman Springs and south to loop intersection |
| 3,000 | 18 | Distribution | 1764 | Street F, from Alessandro Blvd south to existing pipeline connection |

(1) This pipeline length was included as the tank pipeline on Table 11.

# World Logistics Center Recycled Water Analysis

PREPARED FOR: Highland Fairview

PREPARED BY: CH2M HILL

DATE: September 2014

## Summary of Modifications

Modifications to the Recycled Water Analysis have been made to reflect changes in the Project Description. These modifications are reflected in the memo and shown in Exhibits 6 through 9.

## Introduction

The proposed World Logistics Center Specific Plan (WLC) is a master plan for the development of logistics warehouse distribution facilities on approximately 2,610 acres of land in the Rancho Belago area of eastern Moreno Valley. The Specific Plan proposes the development of 40.4 million square feet of high-cube logistics facilities on 2,382.8 acres, 200,000 square feet of light logistics facilities on 37.1 acres, an in-project fueling station, 115.8 acres of street right-of-way and 74.3 acres of permanent open space.

The Specific Plan area is situated southerly of State Route 60, generally between Redlands Boulevard and Gilman Springs Road (the easterly City limit). The Specific Plan extends to, but does not include, the San Jacinto Wildlife Area (SJWA). The General Plan Amendment and Zone Change which accompany the Specific Plan includes a portion of the SJWA property in order to designate that land for open space use.

The World Logistics Center is located within the recycled water service area of Eastern Municipal Water District (EMWD). The purpose of this technical memorandum is to identify recycled water system requirements for the WLC. EMWD currently plans to provide recycled water for site irrigation.

## Analysis Criteria

### Assumptions

The recycled water distribution system analysis for the WLC was performed using the InfoWater model provided by Eastern Municipal Water District (EMWD). Recycled water distribution piping, a booster pump station, and a recycled water storage tank were added to the 2012 distribution system for this analysis.

The standard EMWD demand used for industrial land uses is 2,000 gpd/gross acre (2.2 acre-ft/year (afy) per gross acre). The developable project area (excluding open space) is 2,536 acres which equates to a water demand of 5,580 afy. The WLC has a land use generally consisting of high cube logistics which has a lower water use than typical industrial development. In addition, the project is programmed to utilize native and drought tolerant plants along with sustainable methods to direct rainfall runoff to landscaped areas, potentially reducing the total irrigation demand. Recognizing the potential reduction in water demand, EMWD issued a Water Supply Assessment (WSA) with an estimated total water demand of 1,991 afy. The estimated potable water demand for building use is 460 afy. The balance remaining for potential irrigation use is

1,521 afy. For purposes of sizing facilities, this analysis assumes the full potential irrigation demand of 1,521 afy or 1,358,000 gallons per day (gpd) for the average day demand (ADD). Irrigation demands are distributed evenly throughout the WLC site based on the piping layout.

Peaking factors were applied to ADD to obtain maximum day demands (MDD) and peak hour demands (PHD). For irrigation demands, the peaking factor from ADD to MDD is 2.5 and from MDD to PHD is 3[1].

Highland Fairview Corporate Park (HFCP), which includes the existing Skechers building and adjacent parcels, has an associated irrigation demand as shown in Exhibit 1. The existing irrigation demands are being served by a recycled water pipeline that is connected to the domestic water system. It is assumed this pipeline will be converted to recycled water service in the future.

EXHIBIT 1
**Highland Fairview Corporate Park Irrigation Demands**
*WLC Recycled Water Analysis*

| Site | ADD (gpd)[a] | MDD (gpd)[a] | PHD (gpd)[a] |
|---|---|---|---|
| Skechers | 41,811 | 104,527 | 313,581 |
| Parcel 2 | 11,288 | 28,220 | 84,660 |
| Parcel 3 | 6,682 | 16,704 | 50,112 |
| Parcel 4 | 3,645 | 9,111 | 27,333 |
| **Total** | **63,000** | **159,000** | **476,000** |

[a] Reference: Final Environmental Impact Report for Highland Fairview Corporate Park, Appendix K, Attachment D (Michael Brandman Assoc., 2008).

The total demands for the WLC and HFCP are tabulated in Exhibit 2. The storage tank for the WLC site is sized for 75 percent of MDD storage. The placement of the recycled water storage tank is adjacent to the proposed location of the new domestic water tank east of the intersection of Gilman Springs Road and Street B. At elevation 1850, the recycled water storage tank provides sufficient pressure within the WLC and HFCP sites to require no additional operational storage.

EXHIBIT 2
**Total Demands for WLC and Highland Fairview Corporate Park**
*WLC Recycled Water Analysis*

| Site | ADD (gpd) | MDD (gpd) | PHD (gpd) |
|---|---|---|---|
| WLC irrigation | 1,358,000 | 3,395,000 | 10,185,000 |
| HFCP irrigation | 63,000 | 159,000 | 476,000 |
| **Total** | **1,421,000** | **3,554,000** | **10,661,000** |

[1] Peaking factors are based on the Final Environmental Report for the Highland Fairview Corporate Park (Michael Brandman Assoc., 2008) for irrigation.

| Site | ADD (gpd) | MDD (gpd) | PHD (gpd) |
|---|---|---|---|

## Design Criteria

The criteria used to evaluate system performance were adopted from the 2010 EMWD Recycled Water Facilities Master Plan. The criteria are summarized below.

- Operating pressure range at MDD = 40 to 110 psi
- Maximum MDD flow velocity of 5 feet per second (fps)
- Maximum PHD flow velocity of 10 fps
- Maximum headloss:

| Flow Condition [a] | | Headloss |
|---|---|---|
| < 20 cfs | < 9000 gpm | 3.0 feet/1000 feet |
| 20 – 50 cfs | 9000 – 22,500 gpm | 2.0 feet/1000 feet |
| > 50 cfs | > 22,500 gpm | 1.0 feet/1000 feet |

[a] cubic feet per second (cfs), gallons per minute (gpm)

- The generation of recycled water is assumed to be able to match MDD for the system with the largest Regional Water Reclamation Facility out of service.
- Service level storage capacity is 75 percent of MDD based on the criterion from the 2010 Master Plan for 100 percent landscape demand:

| Percent of Non-Landscape Demand | Percent of Landscape Demand | Recommended Service-Level Percent of Storage (Percent of MDD) |
|---|---|---|
| 100 | 0 | 20 |
| 75 | 25 | 30 |
| 50 | 50 | 50 |
| 25 | 75 | 60 |
| **0** | **100** | **75** |

[a] cubic feet per second (cfs), gallons per minute (gpm)

## Existing System

The existing distribution system consists of:

- Four Regional Water Reclamation Facilities (RWRFs) and associated Effluent Pump Stations

- Seventeen RWRF Onsite Distribution Storage Ponds
- Four RWRF Onsite Storage Pond Recycled Water Pump Stations (RWPSs)
- Six Offsite Distribution Storage Ponds
- Five Offsite Storage Pond RWPSs
- Six Recycled Water Booster Stations (RWBSs)
- Two Service Level Storage Tanks and One Service Level Reservoir
- Reach 4 Energy Dissipator
- Eight Pressure Zones
- Transmission and Distribution Piping

The Landmark Reservoir currently serves the 1710 Pressure Zone of the existing distribution system and is located nearest to the WLC site. A pump station will be required to provide recycled water from the Landmark Reservoir and 1710 Pressure Zone to the WLC site and the new recycled water storage tank.

The 2010 EMWD Recycled Water Facilities Master Plan determined the existing recycled water demands and projected future system requirements. The 2010 recycled water supply exceeded the 2010 ADD, and additional supply will be required to meet projected future demands as shown in Exhibit 3. For the 2012 scenario, the supply slightly exceeds the demand based on the extrapolated demand information in the InfoWater model supplied by EMWD and the additional recycled water demands for the WLC and HFCP sites.

EXHIBIT 3
**Existing and Projected Recycled Water Supply and Demand per 2010 EMWD Recycled Water Facilities Mater Plan**
*WLC Recycled Water Analysis*

| Year | Supply | | Demand | |
|---|---|---|---|---|
| | (afy) | (MGD)[a] | (afy) | (MGD)[a] |
| Existing (2010) | 47,700 | 42.6 | 39,600 | 35.3 |
| 2015 | 57,100 | 50.9 | 57,100 | 50.9 |
| 2020 | 65,000 | 58.0 | 65,000 | 58.0 |
| 2025 | 73,900 | 65.9 | 73,900 | 65.9 |
| 2030 | 82,900 | 74.0 | 82,900 | 74.0 |

[a] MGD = million gallons per day

The existing recycled water distribution model obtained from EMWD includes information for the existing facilities described in the 2010 EMWD Recycled Water Facilities Master Plan. In addition, the InfoWater model is assumed to accurately represent the existing system. The Landmark Reservoir and associated piping for the 1710 Pressure Zone will supply recycled water to the WLC site via the WLC booster pump station. They are included in the WLC site recycled water analysis in order to determine the impacts of the WLC and HFCP demands on the existing

system. Potential impacts to the existing system are discussed on page 7. This analysis assumes that the existing recycled water system has sufficient pump capacity at the various pump stations to provide the additional volume required to the Landmark Reservoir under MDD conditions.

A 12-inch recycled water pipe was installed in 2010 along Eucalyptus Ave. between Redlands Blvd. and Theodore St. It is currently connected to the drinking water system. It is assumed that the 12-inch pipe will be connected to the recycled water system from the WLC site and disconnected from the drinking water distribution system in the future to provide irrigation water to the HFCP.

# Analysis

Two scenarios were developed from the EMWD existing model for the WLC project area:

- Full WLC project area and demands from the EMWD existing system
- Full WLC and HFCP project areas and demands from the EMWD existing system

For each scenario, the average day, maximum day and peak hour demands developed in Exhibit 2 were distributed to nodes in the recycled water model. WLC irrigation demands are distributed to all nodes within the WLC site, except for the nodes on the piping connection between Pressure Zone 1710 and the WLC booster pump station. The scenarios and results are described below.

1. **Full WLC project area and demands from the EMWD existing system**. Pipe sizing for this scenario assumes that the entire site will be constructed without adjustments to demands from phased development. Pipe size was determined based on the pipe velocity and headloss criteria under PHD flows. On-site pipe sizes range from 8 to 18 inches as shown in Exhibit 6. There is potential for some stagnation issues with the piping in the 1730 Pressure Zone due to non-looped piping along Alessandro Blvd.. This will be evaluated further during final design. Potential solutions include routine pipe maintenance to clean out debris in the pipe. The WLC pump station will be located at the boundary of the 1710 Pressure Zone, approximately at the intersection of Merwin Street and Bay Avenue, to pump to the WLC site. The WLC booster pump station is rated at approximately 2,500 gpm and 230 feet of total dynamic head (TDH).

   An 18-inch pipeline from the WLC booster pump station conveys water approximately 20,000 lineal feet (LF) through the 1860 Pressure Zone to the 2.7 million gallon recycled water storage tank, which will be located east of Gilman Springs Road. Recycled water is supplied from the 1710 Pressure Zone; flow return to the 1710 Pressure Zone from the 1730 Pressure Zone will be limited by an emergency pressure reducing valve to eliminate unnecessary pumping of recycled water to HFCP. There will also be a backup supply from the drinking water system into the recycled water storage tank to provide an added level of redundancy to the system. The backup supply will include an air gap to prevent contamination of the drinking water system.

   Preliminary results show pressures in the 18-inch suction piping to the WLC booster pump station that are just below the design criterion of 40 psi. Since none of the controls of the existing system are modified for the WLC and HPCP analysis, further distribution system analysis will be required to determine if improvements are required to eliminate insufficient pressures.

Due to the head required to fill the storage tank in Zone 1850, pressures in the 18-inch transmission pipeline exceed the maximum operating pressure criterion of 110 psi in Zone 1790 near the pump station. These, in turn, will require pressure reducing valves to service connections. The transmission pipeline MDD pressure through the 1790 Pressure Zone ranges between 90 and 117 psi. In the 1860 Pressure Zone, pressures between 65 and 90 psi during MDD fall within the acceptable pressure criteria. Operating pressures are influenced by piping headlosses and static pressure between the tank and pump. To decrease operating pressures in the 1790 Pressure Zone, the transmission pipe size would need to be increased. However, this is not possible since the minimum static pressure due to the elevation difference between the pump and the recycled water storage tank is 110 psi.

Grade and building elevation across the WLC and HFCP sites range from 1540 to 1770. To accommodate the operating pressures associated with the WLC and HFCP sites, three pressure zones are identified to minimize excursions from the design criterion: 1860, 1790, and 1730. Pressure reducing valves are located to reduce pressure from the 1860 Pressure Zone to the 1790 Pressure Zone and from the 1790 Pressure Zone to the 1730 Pressure Zone. The pressure reducing valve to the 1790 Pressure Zone is set to 75 psi. Pressure reducing valves to the 1730 Pressure Zone are set at 65 and 55 psi to allow flow through the looped sections of piping. Exhibit 4 shows the pressure range for each pressure zone of the WLC site; Exhibit 7 shows the map of the WLC site with the pressures displayed for MDD.

EXHIBIT 4
**Pressure Range Results of WLC Scenarios**
*WLC Recycled Water Analysis*

| Pressure Zone | Pressure Range | | |
|---|---|---|---|
| | ADD | MDD | PHD |
| 1730 | 72 – 94 | 62 – 89 | 40 – 68 |
| 1790 (not including transmission pipe) | 75 – 96 | 75 – 92 | 32 – 75 |
| 1790 (transmission pipe) | 98 – 119 | 95 – 116 | 86 – 107 |
| 1860 | 65 – 95 | 63 – 92 | 67 – 78 |

The WLC booster pump station is sized for 2,500 gpm at 230 feet of total dynamic discharge head (TDH). The recycled water storage tank is sized at 2.7 million gallons, with an operational depth of 40 feet. The WLC booster pump station is slightly oversized for the WLC MDD condition of 2,360 gpm.

The estimated pipe lengths required to supply the WLC site from the 1710 Pressure Zone are:

- 8-inch PVC: 14,000 LF
- 12-inch PVC: 16,000 LF

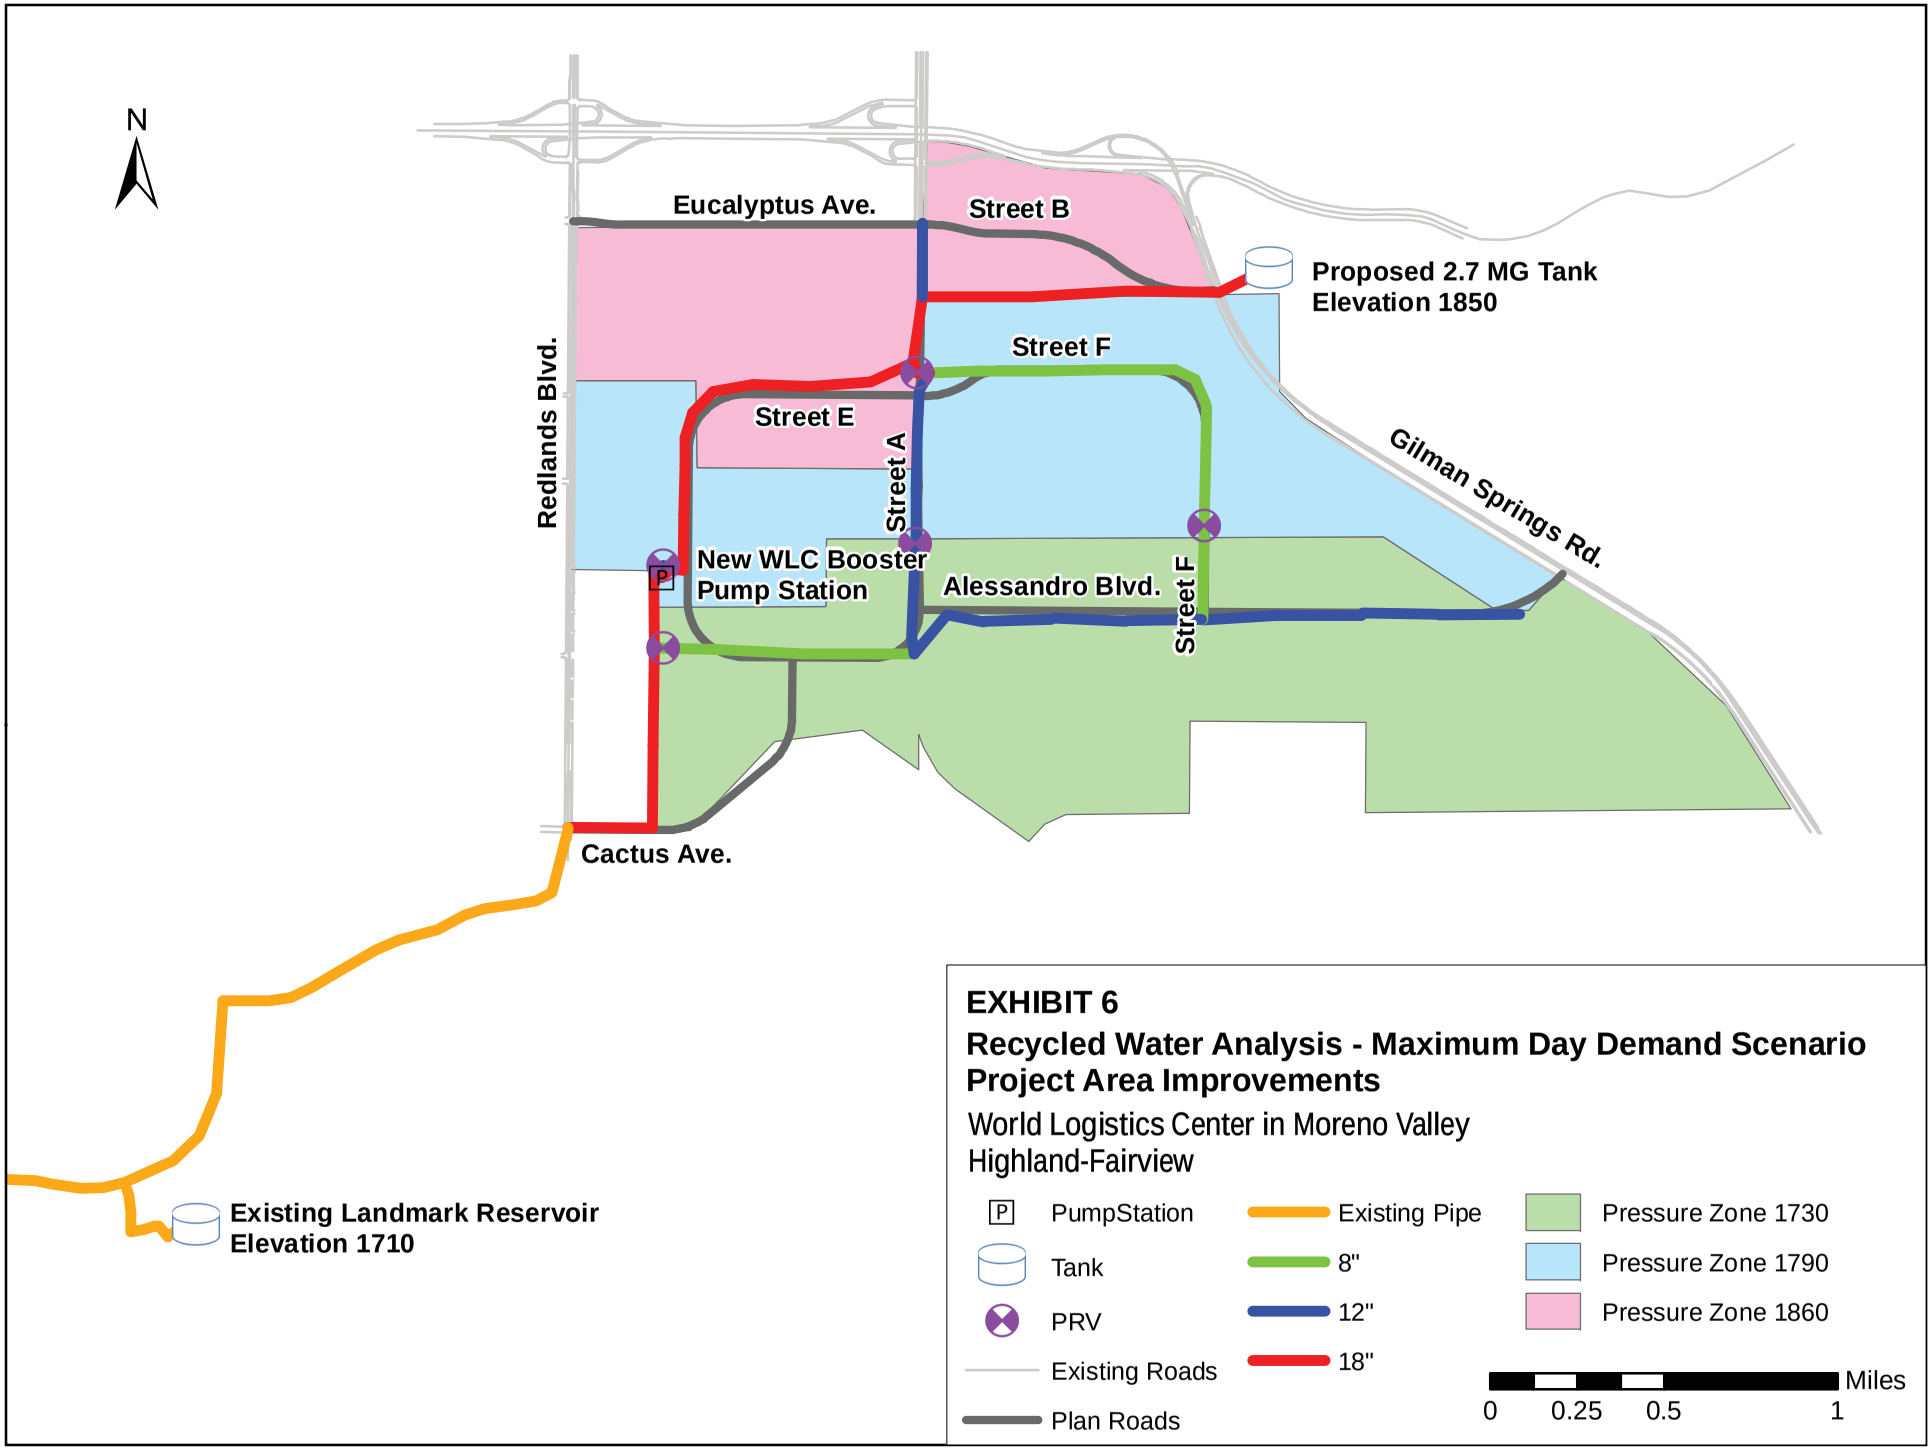
- 18-inch PVC: 20,000 LF

The WLC site will be developed in two phases. Phase 1 development is approximately 50 percent of the entire WLC site and consists of development on the west side of the site. The 18-inch transmission pipe and the 2.7MG Tank will need to be built as part of Phase 1 and the Phase 1 demands will also require the booster pumps for 1,400 gpm at 230 feet TDH to be constructed.

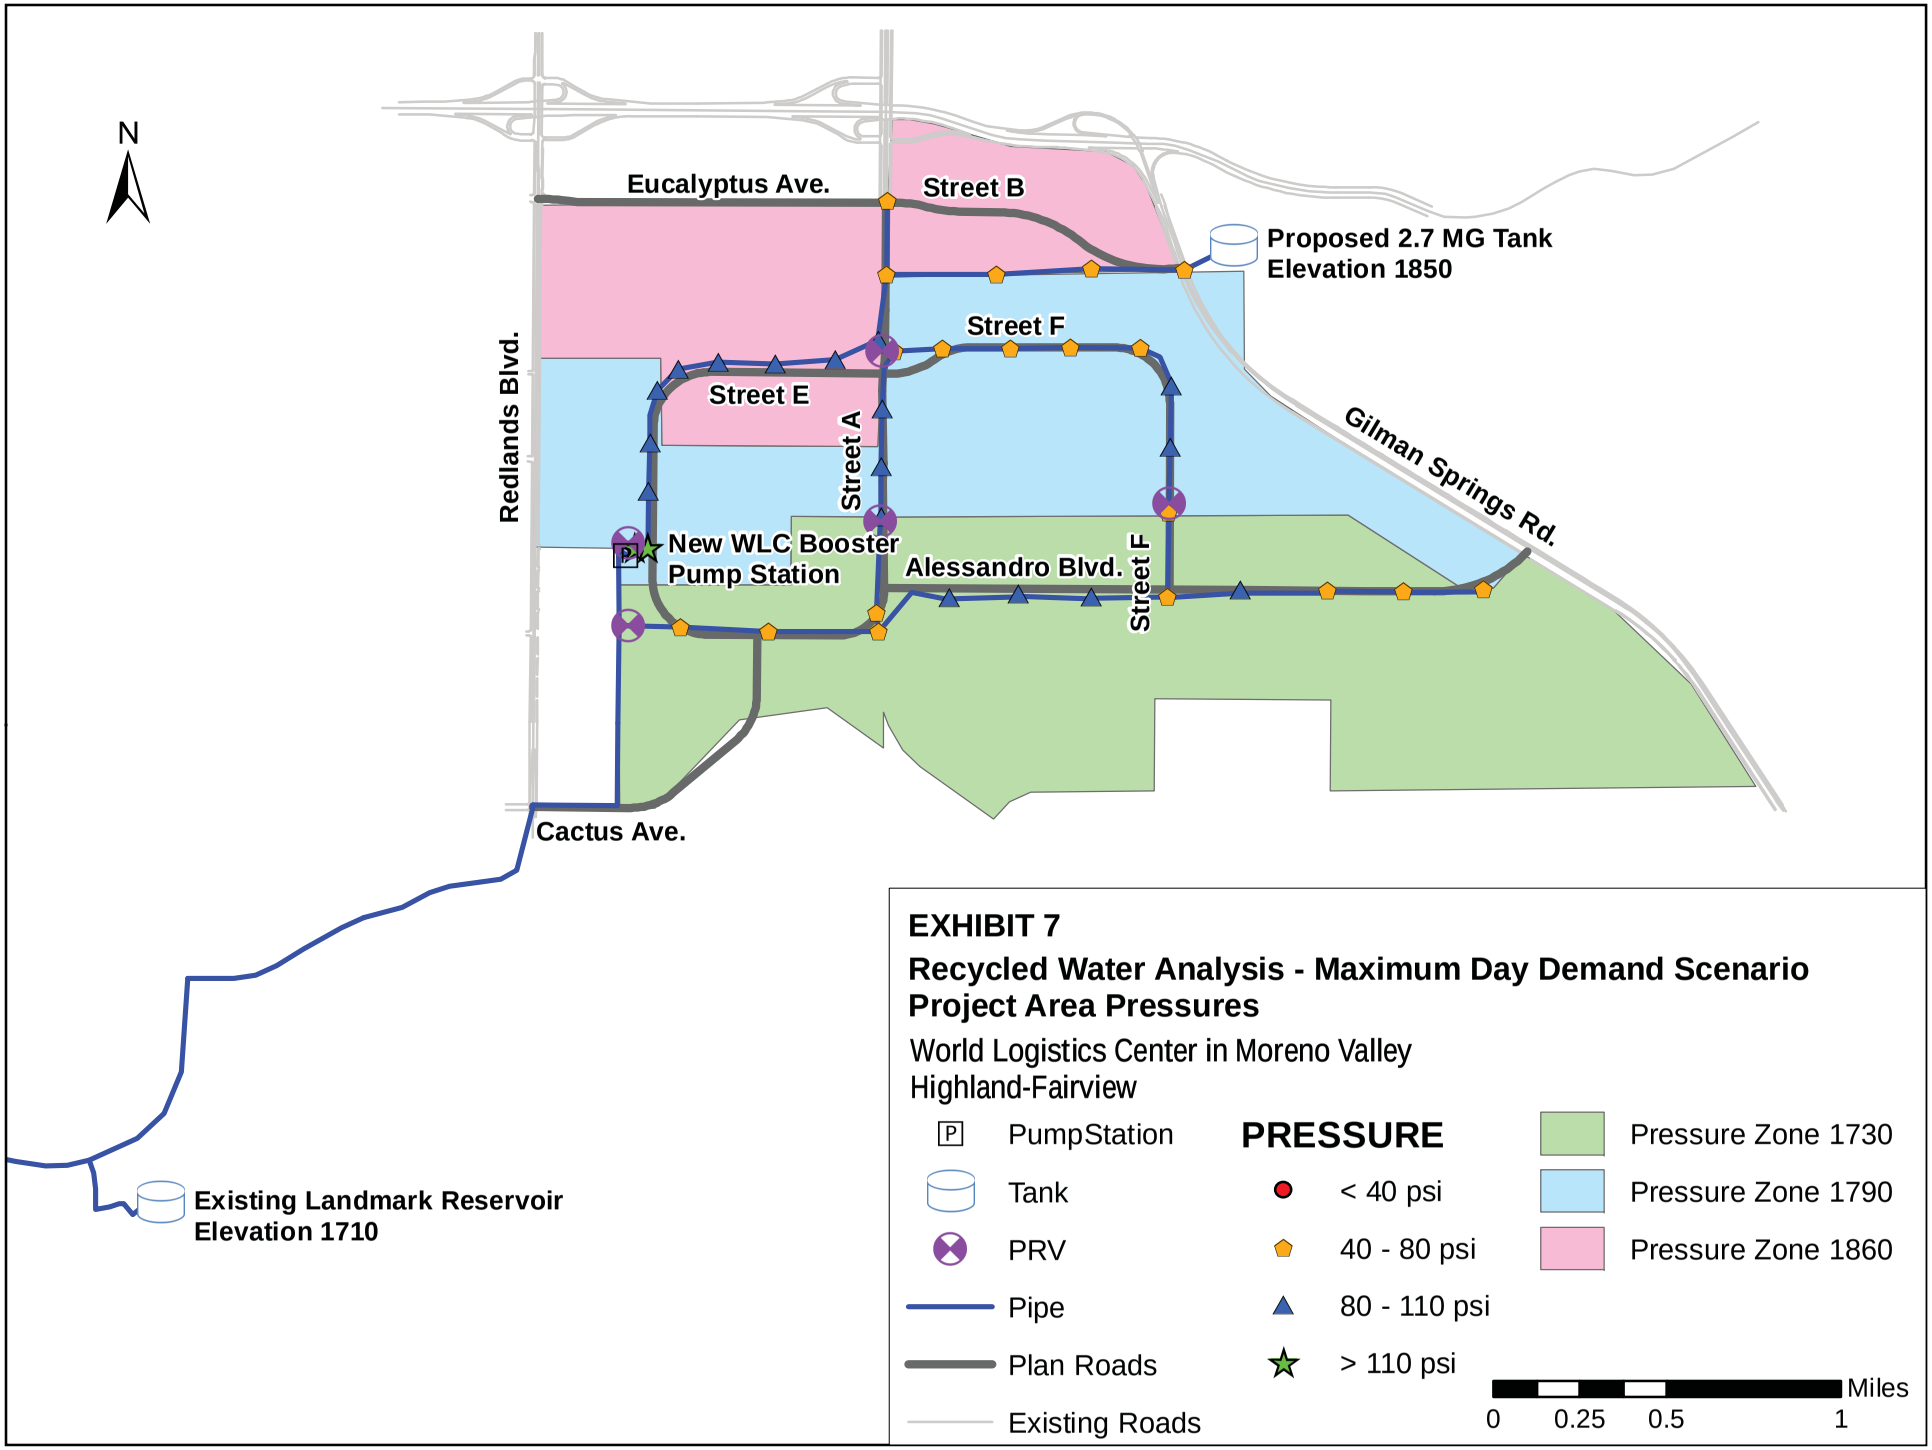
2. **Full WLC and HFCP project area and demands from the EMWD existing system.** The impacts of the adding the HFCP demands to the WLC distribution system do not significantly impact pressures and pipe velocities in the WLC system since the allocation for HFCP is approximately 3, 4, and 4 percent of the total WLC system demand for ADD, MDD, and PHD, respectively. The 12-inch pipe connecting to the existing 12-inch recycled water pipe at the HFCP site is located off the 18-inch transmission pipe to the recycled water storage tank as shown in Exhibit 8. Resultant pressures in the system for the WLC and HFCP sites during MDD are displayed in Exhibit 9.

EXHIBIT 5
**Pressure Range Results of WLC and HFCP Scenarios**
*WLC Recycled Water Analysis*

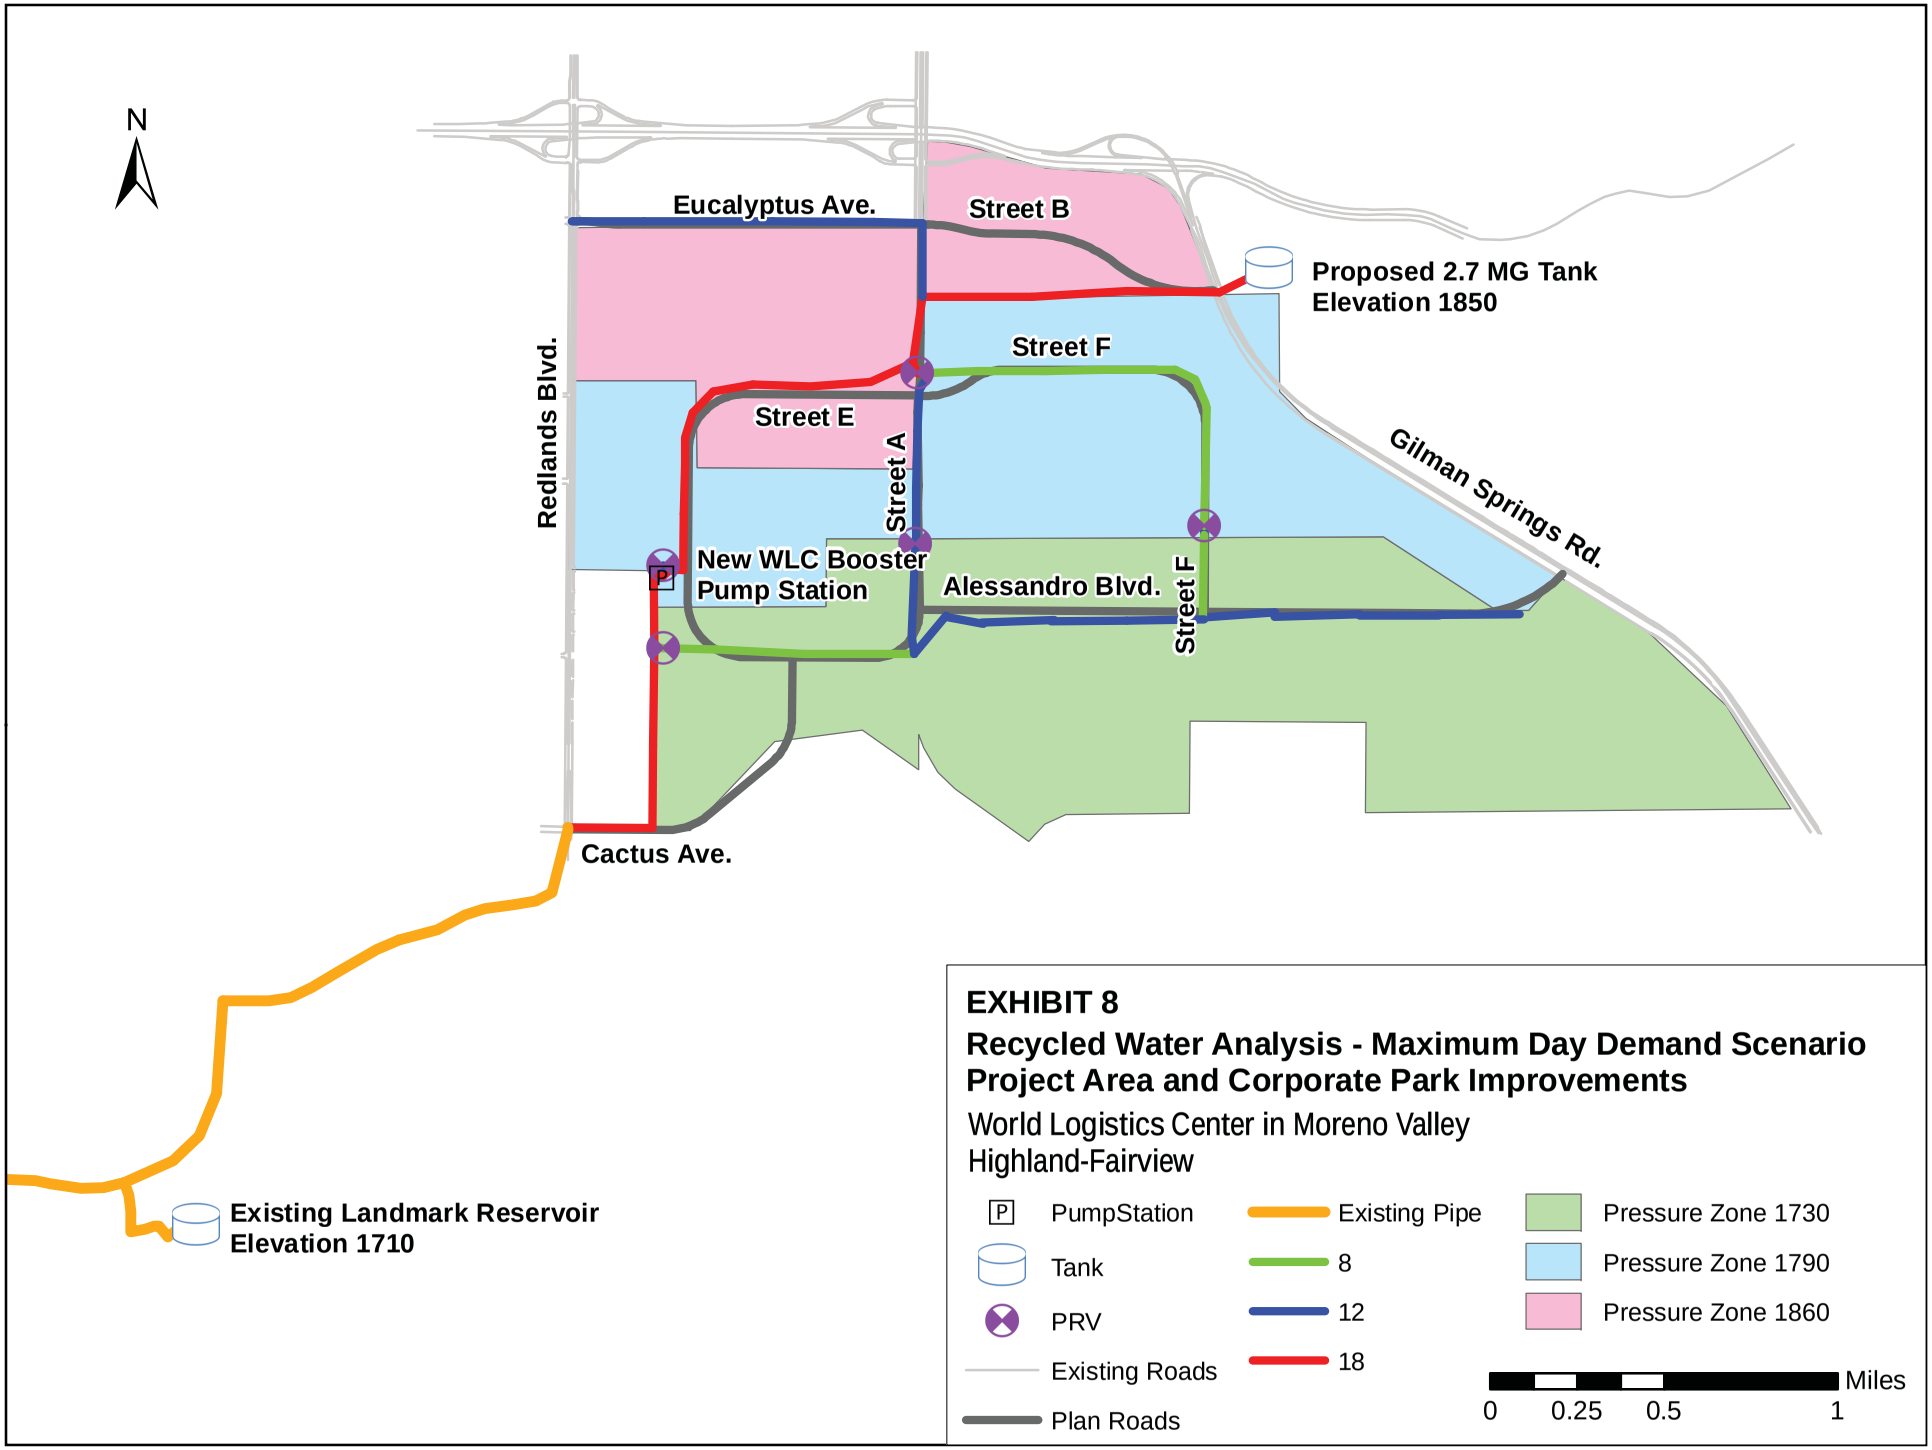
| Pressure Zone | Pressure Range | | |
|---|---|---|---|
| | ADD | MDD | PHD |
| 1730 | 68 – 87 | 62 – 89 | 40 – 68 |
| 1790 (not including transmission pipe) | 75 – 96 | 75 – 924 | 32 – 75 |
| 1790 (transmission pipe) | 98 – 119 | 95 – 116 | 83 – 105 |
| 1860 | 66 – 95 | 65 – 92 | 52 – 80 |
| HFCP site | 63 – 65 | 62 – 63 | 50 – 51 |



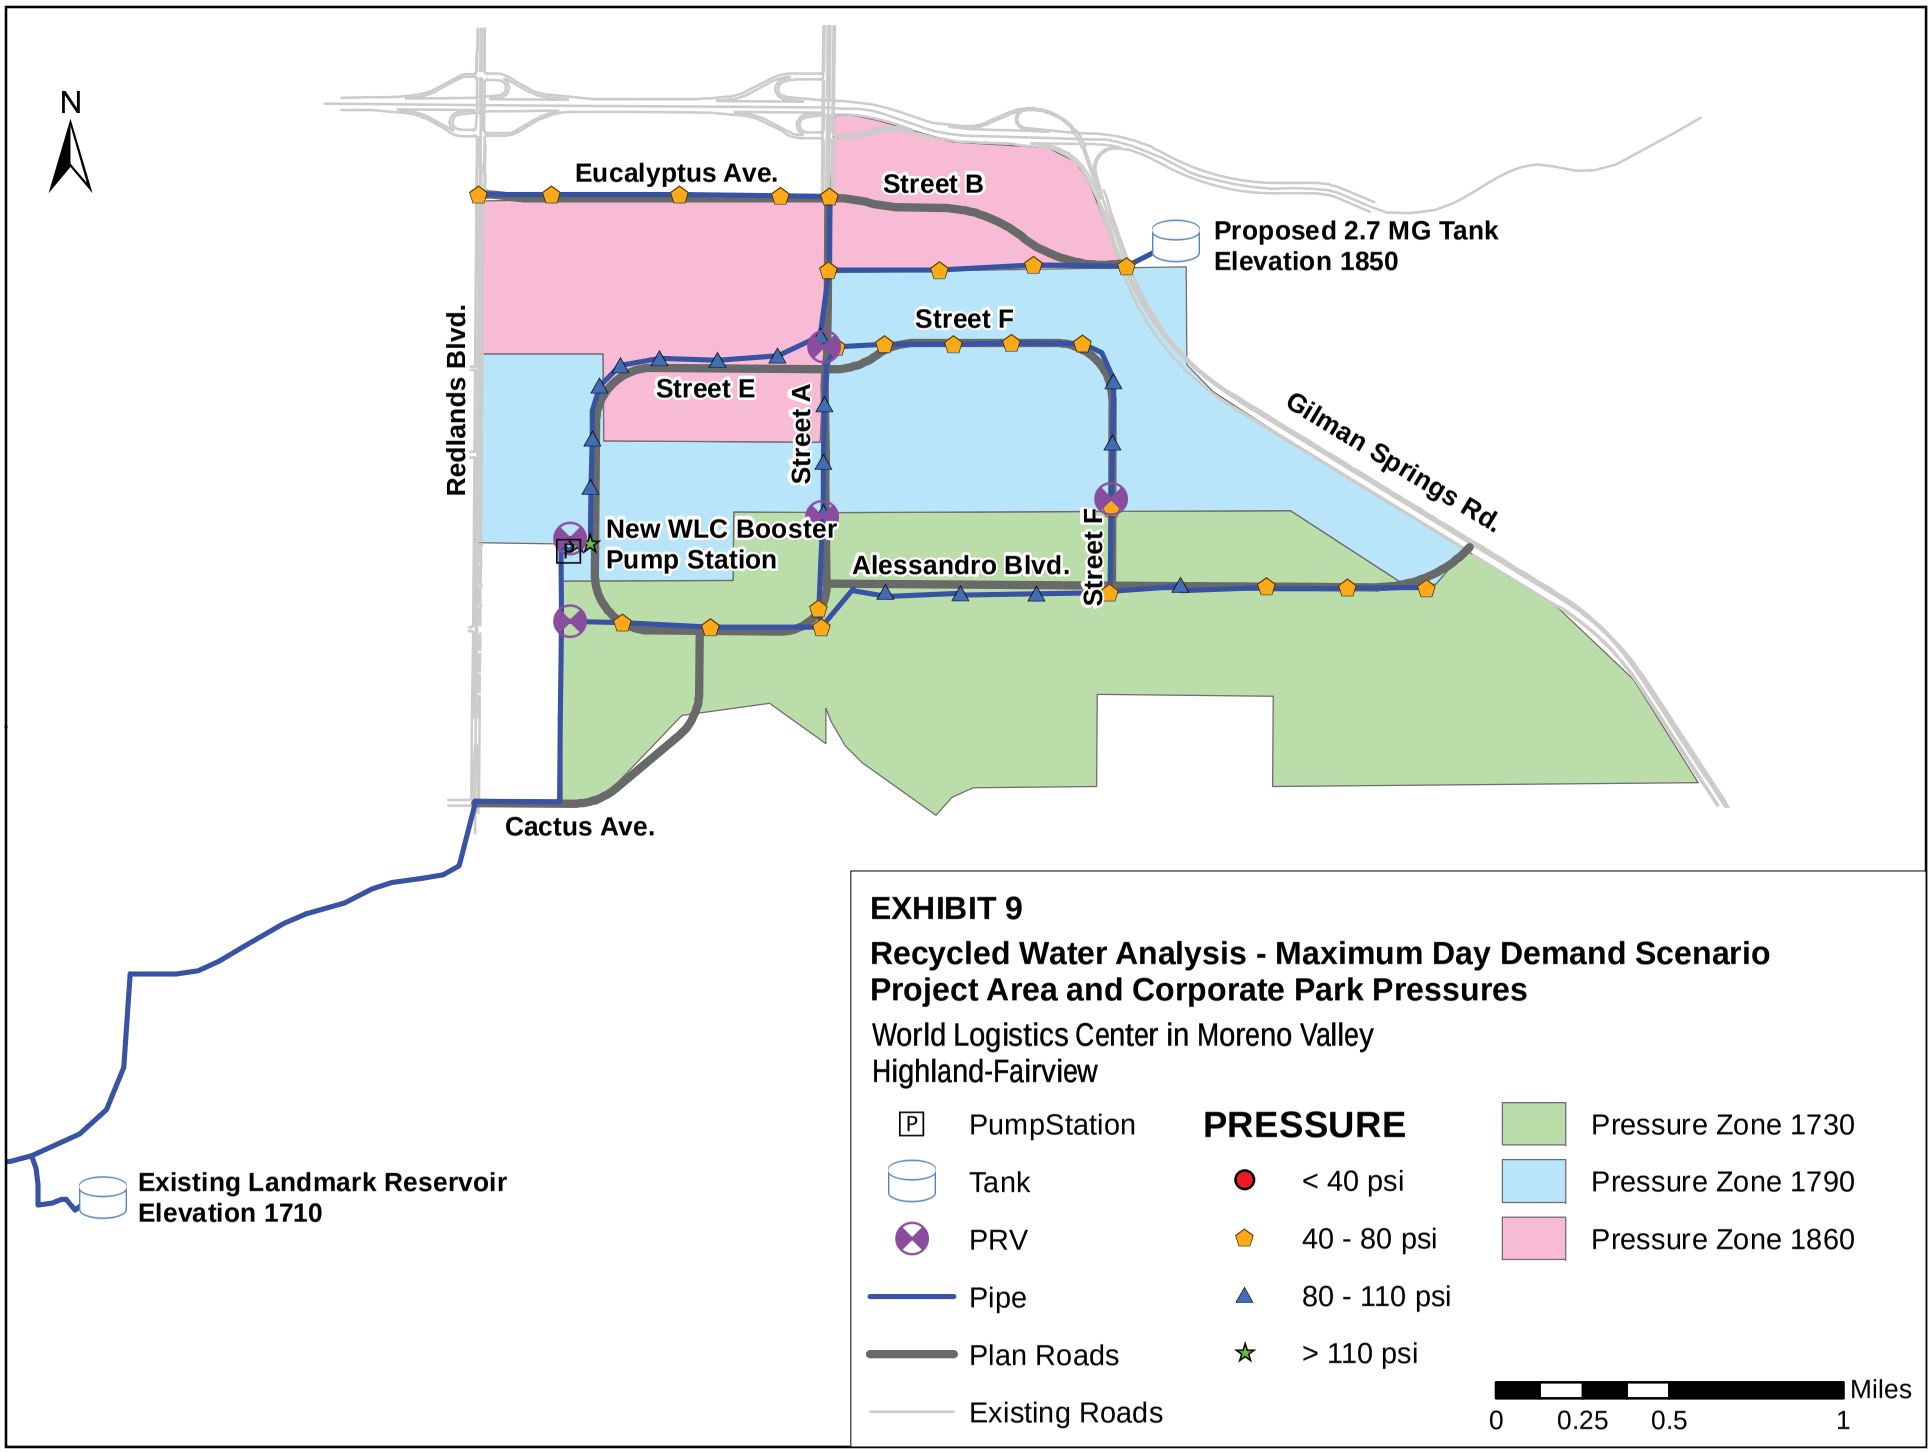
The WLC booster pump station and recycled water storage tank are sized to provide sufficient capacity at the full WLC and HFCP demands due to the minimal increase in pump station capacity and tank size. The HFCP demands increase the required pump station capacity by only 110 gpm and the required tank storage capacity by 200,000 gallons.



Changes to the street layout were made after the modeling and analysis was completed. The figures were updated to show the pipe in Alessandro Blvd in its current location. At the time of final design the analysis will need to be updated to reflect the current street location.



## Potential Existing System Impacts



Based on the projected demands and the existing supply capacity of the RWRFs, the existing system is capable of producing sufficient recycled water to the existing distribution system and meeting the demands of the WLC and HFCP sites for the near-term. The supply capacity may require augmentation depending on increased demands throughout the existing system as well as phasing of the WLC and HFCP development.

The existing system will need to provide an additional 3,100 gpm through the system and up to the Landmark Reservoir. The existing system will need to be analyzed at a later date to determine adequacy of the existing pump stations to maintain existing operating levels in the Landmark Reservoir and to prevent lowering of the operating pressures below the 40 psi criteria. This analysis should include the determination of the pump stations' existing capacity to provide sufficient flow to the distribution system demands and to the Landmark Reservoir; identification of modifications to the pump stations' operations to accomplish filling and draining of the Landmark Reservoir; and identification of improvements to the existing pump stations to fix existing capacity deficiencies.

The proposed World Logistics Center Specific Plan (WLC) is a master plan for the development of logistics warehouse distribution facilities on approximately 2,610 acres of land in the Rancho Belago area of eastern Moreno Valley. The Specific Plan proposes the development of 40.4 million square feet of high-cube logistics facilities on 2,382.8 acres, 200,000 square feet of light logistics facilities on 37.1 acres, an in-project fueling station, 115.8 acres of street right-of-way and 74.3 acres of permanent open space.

The Specific Plan area is situated southerly of State Route 60, generally between Redlands Boulevard and Gilman Springs Road (the easterly City limit). The Specific Plan extends to, but does not include, the San Jacinto Wildlife Area (SJWA). The General Plan Amendment and Zone Change which accompany the Specific Plan includes a portion of the SJWA property in order to designate that land for as open space use.

There are a number of existing dry utility systems owned and operated by Moreno Valley Utility (electric), Southern California Edison (electric), Southern California Gas (natural gas) Questar (petroleum products pipelines) Verizon Communications and Time Warner Communications. The following technical report is a broad global dry utility planning summary identifying the issues to be dealt with as part of the project development.

## Existing Electric Service Facilities

### Electricity – Southern California Edison (SCE)

1. A 115kV transmission pole line along Theodore Street, Eucalyptus Avenue and Gilman Springs Road.
2. A second 115kV transmission pole line along Broadiaea Avenue and Davis Road.
3. Local 12kV distribution facilities are present serving existing residential and commercial development westerly of the World Logistics Center.

### Electricity – Moreno Valley Utility (MVU)

1. Serving the existing Skechers facility is a 12kV underground system along Eucalyptus Avenue between Redlands and Theodore Street.
2. The source for all Moreno Valley Electric Utility (MVEU) electric facilities is an SCE served115kV to12kV MVU substation known as MOVAL, west of the project on Moreno Beach Drive south of Cottonwood Avenue.

## New Electric Distribution Voltage Services for the World Logistics Center (WLC)

The City of Moreno Valley Public Works Department, Electric Utility Division (MVU) is the electric service provider for the project. New electric distribution voltage infrastructure will be underground, engineered and designed by MVU. Construction of new underground electric infrastructure is the joint responsibility of the developer and MVU. The Developer may provide conduit, equipment pads, sub-grade enclosures, protective equipment and retaining walls. MVU is typically responsible for installation of all distribution electric cable, connections, and related electrical equipment.

**New Electric Transmission Voltage Services for the WLC**

It is expected that during the development of the WLC additional electric distribution capacity will be necessary. This additional distribution capacity will come from the expansion of MVU's existing MOVAL substation and the construction of a new SCE electric transmission line and switchyard and MVU distribution voltage substation within the WLC project boundaries.

Currently two (2) potential electric substation sites within the WLC have been identified; Site A adjacent to SCE transmission lines along Gilman Springs Road and Site B adjacent to SCE transmission lines along Brodiaea Avenue. A typical SCE/MVU substation and related switchyard will require approximately 4.5 acres. SCE is also required to secure California Public Utilities Commission permission (Certificate of Public Necessity and Convenience) and related environmental permits for transmission line extensions and switchyard facilities. Any new electric transmission construction of more than 2000 feet of overhead pole line construction must comply with CPUC General Order 131D. (Copy attached)

**Estimated Project Electric Demand**

In order to determine a typical electric profile for the types of uses that are expected within the project area, we analyzed data provided by MVU on twelve similar operations within the utility's service territory. The sample included retail, medical, paint, home improvement, mail distribution centers and a mattress manufacturing facility. We were able to insert actual data for one of the Retail Distribution Centers. To enhance the reliability of the data analysis, we deleted the highest and lowest demand samples. Based on this analysis the average demand is 1.68 watts per square foot of developed space.

The WLC planning area is proposed to support 40,600,000 square feet of Distribution Center/Warehousing space. The potential electrical demand for this area would be approximately 68 MW summarized as follows:

| Land Use Type | Potential Building Sq. Ft. | Demand Factor (w/sq ft) | Expected Demand (kW) | Load Factor | Expected Annual kWH Used |
|---|---|---|---|---|---|
| **Logistics Warehouse (LD/LL)** | **40,600,000** | **1.68** | **68,208** | **0.63** | **376,426,310** |

**Electric Service Capacity**

The existing MOVAL Substation is a 28 MW facility with a remaining capacity of 4.5MW. This location also accommodates a 28 MW Back Up system. This capacity will be committed by MVU to new service customers on a first come basis. MVU reports the ability to add 28mW of additional capacity to the existing MOVAL substation equipment and land configuration. We also understand that MVU has enough land adjacent to MOVAL for another 28MW of capacity completing the build out of the MOVAL facility at of 112MW.

However, even with a commitment of all the new MVU electric service capacity (56mW) the estimated WLC project demand of 68MW would exceed all the existing and planned MVU capacity in the area. Furthermore, a commitment of all new capacity to WLC would leave no capability to serve other new customers in the area and would not provide the advantage of reliability with a single source of electric

service and an expensive congested distribution route corridor to the WLC project.

Because expansion of the existing MVU electric substation cannot completely or perhaps even substantially meet the needs of the WLC project, additional substation capacity will need to be constructed to meet WLC's electric needs.

**Underground Electric Distribution System**

The current 12kV circuit serving Skechers could possibly handle up to 3,250,000 square feet of WLC development before a new circuit would be required. A second circuit could possibly service an additional 4,750,000 square feet provided MVU had upgraded the existing MOVAL facility and the capacity was available to WLC. The addition of more circuits from MOVAL would also provide more reliability for the WLC and surrounding area when coordinated with circuitry from a new WLC electric substation.

Since expansion of MOVAL cannot meet all of the estimated project electric needs and the premium cost for additional circuits from MOVAL it may be useful to consider the construction of a new substation early in the development process.

**WLC Electric Substation**

As identified above in the Electric Transmission section two potential sites for the new MVU substation and SCE switchyard maybe considered. Site "A" adjacent to SCE transmission lines along Gilman Springs Road and Site "B" adjacent to SCE transmission lines along Brodiaea Avenue.

Site A is best situated to accommodate the existing MOVAL Eucalyptus circuits because of a more direct west to east route than Site B. More central proximity to new development and radiation of distribution circuits away for Site A along proposed "F" street, Gilman Springs Road and relatively short route to additional west and east capability of proposed "C" street are an advantage to this site.

Site B is somewhat landlocked with only north south direct access to proposed "C" street and existing Cactus Avenue only goes west into existing developed areas. The close proximity of the existing 20" SCG gas pipeline to the south and east of the site may also limit all new circuits into Street D because of construction of a number of large underground electric facilities and depth constraints crossing the existing gas transmission main.

**Natural Gas – Southern California Gas Company (SCG)**

Large natural gas transmission mains cross much of the WLC from Redlands Boulevard to and along Alessandro Street which will present development grading and infrastructure improvement challenges. Unlike electric transmission facilities we are not aware of specific CEQA requirements like GO 131D, but these facilities are covered by stringent State of California, CPUC and operating company safety standards. In addition a substantial portion of these systems crossing the WLC are covered by easements that may add more restrictions to developing in and around these lines.

Because of the size and character of these natural gas and fuel products transmission lines, construction of project improvements above, below and adjacent to these lines will be limited. The following is a summary of line sizes and general locations:

- A 30" high pressure transmission pipeline in private property along the north side of Cottonwood Avenue from Redlands to Theodore Street, crossing private property from Theodore to Alessandro at Virginia Street, then easterly in Alessandro exiting the street position at a point approximately 2500 feet west of Gilman Springs Road and crossing private property to Gilman Springs Road.

- A 30" high pressure transmission pipeline in private property along the south side of Broadiaea Avenue then in private property to proposed Street C.

- A 36" high pressure transmission pipeline in private property parallel to and south of the 30" transmission pipeline along proposed Street C from Virginia Street to Gilman Springs Road.

- 16", 24" and 30" parallel high pressure transmission pipelines in private property along Virginia Street from the project boundary to a location north of proposed Street C.

- A "Blow down/Pipe Cleaning facility" on the south east corner of Virginia and proposed Street C.

- A Flow Metering Station at the southeast corner of Alessandro Boulevard and Virginia Street.

- Distribution systems at Eucalyptus and Redlands (4 inch) and Gilman Springs Road (8 inch) south of Alessandro.

**Natural Gas – San Diego Gas & Electric (SDG&E)**

- SDG&E owns and operates the "Moreno Compressor Station" south of project boundary on the west side of Virginia Street. It is our understanding that consideration of these facilities in the project EIR has taken place.

**Fuel Products – Questar**

- A 16" gas pipeline in private property along south side of Alessandro Boulevard between Gilman Springs Road and Theodore Street, continuing south along the east side of Theodore turning west along Maltby Avenue.

**New Natural Gas Distribution Systems**

It is expected that natural gas distribution systems will need to be installed to accommodate gas usage within the project. Currently it is assumed that gas usage will be limited to the office space only. Office space is assumed to be 3% of the total building sf or 0.03 x 40,600,000 sf 1,218,000 sf.

| Land Use Type | Potential Building Sq. Ft. | | Natural Gas Consumption Factor (CF/YR/SF) | | Natural Gas Consumption (CF/YR) |
|---|---|---|---|---|---|
| **Office Space** | **1,218,000** | | **12.00** | | **14,616,000** |

**Voice, Video, and Data**

The existing facilities identified as associated with this project as potential sources of future services and or potential construction conflicts are:

1. A Verizon underground system along the north side of Alessandro Boulevard between Gilman Springs Road and Theodore.
2. A Verizon overhead system on the SCE pole line in Theodore Street from Alessandro to Eucalyptus.
3. A Verizon overhead system on the SCE pole line on the east side of Redlands between SR 60 and Broadiaea.
4. A Verizon underground system in a joint trench with MVU on the north side of Eucalyptus between Redlands and Theodore Street.
5. Time Warner Communications overhead and underground systems in Redlands Boulevard and existing adjacent residential development.

**Joint Dry Utilities Distribution System Trenches**

Configurations of joint dry utility trenches (gas, electric, utility communications systems) are subject to standards developed by each individual utility company. Accordingly, SCG (gas) may not allow installation of gas distribution systems in the same trench with electric and communications dry utilities. The numbers of conduits required by electric, telephone and cable TV companies may not be practical for joint installations in a single trench in some locations.

**Gas and petroleum fuel transmission lines are not permitted by State of California safety orders** and other practicalities such as large pipe sizes to be in multiple use dry utility trenches.

**EXHIBITS**

GO 131 D

WLC electric substation locations

GENERAL ORDER NO. 131-D
(Supersedes General Order No. 131-C)

# PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA

RULES RELATING TO THE PLANNING AND CONSTRUCTION OF ELECTRIC GENERATION, TRANSMISSION/POWER/DISTRIBUTION LINE FACILITIES AND SUBSTATIONS LOCATED IN CALIFORNIA.

Adopted June 8, 1994. Effective July 8, 1994
Decision 94-06-014
Modified August 11, 1995. Effective September 10, 1995.
Decision 95-08-038

## SECTION I. GENERAL

Pursuant to the provisions of Sections 451, 701, 702, 761, 762, 768, 770, and 1001 of the Public Utilities Code:

IT IS HEREBY ORDERED that except as specifically provided herein, no electric public utility, now subject, or which hereafter may become subject, to the jurisdiction of this Commission, shall begin construction in this state of any new electric generating plant, or of the modification, alteration, or addition to an existing electric generating plant, or of electric transmission/power/distribution line facilities, or of new, upgraded or modified substations without first complying with the provisions of this General Order.

For purposes of this General Order, a transmission line is a line designed to operate at or above 200 kilovolts (kV). A power line is a line designed to operate between 50 and 200 kV. A distribution line is a line designed to operate under 50 kV.

## SECTION II. PURPOSE OF THIS GENERAL ORDER

The Commission has adopted these revisions to this General Order to be responsive to:

- the requirements of the California Environmental Quality Act (CEQA) (Public Resources (Pub. Res.) Code § 21000 et seq.);
- the need for public notice and the opportunity for affected parties to be heard by the Commission
- the obligations of the utilities to serve their customers in a timely and efficient manner; and
- the need to replace the present complaint treatment of under-200-kV projects with a new streamlined review mechanism.

## SECTION III. NEED FOR COMMISSION AUTHORIZATION

For purposes of this General Order, construction does not include any installation of environmental monitoring equipment, or any soil or geological investigation, or work to determine feasibility of the use of the particular site for the proposed facilities, which do not result in a serious or major disturbance to an environmental resource.

A. Certificate of Public Convenience and Necessity (CPCN)

No electric public utility shall begin construction in this state of any new electric generating plant having in aggregate a net capacity available at the busbar in excess of 50 megawatts (MW), or of the modification, alteration, or addition to an existing electric generating plant that results in a 50 MW or more net increase in the electric generating capacity available at the busbar of the existing plant, or of major electric transmission line facilities which are designed for immediate or eventual operation at 200 kV or more (except for the replacement of existing power line facilities or supporting structures with equivalent facilities or structures, the minor relocation of existing power line facilities, the conversion of existing overhead lines to underground, or the placing of new or additional conductors, insulators, or their accessories on or replacement of supporting structures already built) without this Commission's having first found that said facilities are necessary to promote the safety, health, comfort, and convenience of the public, and that they are required by the public convenience and necessity.

B. Permit to Construct

No electric public utility shall begin construction in this state of any electric power line facilities or substations which are designed for immediate or eventual operation at any voltage between 50 kV or 200 kV or new or upgraded substations with high side voltage exceeding 50 kV without this Commission's having first authorized the construction of said facilities by issuance of a permit to construct in accordance with the provisions of Sections IX.B, X, and XI.B of this General Order. An upgraded substation is one in which there is an increase in substation land area beyond the existing utility-owned property or an increase in the voltage rating of the substation above 50 kV. Activities which increase the voltage of a substation to the voltage for which the substation has been previously rated are deemed to be substation modification projects and not substation upgrade projects.

1. Compliance with Section IX.B is not required for:
   a. power line facilities or substations with an in-service date occurring before January 1, 1996, which have been reported to the Commission in accordance with the Commission's decision adopting GO 131-D.
   b. the replacement of existing power line facilities or supporting structures with equivalent facilities or structures.
   c. the minor relocation of existing power line facilities up to 2,000 feet in length, or the intersetting of additional support structures between existing support structures.
   d. the conversion of existing overhead lines to underground.
   e. the placing of new or additional conductors, insulators, or their accessories on supporting structures already built.
   f. power lines or substations to be relocated or constructed which have undergone environmental review pursuant to CEQA as part of a larger project, and for which the final CEQA document (Environmental Impact Report (EIR) or Negative Declaration) finds no significant unavoidable environmental impacts caused by the proposed line or substation.

g. power line facilities or substations to be located in an existing franchise, road-widening setback easement, or public utility easement; or in a utility corridor designated, precisely mapped and officially adopted pursuant to law by federal, state, or local agencies for which a final Negative Declaration or EIR finds no significant unavoidable environmental impacts.
h. the construction of projects that are statutorily or categorically exempt pursuant to § 15260 et seq. of the Guidelines adopted to implement the CEQA, 14 Code of California Regulations § 15000 et seq. (CEQA Guidelines).

However, notice of the proposed construction of such facilities must be made in compliance with Section XI.B herein, except that such notice is not required for the construction of projects that are statutorily or categorically exempt pursuant to CEQA Guidelines. If a protest of the construction of facilities claimed by the utility to be exempt from compliance with Section IX.B is timely filed pursuant to Section XIII, construction may not commence until the Executive Director or Commission has issued a final determination.

2. The foregoing exemptions shall not apply when any of the conditions specified in CEQA Guidelines § 15300.2 exist:
   a. there is reasonable possibility that the activity may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped and officially adopted pursuant to law by federal, state, or local agencies; or
   b. the cumulative impact of successive projects of the same type in the same place, over time, is significant; or
   c. there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances.

C. Electric Distribution Lines and Other Substations

The construction of electric distribution (under 50 kV) line facilities, or substations with a high side voltage under 50 kV, or substation modification projects which increase the voltage of an existing substation to the voltage for which the substation has been previously rated within the existing substation boundaries, does not require the issuance of a CPCN or permit by this Commission nor discretionary permits or approvals by local governments. However, to ensure safety and compliance with local building standards, the utility must first communicate with, and obtain the input of, local authorities regarding land use matters and obtain any non-discretionary local permits required for the construction and operation of these projects.

## SECTION IV. UTILITY REPORT OF LOADS AND RESOURCES

Every electric public utility required to submit a report of loads and resources to the California Energy Commission (CEC) in accordance with Section 25300 et seq. of the Public Resources Code shall also furnish six copies of its report to the Public Utilities Commission.

## SECTION V. UTILITY REPORT OF PLANNED TRANSMISSION/ POWER LINE, AND SUBSTATION FACILITIES

Every electric public utility shall annually, on or before March 1, furnish to the Commission Advisory and Compliance Division (CACD) for its review three (3) copies[1] of a fifteen-year 15 forecast of planned transmission facilities of 200 kV or greater and a five-year (5) forecast of planned power line facilities and substations of between 50 kV and 200 kV.

A. The report shall include:

1. A list of transmission, power lines, and substations, arranged in chronological order by the planned service date, for which a CPCN or a permit to construct has been received, but which have not yet been placed in service.
2. A list of planned transmission, power lines, and substations of 50 kV or greater or planning corridors, arranged in chronological order by the planned service date, on which proposed route or corridor reviews are being undertaken with governmental agencies or for which applications have already been filed.
3. A list of planned transmission, power lines, and substations of 50 kV or greater or planning corridors, arranged in chronological order by the planned service date, on which planning corridor or route reviews have not started, which will be needed during the forecast periods.

B. For each transmission or power line route, substation, or planning corridor included in the above lists, the following information, if available, shall be included in the report:

1. Planned operating date.
2. Transmission or power line name.
3. The terminal points (substation name and location).
4. Number of circuits.
5. Voltage — kV.
6. Normal and emergency continuous operating ratings — MVA.
7. Length in feet or miles.
8. Estimated cost in dollars as of the year the report is filed.
9. Cities and counties involved.
10. Other comments.

## SECTION VI. UTILITY REPORT OF INFORMATION REGARDING FINANCING OF NEW ELECTRIC GENERATING AND TRANSMISSION CAPACITY

Every electric public utility shall biennially, on or before June 1 of every odd numbered year, furnish a report to the Commission of the financial information designated in Appendix A hereto; provided however, that no public utility shall be required to submit such financial information if such utility does not plan for a fifteen-year (15) period commencing with the year in which the financial information is to be filed to (1) construct within the State of California any new electric

[1]One copy to be stored in the CACD Annual Reports Section.

generating plant having in the aggregate a net capacity in excess of 50 MW, or (2) modify, alter, or add to any existing electric generating plant that results in a 50 MW, or more, net increase in the electric generating capacity of an existing plant within the State of California, or (3) construct in California any electric transmission line facilities which are designed for immediate or eventual operation at any voltage in excess of 200 kV (except for the replacement or minor relocation of existing transmission line facilities, or the placing of additional conductors, insulators or their accessories on, or replacement of, supporting structures already built).

## SECTION VII. ELECTRIC GENERATING AND RELATED TRANSMISSION FACILITIES SUBJECT TO THE WARREN-ALQUIST ENERGY RESOURCES CONSERVATION AND DEVELOPMENT ACT

If an electric public utility proposes to construct electric generating and related transmission facilities which are subject to the power plant siting jurisdiction of the CEC as set forth in Section 25500 et seq. of the Public Resources Code, it shall comply with the following procedure:

A. In accordance with Public Resources Code Section 25519(c) and Public Utilities Code Section 1001, the CEQA, and this Commission's Rules of Procedure No. 17.1 do not apply to any application filed pursuant to this section.
B. Upon acceptance of an electric utility's Notice of Intent (NOI) filing by the CEC, the utility shall mail six copies of the NOI to the Executive Director of this Commission.
C. When an electric utility files with the CEC an application for a certificate to construct (AFC) an electric generating facility pursuant to Section 25519 of the Public Resources Code and any AFC regulations of the CEC, it shall mail six copies of the AFC, including six copies of the CEC's Final Report in the NOI proceeding for the facility, to the Executive Director of this Commission.
D. No later than 30 days after acceptance for filing of the AFC referred to above in Subsection C, the utility shall file with this Commission an application for a CPCN. The application shall comply with this Commission's Rules of Practice and Procedure, specifically Rules 2 through 8, 15, and 16, and shall include the data and information set forth in Appendix B hereto. In complying with this provision, the utility may include portions of the CEC's Final Report in its NOI proceeding by attaching such portions as an appendix to its application filed with this Commission. The utility may also include portions of the AFC filed with the CEC by reference. A copy of the application shall be mailed to the CEC and to every person, corporation, organization, or public agency that has intervened in the CEC's AFC proceeding.
E. No later than 30 days after the filing of the application, the Commission staff shall review it and notify the utility in writing of any deficiencies in the information and data submitted in the application. The utility shall correct any deficiencies within 60 days thereafter, or explain in writing to the Commission staff why it is unable to do so. It shall include in any such letter an estimate of when it will be able to correct the deficiencies. Upon correction of any deficiencies in the application, any public hearings which are necessary may be held on the application while the utility's AFC application is under process

before the CEC. The Commission may issue an interim decision on the application before the issuance by the CEC of a final decision in the AFC proceeding. However, any such interim decision shall not be final and shall be subject to review after the CEC issues its final decision in the AFC proceeding as prescribed in Public Resources Code Sections 25522 and 25530.

F. No later than 30 days after issuance of a certificate by the CEC in a final decision in the utility's AFC proceeding in accordance with Public Resources Code Sections 25209, 25522, and 25530 the Commission shall issue a decision on the application for a CPCN from this Commission, unless a later date for issuance of the decision is mutually agreed to by the Commission and the applicant, or is necessitated by conditions under Paragraph G.

G. In the event that the CEC's certificate in the AFC proceedings sets forth requirements or conditions for the construction of the proposed electric generating facility which were not adequately considered in the proceeding before the Commission, and which will have a significant impact on the economic and financial feasibility of the project, or the rates of the utility, or on utility system reliability, the utility, or Commission staff, or any party, may request that the Commission hold a public hearing on such implications. Any such hearing, if granted, shall be initiated no later than 30 days after the filing of any such request. It is the intent of this Commission that a final decision shall be issued within 90 days after conclusion of the hearing, if held.

H. In the event that judicial review of the CEC's issuance of a certificate in the AFC proceeding is sought in any court, the utility shall immediately notify this Commission and include a copy of the court filing.

## SECTION VIII. ELECTRIC GENERATING FACILITIES NOT SUBJECT TO THE WARREN-ALQUIST ENERGY RESOURCES CONSERVATION AND DEVELOPMENT ACT

An electric public utility proposing to construct in this state new generation facilities in excess of 50 MW net capacity, available at the busbar or proposing to modify an existing generation facility in this state in order to increase the total generating capacity of the facility by 50 MW or more net capacity available at the busbar, shall file for a CPCN not less than 12 months prior to the date of a required decision by the Commission unless the Commission authorizes a shorter period for exceptional circumstances.

A. An application for a CPCN shall comply with this Commission's Rules of Practice and Procedure, specifically Rules 2 through 8, 15, and 16. In addition, it shall include or have attached to it the following:

1. The information and data set forth in Appendix B.
2. A statement of the reasons why and facts showing that the completion and operation of the proposed facility is necessary to promote the safety, health, comfort, and convenience of the public.
3. Safety and reliability information, including planned provisions for emergency operations and shutdowns.
4. A schedule showing the program for design, material acquisition, construction, and testing and operating dates.

5. Available site information, including maps and description, present, proposed, and ultimate development; and, as appropriate, geological, aesthetic, ecological, tsunami, seismic, water supply, population, and load center data, locations and comparative availability of alternate sites, and justification for adoption of the site selected.
6. Design information, including description of facilities, plan efficiencies, electrical connections to system, and description of control systems, including air quality control systems.
7. A Proponent's Environment Assessment (PEA) on the environmental impact of the proposed facility and its operation so as to permit compliance with the requirements of CEQA and this Commission's Rule of Practice and Procedure 17.1 and 17.3. If a PEA is filed, it may include the data described in Items 1 through 6, above.

B. No later than 30 days after the filing of the application, the Commission staff shall review it and notify the utility of any deficiencies in the information and data submitted in the application. The utility shall correct any deficiencies within 60 days thereafter or explain in writing to the Commission staff why it is unable to do so. It shall include in any such letter an estimate of when it will be able to correct the deficiencies. Upon correction of any deficiencies in the application, the commission staff shall determine whether CEQA applies, and if so, whether a Negative Declaration or an EIR has been or will be prepared, and the process required by CEQA and Commission Rule 17.1 will be followed in addition to the Commission's standard decision-making process for applications. The Commission shall issue a decision within the time limits prescribed by Government Code Section 65920 et seq. (the Permit Streamlining Act).

## SECTION IX. TRANSMISSION LINE, POWER LINE, AND SUBSTATION FACILITIES

A. Transmission Line Facilities of 200 kV and Over

An electric public utility desiring to build transmission line facilities in this state for immediate or eventual operation in excess of 200 kV shall file for a CPCN not less than 12 months prior to the date of a required decision by the Commission unless the Commission authorizes a shorter period because of exceptional circumstances

1. An application for a CPCN shall comply with this Commission's Rules of Practice and Procedure 2 through 8, 15, and 16 and shall also include the following:

   a. A detailed description of the proposed transmission facilities, including the proposed transmission line route and alternative routes, if any; proposed transmission equipment; such as tower design and appearance, heights, conductor sizes, voltages, capacities, substations, switchyards, etc.; and a proposed schedule for certification, construction, and commencement of operation of the facilities.

b. A map of suitable scale of the proposed routing showing details of the right-of-way in the vicinity of settled areas, parks, recreational areas, scenic areas, and existing electrical transmission lines within one mile of the proposed route.
c. A statement of facts and reasons why the public convenience and necessity require the construction and operation of the proposed transmission facilities.
d. A detailed statement of the estimated cost of the proposed facilities.
e. Reasons for adoption of the route selected, including comparison with alternative routes, including the advantages and disadvantages of each.
f. A schedule showing the program of right-of-way acquisition and construction.
g. A listing of the governmental agencies with which proposed route reviews have been undertaken, including a written agency response to applicant's written request for a brief position statement by that agency. (Such listing shall include The Native American Heritage Commission, which shall constitute notice on California Indian Reservation Tribal governments.) In the absence of a written agency position statement, the utility may submit a statement of its understanding of the position of such agencies.
h. A PEA or equivalent information on the environmental impact of the project in accordance with the provisions of CEQA and this Commission's Rule of Practice and Procedure, Rules 17.1 and 17.3. If a PEA is filed, it may include the data described in Items a through g above.

2. No later than 30 days after the filing of the application the Commission staff shall review it and notify the utility in writing of any deficiencies in the information and data submitted in the application. The utility shall correct any deficiencies within 60 days thereafter, or explain in writing to the Commission staff why it is unable to do so. It shall include in any such letter an estimate of when it will be able to correct the deficiencies. Upon correction of any deficiencies in the application, the Commission staff shall determine whether CEQA applies, and if so, whether a Negative Declaration or an EIR has been or will be prepared, and the process required by CEQA and Commission Rules of Practice and Procedure 17.1 will be followed in addition to the Commission's standard decision-making process for applications. The Commission shall issue a decision within the time limits prescribed by Government Code Sections 65920 et seq. (the Permit Streamlining Act).

B. Power Line Facilities Between 50 kV and 200 kV and Substations Designed to Operate Over 50 kV Which Are Not Included in Subsection A of this Section.

Unless exempt as specified in Section III herein, or already included in an application before this Commission for a CPCN, an electric public utility desiring to build power line or substation facilities in this state for immediate or eventual operation between 50 kV and 200 kV or substations for immediate or

eventual operation over 50 kV, shall file for a permit to construct not less than nine (9) months prior to the date of a required decision by the Commission unless the Commission authorizes a shorter period because of exceptional circumstances. An application for a permit to construct shall comply with the Commission's Rules of Practice and Procedure No. 2 through 8 and 15 through 17.

1. The application for a permit to construct shall also include the following:

   a. A description of the proposed power line or substation facilities, including the proposed power line route; proposed power line equipment, such as tower design and appearance, heights, conductor sizes, voltages, capacities, substations, switchyards, etc., and a proposed schedule for authorization, construction, and commencement of operation of the facilities.
   b. A map of the proposed power line routing or substation location showing populated areas, parks, recreational areas, scenic areas, and existing electrical transmission or power lines within 300 feet of the proposed route or substation.
   c. Reasons for adoption of the power line route or substation location selected, including comparison with alternative routes or locations, including the advantages and disadvantages of each.
   d. A listing of the governmental agencies with which proposed power line route or substation location reviews have been undertaken, including a written agency response to applicant's written request for a brief position statement by that agency. (Such listing shall include The Native American Heritage Commission, which shall constitute notice on California Indian Reservation Tribal governments.) In the absence of a written agency position statement, the utility may submit a statement of its understanding of the position of such agencies.
   e. A PEA or equivalent information on the environmental impact of the project in accordance with the provisions of CEQA and this Commission's Rules of Practice and Procedure 17.1 and 17.3. If a PEA is filed, it may include the data described in Items a through d above.
   f. The above information requirements notwithstanding, an application for a permit to construct need not include either a detailed analysis of purpose and necessity, a detailed estimate of cost and economic analysis, a detailed schedule, or a detailed description of construction methods beyond that required for CEQA compliance.

2. No later than 30 days after the filing of the application for a permit to construct, the CACD shall review it and notify the utility in writing of any deficiencies in the information and data submitted in the application. Thereafter, within 30 days, the utility shall correct any deficiencies or explain in writing to the CACD when it will be able to correct the deficiencies or why it is unable to do so. Upon correction of any deficiencies in the application, the CACD shall determine whether CEQA applies, and if so, whether a Negative Declaration or an EIR must be prepared, and the process required by CEQA and the Commission's Rules of Practice and Procedure 17.1 will be followed.

3. If the Commission finds that a project properly qualifies for an exemption from CEQA, the Commission will grant the permit to construct.
4. If the CACD determines, after completing its initial study, that the project would not have a significant adverse impact on the environment, the CACD will prepare a Negative Declaration. If the initial study identifies potential significant effects, but the utility revises its proposal to avoid those effects, then the Commission could adopt a Mitigated Negative Declaration. In either case, the Commission will grant the permit to construct.
5. If the initial study identifies potentially significant environmental effects, the CACD will prepare an EIR. The severity and nature of the effects, the feasibility of mitigation, the existence and feasibility of alternatives to the project, and the benefits of the project would all be considered by the Commission in deciding whether to grant or deny the permit to construct. The Commission intends to issue a permit to construct or disapprove the project within eight months of accepting the application as complete. This time limit may be extended if necessary to comply with the requirements of CEQA, but may not exceed the time limits specified in CEQA (for the preparation of an EIR).
6. If no protests or requests for hearing are received (pursuant to Section XII), a CACD Examiner shall be assigned and the Commission shall issue an ex parte decision on the application within the time limits prescribed by Government Code Section 65920 et seq. (the Permit Streamlining Act). If a protest or request for hearing is received, the matter shall be assigned to an administrative law judge, and the Commission shall issue a decision on the application within the time limits prescribed by the Permit Streamlining Act.

## SECTION X. POTENTIAL EXPOSURE TO ELECTRIC AND MAGNETIC FIELDS (EMF)

A. Application for CPCN or Permit to Construct

Applications for a CPCN or Permit to Construct shall describe the measures taken or proposed by the utility to reduce the potential exposure to electric and magnetic fields generated by the proposed facilities, in compliance with Commission order. This information may be included in the PEA required by Rules of Practice and Procedure 17.1.

B. EMF Technical Assistance

The EMF education program administered by the California Department of Health Services for regulated electric utility facilities, established in Investigation (I.) 91-01-012, is available to provide independent information about EMF to local government, other state agencies, and the public to assist in their consideration of the potential impacts of facilities proposed by electric utilities hereunder. Local government and the public should first contact their public health department.

## SECTION XI. NOTICE

A. Applications for a CPCN or Permit to Construct

Notice of the filing of each application for a CPCN for facilities subject to the provisions of Sections VII, VIII, and IX.A of this General Order and of the filing of each application for a permit to construct for facilities subject to Section IX.B of this General Order, shall be given by the electric public utility within ten days of filing the application:

1. By direct mail to:

   a. The planning commission and the legislative body for each county or city in which the proposed facility would be located, the CEC, the State Department of Transportation and its Division of Aeronautics, the Secretary of the Resources Agency, the Department of Fish and Game, the Department of Health Services, the State Water Resources Control Board, the Air Resources Board, and other interested parties having requested such notification. The utility shall also give notice to the following agencies and subdivisions in whose jurisdiction the proposed facility would be located: the Air Pollution Control District, the California Regional Water Quality Control Board, the State Department of Transportation's District Office, and any other State or Federal agency which would have jurisdiction over the proposed construction; and
   b. All owners of land on which the proposed facility would be located and owners of property within 300 feet of the right-of-way as determined by the most recent local assessor's parcel roll available to the utility at the time notice is sent; and

2. By advertisement, not less than once a week, two weeks successively, in a newspaper or newspapers of general circulation in the county or counties in which the proposed facilities will be located, the first publication to be not later than ten days after filing of the application; and

3. By posting a notice on-site and off-site where the project would be located.

A copy of the notice shall be delivered to the CPUC Public Advisor and the CACD on the same day it is mailed. A declaration of mailing and posting as required by this subsection shall be filed with the Commission within five (5) days of completion.

Three copies of each application for electric generation facilities shall be served on the Executive Director of the Energy Commission. If applicable, three copies shall be served on the Executive Director of the Coastal Commission. If applicable, three copies shall be served on the Executive Director of the S.F. Bay Conservation and Development Commission. Upon request by any public agency, the applicant shall provide at least one copy of its application to said public agency. A copy of the application shall be kept available for public inspection at the utility's office(s) in the county or counties in which the proposed facility would be located.

B. Power Line Facilities Between 50 kV and 200 kV and Substations Designed to Operate Over 50 kV Which Are Not Included in Subsection A of this Section

The utility shall give notice of the construction of any power line facilities or substations between 50 kV and 200 kV deemed exempt pursuant to Section III herein, not less than 30 days before the date when construction is intended to begin by:

1. Direct mail to the planning director for each county or city in which the proposed facility would be located and the Executive Director of the Energy Commission; and
2. Advertisement, not less than once a week, two weeks successively, in a newspaper or newspapers of general circulation in the county or counties in which the proposed facility would be located, the first publication to be not later than 45 days before the date when construction is intended to begin; and
3. By posting a notice on-site and off-site where the project would be located.
4. Filing an informational advice letter with the CACD in accordance with General Order 96-A, which includes a copy and distribution list of the notices required by items 1-3 herein. On the same day, a copy of the advice letter must be delivered to the CPUC Public Advisor.

C. Contents of Notices

Each utility shall consult with the CACD and CPUC Public Advisor to develop and approve a standard for the notice required by subsections A and B, which shall contain, at a minimum, the following information:

1. The Application Number assigned by the CPUC or the Advice Letter Number assigned by the utility; and
2. A concise description of the proposed construction and facilities, its purpose and its location in terms clearly understandable to the average reader; and
3. A summary of the measures taken or proposed by the utility to reduce the potential exposure to electric and magnetic fields generated by the proposed facilities, in compliance with Commission order; and
4. Instructions on obtaining or reviewing a copy of the application, including the Proponent's Environmental Assessment or available equivalent, from the utility; and
5. The applicable procedure for protesting the application or advice letter, as defined in Sections XII and XIII, including the grounds for protest, when the protest period expires, delivery addresses for the CPUC Docket Office, CACD, and the applicant and how to contact the CPUC Public Advisor for assistance in filing a protest.

## SECTION XII. PROTEST AND REQUEST FOR PUBLIC HEARINGS

Pursuant to the Commission Rules of Practice and Procedure, Article 2.5, those to whom notice has been sent under Section XI.A hereof and any other person

entitled under the Commission's Rules of Procedure to participate in a proceeding for a CPCN or a permit to construct may, within 30 days after the notice was mailed or published, object to the granting in whole or in part of the authority sought by the utility and request that the Commission hold hearings on the application. Any such protest shall be filed in accordance with Article 2.5. If the Commission, as a result of its preliminary investigation after such requests, determines that public hearings should be held, notice shall be sent to each person who is entitled to notice or who has requested a hearing.

The Commission's Public Advisor shall provide information to assist the public in submitting such protests.

## SECTION XIII. PROTEST TO REQUIRE THE UTILITY TO FILE FOR PERMIT TO CONSTRUCT

Those to whom notice has been given under Section XI.B hereof and any other person or entity entitled to participate in a proceeding for a permit to construct may, within 20 days after the notice was mailed and published, contest any intended construction for which exemption is claimed by the utility from the requirements of Section III.B if such persons or entities have valid reason to believe that any of the conditions described in Section III.B.2 exist or the utility has incorrectly applied an exemption as defined in Section III herein. The protest shall be filed with the CACD, specifying the relevant utility advice letter number, in accordance with General Order 96-A, Section III.H. On the same date a protest is filed with the Commission, the protestant shall serve a copy on the subject utility by mail. The utility shall respond within five business days of receipt and serve copies of its response on each protestant and the CACD. Construction shall not commence until the Executive Director has issued an Executive Resolution.

Within 30 days after the utility has submitted its response, the Executive Director, after consulting with CACD, shall issue an Executive Resolution on whether: the utility is to file an application for a permit to construct, or the protest is dismissed for failure to state a valid reason. Also, the Executive Director shall state the reasons for granting or denying the protest and provide a copy of each Executive Resolution to the Commission's Public Advisor.

The Commission's Public Advisor shall provide information to assist the public in submitting such protests.

## SECTION XIV. COMPLAINTS AND PREEMPTION OF LOCAL AUTHORITY

A. Complaints may be filed with the Commission for resolution of any alleged violations of this General Order pursuant to the Commission's Rules of Practice and Procedure 9 through 13.1. A complaint which does not allege that the matter has first been brought to the staff for informal resolution may be referred to the staff to attempt to resolve the matter informally (Rules of Practice and Procedure No. 10).

B. This General Order clarifies that local jurisdictions acting pursuant to local authority are preempted from regulating electric power line projects, distribution lines, substations, or electric facilities constructed by public utilities subject

to the Commission's jurisdiction. However, in locating such projects, the public utilities shall consult with local agencies regarding land use matters. In instances where the public utilities and local agencies are unable to resolve their differences, the Commission shall set a hearing no later than 30 days after the utility or local agency has notified the Commission of the inability to reach agreement on land use matters.

C. Public agencies and other interested parties may contest the construction of under-50-kV distribution lines and electric facilities by filing a complaint with the Commission pursuant to the Commission's Rules of Practice and Procedure 9 through 13.1.

## SECTION XV. STATE AGENCY REVIEW OF ELECTRIC GENERATING AND RELATED TRANSMISSION FACILITIES NOT SUBJECT TO THE WARREN-ALQUIST ENERGY RESOURCES CONSERVATION AND DEVELOPMENT ACT

Nothing in this order shall be construed to preempt or otherwise limit the jurisdiction of state agencies other than this Commission to exercise the full range of their jurisdiction under state or federal law over facilities subject to this order.

A coastal development permit shall be obtained from the Coastal Commission for development of facilities subject to this order in the coastal zone.

## SECTION IXV. CEQA COMPLIANCE

Construction of facilities for which a CPCN or permit to construct is required pursuant to this General Order shall not commence without either a finding that it can be seen with certainty that there is no possibility that the construction of those facilities may have a significant effect on the environment or that the project is otherwise exempt from CEQA, or the adoption of a final EIR or Negative Declaration. Where authority must be granted for a project by this Commission, applicant shall comply with Rule 17.1 of our Rules of Practice and Procedure:

Special Procedure for Implementation of the CEQA of 1970 (Preparation of EIRs). This latter requirement does not apply to applications covering generating and related transmission facilities for which a certificate authorizing construction of the facilities has been or will also be issued by the CEC. For all issues relating to the siting, design, and construction of electric generating plant or transmission lines as defined in Sections VIII and IX.A herein or electric power lines or substations as defined in Section IX.B herein, the Commission will be the Lead Agency under CEQA, unless a different designation has been negotiated between the Commission and another state agency consistent with CEQA Guidelines § 15051(d).

PUBLIC UTILITIES COMMISSION
OF THE STATE OF CALIFORNIA

By WESLEY M. FRANKLIN
Acting
Executive Director

August 11, 1995

INFORMATION TO BE INCLUDED IN THE UTILITY
REPORT REGARDING FINANCING OF NEW ELECTRIC
GENERATING CAPACITY AND TRANSMISSION LINE PROJECTS

I. A statement, detailing the economic assumptions used to project all construction expenditures and annual operating costs, including the methodology, assumptions, and sources and authorities associated therewith for a fifteen-year (15) period commencing with the year in which the report is filed, for each of the following:

A. Operating Revenues
   1. Electric
   2. Gas, if applicable
   3. Miscellaneous
   4. Total

B. Operating Expenses
   1. Cost of Electric Energy
   2. Cost of Gas sold, if applicable
   3. Transmission and Distribution
   4. Maintenance
   5. Depreciation
   6. Taxes on Income
   7. Property and Other Taxes
   8. Other
   9. Total

C. Operating Income

D. Other Income and Deductions
   1. Allowance for Equity Funds Used During Construction
   2. Gains on Bonds Purchased for Sinking Fund
   3. Subsidiary Income
   4. Other — Net
   5. Total

E. Income Before Interest Charges

F. Interest Charges
   1. Short-term
   2. Long-term
   3. Less Allowance for Borrowed Funds Used During Construction
   4. Total

G. Net Income

H. Preferred Dividend Requirement

I. Earnings Available for Common Stock

J. Average Number of Shares of Common Stock Outstanding (Thousands)

K. Earnings Per Share of Common Stock

L. Dividends Per Share of Common Stock
   1. Declared Basis
   2. Paid Basis

II. An estimate for each of the following capital requirements items for each year for a fifteen-year period commencing with the year in which the report is filed:

A. Construction expenditures by year broken down by:
   1. Generation projects over $100 million, including those, if any, located out-of-state
      a. Busbar, including switchyard, expenditures
   2. All other generation projects, including those, if any, located out-of-state
      a. Busbar, including switchyard, expenditures
      b. Associated transmission expenditures
   3. Non-generation transmission expenditures
   4. Distribution expenditures
   5. Other expenditures

Breakdown of each item in 1 above into the following elements:

| Directs | (M&S + Labor) | Indirects | AFDC | Total |
|---|---|---|---|---|
| | $ | $ | $ | $ |

B. Bond retirements, sinking fund retirements, etc.

C. Investments in subsidiary companies

III. An estimate for each of the following items for each year for a fifteen-year period commencing with the year in which the report is filed:

A. Capital balances as of January 1

B. Capital ratios as of January 1

C. Imbedded costs of debt and preferred stock

D. Debt, preferred and common stock issues:
   1. Amount ($ and shares)
   2. Yield and cost of each issue

E. Income tax information
   1. Tax operating expense
   2. State tax depreciation
   3. Federal tax depreciation
   4. ITC or other credits available and used

F. Short-term debt balances

G. Annual equivalent rate used to compute the Allowance for Funds Used During Construction

IV. Data showing the estimated Results of Operation for electric utility operations for each year for a fifteen-year (15) period, commencing with the year in which the report is filed, in the formal set forth below:

A. Kilowatt-hour Sales
   1. Total
   2. Residential

B. Average Price (¢/kWh)

C. Number of Residential Customers

D. Gross Revenue – Total
   1. Base Rates
   2. ECAC Rates
   3. ECAC Rate Increases
   4. Non-ECAC Rate Increases
   5. Misc. Operating Revenues

E. Operating Expenses – Total
   1. Production – Fuel and Purchased Power – Total
      a. Oil
      b. Gas
      c. Nuclear
      d. Coal
      e. Geothermal
      f. Combined Cycle
      g. Purchased Power
      h. Other (explain)
   2. Production O&M (non-fuel)

   b. Federal Income
   c. Ad Valorem
   d. Other

9. Other (explain)

F. Net Operating Income

G. Rate Base (Weighted Average)

H. Rate of Return

I. Net-to-Gross Multiplier

V. For those electric utilities which also operate other public utility departments, such as natural gas, steam, and water service, an estimate of the following financial information by department for each year for a fifteen-year (15) period, commencing with the year in which the report is filed. Any separate utility operation that contributes to less than one (1) percent of the utility's total gross operating revenues may be excluded.

   A. Gross Revenue
   B. Operating Expenses
   C. Net Operating Income
   D. Rate Base (Weighted Average)
   E. Rate of Return

VI. The following variable will be provided by the staff of the Public Utilities Commission for use by the utility in generating certain financial information required by Appendix A:

   A. Return on Common Equity
   B. Dividend Yield
   C. Market to Book Ratio
   D. Cost of Long-Term Debt (including incremental cost)
   E. Cost of Preferred Stock (including incremental cost)
   F. Common Stock Price
   G. Annual equivalent rate used to compute the Allowance for Funds Used During Construction

These variable will be furnished 60 days before the annual utility report is due and will be developed by the staff based on its independent expertise.

Appendix B - General Order No. 131-D

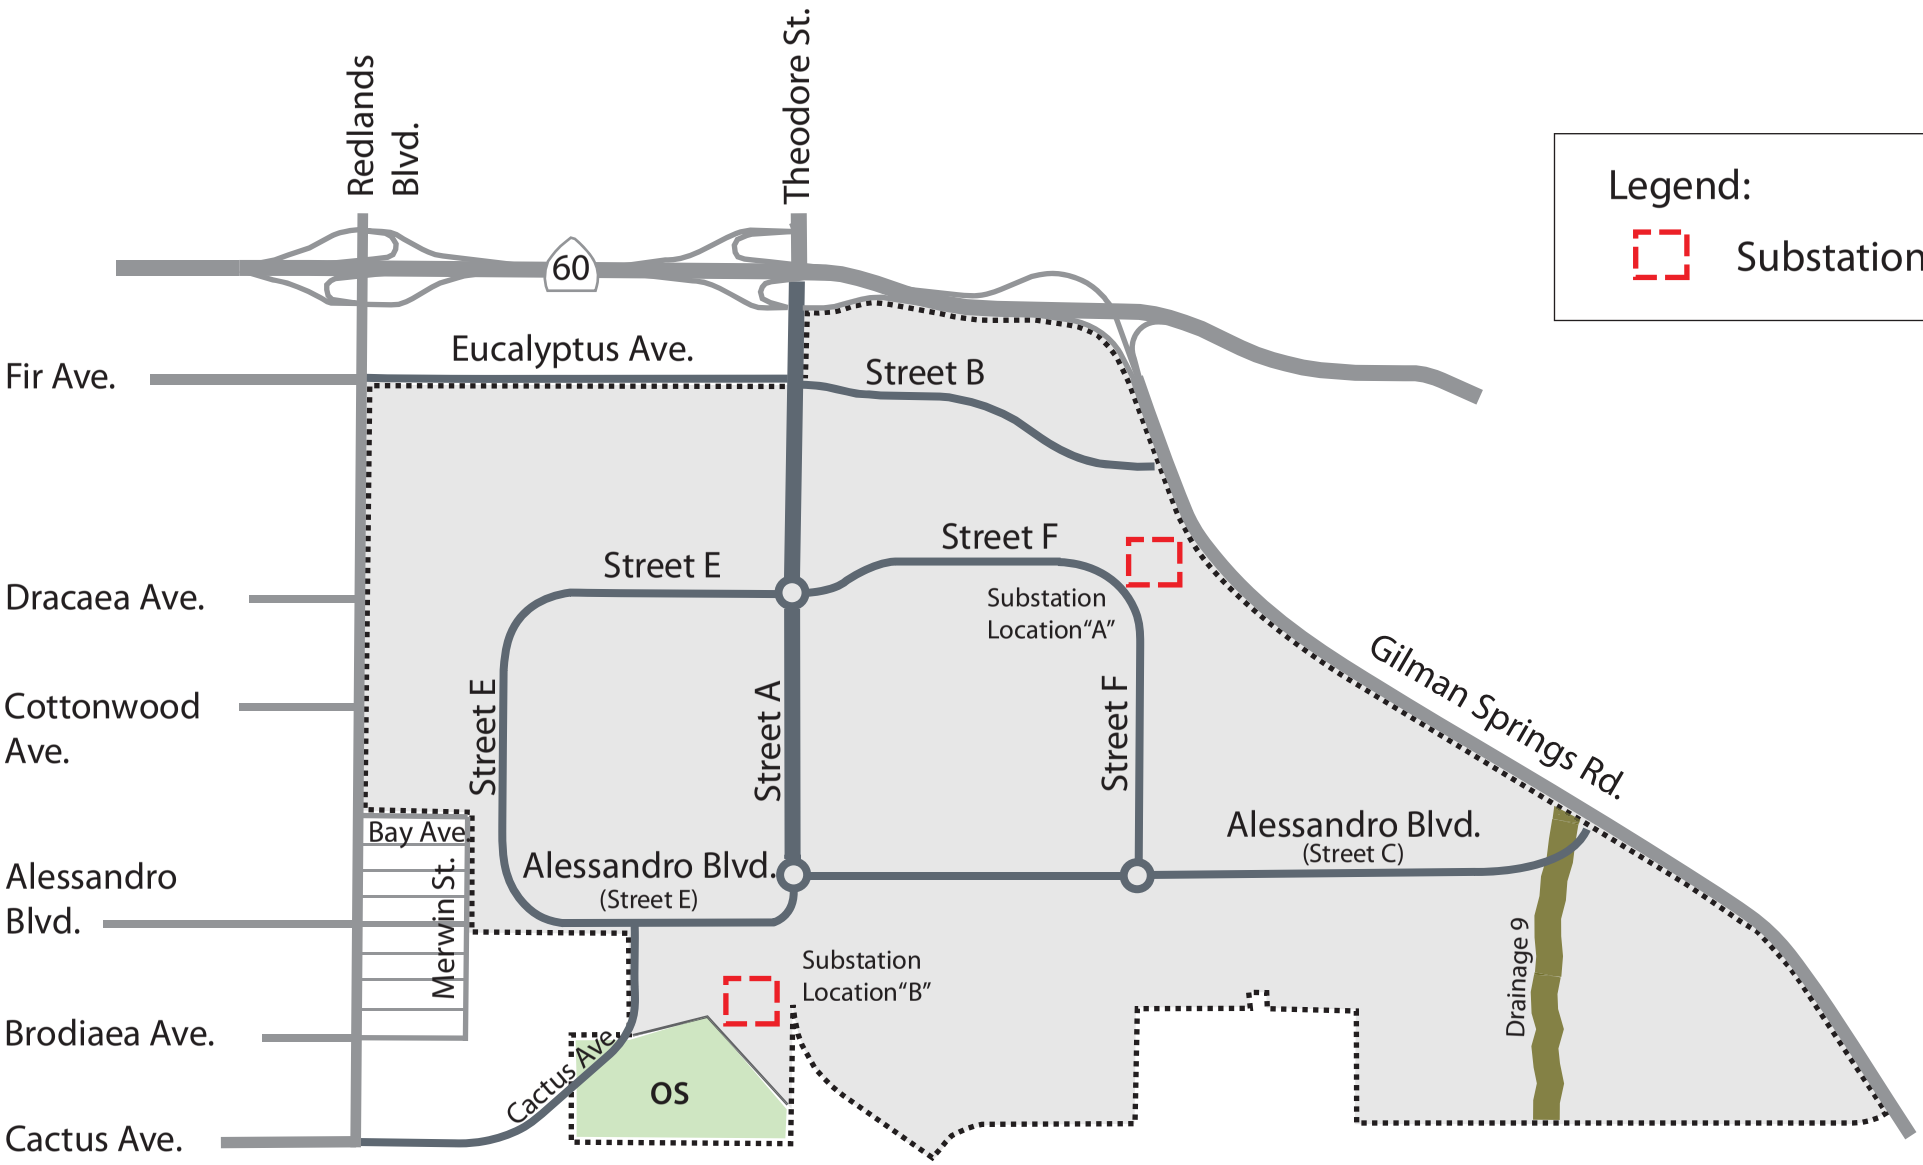
## INFORMATION TO BE INCLUDED IN AN APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR ELECTRIC GENERATING FACILITIES

I. A detailed description of the proposed generating facility and related facilities and the manner in which the same will be constructed, including the type, size, fuel capabilities, and capacity of the generating facilities.

II. A map of suitable scale showing the location of the proposed power plant and related facilities, and a description of the location of the proposed power plant and related facilities.

III. A listing of federal, state, regional, county, district, or municipal agencies from which approvals either have been obtained or will be required covering various aspects of the proposed facility, including any franchises and health and safety permits and the planned schedule for obtaining those approvals not yet received.

IV. Load and resource data setting forth recorded and estimated loads (energy and demands), available capacity and energy, and margins for 5 years actual and 20 years estimated on the same basis, as reported to the CEC including a statement of the compatibility of the proposed generating facility with the most recent biennial report issued by the CEC pursuant to Section 25309 of the Public Resources Code.



V. Existing rated and effective operating capacity of generating plants and the planned additions for a ten-year (10) period.

VI. Estimated cost information, including plant costs by accounts, all expenses by categories, including fuel costs, plant service life, capacity factor, total generating cost per kWh (1) at plant, and (2) including related transmission, levelized for the economic life of the plant, year by year for the 12 years commencing with the date of commercial operation of the plant, and comparative costs of other alternatives considered on a levelized or year-by-year basis depending upon availability of data. Estimated capital and operating costs of power to be generated by the proposed plant for all competitive fuels which may be lawfully used in the proposed plant. When substantially the same data are prepared for utility planning purposes they may be used to satisfy all or any portion of these requirements.

VII. For any nuclear plant a statement indicating that the requisite safety and other license approvals have been obtained or will be applied for.

VIII. Such additional information and data as may be necessary for a full understanding and evaluation of the proposal.

**SOLAR POWER OPTIONS**

In today's world, a discussion of the merits and actual capabilities of using photovoltaic (PV) systems to offset electric power requirements is warranted. In some smaller venues such as residential use, PV arrays can produce sufficient power during peak generating conditions to totally offset power required from the utility company. As long as the utility company can sell additional generated power to other users, this can create a situation where no payment to the electric utility provider is required.

To understand how that would work or benefit the end users within the World Logistics Center planning area, we must consider (a) the generating characteristics of a PV array; (b) how that relates to actual power consumption and power demands; and (c) what ability exists to sell excess power capacity back to MVU during periods of excess production.

**PV Generating Characteristics & Power Consumption and Demand**

PV arrays can produce power for approximately 12 hours each day. Actual peak production, however, only occurs for approximately two hours between 1:00pm and 3:00pm. During the other 10 hours power generation is ramping up and tapering down as the sun rises and falls in the daylight sky. (See Figure 1.) This characteristic cannot be altered significantly and is important as it relates to normal electrical operation in the building and the utility company's service territory.

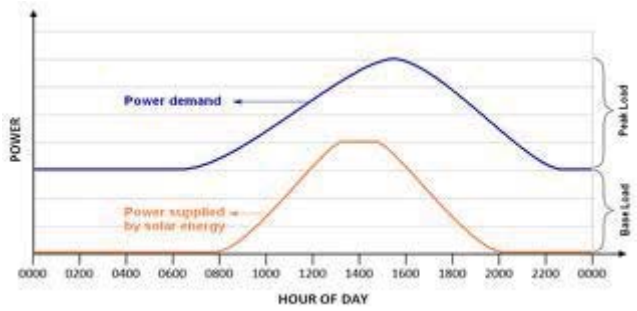

Figure 1 also shows a typical utility demand cycle superimposed over the normal PV generation cycle. The comparison shows that the normal peak electrical requirement is not coincident with the PV array's peak output capabilities.

**Figure 1: Typical power production and usage curves not necessarily WLC specifically related to.**

The total planning area will have approximately 40,600,000 square feet of rooftop. Of that total it is anticipated that approximately 55% or 22,330,000 square feet can be available for PV installation. Depending on the type of PV cells that are used, 201 MW/AC of peak output could be produced during the optimum production period. It is anticipated that the entire project could have a peak electrical demand requirement of 68 MW. The available rooftop space could, therefore meet the electrical cycle demand under optimum conditions.

**Utility Buy/Sell Agreements**

The raw numbers presented in the previous section may look appealing, but several technical issues prevent full utilization of a PV system within the planning area. To reach those optimum numbers, it is

necessary to be able to get excess production to other customers who would be willing to purchase it, and that requires using the MVU distribution grid. To clarify this statement, PV cells act much like the batteries in a flashlight. The electrical potential is present but no power flows to the light bulb until the switch is turned on. Electric companies do not provide credit for electrical potential, but only on power consumed by a paying customer.

Additionally, it is proposed that all customers of the planning area include their own solar arrays. Since each building will be able to generate more power than they could use, they would, therefore, not be in the market for any additional capacity during peak production periods. Simply stated, there will be no market on the MVU system through their substation to utilize the excess power. The solar arrays would sit idle beyond the immediate needs of each specific building and be unused investment.

MVU has determined that twelve new 12kV distribution circuits will be needed to meet the peak electrical demand. The excess generation capacity of the PV arrays would require at least 8 additional circuits or a total of 20 to get that power output back into the electrical distribution grid. That single issue alone makes full utilization of the PV potential economically unfeasible for both the utility and the project developer.

MVU is prohibited by their operating agreement with Southern California Edison (SCE) from producing excess power and transmitting it into the SCE transmission grid. Changing that agreement would be a long and complicated issue involving the two utilities, the California Independent System Operator, the California Public Utilities Commission, and possibly others.

In conclusion when all project occupants have PV capacity to meet their core electric power needs where does surplus PV generation go when constrained by the need for additional distribution infrastructure support and or prohibited beyond the MVU system? Accordingly PV capability beyond the needs of the building occupant does not seem practical or beneficial.

**Actual Benefits of the PV Proposal**

Even though the full capabilities of the total project cannot be achieved, there are benefits that could and should be implemented:

- To the extent that the PV arrays can meet the electrical demands during optimum production times, the building's user will not need to utilize utility company provided power. This may not yield an actual financial savings, but would reduce the need to utilize power from non-renewable sources.
- Coordinating the design of the solar arrays with the actual buildings electrical demands would reduce the size of the solar field and rooftop space required and would eliminate construction of superfluous arrays.

Use of remainder available rooftop space for other uses such as solar water heating, solar assisted space heating/cooling could also be environmentally beneficial and might even further reduce project peak electric demands.

**SOLAR POWER OPTIONS**

In today's world, a discussion of the merits and actual capabilities of using photovoltaic (PV) systems to offset electric power requirements is warranted. In some smaller venues such as residential use, PV arrays can produce sufficient power during peak generating conditions to totally offset power required from the utility company. As long as the utility company can sell additional generated power to other users, this can create a situation where no payment to the electric utility provider is required.

To understand how that would work or benefit the end users within the World Logistics Center planning area, we must consider (a) the generating characteristics of a PV array; (b) how that relates to actual power consumption and power demands; and (c) what ability exists to sell excess power capacity back to MVU during periods of excess production.

**PV Generating Characteristics & Power Consumption and Demand**

PV arrays can produce power for approximately 12 hours each day. Actual peak production, however, only occurs for approximately two hours between 1:00pm and 3:00pm. During the other 10 hours power generation is ramping up and tapering down as the sun rises and falls in the daylight sky. (See Figure 1.) This characteristic cannot be altered significantly and is important as it relates to normal electrical operation in the building and the utility company's service territory.

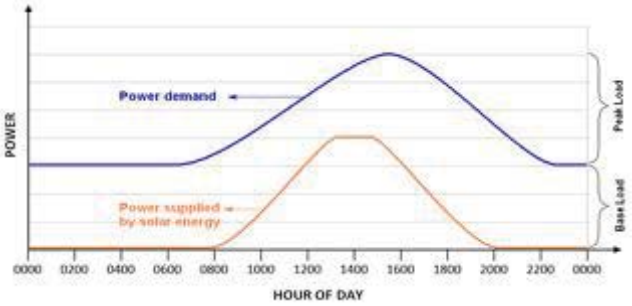

Figure 1 also shows a typical utility demand cycle superimposed over the normal PV generation cycle. The comparison shows that the normal peak electrical requirement is not coincident with the PV array's peak output capabilities.

**Figure 1: Typical power production and usage curves not necessarily WLC specifically related to.**

The total planning area will have approximately 40,600,000 square feet of rooftop. Of that total it is anticipated that approximately 34% or 13,641,600 square feet can be available for PV installation. Depending on the type of PV cells that are used, 68.2 megawatts (AC) of peak output could be produced during the optimum production period. It is anticipated that the entire project could have a peak electrical demand requirement of 68 MW (AC). The available rooftop space could, therefore meet the electrical cycle demand under optimum conditions.

**Utility Buy/Sell Agreements**

The raw numbers presented in the previous section may look appealing, but several technical issues prevent full utilization of a PV system within the planning area. To reach those optimum numbers, it is

necessary to be able to get excess production to other customers who would be willing to purchase it, and that requires using the MVU distribution grid. To clarify this statement, PV cells act much like the batteries in a flashlight. The electrical potential is present but no power flows to the light bulb until the switch is turned on. Electric companies do not provide credit for electrical potential, but only on power consumed by a paying customer.

Additionally, it is proposed that all customers of the planning area include their own solar arrays. Since each building will be able to generate more power than they could use, they would, therefore, not be in the market for any additional capacity during peak production periods. Simply stated, there will be no market on the MVU system through their substation to utilize the excess power. The solar arrays would sit idle beyond the immediate needs of each specific building and be unused investment.

MVU has determined that twelve new 12kV distribution circuits will be needed to meet the peak electrical demand. The excess generation capacity of the PV arrays would require at least 8 additional circuits or a total of 20 to get that power output back into the electrical distribution grid. That single issue alone makes full utilization of the PV potential economically unfeasible for both the utility and the project developer.

MVU is prohibited by their operating agreement with Southern California Edison (SCE) from producing excess power and transmitting it into the SCE transmission grid. Changing that agreement would be a long and complicated issue involving the two utilities, the California Independent System Operator, the California Public Utilities Commission, and possibly others.

In conclusion when all project occupants have PV capacity to meet their core electric power needs where does surplus PV generation go when constrained by the need for additional distribution infrastructure support and or prohibited beyond the MVU system? Accordingly PV capability beyond the needs of the building occupant does not seem practical or beneficial.

**Actual Benefits of the PV Proposal**

Even though the full capabilities of the total project cannot be achieved, there are benefits that could and should be implemented:

- To the extent that the PV arrays can meet the electrical demands during optimum production times, the building's user will not need to utilize utility company provided power. This may not yield an actual financial savings, but would reduce the need to utilize power from non-renewable sources.
- Coordinating the design of the solar arrays with the actual buildings electrical demands would reduce the size of the solar field and rooftop space required and would eliminate construction of superfluous arrays.

Use of remainder available rooftop space for other uses such as solar water heating, solar assisted space heating/cooling could also be environmentally beneficial and might even further reduce project peak electric demands.

# World Logistics Center Specific Plan Sanitary Sewer Analysis

PREPARED FOR: Highland Fairview

PREPARED BY: CH2M HILL

DATE: September 2014

## Summary of Modifications

Modifications to the Sanitary Sewer Analysis have been made to reflect changes in the Project Description. These modifications are reflected in the memo and shown in Exhibits 2 through 6.

## Introduction

The proposed World Logistics Center Specific Plan (WLC) is a master plan for the development of logistics warehouse distribution facilities on approximately 2,610 acres of land in the Rancho Belago area of eastern Moreno Valley. The Specific Plan proposes the development of 40.4 million square feet of high-cube logistics facilities on 2,382.8 acres, 200,000 square feet of light logistics facilities on 37.1 acres, an in-project fueling station, 115.8 acres of street right-of-way and 74.3 acres of permanent open space.

The Specific Plan area is situated southerly of State Route 60, generally between Redlands Boulevard and Gilman Springs Road (the easterly City limit). The Specific Plan extends to, but does not include, the San Jacinto Wildlife Area (SJWA). The General Plan Amendment and Zone Change which accompany the Specific Plan includes a portion of the SJWA property in order to designate that land for open space use.

The World Logistics Center is located within the wastewater service area of Eastern Municipal Water District (EMWD). The purpose of this technical memorandum is to identify sewer system requirements for the WLC.

## Moreno Valley Sewer System

Eastern Municipal Water District (EMWD) and the Edgemont Community Services District (ECSD) provide wastewater (sewer) services in the City of Moreno Valley. EMWD provides wastewater treatment, collection, and disposal service to most of the City while ECSD provides sewer service to a small area in the southwestern portion of the City. Wastewater generated within the WLC area is treated at EMWD's Moreno Valley Regional Water Reclamation Facility (MVRWRF). The MVRWRF facility is located east of Perris Boulevard, just south of Mariposa Avenue. The MVRWRF treats domestic, commercial, and industrial wastewater, and currently accepts an average daily flow of approximately 11.21 million gallons per day (mgd), with an existing capacity of approximately 16 mgd. The existing development on the site (seven residences and associated farming facilities) is served by private septic tank systems. The area adjacent to the project is currently served by a 15-inch

sewer pipeline located within Redlands Boulevard along the western perimeter of the project and an 8- to 15-inch sewer located within Eucalyptus Avenue along the northern perimeter of the project.

# Wastewater Generation Factors

Estimated wastewater flows from the WLC project are based on a factor of water use equivalent to 0.01 gallons per day (gpd)/square foot (sqft). This factor was determined based on a water demand analysis and benchmarking study conducted to determine water generation factors for similar facilities as outlined in the Technical Memorandum entitled *World Logistics Center Water Demands and Waste Water Generation for Buildings* dated September 10, 2013. This study addresses the overall project demands and uses wastewater generation factors which are lower than EMWD's rates used to cover the broad spectrum of light industrial uses. Therefore a facility sizing factor of 2.0 times was applied to the 0.01 gpd/sqft base wastewater rate resulting in a wastewater generation factor of 0.02 gpd/sqft. Based on a maximum building area of 40.6 million square feet, the estimated wastewater generated from the WLC project is 812,000 gpd. An additional 5,100 gpd of flow was added to account for wastewater generated by the in-project fueling station. Thus, the total estimated wastewater generated from the project is 817,100 gpd.

# Analysis Criteria

## Assumptions

The analysis of the sanitary sewer system for the World Logistics Center (WLC) was performed using the InfoSewer model provided by the Eastern Municipal Water District (EMWD). Two scenarios were utilized from the EMWD model:

- Existing piping with 2012 dry weather loading
- Buildout piping with buildout dry weather loading

Sanitary sewer piping and pump station components were added to each model scenario for the WLC project area. WLC project area loading was applied at 0.02 gpd/sqft. For parcels 2, 3 and 4 adjacent to Skechers, 0.02 gpd/sqft, 0.176 gpd/sqft and 0.144 gpd/sqft were used respectively. The total average day loading for the project area was 868,000 gpd which included 40,600,000 sqft for the WLC site, the in-project fueling station and 2,545,000 sqft for the Skechers building and adjacent parcels.

A dry weather diurnal curve was applied to the WLC project area with a peaking factor of 2.8. Wet weather loading components (infiltration and inflow) were not fully implemented in the District model and were not considered in the 2008 EMWCD Master Plan. Based on discussions with the District, wet weather analysis was not included as part of the WLC sanitary sewer analysis.

## Design Criteria

The general planning standards used in the WLC sanitary sewer analysis are as follows. These were taken from the 2008 EMWD Master Plan document.

- Manning's "n" = 0.015.
- Minimum scouring velocity = 2 fps

- Maximum flow velocity = 10 fps for gravity sewers
- Minimum gravity sewer pipe size is 8-inch
- Maximum flow-depth-to-diameter ratio (d/D) as follows:
  - 8- to 12-inch pipelines is 50 percent
  - 15-inch and larger pipelines is 75 percent
- Minimum cover of sewer pipes is 7.5 feet
- Maximum cover of sewer pipes is 20 feet
- The minimum slope as shown in **Exhibit 1**

EXHIBIT 1
Pipe Diameter Minimum Design Slope

| Pipe Diameter | Minimum Slope |
|---|---|
| 8-inch | 0.0040 |
| 10-inch | 0.0032 |
| 12-inch | 0.0024 |
| 15-inch | 0.0016 |
| 18-inch | 0.0014 |
| 21-inch | 0.0012 |
| 24-inch | 0.0010 |
| 27-inch | 0.0008 |
| 30-inch | 0.0007 |
| 36-inch | 0.0007 |
| 42-inch | 0.0007 |
| 48-inch | 0.0007 |
| 54-inch | 0.0007 |

Profiles for on-site piping were established based on the minimum cover, maximum cover, and minimum slope criteria. For each scenario, the on-site piping was sized to satisfy the maximum d/D ratio and minimum scouring velocity criteria. In some areas of limited loading, the minimum scouring velocity cannot be achieved without a pipe size smaller than 8 inches. Given that the minimum sewer pipe size allowable by EMWD is 8 inches, in these areas 8-inch pipes were selected which overrides the minimum scouring velocity criteria. Pump stations and force mains were sized to satisfy peak dry weather flows while satisfying the maximum and minimum velocity criteria.

## Existing System Connection

The WLC sanitary sewer discharges into an existing system at the intersection of Brodiaea Avenue and Redlands Blvd into an existing 15-, 18- and 21-inch sewer pipeline, with a proposed upgrade to 33-inch on Brodiaea Avenue and 36-inch on Wilmot St. . The sewage is then conveyed to the MVWRF through a trunk sewer with existing diameter piping between 24-inches and 54-inches. For each model scenario, the existing trunk sewer between the WLC and the MVWRF was evaluated for the design criteria. Improvements were considered where the d/D ratio criterion was not satisfied.

# Analysis

## Existing System

Three scenarios were developed from the EMWD model for the WLC project area. The scenarios and results are described below.

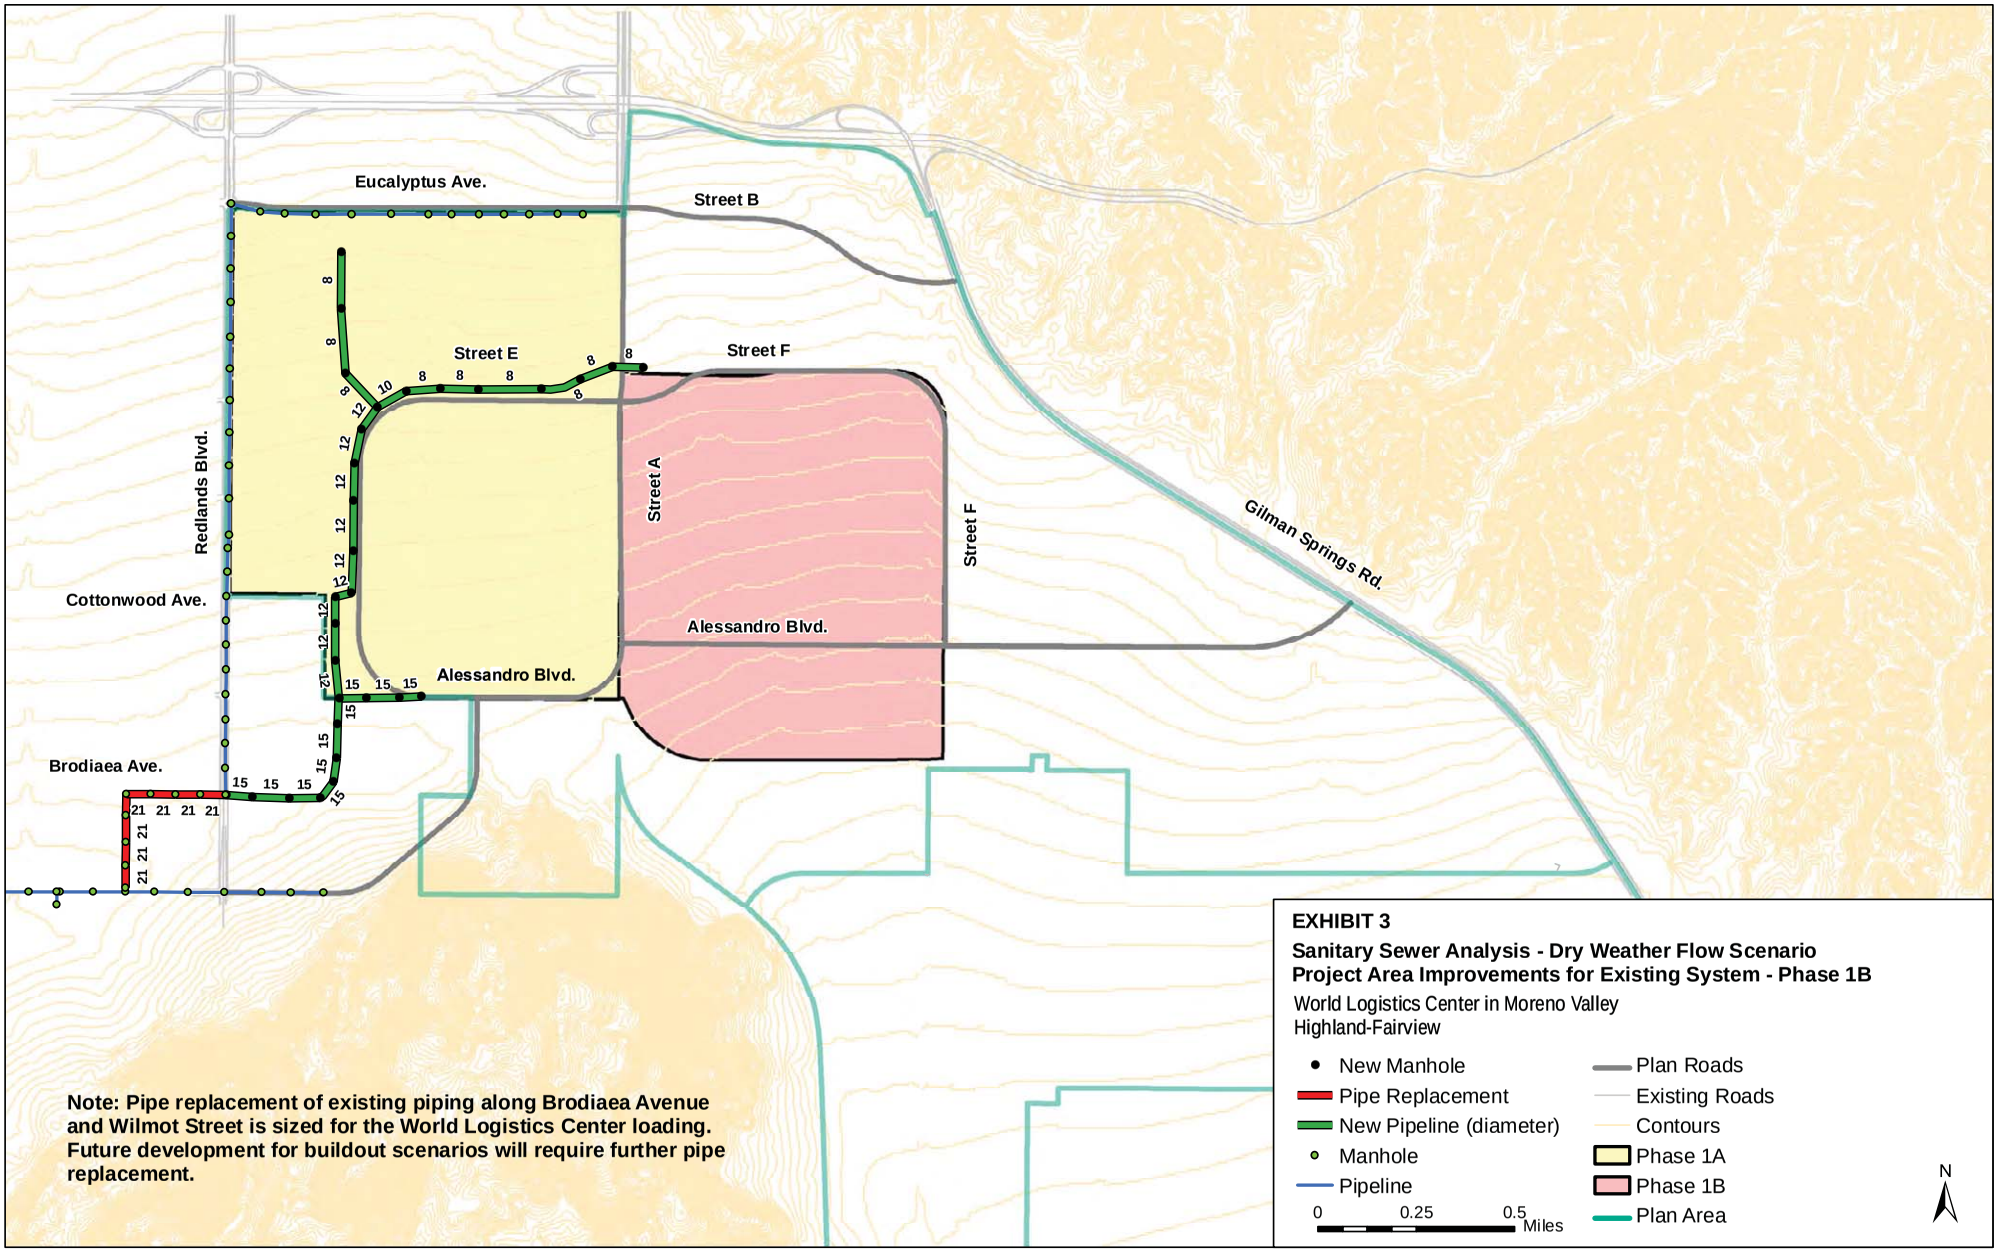
1. **Phase 1-WLC project area and loading into the EMWD existing system (Exhibits 2 and 3).**

   This scenario analyzes the system for phase 1 of the site development, which does not include the undeveloped parcels in the Skechers area. The northwest gravity line will serve all of the phase 1 development. The regional pump station will not be constructed. Prior to phase 2 development, several parcels in the east section of phase 1 may require building specific pumps to convey sewage to the nearest gravity pipeline. On-site gravity pipe sizes range from 8 to 15 inches. As part of phase 1, existing pipeline replacement is required for 2700 feet of existing 15-inch and 18-inch piping immediately downstream of the connection with the WLC sanitary sewer. The replacement piping is sized at 33-inch and 36-inch for buildout conditions. Exhibits 2 and 3 show the approximate timing for the sewer improvements.

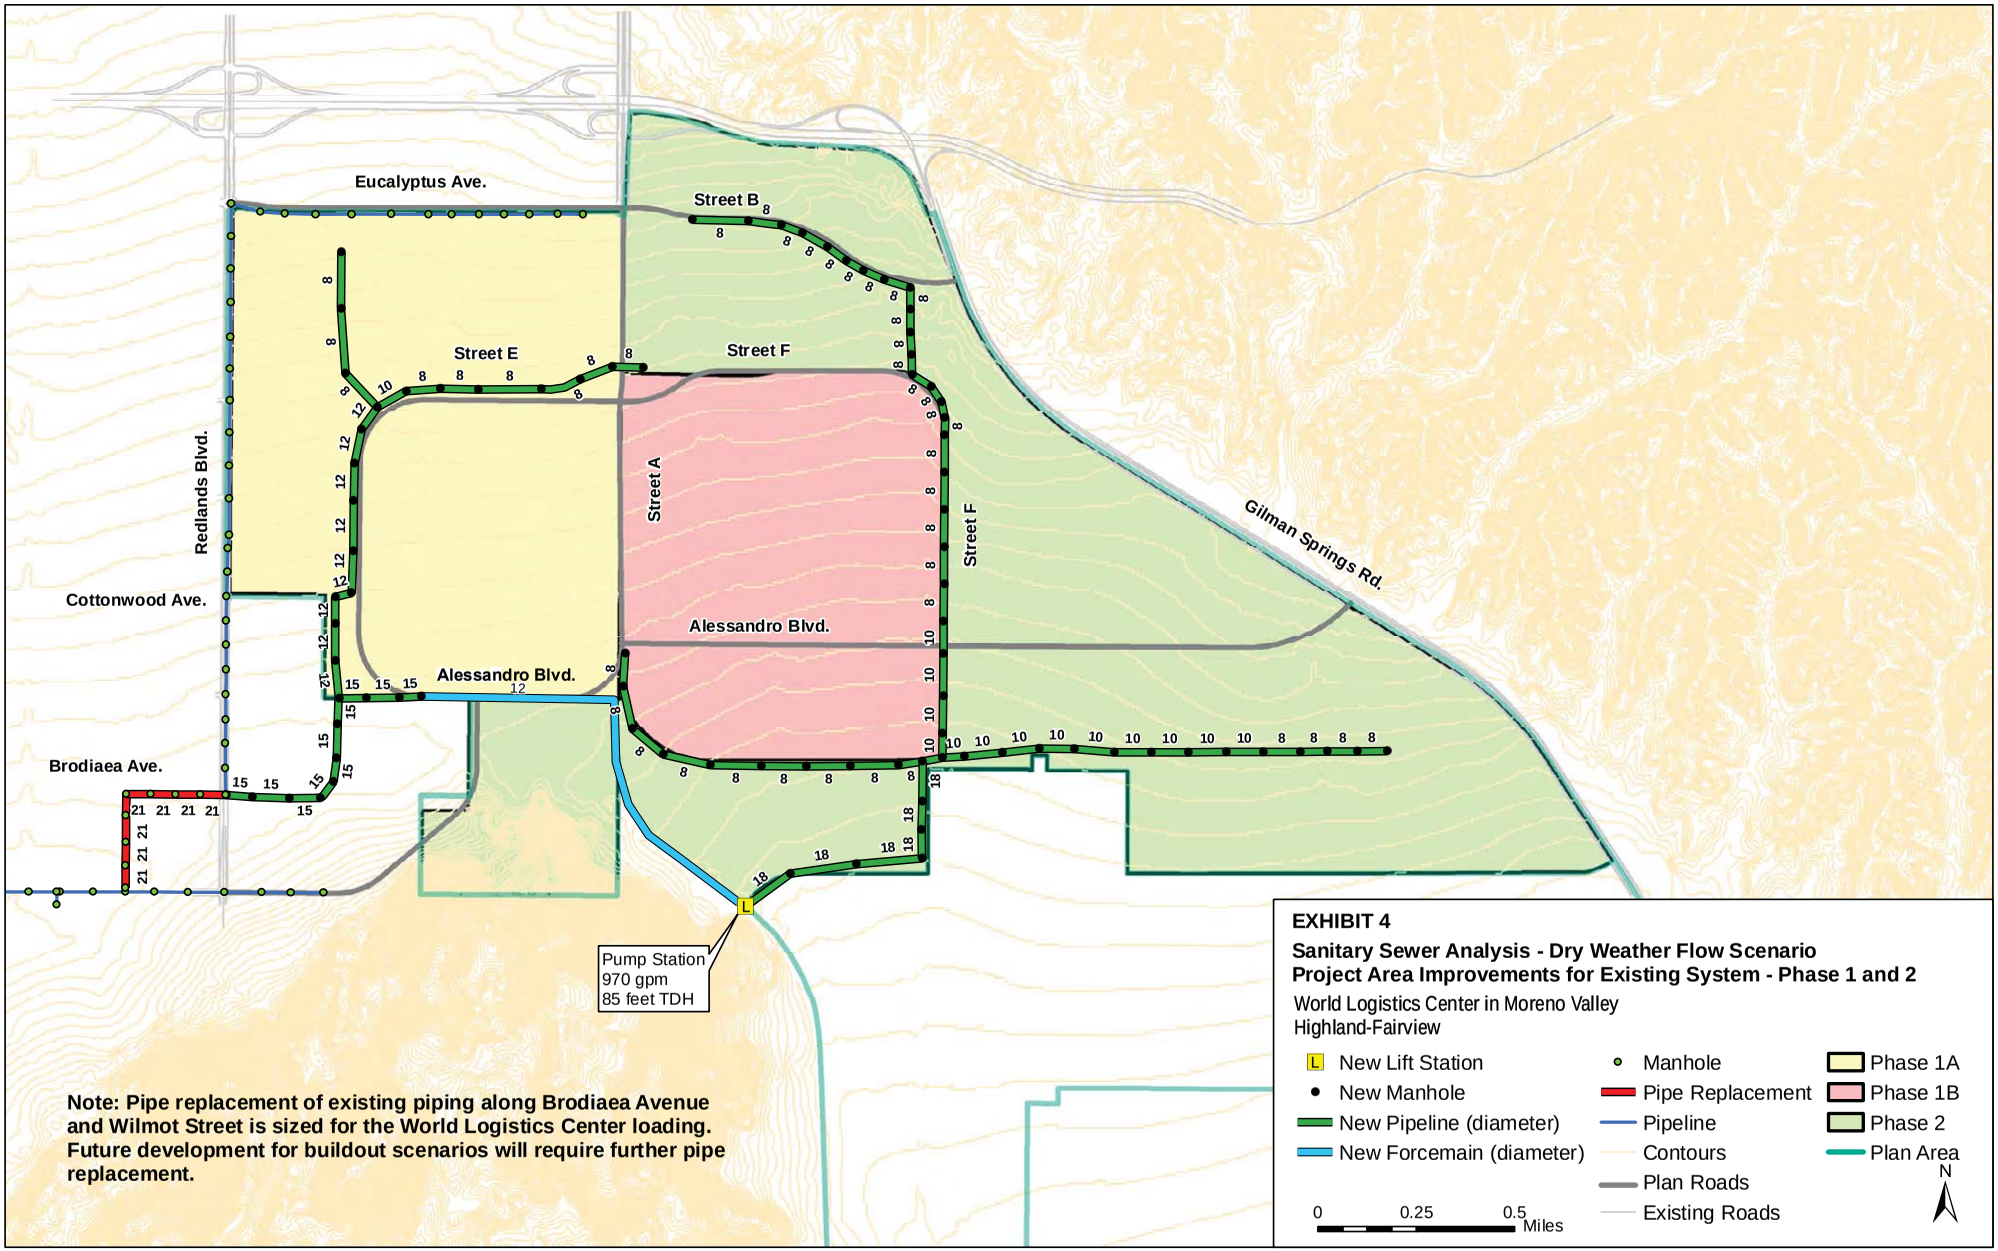
2. **Phase 1 + Phase 2-WLC project area and loading into the EMWD existing system (Exhibit 4).**

   This scenario analyzes the system for phase 1 and phase 2 of the site development and includes the undeveloped parcels in the Skechers area. The northwest gravity line is sized based on the phase 1 construction. As part of phase 2, the remaining gravity lines and the regional pump station are constructed. Some parcels in the east section of phase 1 will be re-routed to the phase 2 gravity lines and building specific pump stations for these parcels can be eliminated. On-site gravity pipe sizes range from 8 to 15 inches. The parcels in the southeast section of the site may require building specific pumps to convey sewage to the nearest gravity pipeline. The regional pump station is rated at approximately 970 gpm and 85 feet of total dynamic head (TDH). The forcemain is sized at 12 inches.

## Buildout System



Two scenarios were developed from the EMWD buildout model for the WLC project area. EMWD buildout models cover two additional major developments expected in the Moreno Valley service area: (1) Aquabella, and (2) Quail Ranch. The Aquabella development covers 670 acres of land east of Lasselle Street, west of Oliver Street, and north of Iris Avenue and proposes the development of a 2,722-unit senior housing community. Quail Ranch is located east of the Gilman Springs Road, three miles south of SR60 and covers approximately 720 acres. The development proposes 1,159 residential units, a park, golf course, and a clubhouse. The portion of the San Jacinto Wildlife Area that was part of the original Moreno Highlands Specific Plan is covered by EMWD's existing build-out model. In the model, this area is categorized as single family residential but it is going to be designated as permanent open space as part of a General Plan Amendment and Zone Change which accompany the WLC Specific Plan.



The scenarios and results are described below.

1. **Full WLC project area and loading into the EMWD buildout system with 2008 master plan buildout pipe sizes (Exhibit 5).** On-site pipe and regional pump station sizing for this scenario consider increased buildout loading from areas immediately south of the WLC project area, including Quail Ranch to the southeast and other areas immediately south. On-site gravity pipe sizes range from 8 to 24 inches. The regional pump station is rated at approximately 3,900 gpm and 82 feet of total dynamic head (TDH). The forcemain is sized at 21inches. Buildout pipe sizes in the existing system are also identified in Exhibit 5 for the trunk sewer between the WLC project area and the Wastewater Treatment Plant. The buildout pipe sizes come from the EMWD buildout model based on the 2008 master plan.
2. **Full WLC project area and loading into the EMWD buildout system with reduced buildout pipe sizes (Exhibit 6).** The loading in the WLC project area is less than the loading planned for the project area in the buildout model and 2008 master plan. For this scenario, the buildout pipeline improvements were downsized in the trunk sewer between the WLC project area and the WWTP to accommodate the reduced loading. On-site piping and pump station sizing is the same as buildout scenario 1.

# World Logistics Center Water Demands and Waste Water Generation for Buildings

PREPARED FOR: Highland Fairview

PREPARED BY: CH2M HILL

DATE: September 10, 2013

## Summary of Modifications

Modifications to the Water Demands and Waste Water Generation for Buildings analysis have been made to reflect changes in the Project Description. These modifications are reflected in the memo in the last section, Building Water Demands.

## Water System Demands

The purpose of this technical memorandum is to evaluate water and waste water building demands for the proposed World Logistics Center (WLC) development in Moreno Valley. A review of the Logistics water demand factor identified in *TPM 35629 EIR- Water and Sewer Evaluation (TPM Memorandum)*, by RBF Consulting dated April 11, 2008 and a benchmarking study of regional water demand use factors was performed to develop the appropriate water demand factor for the WLC Development. TPM 35629 refers to the Highland Fairview Corporate Park (HFCP) at Eucalyptus Avenue and Theodore Street which is immediately adjacent to the WLC project.

### Water Demands from TPM Memorandum

In April 2008, the TPM Memorandum evaluated the impacts to the existing EMWD water system resulting from the following developments:

1. TPM No. 35629 (Highland Fairview Corporate Park)
2. Related Projects in the vicinity of TPM No. 35629
3. The Highlands Area referred to as *the former Moreno Highlands Specific Plan* consisting of the Highland Fairview properties and the Lee property.

The TPM Memorandum calculated demands for the above areas based upon February 2008 Eastern Municipal Water District (EMWD) usage factors, in accordance with the land uses designated in the *Moreno Highlands Specific Plan 212-1*. The TPM Memorandum also conducted a demand analysis based on water demands utilizing the *Logistics – Modified General Plan* land use map combined in the EIR for the HFCP project. (See Appendix A for both demand analyses.) The Logistics water demands were based on low water consumption rates associated with warehouse-type buildings and "per employee" water factors rather than "per dwelling unit" water demand factors.

The water demand usage factor utilized in the Logistics – Modified General Plan analysis was 20 gallons per day (gpd)/employee, based upon "common industry duty factors," identified at the time the memorandum was written. As shown in Table B-5 of Appendix A, this analysis assumed that logistics development would consist of 33,343,929 square feet (sf) of warehouse building area on 1,525 acres. This resulted in an average day demand of approximately 400,000 gpd based upon an assumption that the warehouses would be occupied by .6 employees per 1,000 sf of building area. This translates to a water demand usage factor of 0.012 gpd/sf for logistics developments.

## Benchmarking Study

A regional benchmarking study was performed to determine whether the 0.012 gpd/sf water demand factor utilized in the Memorandum is appropriate for present day.

CH2M HILL contacted 19 water agencies within the region to determine the means and methods used by such agencies to determine the total potable water demand for planned warehouse distribution facilities (see complete list in Appendix B).

Most agencies indicated that they would apply standard water demand factors from the most recent water master plan, based upon the most appropriate land use listed. These agencies indicated that they would utilize the standard commercial, light industrial or business park land use water demand factors specified in the master plan, for a warehouse distribution facility.

These typical land use categories are applied per acre of land and are intended to account for irrigation water to be used onsite. In the case of the WLC, with the use of drought tolerant and native landscaping, the irrigation water demand will be much less than for a typical industrial project. Therefore, a water use demand factor that is applied per square foot of building area is better reflective of actual water use to be used onsite in the WLC. Table 1 lists typical agency water use demand factors.

TABLE 1
Typical Master Plan Water Use Demand Factors

| Land Use Category | Total Water Demand (gpd/acre)[a] | Total Water Demand (gpm/acre) |
|---|---|---|
| **Commercial** | | |
| Regional Commercial | 3,500 | 2.43 |
| Neighborhood Commercial | 3,000 | 2.08 |
| **Industrial** | | |
| Light Industrial | 1,250 | 0.87 |

Data from *Comprehensive Water Distribution Systems Analysis Handbook, Second Edition*

[a]Note that these water demand factors apply on a per acre of land basis, which accounts for irrigation demand to be used onsite.

Most agencies that deviate from this process allow the developer's architect or engineer to recommend a more customized water demand factor, based upon similar facilities. The agency would then review and approve the modified demand factors. The City of Ontario for instance, indicated that they would normally use a standard Industrial/Business Park

water demand factor of 0.032 gpd/sf, but noted that water demands for warehouses may vary significantly, especially where recycled water and other water conservation measures are implemented. The City indicated that they would advise the developer's engineer to calculate water demands based on the site specific development, considering recycled water use, Xeriscape implementation, and water use records from similar facilities previously constructed by the developer.

### Site Specific Benchmark Water Studies

Two of the agencies contacted indicated that they prepare customer specific water studies for warehouse type facilities because the water use at such facilities is far less than standard light industry and/or commercial land use facilities. The Beaumont Cherry Valley Water District is one such agency. It is bounded on the west and north by the Yucaipa Valley Water District, on the east by the City of Banning and is situated one-mile north of the northerly boundary of Eastern Municipal Water District,

The agricultural-based industries within the Beaumont Cherry Valley Water District are giving way to major warehouse distribution centers, e.g., Lowes, Cross Roads Logistics, Prologics, etc. Several major development projects have been constructed, are in construction, or are in the planning phase. For warehouse distribution facilities planned to accommodate .39 to .6 employees per 1,000 sf of building space, the Beaumont Cherry Valley water District utilizes a potable water demand factor of 0.009 gpd/sf. This factor is less than the logistics factor of 0.012 gpd/sf used in the TPM Memorandum and is for a similar type facility, in a water district adjacent to EMWD. The City of Riverside uses a similar type of evaluation.

East Valley Water District, also a neighboring water district, uses a potable water demand factor of 0.01 gpd/sf, for all warehouse type facilities. This factor is slightly less than the logistics water demand factor of 0.012 gpd/sf determined in the TPM Memorandum.

### Recommendations

Table 2 below summarizes the information. As shown in Table 2, values used by nearby agencies for logistics water demand factors range from 0.009 to 0.012 gpd/sf. Based on this benchmarking study, it is recommended that a water demand factor of 0.010 gpd/sf be used for the WLC development.

TABLE 2
Water Demand Factors for Logistics Uses by Agency

| Agency | Water Demand Factor (gpd/sf) |
|---|---|
| Highland Fairview Corporate Park | 0.012 |
| Beaumont/Cherry Valley | 0.009 |
| City of Chino | 0.011 |
| City of Riverside | 0.009 |
| East Valley Water District | 0.010 |

## Comparison to Metered Data

In order to validate the recommendation above the water demand factor of 0.010 gpd/sf was compared to actual metered data obtained from several water districts.

### EMWD Similar Facilities

EMWD provided water use consumption data for ten existing warehouse distribution facilities currently served by the District. The water usage at the facilities is shown in Appendix C. The estimated maximum day water use ranges from 0.001 to 0.017 gpd/sf with the majority of them less than 0.01 gpd/sf.

### Other Agency's Similar Facilities

Several agencies were contacted to obtain actual metered data from warehousing facilities. Summaries of water use for various types of warehouse facilities known to exist within the Cities of Chino, Fontana, and Redlands as well as the Beaumont Cherry Water District were obtained. When contacting the agencies we were routed to the utility billing department which provided the verbal summaries of water use records for the various warehouse facilities ranging in size from 275,000 square feet to 971,640 square feet. Water usage varied from 0.0004 gpd/sf to 0.33 gpd/sf as shown in Table 3. See Appendix C for water use information collected.

In addition, information was received for a Lowes facility in the Beaumont Cherry Water District. The Lowes facility is a 193,000 sf facility with 0.08 employees/1,000 sf. The Lowes facility had an average 2010 water use of 141 gpd, which works out to 0.0007 gpd/sf as shown in Table 3. The Beaumont data proves the point that occupant density is the primary factor to be considered in projecting water use based on previous water use data.

TABLE 3
Actual Water Usage of Similar Facilities

| Agency | Water Usage (gpd/sf) |
|---|---|
| Eastern Municipal Water District | 0.004 to 0.017 |
| City of Chino | 0.002 to 0.003 |
| City of Fontana | 0.033 |
| City of Redlands | 0.0004 to 0.001 |
| Beaumont Cherry Valley Water District | 0.0007 |

In collecting the data the utility billing departments, other than Beaumont Cherry, had no record of the square footage of each facility account or the number of employees per SF of building. When obtaining the square footage from the planning department, a different database was used to pull up the square footage of the entire building where the account holder was located. In multiple cases it was later determined that the account holder shares the building with another occupant, which substantially increases the actual gpd/sf water usage for each such tenant from the quantities calculated above. These means the actual values would be less.

### LEED Calculations

An analysis was also made to estimate the water demand based on standard uses for each employee. The Leadership in Energy and Environmental Design (LEED) program has methodologies for estimating demand based per person or employee. Using this methodology and their calculation worksheet the estimated demand for toilet flushing is 5 gpd per person and for the lavatory is 2.2 gpd per person. Miscellaneous water uses including kitchen and shower was estimated at an equivalent of 2.5 gpd per person. The total gpd per person is 9.7 gpd. Additional water demand for other miscellaneous uses are estimated at 25 percent and would be equivalent to approximately 2.4 gpd per person bringing the total warehouse demand to 12.1 gpd per person or 0.007 gpd/sf using a factor of 0.6 employees/1000 sq ft for the WLC project. This value is less than the recommended value of 0.010 gpd/sf.

## Building Water Demand

Based on the analysis outlined above, a water demand factor of 0.010gpd/sf is proposed for the WLC development building demand. The water demand for irrigation is not included in this analysis. The development proposes 40.6 million square feet of logistics uses. Thus, the water demand for the buildings is 406,000 gpd or 460 acre-feet per year (acft/yr).

## CHIEF'S MESSAGE

***Steve Curley***
***Fire Chief***

As the City's former Fire Chief and current Western Operations Deputy Chief for Riverside County Fire, I am pleased to present the Moreno Valley Fire Department's Strategic Plan 2012-2022. This plan clearly defines the mission and goals of the Moreno Valley Fire Department while providing a guide for continuing the excellent services that we provide to the community for the next ten years.

The Moreno Valley Fire Department has seen an 11.1% increase in emergency calls for service over the last five years and it is anticipated that the total calls for service for 2011 will exceed 14,000 calls. We are expecting to open our seventh fire station, the Morrison Park Fire Station, in the Fall of 2012 to help meet the growing needs of the community. This will also help us continue to meet one of our goals for Fire Operations which is to arrive on scene within 5 minutes of dispatch 90% of the time. The funding for this station was made possible through the issuance of redevelopment agency bonds.

Furthermore, I am excited to announce that in October 2011 we hired four part time Fire Prevention Technicians for the Fire Prevention Bureau for the new Multi-Family Residential Inspection Program. This program will enhance our ability to safe guard the community from fire and environmental hazards by ensuring that each multi-family residential unit is inspected on an annual basis. We are also looking forward to hiring two additional part time Fire Prevention Technicians in 2012 to help ensure that all vacant lots in the City receive an annual hazard abatement inspection. By hiring these six Fire Prevention Technicians, the City's Fire Prevention Bureau will be better able to achieve one of their goals, which is to ensure all business and commercial occupancies receive annual fire and life safety inspections. It also provides the beginning steps to ensuring a second goal is met within the next ten years which is to perform hazard abatement inspections biannually.

Additionally, our Office of Emergency Management (OEM) Program coordinates the City's prevention, preparedness, response, recovery, and mitigation efforts for all natural and man-made disasters. Most recently the City Council adopted a local hazard mitigation plan written by the OEM Program Manager. The goals of the plan are to protect life, property and the environment; provide public awareness; protect the continuity of government; and to improve emergency management, preparedness, collaboration and outreach. The plan contains a profile of the City, a detailed assessment of disasters that could occur in Moreno Valley and the mitigation goals of the City to reduce long-term vulnerabilities. The plan can be found on our City website at www.moval.org.

Finally, once the strategic plan is implemented it will be modified periodically for priority changes, budgetary constraints, and planning refinements. This plan provides an overview of anticipated Fire Department activities as related to the goals contained within this plan. General economic conditions and the capability to fund projects will play a crucial role in determining the actual time that resources are secured and projects completed, however, I strongly feel that the goals, and the strategies to reach those goals, are well within our reach.

# EXECUTIVE SUMMARY

The Moreno Valley Fire Department is the primary response agency for fires, emergency medical service, hazardous materials incidents, traffic accidents, terrorist acts, catastrophic weather events, and technical rescues for the City of Moreno Valley. The Fire Department also provides a full range of fire prevention services including public education, code enforcement, plan check and inspection services for new and existing construction, and fire investigation. Additionally, the City's Office of Emergency Management is located within the Fire Department allowing for a well-coordinated response to both natural and man-made disasters.

Anticipating the future, in terms of building a flexible organization, is an important facet of this strategic plan. The Fire Department must be able to react to change, resolve problems, and work together with other departments and agencies on issues that might arise. It must assess the needs of the community and develop resources to meet those needs. As such, any strategic plan must be adaptable enough to accommodate the needs of the community as they arise.

This plan identifies five goals for Fire Operations, Fire Prevention, and the Office of Emergency Management for a total of fifteen goals which are listed below. The strategies for accomplishing these goals can be found on pages 14-22.

## FIRE OPERATION GOALS

- ***Goal 1:*** Financial Management and Accountability
- ***Goal 2:*** Arrive On Scene within 5 Minutes of Dispatch 90% of the Time
- ***Goal 3:*** Reduce the Risk of Fire to Residents through Prevention Campaigns and Mitigation Efforts
- ***Goal 4:*** Maintain a Strong Partnership with Riverside County Fire Department
- ***Goal 5:*** Ensure Fire Administration Staffing is Sufficient for the Needs of the Department

## FIRE PREVENTION GOALS

- ***Goal 1:*** Fiscal Sustainability
- ***Goal 2:*** Ensure All Business and Commercial Occupancies Receive Annual Fire and Life Safety Inspections
- ***Goal 3:*** Perform Hazard Abatement Inspections Bi-Annually
- ***Goal 4:*** Provide Efficient Plan Review
- ***Goal 5:*** Evaluate Management Structure and Career Advancement within the Bureau

## OFFICE OF EMERGENCY MANAGEMENT

- ***Goal 1:*** Provide Training to Employees and Citizens
- ***Goal 2:*** Incorporate Federal and State Legal Mandates and Standards into City Emergency Management Strategies
- ***Goal 3:*** Continually Improve Emergency Operations Center Functions and

Capabilities Based on a Comprehensive Assessment
- ***Goal 4:*** Manage FEMA and State Disaster Recovery Projects to Ensure Timely Completion of Required Documentation
- ***Goal 5:*** Maintain Effective Coordination and Partnerships with Local, Regional, and State Agencies

This strategic plan is a living document and will be a continuous work in progress. The plan will guide the Fire Department's development over the next ten years and will inform the public and its Fire Department members of the goals and strategies that the Fire Department has for the future. It will also serve as the foundation document for informing City Council as to the direction the Fire Department is headed in order to ensure the community receives outstanding fire protection services. The Fire Department will review this plan biennially to ensure the goals outlined in this plan are being met.

## MISSION STATEMENT AND VALUES

The mission of the Moreno Valley Fire Department is:

> *The Moreno Valley Fire Department serves the community with pride, integrity, and professionalism while providing quality emergency services to protect and preserve life and property of its citizens when exposed to fires, medical emergencies, natural or man-made disasters, hazardous materials incidents, and rescue emergencies in a safe, efficient and cost effective manner as a result of a cooperative, regionalized fire and rescue delivery system with the Riverside County Fire Department. To minimize the impact of natural or man-made disasters by identifying and mitigating known hazards and to enhance our response to these disasters by providing quality training to the community on disaster preparedness, response, and recovery.*

The core values for the Moreno Valley Fire Department are:

*Safety – Leadership – Integrity – Competence – Customer Service*

## ORGANIZATIONAL HISTORY

On December 3, 1984, the City of Moreno Valley officially incorporated as a California general law municipality. The residents of Edgemont, Sunnymead, and Moreno recognized there was a need for managed growth as the population in Moreno Valley had more than doubled from 18,871 residents in 1970 to 49,702 in 1984 and therefore approved the measure to incorporate.

Prior to incorporation, the areas of Edgemont, Sunnymead, and Moreno were serviced by the Riverside County Fire Department which has contracted with the California Department of Forestry and Fire Protection (CAL Fire) since 1921. The initial contracts with CAL Fire augmented the level of wild land fire protection to Riverside County and then evolved as the area grew in population.

Since its incorporation in 1984, the City of Moreno Valley has contracted for fire protection services with the Riverside County Fire Department which contracts with CAL Fire. CAL Fire provides full-service fire protection to many jurisdictions in California through the administration of 145 cooperative fire protection agreements in over 30 counties, including cities, fire districts as well as special districts and service areas. As a full-service fire department CAL Fire responds to wildland fires, structure fires, floods, hazardous material spills, swift water rescues, civil disturbances, earthquakes, and medical emergencies. Local governments, such as Riverside County, are able to utilize this diversity through their agreements with CAL Fire.

The City's Fire Department has grown significantly since 1984, expanding from three fire stations in 1984 to six fire stations in 2002 with a seventh fire station slated to open in the Fall of 2012. The six fire stations currently house a total of six fire engines, two aerial ladder trucks, one brush engine, three reserve fire engines, one reserve fire truck, and two fire rescue squads. The primary fire engines are staffed with one Fire Captain, one Fire Apparatus Engineer, and one Firefighter II Paramedic. The two aerial ladder trucks are staffed with one Fire Captain, one Fire Apparatus Engineer, and two Firefighter II's. Staffing for both the fire engines and trucks is continuous, 24 hours a day, seven days a week. Two Battalion Chiefs supervise 69 firefighting personnel with a Riverside County Fire/CAL Fire Division Chief supervising the two Battalion Chiefs. These two Battalion Chiefs also supervise a reserve firefighters program of up to 50 Reserves and a Fire Explorer Program of up to 25 Explorers.

The Riverside County Fire/CAL Fire Division Chief is also appointed as the City's Fire Chief and oversees the City's Fire Prevention Bureau and Office of Emergency Management. The City's Fire Prevention Bureau provides planning and engineering services to the City; conducts fire and life safety inspections, and oversees the City's hazard abatement program. The Office of Emergency Management program provides a wide variety of training, such as Community Emergency Response Team training and Terrorism Awareness, to both employees and residents. Additionally, this program is tasked with preparing the City for any emergency situation through prevention, mitigation, preparedness, response, and recovery for a variety of natural or man made disasters that may occur in the community.

## COOPERATIVE FIRE PROTECTION AGREEMENT

CAL Fire's mission, as directed and authorized by the State Legislature and statutes, is to provide contractual emergency service to local governments throughout California when requested. CAL Fire has provided cooperative fire protection services for over 100 years to various jurisdictions throughout the state including contracts with more than 140 cities, special districts, and counties. Locally CAL Fire, through Riverside County Fire, provides cooperative fire protection services to 21 of the 28 cities in Riverside County as well as to the Rubidoux Community Services District.

Riverside County Fire is a modern, full-service fire protection and emergency management agency that provides comprehensive fire protection services to its contract city partners. As part

of the contract with Riverside County Fire, the City receives the benefit of a cost effective regionalized cooperative fire protection system which includes:

- Consolidated dispatch center for emergency medical and fire dispatch
- Regionalized training program
- Hazardous materials response team
- Fire arson investigation
- Immediate use of fire hand crews, bulldozers, and aircraft
- Public information and education
- Assistance from the Riverside County Fire Office of Emergency Services

Riverside County Fire is committed to quality fire protection services to its contract partners. The County Fire Department strives to make the most effective use of limited emergency protection resources by efficiently sharing valuable personnel and equipment as part of the Riverside County Fire Department cooperative, integrated, regional fire protection system which includes all the resources from the 21 contract cities and Riverside County.

Through the City's cooperative agreement with Riverside County Fire, the City's Fire Chief is appointed by the Riverside County Fire Chief, John Hawkins. The Fire Chief acts as the City's liaison to Riverside County Fire, relaying information from City Council or the City Manager's Office directly to the Riverside County Fire/CAL Fire Western Deputy Chief who in turn reports to the Riverside County Fire Chief. Furthermore, the City's Fire Chief oversees the City's Fire Prevention Bureau, Office of Emergency Management, and handles all Fire Department related administrative issues.

The City of Moreno Valley is able to determine its staffing levels for various fire apparatus as long as those levels meet the minimum safe and acceptable levels for the Riverside County Fire Department. For example, the City could increase the daily staffing on fire engines from three firefighters to four, however, the City is unable to decrease from three personnel to two due to the minimum standard staffing level that has been established by the Riverside County Fire Department. The City ultimately retains control of the budget for the Fire Department as well as determining fire station locations. The City has worked in conjunction with the Riverside County Fire Strategic Planning Bureau in order to determine fire station locations. A discussion of the methodology for determining fire station locations is located on page 9.

## CLIMATE AND TOPOGRAPHY

The City of Moreno Valley encompasses 51.5 square miles and is located in the northwestern portion of Riverside County with a population of 193,365. Moreno Valley is a mixture of residential, commercial, industrial properties with wildland urban interface areas on the north, east, and south sides of the City which includes Box Springs Mountain and San Timoteo Canyon to the north, the "Badlands" to the east, and Lake Perris State Park to the south.

The elevation in Moreno Valley ranges from 1,450 feet in the south to over 2,700 feet in the north. The slopes of the Box Spring Mountain, Reche Canyon, San Timoteo Canyon, the

"Badlands", and Lake Perris State Park are covered with volatile chaparral fuels and grass ground cover which are susceptible to fires and rapid growth. Once a fire starts, it can spread quickly to the surrounding vegetation and threaten homes located in the wildland urban interface.

Moreno Valley has a semi-arid climate that is similar to the climate found in many Mediterranean regions. The City experiences an average of 10 inches of rainfall a year with minimal threats of frost in the winter months. A majority of the rainfall in Moreno Valley occurs from December to March.

Moreno Valley can also experience strong wind conditions, known as the Santa Ana Winds, from late October through March. These winds can be extremely strong and blow from the north and northeast. These winds will greatly increase the intensity of any wildland fire should a fire occur during Santa Ana Wind conditions.

Summers in Moreno Valley are generally sunny with very warm to hot days. While average temperatures in July and August are in the mid 90's, it is not unusual to experience numerous days of 100 degree heat prior to a slight cooling off period. Monsoonal moisture can occur during the summer when moist air from the tropical regions of the Pacific and Gulf of Mexico bring higher humidity to the area, causing afternoon and evening thunderstorms.

## BUDGET

The City of Moreno Valley continues to reel from the impacts of the Great Recession which is the worst economic crisis faced by this nation since the Great Depression of the 1930's. City operations rely heavily on revenue that is generated through economic stability, activity, and

growth. During this recession, Moreno Valley's General Fund revenue base has declined from a high of $97.8 million in Fiscal Year (FY) 2007-08 to a low of $68.0 million in FY 2010-11. This represents a reduction of $29.8 million or 30.4% in just three years.

Furthermore, the number of General Fund employees in Moreno Valley has declined from 283 employees in Fiscal Year 2007-08 to a low of 147 in FY 2011-12. Additional staffing reductions are planned for the next two fiscal years which will result in a workforce of 138 employees by FY 2013-14. This represents a 51.2% reduction in general fund employees over the course of five years.

To further exasperate the financial situation in Moreno Valley, the unemployment rate has ranged from 16.3% to a high of 17.6% over the last three years. Most recently, the unemployment rate decreased from 16.9% in August 2011 to 16.1% in September 2011. While the unemployment rate is improving, it is still well above the current nation unemployment average of 9% as reported in October 2011. This means that City residents have less discretionary income available to spend which results in less sales tax revenue for Moreno Valley. As sales tax revenue is second only to property tax revenue for the City's General Fund, any decrease in spending by consumers greatly affects the revenue for Moreno Valley.

Property values have also declined sharply since the beginning of the recession. Home values peaked at an average price of $400,678 in 2006 and sharply declined to a low of $137,748, a decrease of 65%. Property values are beginning to recover and as of the second quarter of 2011 the median home price in Moreno Valley was $266,000.

Similarly, property tax revenue for the City has declined over this period of time causing a major decrease in general fund revenue. A portion of the property tax revenue is designated as a structural fire tax and is utilized to help offset the cost for the City's fire protection services, however, these services have never been fully funded by the structural fire tax revenue. In FY 2007-06 the City collected a high of $6,858,622 in structural fire tax revenue which funded 54.8% of the fire services contract cost. By FY 2009-10, the revenue had declined to a low of $4,701,647 and only funded 36.3% of the contract costs. The City has had to cover this decline in revenue with other general fund revenue which has impacted the availability of funds to other City Departments.

While the City Council has tried to keep staffing levels in public safety at the same levels as FY 2007-08, the deep fiscal crisis facing Moreno Valley has forced City Council to decrease the number of public safety employees. As part of a 3-year deficit elimination plan, police department staffing levels are scheduled to be reduced by 12.7% by FY 2013-14 and the fire department was scheduled for a 15.5% reduction in staffing, which included the defunding of a truck company. However, this reduction will only be 8.2% when the Morrison Park Fire Station opens in the Fall of 2012 as the Fire Department will minimally increase staffing by seven firefighter personnel.

There are some signs that the economy in the Inland Empire, including Moreno Valley, is stabilizing. According to the November 2011 Beacon Economics report the combined Riverside and San Bernardino counties are stabilizing and can expect slow growth in employment for at

least the next five years. This strategic plan is formulated with the idea that the economic recovery for Moreno Valley will occur over the course of five to ten years.

## ORGANIZATION OF THE MORENO VALLEY FIRE DEPARTMENT

The Moreno Valley Fire Chief oversees the City's Fire Operations, Fire Prevention, and the Office of Emergency Management programs. The structure of the City of Moreno Valley Fire Department can be seen below.

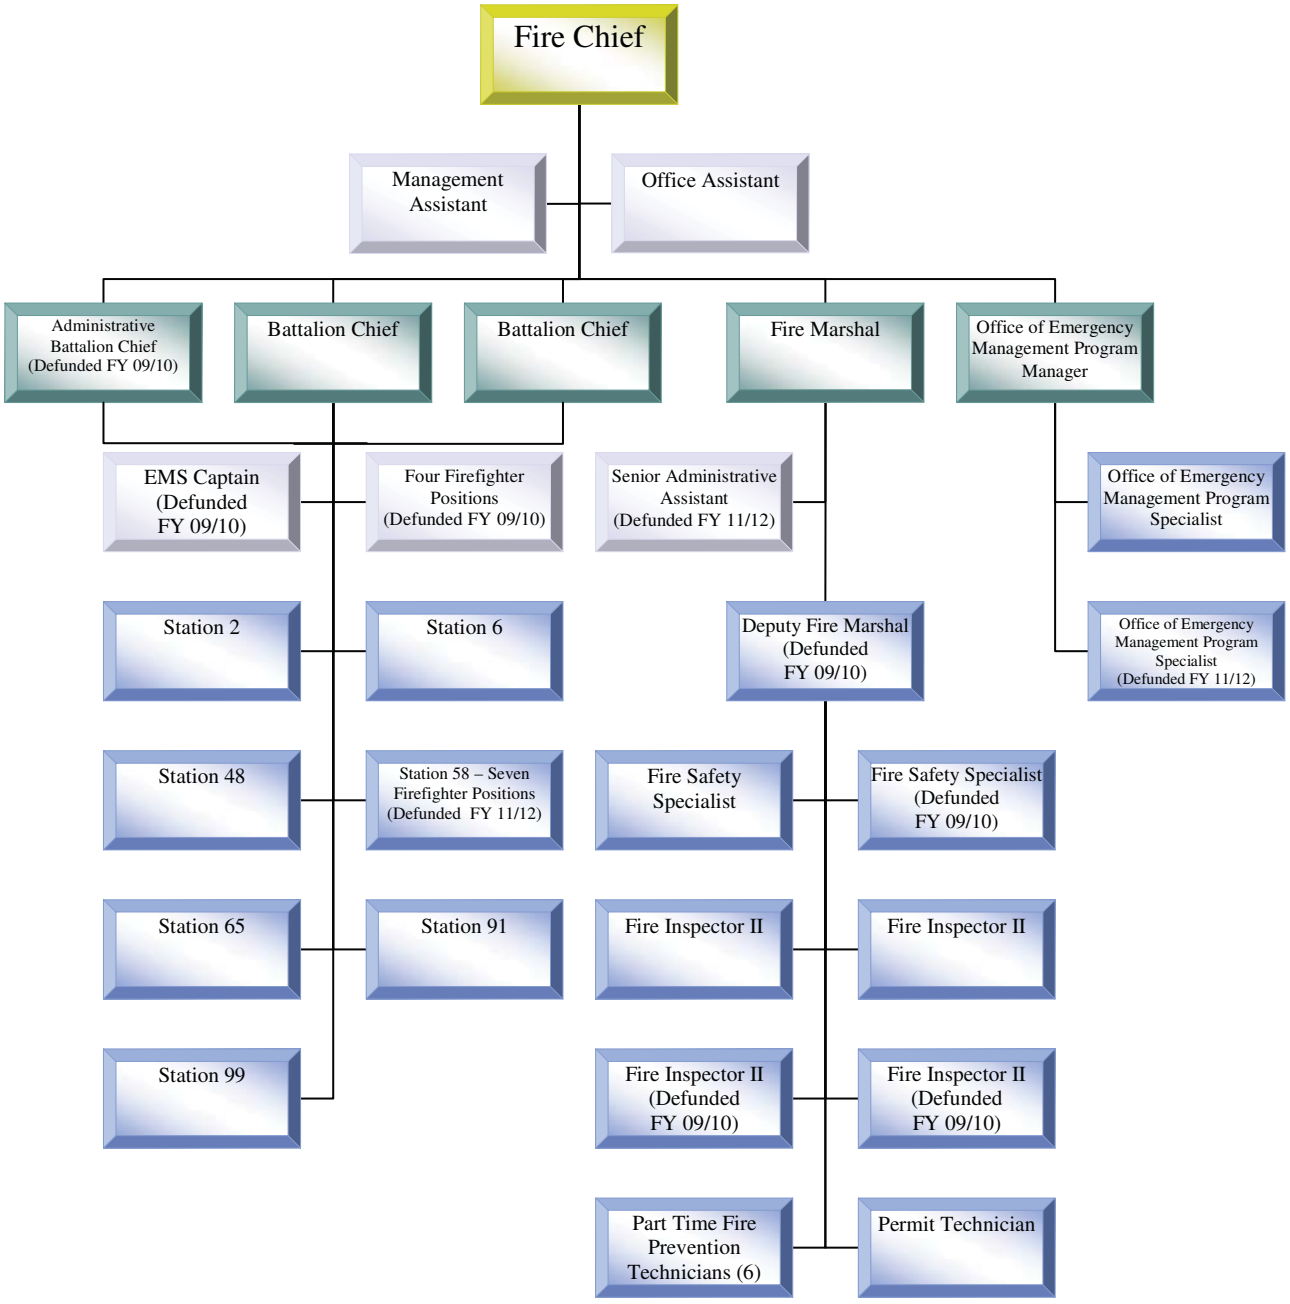

Chart 1: Moreno Valley Fire Department Organizational Chart

The Fire Chief for the Moreno Valley Fire Department is a Division Chief within Riverside County Fire/CAL Fire. Below is an overview of the Riverside County Fire Department organizational chart for Western Operations.

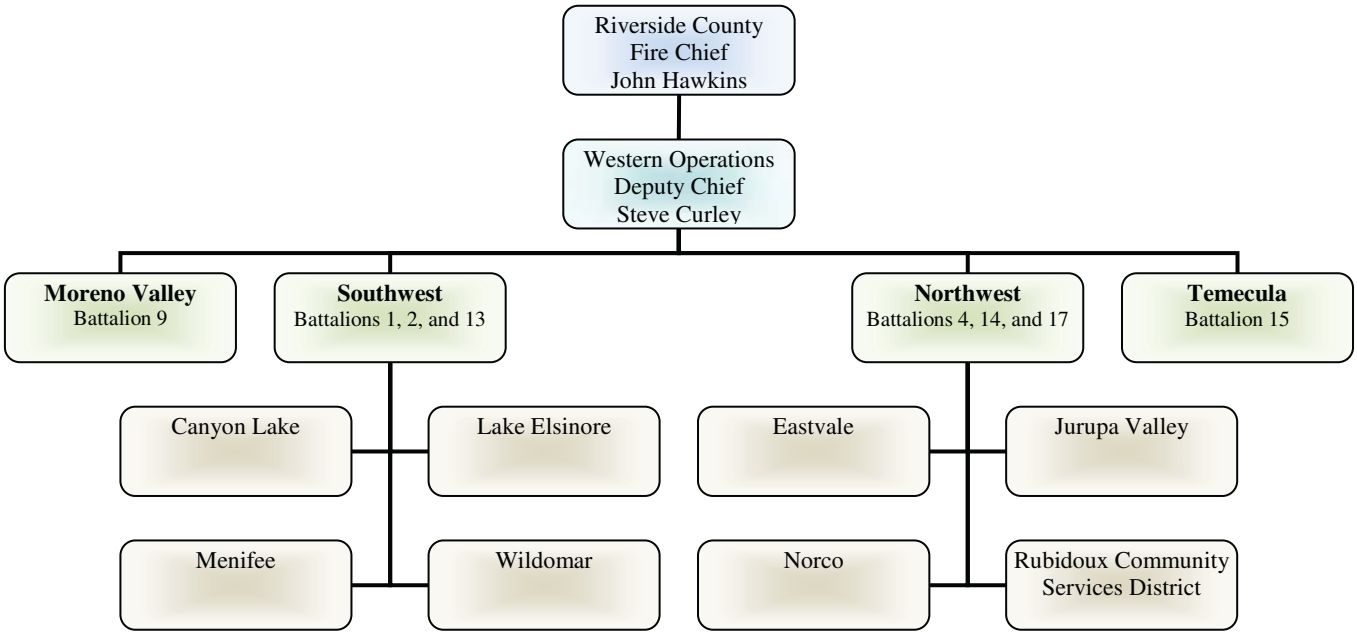

Chart 2: Riverside County Fire Department Organizational Chart Western Operations

## FIRE STATION LOCATION METHODOLOGY

The Moreno Valley Fire Department, through their contract with Riverside County Fire, works with the Riverside County Fire Strategic Planning Bureau to determine fire station locations utilizing an established fire station location methodology. The purpose of having an objective fire station location methodology is to ensure that emergency services are delivered efficiently and effectively throughout the City.

The guiding principles for fire station locations are found in the National Fire Protection Association (NFPA) Fire Protection Handbook, Volume II, 20th edition. They include:

- Consideration of the criteria established by the Insurance Services Offices, Inc. (ISO) regarding the distribution of fire companies within a community
- Consideration of the NFPA Standard 1710 which calls for an engine company to arrive on scene within 4 minutes of travel time to fire incident and emergency medical aid calls 90% of the time. Additionally, this standard calls for a full first alarm assignment within 8 minutes of travel time 90% of the time
- Consideration of the proximity of travel time to other fire station protection zones for timely inclusion in the full first alarm assignment
- Consideration of rapid and safe access to multi-directional major response routes
- Consideration of appropriate locations, given the land use issues in the surrounding environment

- Consideration of utility availability, plot size, land availability, and surrounding traffic control issues
- Consideration of historical and projected call volume (response workload) in the area under consideration using risk versus cost analysis

The process that the City of Moreno Valley utilizes when working with the Riverside County Fire Strategic Planning Bureau for determining future fire station locations include:

1. Identifying the geographic area of concern on a regional map
2. Utilizing computer response mapping software, locate a hypothetical station at or near the center of the geographic area of concern or near a major response route
3. Utilizing a realistic, safe response speed or appropriately varied response speeds, plot color-coded two-minute timed distances on all street and roads emanating from the hypothetical station spreading out from two minutes to ten minutes
4. Determine the number of responders and types of apparatus that would respond from that station for various types of calls and compare with department standards of cover for that type of area and its hazards
5. Evaluate the response time and resources that would be dispatched to fire and emergency medical aid calls for services from other stations to make-up the first alarm assignment standards of cover set by policy for that area
6. Adjust hypothetical station location, if necessary, while maintaining the station location as close to the center of that geographical area as possible to maintain equity of response times
7. Utilization of existing specific plan agreements that identify when a fire station will be built based on the development of a specific area reaching a set number of residential units or commercial/industrial square footage.

## FIRE STATION LOCATIONS

The City of Moreno Valley has six fire stations with a seventh currently under construction. The locations for all seven fire stations are listed below. A map is located on the next page that indentifies their locations. Additionally, a second map has been included that shows the locations where the City is in the process of acquiring land or has completed land acquisitions for future fire station locations.

**Fire Station 2**
**(Sunnymead)**

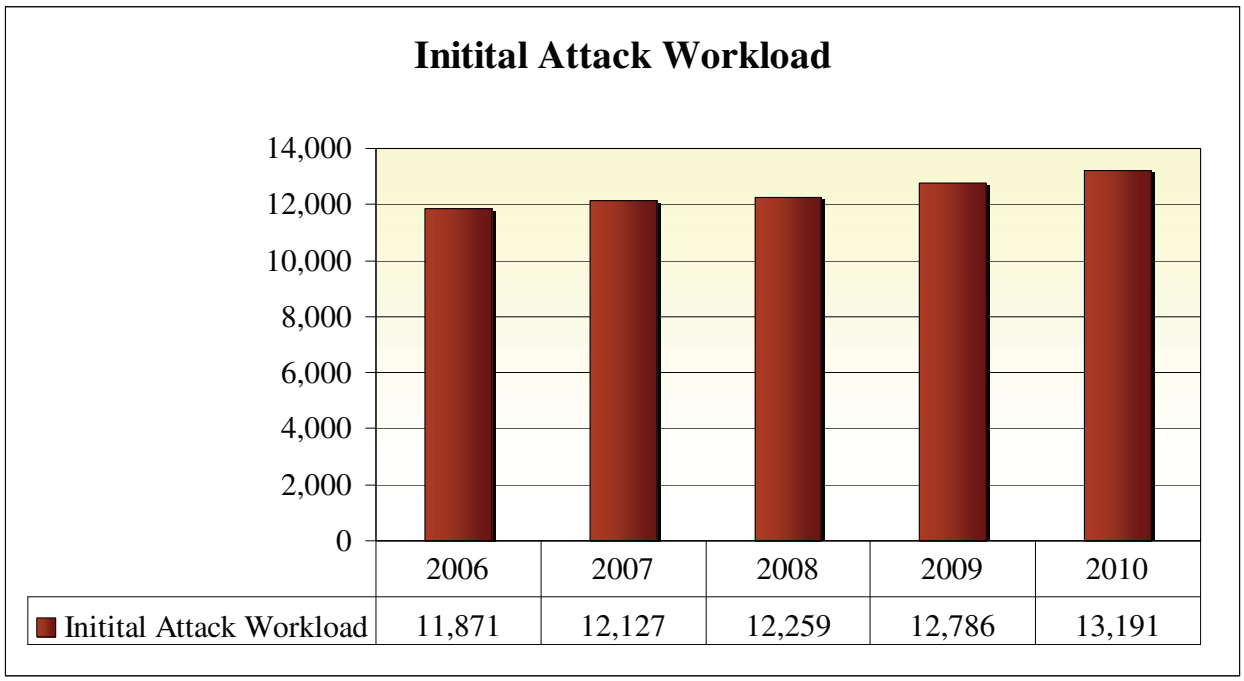
**(Morrison Park)**
13400 Morrison Street

Map 1: Current Fire Station Locations



MORENO VALLEY
FIRE DEPARTMENT

Map 2: Proposed Fire Station Locations with Land Acquisition in Progress or Completed

## ANNUAL CALLS FOR SERVICE

Over the last five years the Moreno Valley Fire Department has seen an 11.1% increase in calls for service (Table 1). Through October of 2011, the City has seen a 6% increase over the same period of time for 2010 and it is anticipated that the total calls for service in 2011 will exceed 14,000.

| | 2006 | 2007 | 2008 | 2009 | 2010 |
|---|---|---|---|---|---|
| Initital Attack Workload | 11,871 | 12,127 | 12,259 | 12,786 | 13,191 |

Table 1: Five Year History of Initial Attack Workload

## ORGANIZATIONAL GOALS AND OBJECTIVES

The strategic plan for the Moreno Valley Fire Department establishes goals and objectives for Fire Operations, Fire Prevention, and the Office of Emergency Management. The Fire Chief directly oversees each division and these divisions have their own set of goals and objectives outlined below.

### FIRE OPERATIONS

Fire Operations is the largest division within the Moreno Valley Fire Department, consisting of 72 sworn staff and 2 non sworn staff as of December 2011. The main mission of Fire Operations is to respond to emergency calls for service from the community and provide quality emergency services while protecting the life and property of the citizens of Moreno Valley. Although responding to emergencies is the primary mission of Fire Operations, there are several support activities conducted by both the sworn and non sworn staff that are vital to the operation of the division including:

- Fire company annual business/commercial fire inspections
- Development and management of the Department budget
- Coordinating and responding to non emergency requests for Fire Department services from both the City Council Office as well as the public
- Long range planning for the Fire Department
- Applying for Assistance to Firefighters grant and other grant opportunities

## Goal 1: Financial Management and Accountability

Over the last several fiscal years the City of Moreno Valley has seen a reduction of $29.8 million in General Fund revenue. As public safety is funded out of the City's General Fund, staffing reductions have been made to both the Police Department and Fire Department by City Council. As the economy slowly begins to recover in Moreno Valley it is critical that the Fire Department continues to provide the best possible service to the community while maintaining a fiscally conservative mindset.

### *Strategies*

1. Annually review the Fire Department false alarm fee to ensure all costs are being recovered for responses to commercial and residential fire alarm calls

   a. This fee has not increased since the ordinance was initially established in 1997. Currently the fee is set at $100 per residential fire false alarm and $200 for a commercial fire false alarm
   b. Propose a fee increase in FY 2012-13 to cover actual costs utilizing the Riverside County Fire model
2. Provide a five year forecast for expenditures and revenues for the Fire Department based on the current economic climate
3. Be an active, cooperative partner with Riverside County Fire/CAL Fire Cost Recovery Unit for recovering the costs associated with hazardous materials spills, negligent fire starts, and traffic accidents with an identified negligent driver
4. Review and revise staffing assumptions to provide the maximum coverage for all fire apparatus while minimizing the overall contract costs to the City
5. Apply for Assistance to Firefighters Grants for staffing, equipment, and fire safety items

## Goal 2: Arrive On Scene within 5 Minutes of Dispatch 90% of the Time

The Moreno Valley Fire Department strives to meet the National Fire Protection Association (NFPA) 1710 guideline for fire department responses which allows firefighters one minute to don their turnouts once an emergency call for service is received from dispatch and four minutes of drive time. A fire department is to meet this 5 minute response standard 90% of the time (see Figure 1 on page 16). By maintaining this standard response time, the Moreno Valley Fire Department can minimize deaths and injuries associated with fires; minimize the direct and indirect losses due to fires; and minimize deaths for people experiencing sudden illness, accidents, or injuries.

Response times in Moreno Valley, until January of 2008, were tracked manually by fire station personnel and were reported to fire administration. Overall, response time statistics varied from 85% to 99% compliance with this goal depending on the time of year and the fire station. The manual process of tracking response times was discontinued when Riverside County Fire began a transition process in 2008 to track response times utilizing mobile data computers. This has been part of the Public Safety Enterprise Communication Project, also known as PSEC, which should be completed in early 2012. PSEC will enhance communication capabilities, data transmissions, and radio interoperability for both Riverside County Fire and the Riverside County Sheriff's Department. Information on response times will once again be available to the City when the system becomes fully operational.

### *Strategies*

1. Review response times on a monthly basis beginning in 2012 to ensure this goal is being met
2. Evaluate current and future fire station locations with Riverside County Strategic Planning to ensure proper locations are selected for new fire stations so the NFPA 1710 response time standard can be met

3. Review staffing assumptions to ensure the appropriate amount of equipment is adequately staffed to respond to emergency calls for service, including a potential shift to paramedic rescue squads as discussed on page 29.
4. Support Riverside County Fire's efforts as they perform system upgrades to an emergency fire dispatch system that will allow them to dispatch and/or reroute the closest available unit for an emergency call for service
5. Support the City's Public Works Department with traffic mitigation efforts during peak hours of travel

Figure 1: NFPA Response Timeline Recommendations for Career Firefighters

## Goal 3: Reduce the Risk of Fire to Residents through Prevention Campaigns and Mitigation Efforts

The best method for reducing fire fatalities and property loss is through fire prevention and public education initiatives. Public fire safety education initiatives play a major role in the prevention of fires. Public fire safety education through educational programs for schools, businesses, and civic associations have significantly reduced the numbers of fires in the community and have reduced the number of deaths and injuries associated with home fires.

***Strategies***

1. Coordinate with Riverside County Fire Department's Public Information Officers to:
    a. Continue to provide educational programs, such as the 9-1-1 for Kids program, to the community
    b. Submit articles on fire safety, flood safety, and disaster preparedness for inclusion in the City's monthly "e-newsletter" *City Link*
    c. Coordinate with the City's Media and Communication Division to post press releases from Riverside County Fire on the City's website when they contain information pertinent to City residents
2. Coordinate with Riverside County Fire Department's Public Information Officers and the City's Media and Communication Division to have public service announcements air on the City's government access channel MVTV-3 and develop new program content to address specific fire safety and disaster preparedness needs in the community
3. Continue to support fire personnel participation in fire safety education for school age children
4. Enhance the Moreno Valley Fire Department website with more fire safety and disaster preparedness information

## Goal 4: Maintain a Strong Partnership with Riverside County Fire Department

The City of Moreno Valley has contracted with Riverside County Fire for fire protection services since 1984. Through open dialogue with the County, the City has expanded its services since incorporation to include municipal staffing and the addition of paramedic firefighters to all fire engine companies. It is important that the City maintains an open relationship to ensure that the City is receiving cost effective, quality fire protection services. The contract the City maintains with the County allows the City to provide excellent fire protection services and advance life support care at a cost savings to the City.

***Strategies***

1. Actively participate in all quarterly Contract Partners meetings with Riverside County Fire
2. Participate in subcommittees associated with cost allocation planning for fire protection services
3. Provide feedback on services, costs and other issues of concerns to the Riverside County Fire Chief and his staff
4. Review cost allocation plan and quarterly billing statements for transparency

## Goal 5: Ensure Fire Administration Staffing is Sufficient for the Needs of the Department

To properly oversee Fire Operations it is important to both increase and enhance staffing in Fire Administration to ensure there is quality assurance oversight for the paramedic program as well as sufficient administrative staff to support the Fire Chief, two Battalion Chiefs, and in the future an Administrative Battalion Chief. The Fire Department, which consists of Fire Operations, Fire

Prevention, and the Office of Emergency Management, consists of 69 firefighter personnel, three chief officers, and nine City personnel for a total of 81 employees. The increase and enhancement of administrative staffing is necessary in order to ensure appropriate span of control is maintained, workloads are manageable, and job titles/descriptions are in line with the type of work being performed.

***Strategies***

1. Reestablish the Administrative Battalion Chief position to oversee personnel issues, schedule training, and provide leadership when the Fire Chief is unavailable
2. Reestablish the Emergency Medical Services (EMS) Captain to directly oversee the QA/QI of the City's paramedic program
3. Reclassify the Office Assistant position in Fire Administration to a Senior Administrative Assistant to provide improved administrative support for the Fire Chief, Battalion Chiefs, and EMS Captain
4. Reclassify the Management Assistant position to a Management Analyst position due to the type of work being performed in support of the Fire Chief
5. Consider adding two Battalion Chiefs when the City begins construction on an 8th fire station

## FIRE PREVENTION

The Fire Marshal, under direction of the Fire Chief, manages the Fire Prevention Bureau. The Fire Prevention Bureau conducts fire and life safety inspections as well as plan reviews for new construction, existing buildings, and special events. The Bureau also oversees the City's Hazard Abatement Program and Multi-Family Residential Inspection Program to ensure multi-housing units receive state mandated annual inspections.

Fire Prevention is the second largest division of the Fire Department consisting of five non-sworn full time personnel and six non-sworn part time personnel. The division also has five defunded positions due to budget constraints.

### Goal 1: Fiscal Sustainability

A brief overview of the fees charged for plan review and inspection of new development, existing construction, and hazard abatement shows that the City does not recover 100% of the costs associated with providing the staff and materials for these programs. As state legislation allows the City to recover all costs associated with providing these services, the Fire Department will continue to review the costs associated with performing these services and increase fees where appropriate.

***Strategies***

1. Examine cost recovery options that would lead to a cost neutral business model
2. Review fire fees to ensure appropriate cost recovery for services provided

3. Establish an appropriate fee schedule for the Multi-Family Residential Inspection Program

## Goal 2: Ensure All Business and Commercial Occupancies Receive Annual Fire and Life Safety Inspections

Both Fire Prevention and Fire Operations perform annual fire and life safety inspections on business and commercial occupancies in Moreno Valley, however, not all of these occupancies receive an annual inspection. Currently, Fire Prevention is conducting a windshield survey to capture 100% of the businesses in Moreno Valley that are required to have annual fire and life safety inspections, including multi-family residential complexes.

### *Strategies*

1. Complete the windshield survey to create a database that captures every business and commercial occupancy in the City
2. Ensure each occupancy that is required to have an annual fire and life safety inspection is assigned to a Fire Prevention Technician, Fire Prevention Inspector, or Fire Engine Company each year
3. Examine the use of new technology applications, such as iPad based inspection software, in order to automate inspection process, scheduling, and data entry

## Goal 3: Perform Hazard Abatement Inspections Bi-Annually

The Fire Prevention Bureau conducts a hazard abatement inspection program on all vacant parcels of land in Moreno Valley on an annual basis. This process begins in the spring and concludes in the early summer. Typically, due to the climate conditions that exist in Moreno Valley, regrowth of grasses and tumbleweeds occur in early fall. Due to budget constraints, the Fire Prevention Bureau addresses the fall hazard abatement program on a case by case basis rather than performing a comprehensive, proactive city wide inspection program.

### *Strategies*

1. Establish a Fall season hazard abatement program to address the accumulation of tumbleweeds and regrowth of vegetation from the Spring hazard mitigation efforts

## Goal 4: Provide Efficient Plan Review

The Fire Prevention Bureau currently utilizes a 3rd party consultant to review all technical plans submitted to the City. All non-technical site review plans are reviewed by the City's Fire Safety Specialist. The Fire Prevention Bureau is examining a variety of measures to improve customer service including decreasing the turn-around times for initial review as well as evaluating the current fee schedule. The Fire Prevention Bureau is also investigating the utilization of electronic plan check submittal as an avenue for improving customer service.

***Strategies***

1. Examine methods for improving the Bureau's efficiency in reviewing building plans, such as electronic plan review and web based plan submittals
2. Develop an "Over the Counter" plan review pilot program for reviewing non-technical plans in order to reduce plan check turnaround times and decrease the cost to the customer

## Goal 5: Evaluate Management Structure and Career Advancement within the Bureau

The Fire Marshal oversees five full time staff members and six part time staff. Over the last three years the Fire Prevention Bureau has been assigned the City's Hazard Abatement program and has recently implemented an inspection program to ensure every multi-family residential housing unit is inspected annually in accordance with state law. In order to improve supervision of field staff, the Fire Prevention Bureau has identified the need to re-establish the Deputy Fire Marshal position. Additionally, in order to promote staff from within the Bureau, the Fire Marshal will identify training opportunities for staff to improve their qualifications for career advancement.

***Strategies***

1. Identify a revenue stream to re-establish funding for the Deputy Fire Marshal position
2. Develop a level of succession to meet the needs of the Bureau

# OFFICE OF EMERGENCY MANAGEMENT

The Fire Department's Office of Emergency Management is responsible for minimizing the impact of natural and man-made disasters by establishing readiness through city-wide prevention, preparedness, response, recovery and mitigation. This includes coordinating and conducting drills for the City's Emergency Operations Center (EOC) as well as providing a wide variety of training to both employees including Community Emergency Response Team (CERT) training, Terrorism Awareness training, and emergency preparedness training.

As part of the Moreno Valley Fire Department, and hence the Riverside County Fire Department, it is critical that the City's Office of Emergency Management collaborates projects, emergency management grants, emergency management exercises, and the management of declared local disasters with the Riverside County Fire Department Office of Emergency Services. Having an integrated, cooperative approach for addressing regional disasters benefits the community as resources can be allocated to areas where they are most critically needed during a major incident.

## Goal 1: Provide Training to Employees and Citizens

Unfortunately, disasters take place all the time around the United States and the world. These can be naturally occurring disasters such as hurricanes, floods, wildfires, and tornados, or they can be man-made events such as terrorism attacks. It is very important that all City employees are

trained in their roles and responsibilities as disaster service workers and, even more importantly, that the citizens of Moreno Valley are trained so they are better able to provide for themselves and their families after a major event.

***Strategies***

1. Continue to conduct 2 ½ day Federal Emergency Management Agency (FEMA) CERT training a minimum of four times a year
2. Continue to provide emergency preparedness outreach activities to the community and utilize Riverside County Fire Office of Emergency Services as an additional training resource
3. Evaluate reinstating the City's CPR and First Aid program as cost neutral, alternative funding sources are identified
4. Work with the Riverside County Fire Public Information Officer and the City's Media & Community Division to have Earthquake Preparedness videos presented on the City's Government Access Channel, MVTV-3, as well as to place relevant emergency preparedness information on the City's website
5. Define priorities, develop and implement a five year emergency management exercise program
6. Utilize resources from the Riverside County Fire Office of Emergency Services to provide National Incident Management System (NIMS) training requirements
7. Continue NIMS training of City employees
8. Coordinate and manage citizen sworn disaster servicer workers

## Goal 2: Incorporate Federal and State Legal Mandates and Standards into City Emergency Management Strategies

The Robert T. Stafford Disaster Relief and Emergency Assistance Act is a federal law designed to bring an orderly and systemic means of federal disaster assistance to state and local governments to assist them in carrying out their responsibilities to aid citizens. Congress' intention was to encourage states and local governments to develop comprehensive disaster preparedness plans, prepare for better intergovernmental coordination, and provide federal assistance programs for losses due to a disaster. There are several other pieces of legislation, such as the Emergency Services Act of 2006, that place mandates on local governments to ensure that local areas are prepared to respond to an emergency effectively and proficiently.

***Strategies***

1. Utilize the NIMS Capability Assessment Tool (NIMSCAST) process in developing NIMS compliancy
2. In coordination with the Riverside County Fire Office of Emergency Services and the California Emergency Management Agency (Cal EMA), complete NIMS resource typing and credentialing requirements
3. Update the City's Emergency Action Plan
4. Update the City's Local Hazard Mitigation Plan for submittal to FEMA by October 2016

5. Maintain an effective Emergency Operations Plan (EOP) consistent with local needs as well as state and national requirements

## Goal 3: Continually Improve Emergency Operations Center (EOC) Functions and Capabilities Based on a Comprehensive Assessment

In order for the City to quickly and effectively manage any disaster it is essential to continually evaluate and improve the EOC to ensure it is in a constant state of readiness and to provide appropriate training to City staff.

### *Strategies*

1. Improve and test EOC Standard Operating Procedures
2. Train EOC staff on updated protocols
3. Build personnel depth in EOC functional areas
4. Maintain and test City emergency management equipment and supplies to ensure the City remains in a constant state of readiness

## Goal 4: Manage FEMA and State Disaster Recovery Projects to Ensure Timely Completion of Required Documentation

Large disasters such as Hurricane Katrina, the Loma Prieta Earthquake and the Northridge Earthquake have a major impact on local residents, the government, and the impacted areas' economic activity and base. The City of Moreno Valley expends resources in preparing for, responding to, and recovering from a disaster event. As an event progresses from preparatory activities to response activities to post event recovery, it is critical that the City maintains appropriate records to ensure that Moreno Valley can successfully recover costs associated with the disaster from federal and state disaster assistance programs. Appropriate documentation will also prepare the City to apply for future Hazard Mitigation Grants from the federal government.

### *Strategies*

1. Coordinate with departments to provide accurate information for Preliminary Damage Assessment and appropriate documentation for Project Worksheets
2. Complete close out documentation and coordinate a FEMA review of completed projects

## Goal 5: Maintain Effective Coordination and Partnerships with Local, Regional, and State Agencies

Maintaining and strengthening the City's relationships with various local, regional, and state agencies is vital to effectively coordinating emergency responses during disasters. The ability to interact with other jurisdictions, jointly perform emergency management exercises, and discuss regional response scenarios is vital to ensuring that not only do the citizens of Moreno Valley

receive assistance during a major disaster but also that the region receives assistance where it is most critically needed. More importantly, the City's Office of Emergency Management will need to work closely with the Riverside County Fire Office of Emergency Services to ensure preparedness activities as well as disaster responses are more regional in concept and in application.

***Strategies***

1. Participate in operational area, regional, and strategic planning activities
2. Provide feedback and participate in coordinated multi-jurisdictional/multi-agency exercises
3. Coordinate emergency response preparedness, exercises, and other activities with Riverside County Fire Office of Emergency Services, Riverside County operational area agencies, Cal EMA, and other local and regional stakeholders such as the school districts, hospitals, and March Air Reserve Base

## FIRE FACILITY AND EQUIPMENT MASTER PLAN

Evaluating the existing and future infrastructure requirements for the Moreno Valley Fire Department is vital to ensuring the safety and protection of lives and property for the citizens of Moreno Valley. Having the appropriate facilities and equipment available are critical to the effective operation of the Moreno Valley Fire Department. As part of this strategic plan, the Fire Department is providing a ten year master plan for fire department facilities, equipment needs, and the importance of traffic mitigation.

### FIRE FACILITIES

The Moreno Valley Fire Department participates in the City's Capital Improvement Project (CIP) budget each fiscal year. This budget identifies the fire facilities that are to be constructed in the next five fiscal years as well as future fire station locations and CIP needs (see Table 2 on page 24). Due to the size of Moreno Valley and the projected population at build out it is estimated that the City will need to plan for the construction of a total of 12-13 fire stations with a possible 14$^{th}$ fire station as an in fill fire station. The exact locations for all the necessary fire stations to provide adequate fire and medical aid responses to Moreno Valley residents and businesses will be determined utilizing the fire station methodology on page 8. The Fire Department has already identified the exact locations for the eighth and ninth fire stations which are located on the map on page 11.

In addition to building new facilities in accordance with the fire station methodology illustrated on page 8, the Fire Department needs to maintain its existing facilities as each fire station is expected to have a 50 year life span. This requires fire station personnel to continue to maintain these facilities at their current levels and to work with the Facilities & Maintenance Division to ensure the appropriate preventive maintenance work is being performed on the buildings.

The two oldest fire stations in Moreno Valley, Fire Station 48 and Fire Station 65, were built in the mid 1980's. Fire Station 65 is slated to be relocated in the next five to ten years as the southern area of the City continues to grow. Due to the construction of warehousing and distribution centers in that region of Moreno Valley, the Fire Department will need to build the Industrial Fire Station to provide adequate fire and emergency medical response coverage to that area. In order to maintain appropriate response times and emergency response coverage in the City, Fire Station 65 will need to be relocated northwest from its current location to accommodate the emergency response area of the Industrial Fire Station.

| Description of Project | Projected Fiscal Year to Begin | Estimated Cost |
|---|---|---|
| Morrison Park Fire Station, Fire Station #99 | FY 2010-11 | $5,925,460 |
| Remodel Fire Station 48 | FY 2013-14 | $4,173,000* |
| Relocation of Fire Station 65 (Note land acquisition occurred in FY 2011-12) | FY 2015-16 and Beyond | $7,540,000 |
| Redlands Boulevard Fire Station (Note land acquisition occurred in FY 2011-12) | FY 2015-16 and Beyond | $7,640,000 |
| Industrial Fire Station with Training Tower (Note land acquisition occurred in FY 2011-12) | FY 2015-16 and Beyond | $8,350,000 |
| Public Safety Conversion – Includes Expansion of Fire Administration | FY 2015-16 and Beyond | $107,639,939 |
| Cottonwood Park Fire Station – Infill Fire Station | FY 2015-16 and Beyond | $6,760,000 |
| Fire Station (Future) Land Acquisition | FY 2015-16 and Beyond | $739,000 |
| Gilman Station (Future) | FY 2015-16 and Beyond | $6,500,000 |
| Northeast Station (Future) | FY 2015-16 and Beyond | $6,500,000 |
| Fire Station 6 Storage Shed | FY 2015-16 and Beyond | $150,000 |
| **Total Estimated CIP Costs** | | **$161,917,399** |

Table 2: Fire Department Capital Improvement Projects as Listed in the FY 2011-12 CIP Book
*Cost for the Fire Station 48 remodel is being reevaluated for the FY 2012-13 CIP

The current CIP proposes a major remodel/renovation of Fire Station 48 in FY 2013-2014 to extend the life span of the current facility. This remodel would include bathroom renovations to comply with ADA requirements; semi-privatization of sleeping quarters for privacy and modesty; kitchen renovations; and construction of an exercise room. A funding source for this project has yet to be identified.

## FIRE APPARATUS

The Moreno Valley Fire Department currently has six fire stations staffed by six fire engines and two aerial apparatus (also known as truck companies) that respond to emergency calls for service

such as fires, medical emergencies, traffic accidents natural and manmade disasters, hazardous materials incidents, and rescue emergencies. A seventh fire station is slated to open in October of 2012 and will minimally be staffed with a fire engine.

Fire engines provide the initial response to any request for emergency service. These fire apparatus are staffed with paramedic firefighters to provide advance life support care for any medical emergency. Additionally, when responding to a fire, their primary responsibilities include laying water supply lines; locating, accessing, and extinguishing the fire; search and rescue if no truck company is available; and assisting in the overhaul and salvage. Truck companies provide search and rescue; forcible entry; a rapid intervention crew (RIC) in case of a building collapse; ventilation of smoke and hot gases; aerial water application; staffing to augment the engine company compliment; and provide backup response to emergency calls for service when engine companies are committed elsewhere.

Truck company personnel are trained to a higher level than fire engine personnel due to the nature of the calls they respond to. These incidents include swift water rescue, low angle rescue, high rise incidents, wide rise incidents, confined space rescue, and trench rescues. Truck companies also carry equipment not normally located on a fire engine. This equipment includes heavy rescue equipment, confined space rescue equipment, low angle rescue equipment, auto extrication equipment (Jaws of Life), a variety of ground ladders, smoke removal fans, and large water delivery appliances.

On an initial report of a fire there is an automatic dispatch of three fire engines, one truck company, and one Battalion Chief for a total of 13 personnel. When the fire is confirmed to be a working fire, there are two additional units dispatched providing a minimum of 19 fire personnel on scene per Riverside County Fire Department Policy which results in a total of 6 fire apparatus and one Chief Officer committed to the incident. This leaves a total of two fire apparatus available for dispatch in the City until Riverside County Fire is able to move up additional fire apparatus from neighboring jurisdictions to cover the City's vacant stations. This process could take up to 30 minutes, and not every vacant station in the City would be covered by the County or other local agencies.

The City participates in a cooperative, regionalized fire and rescue delivery system with the Riverside County Fire Department through the fire services contract the City has with the County. As part of this regionalized system, additional resources are available from the County and surrounding jurisdictions to Moreno Valley when there is an emergency in the City that is utilizing a majority of the City's resources. This allows some of the City's vacant fire stations to be staffed with fire apparatus from surrounding cities or from the County. Conversely, the City provides fire apparatus to local jurisdictions when they are experiencing either a major incident, or a series of incidents, that has left very few, if any, fire resources available for dispatch in that area. Through the Master Mutual Aid Agreement, the City is obligated to provide fire apparatus to other jurisdictions to assist in handling emergency calls for service, just as those jurisdictions are obligated to provide resources to the City.

As future fire stations are constructed to address new residential, commercial, and industrial development the Fire Chief will need to evaluate what existing fire stations and apparatus can

service the newly developed areas. This includes considering the ability to provide an emergency response into the new planning area within 5 minutes of receiving a dispatch from the Emergency Command Center and the ability to have an aerial apparatus on scene within 8 minutes of dispatch for any reported fires.

As new specific plans are submitted for the developing areas on the east end of Moreno Valley the Fire Department will need to consider what types of occupancies will be built; square footage of any commercial or industrial complexes, the number of new residential complexes that will be built; development of the roads servicing the area; and population increases in that area in order to appropriately staff any existing fire station or new fire station. This information will be utilized to determine what type(s) of fire apparatus will need to be purchased in order to provide adequate fire protection and emergency medical services to the new development area. The table below shows recommended first alarm responses for fires at high-hazard, medium-hazard, and low-hazard occupancies.

### TRAFFIC MITIGATION

Traffic is, and will continue to be, an issue in the City of Moreno Valley. Traffic affects the safety of both firefighters and citizens in the community as well as response times to emergency calls for service and increases equipment wear. A recently published study by the United States Fire Administration, and the Department of Homeland Security, reported that since 1984 the percent of firefighter fatalities attributable to vehicle accidents has ranged annually from 20% to 25%. The same study discussed the importance of controlling traffic flow through an intersection to ensure the safety of the emergency responders as this is when emergency vehicles are most likely to be involved in an accident.

The City currently has 172 active traffic signals. Forty-two of these traffic signals have an emergency vehicle preemption system installed on them so that when an emergency vehicle equipped with a transponder can trigger a traffic signal to either remain green or turn a red light to green so that an emergency vehicle can traverse a signalized intersection with the right of way.

On December 6, 2011 the City's Public Works Department began the process to retrofit 115 intersections with an emergency vehicle preemption system, known as Opticom. It is estimated that this project will be completed in June 2012. Once the installation is complete, the Public Works Department will then budget funding to install Opticom at the remaining 15 intersections. At the direction of City Council, all new signalized intersections will have Opticom installed so that the City will have 100% of its signalized intersections covered by an emergency vehicle preemption system. This will vastly increase the safety to firefighters, the community, and reduce response times.

## EMERGENCY MEDICAL DISPATCH

Emergency medical dispatch (EMD) is a recognized structured system used to determine the nature and severity of a medical problem, prioritize it so the appropriate level of Emergency Medical Services is dispatched safely, and provides the caller with instructions on how to assist

the patient until emergency medical services arrive. The system also allows dispatchers, based on a set of protocol and answers obtained from the caller, to triage emergency calls for service and dispatch a tiered level of emergency response. This reduces the risk to firefighters when responding to emergencies and also keeps units available for more urgent calls for service.

Dispatchers are the primary link between the public, who are in need of emergency medical care, and firefighters/ambulance personnel who can provide the required level of medical care. Dispatchers who utilize emergency medical dispatch protocols can assist with the immediate implementation of CPR, airway maintenance, hemorrhage control, emergency birthing instructions for women in labor, c-spine precautions, treatments for heat related or cold related emergencies, and auto injectors (Epi-pens) for allergic reactions.

Not all Public Safety Answering Points (PSAP) provide this service. In Riverside County only the cities of Riverside and Corona provide this service. In 2012, the Riverside County Fire Department Emergency Command Center will begin instituting several of the protocols associated with EMD. Riverside County will then look at utilizing EMD as a way to triage calls for service in order to dispatch the appropriate level of medical care, allowing fire apparatus to remain ready for emergency calls that may be more serious in nature. This system may also be used for coordinating a tiered level of response to fires.

## FUTURE CONSIDERATIONS

The goal of any strategic plan is to map out the future direction for the Fire Department. Over the next ten years there will be items that will need to be discussed with the Riverside County Fire Department and with City Council in order to better serve the needs of the community and the needs of firefighting personnel. These items include:

- Construction of a training/drill tower
- Four person staffing
- Paramedic squads
- Dividing the City into two battalions
- Riverside County Fire Department fire apparatus lease program

### CONSTRUCTION OF A TRAINING/DRILL TOWER

The Ben Clark Training Center, located at 16791 Davis Avenue in Riverside, is a regional training center for both law enforcement agencies and fire departments. The drill tower at this location is a regional training tower serving not only the Riverside County Fire Department but also the students at Moreno Valley College.

When utilizing the training tower, three fire apparatus are out of service in the City due to the distance they would need to travel from the Ben Clark Training Center back to Moreno Valley to respond to an emergency call for service. A local training tower would allow fire apparatus to stay within the city limits of Moreno Valley for multi-company training and be available to respond to emergencies.

Furthermore, training could be scheduled more frequently for City personnel. Being able to drill on a daily or weekly basis is an important component of building an effective and efficient fire ground operation for when a fire emergency occurs. The main benefit to being able to train more frequently for high rise emergencies is that it raises the level of safety for fire personnel. Additionally, they are able to provide a more organized response to high hazard incidents which can ultimately affect the outcome of the emergency situation.

Having a training tower located in Moreno Valley has been recognized in the City's Capital Improvement Project (CIP) budget since 1992 when the Fire Chief at the time requested its construction as part of the ten year CIP with construction to begin in Fiscal Year 1998–99. Due to financial considerations, and the size of property that would need to be purchased to accommodate a joint fire station and drill tower, the fire department has continuously deferred this project. However, with the pending land acquisition in the south end of the City of 4.78 acres, there is now not only the appropriate land size available but also the location is ideal as it is not near a residential development. The fire station and drill tower will be constructed shortly after Fiscal Year 2015-16.

## FOUR PERSON STAFFING

A landmark study released by the National Institute of Standards and Technology (NIST) released in 2010 confirms that the size of fire fighting crews has a substantial effect on the fire service's ability to protect lives and property in residential fires. Conducted by a broad coalition in the scientific, fire fighting and public safety communities, the study results found that four person fire fighting crews were able to complete 22 essential fire fighting and rescue tasks in a typical residential structure 30% faster than two person crews and 25% faster than three person crews. This study was the first to quantify the effects of crew sizes and arrival times on the fire service's lifesaving and fire fighting operations.

Additionally, the Fire Department is subject to the Federal Regulation 1910.134 issued by the U.S. Department of Labor, Occupational Safety and Health Administration (OSHA) which requires two firefighters to enter a burning building together and two firefighters to be outside the building who are able to render immediate assistance should a rescue need to be made. This is commonly called the "two in/two out" rule. As the City staffs all fire engines with three fire personnel and the truck companies with four fire personnel, the engine is oftentimes waiting for the arrival of another fire apparatus in order to safely enter a burning building. The impact of not having essential equipment on scene in a timely manner could lead to an increase in the amount of property loss due to fires and potentially increase the loss of life should anyone be trapped inside. There is also an inherent risk to the firefighters the longer it takes to initiate an interior fire attack due to flashover conditions typically developing within 8 minutes of the start of a fire.

While the Fire Department desires to have four person staffing on all fire apparatus to increase the effectiveness of fire fighting operations it is unlikely that this will occur in the next five to ten years due to the economic situation in Moreno Valley and the cost associated with increasing staffing from three fire personnel on a fire engine to four. Utilizing information from the City's

contract with Riverside County Fire for Fiscal Year 2011-12, the cost per engine company per year would be $419,972 to add an additional firefighter or a total of $2,939,804 when accounting for the six fire engines the City currently staffs and the seventh fire engine that will be staffed when the Morrison Park Fire Station opens in 2012.

The City will need to consider the importance of increasing staffing to four person fire engine crews versus the importance of opening additional fire stations as calls for service increase due commercial and industrial buildings being constructed and population growth. With the approximate operating costs for a three person staffed engine company at $1.1 million a year, in theory, the City could staff two fire engines at two new fire stations with the savings from having three person staffed engine companies versus four person staffed engine companies. The Fire Chief is estimating the City will need to build its next two fire stations within the next eight years given the projected population growth and increase in commercial development for Moreno Valley.

The Fire Chief does recommend that the City, and specifically City Council, be aware of the importance of staffing fire engines with four fire personnel versus three and consider upgrading to four person staffing as economic conditions permit. The Fire Chief will work with the City to determine a way to balance the need to increase staffing to four person fire engine companies with the need to open new fire stations. One possibility for meeting the need to increase staffing for safer fire ground operations is presented in the Paramedic Squad section below.

## PARAMEDIC SQUADS

The City's six fire engines are staffed with firefighter paramedics who provide advance medical care for medical emergencies and trauma. As calls for service continue to increase in the City of Moreno Valley, the Fire Chief will need to consider adding additional fire emergency response units to the existing fire stations in order to provide adequate personnel and equipment for emergency responses. As 84.4% of the Fire Department's emergency calls for service are for medical emergencies it is possible that the additional equipment would consist of a paramedic squad in lieu of a fire engine or fire truck.

One advantage to a paramedic squad is that it will allow for a tiered level of response for both medical and fire emergencies as discussed in the Emergency Medical Dispatch section of this strategic plan. The paramedic squads will also provide additional coverage at the busier fire stations for medical responses requiring advance life support and will provide more staffing for fire ground operations. Finally, there is a cost savings to both purchasing and staffing a paramedic squad. The cost for a paramedic rescue squad and its equipment is $92,907, which is over $400,000 less than the cost of a paramedic fire engine. Additionally, a squad is staffed with two Firefighter Paramedic personnel versus a fire engine that is staffed with one Fire Captain, one Fire Apparatus Engineer, and one Firefighter Paramedic. The cost for two Firefighter Paramedic personnel to cover the paramedic rescue squad seven days a week is estimated at $625,000, which is a 52% savings in personnel costs versus a paramedic fire engine which is approximately $1.2 million a year.

## DIVIDING THE CITY INTO TWO BATTALIONS

The Moreno Valley Fire Department's Battalion Chiefs are responsible for the management of the City's six fire stations and 69 firefighting personnel, with one Battalion Chief on duty at all times. With the level of emergency activity in a city as large and complex as Moreno Valley, when the Morrison Park Fire Station opens in October 2012, the Fire Department will be at its upper most limit for reasonable efficiency expectations for a single battalion with only two Battalion Chiefs supervising field staff.

In order to provide appropriate supervision to field staff, accomplish administrative tasks, and respond to emergency calls for service, the Fire Chief will need to consider splitting the City into two battalions and adding two additional Battalion Chiefs when construction begins on an 8th fire station as the span of control for two Battalion Chiefs will be exceeded when the fire station opens and additional personnel are added. Battalion Chiefs ensure that fire stations are maintained, schedule personnel for training, investigate complaints from the public, and a variety of other administrative tasks in addition to providing operational expertise on the fire grounds. As the number of personnel and fire stations are expanded, the Fire Department need to hire additional Battalion Chiefs to ensure that the myriad of administrative tasks assigned to Battalion Chiefs as well as supervision of employees can be accomplished in an efficient and effective manner.

## RIVERSIDE COUNTY FIRE APPARATUS LEASE PROGRAM

The City of Moreno Valley currently owns three of the six fire engines present in the City as well as the two 100' aerial ladder companies and one 75' quint that is a reserve ladder truck. The cost to purchase and equip a fire engine is estimated at $545,000 and is depreciated over 10 years. In order to cover the replacement cost of the fire engine, the City's Finance department charges the Fire Department an amount equal to the purchase price of the fire engine and its equipment divided by ten each fiscal year. Currently, this would be $54,500 per year for a new fire engine. The vehicle equipment replacement account allows the Fire Department to replace vehicles as needed once they have reached the end of their useful life span.

Three of the City's fire engines are leased from the County of Riverside at a cost of $19,200 per year per vehicle and includes preventive maintenance as well as the cost of both minor and major vehicle repairs. If the City was to transfer the title of the City owned fire engines to the County, the City would save $35,300 each year in vehicle replacement costs. Additionally, the City would save money on the repair of City owned fire engines as the City currently budgets money for any repair that exceeds $5,000. Should an expensive item such as a transmission or axle break on a fire engine the City would need to pay for the cost of the repair. For any leased fire engine the County is responsible for the maintenance of the vehicle and all vehicle repair work. This is a major benefit to the City as the Fire Department would no longer need to budget for expensive vehicle repairs. Furthermore, while it would be a minor savings, the City would no longer need to insure the City owned fire engines. The total insurance cost savings to the City would be $4,960 annually.

Under this program, the City would still need to make the initial purchase of the fire engine, and then transfer the title to the County. Once the title is transferred to the County it is then becomes the responsibility of the County to allocate the appropriate funding to replace the fire engines in the future and to budget for all vehicle repair costs. The County depreciates their vehicles over 20 years, however, when the fire engines reach a certain age, mileage, or condition it is placed into reserve status to extend its useful life to reach the full 20 years

Vehicles that are not covered by this program include the City's two 100' aerial ladder trucks and the 75' quint. The City will still be required to budget for any repair exceeding $5,000 on these two vehicles as well as budget for their replacement.

## SUMMARY

This strategic plan lays the foundation for the development of the Moreno Valley Fire Department over the next ten years by identifying five goals for Fire Operations as well as five goals each for Fire Prevention and Fire Operations. These goals are:

### FIRE OPERATION GOALS

- ***Goal 1:*** Financial Management and Accountability
- ***Goal 2:*** Arrive On Scene within 5 Minutes of Dispatch 90% of the Time
- ***Goal 3:*** Reduce the Risk of Fire to Residents through Prevention Campaigns and Mitigation Efforts
- ***Goal 4:*** Maintain a Strong Partnership with Riverside County Fire Department
- ***Goal 5:*** Ensure Fire Administration Staffing is Sufficient for the Needs of the Department

### FIRE PREVENTION GOALS

- ***Goal 1:*** Fiscal Sustainability
- ***Goal 2:*** Ensure All Business and Commercial Occupancies Receive Annual Fire and Life Safety Inspections
- ***Goal 3:*** Perform Hazard Abatement Inspections Bi-Annually
- ***Goal 4:*** Provide Efficient Plan Review
- ***Goal 5:*** Evaluate Management Structure and Career Advancement within the Bureau

### OFFICE OF EMERGENCY MANAGEMENT

- ***Goal 1:*** Provide Training to Employees and Citizens
- ***Goal 2:*** Incorporate Federal and State Legal Mandates and Standards into City Emergency Management Strategies
- ***Goal 3:*** Continually Improve Emergency Operations Center Functions and Capabilities Based on a Comprehensive Assessment
- ***Goal 4:*** Manage FEMA and State Disaster Recovery Projects to Ensure Timely Completion of Required Documentation

- ***Goal 5:*** Maintain Effective Coordination and Partnerships with Local, Regional, and State Agencies

This plan also identifies five key areas that need to be considered as the City continues to grow. These items will need to be assessed over the next decade and potentially implemented in order to provide quality services to Moreno Valley. These areas are:

- Construction of a training/drill tower
- Four person staffing
- Paramedic squads
- Dividing the City into two battalions
- Riverside County Fire Department fire apparatus lease program

Finally, the Moreno Valley Fire Department is a dynamic organization that must be able to react to change, resolve problems, and work together with other departments and agencies on issues that might arise. The intent of this plan is to serve as a guide for the Fire Department's development over the next ten year. It also serves as the foundation document for informing City Council as to the direction the Fire Department is headed in order to ensure the community continues to receive outstanding fire protection services. The Fire Department will review this plan biennially to ensure the goals outlined in this plan are being met.

# EXECUTIVE SUMMARY

## I. PURPOSE OF STUDY

The objective of this Fiscal and Economic Impact Study (the "Study") is to analyze the fiscal and economic impacts of the proposed development of the World Logistics Center (the "Center" or the "Project") on the City of Moreno Valley ("City") and the County of Riverside ("County"). The Center is comprised of 40.4 million building square feet of high-cube industrial land use, 200,000 building square feet of general warehouse space, and 3,000 building square feet of light retail space providing basic fuel, food, and vehicle maintenance services for trucks. The Study analyzes the recurring fiscal impacts of the Center's development on the City General Fund, and also identifies the general economic impacts on the City in terms of employment, gross receipts, and earnings creation for City residents and workers.

## II. TYPES OF FISCAL AND ECONOMIC IMPACTS TO CITY OF MORENO VALLEY EVALUATED IN THE STUDY

### A. FISCAL IMPACTS ON CITY OF MORENO VALLEY GENERAL FUND

The purpose of the fiscal analysis component of this Study is to estimate the net fiscal impacts of the Center's proposed development and construction on the City General Fund. The fiscal impacts identified in this Study include recurring municipal revenues and costs to the City General Fund that result from the land use scenario analyzed. City General Fund revenues are generated from a variety of revenue sources, including property taxes, sales taxes, fees, and fines. Costs to the City General Fund are associated with a variety of services, such as police protection, fire protection, public works maintenance, and general government services. While the City also expends revenues from a series of other special funds outside of the General Fund, these revenues include a Moreno Valley Library property tax, Community Services District and Community Facilities District assessments and special taxes, and various enterprise funds related to water and sewer services. As these revenues are generally equal to the cost of the services that they finance, they are essentially break-even and are not typically included in a fiscal analysis for a municipality. As a result, most fiscal analyses focus on the General Fund, where any shortfalls or surpluses can be easily identified, and such is the case for this Study.

However, in preparing the Center's fiscal analysis, DTA did notice certain anomalies occurring related to the Moreno Valley Fire property tax, in that the revenues generated by this special fund appear to be significantly greater than the fund's expenditures on fire services to be provided by the City to the Center. While the projected fiscal surplus generated by the Moreno Valley Fire property tax fund was not included in the General Fund analysis, DTA felt that a brief discussion of this revenue source within the text of the Study would better inform the public regarding the entire fiscal impact of The Center on the City.

The fiscal analysis focuses on the impacts of the Center on the General Fund if it were built during fiscal year 2012-13, based on cost and revenue criteria and assumptions existing during that fiscal year. As is the case for most General Fund fiscal analyses, it would be speculative to

project future cost and revenue factors because there is no certainty regarding what those factors will be. For example, while the City will be increasing its annual costs as it eliminates a furlough program that it established during the Great Recession, the Center itself is expected to generate additional revenues in future fiscal years due to increases in logistics facilities property values above the $90 per square foot assumed in the Study. Based on a recent appraisal prepared by Coldwell Banker, the Center site's property valuation has already increased by more than 10%. Assumptions made regarding the relative levels of cost and revenue increases for factors such as these in future years would typically create a bias in the fiscal analysis that could in itself invalidate the results of the Study.

### B. ECONOMIC IMPACTS ON CITY OF MORENO VALLEY

The Study also identifies the general economic impacts on the City that would occur and quantifies these impacts wherever possible. General economic impacts include additions to the City's employment (number of average annual full- & part-time jobs), economic output (e.g., gross receipts), and earnings (the sum of wages, salaries and benefits, other labor income, and employer and employee contributions to social security). The Study also distinguishes between one-time impacts and permanent impacts. One-time impacts include benefits to the City that occur on a non-recurring basis as a result of construction activity, while permanent impacts refer to benefits that occur on a continuing basis, year after year.

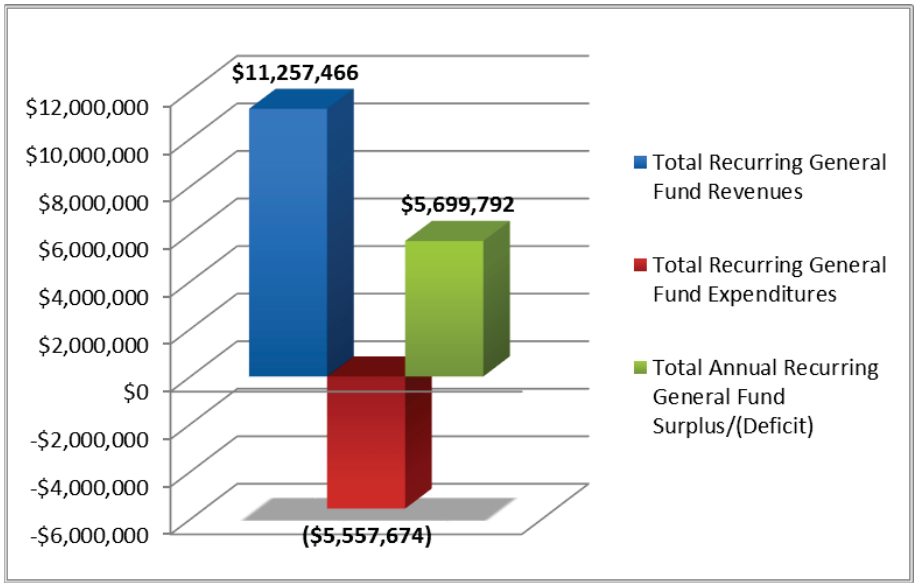
## III. DESCRIPTION OF WORLD LOGISTICS CENTER

The Center is located in the City and is comprised of approximately 40.6 million building square feet of industrial land use. The specific land uses are broken down into two categories: Logistics Development ("LD"), and Light Logistics ("LL"). The LD category covers 2,383 acres and is designated for high-cube logistics uses. Traffic analyses presume that buildings in this area will be a minimum of 500,000 square feet in size. The Center includes up to 40.4 million square feet of logistics uses in the LD category. Correspondingly, the LL category covers 37.1 acres and is designated for general warehouse uses. There is no minimum building size in this category. The Center's Specific Plan ("Specific Plan") permits up to 200,000 square feet of general warehouse space in the LL category. Within the LD category, a Logistics Support ("LS") site will be allocated 3,000 square feet of building area and will be a "floating site" in the Specific Plan; the final site will be determined when development plans/tentative maps are designed. The LS site will accommodate fueling facilities, and fast food.

The Center is located in Rancho Belago, California, at the eastern edge of the City. The Center will require the construction of significant new infrastructure, financed through public and/or private funds, to be ultimately owned by the City and maintained by the City's General Fund. At this time, it is estimated that these public infrastructure improvements will consist of 54 lane miles of roadways, 75 acres of landscaped parkways and medians, 4 signalized intersections, and 18.1 linear miles of storm drains. Please refer to **Table 2E** for further information on these public improvements.

# IV. CONCLUSIONS OF ANALYSIS RELATED TO CENTER

Following are the major conclusions related to the fiscal and economic impacts of the Center:



## A. FISCAL IMPACTS

As reflected in **Table A** and **Figure A** below, the positive Net Fiscal Impact is estimated to be $5,699,792 annually, based on $11,257,466 in fiscal revenues and $5,557,674 in fiscal costs. This fiscal surplus results primarily from property tax in lieu of VLF revenues (40.2% of total) and property tax revenues (secured and unsecured) (32.0%), together constituting approximately 72.2% of total recurring revenues to the City General Fund. The Annual Revenue/Cost Ratio of 2.03 is especially impressive, and demonstrates, inter alia, that the Center will have a very positive impact on the City's General Fund. In comparison, the City's General Fund currently runs a Revenue/Cost Ratio of ~0.94. Notably, the City's costs are limited due to the fact that the Center will not create any new residents, i.e., it is a purely industrial development.

**TABLE A**
**NET FISCAL IMPACT (CITY GENERAL FUND)**

| Category | Amount |
|---|---|
| Total Recurring Revenues | $11,257,466 |
| Total Recurring Costs | ($5,557,674) |
| **Annual Recurring Surplus/(Deficit)** | **$5,699,792** |
| *Total Annual Revenue/Cost Ratio* | *2.03* |

**FIGURE A**
**NET FISCAL IMPACT (CITY GENERAL FUND)**

However, the picture of the fiscal impacts of the Center on the City is incomplete if one just analyzes the General Fund, because in the case of the Center, a Moreno Valley Fire property tax will be collected by the City that greatly exceeds the cost of fire services provided by the City to the Center. While the average fire services costs City-wide for a project of the magnitude of the Center would be $94.50 per Persons Served (including both General Fund and Moreno Valley Fire property tax revenues), the actual funding for fire services from these two sources for the Center totals $272.11 per Persons Served. **This means there will be an excess of $177.61 per Persons Served generated by the Center, or $1,803,274 recurring annually that can be spent on fire services in other parts of the City. Adding this $1.80 million Moreno Valley Fire property tax surplus to the $5.70 General Fund surplus yields a total annual recurring surplus of $7.5 million generated by the Center.**

## B. ECONOMIC IMPACTS

The Study distinguishes between one-time economic impacts – i.e. impacts related to one-time construction jobs ("One-time Construction Jobs") and permanent economic impacts – i.e. impacts related to the creation of permanent jobs ("Permanent Jobs"). One-time Construction Job impacts include benefits to the community that occur on a non-permanent basis as a result of construction and development activity, while Permanent Job impacts refer to benefits that occur on a continuing basis, year after year.

The economic impacts of the Center that are analyzed within the Study are (1) Permanent Jobs – direct-on-site and indirect/induced (which supplies or supports direct employment); (2) Permanent Job Output (Gross Receipts) – total direct output *plus* output produced by suppliers and employee spending; and (3) One-Time Construction Job impacts. As reflected in **Tables B** and **C** below, the City's Permanent Jobs and Permanent Job impacts, as well as its One-Time Construction Jobs and its One-time Construction Job impacts are all substantially higher following Center development.

### 1. PERMANENT JOBS, WAGES, AND GROSS RECEIPTS

**TABLE B**
***(ALL NUMBERS SUBJECT TO ROUNDING)***

| Permanent Job Impacts | Direct | Indirect/Induced | Total |
|---|---|---|---|
| Employees | | | |
| Countywide | 20,307 | 7,386 | 27,693 |
| Within City | 20,307 | 3,693 | 24,000 |
| Employee Wages | | | |
| Countywide | $831 Million | $300 Million | $1.13 Billion |
| Within City | $831 Million | $150 Million | $981 Million |
| Overall Output | | | |
| Countywide | $1.50 Billion | $870 Million | $2.37 Billion |
| Within City | $1.50 Billion | $435 Million | $1.94 Billion |

## 2. ONE-TIME CONSTRUCTION JOBS, WAGES, AND GROSS RECEIPTS

**TABLE C**
***(ALL NUMBERS SUBJECT TO ROUNDING)***

| One-Time Construction Job Impacts | Direct | Indirect/Induced | Total |
|---|---|---|---|
| Construction Employees | | | |
| Countywide | 12,807 | 7,427 | 20,233 |
| Within City | 12,807 | 3,714 | 16,521 |
| Construction Wages | | | |
| Countywide | $625 Million | $302 Million | $927 Million |
| Within City | $625 Million | $151 Million | $776 Million |
| Construction Output | | | |
| Countywide | $1.67 Billion | $932 Million | $2.60 Billion |
| Within City | $1.67 Billion | $466 Million | $2.14 Billion |

Given a build out period of approximately 15 years, with projected equal absorption every year, the construction of the Center will create approximately 854 full-time equivalent ("FTE") *direct* One-time Construction Jobs in the City in each of those years.

## 3. OTHER IMPACT CONCLUSIONS

**TABLE D**

| Jobs-Housing Balance | Balance with Center | % Increase Increase/(Decrease) |
|---|---|---|
| Countywide | 0.74 | 5.02% |
| Within City | 0.91 | 95.54% |

Although the Center is expected to require a considerable amount of public infrastructure, the Center is also expected to generate significant new revenues for the City of Moreno Valley. As **Tables A, B, C,** and **D** illustrate, the Center's logistics component is expected to generate sizeable, substantial, and lasting employment, wage, output, and revenue impacts. To ensure that these high property and sales tax revenues are available to the City, it is crucial that all of the Center's logistics uses that generate these revenues be entirely built out.

# SECTION 1 INTRODUCTION

David Taussig and Associates, Inc. ("DTA") has been engaged by Highland Fairview (the "Applicant") to prepare a Fiscal and Economic Impact Study (the "Study") that evaluates the likely fiscal and economic impacts of the proposed development and construction of the World Logistics Center (the "Center") on the City of Moreno Valley (the "City"). The impact of the Center on the City's General Fund was thoroughly analyzed, although City enterprise and special funds were not explicitly considered within the Study.

## I. SCOPE AND METHODOLOGY

### A. RECURRING FISCAL IMPACTS

Fiscal impacts arising from a land development plan can be broadly categorized as one of two types: one-time impacts or recurring impacts. Each of these broad types may, in turn, be divided into a revenue component and a cost component. For purposes of this Study, it has been assumed that one-time revenues would directly offset one-time costs; thus, the fiscal impacts considered in this Study focus on ongoing, or recurring, fiscal impacts of the Center on the City General Fund. To the extent that revenues are generated outside of the City's General Fund (e.g., special district revenues) or costs are incurred by the City outside of the General Fund (e.g., costs financed through a special district), they are not included within this fiscal analysis.

As previously mentioned, the fiscal impacts projected for the Study are based generally on the *Multiplier Methodology*. The primary *Multiplier Methodology* used to project the fiscal impacts in this Study was the *Per Capita-Employee ("Persons Served") Methodology*. The Persons Served Methodology considers the fact that the exact relationship of service demands and revenue-generating potential between residents and employees is difficult to measure. Thus, utilizing a service population, or Persons Served population, comprised of all residents and 50% of employees is common fiscal practice, and suggests that a resident generally has twice the fiscal impact of an employee. This methodology involves calculating the *average City-wide* revenues/costs per Persons Served, utilizing the fiscal year 2012-2013 City budget, and applying these revenue/cost factors to the specific number of Persons Served projected for the Center.

DTA also used a *Per Employee Methodology* in the Study to project recurring fiscal factors based on employment only, such as business license tax revenues. Similar to the Persons Served Methodology discussed above, the Per Employee Methodology involves calculating the *average City-wide* revenues/costs per employee, utilizing the fiscal year 2012-2013 City budget, and applying these factors to the specific number of employees projected under the given scenario.

While most recurring revenues analyzed in the Study are projected using the *Multiplier Methodology*, some major revenue sources, including property taxes and sales taxes, are calculated using a *Case Study Methodology* that involves calculating the *marginal revenues* to be specifically generated by a particular land use, instead of applying an *average City-wide* revenue factor. For purposes of the Study, all recurring revenues and costs are stated in constant (un-inflated) 2012 dollars, based on the assumption that the relative impacts of inflation in future years will be the same for both of these fiscal impact categories.

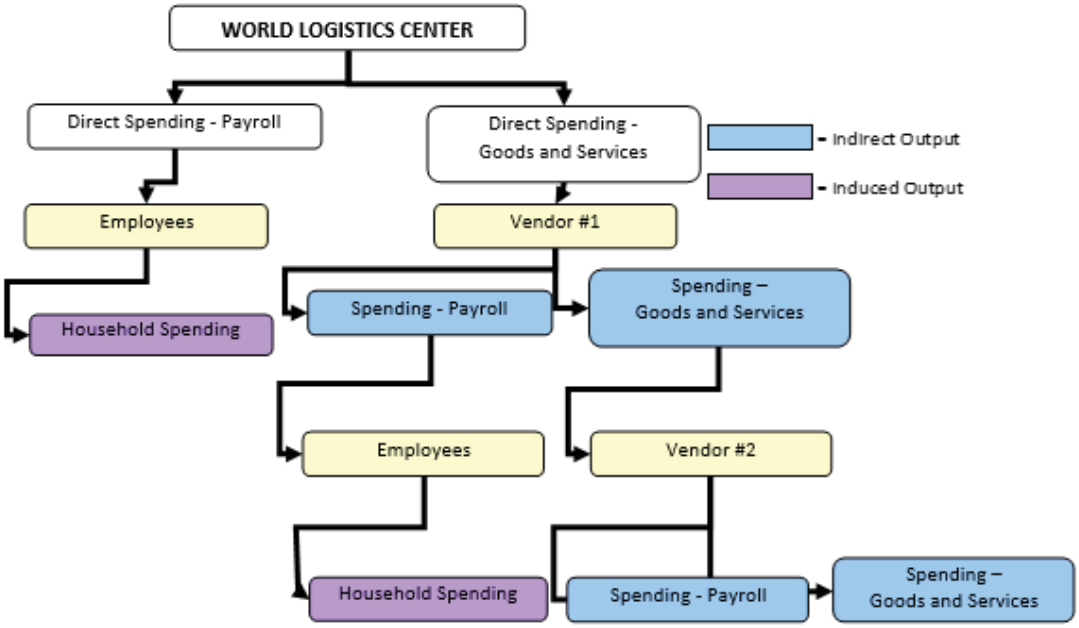
Notably, the City also expends revenues from a series of other special funds outside of the General Fund. These revenues include a Moreno Valley Library property tax, Community Services District and Community Facilities District assessments and special taxes, and various enterprise funds related to water and sewer services. As these revenues are generally equal to the cost of the services that they finance, they are essentially break-even and are not typically included in a fiscal analysis for a municipality. As a result, most fiscal analyses focus on the General Fund, where any shortfalls or surpluses can be easily identified, and such is the case for this Study.

However, in preparing the Center's fiscal analysis, DTA did notice certain anomalies occurring related to the Moreno Valley Fire property tax, in that the revenues generated by this special fund appears to be significantly greater than the fund's expenditures on fire services to be provided by the City to the Center. While the projected fiscal surplus generated by the Moreno Valley Fire property tax fund was not included in the General Fund analysis, DTA felt that a brief discussion of this revenue source within the text of the Study would better inform the public regarding the entire fiscal impact of The Center on the City.

## B. GENERAL ECONOMIC IMPACTS

The Study also identifies the general economic impacts on the City that would occur due to the Center, and quantifies these impacts wherever possible. General economic impacts include additions to the City's employment (number of average annual full- & part-time jobs), economic output (e.g., gross receipts), and earnings (the sum of wages, salaries and benefits, other labor income, and employer and employee contributions to social security). The Study also distinguishes between one-time economic impacts and permanent economic impacts. One-time impacts include benefits to the community that occur on a non-recurring basis as a result of construction and development activity, while permanent, recurring impacts refer to benefits that occur on a continuing basis, year after year. Additionally, for purposes of the Study, all economic impacts are stated in constant (un-inflated) 2012 dollars, based on the assumption that the relative impacts of inflation in future years may be difficult to gauge.

In evaluating economic impacts, the Study quantifies both direct and indirect/induced economic impacts on the City. Direct economic impacts reflect the initial or first-round increases in jobs, earnings, and output, all of which occur directly on-site at WLC. Indirect/induced economic impacts are the secondary and other additional rounds of economic activity that occur as a consequence of the direct impacts, and can occur elsewhere within the City. The **indirect** impacts represent the economic activity – buying and selling of goods and services – of *suppliers* to the land use types analyzed. In this Study, suppliers to WLC consist of maintenance and repair professionals, utilities' providers, wholesale trade companies, and business support services; while suppliers to retail/office developments consist mainly of real estate firms, computer and other technology firms, accounting and bookkeeping professionals, and utilities' providers. Furthermore, the suppliers representing the indirect one-time impacts are mainly heavy industrial and construction suppliers for the actual development of buildings and facilities. The **induced** impacts represent the economic activity that results from household spending by *employees* of all companies directly and indirectly affected by the construction and operation of the land uses analyzed in this Study. Induced impacts created by the expenditures of employees at WLC



would include local housing, retail outlets, gas stations, recreation venues and restaurants, child care facilities, etc. Indirect and induced impacts can occur throughout all industries of the economy, and have been categorized using the North American Industry Classification System (NAICS). Adopted by the Office of Management and Budget (OMB) in 1997 to replace the Standard Industrial Classification System (SIC), NAICS is a widely-used system to classify business establishments for the collection, analysis, and publication of statistical data in Canada, Mexico, and the United States. NAICS industries are identified using a six-digit coding system to classify all economic activity into twenty broad sectors, five of which are mainly goods-producing sectors and fifteen of which are services-producing sectors. This six-digit hierarchical structure allows for the identification of nearly 1,170 industries. The broad NAICS sectors include the Construction, Retail Trade, and Administrative and Support Services classifications, which are the focal NAICS categories analyzed within this Study to determine the indirect and induced economic impacts generated under the analysis.

### (i) IMPLAN MULTIPLIER METHOD

Although most economists agree that indirect and induced, or "multiplier" effects exist, most economists also agree that such effects are difficult to measure. Patterns on spending and employment among suppliers and employee households often vary over time and from one region to another. Nevertheless, there are certain input-output models that can be used to estimate indirect and induced effects.

In quantifying the indirect and induced economic impacts for the Study, DTA utilized the Impact Analysis for Planning ("IMPLAN") Input/Output Modeling System, a type of quantitative economic model that provides an approximate measure of the "multiplier effect" of a firm's spending on payroll and the purchasing of goods and services. Like similar econometric models, IMPLAN helps to calculate the flow of payments for goods and services across different industry sectors, and between households and industries. The IMPLAN model can be envisioned simply as a large spreadsheet with hundreds of industries (plus the household sector) arrayed across the top as producers, and the same industries and households listed down the side as consumers. Each million dollars (output) in spending by any one consumer (i.e. the Center) is allocated across the producing industries from which it buys goods and services. These producing industries, in turn, spend money buying goods and services from their own distinct sets of suppliers. Thus, the IMPLAN multiplier model allows one to gauge the effect on each dollar an industry spends as it diffuses through a regional economy. Furthermore, it allows one to translate the overall regional impact of spending into jobs and employee compensation. Please refer to **Table 1** for a diagram of the multiplier effect.

**TABLE 1**
**EXAMPLE OF THE MULTIPLIER EFFECT (INDIRECT AND INDUCED OUTPUT)**

The multiplier factors available to determine indirect/induced impacts are intended to reflect impacts for entire areas within a zip code. Therefore, the indirect/induced impacts identified in this Study to occur within the City boundaries are based on assumptions established by DTA and are subject to change. Please refer to **Appendix B** for further information.

## II. LIMITATIONS

### A. ACCURACY OF INFORMATION

The fiscal and economic models in the Study contain an analysis of revenues, costs, and impacts to the City resulting from the Center. These models are based on both (i) information provided to DTA by the Applicant staff and (ii) certain DTA assumptions taken from DTA's municipal cost database, as compiled by DTA from previous fiscal impact studies prepared by the firm. The sources of information and basis of the estimates calculated in the Study are stated herein. While DTA is confident that the sources of information are reliable, DTA does not express an opinion or any other form of assurance on the accuracy of such information. The analysis of fiscal impacts contained in this report is not considered to be a "financial forecast" or a "financial projection" as technically defined by the American Institute of Certified Public Accountants. The word "projection" used within this report relates to broad expectations of future events or market conditions. Since the analyses contained herein are based on estimates and assumptions that are inherently subject to uncertainty and variation depending on evolving events, DTA cannot represent that such estimates will definitely be achieved. Some assumptions inevitably will not materialize, and unanticipated events and circumstances may occur; therefore, the actual results achieved may vary from these projections stated throughout the Study.

In addition, the fiscal analysis included herein focuses on the impacts of the Center if it were built during fiscal year 2012-13, based on cost and revenue criteria and assumptions existing during that fiscal year. As is the case for most General Fund fiscal analyses, it would be speculative to project future cost and revenue factors because there is no certainty regarding what those factors will be. For example, while the City will be increasing its annual costs when it eliminates a furlough program that it established during the Great Recession, the Center itself is expected to generate additional revenues in future fiscal years due to increases in logistics facilities property values above the $90 per square foot assumed in the Study. Based on a recent appraisal prepared by Coldwell Banker, the Center site's property valuation has already increased by more than 10%. Assumptions made regarding the relative levels of cost and revenue increases for factors such as these in future years would typically create a bias in the fiscal analysis that could in itself invalidate the results of the Study.

# SECTION 2 DESCRIPTION OF RECURRING FISCAL REVENUES/COSTS

The following section presents the recurring revenue and cost impacts to the City General Fund and the methodology and assumptions utilized in the Study to project these impacts. Detailed numerical analyses of the revenue and cost impacts subsequently discussed in this section are contained in **Appendix A**.

## I. ANALYSIS OF RECURRING REVENUES

### CASE STUDY METHOD:

#### A. PROPERTY TAXES – SECURED AND UNSECURED

Property tax revenues are conservatively projected based on the City's estimated share of the general 1% property tax levy. Total secured property tax revenues received by the City from the land uses will equal approximately 8.97% of the basic 1% property tax levy from the Tax Rate Areas ("TRAs") encompassing the Center. Please note that the gross tax increment, as calculated by the Riverside County (the "County") Auditor-Controller, has been reduced to account for the projected Education Revenue Augmentation Fund ("ERAF") property tax shifts. Please refer to **Table 2A** below and **Exhibit 4** of **Appendix A** for details regarding the secured and unsecured property tax assumptions utilized in the fiscal impact analysis.

Unsecured property taxes are levied on tangible personal property that is not secured by real estate. Examples of unsecured property includes trade fixtures (e.g., manufacturing equipment and computers), as well as airplanes, boats, and mobile homes on leased land. In generating the fiscal impact models for this Study, DTA has assumed that unsecured property values average 10.00% of the secured value for non-residential land uses.

##### (1). ANNEXATION

According to the Riverside County Local Agency Formation Commission ("Riverside County LAFCO"), the Master Property Tax Transfer Agreement for the County of Riverside and the City of Moreno Valley (the "Property Tax Agreement") will determine the tax apportionment factors for the proposed annexation of elements of the Center to the City. Only one (1) parcel is to be annexed per the Specific Plan, however, this analysis still assumes that the annexation of this parcel will be carried out according to the terms of that agreement. Please refer to **Appendix C** for further information regarding that parcel. As the vast majority of elements of the Center are currently within the City, the overall TRA breakdown described above is weighted both by TRA, subject to the Property Tax Agreement, and acreage.

Of the property tax apportionment that is currently dedicated to the County's General Fund, 25% will be allocated to the City's General Fund upon annexation of the Center to the City, while the remaining 75% will be remitted to the County to pay for services that the County provides to City residents. For a detailed breakdown of the tax sharing assumptions, please refer to **Exhibit 4** of **Appendix A**.

## B. PROPERTY TRANSFER TAX

Per California Revenue & Taxation Code §11901, *et seq*. and the Moreno Valley Municipal Code §3.22.020, sales of real property are taxed by the County at a rate of $1.10 per $1,000 of property value, whereas for property located in the City, the property transfer tax is divided equally between the City and the County, with the City receiving $0.55 per $1,000 of transferred property sale or resale value, excluding assumed liens or encumbrances. Per typical baseline assumptions, DTA assumes that non-residential development changes ownership at an average rate of 5% per year, and that continuing liens and encumbrances are insignificant.

## C. PROPERTY TAX IN-LIEU OF VEHICLE LICENSE FEE

The passage of Proposition 1A in California in 2004 enacted a constitutional amendment that introduced a new methodology to calculate property taxes in-lieu of VLF. Per California Revenue and Taxation Code §97.70, the property tax in-lieu of VLF amount now grows in proportion to the growth rate of gross assessed valuation in a city or county. Property taxes in-lieu of VLF revenues are projected to grow with the change in the City-wide gross assessed valuation of taxable property from the prior fiscal year. Property tax in-lieu of VLF revenues constitute an addition to other property tax apportionments and were calculated for purposes of this Study at $1.26 per $1,000 increase in assessed valuation on a City-wide basis. Please refer to **Table 2A** below and **Exhibit 4** of **Appendix A** for details regarding the property tax assumptions utilized in the fiscal impact analysis.

**TABLE 2A – PROPERTY TAX ASSUMPTIONS**

| Property Tax Assumptions | |
|---|---|
| **Property Tax** | |
| **Industrial Sales Price / Square Foot** | $90.00 |
| **Retail Sales Price / Square Foot** | $200.00 |
| **Secured Property Tax –** Net Apportionment Factor to the City of Moreno Valley as a Fraction of 1.0% Property Tax Rate (Net of ERAF) | 8.97% |
| **Unsecured Property Tax** – Unsecured Taxes as a % of Secured Property Value | 10.00% |
| **Property Transfer Tax** | |
| Non-Residential Property Turnover Rate | 5.00% |
| Transfer Tax as a % of Price | 0.11% |
| Property Transfer Tax Passed Through to City | 50.00% |
| **Property Tax In-Lieu of VLF** | |
| City of MV – Total Assessed Value (FY 2011-2012) | $10,445,118,397 |
| City of MV – VLF Prop. Tax In-Lieu Revenues (FY 2012-2013) | $13,195,000 |
| VLF Property Tax In-Lieu per $1,000 Assessed Value | $1.26 |

## D. MOTOR VEHICLE LICENSE FEES

### (I). BACKGROUND

Prior to June 1, 2004, the Motor Vehicle License Fee ("VLF") tax rate was equal to 2.00% of the value of a vehicle, with 0.65% paid by the vehicle owner and an additional 1.35% supplemented with a backfill from the State General Fund. A large portion of those funds was allocated to cities (42.50%) and counties (42.50%) based on population, while newly-incorporated cities received an additional population subvention based on three (3) times the number of registered voters for the first seven (7) years after incorporation.

As discussed earlier, in 2004, the VLF allocation was altered. The California Legislature implemented the "VLF Swap" in which the VLF was lowered to 0.65%. The resultant loss of city revenue was swapped with an augmentation of property tax, termed property tax in-lieu of VLF. These amounts grow annually based on the annual increase in assessed value within each respective jurisdiction (see above).

### (II). SUPPLEMENTAL LAW ENFORCEMENT FUNDING ("SLESF") AND OTHER STATE LAW ENFORCEMENT GRANTS

As a part of the 2009 state budget agreement, a number of law enforcement grant programs previously funded by the state general fund were instead funded in fiscal year ("FY") 2009-10 and FY 2010-11 by a temporary 0.15% state VLF increase, which ended on June 30, 2011. The additional 0.15% VLF rate was intended to generate around $500 million annually – the tax generated $414 million in FY 2009-10 and $442 million in FY 2010-11.

### (III). SENATE BILL (SB) 89 - FEES SHIFTED TO FUND STATE LAW ENFORCEMENT GRANTS

SB89, signed in 2010 by Governor Brown, effectively eliminates the 0.65% VLF revenue that was being allocated as a general fund revenue source to California cities. Provisions in SB89 shift hundreds of millions of VLF revenues to fund the state law enforcement grants beginning FY 2011-12. The SB89 plan operates as follows:

- The "Vehicle License Registration Fee" is increased by $12 to produce approximately $300 million in FY 2011-12. This fee will fund state DMV vehicle license registration operations, thereby "freeing up" $300 million of VLF revenue that had been used to fund DMV operations. This money will be transferred to a new Local Law Enforcement Services Account ("LLESA)" to fund the law enforcement grants.

- In addition, beginning July 1, 2011, SB89 transfers the remaining VLF revenue (after the Local Revenue Fund allocation for county health and welfare programs) previously allocated to cities and the County of Riverside to the LLESA.

SB89 takes $130 million of city general revenue and shifts it to save state law enforcement grant programs. Less than $100 million of these grant funds will come back to cities, earmarked for police services. But these funds will likely be offset by the loss of city VLF. Therefore, VLF (as

opposed to property tax in-lieu of VLF) revenue was not analyzed as a Center revenue source in this Study.

## E. SALES AND USE TAXES

Direct sales tax revenues are generated by retail sales from businesses within City limits, with 1% of taxable sales receipts passed through to the City. **Exhibit 5** of **Appendix A** reflects taxable sales receipts per square foot for each on-site non-residential land use type, based on data from the *Urban Land Institute's Dollars & Cents of Shopping Centers (2008)* publication and total taxable sales receipts for the Center, based on information provided by the Applicant and the City.

Indirect sales tax revenues, as summarized in **Exhibit 5** of **Appendix A**, are generated by the purchases made by the Center's employees within the City. Based on studies outlined in the *International Council of Shopping Centers' Office Worker Local Retail Spending Patterns,* DTA assumed that each on-site employee spends nearly $4,168 annually within the City.

**TABLE 2B – SALES TAX ASSUMPTIONS**

| Sales Tax Assumptions | |
|---|---|
| % Sales Tax Passed Through to City of MV | 1% |
| Local Employee Spending (Annual) | $4,168 |
| *Capture Rate of Employee Spending (within City)* | *50%* |
| *Displacement Rate (of existing taxable sales within City)* | *20%* |
| Taxable Sales per Square Foot – Retail | $250 |

## F. INVESTMENT INCOME REVENUES

Investment Income revenues are generated by the increase in General Fund Revenues resulting from the Center. This increase reflects growth in the following revenue categories: property taxes, sales taxes, and multiplier revenues (as discussed below).

Importantly, the City expects to incur borrowing costs throughout each fiscal year on its investment account that will offset investment returns on its General Fund Revenues prior to the funds being expended. As a result, this Study conservatively assumes that any Investment Income revenues would be fully offset by the borrowing costs, and that Investment Income will not provide any additional revenues to the City General Fund.

## MULTIPLIER METHOD:

### G. OTHER TAX REVENUES

The Utility Users Tax ("UUT") and the Transient Occupancy Tax ("TOT") were forecasted at $59.85 per Persons Served using the *Per Capita-Employee Multiplier Method.* Please note that this revenue multiplier has been reduced by 25% to account for only the portion of the UUT and TOT revenues that are expected to be variable with population and employee growth in the City. Historically, UUT is one of the General Fund's largest revenue sources, as well as one of the most stable due to trends in the natural gas, wireless telephone, and cable industries.

### H. BUSINESS RECEIPTS TAX & LICENSES

Business Receipts Tax and Business Licenses revenues to the City General Fund are anticipated to grow due to employment growth only. Therefore, Business Receipts Tax and Business Licenses revenues were projected at $59.63 per Employee using the *Per Employee Multiplier Method.* However, the future addition of new retail businesses will have a particularly positive effect on the Business Receipts Tax.

### I. FRANCHISE TAXES

Franchise Taxes, including Cable TV, Sewer, etc., were forecasted at $24.81 per Persons Served using the *Per Capita-Employee Multiplier Method*.

### J. LICENSES AND PERMITS

Licenses and Permits are based on the City's collection of fees for various types of permits and community programs. Revenues are forecasted using a *Per Capita-Employee Multiplier Method* that results in a total multiplier of $5.69 per Persons Served.

### K. INTERGOVERNMENTAL REVENUES

Intergovernmental Revenues are forecasted using a *Per Capita-Employee Multiplier Method* that results in a total multiplier of $6.00 per Persons Served.

### L. CHARGES FOR CURRENT SERVICES

Current Services, including parking control fees, plan check fees, and inspections fees, were projected at $38.12 per Persons Served, based on the *Per Capita-Employee Multiplier Method*.

### M. USE OF MONEY AND PROPERTY (NON-INTEREST REVENUES)

Use of Money and Property Revenues, including Park and Community Building Rentals, were forecasted at $0.25 per Persons Served using the *Per Capita-Employee Multiplier Method*.

## N. FINES AND FORFEITURES

This revenue category represents fines and penalties collected by the City for various infractions, including Vehicle, Code, and certain Parking Fines. Fines and Forfeitures were forecasted at $0.64 per Persons Served using the *Per Capita-Employee Multiplier Method.*

## O. TRANSFERS IN

Direct cost of development related services and all development services revenue are budgeted in special funds, and the portion of the fee revenues that are attributable to overhead costs are shown as a transfer into the General Fund to reimburse the City for general support. Transfers In revenue is forecasted at $0.37 per Persons Served, using the *Per Capita-Employee Multiplier Method.*

## P. OTHER REVENUE

Other Revenues, including Miscellaneous Revenues, Donations, and Mandated Cost Reimbursements, were projected at $1.21 per Persons Served utilizing the *Per Capita-Employee Multiplier Method.*

**TABLE 2D – OTHER GENERAL FUND REVENUES (MULTIPLIER METHOD)**

| Category | Amount | Methodology |
|---|---|---|
| Other Tax Revenues | **$59.85** | Persons Served plus 25% Discount |
| Business Receipts Tax & Licenses | **$59.63** | Per Employee |
| Franchise Taxes | **$24.81** | Persons Served |
| Licenses and Permits | **$5.69** | Persons Served |
| Intergovernmental Revenues | **$6.00** | Persons Served |
| Charges for Current Services | **$38.12** | Persons Served |
| Use of Money and Property (Non-Interest Revenues) | **$0.25** | Persons Served |
| Fines and Forfeitures | **$0.64** | Persons Served |
| Transfers In | **$0.37** | Persons Served |
| Other Revenues | **$1.21** | Persons Served |

Please refer to **Exhibit 7** of **Appendix A** for more details on the case study assumptions and revenue multipliers utilized in the Study.

# II. ANALYSIS OF RECURRING COSTS

## CASE STUDY METHOD:

### A. INFRASTRUCTURE AND PARKS MAINTENANCE

The Center will require the construction of new infrastructure to be ultimately owned by the City and maintained by the City's General Fund. At this time, it is estimated that these public infrastructure improvements will consist of 54 lane miles of roadways, 75 acres of landscaped parkways and medians, 4 signalized intersections, 699 streetlights, and 18.1 linear miles of storm drains, Notably, other improvements such as street lights and trails, to be maintained by other City Funds, i.e., Community Services District funding, Enterprise Funds, Special Funds, etc., but not the General Fund, were disregarded for purposes of this Study.

These improvements were multiplied by estimated annual cost figures for each category derived from the DTA Public Works Database, resulting in annual Infrastructure and Parks Maintenance costs of $1,916,941.

Finally, Measure A funding – a half-cent sales tax for roadway funding administered by the Riverside County Transportation Commission – was incorporated, based on the percentage of total Measure A funds allocated to the City of Moreno Valley. Following a $21,467 Measure A set-off, the annual Infrastructure and Parks Maintenance forecast is $1,895,474

**TABLE 2E – INFRASTRUCTURE/PARKS REQUIREMENTS (CASE STUDY METHOD)**

| Infrastructure/Parks to be Maintained by City General Fund | Quantity | Cost/Unit |
|---|---|---|
| Roadways (Lane Miles) | 54 | $12,000 |
| Signalized Intersections | 4 | $4,938 |
| Parkways/Medians (Acres) | 75 | $14,953 |
| Open Space | 206 | $517 |
| Storm Drains (Lineal Miles) | 18.1 | $1,177 |

### B. GENERAL GOVERNMENT COSTS

General Government costs are projected at a marginal rate of 7.58% of the City General Fund recurring costs, based on the assumption that the FY 2012-2013 General Government expenditures, equaling $7.1 million, will remain at the same relative proportion of the FY 2012-2013 City General Fund non-governmental expenditures of approximately $70.1 million in future years. The current percentage of General Government expenditures to City General Fund non-governmental expenditures is approximately 10.1%; however, these General Government costs are not expected to increase on a one-for-one basis as a result of the land use development depicted in this Study. Therefore, this Study assumes that General Government costs increase at

an estimated marginal rate of 75%, or 7.58%, of the existing General Government cost overhead rate. This approach results in annual General Government costs of $385,871.

Importantly, as discussed above, the fiscal analysis included herein focuses on the impacts of the Project as if it were built during fiscal year 2012-13, based on cost criteria and assumptions existing during that fiscal year. As is the case for most General Fund fiscal analyses, it would be speculative to project future cost factors because there is no certainty regarding what those factors will be. For example, in the case of general government costs specifically, the City is expected to increase its annual expenditure by eliminating a furlough program that it established during the Great Recession. However, the Project is expected to generate additional revenues in future fiscal years, above and beyond the revenues discussed in the Study, due to increases in logistics facilities property values above the $90 per square foot assumed in the Study. Therefore, any assumptions made regarding the relative levels of cost and revenue increases in future years would likely to create bias in the analysis that could lead to the invalidation of the results of the Study.

**MULTIPLIER METHOD:**

## C. POLICE AND FIRE PROTECTION

Police services include those costs associated with Law Enforcement and Patrol, Administration, Traffic Enforcement, Crime Prevention, Volunteer Programs, and Community-Based Policing. Police Services costs are forecasted at $196.20 per Persons Served using the *Per Capita-Employee Multiplier Method.* Fire services include those costs associated with Fire Suppression, Fire Prevention, Equipment and Vehicles, Outreach, and Training. Fire services costs financed through the General Fund are forecasted at $72.84 per Persons Served using the *Per Capita-Employee Multiplier Method.*

Notably, there is additional funding available to fund fire services through a Moreno Valley Fire property tax that is separate from General Fund revenue sources and is not included in this analysis of the General Fund. City-wide, the fire services costs funded through the Moreno Valley Fire property tax equal $21.66 per Persons Served, so total funding actually required for fire services utilizing the *Per Capital-Per Employee Multiplier Method* would be $94.50 per Persons served. However, as described below in Section III of this Study, the amount of Moreno Valley Fire property tax per Persons Served generated by the Center will be $199.27. As a result, there will be a significant surplus of revenues beyond the $21.66 per Persons Served that is currently the average amount of Moreno Valley Fire property tax costs City-wide. The City will be able to expend these excess revenues on fire services provided throughout other parts of the City outside of the Center.

## D. ANIMAL SERVICES

Animal Control Services costs were projected at $4.70 per Persons Served using the *Per Capita-Employee Multiplier Method*. Please note that this cost multiplier has been reduced by 50% to account for only the portion of Animal Services costs that are expected to be variable with population and employee growth in the City.

## E. DEVELOPMENT SERVICES

Development Services costs, including elements of the Planning and Building Divisions, Land Development services, and certain Public Works (non-overhead/department) services related to new growth, were forecasted at $20.87 per Employee using the *Per Capita-Employee-Multiplier Method*.

## F. OTHER USES

Other Uses costs, including Records Management, Sign Programs, and the Office of Emergency Management and Volunteers, were forecasted at $6.27 per Persons Served based on the *Per Capita-Employee Multiplier Method.* Please note that this cost multiplier has been reduced by 50% to account for only the portion of Other Uses costs that are expected to be variable with population and employee growth in the City.

## G. COMMUNITY DEVELOPMENT

Community Development costs, including certain costs associated with existing City Planning and Building Safety, were forecasted at $4.17 per Persons Served based on the *Per Capita-Employee Multiplier Method.* Please note that this cost multiplier has been reduced by 50% to account for only the portion of Community Development costs that are expected to be variable with population and employee growth in the City.

## H. PUBLIC WORKS – OVERHEAD/DEPARTMENT COSTS

Public Works costs, including Administration, Engineering, and Operations and Maintenance expenses, were projected at $10.79 per Persons Served using the *Per Capita-Employee Multiplier Method*. This category includes those Public Works costs not directly associated with Center-related roadway maintenance, signalized intersections, park rehabilitation, and other infrastructure (i.e. 54 lane miles of roadways, 75 acres of landscaped parkways and medians, 4 signalized intersections, 699 streetlights, 18.1 linear miles of storm drains, and 17.2 linear miles of sidewalks/trails).

## I. TRANSFERS OUT

Transfers Out costs were forecasted at $6.28 per Persons Served using the *Per Capita-Employee-Multiplier Method*.

**TABLE 2F – OTHER GENERAL FUND COSTS (MULTIPLIER METHOD)**

| Category | Amount | Methodology |
|---|---|---|
| Police Services | **$196.20** | Persons Served |
| Moreno Valley Fire | **$72.84** | Persons Served |
| Animal Services | **$4.70** | Persons Served plus 50% Discount |
| Development Services | **$20.87** | Persons Served |
| Other Uses | **$6.27** | Persons Served plus 50% Discount |
| Community Development | **$4.17** | Persons Served plus 50% Discount |
| Public Works | **$10.79** | Persons Served |
| Transfers Out | **$6.28** | Persons Served |

# SECTION 3 FISCAL IMPACTS

## I. TOTAL RECURRING REVENUES: CITY OF MORENO VALLEY

Total recurring revenues to the City equal approximately $11,257,466 per year. As illustrated in **Table 3A** below, the largest percentage of revenue is attributed to the property tax in lieu of VLF revenues (40.2% of total) and property tax revenues (secured and unsecured) (32.0%), together constituting 72.2% of total recurring revenues to the City General Fund. **Exhibits 1-6** of **Appendix A** provide additional details about all recurring revenues and the assumptions used in their derivation.

**TABLE 3A**
**RECURRING FISCAL REVENUES (CITY GENERAL FUND)**

| Category | Amount | Percent* |
|---|---|---|
| Property Tax In-Lieu of Vehicle License Fee | $4,522,818 | 40.2% |
| Secured Property Tax | $3,276,191 | 29.1% |
| Business Receipts Tax & Licenses | $1,210,847 | 10.8% |
| Tax Revenue | $607,657 | 5.4% |
| Indirect Sales Tax | $423,144 | 3.8% |
| Charges for Services | $387,032 | 3.4% |
| Unsecured Property Tax | $327,619 | 2.9% |
| Franchises | $251,896 | 2.2% |
| Property Transfer Tax | $100,495 | 0.9% |
| Intergovernmental Revenues | $60,918 | 0.5% |
| Licenses/Permits | $57,771 | 0.5% |
| Other Revenues | $12,285 | 0.1% |
| Fines and Forfeitures | $6,498 | 0.1% |
| Direct Sales Tax | $6,000 | 0.1% |
| Transfers In | $3,757 | 0.0% |
| Use of Money & Property | $2,538 | 0.0% |
| **Total Revenues** | **$11,257,466** | **100.0%** |

**Numbers may not sum due to rounding*

## II. TOTAL RECURRING SERVICES COSTS: CITY OF MORENO VALLEY

As illustrated in **Table 3B** below, total annual recurring costs to the City are estimated at **$5,557,674** per year. A majority of the costs are estimated to result from police services, fire services, and Center-specific infrastructure and parks maintenance costs. **Exhibits 2 and 7-10** of **Appendix A** provide additional details about all recurring costs and the assumptions used in their derivation.

**TABLE 3B**
**RECURRING FISCAL COSTS (CITY GENERAL FUND)**

| Category | Amount | Percent* |
|---|---|---|
| Police | $1,992,019 | 35.8% |
| Infrastructure & Parks Maintenance Costs | $1,895,474 | 34.1% |
| Fire Services | $739,545 | 13.3% |
| General Government | $391,715 | 7.0% |
| Development Services | $211,893 | 3.8% |
| Public Works | $109,551 | 2.0% |
| Transfers Out | $63,761 | 1.1% |
| Other Uses | $63,659 | 1.1% |
| Animal Services | $47,719 | 0.9% |
| Community Development | $42,338 | 0.8% |
| **Total Costs** | **$5,557,674** | **100.00%** |

**Numbers may not sum due to rounding*

## III. OVERALL NET FISCAL IMPACT TO THE CITY OF MORENO VALLEY

As shown in **Table 3C** below, the overall fiscal impact to the City General Fund resulting from the revenues generated by the Center is a recurring annual fiscal surplus of **$5,699,792** based on the generation of **$11,257,466** in recurring annual revenues and **$5,557,674** in recurring annual costs. Annual revenues are projected to equal **2.03** times the associated City General Fund costs. A summary of the overall fiscal **impacts to the City is provided in Exhibit 11 of Appendix A.**

**TABLE 3C**
**NET FISCAL IMPACT (CITY GENERAL FUND)**

| Category | Amount |
|---|---|
| Total Recurring Revenues | $11,257,466 |
| Total Recurring Costs | ($5,557,674) |
| **Annual Recurring Surplus/(Deficit)** | **$5,699,792** |
| *Total Annual Revenue/Cost Ratio* | *2.03* |
| Surplus per 1,000 SF Industrial | $140 |

However, the picture of the fiscal impacts of the Center on the City is incomplete if one just analyzes the General Fund, because in the case of the Center, a Moreno Valley Fire property tax will be collected by the City that greatly exceeds the cost of fire services provided by the City to the Center. As calculated in Section A-12 in the Appendix, the Moreno Valley Fire property tax

averages 5.54% of the total property taxes levied in the Center, which yields a total of $2,023,235 in annual revenues to the City. While the *Per Capita-Per Employee Multiplier Method*, utilizing the multiplier for both the General Fund and Moreno Valley Fire property tax, reflects total fire costs of $94.50 per Persons Served (see Section 2.II.c, above), the funding for fire services for the Center consists of $72.84 from the General Fund plus $199.27 from the Moreno Valley Fire property tax per Persons Served in the Center, for a total of $272.11 per Persons Served. **This means there will be an excess of $177.61 per Persons Served generated by the Center, or $1,803,274 recurring annually that can be spent on fire services in other parts of the City. Adding this $1.80 million Moreno Valley Fire property tax surplus to the $5.70 General Fund surplus yields a total annual recurring surplus to the City of $7.5 million generated by the Center.**

# SECTION 4 ECONOMIC IMPACTS

The Study also identifies the general economic impacts on the City that would occur due to the Center, and quantifies these impacts wherever possible. General economic impacts include additions to the City's employment (number of average annual full- & part-time jobs), economic output (e.g., gross receipts), and earnings (the sum of wages, salaries and benefits, other labor income, and employer and employee contributions to social security). The Study also distinguishes between one-time economic impacts – i.e. impacts related to one-time construction jobs ("One-time Construction Jobs") and permanent economic impacts – i.e. impacts related to the creation of permanent jobs ("Permanent Jobs"). One-time Construction Job impacts include benefits to the community that occur on a non-permanent basis as a result of construction and development activity, while Permanent Job impacts refer to benefits that occur on a continuing basis, year after year.

## I. PERMANENT JOB IMPACTS

### A. ASSUMPTIONS

In evaluating economic impacts, the Study quantifies both direct and indirect/induced economic impacts on the City. Direct economic impacts, as defined in Section 1 of the Introduction of this Study, reflect the initial or first-round increases in jobs, earnings, and output, all of which occur directly on-site. Indirect/induced economic impacts, as further explained in Section 1 of the Introduction, are the secondary and other additional rounds of economic activity that occur as a consequence of the direct impacts, and can occur elsewhere within the City. The **indirect** impacts represent the economic activity – buying and selling of goods and services – of *suppliers* to the land use types analyzed. In this Study, suppliers to the Center consist primarily of maintenance and repair professionals, utilities' providers, wholesale trade companies, and business support services; while suppliers to retail/office developments consist mainly of real estate firms, computer and other technology firms, accounting and bookkeeping professionals, and utilities' providers. Furthermore, the suppliers representing the indirect one-time impacts are mainly heavy industrial and construction suppliers for the actual development of buildings and facilities. The **induced** impacts represent the economic activity that results from household spending by *employees* of all companies directly and indirectly affected by the construction and operation of the land uses analyzed in this Study. Indirect and induced impacts can occur throughout all industries of the economy, and have been categorized using the North American Industry Classification System (NAICS). Adopted by the Office of Management and Budget (OMB) in 1997 to replace the Standard Industrial Classification System (SIC), NAICS is a widely-used system to classify business establishments for the collection, analysis, and publication of statistical data in Canada, Mexico, and the United States. NAICS industries are identified using a six-digit coding system to classify all economic activity into twenty broad sectors, five of which are mainly goods-producing sectors and fifteen of which are services-producing sectors. This six-digit hierarchical structure allows for the identification of nearly 1,170 industries. The broad NAICS sectors include the Construction, Retail Trade, and Administrative and Support Services classifications, which are the focal NAICS categories analyzed within this Study to determine the indirect and induced economic impacts generated under the analysis.

Based on information provided by the Applicant, the Center is comprised of 40.4 million building square feet of high-cube industrial land use, 200,000 building square feet of general warehouse space, and 3,000 building square feet of light retail space providing basic fuel, food, and vehicle maintenance services for trucks.

1. Direct Employees Assumptions

DTA's analysis is based on the assumption that the Project will directly employ 0.50 employees per 1,000 building square feet. These employees are Full Time Equivalent ("FTE") employees, meaning that part-time employees are only counted based on the percentage of forty (40) hours per week that they are working. Understandably, it takes two half-time (1/2) employees to equal one FTE employee.

DTA estimated the number of direct employees in the proposed development based upon an average employee per SF ratio for similar land uses in the region utilizing two data sources. The first source was an Employment Density Study prepared for the Southern California Council of Governments ("SCAG") for Riverside County in 2001, and the second was a study entitled "Logistics Trends and Specific Industries," which was prepared by the National Association of Industrial and Office Parks ("NAIOP") in 2012.

Tables 9A, 9B, 10A, and 10B of the SCAG Study state that the median building square footage for a logistics employee in Riverside County is 819 to 1,390 square feet, and that the average building square footage for a logistics employee in Riverside County is 581 to 953 square feet. Square footage per employee averages are stated as ranges because the SCAG Report employee density calculations are based on two separate Floor Area Ratio ("FAR") assumptions; the median building square footage (0.31) and the mean building square footage (0.50). Using average employees and the average FAR, the number of employees per 1,000 building square feet based on the SCAG Report ranges from 1.05 to 1.72. Alternatively, using median employees and the median FAR, the number of employees per 1,000 square feet ranges from 0.72 to 1.22 employees.

These SCAG estimates are significantly higher than those prepared by NAIOP. NAIOP's main website (http://www.naiop.org) includes a research section that contains detailed reports on the characteristics of industrial warehouses constructed in recent years. There are separate reports entitled "How Office, Industrial and Retail Development and Construction Contributed to the U.S. Economy" in 2010 and 2011. Table 12 in these reports reflect an average of 900 building square feet per employee for warehouses constructed in 2010 (equivalent to 1.11 employees per 1,000 building square feet) and 450 building square feet per employee for warehouse/flex buildings constructed in 2010 (equivalent to 2.22 employees per 1,000 building square feet).

To ensure that our Study is based on conservative assumptions, DTA utilized the lowest ratio presented in the SCAG and NAIOP analyses, or 0.50 employees per 1,000 square feet of floor space, thereby reflecting the minimal number of employees that will be generated by the Project. Therefore, DTA selected the 0.50 estimate, and is confident that if anything, the logistics employees density that will ultimately be generated by the Project will be higher, particularly

with the increasing use of logistics projects for fulfillment facilities, which average higher numbers of employees per 1,000 building square feet.

2. Annual Income Assumptions

The website for "U.S. Census Bureau's Longitudinal Employer-Household Dynamics Reports" includes an LED Extraction Tool that allows the user to access the average income numbers. Specifically, using the Extraction Tool, a user would choose California, Metropolitan Area, Riverside-San Bernardino-Ontario, Transportation and Warehousing, Male and Female All Ages, Full Quarter Employment Earnings, 2nd Quarter 2012. At that point, a spreadsheet appears indicating a monthly income of $3,410.50 per month over the past twelve months, or $40,926 per year.

In terms of WLC's anticipated average employee incomes, DTA is confident based on its research that the $40,926 average income assessment for employees in the Transportation and Warehousing labor category for the Riverside-San Bernardino-Ontario Metropolitan Area (the "Metropolitan Area") according to the U.S. Census Bureau, is a reasonable estimate. DTA found similar data validating this average income estimate for Riverside County and for the Metropolitan Area as published by the State Economic Development Department ("EDD") and the U.S. Bureau of Labor Statistics ("BLS"). Both of these agencies list average incomes in 2012 for both the Warehousing and Storage labor category and the Transportation and Warehousing labor category in 2012 ranging from $40,123 to $41,721, all of which are within 2.0% of the $40,926 figure. As is appropriate, this average wage was utilized to compute total gross wages generated by WLC as listed in Table 4B, below. Notably, the average incomes listed under the "Warehousing and Storage" and "Transportation and Warehousing" categories from these three government sources for Riverside County and the Inland Empire are virtually identical to the average incomes of current Moreno Valley residents, which according to the BLS is $40,124. As a result, the income levels currently paid in the logistics industry locally, which are likely to be similar to the wages to be paid at WLC, are almost identical to the average incomes currently earned by all employed City residents.

While average incomes are appropriate for use when calculating total projected WLC salaries, they are sometimes not indicative of a typical employee's salary in a logistics facility because high paid employees, such as engineers and managerial staff, can skew the average salary upwards. In these cases, a median income sometimes provides a more accurate assessment of a typical employee's earnings. Unfortunately, median income information for Riverside County and the Inland Empire are not available through the U.S. Census, EDD or BLS. However, based on national data prepared by BLS, it appears that the median income for the Warehouse and Storage labor sector on a nationwide basis equals 88.7% of average income for that sector. Assuming that this ratio could also be applied to the average income of $41,721 per year as listed by the BLS for Riverside County, the median income applicable to Riverside County, and therefore WLC, would be $37,007.

3. Build-Out and Occupancy Assumptions

A detailed review and analysis of future market conditions is not included within the scope of the Study. However, due to the cyclical nature of the real estate market and its impact on the build out period of the Project, it is important to consider how future market absorption and or occupancy might ultimately affect the results described in this analysis.

In terms of the absorption of the Project, the Applicant projects a build out of approximately fifteen (15) years with an average absorption rate of 2.4 million square feet per year (6% of the overall Project). Importantly, the economic impacts prior to build out will be proportional to the amount of the Project that has been completed at any point in time. Once build out occurs, the economic impacts are expected to be consistent with the conclusions of the Study. In the analysis below, DTA has incorporated a discussion of the economic benefits that may be achieved during the absorption period.

Furthermore, the occupancy rates during the absorption period as well as after build out will affect the economic benefits achieved. The Study analyzes the build out condition of the Project assuming full occupancy, i.e. the maximum economic benefit that may be realized by the Project. Importantly, future market cycles may have a significant impact on the occupancy rate for the Project in any given year. As a result, the analysis included in Study also incorporates a discussion of the occupancy rates and their impacts on the economic benefits to be provided by the Project. For purposes of this discussion, DTA has included additional data that reflects an occupancy rate of 90% percent (or a vacancy rate of 10%). The estimated occupancy/vacancy is based on research conducted by DTA of the current and projected market outlook for industrial space. DTA considered the "Casden Forecast – 2012 Industrial & Office Forecast Report" published by the University of Southern California that listed average vacancy rates in 2012 for industrial space significantly below 10%. More importantly, DTA considered the publication titled "Industrial Space in Southern California: Future Supply and Demand for Warehousing and Intermodal Facilities" published by the SCAG that projects increasing demand, increasing rents, and decreasing vacancies for industrial space over next few years. Based on these data sources, DTA is confident that the average vacancy rate of 10%, utilized in the discussion of the occupancy rate of the Center, is appropriate.

Other assumptions used to analyze the economic impact of the Center are summarized in **Table 4A** on the following page.

**TABLE 4A**
**ASSUMPTIONS**

| Assumptions | |
|---|---|
| Land Use Assumptions | *Sq. Ft.* |
| **Logistics Development ("LD")** | **40,397,000** |
| **Light Logistics ("LL")** | **200,000** |
| **Logistics Support ("LS") Site** | **3,000** |

## B. PERMANENT JOB CREATION & EMPLOYEE WAGES

Development will contribute to the creation of Permanent Jobs in the City and County. As shown below in **Table 4B**, development of the Center is projected to generate approximately 20,307 estimated new on-site Permanent Jobs within the City. Since the analyses contained herein are based on estimates and assumptions that are inherently subject to uncertainty and variation depending on evolving events, DTA cannot represent that such estimates will definitely be achieved. Some assumptions inevitably will not materialize, and unanticipated events and circumstances may occur; therefore, the actual results achieved may vary from these projections stated throughout the Study.

In addition to these employment opportunities, DTA estimates that the Center will generate new off-site Permanent Jobs in all industries of the economy, which constitute the indirect/induced Permanent Job impacts of the project. Seven thousand three hundred eighty six (7,386) indirect/induced Permanent Jobs are expected to be created in the County, of which 3,693 are projected to be within the City, as a result of the development of the Center. This estimate was derived utilizing the Impact Analysis for Planning ("IMPLAN") Input/Output Modeling System, a type of quantitative economic model that provides an approximate measure of the "multiplier effect" of a firm's spending on payroll and the purchasing of goods and services. Like similar econometric models, IMPLAN helps to calculate the flow of payments for goods and services across different industry sectors, and between households and industries. Unlike similar econometric models, e.g., the Regional Input-Output Modeling System ("RIMS II"), IMPLAN is the industry standard. RIMS II and IMPLAN both include induced effects, but RIMS II differs from IMPLAN in two ways: (i) RIMS II uses a single household type for induced personal consumption while IMPLAN uses nine (9) household types; and (ii) RIMS II uses the traditional single row/column Type II formulation whereas IMPLAN uses a more robust mapping of factor income to household consumption using several sub-matrices. RIMS II uses location quotients to regionalize the national technical coefficients, a method which underestimates inter-regional trade and overestimates regional multipliers when cross-hauling is present.

The IMPLAN model can be envisioned simply as a large spreadsheet with hundreds of industries (plus the household sector) arrayed across the top as producers, and the same industries and households listed down the side as consumers. Each million dollars (output) in spending by any one consumer (i.e. the Center) is allocated across the producing industries from which it buys goods and services. These producing industries, in turn, spend money buying goods and services from their own distinct sets of suppliers. Thus, the IMPLAN multiplier model allows one to gauge the effect on each dollar an industry spends as it diffuses through a regional economy. Furthermore, it allows one to translate the overall regional impact of spending into jobs and employee compensation.

While the specific location of the additional indirect Permanent Jobs created within the County cannot be specifically determined, experience and modeling indicate that a large percentage of these Permanent Jobs will be support service jobs, and are likely to be located close to the Center, and therefore within the City itself. For purposes of this Study, it is conservatively modeled that one-half of these indirect Permanent Jobs will be located within the City. **Table 4B** shown below, and **Exhibits 1** and **3** of **Appendix B** summarize the direct and indirect Permanent Job impacts of the Center.

**TABLE 4B**
**PERMANENT JOBS AND WAGES**
***(ALL NUMBERS SUBJECT TO ROUNDING)***

| Permanent Job Impact | Direct | Indirect | Induced | Total |
|---|---|---|---|---|
| Employees | | | | |
| Countywide | 20,307 | 3,269 | 4,118 | 27,693 |
| Within City | 20,307 | 1,634 | 2,059 | 24,000 |
| Employee Wages | | | | |
| Countywide | $831 Million | $133 Million | $167 Million | $1.13 Billion |
| Within City | $831 Million | $66 Million | $84 Million | $981 Million |

Overall, the creation of new Permanent Jobs will provide many benefits to the City. More Permanent Jobs will lead to more consumer spending by employees in existing retail establishments within the City, as well as new retail development that will be attracted to the City as a result of this spending. Permanent Job creation also results in increased tax revenues to the City through increased property taxes and sales taxes related to this new development.

However, because of the difference in timing of and/or the occupancy at the various Center developments, the number of Permanent Jobs summarized above will not be realized at the same time. It is estimated the build-out of the Center will occur over 15 years, as many individual elements have not yet begun and the demand for such elements may fluctuate. By way of example, assuming a vacancy rate of 10%, the Center will generate (i) approximately 1,440 Permanent Jobs in the City for every 2.4 million square feet occupied; and (ii) at build out, approximately 21,600 Permanent Jobs within the City.

## C. OVERALL PERMANENT JOB OUTPUT

Total Permanent Job output (i.e., total expenditures including sales or gross receipts, or other operating income) within the City will increase substantially with development. Total Permanent Job output is estimated based on the different types of development projected to occur. As stated in Section I, this Study analyzes direct and indirect/induced impacts. Regarding gross receipts, the direct impact reflects the initial or first-round increases in output (total spending/gross receipts, including payroll), all of which occur directly on the Center site. Permanent Job indirect/induced economic impacts are the secondary and other additional rounds of economic activity that occur as a consequence of the direct output impacts, and can occur outside of the Center. The indirect impacts represent the economic activity – buying and selling of goods and services – of suppliers and/or supporting businesses. The induced impacts represent the economic activity that results from household spending by employees of all companies directly and indirectly affected by the Center (please see **Table 1** on *Page 3* for a graphical representation of the indirect and induced effects). **Table 4C** shown below and **Exhibit 2 of Appendix B** summarize the Total Permanent Job output projections anticipated.

Based again on IMPLAN multipliers and other assumptions utilized in the fiscal impact model, DTA estimated that the Permanent Job direct and indirect/induced effects total $2.37 billion for the County, of which $1.94 billion is attributable to the City.

**TABLE 4C**
**PERMANENT JOB TOTAL OUTPUT**
***(ALL NUMBERS SUBJECT TO ROUNDING)***

| Permanent Job Impacts | Direct | Indirect | Induced | Total |
|---|---|---|---|---|
| Overall Output | | | | |
| Countywide | $1.50 Billion | $376 Million | $494 Million | $2.37 billion |
| Within City | $1.50 Billion | $188 Million | $247 Million | $1.94 billion |

However, similar to the effect that Center absorption and/or occupancy will have on Permanent Jobs, it will have a similar effect on the generation of total output related to the Permanent Jobs, specifically due to the difference in timing of the various Center developments and/or future occupancy rates for the Center. As a result, the overall output related to Permanent Jobs summarized above will not be realized at the same time. By way of example, assuming a vacancy rate of 10%, the Center will generate (i) approximately $116 million in Permanent Job output in the City for every 2.4 million square feet occupied; and (ii) at build out, approximately $1.75 billion in Permanent Job output within the City.

## II. ONE-TIME CONSTRUCTION JOBS, WAGES, AND OUTPUT IMPACTS

According to IMPLAN, development of the Center is also projected to create 16,521 estimated construction-related full-time equivalent ("FTE") jobs within the City. Therefore, given a build out period of approximately 15 years, with projected even absorption, the construction of the Center will create approximately 1,101 FTE annual One-time Construction Jobs in the City. Construction and development costs related to these One-time Construction Jobs will also have multiplier effects on the economy, generating one-time increases in output and wages related to One-time Construction Jobs for non-residential buildings and all related site improvements.

As with Permanent Job impacts, experience and modeling indicate that a large percentage of these One-time Construction Jobs will be support service jobs, and are likely to be located close to the Center, and therefore within the City itself. For purposes of this Study, it is conservatively modeled that one-half of these indirect One-time Construction Jobs will be located within the City. **Table 4D** and **Table 4E** below and **Exhibit 5** of **Appendix B** summarize the projected increases in employment, wages, and output that are generated directly from One-time Construction Jobs of the Center land uses, based on DTA wage and construction cost assumptions.

**TABLE 4D**
**ONE-TIME CONSTRUCTION JOB INCREASES IN EMPLOYMENT AND WAGES**
*(ALL NUMBERS SUBJECT TO ROUNDING)*

| One-Time Construction Job Impacts | Direct | Indirect | Induced | Total |
|---|---|---|---|---|
| Employees | | | | |
| Countywide | 12,807 | 3,285 | 4,141 | 20,233 |
| Within City | 12,807 | 1,643 | 2,071 | 16,521 |
| Employee Wages | | | | |
| Countywide | $625 Million | $133 Million | $168 Million | $927 Million |
| Within City | $625 Million | $67 Million | $84 Million | $776 Million |

**TABLE 4E**
**ONE-TIME CONSTRUCTION JOB TOTAL OUTPUT**
*(ALL NUMBERS SUBJECT TO ROUNDING)*

| One-Time Construction Job Impacts | Direct | Indirect | Induced | Total |
|---|---|---|---|---|
| Overall Output | | | | |
| Countywide | $1.67 billion | $436 million | $496 million | $2.60 Billion |
| Within City | $1.67 billion | $218 million | $248 million | $2.14 Billion |

By way of example, assuming an vacancy rate of 10%, the Center would generate (i) approximately 991 One-time Construction Jobs, $47 million in related wages, and $128 million in related output, in the City for every 2.4 million square feet developed; and (ii) at build out, approximately 14,867 One-time Construction Jobs, $698 million in related wages, and 1.92 billion in related output within the City.

## III. OTHER IMPACTS (JOBS-HOUSING BALANCE)

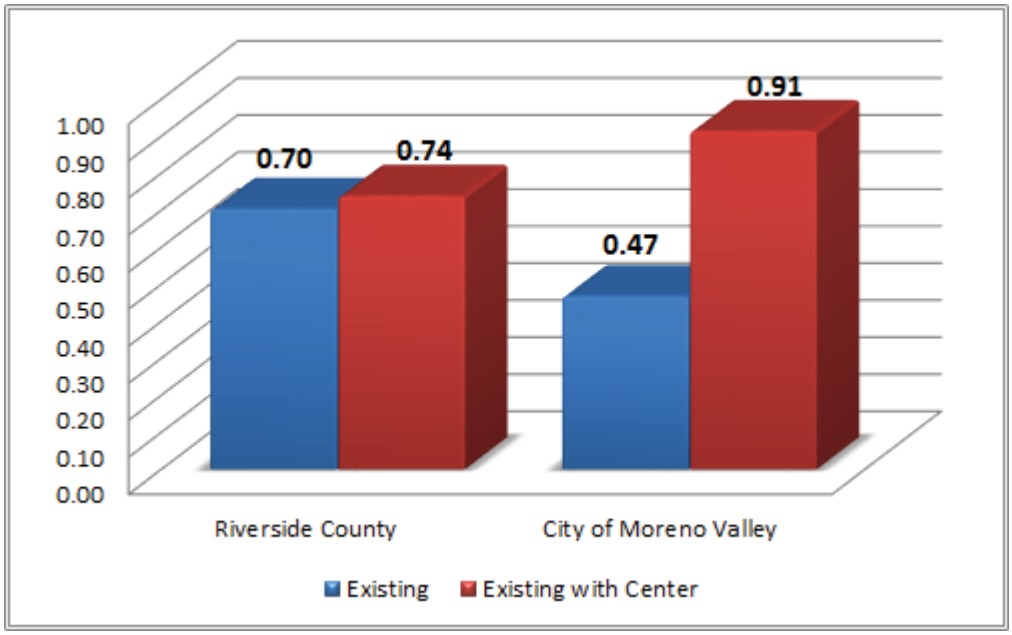
As stated earlier, the Center is estimated to create approximately 20,307 new on-site jobs, and DTA estimates that an additional 7,386 new off-site jobs will be created County-wide (of which 3,693 will be located within the City). As depicted in **Table 4F** and **Figure B** below, as well as in **Exhibit 4** of **Appendix B**, because the Center does not involve a residential component, the jobs generated by the Center do not need to support new households as a result of direct employment or indirect employment. This results in a Jobs-Housing balance calculation wherein the numerator increases (as described above), while the denominator remains constant.

The Jobs-Housing balance is an indicator of the balance between employment and housing opportunities. Defining what constitutes a balance between jobs and housing is not an easy task. Assuming a simple ratio of one job to one household is inappropriate today when so many households include more than one person in the workforce. A study prepared by the Southern California Association of Governments ("SCAG") suggests that if an area has a Jobs-Household

balance that significantly diverges from a regional standard of 1.0–1.29, it can be considered out of balance.

At build-out, the Center will significantly affect the Jobs-Housing balance. As described in **Exhibit 4** of **Appendix B**, moving forward with the Center will increase total employment in the City from 25,120 (current, per California Employment Development Department, Labor Market Information Division) to 49,120 (projected), increasing the City Jobs-Housing balance from 0.47 to 0.91, a metric now largely in line with the SCAG standard[1]. The 27,693 new County employees from the Center will increase total County employment to 579,185 (projected) from 551,492 (current), resulting in an increase in the County Jobs-Housing balance as well, up to 0.74 from 0.70. **Table 4F** and **Figure B** below, and **Exhibit 4** of **Appendix B** summarize the pre- and post-Center Jobs-Housing Balance.

**TABLE 4F**



| Jobs-Housing Balance | Balance without Center | Balance with Center | % Increase /(Decrease) |
|---|---|---|---|
| Countywide | 0.70 | 0.74 | 5.02% |
| Within City | 0.47 | 0.91 | 95.54% |

However, as development of the Center is expected to occur over many years, the Jobs-Housing balance will not be significantly changed in the earlier years due to the Center. As the City's current Jobs-Housing balance is exceptionally low according to SCAG standards, the need for employment is immediate. By way of example, assuming a vacancy rate of 10%, the Center will result in a jobs housing balance of (i) approximately 0.49 in the City for the first 2.4 million square feet occupied (increasing by approximately 0.03 for every additional 2.4 million occupied); and (ii) at build out, approximately 0.87 within the City.

A balance between jobs and housing has a positive impact on the City by decreasing costs associated with commuting and traffic congestion. A balanced Jobs-Housing ratio provides, inter alia, reduced commute times, improved social and cultural involvement, a more attractive work/life balance to residents, and savings to local public agencies in terms of the need to construct and maintain new road improvements and other facilities. For example, the lower transportation facility costs experienced by local public agencies will enable these agencies to invest their tax proceeds in other facilities that can improve the quality of life within the City, such as libraries, recreational centers, and other community amenities.

[1] The jobs/housing balance ratio does not account for projected population growth or employment growth resulting from other future development that may occur in the City.

# ECONOMIC DEVELOPMENT ACTION PLAN 2013-2016

An updated Economic Development Action Plan has been formulated to capitalize on near-term opportunities in eight geographic areas during a 3-year time frame. The focus of the updated Economic Development Action Plan includes the following goals and objectives in the nine recommended geographic areas:

## Edgemont

Pursue the revitalization of the Edgemont area through the adoption of a multi-faceted redevelopment strategy.

- Work towards the upgrading the water system to ensure sufficient water pressure to allow for new development projects in this area.
- Use Neighborhood Stabilization program funding to acquire and land bank foreclosed properties-both single-family and multi-family residential.
- Conduct quarterly Neighborhood Clean-up programs.
- Retain a planning consultant to evaluate land uses to establish the highest and best land use designations for redevelopment efforts.
- Pursue a master developer to assist with the planning for redevelopment in the Edgemont area.

## TownGate

Collaborate with the Fritz Duda Company and CW Capital towards stabilizing, upgrading and expanding retail and restaurant development opportunities in the TownGate area including the Moreno Valley Mall and the five shopping centers surrounding the regional mall including TownGate Center, TownGate Plaza, TownGate Crossing, TownGate Promenade and TownGate Square

- Continue to work with CW Capital-the owner of the Moreno Valley Mall in upgrading and attracting new users to the regional mall.
- Facilitate the planning and marketing for a 30,000 S.F. expansion project at the Moreno Valley Mall to include a new restaurant, retail and plaza area next to Harkins Theatres.
- Work with the Fritz Duda Company in the re-occupancy of vacant retail spaces and the overall stabilization of TownGate Center including new uses such as ULTA Beauty, BevMo and Planet Fitness.
- Assist in the processing of development plans for new projects in TownGate shopping centers including 24 Hour Fitness Sport, Miguel's Jr. Mexican Restaurant and Richie's Real American Diner.
- Cooperate with the Fritz Duda Company in pursuing the continued development of a 'Restaurant Row' area in TownGate Promenade.

## Festival

Cooperate with the Kodash Company and Miller Family Trust-the ownership of the Festival Center, to explore ways to redevelop or enhance the viability of the Festival Center including rehabilitation efforts and incorporating new appropriate land uses.

- Help facilitate attracting new users and the upgrade of the Festival Center.
- Explore developing a new residential component at the Festival Center.
- Explore possibilities with Moreno Valley Unified School District of developing new education facilities at Festival.
- Pursue an overlay study to consider other uses at Festival including possibly cultural & performing arts facilities, along with developing sports or recreation facilities for use by the community to create a mixed-use development concept.

## Sunnymead Boulevard

Work towards the further redevelopment of Sunnymead Boulevard, between Frederick Street to Perris Boulevard.

- Conduct a code compliance effort aimed at enhancing the image of Sunnymead Boulevard.
- Pursue new users and development projects for Sunnymead Boulevard.
- Market mixed-use development opportunities for Sunnymead Boulevard that combine new residential projects with retail and office uses.

## Centerpointe Business Park

Work with Ridge Property Trust and USAA Real Estate to expand development and business opportunities aimed at completing the Centerpointe Business Park.

- Assist Ridge Property Trust and Harbor Freight Tools (HFT) in the 507,720 S.F. expansion of HFT's Distribution Center at the NW corner of Cactus and Graham.
- Facilitate efforts for a user to occupy USAA's new 522,774 S.F. Centerpointe Logistics Center at the NW corner of Cactus and Frederick.
- Help advance the development of Ridge Property Trust's approved 607,960 S.F. industrial building at the NW corner of Brodiaea and Graham.
- Facilitate expansion plans for the Serta Mattress facility.
- Work with the owner of the Plaza Del Sol Center in stabilizing the center to provide needed shopping and restaurant opportunities in the Centerpointe Business Park area.

## South Moreno Valley Industrial Area

Work with seven developers (Alere Property Group, First Industrial Realty Trust, IDS Real Estate Group, Panattoni Development Co., Sares-REGIS Group, Trammell Crow Company & Western RealCo) on new business attraction and development projects in the South Moreno Valley Industrial Area.

- Work with IDS Real Estate Group in securing a business user for the new 769,320 S.F. Nandina Distribution Center.
- Facilitate the completion of Trammell Crow Company's 1,250,000 S.F. I-215 Logistics Center project, including securing a user.

- Cooperate with First Industrial Realty Trust and Panattoni Development Co. in pursuing the speculative development of two industrial buildings with a total of nearly 2 million S.F.
- Assist Sares-REGIS Group and Western RealCo in build-to-suit opportunities for two approved industrial building projects with a total of more than 3.6 million S.F.
- Work with Alere Property Group, First Industrial Realty Trust and Trammell Crow Co. in the planning and entitlements for several new industrial projects with a proposed 4 million S.F.

## City Center Medical/Healthcare Corridor

Cooperate with Riverside County Regional Medical Center (RCRMC), Kaiser Permanente, Moreno Valley College and Highland Fairview to help facilitate the further expansion of the City of Moreno Valley's Medical/Healthcare Corridor on Nason Street & Iris Avenue.

- Assist Riverside County with the implementation of the Master Plan for expanding the Riverside County Regional Medical Center including a new Trauma & Urgent Care, relocated & upgraded Operations Support building and facilities for the new UCR School of Medicine.
- Facilitate plans by Kaiser Permanente to expand the Moreno Valley Community Hospital with an expansion and upgrade of the Emergency Room facilities and development of a planned second tower.
- Cooperate with Moreno Valley College and Riverside Community College District in the development of a proposed 30,000 S.F. allied health sciences facility in the medical-healthcare corridor.
- Support the planning and marketing efforts of Highland Fairview to pursue the creation of a master planned 200-acre healthcare campus to be situated within the medical corridor and between the two existing hospitals-RCRMC and Kaiser's Community Hospital.
- Continue the planning and funding of capital improvement projects that will widen and construct the ultimate improvements on Nason Street from SR 60 to Iris Avenue to provide critical access to the two hospitals and the medical/healthcare corridor.
- The continued development of Medical/Healthcare corridor on Nason Street and Iris Avenue shall be the City's top priority for new medical and healthcare development.
- Undertake a study to determine highest and best land uses for the City-owned 60-acre property at the NW corner of Nason and Alessandro.

## World Logistics Center at Rancho Belago

Collaborate with Highland Fairview in the development of the World Logistics Center—a 41.6 million S.F. master planned corporate park proposed to be developed on 2,700 acres in the Rancho Belago area of eastern Moreno Valley.

- Process an Environmental Impact Report and preliminary development plans for the World Logistics Center in eastern Moreno Valley—south of SR 60 and east of Redlands Boulevard to Gilman Springs Road.
- Assist in the drafting of a Specific Plan that will guide the orderly development for of World Logistics Center.
- Cooperate with Highland Fairview in the formulation of a Development Agreement to create a public-private partnership to help facilitate the development of new public infrastructure in eastern

Moreno Valley associated with the World Logistics Center including roads, trails, utilities, storm water protection and fire protection facilities.
- Work with Highland Fairview in branding the World Logistics Center as one of the largest e-commerce focused development projects in the U.S.

## SR 60 East Corridor

Pursue new development opportunities along the SR 60 East corridor—from Nason Street to the easterly City limits.

- Prepare an Overlay Study to determine the 'highest and best' land uses along the SR 60 East Corridor.
- Assist property owners and developers in marketing development opportunities along the SR 60 East Corridor.
- Work on opportunities to expand the Moreno Valley Auto Mall.
- Facilitate the stabilization and further development of Stoneridge Towne Centre and Moreno Beach Plaza.

In addition to activities in the eight geographic areas, a series of objectives are being recommended to assist with overall economic development efforts to assist with Business Attraction, Business Retention and Business Expansion including the following:

- Continue to coordinate the Capital Program (CIP) with economic development efforts
- Expand the Development Ombudsman Program to provide a comprehensive range of business support services for developers and businesses
- Restart the Business Visitation Program, including the participation of the Mayor in 1 on 1 visits annually with the Top 50 with the major employers in the community
- Implement new software that will enable business owners, developers, contractors and residents to electronically submit and manage their plans with the City of Moreno Valley
- Utilize the Chambers of Commerce to expand participation in the Small Business Counseling Services provided by the Small Business Development Center (SBDC)
- Work with the Community Investment Corporation in a the development of a business incubator and micro-business loan program
- Pursue the reuse of vacant anchor retail spaces, including the use of the new ED-Retail Anchor Reuse Incentive Program
- Explore revising the scopes of work with the Agreements the Chamber of Commerce to better focus on business retention and expansion activities, including expansion of Shop MoVal, as well as establishing a program to promote more business to business transactions in Moreno Valley
- Utilize the Chambers of Commerce to undertake a survey of the small business community on ways to improve the business climate in Moreno Valley
- Use the Chambers of Commerce to assist with increasing high school graduation rates in the community through the development of mentor programs to link students with business leaders
- Pursue the creation of a Business Support Advisory Council comprised of major employers in Moreno Valley

- Seek ways to promote opportunities for more ties between cultural & performing arts in the community with economic development
- Explore creating an incentive program aimed at attracting development projects with e-commerce or fulfillment center users
- Continue to work with residential developers and the Building Industry Association (BIA) on ways to help facilitate new quality residential development in Moreno Valley

# Objectives for Economic Development

- Create jobs locally and address City's high unemployment rate
- Address the Community's jobs to housing imbalance
- Strengthen and broaden the local economic foundation by attracting quality businesses
- Enhance City revenue generation from sources such as sales tax, property tax, transient occupancy tax, and utility tax – all aimed at improving quality of life in Moreno Valley

# Economic Development Action Plan

Focusing on key initiatives to be provided in 2 years

TownGate

Centerpointe Business Park

South Moreno Valley Industrial Area

Eastern Moreno Valley – Rancho Belago

City Center

# Action Plan
# Areas of Opportunity

# TownGate

- Major retail area that produced $2.84 million in sales tax in 2010 (26.19% of City total)
- New owner of Moreno Valley Mall
- Recent success with Sports Authority, Burlington Coat Factory, Buffalo Wild Wings and two hotels
- Negotiations ongoing with several major retailers and restaurants for TownGate locations

# Centerpointe Business Park

- Major Business Park location primed to produce more employment opportunities – already home to six major corporations
- Several approved and entitled projects being considered for starting construction in short-term

# South Moreno Valley Industrial Area

- Significant job center in community with 10 major corporations already here.
- Prospects for short-term construction developments is excellent with 3.6 million s.f. in building plan check, 3.5 million s.f. approved/entitled, 3.1 million s.f. ongoing with EIR’s

# Eastern Moreno Valley – Rancho Belago

- Prime area of Community with large undeveloped areas.
- Skechers USA opening has generated interest by other prospective corporate users.
- Nearly 20-year old Moreno Highlands Specific Plan to expire in 2012
- Highest and Best land uses should be evaluated to address City's jobs to housing imbalance

# Survey of Inland Region Industrial/Business Park Zoning

- Ontario 25.3%
- Perris 21.7%
- San Bernardino 18.0%
- Chino 17.1%
- Fontana 17.0%
- Rancho Cucamonga 15.3%
- Riverside 15.2%
- Corona 11.4%
- Moreno Valley 9.0%

# Survey of Inland Region Industrial/Business Park Land Use

| City | Population | City Size sq. mi. | Workforce | Housing Units | Industrial Zoning Percentage | Industrial Developed |
|---|---|---|---|---|---|---|
| Riverside | 297,863 | 81.5 | 159,100 | 99,949 | 15.2% | 39.3 million |
| Moreno Valley | 188,537 | 60.0 | 32,411 | 56,845 | 9.0% | 10.1 million |
| Fontana | 188,498 | 52.4 | 61,600 | 53,725 | 17.0% | 48.3 million |
| Rancho Cucamonga | 178,904 | 40.2 | 70,275 | 56,215 | 15.3% | 36.8 million |
| Ontario | 173,690 | 50.0 | 107,069 | 47,276 | 25.3% | 97.0 million |
| Chino | 84,973 | 30.9 | 34,331 | 20,265 | 17.1% | 40.1 million |

# City Center

*Why City Center?*

- Geographic center of Moreno Valley
- Home to Moreno Valley College, Riverside County Regional Medical Center, Kaiser Community Hospital, Stoneridge Towne Center, Moreno Beach Plaza, and Moreno Valley Auto Mall
- Contains large amount of newer housing developments of major developers such as American Richmond Homes, Beazer Homes, DR Horton, Pacific Community and Young Homes

# Re-sequence CIP Projects

- Installation of new SR60 southerly ramps at Moreno Beach, including extension of Eucalyptus to connect with Moreno Beach
- Improvements on Cactus Avenue between Lasselle Street to Nason Street
- Extension of Nason Street southerly to connect Cactus Avenue with Iris Avenue

# Re-sequencing of CIP Projects
## Provides the Following Benefits:

- Builds improvements identified in City's Circulation Plan
- Improves traffic circulation in center of the City
- Enhances Economic Development efforts
- Assists major stakeholders in the community – RCRMC, Kaiser Community Hospital, Moreno Valley College, Stoneridge Towne Centre, Moreno Beach Plaza and the Moreno Valley Auto Mall.

# Stoneridge Towne Centre, Moreno Beach Plaza and the Auto Mall

- Major Sales Tax Producers for the City
- Potential for significant increased sales tax revenue
- Closing of any anchor use would be devastating
- Need to stabilize and enhance effectiveness of major anchor uses must be a priority

# Moreno Valley College, RCRMC and Kaiser Community Hospital

- Major institutions focused on Health & Medical Field
- Expansion plans in the works for all three institutions
- Allied health industry is one of the rapidly growing professions in the U.S.
- CIP projects greatly enhance the area and fully supported by three institutions

# Highland Fairview

- City & Highland Fairview working together on plan to reposition part of Aqua Bella to develop world-class medical and health related campus
- Expand City's established overlay zone for medical office corridor
- Development of more medical and health related uses would compliment two hospitals and Community College's Allied Health Services focus

# Fiscal Impact of CIP Re-sequencing

## SR/60 Moreno Beach

Estimated cost of $10.5 million funded through:

1. $2.5 million of RDA Bond proceeds
2. Savings of $7 million from SR60/Nason Project
3. Proposed $1 million Developer contribution

## Cactus and Nason Improvements

Established cost of $23.3 million funded through:

1. Estimated 10% savings by constructing projects together
2. $6 million funded by RDA pass-through targeted for Flood Control projects
3. $1 million funded from California's SLLP Grant
4. Borrowing funding from five CIP projects to generate $13.4 million

# Economic Development Strategy Next Steps

- Approve Economic Development Action Plan
- Re-sequence CIP projects
- Strive to enhance Development Services Process
- Work with major developers on advancing projects
- Make Moreno Valley a “Best Place to do Business”

# Report to City Council

**TO:** Mayor and City Council

**FROM:** Barry Foster, Community & Economic Development Director

**AGENDA DATE:** April 23, 2013

**TITLE:** 3-YEAR ECONOMIC DEVELOPMENT ACTION PLAN

## RECOMMENDED ACTION

Recommendation:

1. Approve the 3-Year Economic Development Action Plan.

## ADVISORY BOARD/COMMISSION RECOMMENDATION

The City's Economic Development Subcommittee recommends approval of the 3-Year Economic Development Action Plan as drafted.

## BACKGROUND

In April 2011, the City adopted a 2-Year Economic Development Action Plan to act as a short term (2 year) strategic plan to help guide the City's economic development efforts in five geographic areas including: 1) Towngate, 2) Centerpointe Business Park, 3) South Moreno Valley Industrial Area, 4) Rancho Belago - East Moreno Valley and 5) City Center. Additionally, the Economic Development Action Plan helped focus Capital Improvement Plan Funding on projects that can help advance Economic Development efforts. During the 2-Year period of the Economic Development Action Plan much has been accomplished in the five geographic areas including the significant project advancement and job creation.

## DISCUSSION

The new proposed 3-Year ED Action Plan has been formulated to build upon the 2-Year ED Action Plan, but continues to push many more economic development efforts including even more job creation. The proposed 3-Year ED Action Plan presents the following:

- A new 3-Year ED Action Plan would expand the focus of to nine geographic areas including 1) Edgemont, 2) TownGate, 3) Festival, 4) Sunnymead Blvd., 5) Centerpointe Business Park, 6) South Moreno Valley Industrial Area, 7) City Center & Medical/ Healthcare Corridor, 8) World Logistics Center at Rancho Belago and 9) SR 60 East Corridor.

- The ED Action Plan also includes fourteen objectives aimed at increasing overall economic development efforts with 1) Business Attraction, 2) Business retention and 3) Business Expansion.

# Report to City Council

**TO:** Mayor and City Council

**FROM:** Barry Foster, Community & Economic Development Director

**AGENDA DATE:** April 26, 2011

**TITLE:** ECONOMIC DEVELOPMENT ACTION PLAN

## RECOMMENDED ACTION

Staff recommends the City Council:

1. Review and provide direction on an Economic Development Action Plan.
2. Consider the sequencing and funding of Capital Improvement Program projects.

## BACKGROUND

The City of Moreno Valley is looking at ways to best assist the future development of the community. With the economy starting to improve, now is the right time to seize the opportunity to evaluate ways that Moreno Valley can best plan for advancing economic development. On March 22, staff introduced an Economic Development Plan with established Areas of Opportunity in the community aimed at producing major employment hubs, successful retail centers and redevelopment possibilities with a goal of making Moreno Valley a major business development area in Southern California.

The focus of the Economic Development Plan-Areas of Opportunity is toward creating a well-rounded community with a strong economic foundation. Creating new jobs in the community, along with providing a positive economic stimulus to existing businesses, must be major priority for the City. Furthermore, Moreno Valley should seek ways to enhance its commercial retail/restaurant make-up and move to improve the City's per capita sales tax revenue stream. Making Moreno Valley a great place to live, work, do business, shop, eat and visit is the ultimate economic development objective. The twelve recommended Areas of Opportunity include the following locations:

- Eastern Moreno Valley-Rancho Belago (including Highland Fairview Corporate Park-Skechers USA, WestRidge Commerce Center, Prologis, and Moreno Highlands)
- City Center (including a Nason, Moreno Beach and Lasselle loop--with Stoneridge Towne Centre, Moreno Beach Plaza, Moreno Valley Auto Mall, proposed Moreno Beach Marketplace-Lowes Center, Moreno Marketplace-Stater Bros. Center, Moreno Valley Ranch Golf Club, Riverside County Regional Medical Center, Aqua Bella, Kaiser-Moreno Valley Community Hospital, Lakeside Plaza & Terrace, Moreno Valley College, the proposed Winco Center and the City's 60-acre property at NWC of Alessandro/Nason)
- South Moreno Valley Industrial Specific Plan Area
- March LifeCare
- Centerpointe Business Park
- Alessandro Boulevard
- Sunnymead Boulevard
- Festival-Ironwood
- Sunnymead Ranch-Lakeshore Village Marketplace
- TownGate (including the Moreno Valley Mall and five surrounding commercial centers-TownGate Center, TownGate Plaza, TownGate Crossing, TownGate Promenade, and TownGate Square)
- Canyon Springs Plaza and proposed TownGate Highlands
- Edgemont Area

## DISCUSSION

The formulation of the Economic Development Plan-Areas of Opportunity establishes a broad framework with a diverse number of economic development opportunities, including both short term and longer term possibilities. To fully capitalize on near-term opportunities, staff is recommending the implementation of an Economic Development Action Plan focusing on several key initiatives within five of the Areas of Opportunity--to be pursued within a short-term, 2-year time frame. The focus of this Action Plan would be to:

- Collaborate with the Fritz Duda Company and CW Capital towards enhancing retail and restaurant development in the TownGate area, including pursuing new users for vacant big-box retail space in TownGate Center and the Moreno Valley Mall.
- Advance the development on several projects in the Centerpointe Business Park area.
- Facilitate the development of a number of approved and entitled projects in the South Moreno Valley Industrial Specific Plan Area.
- Capitalize on the opening of Skechers USA and begin to re-evaluate land uses in eastern Moreno Valley, in conjunction with the expiration of the Moreno Highlands Specific Plan and supporting Development Agreement.

- Re-sequence and fast-track three Capital Improvement Projects in the City Center area—1) SR60 south ramps and extension of Eucalyptus to connect with Moreno Beach, 2) installation of ultimate improvements on Cactus Avenue, between Lasselle and Nason and 3) the extension of Nason Street southerly to connect Cactus Avenue with Iris Avenue, along with pursuing the idea of repositioning part of the Aqua Bella area to expand the City's established medical office overlay zone.

Moreno Valley has a strategic location in the Inland Region and is clearly in the path of growth. Since incorporation as a city, Moreno Valley has experienced strong residential development from many quality home builders. Now is an important time for the City to broaden its economic base by pursuing ways for new commercial retail, office and industrial development to happen in the community. The five specified areas of opportunity focused within the proposed Economic Development Action Plan were selected because of location and potential for realizing success in the near-term development marketplace, along with adherence with the following economic development objectives:

- Create jobs locally and address the City's high unemployment rate.
- Address the community's jobs to housing imbalance.
- Strengthen and broaden the local economic foundation by attracting quality businesses.
- Enhance City revenue generation from sources such as Sales Tax, Property Tax, Transient Occupancy Tax, and Utility Tax, with an overall goal of improving the quality of life in Moreno Valley.

***TownGate***

The master planned 590-acre TownGate area, including the Moreno Valley Mall along with five popular community shopping centers is a major component of Moreno Valley's retail environment. In 2010, the retail areas of TownGate produced more than $2.84 million in sales tax revenue for the City of Moreno Valley, which represented 26% of all the sales tax revenue generated for the City. The ownership of the Moreno Valley Mall at TownGate, a 1.25 million square foot regional mall, was recently assumed by CW Capital. City staff is working closely with CW Capital and their development partners (Cushman & Wakefield and Spinoso Real Estate Group) on plans to upgrade, expand and reposition the Mall property, which anchors the TownGate area. Additionally, City staff is working in collaborative partnership with the Fritz Duda Company in pursuing national retailers and restaurants to occupy vacant spaces in TownGate properties. Recent success in attracting Burlington Coat Factory, Buffalo Wild Wings, Five Guys Burgers and Panera Bread have lead to furthering negotiations with several other major retailers and restaurants for TownGate locations. The use of the CDBG Business Incentive program and purchasing operating covenants will be important tools in finalizing these potential users. The relocation of the Robertson's Ready-Mix operation out of TownGate will also present additional development opportunities in TownGate Square.

***Centerpointe Business Park***

The Centerpointe Business Park area has attracted a number of quality businesses that have produced many employment opportunities in the community. Frazee Paint, Minka Group, ResMed, Serta Mattress, United Natural Foods Inc., and the U.S. Postal Service all have opened major facilities in the Centerpointe Business Park. By this August, Harbor Freight Tools will be fully operational in a new Distribution Center (DC) at the NW corner of Cactus Avenue and Graham Street that will eventually employ up to 400 people. Both Ridge Property Trust and Overton Moore Properties (OMP) are pursuing additional development opportunities in the short term for the Centerpointe Business Park. Recently OMP re-started the plan check process for a new 519,760 S.F. industrial building to be situated at the NW corner of Cactus Avenue and Frederick Street. All of these projects are aimed at attracting new logistic and distribution users that will create new jobs in the community.

***South Moreno Valley Industrial Specific Plan Area***

During the last development cycle, the South Moreno Valley Industrial Specific Plan Area was a catalyst for producing development opportunities for a number of major employers including Cardinal International Inc., El Dorado Stone Corporation, Harmon Kardon International Industries, iHerb Inc., Lowe's Company Inc., Masonite International Corporation, O'Reilly Automotive Inc., Philips Electronics Corporation, Ross Stores Inc. and Walgreens Company. Recently, a number of leading industrial developers have reinstituted the processing of construction plans for approved and entitled projects in the South Industrial Area. Assisting in the development of new speculative industrial development projects in this area of Moreno Valley will be an important tool for the City in creating new employment opportunities in logistics/distribution. With a vacancy rate of just 3.4% for industrial buildings, Moreno Valley needs developers to initiate new construction projects. Presently five buildings with a total of 3.6 million square feet are in plan check with construction drawings. Four other projects with 3.5 million square feet are approved and entitled, but at this time do not have active development plans being processed. One of these large projects is in escrow to be purchased by a major-national developer who desires to move forward with development of the project. Another two sizeable projects with a total of 3.1 million square feet have Environmental Impact Reviews in progress.

***Eastern Moreno Valley-Rancho Belago Area***

The eastern area of Moreno Valley, including the Ranch Belago area, has a significant amount of undeveloped property. Much of this area is included in the Moreno Highlands Specific Plan, which is set to expire in 2012. Considering that the Specific Plan will soon expire, the idea of evaluating the highest and best land uses in the eastern area of the community makes great sense. With the opening of the Skechers USA facility coming soon many other potential users have expressed interest in development opportunities in the eastern Moreno Valley-Rancho Belago area. The existing Moreno Highlands Specific Plan actually includes established land uses that could support approximately 8 million square feet of new industrial and business park development—the question is proper location and product type, consistent with the ongoing development marketplace.

With the Moreno Highlands Specific Plan expiring all of this can and should be re-evaluated.

With a goal of producing more jobs in Moreno Valley, the City should consider the appropriate percentage of land area in the community to be zoned for industrial and business park development. Presently, Moreno Valley has a low percentage of land area zoned for industrial and business park uses, as compared to other nearby cities. The following represents a survey of other Inland Region cities and the percentage of property they have zoned for industrial and business park use:

Chino 17.1%
Corona 11.4%
Fontana 17.0%
Ontario 25.3%
Perris 21.7%
Rancho Cucamonga 15.3%
Riverside 15.2%
San Bernardino 18.0%
Moreno Valley 9.0%

The logistics and distribution industry is rapidly evolving to better react to the global marketplace. Large sale projects such as Skechers, are the future of logistics and distribution. The workforce to operate and maintain sophisticated and costly material handling systems demands a better trained and highly skilled worker. With significant undeveloped land holdings and easy access to SR60, the eastern Moreno Valley area is primed for more logistic and distribution development.

***City Center***

The City Center area is strategically situated at the geographic center of Moreno Valley. The City Center area includes major medical facilities, the community college, the Auto Mall, several shopping centers and a large amount of the newer housing developments in the community.

To improve traffic circulation in the area, and strengthen economic development efforts, City staff is recommending the re-sequencing of several projects from the Capital Improvement Program (CIP), including the following three projects:

- Installation of the new SR60 southerly ramps, along with the extension of Eucalyptus Avenue to connect with Moreno Beach Drive.
- Installation of the ultimate improvements on Cactus Avenue between Lasselle Street and Nason Street.
- Provide for the extension of Nason Street southerly to connect Cactus Avenue with Iris Avenue.

All of these improvements are part of the City's approved Circulation Plan and contained in the City's 2010/11 Capital Improvement Program. However, the projects

are presently either unfunded or only partially funded. The Economic Development Action Plan proposes to re-sequence the order of CIP projects to pursue the funding and construction of these projects in the short-term to assist economic development efforts and better leverage towards future revenue opportunities for the City by strengthening existing shopping centers (Stoneridge Towne Center, Moreno Beach Plaza, and the Auto Mall) and major employers (Riverside County Regional Medical Center, Kaiser's Community Hospital and Moreno Valley College). Additionally, the completion of these three CIP projects will significantly enhance the traffic flow in the central area of the community which will assist both the business community and residents with easier commutes.

Currently, major improvements are underway at SR60 and Nason to significantly improve this freeway interchange. The construction of the new ramps and bridge is targeted for completion by summer 2013. Pursing the installation of the southerly ramps at SR60 and Moreno Beach and the connection of Eucalyptus to Moreno Beach, in conjunction with the Nason interchange project, will significantly enhance the future traffic circulation in this area. Additionally, it will assist with the convenient ingress and egress to Stoneridge Towne Centre, Moreno Beach Plaza and the Moreno Valley Auto Mall.

The other two CIP projects will install the ultimate street improvements to connect Nason Street, from Cactus to Iris and upgrade Cactus Avenue from Lasselle to Nason. These improvement projects will greatly improve access to Moreno Valley College and the two medical centers in the community, along with enhancing the traffic flow in the central area of the community. Traffic modeling by the City's transportation professionals illustrates that undertaking these improvements on Cactus and Nason will greatly reduce traffic loads on Iris, Moreno Beach, Lasselle and Alessandro—thereby better managing traffic flow in this area of the community. Additionally, providing the connection of Nason from Cactus to Iris creates much easier commutes from the residential areas in Moreno Valley Ranch and the southerly section of the community to shop and dine in Stoneridge Towne Centre, Moreno Beach Plaza and the Moreno Valley Auto Mall.

Sales have finally increased at the Moreno Valley Auto Mall. Work is underway for the installation of the new freeway sign, along with other improvements at the Auto Mall. Enhancing access to the Auto Mall with these three CIP projects will be a strategic investment in growing sales tax revenue at the Auto Mall.

Stoneridge Towne Centre and Moreno Beach Plaza are major retail centers. While being attractive and nicely designed retail areas, both of these centers have struggled somewhat since opening because of the economic downturn and the collapse of the new housing development market, along with inefficiencies in traffic flow in getting to and from these shopping centers. Together, both of these shopping centers produced $1,428,000 in sales tax revenue in 2010 for the City of Moreno Valley. However, the sales performance of these two shopping centers was significantly below what they should have produced if one compares them with the California or Riverside County

averages of what these types of retail centers should produce with the tenant mix and user lineups they have assembled. Together the two shopping centers sales production was 17.9% less than the statewide average and 15.9% off the Riverside County average. This represented a $582,000 loss in potential sales tax revenue for Moreno Valley in 2010 if sales performance of these two shopping centers had just achieved the State of California average. This loss in sales revenue is even greater considering that three of the anchor stores in Moreno Beach Plaza—Phase II are vacant after Circuit City went out of business two years ago and Staples and Petsmart chose not to open their new stores.

Clearly, these two shopping centers and their anchor tenants (Walmart, Super Target, Kohl's, Best Buy, and Office Max) are underperforming. Rumors have surfaced from time to time that some of these anchor stores may close because of depressed sales performance. On average, the five operating anchor stores in the two shopping centers range from 16.6% to 48.4% below the average of what these store types should produce in sales performance when compared to the statewide average. Collectively, the five anchor stores produced $43 million in sales in 2010, but this was 29.3% below what the statewide average was for these same stores. This represented a $430,000 loss in potential sales tax revenue for Moreno Valley as compared to the statewide average. Even more troubling would be the devastating effect it would be for one or more of these anchor stores to close and the subsequent negative impact it would have on the shopping centers. An objective of this Action Plan is not only keeping all the anchor stores open, but also move to enhance their sales performance.

Interest has recently materialized for the possible re-occupancy of the three closed anchor spaces in Moreno Beach Plaza II. However, any reuse of these spaces will be contingent on first connecting Eucalyptus to Moreno Beach, along with plans to enhance traffic circulation and expand daytime population—i.e. establish more businesses and create job production in the eastern area of the City.

Moreno Valley College is well underway with four construction projects totaling $88 million that will greatly expand and upgrade the City's community college. Moreno Valley College's student population exceeds 10,000. Furthermore, both Kaiser Permanente's Community Hospital (Kaiser) and Riverside County Regional Medical Center (RCRMC) are working on plans to expand these major medical facilities. In fact, Kaiser Permanente expects to bring the development of a new 75,000 S.F. building before the Planning Commission in June, with a start of construction expected by late summer. Executive management from Moreno Valley College, Kaiser, and RCRMC all fully express support for the idea of pursuing the CIP projects and the goal of improving traffic flow in the City Center area.

In 2007, the City adopted a medical overlay zone that includes area on Iris Avenue—from the Kaiser Community Hospital area and down Nason Street to the RCRMC area. Presently, Highland Fairview is evaluating the possibility of other land uses for part of the Aqua Bella area—including the idea of developing a major health and medical related campus on approximately 200 acres of the undeveloped land on the eastern

side of a newly installed Nason Street. This proposed development concept, which would include a world-class master planned health care campus would provide a link between the existing two hospitals and further advance the City's planning concept of creating a medical corridor in this section of the community. As Americans live longer (it is expected that 20% of Americans will be over the age of 65 by 2050) and the population continues to grow in the Inland Region, the need will escalate for more medical and health related services in this area. The vision of creating a medical and health services corridor in this of the community makes great sense, particularly considering that major institutions such as RCRMC, Kaiser Permanente and Moreno Valley College are already situated in this area of the community.

There is a clear need for education, training and research/development in the health and medical fields. Allied Health is one of the most rapidly growing professions in the U.S. and especially in Southern California. According to the U.S. Bureau of Labor Statistics---17 of the top 30 fastest growing occupations in the U.S. are in the health related professions. The California Wellness Foundation, estimates that by 2030, almost 1 million health care workers will be needed in California. Having Moreno Valley College, with its Allied Health Sciences programs, along with the fact that RCRMC will be the major teaching hospital for the new UC-Riverside medical school, provides even more momentum to consider repositioning part of the undeveloped land at Aqua Bella for health and medical related uses. Constructing the Nason and Cactus improvements would clearly help advance the planning and marketing efforts for an expansion of the medical overlay corridor. Producing more health and medical related facilities will create more jobs and employment opportunities in Moreno Valley, along with helping improve retail and restaurant sales in the shopping centers in the City Center area.

Staff has discussed the idea of advancing the construction of the three CIP projects in the City Center area with many of the stakeholders in this area--including Moreno Valley College, RCRMC, Kaiser Permanente, Highland Fairview, Stoneridge Towne Centre-Weingarten Realty, Moreno Beach Plaza I-Pacific Retail Partners, Moreno Beach Plaza II-Merlone Greier Partners, and the Moreno Valley Auto Mall-Moss Bros. Auto Group. All are fully supportive and enthusiastic about the idea of pursuing these three CIP projects in the short-term. Ten of the Top 20 Sales Tax Producers in the City are contained in this area and 22% of the entire City's sales tax revenue in 2010 was produced in Stoneridge Towne Centre, Moreno Beach Plaza and the Moreno Valley Auto Mall. The City Center area also includes a number of the major employers in the community--including eight of the top 50 major employers in Moreno Valley. Presently these eight major employers provide nearly 5,000 employment opportunities in Moreno Valley. Strengthening all these businesses should be an objective of the City's economic development efforts.

## ALTERNATIVES

Staff recommends that the City Council approve the Economic Development Action Plan including the following actions:

1. Adoption of the five initiatives as proposed in the Economic Development Action Plan.
2. Approve the re-sequencing as proposed for Capital Improvement Program projects.

Other alternatives the City Council may consider is rejecting the proposed Economic Development Action Plan and the re-sequencing of CIP projects or provide direction on other economic development efforts to be included in formulating a short-term Action Plan.

## FISCAL IMPACT

The funding and construction of the three projects will be accomplished through the Capital Improvement Program.

***SR60/Moreno Beach-South Ramps***

The cost for this project is estimated at $10.5 million and will be funded though a combination of sources including 1) $2.5 million of proceeds from the 2007 RDA Bond Issuance that was recently shifted to the City, 2) estimated savings in the amount of $7 million from the SR60/Nason ramps and bridge projects, and 3) a proposed Developer contribution of $1 million from the owner of the Moreno Beach Plaza-Phase II, in conjunction with a reimbursement agreement to be tied to future tenants sales tax performance.

***Cactus Avenue and Nason Street Improvements***

The total cost for these two projects is estimated at $23.3 million. To achieve an 'economies of scale' and reduce overall costs, it is suggested to construct the projects together as one large scale project or through a design build process—with a goal of saving at least 10% in construction costs. An estimated $6 million of the costs for the projects involves installing storm water infrastructure that is part of Riverside County's Master Planned Flood Control System. Moreno Valley through its Redevelopment Agency (RDA) has accumulated $5.42 million in tax increment pass through revenues that in accordance with a Cooperative Agreement (executed in 1988) between Riverside County and Moreno Valley's RDA must be used for County Flood Control master planned projects—such as the construction of Line I and Line J that should be constructed as part of the Cactus and Nason street improvement projects. By FY 2011/12 the amount of tax increment generated for this use is estimated to grow to $5,997,000 and be sufficient to construct these storm water improvements. Another potential funding source for the Cactus Avenue project is a $1 million California SLLP grant. To properly fund the remaining cost of the two projects, it is recommended that the City Council, through the CIP process, consider re-sequencing the timing of the

funding of several other CIP projects, including the delaying and/or borrowing of existing funding from several sources, including borrowing $4 million in DIF Library funds, along with pushing back the timing of several projects—Reche Vista Alignment ($3.1 million), Corporate Yard ($2.5 million), Heacock Channel improvements ($1.3 million), and Kitching Street ($2.5 million). These four projects would remain in the CIP, but would be funded at a future time if the re-sequencing of CIP projects is supported by the City Council.

## SUMMARY

Advancing economic development efforts should be a major goal for the City of Moreno Valley. Previously City staff had presented City Council with an Economic Development Plan-Areas of Opportunity. The formulation of an Economic Development Action Plan with five key initiatives is envisioned as a roadmap to guiding the City's short term economic development efforts. Included with the Action Plan is the re-sequencing of Capital Improvement Projects to better assist in economic development efforts. Investing in CIP Projects that enhance economic development through job creation and revenue generation will improve the economic condition of the City, along with enhancing the quality of life in Moreno Valley.

BEACON ECONOMICS

# *Economic Impacts*

## *The World Logistics Center*

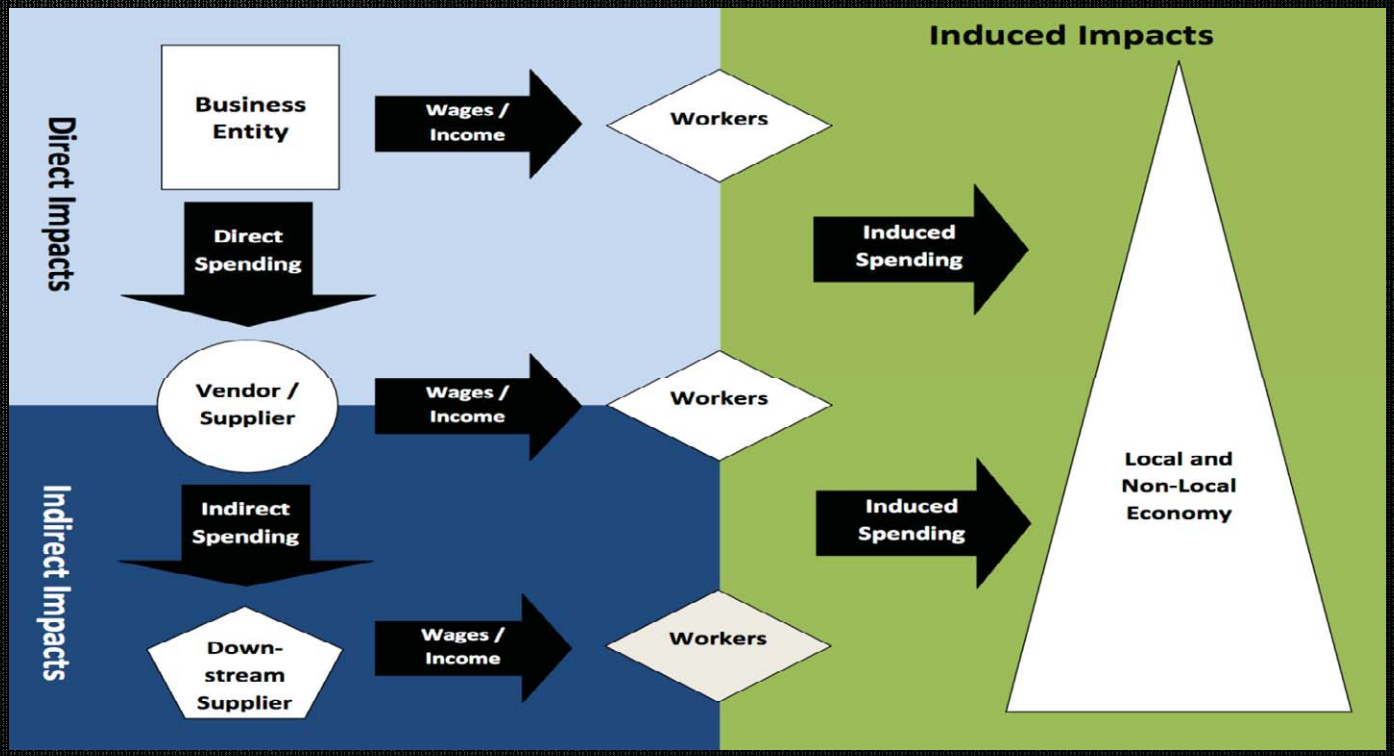
Jordan G. Levine
Director of Economic Research, Beacon Economics

BEACON ECONOMICS

# Overview

- Motivation for study
  - Measure impact of WLC on Moreno Valley
- Economic impact
  - 3 primary sources of impact
  - Construction, Outfitting, and Operations
- Benefits
  - Jobs – jobs for Moreno Valley and region's residents
  - Output – demand for additional goods and services
  - State and local tax revenues

# World Logistics Center



- 41.6 million sq. ft.
- 2,710 acres in East Moreno Valley
- Built with sustainable designs: solar, natural gas, efficient irrigation
- 22X larger than largest LEED-Gold building

BEACON ECONOMICS

# Types of Economic Impact

- Three types of impacts:
  - Direct
  - Indirect
  - Induced
- Secondary Impact
  - The sum of indirect and induced impacts
- Total Impact
  - The sum of the direct and secondary impacts

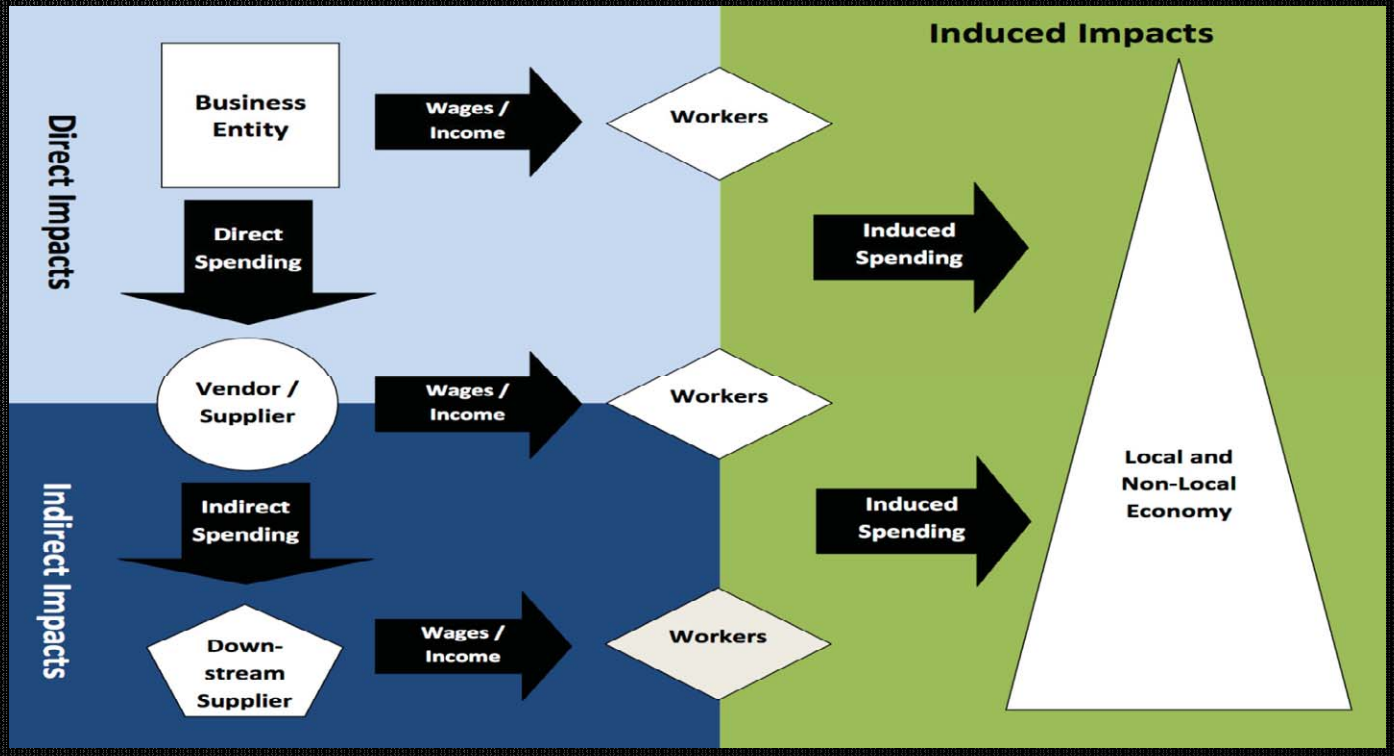
# Overview of Economic Impacts

BEACON ECONOMICS

# 1) Construction Impact

- Direct impact
  - Developer/construction company build facility
  - Provides jobs for city and county residents
- Indirect
  - Architectural and engineering services
  - Hiring of equipment
  - Purchase of building materials
- Induced
  - Spending by clientele in local economy
  - Spending by construction workers and suppliers
  - Tax revenues (Sales tax on goods purchased)
- Countywide
  - Earnings that leak out of Moreno Valley
  - Captured within Riverside County

BEACON ECONOMICS



# 2) Improvements & Equipment

- Direct impact
  - Developer performs tenant improvements
  - Outfit/customize facility for operations
- Indirect
  - Additional construction and installation
  - Equipment and software vendors
  - Engineers and mechanics
- Induced
  - Spending by workers and vendors
  - Tax revenues (Sales tax on goods purchased)
- Countywide
  - Earnings that leak out of Moreno Valley
  - Captured within Riverside County

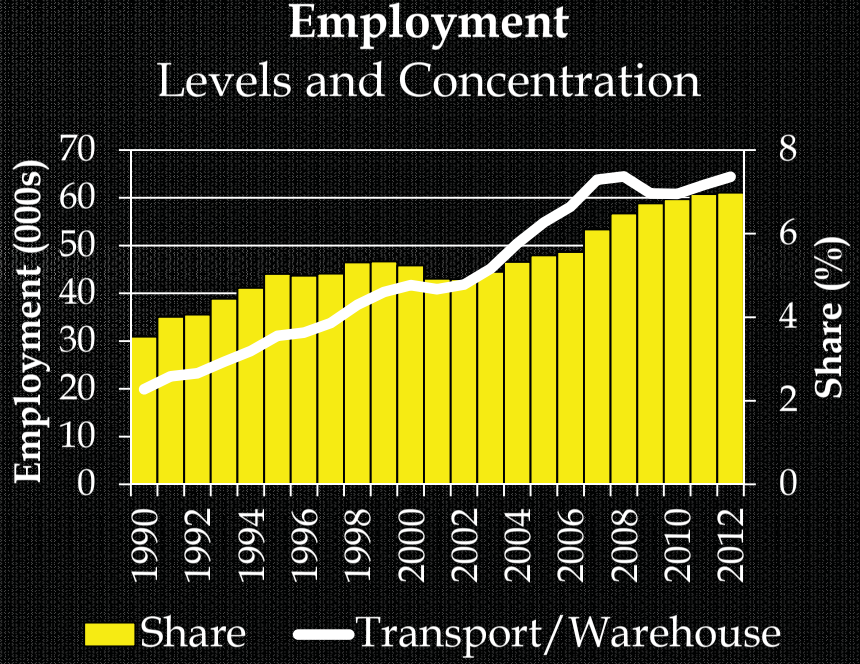
# 3) Ongoing Operations

- Direct impact
  - Tenants occupy space and hire workers
  - Provides permanent jobs for residents
- Indirect
  - Maintenance and housekeeping services
  - Accounting and payroll services
  - Legal and professional services
- Induced
  - Spending by workers and suppliers
  - Paying rent and buying cars
  - Shopping at the local retail establishments and eating out
- Countywide
  - Earnings that leak out of Moreno Valley
  - Captured within Riverside County

# Overview of Economic Impacts

BEACON ECONOMICS

# Overview of IMPLAN

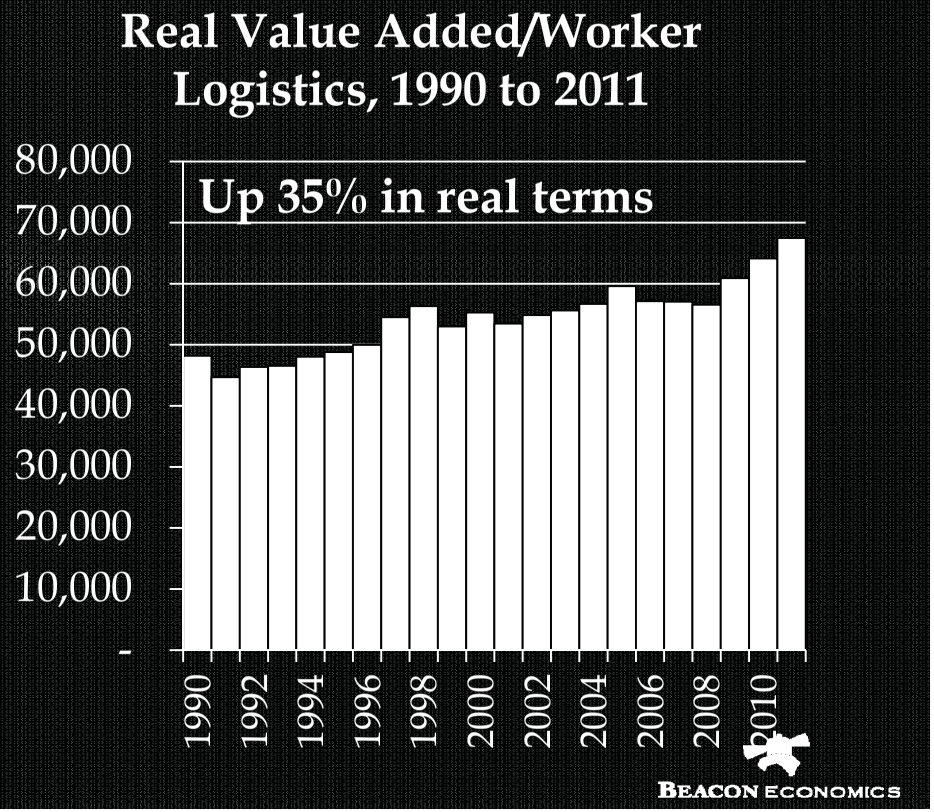


- Used to estimate economic impact on a particular geography of:
  - Business
  - Investment
- Typically constructed at the County level
  - Can also be done at zip code, state, or U.S. level
- Based on multipliers:
  - X dollars invested in the local economy
  - Generates $Y in output and Z jobs

# IMPLAN Multipliers

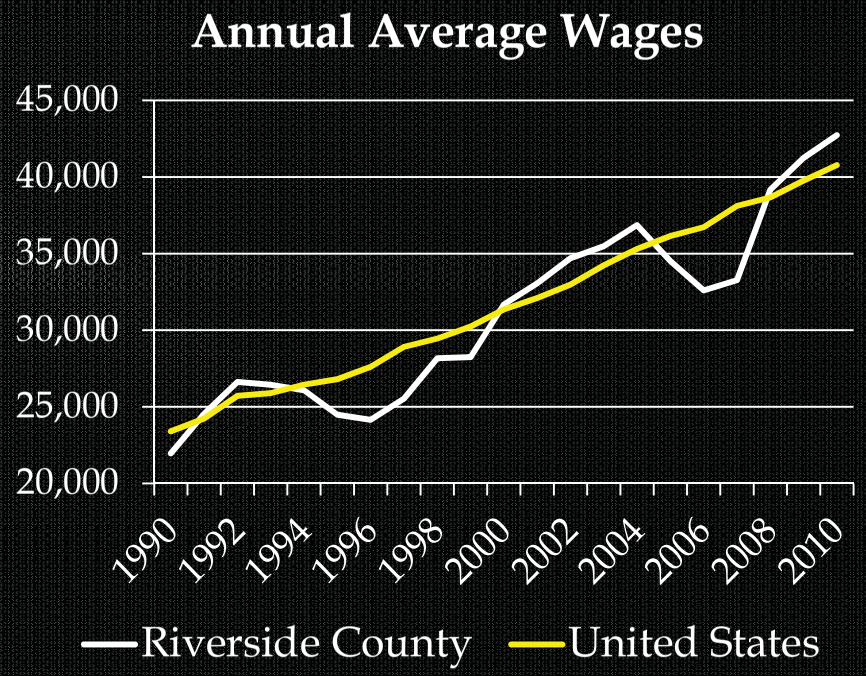
- California vs. Riverside County
  - California has larger multipliers. Why?
  - Leakage into other regions
- Example: Aircraft manufacturing in Riverside
  - Requires steel as major input
  - Riverside has few steel manufacturing plants
  - Aircraft manufacturer has to buy steel from another state
  - Steel purchases do not impact Riverside ("leaks out")
- General rule of thumb:
  - Larger geography will have less leakage
  - More diverse local economy will have less leakage

# Logistics: A Growing Force



- Employment:
  - Doubled since 1990
- Almost 65,000 jobs
- Bigger share today
- Up from 3.5% to 7%
- Big part of recovery
  - Back to pre-recession peak

BEACON ECONOMICS



# Brief History on Logistics

- Have become much more sophisticated
- Efficiency and automation have boosted productivity
- Less labor-intensive
- Quality of logistics jobs much better today

# Brief History on Logistics

- Have become much more sophisticated
- Efficiency and automation have boosted productivity
- Less labor-intensive
- Quality of logistics jobs much better today

BEACON ECONOMICS

# Two Scenarios for Impact

- Logistics have evolved tremendously
- Adopt two scenarios for impact
  - Provides a range of likely outcomes
- High-tech scenario
  - Closely resembles other highly automated facilities
  - Fewer direct jobs, but more overall output
- Traditional logistics operation
  - Larger number of direct jobs
  - Smaller equipment and automation budgets

# Summary of Economic Impact

# Summary

- World Logistics Center will have a significant economic impact on the City of Moreno Valley

- 3 Primary Sources of impacts:
  - Construction
  - Improvements and outfitting
  - Ongoing operations

# Summary (Cont'd)

- World Logistics Center will have a significant economic impact on the City of Moreno Valley

- Key Benefits:
  - Jobs for Moreno Valley and Riverside County
  - Demand for goods/services throughout economy
  - Tax revenues for state and local governments

BEACON ECONOMICS

**ANDREW J. CHANG**
**Managing Director**

**PROFILE:** Seventeen years of experience working with both high-level executives and operations staff on sensitive issues under tight deadlines in both the private and public sectors. Eight years strategy and operations consulting experience with emphasis on customer analysis and market entry strategies. Twelve years public policy development and implementation experience in California State government. Extensive experience working with a broad array of stakeholders to design, implement and monitor organizational initiatives.

**PROFESSIONAL EXPERIENCE:**

10/11 – present **Andrew Chang & Co, LLC** Sacramento, CA
***Managing Director***
- Provide market entry and strategy consulting to Fortune 1000 companies with an emphasis on private sector interaction with government. Private sector specialization in assessing and identifying new market opportunities and developing strategies to enter new markets. Public sector emphasis on public policy, economic and public finance analysis and operations management consulting.

07/09 – 10/11 **Chang & Adams Consulting** Sacramento, CA
***Managing Director***
- Provide market entry and strategy consulting to Fortune 1000 companies with an emphasis on private sector interaction with government. Private sector specialization in assessing and identifying new market opportunities and developing strategies to enter new markets. Public sector emphasis on public policy, economic and public finance analysis and operations management consulting.

04/07 – 07/09 **Forward Observer, Inc.** Sacramento, CA
***Vice President***
- Provide business intelligence and strategy consulting to Fortune 1000 companies to support market entry initiatives. Provide business-political risk and due diligence assessment for investment companies. Conduct fiscal, economic and public policy assessments.

08/04 – 04/07 **California Department of General Services** Sacramento, CA
***Chief Deputy Director***
- Chief Financial and Operations Officer of a state department with $1 billion annual operating budget, thirteen business units and 4,000 employees. Oversaw the state's procurement and real estate operations. Also responsible for the state's telecommunications, automobile fleet, printing, warehousing, insurance and school construction operations.
- Special assignment to the Governor's Office to serve as chief staff economist for the Governor's Council of Economic Advisors. Facilitated Council meetings, prepared written briefings for the Governor on policy issues for consideration and assisted Council members with original research to present at the Council meetings.
- Special assignment to the California Department of Corrections and Rehabilitation to assess the agencies procurement operations and develop recommendations to improve procedures and operations.

06/00 – 08/04 **A.T. Kearney, Inc.** San Francisco, CA
***Senior/Engagement Manager*** (06/02 – 08/04)
- Lead teams to develop strategies for new lines of business for a Fortune 1000 technology company, a national consumer products consortium and an international consumer products retail company.
- Lead teams to develop strategies to both acquire and sell technology services, R&D and manufacturing business units.
- Analytic and modeling methods subject matter expert. Finance and Accounting business processes subject matter expert.

***Associate Management Consultant*** (06/00 – 06/02)
- Conduct research and develop recommendations for various clients in the high technology and consumer products industries.

08/03 – 10/03 **Californians for Schwarzenegger** (Temporary leave from A.T. Kearney, Inc.) Santa Monica, CA
***Chief Economist/Deputy Policy Director***
- Principal economic, tax, energy and budget staff advisor for Arnold Schwarzenegger's gubernatorial campaign.

12/98 – 02/00 **MGT of America, Inc.** Sacramento, CA
***Senior Management Consultant***
- Implemented studies to improve finances and operations for Cleveland Unified School District, Florida State University and the California Resources Agency.

10/95 – 12/98 **California State and Consumer Services Agency** Sacramento, CA
***Assistant Secretary for Policy and Operations***
- Executive of a government agency with an annual operating budget of $1.3 billion, twelve departments and over 14,000 employees.
- Under supervision of the Secretary, guided agency and department policies, budgets and strategic plans.

05/95 – 10/95 **Personal Staff of Governor Pete Wilson** Sacramento, CA
***Chief Economist/Deputy Issues Director***
- Managed the development of national tax, trade, environment, agriculture and crime policies for Governor Pete Wilson's presidential campaign.

09/93 – 05/95 **California Office of the Governor** Sacramento, CA
***Deputy Chief Economist***
- Lead research teams to assess the economic and fiscal impact of tax, economic development, health care and immigration policies.

**EDUCATION:** **University of Michigan** Ann Arbor, MI
***Master of Business Administration Essentials*** (1 of 30 A.T. Kearney consultants selected globally to participate in a tailored executive MBA program.)

**Georgetown University** Washington, DC
***Master of Public Policy***

**University of California** Berkeley, CA
***Bachelor of Arts***

# Kathleen L Higgins

Water Resources Technical Lead

## Education

M.S., Civil Engineering, California State University at Long Beach, 1987
B.S., Civil Engineering, California State University at Long Beach, 1984

## Professional Registrations

Professional Engineer: California

## Distinguishing Qualifications

- Expert in hydraulic analysis and design of detention basins, channels, levees and other flood protection and stormwater management facilities
- Extensive experience in all aspects of water resources engineering including hydraulics/flood control, stormwater management, highway drainage, water supply studies, and watershed management

## Relevant Experience

Ms. Higgins is a senior water resources engineer for CH2M HILL's Southern California Office, responsible for water resources projects including hydraulics/flood control storm water management, highway drainage, water supply, water rights, and watershed management. Ms. Higgins has extensive experience in all aspects of water resources engineering and planning ranging from preparation of comprehensive drainage master plans to the design of major flood control and highway drainage facilities.

## Representative Projects

**Senior Consultant; Floodplain and Water Quality Analysis, for SR-79 Environmental Analysis/ Project Report, Hemet, CA.** Responsible for floodplain and water quality analysis for environmental planning for 19-mile expressway. She is also responsible for reviewing and providing technical guidance for floodplain analysis including preliminary design of BMPs and drainage structures.

**Project Manager for the Haster Basin Preliminary Design Study, County of Orange Resources and Development Management Department.** Managed the preliminary design of the 220-acre foot Haster Retarding Basin. Evaluated a number of alternatives for the inflow and outflow options for the basin including preliminary design of a pump station for outflow of the stored water volume.

**Project Manager for Arundell Barranca Deficiency Study for the Ventura County Watershed Protection District.** This project involved the analysis of 25000 lineal feet of the channel system for existing and future conditions, the existing level of protection was determined, deficiency areas identified, and alternatives were recommended to provide 100-year level of protection. The analysis included detention basin analysis benefit cost analysis, flood plain identification, preliminary cost estimates, and recommendation of a preferred alternative.

**Project Manager for Camarillo Hills Drain 30 Percent Design Study for the Ventura County Watershed Protection District.** This project involved the analysis of 25,000 lineal feet of the channel system for existing and future conditions, the existing level of protection was determined, deficiency areas identified, and alternatives were recommended to provide 100-year level of protection.

# Wilfred Hsu

Water Quality Technical Lead

## Education

M.S., Civil and Environmental Engineering, University of California, Los Angeles, 1997
B.S., Civil and Environmental Engineering, University of California, Berkeley, 1996

## Professional Registrations

Registered Professional Civil Engineer: California, 2000 (No. C61156))

## Relevant Experience

Mr. Hsu is a civil engineer with the Water Business Group in CH2M HILL's Southern California office. He has more than 15 years of experience in the environmental consulting industry and has worked on numerous projects as a project manager, task manager, and project engineer. Mr. Hsu's experience includes stormwater quality and management, BMP design, TMDL implementation, and NPDES compliance.

## Representative Projects

**Task Manager; Highland Fairview Stormwater Quality Analysis for World Logistics Center Specific Plan, Riverside County, California; 2011 to 2012.** Managed the stormwater quality analysis for the World Logistics Center Specific Plan, a development of modern high-cube logistics warehouse distribution facilities on approximately 3,814-acres of land in eastern Moreno Valley. Water quality issues were determined for the project and LID treatment BMPs were identified to meet NPDES permit requirements.

**Project Manager; Total Maximum Daily Load (TMDL) Implementation Plans for City of Los Angeles, Bureau of Sanitation Watershed Protection Division; Los Angeles County, California; 2008-2011.** Managed the development of the implementation plan for the Los Angeles River Metals TMDL for the City's Stormwater Program. The project assists the City in complying with existing and pending TMDL requirements and implementation of water quality improvement projects.

**Task Manager; California Department of Transportation (Caltrans) Corridor Stormwater Management Studies; Los Angeles County, California; 2006 to 2012.** Managed the corridor stormwater management studies for multiple corridors throughout Los Angeles County, totaling over 350 miles of Caltrans freeways and highways. The primary objectives of the studies were to evaluate potential locations for Caltrans-approved Treatment BMPs, including infiltration devices, media filters, detention devices, and biofiltration strips and swales.

**Project Manager; Caltrans TMDL Assistance; Los Angeles County, California; 2011 to 2012.** Reviewed TMDL development documents prepared by the State Water Resources Control Board (SWRCB) and the nine Regional Water Quality Control Boards (RWQCBs). Prepared written comments on the review of documents and provided suggested courses of action to Caltrans with respect to development of TMDL implementation plans and schedules.

**Task Manager; Caltrans Storm Water Data Report, Various Counties, California; 2006 to 2012.** Managed multiple Caltrans Storm Water Data Reports (SWDRs), including the I-710 Pavement Rehabilitation Project, the US-101/SR-23 Interchange Improvement Project, the California High-Speed Train Merced-to-Fresno Corridor Project, and the SR-79 Realignment Project. The purpose of an SWDR is to assess project impacts to storm water quality and to minimize those impacts by incorporating appropriate BMPs to the project.

DAVID TAUSSIG & ASSOCIATES
Public Finance and Urban Economics
5000 Birch Street, Ste. 6000, Newport Beach, CA 92660

# PROFESSIONAL QUALIFICATIONS

**David Taussig and Associates, Inc. ("DTA")** is a public finance and urban economics consulting firm specializing in infrastructure and public services finance. Our firm, which provides public finance consulting services to both public and private sector clients, has offices in Newport Beach, San Francisco, Fresno, and Riverside, California, as well as branch offices in Chicago, Illinois, and Dallas, Texas, to service our clients in the Midwestern and Southwestern United States. Additional information on DTA is available on our website (www.taussig.com).

Since its establishment in 1985, DTA has completed consulting assignments for more than 2,500 clients in ten states. During this period, the firm has been involved in the formation of more than 1,500 public finance districts, with total bond authorizations exceeding $50 billion. Our financing programs have utilized a variety of public financing mechanisms such as Assessment Districts ("ADs"), Community Facilities Districts ("CFDs"), Certificates of Participation, Tax Allocation Bonds, Sewer and Water Revenue Bonds, Marks-Roos Bond Pools, Landscaping and Lighting Districts ("LLDs"), Integrated Financing Districts, and various types of fee programs.

While DTA is primarily known for its specialized expertise in the design and administration of Community Facilities Districts ("CFDs") and various types of 1913/1915 Act Assessment Districts ("ADs"), as well as the issuance of a variety of types of municipal debt, the firm also provides fiscal and economic impact and development impact fee consulting services, and is experienced in grant writing for federal and State grant and tax credit programs. All of these capabilities are frequently combined with our infrastructure finance consulting services to develop public infrastructure and services financing strategies and plans.

DTA's consulting services include:

- Public Infrastructure and Public Services Financing Strategies
- Special Tax and Assessment Engineering
- **Fiscal and Economic Impact Analyses**
- Proposition 218 and AB 1600 Compliance Studies
- Redevelopment (Dissolution) Finance
- Federal and State Grant and Loan Applications
- Economic Development and Revitalization Studies
- Public Improvement Construction Management Services

In addition to the planning and implementation of financing mechanisms, DTA is involved in the fiscal and economic analysis of land development impacts, project feasibility studies, and economic development studies. DTA staff has prepared over 350 fiscal impact reports ("FIRs") estimating the revenue and cost impacts of various land use decisions on cities, counties, and special districts.

DTA has also prepared approximately 275 fee justification studies and analyses throughout California, as well as in other States, involving fees for a variety of public improvements, including transportation, water, sewer and flood control facilities, fire and police stations, parks, libraries, and other types of infrastructure. DTA has recently prepared such studies for the Cities of Blythe, Brawley, Calexico, Cathedral City, Live Oak, Mammoth Lakes, Paso Robles, Perris, Red Bluff, San Francisco, San Jacinto, San Luis Obispo, and Torrance, as well as for the Counties of Colusa, Riverside, Santa Barbara and San Bernardino, among others. Additionally, DTA is currently working on a comprehensive review and update of the City of Palo Alto's Development Impact Fee Program.

# TEAM MEMBERS

**DAVID TAUSSIG**
President | dtadavid@taussig.com
*Project Role: Principal-in-Charge*

Mr. Taussig has over 35 years of experience in the fields of real estate finance and urban economics. His areas of expertise include municipal finance programs for infrastructure and public facilities development, fiscal and redevelopment impact analysis, and land development project feasibility studies.

Mr. Taussig has an extensive background in computerized financial analysis. Since founding DTA in 1985, Mr. Taussig has developed a number of state-of-the-art analytical methods and modeling approaches, as well as personally directed the formation of more than 1,000 public financing districts, and the subsequent sale of tax-exempt municipal bonds. These districts have funded public infrastructure and services for a variety of types of residential and non-residential development, and have included several hundred master planned communities built throughout California, as well as in several other western states. Mr. Taussig's work has involved both the preparation and implementation of financing plans, and his public sector clients have included virtually every major county, urban center, and city within California, as well as hundreds of special districts. He has provided similar consulting services to many of the largest land development firms in the State. The financing programs implemented by Mr. Taussig have ranged from land-secured Community Facilities Districts to redevelopment tax-increment programs and lease revenue-based Certificates of Participation. He is also responsible for DTA's successful efforts related to funding opportunities under the American Recovery and Reinvestment Act and various tax credit programs.

Mr. Taussig has also overseen the preparation of numerous feasibility and impact studies involving the computerized analysis of project cash-flows and/or impacts on public agencies and landowners. This has assumed project management responsibilities for several dozen AB 1600 Development Fee Justification Studies, including recent studies prepared on behalf of the cities of Blythe, Coachella, Live Oak, Paso Robles, Perris, Red Bluff, San Luis Obispo, Torrance, and Tustin, as well as the Counties of Riverside, Santa Barbara, and Colusa. He has also been responsible for the preparation of over 100 fiscal impact studies utilized by public agencies to determine the impact of new development or annexations on a municipality.

Prior to establishing his own firm, Mr. Taussig was Director of Finance for Gfeller Development Company, where he was responsible for all take-out and construction financing for the Company's residential projects and infrastructure. He also prepared development project proformas that were used by prospective lenders and joint venture partners to evaluate the Company's proposed projects.

Mr. Taussig was previously employed for six years by Mission Viejo Company (MVC) where, as Manager of Housing and Community Development, he was involved in the planning and financing of two planned communities encompassing over 50,000 homes. Mr. Taussig was responsible for a substantial portion of MVC's mortgage financing and infrastructure financing during that period. He also worked for five years in the public sector as the administrator of a federal housing and community development program, and as a land-use planner. Mr. Taussig's educational background includes a Masters in City Planning from the University of California at Berkeley and a B.A. in Economics from Cornell University. He has received full certification from the American Institute of Certified Planners.

**NATHAN PEREZ, ESQ.**
Vice President | nperez@taussig.com
*Project Role – Project Manager*

Mr. Perez has a background in law, economics, business administration, and statistical analysis. Since joining DTA, Mr. Perez has been involved in all aspects of the formation and implementation of numerous Mello-Roos Community Facilities Districts located throughout California, with responsibilities related to the development of tax spread proforma analyses and the preparation of rate and method of apportionments, Public Reports, and overlapping debt analyses.

Mr. Perez also has expertise in the preparation of development impact fee studies. This includes considerable work related to the preparation of facilities needs lists and the apportionment of infrastructure and services costs to a variety of land uses based on benefit criteria. He has also specialized in the apportionment of costs and the setting of service levels for the construction and maintenance of law enforcement and fire protection facilities, open space acquisition, parkland, transportation facilities, drainage facilities, government services facilities, community centers, and library facilities. Furthermore, he has also completed nearly 35 fiscal impact reports and 20 economic development analyses for a variety of residential, commercial, and mixed-use developments throughout California.

Finally, his experience as an attorney has allowed Mr. Perez to effectively and efficiently evaluate dozens of state and Federal legal, regulatory, and administrative frameworks related to public finance and infrastructure development.

Prior to joining DTA, Mr. Perez worked for the Boston office of an international law firm, where he advised sponsors, managers, and investors on the tax aspects of fund formation and investment. Mr. Perez is admitted to the bar in both Massachusetts and California. Mr. Perez received his law degree from Harvard Law School, and his B.A. in Economics and History, with highest distinction, from the University of North Carolina at Chapel Hill.

Mr. Perez is an active member of the Urban Land Institute, the California Bar Association, and the Hispanic National Bar Association.

# DAVID OATIS

Owner and CEO

David Oatis was a firefighter for 15 years before founding FPS. David has pioneered new methods and formats for Fire Master Plans and Fire Protection Plans. David's years of experience, knowledge and understanding of the complexities of fire planning have allowed him to be successful when others have failed.

## Background

David has worked on a large number of fire prevention projects over the past few years. These include:

- Fire Code Adoption committees (several adoption sequences)
- Wildland Interface working committees (Bates Bill 377 and all of the VHFHSZ implementation after that)
- Presentations to BIA, Buster's Task Force in Riverside County, Planning commissions, City Councils and other governmental organizations.
- Input to State and Local officials on WUI mapping, standards and implementation issues

David has done a great deal of Pro bono work in Orange County after the Santiago Fire (2008) and the Freeway Complex Fire (2009) helping those who lost their homes get through the process of rebuilding under the new codes.

Firesafe, through David's leadership, has taken on many unique and challenging projects, including building over old landfills, new technology projects such as the solar projects in the desert areas and many difficult projects in the wildland interface that other consultants have turned down as being too difficult or impossible with the existing restrictions on the property.

David Oatis was influential in the evolution and refinement of current Fuel Modification design in Southern California. These plans were merged into Fire Protection Master Plans and builders including Ladera Ranch, Rancho Mission Viejo, The Irvine Ranch, Shea's Tustin Airbase, Lennar's Great Park and other have relied on the expertise of FPS to design and supervise the construction of the fire protection measures for their communities.

## Professional Experience

Paid Call Firefighter - San Clemente Fire Department for 9 years (1985 – 1994)
Fire Inspector - San Clemente Fire Department for 9 years (1985 – 1994)
Fire Inspector – Orange County Fire Authority for six years (1994 – 2000)
Hazard abatement - San Clemente (1985 – 1994)
Wildland Interface Inspector San Clemente and OCFA (1985 – 2000)
Consultant (2000 to present)

**Select Project Summary**

A-Town (redevelopment of the Anaheim Platinum Triangle)
Boy Scouts of America – Outdoor Education Center
Boulevards at South Bay – shopping mall over landfill
City of Santa Paula, California
Craig Realty – Marblehead Outlet Mall
First Solar – several large solar energy project in the California desert areas
Fusco – Mountain Park
Habitat for Humanity – Multiple Locations
Hearthside Homes - Brightwater
Highland-Fairview – Aqua Bella
Irvine Apartment Communities – All Communities including housing at San Diego University
The Irvine Company – Portola Hills, East Orange, Westpark, Shady Canyon, Newport Coast
Legacy Park/Shea – Tustin Marine Corp Base Redevelopment
Lennar – Central Park West
Rancho Mission Viejo – Overall Ranch, Ladera Ranch, Coto De Caza
Shea Homes – Tonner Hills
St. Margaret's Episcopal School
Standard Pacific Homes
Suncal – All Projects
Talega Community
The Great/Park Lennar– El Toro Marine Base Redevelopment
University of California Irvine

# GENE F. BEGNELL

Fire Protection Consultant

## EDUCATION

Masters Degree in Public Administration - California State University; Long Beach, May 1985
Bachelor of Science Degree in Fire Administration - CUM LAUDE - California State University; Los Angeles, September 1981
Associate of Arts Degree in Fire Science - Antelope Valley College, Lancaster, California, January 1980
Executive Fire Officer Program - National Fire Academy, December 2004
Certified Fire Officer - State Board of Fire Services, State of California, October 1989
Master Instructor - State Board of Fire Services, State of California
Certified ICS Positions - Strike Team Leader, Group/Division Supervisor (20 years)
Extensive professional studies and experience in:

- Fire Prevention Administration (including technical aspects and Code Committee work)
- Disaster Administration and Planning (past member of Interjurisdictional Planning Committee for San Onofe Nuclear Generating Plant)
- Financial Administration and Economic Development
- Community Relations and Public Information
- Personnel Management and Labor Relations (both Union and Management side)

## FIRE SERVICE CAREER

Thirty-eight years of progressive experience in fire administration, prevention and suppression. Twenty Two years as a Chief Officer:

| | | |
|---|---|---|
| Battalion Chief | 18 yrs. | Orange Co. Fire Authority |
| Fire Chief/Fire Marshal/Battalion Chief | 8 yrs. | San Clemente F.D. |
| Training Officer | 3 ½ yrs. | Newport Beach F.D. |
| Asst Fire Chief /Inspector/Training Officer | 3 yrs. | Federal Fire Service |
| Firefighter/Engineer/Crew Chief | 6 ½ yrs. | Federal Fire Service/U.S.A.F. |

**Career Achievements** (selected)

- Strategic Services Chief for Orange County Fire Authority - Strategic and advance planning, modeling, forecasting and environmental review of new projects
- Transition Coordinator for Orange County Fire Authority (Moved from County Department to Joint Powers Authority as full service organization)
- Developed and implemented a computerized records management system
- Established and codified Fire Department response standards
- Completed the rewrite of San Clemente Multi-Hazard Emergency Plan
- Contributing author to "Standards of Cover" Handbook ($4^{th}$ and $5^{th}$ editions) for CFAI and development of the teaching and instructional materials for the SOC process

- Published professional journal articles and teach seminars on deployment nationally
- Resource deployment planning for OCFA, San Clemente, El Cajon, Chula Vista, Corona, Eastside Fire and Rescue (Washington State) and San Jose Fire Departments
- Assisted in the development of deployment software (Optima Corp, University of Arizona, Deccan)

**Specialized Experience**

- Experience in all phases of firefighting including: structural, industrial, airport crash rescue, wildland, high-rise, and shipboard
- Management of several traditional and non-traditional divisions/programs:
  - Fire Prevention and Hazardous Materials Program
  - Fire Investigations (Arson/Fire Cause Determination)
  - Communications and Emergency Planning Divisions
  - Department Safety Officer, Training Officer & Paramedic Coordinator
  - Weed Abatement, City Zoning enforcement and Animal Control
- Experience in labor relations and in contract negotiations (labor and management sides)
- Instructor for California Community College System and California State Fire Marshal's Office
- As the Transition Coordinator during the establishment of the OCFA, developed departmental functions including purchasing, investment plans, employee health services contract, roles and responsibilities matrix and organizational value statements
- Fire defense planning, fuel modification, Fire Master Planning, Fire Protection Plans, EIR response/analysis, CEQA review and other fire protection issues throughout the plan planning and land use process.
- Fire/EMS deployment planning, analysis and implementation
- Statistical analysis of performance and performance measures

# HIGHLAND FAIRVIEW PROJECT TEAM

## Iddo Benzeevi - President and Chief Executive Officer

Mr. Benzeevi is the president of Highland Fairview. Mr. Benzeevi has extensive development experience with commercial, industrial and large scale mixed-use master planned developments. He is adept at developing livable and exciting places for people to live, work and enjoy. His unique vision and expertise includes the technical direction and management of large, multi-disciplined teams, including facilities planning and programming of civil infrastructure systems.

## Danette Fenstermacher - Chief Operating Officer Executive Vice President

Danette Fenstermacher has held a variety of executive real estate development positions spanning over 35 years. Prior to joining Highland Fairview, she was Senior Vice President & Executive Committee member of Mission Viejo Company, the master planner and developer of over 38,000 acres of land, 87,000 residential units and more than 32 million square feet of nonresidential property in California and Colorado. She also served as the Company's President of the Financial Services entity. Prior to joining Mission Viejo Company, she was with PricewaterhouseCoopers. Ms. Fenstermacher is a Certified Public Accountant and a California Real Estate Broker.

## Joe Anfuso - Chief Financial Officer

Prior to joining Highland Fairview, Mr. Anfuso was the CEO of Florsheim Homes, with operations in CA and NV, from 2006 - 20011. Mr. Anfuso directed all operational, financial and administrative functions for the 29 year old company. Previously, Joe was the CFO for Shea Homes San Diego from 2001-2006. Joe was responsible for the financial operations and strategic planning of San Diego's largest privately held homebuilder, with revenues in excess of $425 Million. Before Shea, Joe practiced various aspects of public accounting, ranging from forensic accounting and investigative auditing to accounting for private industry as both an internal auditor and controller. Joe is a CPA, obtaining his BBA in Accounting and MBA from the University of San Diego. Joe also possesses a California Real Estate Brokers and General Contractors License. Joe is the chairman of the Residential Real Estate Committee for Burnham-Moores Center for Real Estate. Recognized as an industry expert, Joe has been a frequent contributor on CNBC television, discussing the housing and real estate markets.

## HIGHLAND FAIRVIEW PROJECT TEAM

**Wayne Peterson - Vice President Community Planning**

Wayne Peterson has over 34 years of entitlement experience with cities and counties throughout Southern California including master community planning and site-specific high-rise residential, large-scale commercial/industrial, recreational, and mixed-use projects. Previously at Mission Viejo Company, he directed the California entitlement program for 17,000 acres, 51,000 units and 16.5 million square feet of nonresidential property, at the Mission Viejo and Aliso Viejo projects. Mr. Peterson is very adept in the CEQA process leading numerous entitlement efforts involving EIR's, mitigation measures, development agreements and Conditions of approval.

**Brian Hixson, P.E. - Vice President of Land Development**

Brian Hixson has held executive positions at top civil engineering firms for over 25 years, including RBF Consulting. He is an experienced project manager, specializing in residential and commercial development projects. He has direct design engineer experience, including grading and drainage improvements, agency coordination, tract layout, utility design and permitting requirements, for all types of land development projects. Mr. Hixson has managed and processed projects to approval with County of Riverside, City of Moreno Valley, Riverside County Flood Control, Eastern Municipal Water District and other jurisdictional and utility agencies in within the Inland Empire.

**Jack Stones - Vice President of Vertical Construction**

Jack Stones has over 40 years of construction and construction management experience. His experience as a seasoned construction manager, entailed the development of all types of commercial buildings from the pre-construction design phase, value engineering, purchasing, and construction management. Prior to joining Highland Fairview construction, Mr. Stones owned his own company where he provided Design-Build services for Restaurants and Hotels throughout the United States. In 1988 he joined R D Olson Construction for 16 years where he managed construction on numerous types of buildings; Commercial, Industrial, Commercial Office, Health Care, Retail, Education, Civic, Worship, Hospitality, Network Operating Centers, Country Clubs, Airport Terminal and Command Center, Hotel New Construction, Hotel Renovation, Residential & Multi-Unit Housing, Vacation Ownership Properties, Resort & Spa, Restaurant & Entertainment, Office & Mixed Use. Mr. Stones continued his career with Diffenbaugh Construction as a Project Executive handling Industrial Warehouse, Retail, New Hotels, Health Care & Worship facilities. Mr. Stones Joined Highland Fairview in 2008 and was instrumental in the completion of the 1.8 million square foot Skechers facility in Moreno Valley.

# ROBERT F. RIHA, PG, CEG

Senior Vice President/Senior Principal Geologist

## Education

- B.S., Geological Sciences, San Diego State University, San Diego, California, 1985

## Professional Registrations

- California Certified Engineering Geologist - 1921 Exp. 2/2014
- California Professional Geologist – 5866 Exp. 2/2014
- Nuclear Gauge Certification / 1985

## Professional Summary

For the past 15 years, Bob Riha has been the Senior Principal and the Managing Director of Leighton's Temecula office. He has over 25 years of professional experience performing and managing geotechnical assessments for planning and construction. His experience includes onsite geological investigations and services during design and construction for large tentative tracts, commercial developments, educational facilities and geotechnical investigations of distressed structures.

Mr. Riha has completed and supervised slope stability studies, landslide remediation design, site-specific geologic faulting, liquefaction, and dynamic settlement evaluations, evaluation of rock rippability and seismic hazard studies. Mr. Riha's duties also include field identification and evaluation of soil materials and bedrock, and observe, test, and document earthwork, foundation and pavement construction activities. Mr. Riha has also performed and managed staff performing field density testing (field compaction control) during rough grading and all phases of underground utility construction, foundation and pavement construction. He has been responsible for ensuring that work performed is in accordance with the project geotechnical report, recommendations of the soils engineer, improvement plans and specifications, and applicable agency ordinances.

These services have been performed at all stages of project development, from feasibility and planning of new work through construction, forensic studies, expert witness and remedial work related to failed structures. Mr. Riha's clients include private owners, residential and commercial/industrial developers, school districts, and public agencies.

## Project Experience

### Commercial

- **Skechers Logistics Facility, Moreno Valley, CA.** Principal Geologist for 85 acre, 1,820,000 square foot distribution facility. The multi-phased investigations determined active earthquake faults; evaluation of compressible soils; and provided detailed remedial earthwork evaluations. Geotechnical evaluations were also performed for the widening of adjacent SR-60 and a large RCFC box culvert which parallels one side of the building foundations. The fault investigations included over 7,000 feet of exploratory trenches reaching depths of up to 30 feet. This study allowed development planning in areas previously restricted in City EIR documents.

- **Golden Triangle, Murrieta, CA**. Principal Geologist for a proposed 64-acre, mixed-use commercial development that will include office buildings, retail/entertainment centers, hotel, parking structures, and associated underground utilities, driveways, parking lots, and off-site improvements.

- **Professional Hospital Supply Building, Temecula, CA.** Principal Geologist for geotechnical observation and testing services during rough grading and construction of onsite and off-site improvements. The project includes up to 20-foot high geogrid type retaining walls and up to 50-foot high cut slopes (1.5H:1V) which requires detailed geologic mapping to evaluate remedial grading necessary to ensure long-term stability. This is a 609,000-square-foot headquarters and distribution center located at the northwest corner of Dendy and Winchester Roads.

- **Promenade Mall Expansion, Temecula, CA.** Principal Geologist during the geological and geotechnical investigation and percolation studies for proposed onsite WQMP systems. This included extensive field work and laboratory resting to assess various foundation design options in consideration of the heavy load to be exerted by the four-story parking structure.

- **City of San Diego, CA.** Coordinated and performed extensive subsurface geotechnical evaluation of 79-acre commercial site located along potentially active La Nacion fault zone.

- **City of Vista, CA.** Project Manager during grading operations for 60-acre commercial center. Performed site-specific evaluation of deep alluvial soils with high groundwater levels and high potential for expansion to design support of multi-story buildings and realignment of major drainage channel.

- **City of Vista, CA.** Geotechnical evaluation of dynamic settlement potential before and after remedial implementation for support of 125,000-square-foot commercial building.

- **Encinitas Towne Center, Encinitas, CA.** Project Manager/Project Geologist for retail center development.

- **Jefferson Avenue Business Center, Murrieta, CA.** Project Manager/Project Geologist.

- **Marbella Golf and Country Club, San Juan Capistrano, CA.** Supervised staff geologists and performed geologic mapping and site-specific evaluation of several large landslide stabilizations during hillside grading. Involved >20 million cubic yards of remedial earthwork.

- **Promenade Mall, Temecula, CA**. Project Manager/Geologist for geotechnical evaluation and grading of the 79-acre site, on an alluvial plain less than one-half mile from the active Wildomar fault and within a defined liquefaction hazard zone.

- **RogersDale USA Entertainment Complex, Murrieta, CA**. Project Manager/Geologist for studies on a 64-acre site in the “Golden Triangle” area.

- **Silverhawk Development, Murrieta, CA**. Project Manager/Geologist providing the geotechnical evaluation of the commercial pads and residential parcels.

- **Pavement Failure – Peer Review/Expert Witness , Perris, CA.** Mr. Riha provided field and document review during geotechnical analysis and consulting during the determination of large in-tract pavement failures. Consultant reports were reviewed, independent analysis performed and clarification requests to involved design consultants prepared. Expert witness testimony provided during arbitration hearings with overall findings in favor of owner.

- **Master Planned Community (confidential client), Orange County, CA.** Performed geotechnical analysis for settlement concerns on deep sewer lines.

## Master-Planned Community

- **The Villages (Teneja), San Jacinto, CA.** Principal Geologist providing all necessary geologic and geotechnical management of personnel and technical direction during site geotechnical and geologic studies for the 475-acre residential and mixed-use development. The geologic and geotechnical engineering studies supported the project Specific Plan and EIR. The site contained a State of California Earthquake Fault Hazard Zone and Leighton's fault investigation included over 13,300 lineal feet of exploratory trenches reaching depths of up to 25 feet. This study was approved by the County of Riverside and allowed development planning in areas previously restricted by State AP Zones.

- **Geologic Constraints Study, Park Hill, Mixed Used, San Jacinto, CA.** Senior Principal Geologist coordinating and overseeing geologic constraints study on 320 acres of land with extreme topographic relief in southern San Jacinto. The property is bounded by and contains two active fault zones. The study included extensive aerial photographic analysis, field mapping, excavation and down hole logging of large-diameter boreholes and trenches for analysis of onsite fault activity. The locations of active faults were determined and a geologic report including a geologic constraints and land use restrictions was prepared. Over 12,700 lineal feet of fault trench up to 25 feet deep were excavated, logged and reported. All geologic work was performed under review by County of Riverside Geologist.

- **Moreno Highlands Bel Lago, Moreno Valley, CA.** Principal Geologist during site specific fault investigation and preliminary studies of a 2,000-acre, mixed-use development. The fault investigation included over 14,500 lineal feet of exploratory trenches reaching depths of up to 30 feet to expose the San Jacinto fault. This study allowed development planning in areas previously restricted in City EIR documents. City of Moreno Valley contracting geologic reviewing consultant accepted all work completed by Leighton.

- **Harveston, Temecula, CA**. Principal Geologist for this 550-acre residential and commercial planned development. Additional studies were performed to support the use of onsite soils to create the man-made lake liner, which prevented the need to import, impermeable clay materials. Recommendations were crafted to suit the needs of four homebuilders and one apartment boulder and various commercial builders.

- **Chardonnay Hills, Temecula, CA**. Principal Geologist for this 250-acre site. Geotechnical services during grading, street paving, and home construction; included geotechnical services and concrete inspection for a 96-inch-diameter cast-in-place storm drain pipeline.

- **Copper Canyon Development, Murrieta, CA.** Principal Geologist and Manager for geotechnical design and construction grading.

- **Geologic Constraints Study, San Joaquin Hills, CA**. Project Geologist coordinating and performing geologic constraints study on 1,800 acres of land in northern San Joaquin Hills. Study included extensive aerial photographic analysis, field mapping, excavation and downhole logging of large-diameter boreholes and trenches, seismic refraction survey for determination of bedrock rippability characteristics, and preparation of a geologic report including a geologic constraints map.

- **Proposed New Boat Launch Facility Improvements, City of Lake Elsinore, Riverside County, CA**. Principal Geologist during the preliminary geotechnical investigation, including site review of available information, site reconnaissance to observe and document the current surface conditions.

- **WatersEdge, Riverside County, CA.** Project Geologist during the preliminary geotechnical investigation, which included seismic design parameters, liquefaction analysis, settlement potential, natural slope stability and preliminary foundation design considerations were developed.

- **Murrieta Hills Specific Plan, Murrieta, CA.** Project Manager/Geologist for the Murrieta Hills Specific Plan area rock rippability update. Evaluation of rock hardness was performed to determine limits on excavation with conventional earthmoving equipment.

- **Temeku Hills Country Club, Temecula, CA**. Project Manager for geotechnical aspects of the master-planned residential and golf community.

- **Tucolata Hills and Silverhawk Specific Plan Areas, Riverside, CA**. Project Geologist for geotechnical portion of the EIR documents, tentative tract maps, and rough grading plan reviews. Site specific fault explorations were completed to define the active Murrieta Hot Springs fault and provide land use restrictions for this fault zone. Fault studies accepted by County of Riverside geologist and Planning Departments.

- **Victoria Grove, Lake Mathews Area, Riverside County, CA**. Project Geologist coordinating geologic constraint study, subsurface investigations and plan reviews for the approximately 1,000-acre development. Extensive hard rock evaluations were performed to development a strategy on excavation and placement of large volumes of oversize rock materials during the hillside grading process.

- **Whittier Fault, Yorba Linda, CA**. Project Geologist providing site-specific fault investigations on property adjacent to an active fault.

- **Winchester 1800, Inc., French Valley, Riverside County, CA.** Project Manager/Geologist for the geotechnical evaluation and plan reviews.

- **The Cove, San Jacinto, CA.** Principal Geologist during design and construction of the 250-acre, 500-lot residential subdivision. Specific studies were required to evaluate ground fissures, slope stability, storm drain and detention basin alignments, rock rippability and settlement of alluvial soil.

- **Aquabella, Moreno Valley, CA.** Principal Geologist for the 760-acre residential and commercial planned development. Additional studies were performed to evaluate the Riverside County Flood Control (RCFC) earthen berm, concrete lined, Line F Channel traversing the site along with two bridge spans. Recommendations were crafted to provide suitable grading recommendations as well as drainage provisions in areas supporting wetland habitat areas above the channel area. Provided geologic oversight and consultation during rough grading.

- **Greer Ranch and Vineyard Developments, Murrieta, CA**. Principal Geologist during the tentative map design review of proposed residential developments.

- **Line F Channel, Moreno Valley, CA.** Principal Geologist for the Moreno Highlands residential and commercial development. Provided geologic studies from EIR through current construction. Studies were performed to evaluate the Riverside County Flood Control earthen berm, concreted line, Line F Channel along with two bridge spans. Grading recommendations, as well as drainage provisions in areas supporting wetland habitat areas above the channel area were provided.

## Municipal Infrastructure

- **Moreno Valley Recreation and Conference Center, Moreno Valley, CA.** Project Geologist for geotechnical investigation. Leighton worked closely with the project architect and structural engineer to provided practical recommendations to mitigate differential settlement potential using earthwork techniques in lieu of a costly foundation system. The project included joining the city hall and police facilities with a 25-acre civic center master plan that includes a 42,000-square-foot community center.

- **City Library, Temecula, CA.** Principal Geologist during geotechnical observation and materials inspection and testing during construction. Grading of this steep hillside property required careful geologic observation to confirm a stable hillside to prepare to receive the foundation supporting fill soils. Nearly continuous observation and testing was performed to assure compliance for compacted fill soils and site grading.

- **Civic Center and Parking Structure, Temecula, CA**. Principal Geologist during the planning and design of the new Civic Center, parking structure and Mercedes and Main Street improvements. Geologic studies were provided to confirm lack of onsite faulting or liquefaction potential.

- **Proposed Water Park Peer Review, Temecula, CA**. Engineering Geologist performing peer review of development geotechnical report for a proposed water park located at the corner of Diaz Road and Dendy Parkway. The results of the review were submitted to the City of Temecula in a formal report outlining deficiencies and recommending corrective action plan. All reports were approved and project is awaiting development.

## Schools- DSA

- **Rancho Mirage High School, Palm Springs, Rancho Mirage, CA.** Principal Geologist for geotechnical investigation and construction for the 48-acre High School No. 4 site. Preliminary geotechnical report was prepared to fulfill the Geotechnical and Engineering Geology requirements of the California Building Code (CBC) Title 24 for development of the proposed high school. Principal for geotechnical and materials testing during construction.

- **Lake Elsinore Middle School, Lake Elsinore, CA.** Project Manager and Geologist during revitalization and expansion project. The project was a very complex project combining remodeling, seismic retrofit, and adding new permanent classrooms.

- **Lakeside High School, Lake Elsinore, CA.** Project Geologist during construction of new high school. Performed subgrade observations and evaluation during pool construction, pavement subgrade evaluation and provided mitigation recommendations for pavement subgrade stabilization.

- **Martin Luther King Middle School, Oceanside, CA.** Project Geologist and Manager during grading and construction for the Oceanside USD.

- **Sunnymead Elementary School, Moreno Valley, CA.** Principal Geologist for geotechnical investigation for the 6-acre elementary school site. Report was prepared to fulfill the geotechnical and Engineering Geology requirements of the California Building Code (CBC) Title 24 for development of the proposed high school. This report summarized the geotechnical findings, conclusions and geotechnical design and construction recommendations for the proposed school development.

- **Murrieta Mesa High School, Murrieta, CA.** Principal Geologist for geologic investigation for the 65-acre Murrieta Mesa high School. Reports were prepared to fulfill the Geotechnical and Engineering Geology requirements of the California Building Code (CBC) Title 24 for development of the proposed schools. The report summarized the geologic and geotechnical findings, conclusions and geotechnical design and construction recommendations for the proposed school developments. A subsurface exploration consisted of the excavation, logging and sampling of exploratory fault trenches. Trenching concluded that active faulting was determined to exist at the High School site. Land use restrictions were prepared and the campus building layout adjusted to accommodate these findings. All geologic reports accepted by CGS and DSA.

- **Great Oak High School, Temecula, CA**. Principal Geologist and Project manager during site grading/construction and all materials testing.

- **Erle Stanley Gardner Middle School, Temecula, CA.** Principal Geologist and Project manager during site grading/construction and all materials testing.

- **Sykes Elementary School, Murrieta, CA.** Principal Geologist for geotechnical investigation for the 12-acre Sykes Elementary School. Report was prepared to fulfill the Geotechnical and Engineering Geology requirements of the California Building Code (CBC) Title 24 for development of the proposed high school. This report summarized the geotechnical findings, conclusions and geotechnical design and construction recommendations for the proposed school development. A subsurface exploration consisted of the excavation, logging and sampling of 22 exploratory borings and one fault trench. Trenching concluded that faulting had not occurred onsite and allowed the planning of the school to continue.

- **Ortega High School, Lake Elsinore, CA.** Project Geologist during construction. For the fast-track construction schedule, Mr. Riha managed the geotechnical consulting and materials testing and inspections to assure that the project would be built to project specifications, ahead of schedule, and within budget. Close coordination with the district and a ground modifications contractor was necessary to meet the site development schedule.

- **Vista Murrieta High School, Murrieta, CA.** Project Manager and Project Geologist for geotechnical investigation for the 58-acre site. Report was prepared to fulfill the Geotechnical and Engineering Geology requirements of the California Building Code (CBC) Title 24 for development of the proposed school. This report summarized the geotechnical findings, conclusions and geotechnical design and construction recommendations for the proposed school development. A subsurface exploration consisted of additional geologic mapping of the site conditions and the excavation, logging and sampling of 11 exploratory backhoe pits and 14 hollow stem auger borings.

## Transportation

- **Lasselle Street Road Widening, Moreno Valley, CA.** Project Manager during the Preliminary Geotechnical Exploration for the proposed road widening of Lasselle Street; work included stability analysis of the rock slope after planned removal, and provided rock slope protection mitigations. Consultation was also provided to the project design civil engineer and City representatives during reparation of final construction design documents.

- **Newport Road Realignment, Riverside County, CA.** Project Geologist for geotechnical investigation and construction of Newport Road realignment between Winchester Road (SR79) and Menifee Road (approx. 5.9 miles) in Riverside County. Included steepened cut slopes requiring rock bolt anchors to construct a stable slope configuration.

- **Ground Motion Study, La Jolla, CA.** Project Manager. Coordinated and performed a geologic evaluation of an ongoing slope movement (due to a deep-seated landslide) on the eastern slopes of Soledad Mountain on Desert View Drive. Study included excavation and downhole logging of large-diameter boreholes to depths exceeding 160 feet in hillside terrain, and the installation of numerous slope monitoring instruments.

- **I-15 Widening, Winchester Road overpass, and SR-79 North Widening, Temecula, CA.** Project Geologist. Sampling, laboratory testing and field density testing of earthwork construction, aggregate base and asphalt materials. Testing was performed in accordance with the Caltrans and City of Temecula requirements. Materials inspection included observation and testing during construction of tie-back retaining walls.

- **La Sierra Realignment and Widening, Lake Matthews Area, Riverside County, CA.** Project Manager/Geologist during design and construction of the road widening which required rock bolt anchoring and hydro-auger construction to provide stable cut slopes.

- **SR-74/Riverside Avenue Improvement Project, Lake Elsinore, CA.** Principal Geologist and Project Manager during widening of SR-74 along the newly constructed Lakeside High School.

- **SR-79 North, Santa Gertrudis Creek Undercrossing, Temecula, CA.** Project Geologist during the design and construction of the new and widened SR-79 bike lane undercrossing.

- **French Valley Airport Hangar / Taxiway Expansion, Murrieta, CA**. Principal Geologist during the supplemental geotechnical investigation for the hangar and taxiway expansion project. Developed alternate methods to prepare soil subgrade to provide options to the developer, which would reduce construction costs.

## Water Infrastructure

- **EMWD Regional Water Reclamation Facility Expansion and Upgrade, Temecula, CA.** Principal Geologist and Senior Reviewer. Performed a detailed geotechnical investigation for the expansion and upgrade phase of this project. This project consisted of two new 80-foot-diameter digesters, one clarifier, a maintenance building, two out-of-compliance and one tertiary-effluent storage ponds, and associated pipelines.

- **EMWD Booster Pump Station and Pipelines, Scott Road, Menifee, CA.** Principal Geologist and Senior Reviewer of a subsurface geotechnical investigation for a two-mile pressurized water pipeline and a booster pump station. Provided field geotechnical testing and consulting services during grading and construction of the booster pump station and pipeline construction.

- **EMWD Perris Water Filtration Plant Phase II, Perris, CA.** Principal Geologist. Provided field geotechnical testing and consulting services during the expansion phase II- Raw Water Augmentation Pump Station and associated pipeline construction.

- **EMWD 21-inch Diameter Sewer, Jefferson Avenue, Via Montezuma and Del Rio Road, Temecula, CA.** Principal Geologist/Senior Reviewer. Performed a subsurface geotechnical investigation for the 21-inch diameter gravity sewer pipeline and investigated the feasibility for pipe jacking and bursting of existing pipe along the alignment.

- **Elsinore Valley Municipal Water District's Mission Trail Transmission Main Replacement, Lake Elsinore, CA.** Principal Geologist. Performed a geotechnical investigation for replacement of approximately 7,000 linear feet of existing 24-inch diameter polyvinyl chloride (PVC) waterline with a new 24-inch diameter ductile iron pipe (Dip Class 300).

- **Elsinore Valley Municipal Water Districts, Lake Elsinore, CA.** Project Manager and Project Geologist for design and construction of A-4 pump station and Temescal Canyon intertie pipeline. These projects consisted of excavation of below grade sewer lift station in soft ground conditions with shallow ground water requiring de-watering systems. The soft wet-well subgrade was stabilized, and the deep inlet/outlet pipeline also required de-watering during backfill. All work was performed within Caltrans right-of-way. The Intertie Pipeline project consisted of approximately two miles of 30-inch ductile iron pie crossing unexplored variable geotechnical conditions. Soft ground conditions were encountered that required specific evaluation and stabilization recommendations. Micro-tunneling and pipe jacking was performed though a hard, granitic rock hill side.

- **Irvine Ranch Water District, Orange County, CA.** Project Geologist for geotechnical feasibility studies on four 6-million-gallon water reservoirs and associated pumping facility. Six locations were independently evaluated for hillside stability including landslide evaluations. Evaluation methods included historical aerial photograph review, down-hole logging of large diameter borings was performed to evaluate the subsurface geologic conditions. Detailed geologic analysis was performed and recommendations for site selection were provided.

- **Metropolitan Water District, Riverside County, CA.** Project Geologist to determine the need for and the design of protective slabs covering two 90-inch San Diego pipelines at the Victoria Grove, Silverhawk, Temeku Hills and Chardonnay Hills residential projects. Subsurface borings and test pits were excavated to determine existing conditions and design criteria was developed in close coordination with District personnel.

- **Perris Valley Lateral "B" Stage 2, Moreno Valley, CA.** Principal Geologist during site geotechnical investigation for 2-mile long channel widening design for RCFC. Study provided remedial grading recommendations for the 13-foot-high channel embankments at two bridge crossings.

- **Temecula Valley RWRF 18-MGD Upgrade and Storage Expansion, Temecula, CA.** Principal Geologist and Senior Reviewer. Performed a detailed geotechnical investigation for the expansion and upgrade that consisted of two new 80-foot-diameter digesters, one clarifier, and maintenance building, two out-of-compliance and one tertiary-effluent storage pond, and associated pipelines.

## Honors and Associations

- Seismological Society of America - Member
- Association of Engineering Geologist, Member
- Building Industry Association, (BIA) Member, Riverside County Chapter

# M. KEVIN OSMUN
## PRINCIPAL CIVIL ENGINEER

### PROFESSIONAL HISTORY

| | |
|---|---|
| 1988 to Present | LOR Geotechnical Group, Inc.<br>Principal Civil Engineer |

### EXPERIENCE SUMMARY

Mr. M. Kevin Osmun has over 20 years experience in the environmental field. Mr. Osmun directs LOR Geotechnical Group's environmental operations and has conducted over 500 Phase I Environmental Site Assessments for the private and public sectors. The properties have ranged from agricultural to commercial/industrial. In addition to his experience with environmental assessments for property transfers, he has managed projects that require mitigation prior to and during development. Mr. Osmun is well versed in hazardous waste sampling and characterization methodologies in soil and groundwater regimes and risk assessments. Projects have ranged from leaking USTs, solid waste landfills, TSD facility closures to single spill response. LOR Geotechnical Group, Inc. is one of three firms that provides report review for underground storage tank closure for the County of San Bernardino, Fire Department Hazardous Materials Division.

### EDUCATION

B.S. Civil Engineering, Wayne State University, Northridge, 1975

### PROFESSIONAL REGISTRATIONS

California, Professional Engineer, CE 55116

### PROFESSIONAL AFFILIATIONS

American Society of Civil Engineers

# DAVID ATWATER
ENVIRONMENTAL PLANNER

## EXPERTISE

Data Collection, Research, and Analysis

Environmental Analysis/ Community Planning

California Environmental Quality Act

National Environmental Policy Act

Geographic Information Systems (GIS)

## EDUCATION

California State Polytechnic University, Pomona; B.S. in Urban and Regional Planning with an Interdisciplinary Minor in Geographic Information Systems Applications; June 2006.

## Continuing Education

Rio Hondo College; Geographic Information Systems coursework; July 2005.

## PROFESSIONAL AFFILIATIONS

American Planning Association (APA)

Association of Environmental Professionals (AEP)

## PROFESSIONAL RESPONSIBILITIES

Mr. Atwater coordinates and conducts research and provides analysis for LSA's environmental and planning projects subject to the laws of the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA). He coordinates and contributes to the preparation of professionally written documents, which are submitted or publicly presented including Initial Studies, Environmental Impact Reports, Environmental Assessments, and Environmental Impact Statements through researching technical resources and providing accurate analysis, contributing to the overall production of environmental documents. Mr. Atwater has experience utilizing Geographic Information Systems (GIS) for analysis in planning-related applications. He also has experience conducting air quality modeling utilizing the Urban Emissions (URBEMIS) 2007 computer model to estimate project-related air emissions. Prior to working with LSA, Mr. Atwater had one year of professional experience working with the West Basin Municipal Water District as its GIS Project Planner for numerous water quality projects in western Los Angeles County.

## PROJECT EXPERIENCE

- Addendum to the General Plan Update Final Program EIR, City of Loma Linda, San Bernardino County, California
- Adelanto Towne Center Environmental Impact Report, City of Adelanto, San Bernardino County, California
- Amendments to the Victoria Gardens Master Plan Initial Study and Supplemental Environmental Impact Report, City of Rancho Cucamonga, San Bernardino County, California
- Circuit 1533 Feeder Load Relief Project Initial Study Mitigated Negative Declaration, City of Riverside, Riverside County, California
- High Desert Gateway Shopping Center, City of Hesperia, San Bernardino County, California
- Hospitality Mixed-Use Retail Center, City of San Bernardino, San Bernardino County, California
- Interstate 15/Railroad Canyon Road Interchange Project, City of Lake Elsinore, Riverside County, California
- Marble Canyon Quarry – High Wall Extension, County of San Bernardino, United States Forest Service
- South Perris Industrial Environmental Impact Report, City of Perris, Riverside County, California
- Tehachapi Upland Multiple Species Habitat Conservation Plan Environmental Impact Statement (EIS), United States Fish and Wildlife Service

## PROFESSIONAL EXPERIENCE

Environmental Planner, LSA Associates, Inc., Environmental Planning Consultants. September 2006–present.

GIS Project Planner, West Basin Municipal Water District, Carson, California. August 2005–August 2006.

University of California, Riverside, University Extension, *Watershed and Storm Water Regulations and Management*, September–November 2005.

## PROFESSIONAL RESPONSIBILITIES

Ms. Czechowski provides research, assistance, and coordination for a variety of LSA's environmental planning projects subject to review under the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA). She assists and coordinates with staff in the preparation of initial studies, environmental impact reports, environmental assessments, and environmental impact studies for commercial, industrial, public facility/infrastructure, and residential projects. Her duties have included the research, analysis, and identification of environmental impacts, utilizing knowledge of principles and concepts of various scientific and engineering disciplines and contributing to the overall production of environmental and planning documents. Her assignments range from preparing and coordinating the completion of initial studies, environmental impact reports, environmental assessments, and environmental impact studies based on technical documents to locating facts and findings associated with individual projects and providing assistance to staff. Her assignments also include the preparation and coordination of technical studies dealing with relocation, community, environmental justice, and water quality issues.

## PROJECT EXPERIENCE

- Atlantis Gardens Initial Study, City of Azusa, Los Angeles County, California
- Walnut Benson Residential Initial Study, City of Chino, San Bernardino County, California
- Adelanto Towne Center Environmental Impact Report, City of Adelanto, San Bernardino County, California
- High Desert Gateway Shopping Center Environmental Impact Report, City of Hesperia, San Bernardino County, California
- Yucca Valley Retail Specific Plan Environmental Impact Report, Town of Yucca Valley, San Bernardino County, California
- Perris Marketplace Environmental Impact Report, City of Perris, Riverside County, California
- Wal-Mart Supercenter at Canyon Crossings Environmental Impact Report, City of Riverside, Riverside County, California
- South Perris Industrial Environmental Impact Report, City of Perris, Riverside County, California
- UPS Freight Facility Environmental Impact Report, City of Rialto, San Bernardino County, California

## Continuing Education (Continued)

University of California, Riverside, University Extension, *Water Quality Basins and Bio-swales for the Inland Empire Region: Requirements, Design, Native Plants and Implementation*, October 2005.

## PROFESSIONAL EXPERIENCE

Senior Environmental Planner, LSA Associates, Inc., Environmental Planning Consultants, November 2010–present.

Environmental Planner, LSA Associates, Inc., Environmental Planning Consultants, October 2007–November 2010.

Assistant Environmental Planner, LSA Associates, Inc., Environmental Planning Consultants, July 2005–October 2007.

Planning Intern, City of Riverside Planning Department, Riverside, California. August 2004–July 2005.

Air Quality Administrative Intern, South Coast Air Quality Management District, Diamond Bar, California. July–September 2003.

## PROFESSIONAL AFFILIATIONS

Association of Environmental Professionals (AEP), Vice President of Programs January 2010–present.

Association of Environmental Professionals (AEP), Newsletter Editor January 2008–December 2009.

## PROJECT EXPERIENCE (CONTINUED)

- Kline Ranch Environmental Impact Report, City of Rialto, San Bernardino County, California
- Gateway South Warehouse Facility Initial Study, City of San Bernardino, San Bernardino County, California
- Gateway North Building 2 Initial Study, City of San Bernardino, San Bernardino County, California
- Arantine Hills Specific Plan Environmental Impact Report, City of Corona, Riverside County, California
- La Verne Village Mixed Use Initial Study, City of La Verne, Los Angeles County, California
- Sanderson Square Specific Plan Environmental Impact Report, City of Hemet, Riverside County, California
- Upland Crossing Specific Plan, City of Upland, San Bernardino County, California
- Colton Crossing Rail to Rail Grade Separation, City of Colton, San Bernardino County, California
- I-15/Railroad Canyon Road Interchange Project, City of Lake Elsinore, Riverside County, California
- Rancho Vista Boulevard Grade Separation Project, City of Palmdale, Los Angeles County, California
- Baseline Bridge Replacement Project, City of Highland, San Bernardino County, California
- Davis Road Bridge Replacement and Road Widening Project, Monterey County, California
- Imperial Valley Solar Project SA/DEIS and FEIS, Imperial County, California
- McCanna Ranch Water Company Pipeline Initial Study, City of Perris, Riverside County, California
- Huntington Beach Desalination Project Growth Inducement Evaluation, City of Huntington Beach, Orange County, California
- I-215/State Route 60 East Junction High Occupancy Vehicle Connector Project, Riverside County, California
- West Valley Water District Wellhead Treatment System Initial Study, City of Rialto, San Bernardino County, California
- I-10/Tippecanoe Avenue Interchange Project, City of San Bernardino and City of Loma Linda, San Bernardino County, California
- Greenspot Road Bridge at Santa Ana River, City of Highland, San Bernardino County, California

# KENT NORTON, AICP, REA

SENIOR ENVIRONMENTAL PLANNER

## EXPERTISE

CEQA and NEPA Compliance

Registered Environmental Assessor

## EDUCATION

California State University, Fullerton, California. M.S., Environmental Studies with an emphasis in Urban and Regional Planning. 1983. His thesis on "Land Use Planning for Sources of Non-Ionizing Electromagnetic Radiation" was published in 1984 by the National Technical Information Service as a handbook for planners when dealing with cellular telephone towers, high voltage power lines, microwave communication towers, radio and television broadcast towers, etc.

California State University, Fullerton, California. B.A., Biology. 1978.

## PROFESSIONAL AFFILIATIONS

American Institute of Certified Planners (AICP), #9601, 1993.

Registered Environmental Assessor (REA), Class I #06827, State of California. 1996.

Association of Environmental Professionals (AEP), State of California President 2006–2009

AEP, Inland Empire Chapter Director, 2005–2006.

AEP, Inland Empire Chapter, Board Officer, 2000–2005.

National Association of Environmental Professionals (NAEP), 2007–2009.

American Planning Association (APA), Inland Empire Section, member, 2000–present.

## PROFESSIONAL RESPONSIBILITIES

Mr. Norton has prepared and managed the preparation of hundreds of CEQA and NEPA compliance documents that include Initial Studies, Environmental Assessments, Categorical Exclusions and Exemptions, Negative Declarations, and Environmental Impact Reports (EIRs). His projects have ranged from small urban infill subdivisions to the development of over 13,000 acres of land in the high desert near Barstow, and EIRs for approximately a dozen large specific plan projects in Riverside and San Bernardino Counties. He has prepared EIRs for complex development projects on the former Kaiser Steel Mill, the Ontario Mills Mall property, and the Sierra Lakes Specific Plan project in Fontana. He has managed several award-winning projects including the Los Alamos Hills Master Plan and EIR for park and school facilities in Murrieta, the Coldwater Reservoir EIR in Beverly Hills, the Padua Park EIR in the City of Claremont, and the MacArthur Park Master Plan EIR in the City of Los Angeles. He also managed preparation of a comprehensive Environmental Impact Statement (EIS) for the closure and reuse of Griffiss Air Force Base in Rome, New York. As a Registered Environmental Assessor, Mr. Norton has prepared dozens of Phase 1 Environmental Site Assessments (ESAs) dealing with hazardous materials on vacant and developed sites.

Mr. Norton is the immediate past state president of the Association of Environmental Professionals (AEP), and has conducted numerous workshops and training sessions for students and professionals on the basics of CEQA compliance. He is still a Director-At-Large on the AEP State Board and is the chair of the AEP Emerging Issues Committee. He is also a member of the American Institute of Certified Planners (AICP) and the American Planning Association (APA).

## PROJECT EXPERIENCE

- General Plan, City of Indian Wells, Riverside County, California
- General Plan and EIR, City of Diamond Bar, Los Angeles County, California
- University Hills Specific Plan EIR, City of San Bernardino, San Bernardino County, California
- Roripaugh Ranch Specific Plan and EIR, City of Temecula, Riverside County, California
- Sierra Bella Specific Plan EIR, City of Corona, Riverside County, California
- Rancho El Rivino Residential Specific Plan EIR, City of Rialto, San Bernardino County, California

# KENT NORTON, AICP, REA

SENIOR ENVIRONMENTAL PLANNER

## PROFESSIONAL EXPERIENCE

Senior Environmental Planner, LSA Associates, Inc., Riverside, California. September 2010–present.

Director of Environmental Services, The Planning Center. November 2009–June 2010.

Director of Environmental Services, Michael Brandman Associates. October 2002–November 2009.

Director of Environmental Services, The Keith Companies. May 1995–October 2002.

Independent Consultant. August 1994–May 1995.

Environmental Planner, South Coast Air Quality Management District. June 1993–August 1994.

Senior Scientist, Tetra Tech. September 1992–June 1993.

Senior Project Manager, Cotton-Beland Associates. March 1992–September 1992.

Project Manager, Planning Network. January 1980–February 1992.

Facilities Planner, Placentia Unified School District. January 1980–January 1988.

Environmental Planner, PRC Toups Corporation. November 1977–January 1980.

## PROJECT EXPERIENCE (CONTINUED)

- P&V High Desert Development EIR, San Bernardino County, California
- Marketplace at Main Street Project EIR, City of Corona, Riverside County, California
- Renaissance Specific Plan EIR, City of Rialto, San Bernardino County, California
- Sunny Cal Specific Plan EIR, City of Beaumont, Riverside County, California
- EIS for Closure and Reuse of Griffiss Air Force Base, City of Rome, Oneida County, New York
- CEQA and NEPA Compliance for Riverside Freeway (SR-91) Auxiliary Lane, City of Riverside, Riverside County, California
- NEPA Compliance for Various Road Projects, City of Moreno Valley, Riverside County, California
- CEQA and NEPA Compliance for Improvements to Foothill Boulevard (Route 66), City of Fontana, San Bernardino County, California
- EIS/EIR for Metro Gold Line Extension to Pasadena, Los Angeles Metropolitan Transit Authority, Los Angeles County, California
- Greenspot Road Improvements, City of Highland, San Bernardino County, California
- High School #3 EIR & Elementary School, Palm Springs Unified School District, Riverside County, California
- South Ontario High School, Chaffee Joint Union High School District, San Bernardino County, California
- Desert Hot Springs Elementary School Mitigated Negative Declaration (MND), Palm Springs Unified School District, Riverside County, California
- Police and Public Works Facilities EIR, City of San Gabriel, Los Angeles County, California
- Cedar Glen Disaster Recovery EIR, City of Lake Arrowhead, San Bernardino County, California
- Los Alamos Hills Master Plan EIR for Park and School Facilities, City of Murrieta, Riverside County, California
- MacArthur Park Master Plan EIR, City of Los Angeles, Los Angeles County, California
- Padua Hills Park EIR, City of Claremont, Los Angeles County, California
- Ferraro Soccer Fields MND, City of Los Angeles, Los Angeles County, California
- Jurupa Business Park EIR, City of Fontana, San Bernardino County, California
- Calvary Chapel Initial Study/MND, City of Highland, San Bernardino County, California

# MEGHAN MACIAS
PRINCIPAL/TRANSPORTATION PLANNER

## EXPERTISE

Transportation Planning and Traffic Impact Assessment

Access and Site Plan Analysis

Parking Demand and Shared Parking Studies

## EDUCATION

University of California, Irvine, Master of Urban and Regional Planning, 1998.

California State University, Fullerton, B.A., Geography, 1996.

## PROFESSIONAL MEMBERSHIPS

Institute of Transportation Engineers

Orange County Traffic Engineering Council

## PROFESSIONAL EXPERIENCE

Principal, LSA Associates, Inc., Riverside, California, 2009–present.

Senior Transportation Planner, LSA Associates, Inc., 1999–2009.

Transportation Planner, California Department of Transportation (Caltrans), District 8, 1998–1999.

Intern, Planning and Programming, Orange County Transportation Authority (OCTA), 1997–1998.

## PROFESSIONAL RESPONSIBILITIES

Ms. Macias' primary responsibilities include preparation of technical analyses of land development projects, including comprehensive traffic impact analyses, traffic operations analyses, and parking studies. Ms. Macias has prepared traffic analyses for numerous and varied projects throughout California, including regional retail centers, college campuses, mixed-use projects, and special events. In addition to her expertise in traffic engineering and operations analysis methodologies, Ms. Macias works closely with environmental staff to prepare technically sound and defensible Environmental Impact Report level analyses and traffic sections for environmental documents.

Ms. Macias' provides strategic transportation planning services to public- and private-sector clients. Her work focuses on providing mobility solutions for local agencies, developers, and campus environments. Ms. Macias has prepared transportation and parking management plans and trip reduction plans for numerous and varied projects throughout California, including master planned developments, college campuses, mixed-use projects, and special events. Ms. Macias has prepared Transportation Demand Management (TDM) plans for development project compliance with air quality regulations, and has assisted large and small employers in developing and implementing Trip Reduction Plans.

## PROJECT EXPERIENCE

- Moraga Canyon Sports Fields, Piedmont, California
- Coachella Valley Music and Arts Festival Traffic Operations Analysis, Indio, California
- Upper Santa Ana River Wash, San Bernardino County, California
- West Civic Center Parking Master Plan, Westminster, California
- San Miguel Ranch TIA, San Luis Obispo County, California
- Hoag Memorial Hospital Presbyterian TDM Plan, Newport Beach, California
- Imperial Valley Commons, El Centro, California
- Santa Barbara Cottage Hospital, Santa Barbara, California
- I-15 Baseline Road Interchange, Riverside County, California
- Laguna Canyon Road (State Route 133) Widening Project Report/Environmental Documentation, Orange County, California
- Laguna Canyon Road Widening Project Report/Project Study Report, Orange County, California
- I-5 Widening Environmental Impact Report/Environmental Impact Study On-Call Services, Caltrans District 7, Los Angeles, California
- Eastshore State Park Master Plan, Alameda and Contra Costa Counties, California

## PROJECT EXPERIENCE (CONTINUED)

- Richmond Greenway, Richmond, California

- Park Place Master Plan Circulation Planning, Irvine, California
- Bicycle and Pedestrian Safety Study, Santa Rosa Junior College, Santa Rosa, California
- Palm Springs Unified School District Traffic Impact Analyses, Desert Hot Springs, California
- Folsom Lake State Recreation Area (SRA) General Plan EIR/EIS, Sacramento, El Dorado, and Placer Counties, California
- Melrose Triangle Traffic Impact Analysis, West Hollywood, California
- 8759 Santa Monica Boulevard Traffic Impact Analysis, West Hollywood, California
- Beverly Place Mixed-Use Development Traffic Impact Analysis, West Hollywood, California
- De Anza College Transit Center, Santa Clara Valley Transportation Authority, Cupertino, California
- Pilarcitos Quarry (West Coast Aggregates) Trip Generation and VMT Analysis, Half Moon Bay, California
- Clayton Community Church, Clayton, California

# RON BRUGGER
SENIOR AIR QUALITY SPECIALIST

## EXPERTISE

Air Dispersion Modeling

Human Health Risk Assessment

Noise Modeling

Regulatory Analysis and Permitting

## EDUCATION

University of Wisconsin-Madison, B.S., Mechanical Engineering, 1983.

Trinity Consultants, Air Dispersion Modeling Course, 1994.

Blue Scape Environmental, Air Toxics Health Risk Assessment and HARP Course, 2004.

Blue Scape Environmental, Rule 1401 Health Risk Assessment Course, 2005.

Lakes Environmental, Air Dispersion Modeling Workshop and AERMOD Course, 2007.

## PROFESSIONAL EXPERIENCE

Senior Air Quality Specialist, LSA Associates, Inc., Irvine, California, 2003–present.

## PROFESSIONAL RESPONSIBILITIES

Mr. Brugger is a Senior Air Quality Specialist at LSA with over 19 years of experience in air emission modeling, human health risk assessment, noise modeling, regulatory analysis, and permitting and landfill gas modeling. Mr. Brugger's direct experience with all industry-standard environmental models assures a thorough analysis using the best analysis methodology.

He has recently conducted the CEQA air quality analysis, health risk assessment, and/or noise analysis for: Banning Business Park for the City of Banning, River Springs Charter School for the City of Riverside, 24th Street Widening for the City of Bakersfield, the Walmart Expansion for the City of Poway, the Valero Ethanol Transloading Project for the County of San Bernardino, Loma Bonita Residences for the City of San Dimas, and Grand Terrace Town Square in the City of Grand Terrace.

He is proficient with the use of the AERMOD, ISCST3, HARP, SCREEN3, EMFAC2007, URBEMIS 2007, CALINE4, FHWA Highway Traffic Noise Prediction Model (FHWA RD-77-108), SOUND32 noise model, and Traffic Noise Model (TNM) 2.5. He is also responsible for measuring noise levels with the Larson Davis models 720, 820, and 824 noise meters.

Mr. Brugger has contributed his energy efficiency, sustainability, and global climate change impact analysis expertise in developing the Energy, Sustainability, and Global Climate Change sections for residential, commercial, and industrial development projects as well as roadway improvement projects. Specific projects include the following:

- Banning Business Park, City of Banning
- Mountain Grove Citrus Plaza, County of San Bernardino
- Poway Walmart Expansion, City of Poway
- SR-91 Corridor Improvement Project EIR, Caltrans
- General Plan Update, City of Rancho Palos Verdes
- Vogel Industrial Park, City of Moreno Valley
- Newport Beach City Hall, City of Newport Beach
- Pedley Affordable Housing, County of Riverside
- Del Mar Fairgrounds, City of Del Mar
- Clay Street Business Park, County of Riverside

## PROFESSIONAL EXPERIENCE (continued)

Air Quality and Health Risk Specialist, TRC Companies, Inc., environmental consultants, Southern California, 1992–2003.

Senior Software Engineer, BDM International, Inc., engineering services consultants, Southern California, 1989–1992.

Missile Systems Analyst and Systems Expert, Fleet Analysis Center, Department of the Navy, Southern California, 1983–1985.

## PROJECT EXPERIENCE (CONTINUED)

- Air Dispersion Modeling, Various Clients, Various States (mostly California)
- Big Bear Disposal, San Bernardino County, California
- Hanford Municipal Airport Improvements Project, Kings County, California
- Grand Terrace Town Square, San Bernardino County, California
- Banning Business Park, Riverside County, California
- Defense Reutilization and Marketing Office, Meridian Business Park Project, Riverside, California
- Clay Street Industrial Park, Riverside County, California
- Vogel Industrial Park, Moreno Valley, California
- Central Park Master Plan Amendment, Rancho Cucamonga, California
- Caltrans Statewide On-Call Environmental Service, Throughout California
- South Orange County Transportation Infrastructure Improvement Project, Orange County, California
- Mid County Parkway, Riverside County, California
- SR-91 HOV Lanes, Riverside, California
- Vacek Project, Desert Hot Springs, California
- Jamboree & Richter Residential, Irvine, California
- Shady Creek Medical Center, Irvine, California
- Long Beach Home Depot, Long Beach, California
- Main and Iowa Traffic Signalization Project, Colton, California
- Melrose Triangle EIR, West Hollywood, California
- Western Way Recycling, Perris, California
- Teller/Campus, Irvine, California
- High Desert Gateway, Hesperia, California
- Gateway South, San Bernardino, California
- Hospitality Mixed-Use, San Bernardino, California
- La Habra Homes, La Habra, California
- Barranca/Millikan, Irvine, California

# RAYMOND V. HUSSEY, AICP
ASSOCIATE

## EXPERTISE

Environmental Analysis

Transportation Planning/Engineering

## EDUCATION

California Polytechnic State University, San Luis Obispo, Master of City and Regional Planning, 1993.

University of California, Davis, Bachelor of Science in Environmental Policy Analysis and Planning, 1982.

## PROFESSIONAL AFFILIATIONS

American Institute of Certified Planners (AICP), Certification No. 12937

American Planning Association (APA)

Association of Environmental Professionals (AEP)

Building Industry Association (BIA)

Institute of Transportation Engineers (ITE)

## PROFESSIONAL EXPERIENCE

Associate, LSA Associates, Inc., Riverside, California. 1998–present.

## PROFESSIONAL RESPONSIBILITIES

Mr. Hussey manages the Environmental and Planning groups in LSA's Riverside office. His primary duties include managing and preparing environmental documents (CEQA and NEPA) for public and private development projects throughout Southern California. His experience includes preparation of categorical exemptions/exclusions, initial studies, and environmental impact reports for roadway widening, transit centers, retail centers, commercial centers, industrial warehouses, residential subdivisions, and Specific Plans. As project manager, Mr. Hussey works directly with the agency contact persons and project applicants and manages, coordinates, and conducts all LSA work efforts, including review of technical reports to ensure CEQA and NEPA compliance. As a result of this experience, he has developed a comprehensive understanding of the environmental issues associated with the environmental review of projects and has developed and expertise in the procedures required by CEQA and NEPA.

## PROJECT EXPERIENCE

- Citrus Village II EIR, Corona, Riverside County, California
- Green River Ranch Specific Plan EIR, Corona, Riverside County, California
- Kline Ranch Industrial Warehouse EIR, Rialto, San Bernardino County, California
- ProLogis Industrial/Warehouse EIR, Rialto, San Bernardino County, California
- Rancho Vista Boulevard Widening Project IS/MND and EA, Palmdale and Caltrans District 7, Los Angeles County, California
- Rancho Vista Boulevard Widening Project IS/MND and CE, Palmdale and Caltrans District 7, Los Angeles County, California
- 20th Street West IS/MND, Palmdale, Los Angeles County, California
- Green River Road Widening Project IS/MND, Corona, Riverside County, California.
- Recycled Waterline IS/MND, Corona, Riverside County, California
- San Jacinto Retail Center EIR, San Jacinto, Riverside County, California
- Swift Transportation Facility Draft EIR, Rialto, San Bernardino County, California
- The Crossings EIR, Corona, Riverside County, California
- Upper Santa Ana River Wash Land Management and Habitat Conservation Plan EIR, San Bernardino County, California
- Valley Central Shopping Center EIR, Lancaster, Los Angeles County, California
- West Valley Water District Wellhead Treatment System IS/MND and Addendum, Rialto, San Bernardino County, California

## PROFESSIONAL EXPERIENCE

Previous Experience 1987–1998:

- Transportation Planner, Penfield & Smith Engineers, civil engineering consultants, Santa Barbara, California.
- Transportation Planner, Associated Transportation Engineers, consulting transportation engineers and planners, Santa Barbara, California.
- Transportation Planner, Willdan Associates, transportation planning and engineering consultants, Sacramento, California.
- Transportation Planner, TJKM Transportation Consultants, transportation planning and engineering consultants, Sacramento, California.
- Transportation Analyst/Engineer, Transportation Development Review Section, City of Irvine, Irvine, California.
- Intern, Transportation Planning/Traffic Engineering Division, City of Oxnard, Oxnard California.

CORPORATE
RESUME

# Cori Wilson

**Project Role: Air Quality/Climate Change Expert**

## Overview

- 7 Years Experience
- Bachelor of Science, Environmental Science - University of Washington, Bothell

**Cori Wilson** is an Air Quality and Greenhouse Gas Specialist with seven years of experience in the authorship of air quality and greenhouse gas analyses. Cori's analyses are known for their technical accuracy, thoughtful mitigation measures, and innovative approaches. Cori regularly co-authors papers on the topic of greenhouse gases for the Association of Environmental Professionals.
Cori's analyses are tailored to the type of project and the air district in which the project is located. In general, greenhouse gas analyses contain emission quantification of construction and operational impacts, consistency with California's most recent strategies to reduce State emissions pursuant to Assembly Bill 32, identification of project design features to reduce emissions, application of mitigation measures (if necessary), and a finding of significance. Cori's air quality analyses include an estimation of short-term and long-term criteria pollutant emissions. She is an expert with the URBEMIS and CalEEMod models, yet can supplement the model with her own emissions calculations. She conducts carbon monoxide hotspot analyses using the EMFAC and Caline4 models. She also prepares localized significance threshold analyses and health risk assessments utilizing the AERMOD dispersion model. She uses appropriate air district and State guidance to produce legally defensible analyses.

## Related Experience

Cori prepared greenhouse gas and/or air quality analyses for the following projects.

### Commercial Projects

- **Gosford Village Shopping Center and the Panama Lane Shopping Center, City of Bakersfield.** The Gosford Village and the Panama Lane shopping centers are two projects within a three mile radius of each other both consisting of a Walmart and related commercial shopping centers. These projects were completed in early 2007 and had among the first climate change analyses for CEQA. Cori developed the approach to address climate change, which was used by other Lead Agencies in California because at the time, there was no regulatory guidance on this issue.
- **Almond Plaza, County of San Bernardino.** The project includes the construction of approximately 59,000 square feet of commercial retail uses, a 180-room hotel, 149,000 square feet of office space, 5,000 square feet of restaurant uses, and 3,500 square feet of a fast food restaurant.
- **Standard Center, Tuolumne County.** The project consists of 40,922 square feet of retail buildings.
- **Milpitas Walmart Expansion Project, City of Milpitas.** The project is the expansion of an existing Walmart.
- **Murrieta Marketplace, City of Murrieta.** The project involved a regional shopping center, park-and-ride, and a dedicated wetlands area.
- **Creekside Marketplace, Fremont.** The project consists of 524,000 square feet of commercial uses near an existing landfill.

- **Merced Truck Stop (Tentative Parcel Map No. 11325), Kern County.** The project includes construction of a truck stop, gasoline station, oil and lube facility, truck and car wash, convenience store, restaurants, and hotel.
- **Pomona/Rincon Medical Office Center and Hospital, City of Chino Hills.** An air quality analysis was prepared for the project, which considered two options for the project site: 1) the project with a hospital (with and without an emergency room); and 2) the project with a second medical building in place of the hospital. The project site is located next to a freeway; therefore, the analysis also assessed the potential impact of the freeway on the proposed hospital.
- **Travel Plaza in Thunder Bay, Ontario, Canada.** The project consists of a truck stop, including a convenience store, restaurant, and gasoline, diesel, and propane fueling stations. Cori prepared a unique Air Quality Impact Analysis that assessed the impact of project-related and mobile emissions at sensitive receptors using the U.S. EPA dispersion model, AERMOD. GIS technology was used in combination with AERMOD to produce concentration isopleths for nitrous oxides, carbon monoxide, diesel particulate matter, and benzene. Health risks from exposure to benzene were assessed. Emissions were estimated using the U.S. EPA emission factor model, MOBILE6, and the California Air Pollution Control Officers Association's Air Toxics Hot Spots Program methodology. Canadian regulations and anti-idling technology were also discussed in the report. An Odor Impact Analysis was also prepared to determine odor impacts from the proposed development on nearby sensitive receptors. Cori was called as an expert witness in the Canadian court and testified regarding the technical accuracy of the analyses she prepared.
- **William J. Carroll Government Center, County of Solano.** The project consisted of a 35,000 square foot two-story County public health facility and clinic and associated site improvements located on 2.78 acres in the City of Vacaville. The Health facility and clinic would be operated by the Solano County Health and Social Services Department.
- **Wasco Center Walmart, City of Wasco.** The project involves the addition of square footage to a previously approved Walmart building.
- **Sheriff Station, Palm Desert, Riverside County.** The project consists of a proposed sheriff station.
- **West Hollywood Peer Review.** Cori prepared a peer review of the air quality and climate change analyses for the 8801 Sunset Boulevard project in the City of West Hollywood.
- **Newport Beach Learning Center, City of Newport Beach.** The project consists of the demolition of existing structures and construction of a three-story learning facility. Cori prepared air quality and greenhouse gas analyses for the project.
- **Fahrens Park Plaza, City of Merced.** The project consists of the development of a more intense use on an existing commercial retail site.
- **Chick-fil-A, City of Sunnyvale.** The project consists of a 4,350 square foot Chick-fil-A restaurant.
- **Mira Loma Retail Center, Riverside County.** The project consists of two alternatives with fast food restaurant and a specialty retail or convenience store.
- **Needles Fire Station No. 31, County of San Bernardino.** The project consists of the development of a fire station.

### Industrial and Warehouse Projects

- **City Creek Maintenance Project, County of San Bernardino.** The project includes maintenance activities for existing flood control facilities and completion of emergency activities.

- **Rialto Commerce Center, City of Rialto.** The project consists of the construction and operation of 3,659,000 square feet of industrial and warehouse uses on 158.9 acres.
- **Highland Fairview Corporate Park, City of Moreno Valley.** The project consists of the construction of 2.4 million square feet of logistics, 200,000 square feet of commercial, and a retail component. A comprehensive climate change analysis included an emissions inventory and an onsite and offsite (carbon offsets) mitigation measure feasibility analysis. The cumulative analysis included a description of the potential of the project to contribute to the emissions associated with international trade.
- **North Basin Groundwater Protection Project, Orange County Water District.** The Orange County Water District conducted investigations of a portion of the Orange County Groundwater Basin within the cities of Fullerton and Anaheim and found concentrations of volatile organic compounds that are in excess of drinking water standards. The project includes construction and operation of a pump-treat-recharge system to remediate the groundwater contamination. The project is being designed to extract adequate amounts of contaminants while minimizing the risk of contamination migration into portions of the Orange County Groundwater Basin that are used for potable water supplies.
- **Miraloma Recharge Basin, Orange County Water District.** The project involves the construction and operation of an approximately 13-acre groundwater recharge basin.
- **Burris and Lincoln Basins Reconfiguration and Five Coves Pipeline Project, Orange County Water District.** The project involves the reconfiguration of two groundwater recharge basins and the construction of a pipeline system. The analysis took into account the "adaptation" benefits of the project by mitigating the effects of climate change by recharging groundwater basins.
- **Mid Basin Injection Well Pilot Project, Orange County Water District.** The project is a pilot program that involves the construction and operation of a mid basin injection well and monitoring well onsite within the City of Fountain Valley and the construction and operation of a mid basin monitoring well on a site in the City of Santa Ana. The purpose of the project is to test the effectiveness of a mid basin injection well system in the Orange County Groundwater Basin. Based on the results of the pilot program, a series of additional injection wells could be constructed.
- **Linda Vista Reservoir and Pump Station Project, City of Anaheim.** The project consists of upgrading and replacing existing water storage and pumping facilities and developing new facilities to meet future water demands.
- **Public Safety Enterprise Communication Project, Riverside County.** The project involves the expansion of the County's communication system through the construction of 45 radio tower sites. The analyses took into account the fact that the project sites spanned two air districts and three air basins by expanding the background information and utilizing appropriate thresholds where necessary.
- **Pacific Rail Industries Metal Shredding Operation, Colton.** The project involves the installation and operation of a metal shredding operation as an expansion of an existing scrap metal facility and an increase in the volume of transloading (transfer of goods between rail car and truck for distribution).
- **Overton Moore Properties Distribution Center, Perris.** An Air Quality Analysis and Health Risk Assessment Report was prepared that estimated the health risk from operational related diesel particulate matter and construction emissions using the U.S. EPA dispersion model, ISCST3.
- **Jaden Warehouse/Distribution Facilities, Mead Valley.** An Air Quality Impact Analysis and Health Risk Assessment Report was prepared for the project, which included four warehouses totaling 170,228 square feet of floor space.

- **Barstow Industrial Park, City of Barstow.** The project consists of the development of a maximum of 10.9 million square feet of industrial and related development. The Climate Change Analysis included an assessment of potential greenhouse gas reductions from the use of rail on the project site.
- **Granite Mine Expansion, City of Twentynine Palms.** The project involves the expansion of an existing sand and gravel mine with accompanying concrete and asphalt facilities. Emissions associated with the concrete and cement manufacturing industries were explored in the Climate Change Analysis report. Greenhouse gas emissions from the proposed expansion were quantified.

### Residential and Mixed-Use Projects

- **Tentative Tract Map 34271, City of San Jacinto.** The project is the construction of 154 single-family residential units on 45 acres.
- **Tentative Tract Map 36243, City of San Jacinto.** The project is the construction of 43 single-family residential units on 11.55 acres.
- **Tentative Tract Map 62757, City of Lancaster.** The project is the subdivision of approximately 160 acres into 650 residential lots.
- **Edgewater Communities, City of Chino.** The project is the construction of residential units on land previously designated for open space and agriculture. The climate change analysis included a discussion on smart land use and the conversion of agriculture to sprawling communities.
- **Stonefield Tentative Tract Map 18393, Chino Hills.** The project is the development of 28 single family residential units in a location with variable terrain.
- **Sky 19 Development, Bakersfield.** The project is a residential development. The analysis assessed regional and cumulative air quality impacts. Mitigation measures and compliance with the San Joaquin Valley Air Pollution Control District's Indirect Source Review Rule 9510 reduced air quality impacts to less than significant.
- **Ashlan Locan II, City of Clovis.** The project consists of the development of 196 residential units on 17.78 acres.
- **Sierra Bella Specific Plan EIR, Corona.** The project consists of residential uses on variable terrain, which would require substantial grading near existing residential uses. An Air Quality Impact Analysis and Health Risk Assessment was prepared, which examined potential health risks associated with diesel particulate matter and fugitive dust generated during grading activities. URBEMIS was used in conjunction with AERMOD to estimate future concentrations.
- **Renaissance Specific Plan, City of Rialto.** The project accommodates 17.4 million square feet of business and commercial uses (835,200 square feet of which is existing and expected to remain), 1,746 residential units, one school, two community parks, and multiple neighborhood parks. It is located on 1,510 acres in the City of Rialto on and adjacent to the Rialto Municipal Airport.
- **Rich Haven Specific Plan, City of Ontario.** The analysis assessed the conversion of existing dairies to a mix of residential, employment centers, and an activity core. The Climate Change Analysis included a greenhouse gas emission inventory (methane and nitrous oxides) for the existing cattle and hog farming. Greenhouse gas emissions from the proposed residential and commercial uses were also estimated and the net increase of emissions with project implementation was determined. Project specific thresholds were derived to determine the level of significance in regard to the project's impact on climate change as well as the impact of climate change to the project.

- **Colinas del Oro, Riverside County.** The project consists of residential and retail uses on steep slopes that would require substantial grading. Mitigation and project alternatives were proposed to reduce localized impacts during grading to less than significant at the nearest sensitive receptor.
- **940 Main Street Project, City of Half Moon Bay.** The project consists of subdividing the existing 1.83-acre parcel into 12 lots to allow for future residential development.
- **Merrill Gardens at Lafayette, Lafayette.** The project would include 72 independent/assisted living apartments, a 17-bed memory care facility, and approximately 6,000 square feet of retail.
- **Lugonia Avenue Housing, Housing Authority of San Bernardino.** The project consisted of 39 single-family residential units and 189 multi-family residential units.
- **Rancho Summit, Tentative Tract Map 18741, Rancho Cucamonga**. The project consists of the development of 53 residential lots on 40 acres.
- **Tentative Tract Map 18122, City of Rancho Cucamonga.** The project would allow the development of 76 single-family residences on 53 acres.
- **Rubidoux Affordable Housing, Mustang Lane, Plot Plan 24395, City of Jurupa Valley.** The project consists of a 22-unit low-income apartment development on 1.12 acres.

### Recreation Projects

- **Silverlakes Recreational Complex, Norco.** The project consists of a variety of multi-use recreational facilities including soccer fields, equestrian show-grounds, and/or a community event. Cori prepared air quality and greenhouse gas analyses for the project.
- **Bakersfield State Vehicular Recreational Area, County of Kern.** The air quality section in support of a DEIR was prepared for the project, which involves the construction and operation of a state vehicular recreational park. The park would be used for all-terrain vehicles, motorcycles, and 4-wheel drive vehicles operated on maintained trails and within fenced activity areas. The air quality analysis was conducted in accordance with San Joaquin Valley Air Pollution Control District methodology that estimated air quality impacts using a combination of modeling techniques: URBEMIS; U.S. EPA AP-42 emission factors; ISCST3; VISCREEN; and NONROAD.
- **Burris Basin Recreation Area, City of Anaheim.** The project consisted of a 14-acre passive recreation/nature park within an existing 116-acre ground water percolation basin/wildlife habitat area currently referred to as the Burris Basin. Cori prepared an Air Quality and Climate Change Analysis Report for the project.

## Climate Action Plans, General Plans, and Greenhouse Gas Inventories

**City of Palm Springs Greenhouse Gas Inventory.** MBA prepared a greenhouse gas inventory for the City of Palm Springs. Community and government business as usual emissions were estimated for the years 1990, 2000, 2005, 2008, 2012, 2020, and 2035. Compliance emissions were also estimated, which take into account greenhouse gas reductions from adherence of State regulations adopted under the authority of AB 32. The inventory utilizes ICLEI's Clean Air and Climate Protection Software as well as calculations prepared specifically for the City.

**City of Hesperia Climate Action Plan.** Cori managed and prepared a Climate Action Plan for the City. The Plan outlines a course of action for the City government and the community of Hesperia to reduce per capita greenhouse gas emissions 29 percent below business as usual by 2020. The Plan includes baseline and projected business as usual inventories for 2020 and General Plan buildout. The Plan provides strategies and implementation actions to achieve target reductions compared to business as usual scenarios, quantifies emission reductions anticipated from state and City of Hesperia measures and provides a monitoring program to track

progress, and includes a thorough discussion of climate change adaptation policies and measures to minimize the potential impacts of climate change on future development. The Plan received a Merit Award from the Association of Environmental Professionals in 2011.

**City of San Ramon Climate Action Plan.** Cori assisted on the preparation of a Climate Action Plan for the City of San Ramon. The Climate Action Plan is the City's primary strategy for ensuring that the buildout of the General Plan 2030 will not conflict with the implementation of Assembly Bill (AB) 32. The Climate Action Plan is designed to reduce community related and City operations related greenhouse gas emissions to a degree that would not hinder or delay implementation of AB 32. The purpose of the Climate Action Plan is to: outline a course of action for the City government and the community of San Ramon to reduce greenhouse gas emissions 15 percent below 2008 levels by the year 2020 and adapt to effects of climate change, and provide clear guidance to City staff regarding when and how to implement key provisions of the Climate Action Plan.

**City of San Ramon General Plan Update**. Cori prepared the air quality and greenhouse gas analysis for the General Plan Update EIR.

## Awards

**2011 Merit Award from the Association of Environmental Professionals** for the City of Hesperia Climate Action Plan.

## Professional Publications

**California Community-wide Greenhouse Gas Baseline Inventory Protocol White Paper, Association of Environmental Professionals (AEP).** Cori and Dave Mitchell prepared two sections in this paper. One section provides guidance on how to estimate greenhouse gas emissions from stationary and area sources and the other section provides guidance on how to estimate greenhouse gas emissions from purchased electricity. The paper was finalized in June 2011. Website: www.califaep.org/docs/WhitePaper_June2011.pdf

**California Emissions Estimator Model (CalEEMod) Beta Tester.** The South Coast Air Quality Management District requested that Cori beta test CalEEMod prior to its release in 2011. She prepared a memorandum to the District with recommendations for the model.

Wilson, C. **Climate Change Risks and CEQA.** Association of Environmental Professionals Environmental Monitor, Fall, 2009. The article provides suggestions on how climate change risks can be addressed in the context of CEQA.

Wilson, C. **Greenhouse Gas Threshold Development.** Association of Environmental Professionals Environmental Monitor, Summer, 2009. The article presents an update on the process of greenhouse gas threshold development by air districts, cities, and counties.

**Alternative Approaches to Analyzing Greenhouse Gas Emissions and Global Climate Change in CEQA Documents.** Cori was a primary author on this paper prepared on behalf of the California Association of Environmental Professionals. The paper outlined various approaches that a Lead Agency could take to address climate change and greenhouse gases in a CEQA document. The paper also contained a summary of climate change legislation, CEQA requirements, and mitigation to reduce impacts. The paper was finalized on June 29, 2007, and incorporated comments from the environmental sector and the building sector.

## Professional Presentations

**"City of Palm Springs Greenhouse Gas Inventory."** Cori presented at the City of Palm Springs 3rd Annual Sustainability Summit in November 2010. She discussed the basics of greenhouse gases and provided a summary of the results of the City's greenhouse gas inventory.

**"Clear Skies Ahead: Clearing the Smog about Air Quality Analysis."** Cori, Dave Mitchell, and Steve Smith presented at the Association of Environmental Professionals State Conference. The presentation described step by step how to answer the air quality questions contained in Appendix G of the CEQA guidelines.

**"A Planner's Guide to Air Quality Issues in Land Use Planning."** In 2006, Cori moderated and presented at the American Planning Association, California Chapter Conference, Orange County, California. The presentation focused on the California Air Resources Board's Air Quality and Land Use Handbook.

**"Global Climate Change, CEQA, and NEPA."** In 2007, by request of the California State Lands Commission, Cori Wilson presented on various topics, including climate change legislation and litigation and a multi-step approach for assessing climate change in National Environmental Policy Act (NEPA) documents.

**"A Change in the Air."** Cori discussed how to address climate change in CEQA documents at the Building Industry Show.

**"How to Analyze Greenhouse Gas Emissions and Determine Significance in CEQA Documents."** Cori presented for the Fresno Chapter of the Association of Environmental Professionals, January 17, 2008.

CORPORATE
RESUME

# Kenneth J. Lord, Ph.D., RPA

**Director, Natural/Cultural Resources**

## Overview

- 30 Years Experience
- Doctorate degree, Archaeology – University of Texas, Austin
- Bachelor's degree, Anthropology – University of Pittsburgh

**Kenneth Lord** possesses over 30 years of professional experience in the areas of environmental consulting, cultural resources management, and environmental assessment of major transmission and development projects. He has managed multi-disciplinary teams preparing Environmental Impact Studies (EISs) and Environmental Impact Reports (EIRs) that have been used by the Federal Energy Regulatory Commission, US Army Corps of Engineers, and State of California agencies in licensing pipeline projects in California and the western United States. He has been involved in management of the construction/ environmental compliance monitoring associated with a variety of development projects.

Dr. Lord's experience encompasses the reconnaissance, feasibility, and environmental impact aspects of a variety of project types. He is knowledgeable about California's county environmental documentation procedures and regulations, as well as other federal and state environmental laws, regulations, and guidelines. He prepared and supervised the preparation of EIRs, EISs, and Biological Assessments in accordance with NEPA and CEQA rules and regulations.

## Relevant Project Experience

### Government Land Use Planning and Community Development

**Apple Valley Re-entry Facility, California Department of Corrections and Rehabilitations.** Biology and Cultural Resources lead for the preparation of the EIR and Environmental Compliance Program. The proposed SCRF site is located on San Bernardino County property adjacent to the West Valley Juvenile Detention and Assessment Center located approximately two miles north of Victorville on the east side of Interstate- 15. The federal regulatory agencies that had jurisdiction over this project in the realm of biological, regulatory and cultural resources concerns included the U.S. Department of the Army Corps of Engineers, and U.S. Fish and Wildlife Service. Biological, regulatory, and cultural resources reports have been completed for the project. Potential issues with loss of endangered species habitat and jurisdictional issues with the CDFG have been identified. Informal discussions with U.S. Fish and Wildlife and CDFG have occurred.

### Land Development

**Burns Ranch Project, Riverside County.** Served as Project Manager for the 64-acre Burns Ranch Project located in Riverside County, CA. This project included completion of both biological and cultural resources tasks in compliance with Riverside County regulations. A biological assessment of the property was completed by the MBA team. Cultural resources were identified on the property and MBA cultural resources specialists prepared a cultural resources testing plan for the project.

**Twin Creek Development, Riverside County.** Serving as Project Manager for the Twin Creeks Development in Western Riverside County, Dr. Lord and the MBA team are providing biological and regulatory support for this 680-acre development. The primary objective of the project is to provide the client with a Riverside County Biological Assessment, Jurisdictional Delineation as well as to assist the client with the Habitat Evaluation and Acquisition Negotiation. The MBA team has successfully completed these tasks and is now in the process of obtaining US. Army Corps of Engineers, California Department of Fish and Game and Regional Water Quality

Control Board permits.

**Juniper Flats Development, Riverside County.** Serving as Project Manager for the Juniper Flats Development Project in the Nuevo Area of Riverside County, Dr. Lord and the MBA team of biologists, regulatory staff, and cultural resources personnel provided a full biological assessment and completed HANS negotiations for this 413-acre project. The MBA team also completed cultural resources surveys including documentation to determine the significance of the site. The MBA regulatory staff is currently processing all required permits for the project.

### Water Projects

**Los Osos Wastewater Project EIR, County of San Luis Obispo.** Co-managed the preparation of technical appendices for natural and cultural resources and providing sections of an EIR for the construction and operation of a wastewater facilities project in the Community of Los Osos in San Luis Obispo County. The natural resources technical studies and the EIR section included natural resources, jurisdictional delineations, consultations on endangered species, and development of appropriate mitigation. These activities were performed by MBA staff. In addition, technical studies for archaeological, historical, architectural, and Native American concerns are being completed. These studies included detailed Native American consultation on a CEQA and federal level, as well as completion of Section 106 consultation. Finally, a Native American participation plan was completed to provide Native American and archaeological monitoring for the project.

### General City/County Consulting

**Mt. Olympus and Wilderness Gardens Preserves, County of San Diego Department of Parks and Recreation.** Project Manager of multi-disciplinary study of over 1,400 acres of Preserve lands within the North County Multiple Species Conservation Plan. Four different types of reports were prepared: yearlong biodiversity reports for Mt. Olympus and Wilderness Gardens, vegetation management reports for both preserves; cultural resources inventory reports for both preserves; and a public access plan for the Mt. Olympus Preserve. All reports will be utilized as the County prepares Resource Management Plans for the Preserves.

**Santa Ana River Trail, County of Riverside Parks, City of Corona, and City of Norco.** Project manager for the preparation of a joint EA/MND for the Santa Ana River Trail segment between Hidden Valley County Park and Prado Dam at SR 71. Primary activities include determining feasible routes through MSHCP lands and areas with substantial biological resources on U.S> Army Corps of Engineers lands.

### Phase I Cultural Resources

**Kona Road III Project Cultural Resources Survey, French Valley Area.** Project Manager for a Phase I cultural resources survey and paleontological review of a 4.65-acre property project located in the French Valley Area of unincorporated Riverside County, California, for John Laing Homes.

**Merrill Avenue Project Cultural Resources Assessment, City of Chino.** Project Manager for a Phase I cultural resources assessment and paleontological records review for the Albers and Van Vliet Dairy Farms, a project located in Chino, San Bernardino County, California for Watson Land Company.

### Biological Assessment

**Parsons – SR91/SR71 Interchange Improvement Project Natural Environment Study in the City of Corona, Riverside County.** Project manager of a Biological Assessment and Assessment of Jurisdiction Waters and Wetlands for the Caltrans sponsored SR91/SR71 Interchange Improvement under the direction of Parsons. This project entailed preparation of a Biological Assessment, Habitat Assessment and MSHCP Consistency Analysis, Natural Environment Study Report and Jurisdictional Waters Delineation Report.

# Michael H. Dice, MA, RPA

## Senior Cultural Resource Specialist/Project Manager

## Overview

- 25 years experience in Cultural Resource Management
- Master's degree, Anthropology – Arizona State University, Tempe. 1993
- Bachelor's degree, Anthropology – Washington State University, Pullman. 1986
- Registered Professional Archaeologist (RPA 2000)
- Certified Archaeologist in Riverside County (#101), County of Orange and the County of San Diego.

**Michael H. Dice, MA, RPA**, Senior Cultural Resource Specialist and Project Manager, has more than 25 years experience performing record searches, archaeological surveys, archaeological site testing projects, and data collection projects on private and public lands in the Southwestern United States. He has authored or co-authored more than 200 Cultural Resources Inventory Reports required for CEQA and/or NEPA level documents. His management experience within CRM involves producing proposals, hiring and managing field and office cultural resource personnel, writing draft and final reports to various Clients and Lead Agencies, and managing costs effectively. Michael has extensive experience with California Native American Tribes, having provided direct consultation and coordination with the Agua Caliente Band, Gabrielino tribal officials, Juaneño tribal officials, the Morongo Band, the Serrano Band, and the Temecula Band of Luiseno Indians (Pechanga).

## Relevant Project Experience

### Prehistoric and Historic Archaeology

**Cultural Resource Assessment of The Las Montanas Marketplace Project, City of Indio, CA. M-To Management, Inc., Los Alamitos, CA. (2010-2011).** Mr. Dice performed an archaeological survey of 95 acres in the northern section of the City of Indio in support of an EIR for a new private developmental project. The project area was believed, through museum research, to contain three prehistoric archaeological sites. MBA cultural resource staff provided the proponent with an exploratory testing study that will effectively clear the project of specific mitigation measures for the sites in question. Because one of the sites was determined significant within an adjacent project area, that sites had to be cleared from the project. Work was undertaken before the City accepted the Initial Study. Consultations with local Tribal Authorities took place.

**Cultural Resource Assessment of The Salton Sea Solar Project, Riverside County, CA. Reese-Chambers Systems Consultants Inc., Somis, CA. (2009-2010).** Mr. Dice performed an archaeological survey and protohistoric ceramic scatter assessment on approximately 480 acres just north of the Salton Sea in the County of Riverside. The purpose of the study was to evaluate seemingly vacant property as part of an analysis for potential impacts during construction of a new solar panel complex. Two sites were identified and will have to be Phase III collected prior to construction. Consultations with local Tribal Authorities took place.

**Phase 1 Cultural Resource Assessment of the Badlands Landfill and Lamb Canyon Landfill Expansion Projects, Riverside County, California. Riverside County Waste Management Department (2010).** Mr. Dice performed an archaeological survey on a total of 1600 acres adjacent to the existing Badlands Landfill and the Lamb Canyon Landfill in the County of Riverside. The purpose of the study was to evaluate adjacent property as part of an analysis for potential impacts during expansion of the Landfills. Several new resources were detected and recorded during the study. While RCWMD will not construct for several decades, the sites will be avoided when land development takes place in the site areas. Consultations with local Tribal Authorities took place.

**Cultural Resource Assessment of the Van Norman Dam and Chatsworth Dam Complexes. Los Angeles Department of Water and Power (2008-9).** Mr. Dice performed an archaeological survey and historic landscape

assessment of the Van Norman Dam complex plus the Chatsworth Dam in western Los Angeles County for the Los Angeles Department of Water and Power. For the first time, the history of the complex was detailed and Program-level recommendations for historic evaluations of these significant engineering complexes were made. LADWP plans to remove the upper Van Norman Dam and replace it with a newly designed covered Dam in order to reduce water supply pollutants. Soils on the floor of the Chatsworth Dam will be used for fill. The project was written under CEQA Guidelines because LADWP will not be using federal monies. Future work will involve Section 106 because certain permits will be required when the project reaches a Project-level analysis.

**Cultural Resource Assessment, Phase II Historical evaluation and Phase IV Monitoring for the Sketchers Industrial Park Project, City of Moreno Valley, California. Highland-Fairview Operating Partners (2004-2011).** Mr. Dice undertook a Phase 1 survey of the Sketchers property in addition to other properties controlled by the Client, headed a team of cultural professionals performing historic building evaluations, then headed up a field crew of monitors during the earth-moving phase of complex construction in 2010. Wholly seen through by Mr. Dice, several historic era buildings were examined. Consultations with local Tribal Authorities took place.

**Phase 2 Testing Evaluation of Historic Site CA-SBR-11567H, the Empire-Fontana Project (ACOE #200301127), City of Fontana, California (2005).** Mr. Dice undertook an evaluation of a historic archaeological site for the City of Fontana in order to gain permits for developmental impact from the Army Corps of Engineers. Several abandoned historic foundations, trash dumps, remnant buildings and a possible prehistoric isolated within the historic property were examined and quantified. The report was submitted and accepted by Mr. Steve Dibble of the Army Corps LA District.

**Phase 2 Testing and Phase 3 Excavation of the Loring Ranch Project, Rubidoux-Jurupa Area, County of Riverside, California. Mastercraft Homes, Inc. (2004).** Mr. Dice undertook an evaluation of two historic archaeological sites on vacant land located west of the Santa Ana River and southeast of the Flabob Airport. Cultural Resource Staff determined that two mid-1800's trash deposits were located on the property and tested the sites for significance. Because the sites were felt to reflect a period in history when Chinese immigrants were forced into limited economic means, the sites were determined to represents "truck farms" developed between 1870 and 1900.

### Historic Building and Landscape Assessments

**Section 106 Cultural Resource Assessment and Technical Evaluation of the McCoy and Garibaldi Laterals, Merced Irrigation District. Fremming, Parson & Pecchenino, Consulting Civil Engineers, Merced, CA. (2010).** Mr. Dice performed an archaeological survey and historic landscape assessment of two Laterals within the Merced Irrigation District in support of the District's plans to use federal funding (Bureau of Reclamation) to repair segments of the Laterals. Mr. Dice determined that the MID should be considered a potential Historic District for listing on the National Register. Modifications to the Laterals as a result of the undertaking will have No Adverse Effect to the potential Historic District that is the MID. Consultations with local Tribal Authorities took place.

**Three Historic Assessments of the Southside Park, the Del Paso Regional Park and the Chorley Park. City of Sacramento, California (2010).** Under contract with the City of Sacramento Parks and Recreation Department, Mr. Dice produced three technical studies in order to fulfill Section 106 requirements. The Department requested these studies because the Department requires Recreation Trails and Land and Water Conservation funding programs. Each park exhibited a landscape more than 50 years old, and certain older internal structures, that allowed each Park to be considered potentially eligible for the National Register at the local level of analysis. We determined that the Southside Park and the Del Paso Park are potentially eligible for the NR but that the specific projects would have no impact on their eligibility qualities. The Chorley Park was determined not significant. Consultations with local Tribal Authorities took place.

**Historic Building Evaluation of the San Gorgonio Inn, City of Banning, CA. (2010).** Mr. Dice evaluated a historic-era structure originally built in 1884 and rebuilt in 1930 for significance at the State (CEQA) level of analysis. The

City proposed to demolish the structure and the report supported an EIR written by Ernest Perea of Romo Planning Group Inc., Covina. Mr. Dice performed a historic background assessment and developed a thematic context with which the structure could be evaluated against. The results of this research showed that the building did not qualify for listed on the National or State Register, but that the location of the Inn was considered locally significant. This was not a popular decision, especially with Steve Lech, but the research showed that the results were justified. After reading the report, the City chose to attempt to preserve Googie-styled signage off-site.

**Historic Building Evaluation of the F&M Artesia Branch Bank, City of Long Beach, CA. (2009).** Mr. Dice evaluated a structure built in 1961 for significance at the State (CEQA) and City of Long Beach Historic Property level of analysis. The City had proposed to demolish the structure complex and the technical report supports an IS/MND written in City Format for the proponent, Jeffrey Tartaglino of Palm Desert Development. Mr. Dice performed a historic background assessment and developed a thematic context with which the structure could be evaluated against. Because the structure was found significant at the local level of analysis, the City required a photographic assay of the building: this was incorporated into the finished document.

**Historic Building Evaluation of the Premiere Lanes Bowling Alley, City of Santa Fe Springs, CA. (2009).** Mr. Dice evaluated a structure built in 1960-61 for significance at the State (CEQA) level of analysis. The City had proposed to demolish the structure complex and our technical report supported an EIR written by Sandra Bauer of Bauer Consulting Inc., Irvine. Mr. Dice performed a historic background assessment and developed a thematic context with which the structure could be evaluated against. The City will allow the removal of the building through demolition but save Googie-styled signage associated with the structure.

**Historic Building Survey, Washington Boulevard and Consolidated Redevelopment Projects, City of Santa Fe Springs, CA.** Mr. Dice conducted a historic building survey for two redevelopment project areas located in the City of Santa Fe Springs, County of Los Angeles. The Washington Boulevard Redevelopment project area is located in the City of Santa Fe Springs' side of Washington Boulevard, and is bisected by Sorensen Avenue. The purpose of the study was to identify those properties more than 45 years old that may be demolished during planned Redevelopment in the next 25 years. The Consolidated Redevelopment Project Area is located near Gateway Plaza at the intersection of Telegraph Road and Painter Avenue west of Carmenita Road. A program-level historic context was developed and existing properties preliminarily assessed against that historic context. The results showed that more 140 individual properties more than 45 years old were located in and near the Redevelopment project area. The evaluation of the historic context and existing properties will allow the City, for the first time, to recommend that the significance of old buildings be considered when undertaking redevelopment in the City limits.

**Historic Resource Assessment and Phase II Recommendation for the Alfa Leisure Property, City of Chino, CA.** This study was a CEQA and NEPA-compliant assessment of the old Chino Sugar Mill, including an historic building survey and photographic assay. The Mill building housed one of the first commercial ventures in the City, opening in the 1880's. The results of the study showed that the structure was a locally significant structure but could not be saved within a reasonable monetary expenditure as the structure was completely unstable from an earthquake standpoint. Mr. Dice recommended that a photographic assay and additional historic analysis be undertaken before the structure would be allowed to be demolished.

CORPORATE
RESUME

# Scott Crawford, MA

## Section Manager of Natural Resources

## Overview

- 18 Years Experience
- Master's degree, Biological Science – California State University, Fullerton
- Bachelor's degree, Environmental Biology – California State University, Northridge

**Scott Crawford, MA**, senior biologist, has over 18 years experience conducting herpetological, mammalian and avian surveys and ten years experience preparing jurisdictional delineation for regulatory permits. Scott's expertise includes conducting focused surveys for sensitive wildlife species including fairy shrimp, California gnatcatcher, Red-Legged Frog, Arroyo Toad, Least Bell's Vireo, Western Spadefoot, Western Pond Turtle and Burrowing Owl. He is also well versed in documenting biological resources and drainage systems using Geographic Information Systems.

## Related Experience

### Trails and Recreation Projects

**San Diego County Parks.** Conducted biodiversity baseline surveys to document all the flora and fauna on two potential county parks, each of which were over 700 acres. Wildlife surveys included pitfall traps for reptiles and insects, funnel traps for snakes, small mammal trapping through the use of Sherman live traps, remotely operated cameras to detect nocturnal wildlife, scent stations to track mammals, conducting avian and botanical surveys, and installing bat detection equipment to record bat calls for specie identification analysis.

**Wildlife Movement Corridor Study, Los Angeles and Orange Counties.** Conducted a year-long study of wildlife movement within the Tonner Canyon property in the Los Angeles and Orange Counties. Surveys included spot counts for birds, scent stations for tracks, and photo stations for active wildlife movement photographs. The survey was conducted for a 5-day period once a month for an entire year.

**Quail Lake Spring Surveys Project.** Conducted spring surveys for a proposed project with SEA #58 south of Quail Lake. Prepared the final Constraints analysis for submittal to the SEATAC for review and recommendation. Coordinated project design to reduce amount of potentially significant impacts. (2002-2005)

**Southwestern Pond Turtle Trapping/Telemetry, Los Angeles County Department of Public Works.** Assisted in trapping southwestern pond turtles in the San Gabriel water shed prior to the sluicing of Morris Dam. A total of twelve turtles were captured, processed, fitted with a radio telemetry transmitter, and relocated in the upper west fork of the San Gabriel River. Turtles were then monitored bi-monthly for movement and recaptured to determine health and status of each individual.

### Commercial and Industrial Projects

**Rose Hills Cemetery Biological Resources Assessment.** Conducted a biological resources assessment to document the existing conditions within the proposed expansion and maintenance areas that required site disturbance. Suitable gnatcatcher habitat and drainage feature were documented within the Project Site.

**J. Edwards Company Biological Resources Assessment, City of Corona.** Conducted a biological resources assessment for a 120-acre parcel within the sphere of influence of the City of Corona at the base of the Cleveland

National Forest. Suitable habitat was observed for California gnatcatcher. A single red-diamond rattlesnake, a California species of special concern, was identified onsite.

**California Gnatcatcher Focused Surveys, Citrus Valley Health Partners, City of Diamond Bar.** Conducted a focused survey for California Gnatcatchers for a proposed commercial development. Suitable habitat was observed and focused surveys were conducted. No Gnatcatchers were observed during the surveys.

### Energy Projects

**Lake Elsinore Advance Pump Storage (LEAPS), Lake Elsinore and Surrounding Areas.** Conducted biological resources assessment and focused species surveys for thirty-seven miles of proposed transmission lines for the LEAPS project near Lake Elsinore and surrounding areas. Surveys included general reconnaissance-level surveys as well as focused surveys for Quino checkerspot butterfly, California gnatcatcher, least bell's vireo, arroyo toad, red-legged frog, spotted owl, and sensitive plants. Also participated in informal consultation with USFWS, USFS, and CDFG.

### General Plan Updates

**General Plan Update Biological Resources Document, City of Perris.** Prepared the biological resources section, conducted a complete survey and evaluation of all property within the City limits.

**General Plan Update Biological Resources Document, City of Rancho Santa Margarita.** Prepared the biological resources section, conducted a complete survey and evaluation of all property within the City limits.

**Subarea 2 General Plan Biological Resources Document, City of Chino.** Assisted in the preparation of the biological resources section, conducted a complete vegetation map and jurisdictional delineation over the entire General Plan area.

### Residential and Mixed Use Projects

**Green Park Ranch Wetlands Delineation, City of Simi Valley.** Conducted a wetland delineation on a 1600-acre site in the City of Simi Valley. The survey was conducted to delineate the jurisdictional limits of United States Army Corps of Engineers waters of the U.S. and California Department of Fish and Game waters of the state. Assisted in preparing the Runkle Canyon Specific Plan and reviewed the EIR prepared by Impact Sciences. Participated in public hearings and coordination with City Staff to reduce environmental impacts.

## Professional Affiliations

- Association of Environmental Professionals
- Building Industry Associate (BIA)

## Research and Publications

**Masters Thesis, Social Behavior of the Zebra-tailed Lizard, California State University, Fullerton.** Was responsible for the creation of an independent thesis study. The study was done on the zebra-tailed lizard, which lives in a desert wash community. This study will help in the conservation of this lizard in the event of massive habitat destruction due to off-road vehicles.

CORPORATE
RESUME

# Thomas F. Holm, AICP

## Director, Environmental Services

## Overview

- 30 Years Experience
- Master's degree, Urban Planning – University of California, Los Angeles
- Bachelor's degree, Political Science – University of California, Irvine

**Thomas F. Holm, MURP, AICP**, is MBA's Director of Environmental Services. Tom offers more than 30 years of diverse planning and environmental experience on a variety of environmental, natural resource, and regulatory compliance projects. Since joining MBA in 1997, he has been actively involved in broad-based NEPA and CEQA-related projects throughout Southern and Central California including large master-planned communities, major public works and infrastructure, transportation corridors, water resources, and coastal projects. He oversees operations of the firm's Air Quality/Noise discipline group and provides quality control and assurance to major CEQA and NEPA efforts.

A former City Planning Commissioner and Transportation/Traffic Commissioner, he has also served as Legislative Liaison and Board Member of the Orange County Chapter of the American Planning Association, and Board member of the Natural History Foundation of Orange County.

## Related Experience

### Master Planning

**City of Chino "The Preserve" Master Plan Program, Chino, CA.** Served as project director for the City of Chino Sub-area 2 Master Plan program for 5,400 acres currently in the Chino Valley Dairy Preserve. The project includes a General Plan Amendment, Master Plan/Policy-Level Specific Plan, Program EIR, market, fiscal and financial studies, GIS applications, and support for annexation to the City. Significant influences include the Prado Dam high water inundation line, Chino Municipal Airport and various surrounding institutional uses. Significant issues include regional transportation linkages, ties to the rural heritage of Chino, sensitive habitats and recreational opportunities within the Prado Basin, agricultural lands conversion, dairy waste management and water quality, and financing major infrastructure.

**City of Chino Sub-Area 1 Sphere of Influence/ Annexation Program, Chino, CA.** Master Environmental Baseline Report and Opportunities and Constraints Studies for the City of Chino Sub-area 1 Sphere of Influence/Annexation Program. Managed preparation of these studies which included preparation of GIS data layers, public workshops and interagency coordination. The program involved proposed multiphase annexation and GPAs for 1,800 acres of dairy lands and recreational open space influenced by the Prado Dam high water inundation area and Chino Airport.

**Rio Mesa Area Plan and Program EIR, Madera County, CA.** Served as principal-in-charge for a 15,000-acre master planned community along the San Joaquin River in Madera County, California. The Plan included approximately 30,000 residential units, over 500 acres of Commercial/Industrial and Mixed-Use Core areas, and an overlay for a future University of California campus site. Over 30 percent of the site were proposed for retention in agriculture/open space. Issues included traffic and circulation, public services and utilities, water consumption, agricultural land conversion, growth and cumulative effects, air resources and biological resources.

**Aliso Viejo Greenbelt Management Program, Orange County, CA.** Member of original design team for the Aliso Viejo Planned Community and Greenbelt Management Program, leading to establishment of the Aliso/Wood Canyon Wilderness Park in South Orange County, California. Participated in all phases of concept design, plan preparation, greenbelt management studies, Feature Plan and Program EIR preparation, local coastal program development, urban runoff management plan to preserve Aliso Creek, and community theme/design studies. The Aliso Viejo Planned Community includes over 6,600 acres and is built out at a population of 60,000.

**Salvation Army Master Plan, City of Rancho Palos Verdes, CA.** Managed a Program EIR for the proposed Salvation Army 15-year Master Plan, encompassing a campus of 42 acres and proposed education/conference center in Los Angeles County. Specific issues included height and visual impacts of the proposed education/conference center, costal resources, traffic circulation, sensitive species, and cumulative effects on water supplies, fire services and air quality.

**Gunner Ranch Area Plan and Program EIR, Madera County, CA.** Prepared a tiered EIR for a Phase I Children's Hospital and long range buildout of a surrounding 1,300-acre mixed use commercial and residential center adjacent Highway 41 and the San Joaquin River in Southeast Madera County, California. The proposed hospital relocation and expansion was in response to a critical need for the expanded pediatric care services to meet current and projected Central Valley regional needs. The comprehensive EIR addressed agricultural land conversion, vernal pools and water resources, public services and utility extensions, growth and cumulative effects issues, and included extensive alternative analysis.

**Rich Haven Specific Plan EIR, City of Ontario, CA.** Currently managing preparation of this tiered EIR for up to 4,200 residential units and regional commercial center with mixed-use overlay within the New Model Colony, Ontario, CA.

**North Shore at Millerton Lake EIR, Madera County, CA.** Project director for tiered EIR for this 2,238-acre development in the North Fork Village area of the Rio Mesa Area Plan (RMAP). The specific plan includes 1,459 acres of residential (rural to high density), 160 acres of mixed-use and non-residential, 538 acres of open space, and 81 acres for public use area (i.e., parks and preserves). Based on the proposed densities, up to 2,966 dwelling units would be built. Issues include visual and drainage impacts of hillside development upon adjacent Lake Millerton State Recreational Area, and impacts on biological resources, traffic, air quality, and public services.

**Heritage Oaks Specific Plan, City of Calimesa, CA.** Directed preparation of specific plan and IS/MND for 54-unit country and equestrian estates project within environmentally sensitive oak woodlands and arroyos.

**Liberty Groves Specific Plan EIR, Madera County, CA.** Environmental Principal/Project Director for this 1,320-acre master planned community proposing over 7,000 residential units, mixed-use core, business park and open space/park system on agricultural lands in the southeastern portion of the County. Significant issues for resolution through the environmental review include transportation/traffic, water supply, agricultural land conversion, schools and extension of other services/utilities.

### Transportation

**Los Angeles International Airport Expansion Technical Review, County of Los Angeles, CA s.** Project manager and part of the technical review team in assisting to provide assessment and analyses regarding the adequacy of the draft EIS/EIR for the proposed expansion of the Los Angeles International Airport (LAX). The issues of concern include: capacity of other airports to meet demand, is the simulation model for capacity reasonable, thoroughness of traffic assessment and environmental justice, thoroughness of air quality assessment, thoroughness of noise assessment and environmental justice, equal assessment of impacts on unincorporated vs. incorporated areas.

**Harbor Boulevard SMART STREET Feasibility and Environmental Documentation Project, Orange County, CA.** Served as environmental manager for the Harbor Boulevard SMART STREET Feasibility and Environmental

Documentation project. Environmental documentation includes a Preliminary Environmental Assessment Report (PEAR) and CEQA/NEPA clearances for 7.7 miles of urban arterial improvements in the cities of Garden Grove, Anaheim, Santa Ana, and Fountain Valley. Project includes an extensive public participation and interagency coordination program.

**State Route 91 Improvements Study Environmental Assessment, Orange and Riverside Counties, CA.** Directed preparation of the EA along a 24-mile segment of this corridor through Orange and Riverside Counties. Primary alternatives involved the addition of multiple high occupancy vehicle (HOV) lanes and support facilities, such as park-and-ride lots, ramp metering and a Transportation Management Plan (TMP).

**Cook Street at Interstate 10 Interchange Environmental Assessment, City of Palm Desert, CA.** Prepared an expanded NEPA EA that evaluated the environmental effects of a new connection to I-10 at the planned northerly extension of Cook Street in the City of Palm Desert. The study of the proposed interchange was initiated at the request if the City of Palm Desert and the County of Riverside. Coordination and consultation with these agencies, as well as Caltrans, Districts 8 and 12 FHWA and USFWS was required.

**Eastern Transportation Corridor Route Location Study Master Environmental Baseline and EIR, Orange County, CA.** Served as project director on the Eastern Transportation Corridor Route Location Study Master Environmental Baseline and EIR in Orange County, California. Supervised baseline studies within a 23-square-mile area and EIR preparation for this new state route linking SR91 with I-5 in Orange County. The EIR was prepared as a Tier I EIS for subsequent NEPA clearance. An extensive public participation and technical advisory program were key elements of this study.

**Ford Road Realignment/Extension EIR; Newport Beach and Irvine, CA.** Directed preparation of an Alternatives Analysis and EIR for the extension/realignment of the Ford Road arterial between MacArthur Boulevard and the proposed San Joaquin Hills Transportation Corridor (SJHTC) in the cities of Newport Beach and Irvine. The Ford Road Extension and Realignment Project, is itself a mitigation for noise impacts and traffic loading onto streets anticipated from implementation of the corridor. Specific issues included disruption of natural habitat and biological resources, drainage, archeology, views, noise, air quality, and traffic impacts.

**Bastanchury Road Alignment/Extension EIR; Yorba Linda, CA.** Managed EIR preparation for the Bastanchury Road Alignment/Extension in Yorba Linda, California. Environmental issues included habitat loss, conflicts with oil field operations, landform alteration /views and noise impacts to established residential areas.

**Santa Monica Neighborhood Traffic Control Plan EIRs.** Prepared two separate Focused EIRs and alternatives analyses for roadway improvements, traffic diversion/closures, parking and traffic control measures in sectors of the City of Santa Monica, encompassing Santa Monica Airport, Santa Monica City College, businesses along Lincoln and Santa Monica Boulevards, and adjacent neighborhoods. The traffic component of the EIRs included analysis of over 60 intersections within an outside the City.

**Road Widening EIRs, Cities of Anaheim and Costa Mesa, CA.** Project director for Santa Ana Canyon Road Widening EIR in the City of Anaheim, California, and for the Victoria Street Widening EIR in the City of Costa Mesa, California. Both projects involved right-of-way acquisition, noise, air quality, and visual/aesthetic impacts. The Victoria Street project involved significant residential displacements and public participation.

**California High Speed Rail Project Third Party Technical Review, Southern and Northern California.** Serving as project manager to provide third party, technical review of the DEIR/S for the California High Speed Rail Project involved the preparation of a Master EIR/EIS document for a high-speed rail line that would extend from southern to northern California. The MBA team is providing an intensive review of the Program EIR/S and supporting documents during the draft environmental document (DED) public review period. The primary objective is scrutiny of all available environmental, socioeconomic and engineering data, analysis and conclusions provided in

the DED having a bearing upon the identification of a preferred or environmentally superior alternative alignment for the train through the project area.

### Residential Development

**Vista Verde and Alderwood Residential Project EIRs, Irvine, CA.** Managed two EIRs for single-family residential developments on former school sites proposed by William Lyon Homes and the Irvine Unified School District for conversion. The Vista Verde Project in University Park (PA 20) proposes to develop the former Vista Verde Elementary School site with up to 66 detached single-family homes on approximately 8.47 gross acres. The Alderwood Project in Woodbridge (PA 15) on the site of the former Alderwood Basics Plus Elementary School seeks approvals to develop the site with up to 48 detached single-family homes on approximately 6.2 gross acres. Significant issues for resolution through the EIR process with both of these infill projects included Land Use and Planning, Aesthetics/Views, Tree Removal, Neighborhood Traffic patterns and access, Noise/Vibration and Parks and Recreation.

**Park View at Town and Country Manor, Santa Ana, CA.** Managed an EIR for an 11-story high rise with subterranean parking to support 174 independent living units. The proposed Project will add to the number of independent living units within the existing campus for Town & Country Manor. The Project will be a regulated residential care facility for the elderly. The 8.3-acre site is located near Santa Ana's downtown business district east of Main Street and across from Santiago Park. A zone change to a Specific Development zoning designation and a General Plan Amendment to the District Center land use designation will be required.

**Metropolis Residential Project, Irvine, CA.** Supervised preparation of a project EIR and subsequent Addendum to the *Irvine Business Complex Vision Plan and Mixed Use Overlay Zoning Code Program EIR* for this proposed mid-rise residential project with ground floor commercial/retail within the Irvine Business Complex. The project includes 457 high-density residences with 89 density bonus units for very low-income households in an area originally containing high-rise offices as well as industrial and support businesses. Applications for a Conditional Use Permit for Transfer of Development Rights (TDR), Tentative Tract Map, and Park Plan were also under consideration. The site consisted of two parcels of land totaling 7.34 acres, to be subdivided for residential units, ancillary retail, supporting parking and recreational areas.

**Residential Housing EIR, Lake Arrowhead, CA**. Project manager to prepare an Environmental Impact Report (EIR) for a proposed residential housing development on a prominent ridgeline and forest hillside site in the community of Lake Arrowhead. The applicant seeks approval for development of fifty-eight single-family residential lots and four lettered common lots for roads and open space on 39.8 acres, with a Conditional Use Permit application to request approval for a 20-foot high, 500,000-gallon concrete water reservoir (partially buried in the ground). County determined that the following concerns needed to be addressed in the EIR: evaluation of alternative development concepts (PD), aesthetics, biological resources, grading/landform alteration, water resources, soil erosion, land use and planning; fire safety and mandatory findings of significance. Also of concern is the federally listed Southern Rubber Boa and issues regarding the preservation of this species and its forest habitat.

**Driftwood Estates EIR, Laguna Beach, CA.** Principal-in-charge for a 228-acre hillside subdivision EIR in the City of Laguna Beach. The required approvals for the project include a master tentative tract map, indirect access variance, and a Zoning Ordinance variance from the City of Laguna Beach and a coastal development permit from the California Coastal Commission. The primary issues addressed in the EIR included geology and soils, hydrology/water, biological resources, traffic and circulation, air quality, noise, and aesthetics. The project required extensive coordination with the City of Laguna Beach, California Coastal Commission, California Department of Fish and Game, County of Orange, and the public.

**Andalucia Mission Viejo.** Supervised preparation of an expanded Initial Study/Proposed MND for the Andalucia Apartment Project on a 7.12-acre site adjacent Oso Parkway and the Mission Viejo Country Club in the City of

Mission Viejo. The environmental documentation tiers from a prior GPA/ZC MND on multiple potential affordable housing sites in the City by addressing the environmental effects at this site at a project-level of environmental review. The Project proposes a maximum of 256 units in 3- and 4-story buildings, reflecting a density bonus for affordable units of up to 25% to the base zoning yield. A Streambed Alteration Agreement (SAA) for Oso Creek bank stabilization, restoration and enhancement activities within the project is also proposed.

**Los Alisos Townhomes, Mission Viejo, CA.** Supervised preparation of an Initial Study/MND for a 275-unit infill townhome project with affordable component. Project was adjacent existing residential and retirement neighborhoods, and required GPA/rezone and demolition of existing large-box commercial retail building.

**Capistrano Hillside Residential Project, Dana Point, CA.** Managed a Mitigated Negative Declaration for the development of a vacant 2.0-acre hillside infill parcel proposed to includesingle-family dwellings, a private access road, and several retaining walls as high as 20 feet on a steeply sloping lot, in the Capistrano Beach district of the City of Dana Point.

**Oak Street and Jefferson Street Townhomes, Torrance, CA.** Prepared Initial Studies and Mitigated Negative Declarations for multiple townhome residential projects on industrial Brownfields sites. Projects included senior and market-rate condominiums and townhomes. Issues included hazardous materials/soil contamination and remediation, traffic, noise and air quality, and land use transition and compatibility.

**Pine Valley Estates at Western Hills, Chino Hills, CA.** Project director for EIR evaluating a gated community of 98 single-family homes on 192 acres of hillside property overlooking Western Hills Country Club. Significant issues included traffic and circulation, construction phase air quality, visual impact, geologic hazards, hydrology/water quality, biological resources and wetlands.

**Stonefield Residential Development, Chino Hills, CA.** Supervised an Environmental Impact Report for a gated residential development (TTM 18393) on hillside property overlooking the Western Hills Country Club, including 26 single family residential lots on approximately 35 acres surrounded by residential and commercial-recreation development. Issues for analysis and resolution through the City's EIR process included impacts to jurisdictional waters and riparian vegetation; topography/landform alteration; views: vehicular access, safety and ingress/egress via Carbon Canyon Road (SR 142).

**Multiple Tentative Tract EIRs, Lancaster, CA.** Directed preparation of two EIRs for three proposed Tentative Tracts (TTMs 62757, 062332, 062604) totaling 1,500 single family units in the City of Lancaster, in the Antelope Valley. Royal Investors Group, LLC seeks approval of GPA, zone changes, and tentative maps to allow development of three sites encompassing 328 acres west of SR-14. Significant issues included urban form, infrastructure extensions (roads, water, sewer) and adequate water supplies.

### Commercial Projects

**Hanover-Katella Office Park, Anaheim, CA.** Managed preparation of the Hanover-Katella Office Park EIR in Anaheim, California. Near Anaheim Stadium, this development proposed 2.0 million square feet of new commercial office space in multiple high-rise buildings, with supporting commercial retail integrated in the project design.

**Arena/Events Center, Santa Ana, CA.** Managed preparation of an EIR for a 20,000-seat arena/events center near State Route 55 in Santa Ana, California. The project involved extensive interagency consultation and coordination, and analysis of locally and regionally significant effects-including transportation/circulation, air quality, noise, land use, displacement/relocation, services and utilities, and population and employment.

**Home Depot Retail Center Specific Plan, Town of Yucca Valley, CA.** Supervised preparation of specific plan for 378,000 square-foot Home Depot, with satellite retail buildings. Issues involved Joshua tree displacement and relocation, drainage and water quality, traffic, signage and lighting, and provisions for infrastructure.

**South Coast Home Furnishings Center, Costa Mesa, CA.** Supervised expanded Initial Study/MND for 312,500 square-foot commercial center on 21-acre parcel adjacent I-405. Project included full service furniture stores, show rooms, specialized home furnishings and food service facilities. Project required demolition of existing State Farm Insurance Headquarters and reflects a transition from business park uses to commercial retail uses. Significant issues included traffic and air quality.

**Seaport Village Expansion EIR, Unified Port District of San Diego.** Served as principal-in-charge of EIR addressing major commercial/tourist center, specialty shops, and restaurants. Significant issues resolved or mitigated through the EIR included traffic/circulation/access, parking, views, land use, and historic resources (adaptive reuse).

### Community Planning

**Kings County General Plan Elements.** Managed preparation of the Air Quality, Resource Conservation and Open Space Elements. To support the General Plan update, also prepared an *Agricultural Land Conversion study*. This study involved inventorying and mapping agricultural properties Countywide that are sensitive to growth effects or growth-inducing effects by virtue of proximity to pending or probable future development. The study establishes an economic framework for estimating potential agricultural value losses resulting from conversions, and recommends mitigation strategies to assure a sustainable agricultural base for the County.

**City of Fountain Valley General Plan Update.** Served as principal-in-charge for the City of Fountain Valley General Plan Update, including finalization of the General Plan and Master EIR. The process included extensive community participation in development of the seven mandated Plan Elements, plus optional Air Quality and Growth Management elements.

**City of Stanton General Plan Update.** Served as a group leader/facilitator in the innovative Community Policy Conference leading up to General Plan preparation. Assisted with preparation of the City of Stanton General Plan Update, including responsibility for the Economic Development, Redevelopment, Community Design, and Conservation and Parks, Recreation and Open Space elements, and Master EIR.

### Industrial Projects

**Highland Fairview Corporate Park, Moreno Valley, CA.** Managed preparation of a full scope project EIR for the multiphase buildout of a new 2.6 million square foot transportation logistics center ('Skechers') located along State Route 60 at Redlands Boulevard in Moreno Valley. Significant issues included traffic, air quality/health risk, global climate change/greenhouse gas emissions, noise, aesthetics/views, land use and planning, hazards, water resources (hydrology, water quality, water supply), and cumulative effects.

**Pacific Rail Metal Shredder EIR, City of Colton, CA.** Principal-in-charge for controversial scrap metal and auto body shredding facility EIR adjacent UPRR rail lines. Issues included hazardous materials, air quality/air toxics, noise, traffic, surface and groundwater hydrology, and water quality.

**Bellflower Oil Field EIR, City of Long Beach, CA.** Project manager for EIR evaluating impacts of crude oil and gas exploratory drilling and well production within an oil field adjacent LADWP's Haynes Steam Power Plant in Long Beach, and Rossmoor Leisure World community in Seal Beach.

CORPORATE
RESUME

# Vincent Mirabella, M.S.

**Senior Air Quality Scientist**

## Overview

- 30 Years Experience
- Master's degree, Meteorology – Pennsylvania State University
- Bachelor's degree, Meteorology – Florida State University

**Vince Mirabella** offers considerable experience consisting of diverse public and private-sector scientific experience, spanning over three decades. This includes the design and management of major air quality research projects dealing with air quality model development application and analysis and the preparation of technical studies in support of CEQA documents. These projects have included the first application of a comprehensive urban photochemical grid model to examine the impacts of power plant emissions in the South Coast Air Basin, characterization of emission dispersion in complex terrain, identify, quantification of visibility impairment in the Grand Canyon, and the application of various emission inventory and dispersion models in health risk and traffic impact assessments. His experience also involves development of emission inventories and meteorological data necessary to drive dispersion models, legislative review, regulatory peer review, CEQA compliance determinations, and expert testimony.

## Recent Project Experience

### Air Quality and Health Risk Studies in Support of CEQA Documents

**Emission Inventory Development.** Applies various emission estimation tools to derive criteria, toxic air contaminant, and greenhouse gas emissions for short-term construction and long-term operations for use in air dispersion models. These estimation tools include the CARB URBEMIS and EMFAC models, the SCAQMD CalEEMod model, and the USEPA AP42 methods. Sources of emissions include mobile source gasoline and diesel powered vehicles, standby emergency generators, gasoline dispensing stations, parking lots, dry cleaning establishments, restaurants, and rail lines. The types of projects requiring such information have included large warehouses, gas turbine peaker facilities, large industrial projects, mixed use residential-commercial, large retail outlets, and residential projects.

**Air Dispersion and Health Risk Model Applications.** Applies a wide variety of air quality models in developing assessments for both criteria pollutants and toxic air contaminants. Such models include the Industrial Source Complex Model, AERMOD Model, HARP air toxic model for health risk assessments, and the CALINE4 traffic intersection model. The results from these air dispersion models are then compared to the significance thresholds and ambient air quality standards established by various regulatory agencies to assess the significance of project impacts. Such applications involve a close relationship with the staffs of the regulatory agencies to insure that the applications are most appropriate to the specific project.

**CEQA Analyses.** Applies the results of the emission inventory and air dispersion model technical studies in determining compliance with the CEQA checklist for air quality and in particular the various significance threshold levels. Such compliance determinations require the Identification of potential mitigation measures to minimize project construction and operational emissions as part of the CEQA compliance process.

### Recent Projects

- 1 million + square-foot warehouse projects in Perris, Banning, Barstow, San Bernardino, Riverside, Chino, Manteca, and Moreno Valley, CA

- Big-box commercial retail centers in Bakersfield, Wildomar, Oakley, Paradise, Highland, Wasco, Rocklin, Fresno, Visalia, Selma, Yucaipa, Murrieta, Del Norte, and Clovis, CA
- Industrial projects in Colton, West Sacramento, Fresno, Volta, CA
- Mixed use residential and commercial projects in Riverside, San Jacinto, Rialto, Corona, CA
- Residential projects in Fontana, Big Bear, Redlands, San Bernardino, Orange, Martinez, CA

### Air Quality Model Development

**Windfield Modeling Techniques.** Developed a number of modeling techniques used to generate three-dimensional windfields that are used to drive photochemical airshed grid models and point source models in both urban and complex terrain mountain environments. These same wind models have been used to derive the optimum placement of wind energy systems in such areas as Palm Springs.

**Lagrangian Models.** Developed one of precursor point source photochemical lagrangian models used to quantify the impacts of NOx and ROG emissions from point sources on ozone and fine particulate matter concentrations in the atmosphere.

**Photochemical Airshed Application.** Coordinated the first urban photochemical airshed application to examine the impacts of emissions from power plants in the South Coast Air Basin on ambient ozone and $NO_2$ levels.

**Aerosol and Acid Rain Models.** Coordinated a number of basic research studies involving the development of aerosol and acid rain models and enhancing the accuracy of numerical techniques used in grid modeling.

**Nested Grid Models.** Developed one of the first "nested" grid models which allowed a detailed examination of individual large emission sources within the context of an urban grid scale model application Gaussian Dispersion Models. Developed several methods for applying Gaussian dispersion models in the siting of power plants in the western US

**City of Melbourne Urban Air Quality Study, Australia.** Was responsible for the on-site management of a multi-year million dollar urban air quality. The study involved the generation of a comprehensive multispecies emission inventory for the entire metropolitan area of three million people including point sources and area sources, the design of a comprehensive monitoring network to measure various air pollutant constituents across the metropolitan area, development of models for forecasting ozone levels in the metropolitan area, model applications to calculate three-dimensional wind fields for air quality model usage, conduct of a tracer study to document the impact of large emission source in the metropolitan area, development of a photochemical trajectory model to examine sources of pollution in the metropolitan area, report preparation and every day interfacing with the State of Victoria Environment Protection Agency.

**South Coast Air Basin Photochemical Airshed Model.** Application of a photochemical airshed model to the South Coast Air Basin to examine the effects of large scale changes in albedo (ie., "whitening" roofs to reduce the urban heat island and slow down the atmospheric chemistry of ozone)

### Air Quality Data Analysis

**Ozone, CO and NO2 Pattern Study.** One of the first studies to examine the weekday-weekend patterns of ozone, CO, and $NO_2$ in the South Coast Air Basin and attribute emission source contributions using emission and ambient pollutant concentration ratios

**Grand Canyon Visibility Impairment.** Performed a comprehensive evaluation of aerosol and visibility data to assess the relative influences of emission sources on the visibility impairment at the Grand Canyon

## Professional Publications and Presentations and Awards

**Management Achievement Award**: Southern California Edison
**Technology Transfer Achievement Award**: Electric Power Research Institute
**Relating Summer Ambient Particulate Sulfur, Sulfur Dioxide, and Light Scattering to Gaseous Tracer Emissions from the Mohave Power Project, Atmospheric Environment**. 2000 V.A. Mirabella and R. Farber

**Attribution of Particulate Sulfur in the Grand Canyon to a Specific Point Source Using Tracer Aerosol Gradient Interpretive Technique (TAGIT)** 1999 H. Kuhns, M. Green, M. Pitchford., L. Vasconcelos, W. White, and V.A. Mirabella.

**Tracking Regional Background in a Haze Attribution Experiment,** 1999 W. White., R. Farber, M. Green, E. Macias, V. Mirabella, M. Pitchford, and L. Vasconcelas, AWMA.

**Meteorological and Photochemical Modeling of Large-Scale Albedo Changes in the South Coast Air Basin,** 1998 K.T. Tran, and V.A. Mirabella, presented at the 1998 annual meeting of the Air and Waste Management Association, San Diego, CA.

**Relating Summer Ambient Particulate Sulfur, Sulfur Dioxide, and Light Scattering to Gaseous Tracer Emissions from the Mohave Power Project, Proceedings, Visual Air Quality, Aerosols & Global Radiation Balance,** 1997 V. Mirabella and R. Farber, AWMA

**Overview of the Varible-Grid Urban Airshed Model (UAM-V)** 1992 R. Morris, M. Yocke, T. Meyers and V. Mirabella, presented at the 85th annual meeting of the Air and Waste Management Association, Kansas City, Mo.

**Adaption of the ISCST Model for Local Fugitive PM10 Modeling With Application to the Riverside/Rubidoux Area,** 1992 I. Wang, R. Countess, T. Umenhofer, R. Farber, and V. Mirabella

**Development of a Nested Grid Urban Airshed Model and Application to Southern California,** 1991 R. Morris, T. Myers, S. Douglas, M. Yocke, and V. Mirabella, presented at the 84th annual meeting of the Air and Waste Management Association, Vancouver, B.C.

**Performance Evaluation of an Improved Urban Airshed Model,** 1991 K. Tran, and V. Mirabella, presented at the 84th annual meeting of the Air and Waste Management Association, Vancouver, B. C.

**A Comparison of Advection Schemes in Existing Photochemical Grid Models,** 1991 K. Tran and V. Mirabella, presented at the 84th annual meeting of the Air and Waste Management Association, Vancouver, B. C.

**Field Measurements Used to Evaluate Implementation Programs for Multiple Standard Violations,** 1990 R. Farber, V. Mirabella, J. Baas, A. Amerzcua, R. Countess, I. Wang, C. Pilinis, and J. Watson, presented at the 83rd annual meeting of the Air and Waste Management Association, Pittsburgh, Pa.

**Development of the SCAQS Emission Inventory,** 1989 Mirabella, V.A. Mirabella and M. Nazemi, presented at the 82nd annual meeting of the Air and Waste Management Association, Anaheim, Ca.

**An Analysis of Weekend/Weekday Ozone Differences in the South Coast Air Basin of California,** 1989 M. Zeldin, Y. Horie, and V. Mirabella, presented at the 82nd annual meeting of the Air and Waste Management Association, Anaheim, Ca.

**Methodologies for Applying the Urban Airshed Model to Determine the Effectiveness of Measures to Reduce Ozone Levels in the Los Angeles Basin,** 1989 M. Yocke, L. Mahoney, H. Hogo, and V. Mirabella, presented at the 82nd annual meeting of the Air and Waste Management Association, Anaheim, Ca.

**Snowpack and Flow Simulation for the Eastern Brook,** 1988 C. Chen, L. Gomez, and V. Mirabella, presented at the Sub-alpine Watershed Processes and Water Quality, Lake Tahoe, Nevada.

**Retention of Acid Anions by Sub-Alpine Meadows,** 1988 C. Chen, L. Gomez, L. Lund, and V. Mirabella, presented at the Sub-alpine Watershed Processes and Water Quality, Lake Tahoe, Nevada.

**Diffusion and Reaction of Pollutants in Stratus Clouds: Application to Nocturnal Acid Formation in Plumes,** 1985 C. Seigneur, P. Saxena, and V. A. Mirabella, Environmental Science Technical Volume 19, No. 9

**Development of an Acid Rain Trajectory Model,** 1984 C. Seigneur, P. Saxena and V. A. Mirabella, presented at the 77th annual meeting of the Air Pollution Control Association, San Francisco

**Estimating Future NO2 Levels in the Greater Los Angeles Area by Source Type Contribution,** 1982 Y. Horie, and V A. Mirabella,:; JAPCA, Vol. 32 No.3.

**"On A Clear Day",** 1982 V. A. Mirabella, Clean Air Journal of Australia and New Zealand, 2nd Quarter, 1982

**Emission Trade-Offs: One Way to Increase Generating Capacity,** 1979 M.D. High, and V.A. Mirabella, presented at the 41st annual meeting of the American Power Conference, Chicago, Illinois.

**Atmospheric Dispersion Modeling,** 1979 V. A. Mirabella, Discussion Paper, JAPCA, Vol 29, No. 9

**Experience in IMPACT Modeling of Complex Terrain,** 1979 R.C. Sklarew, and V.A. Mirabella, presented at the fourth symposium on Atmospheric Turbulence Diffusion and Air Pollution, Reno, Nevada.

**Recent Verification Studies with the SAI Urban Airshed Model in the South Coast Air Basin,** 1979 T.W. Tesche, C.S. Burton and V.A. Mirabella, presented at the fourth symposium on Atmospheric Turbulence Diffusion and Air Pollution, Reno, Nevada.

**Optimum Site Selection for Wind Energy Systems,** 1978 R.C. Sklarew, and V.A. Mirabella, presented at the Second International Conference on Alternative Energy Sources; Palm Springs, California.

**Point Source Modeling for Reactive Plumes in Complex Terrain,** 1977 J.C. Wilson, A.J. Fabrick, R.L. Sklarew, and V.A. Mirabella, presented at the 70th Annual Meeting of the APCA, Toronto, Canada.

**Comparison of Several Models with Ambient Sulfur Dioxide Measurements Near the Navajo Generating Station,** 1976 R.B. Lantz, G.F. Hoffnagle and V.A. Mirabella, presented at the 69th Annual APCA Meeting; Portland, Oregon.

**DEPICT: Detailed Examination of Plume Impact in Complex Terrain,** 1976 R.C. Sklarew, J.C. Wilson, S.J. Fabrick, and V.A. Mirabella, presented at Geothermal Environmental Seminar, Clear Lake, California.

**Model Simulation of a Tracer Study in Rough Terrain,** 1975 G.F.Hoffnagle, V.A. Mirabella, and T.L. Spangler, presented at the First Annual AMS Conference on Regional, and Mesoscale Modeling Analysis and Prediction in Las Vegas, Nevada

**Statistical Properties of Turbulence at the Kennedy Space Center for Aerospace Vehicle Design**, 1971, J. Dutton, H.A. Panofsky, D.C. Deavon, B.R. Kerman, and V.A. Mirabella, prepared for the National Aeronautics and Space Administration

**RICHARD BRADY** is the President of the Matrix Consulting Group. He is the leader of our management studies and law enforcement analytical practices. He has been a consultant to local governments for over thirty years. During that period, he has specialized in the analysis of police services, having conducted over 200 studies of law enforcement and criminal justice systems. Mr. Brady has managed and/or significantly participated in every law enforcement study cited as experience in this proposal. Mr. Brady has conducted law enforcement studies in the following jurisdictions:

| State | Illustrative Law Enforcement Management and Staffing Studies |
|---|---|
| **Alaska** | Anchorage |
| **Arizona** | Goodyear, Prescott Valley |
| **California** | Alameda County, Anaheim, Butte County, Citrus Heights, Contra Costa County, Galt, Gilroy, Glendale, Kern County, Los Angeles, Los Angeles County, Los Gatos, Lynwood, Monrovia, Napa, Ontario, Orange County, Palmdale, Palo Alto, Pittsburg, Poway, Roseville, San Jose, Pasadena, San Bernardino, San Bernardino County, San Mateo County, San Rafael, Santa Ana, Santa Barbara County, Santa Monica, Sonoma County, Santa Clara County, Sunnyvale |
| **Colorado** | Aurora |
| **Connecticut** | Stamford |
| **Florida** | Alachua County, Coral Gable, Jacksonville, Jupiter, North Miami Beach, Orange County, Pasco County, Pinellas County, Port Richey and Venice |
| **Georgia** | Americus, Augusta-Richmond County, Fulton County, Hall County, Chatham County |
| **Louisiana** | Alexandria |
| **Massachusetts** | Beverly, Boston, Lawrence, Milford, Mansfield, Burlington, Pelham, Watertown, Wayland, Westwood, Whitman |
| **Minnesota** | Anoka County |
| **Missouri** | Des Peres and Raymore |
| **Nebraska** | Omaha |
| **Nevada** | Las Vegas Metropolitan Police Service, Sparks and Reno |
| **New Hampshire** | Portsmouth |
| **New York** | Albany, Carthage, Endicott, Vestal and Briarcliff Manor |
| **North Carolina** | Burke County and Durham |
| **Michigan** | Alpena and Detroit |

| State | Illustrative Law Enforcement Management and Staffing Studies |
|---|---|
| **Ohio** | Fairborn |
| **Oregon** | Clackamas County and Grants Pass |
| **Pennsylvania** | York |
| **South Carolina** | Beaufort County, Charleston County, Hilton Head Island, Spartanburg County |
| **Tennessee** | Nashville-Davidson County and Knox County |
| **Texas** | Arlington, San Antonio, Terrell, El Paso, Grand Prairie and Southlake |
| **Utah** | Salt Lake City |
| **Vermont** | Brattleboro |
| **Virginia** | Richmond, Leesburg and Loudoun County |
| **Washington** | Spokane, Kirkland and Snohomish County |
| **Wisconsin** | Sun Prairie, Milwaukee, Dane County |

Mr. Brady has a BA from California State University, Hayward; and a doctorate from Oxford University, U.K.

# FRED GREVE, P.E.
## MESTRE GREVE ASSOCIATES
## DIVISION OF LANDRUM & BROWN, INC.
***MANAGING DIRECTOR***

Mr. Greve has over thirty years experience in all fields of noise assessment and air quality management. Principal experience includes noise and air quality assessment for traffic networks, airports, transportation corridors, and planned communities on the local, state, federal and industrial level. This experience includes legislative monitoring of air and noise regulations, development of ambient air monitoring facilities, and management of aircraft noise monitoring networks. Greenhouse house gas assessments and monitoring of climate change regulations are capabilities that have recently grown out of his work for over 30 years in the air management arena.

Mr. Greve, along with Vince Mestre, established Mestre Greve Associates in 1981. In March 2009, Mestre Greve Associates was purchased by Landrum & Brown, Inc. Landrum & Brown is an aviation planning firm headquartered in Cincinnati, Ohio. Mestre Greve Associates now operates as a division of Landrum & Brown.

**EXPERIENCE**

Principal in Charge for over 500 air quality studies ranging from small developments to master planned communities. Air quality studies have also included a wide range of transportation projects across the United States for roadways, freeways, and airports. Mr. Greve has been at the forefront in conducting greenhouse gas studies (over 15 studies completed as of January 2009) and monitoring greenhouse gas guidelines and regulations.

Principal in Charge of the development of Noise Elements for the Cities of Dana Point, Inglewood, Irvine, Beaumont, Stanton, Rialto, Fountain Valley, Solvang, and Palm Springs. Principal in Charge of updates to the Noise Elements for the Cities of Rancho Cucamonga, Santa Clarita, Glendale, Santee, and the County of Monterey.

Principal in charge, under subcontract with P & D Consultants/ TCB-AECOM and Caltrans, of the preparation of air quality analyses for the addition of the HOV Lane to the Northbound I-405 through the Sepulveda Pass (between I-10 and U.S.101) Project. This proposed highway improvement project required four build alternatives, and one no-build alternative to be analyzed. The initial report analyzed and identified the affected environment, permanent impacts, temporary impacts, cumulative impacts and mitigation measures of each of the five design alternatives along the freeway mainline, the HOV lanes, the freeway ramps, and up to five intersections in the immediate study area for the project. The consultant recently met and worked with Caltrans' Headquarters, FHWA and district staff, and with the appropriate regulatory agencies to resolve all conformity and air quality planning issues.

Principal in charge, under subcontract with P & D Consultants/ TCB-AECOM and Caltrans, of the preparation of air quality analyses for the realignment of the Southbound I-405 connections to the Northbound and Southbound US-101 Project. This proposed highway improvement project required four build alternatives, and one no-build alternative to be analyzed.

Principal in charge for the updated noise assessment based on new traffic data, prepared under contract to Barnard Dunkelberg & Company, for the proposed Northwest Arkansas Regional Airport Authority Intermodal Access Road in Benton County, Arkansas. The access to the new

airport is provided from the Highway 71 bypass on Highway 264 at the Lowell exit and from Bentonville on Highway 12.

Principal in charge, under contract with RBF Consulting, of the NEPA level noise study for the Caltrans Culver Drive Widening project. Mestre Greve Associates has previously conducted comprehensive noise studies for the Culver Drive Widening EIR project as a subconsultant to both RBF Consulting and Templeton Planning Group for the City of Irvine.

Principal in Charge of the technical noise and air quality assessment reports for the following recent EIR projects: Planning Areas 18 and 39 General Plan Amendment and Zone Change, City of Irvine; Perris Ridge Commerce Center, City of Perris; Ontario Gateway Specific Plan, City of Ontario, CA;

Principal in Charge of the noise and air quality assessments for the proposed Foothill Transportation Corridor-South EIS/SEIR project. This study includes the analysis of various alternatives proposed by the Transportation Corridor Agencies.

Principal in Charge of the Carbon Monoxide Monitoring Program for the San Joaquin Hills Transportation Corridor. This program included monitoring air quality levels at three sites near the corridor in order to determine if air quality standards had been exceeded, and to make recommendations as to potential remedial actions if necessary.

Project Manager for the air quality assessment for MCAS El Toro Community Reuse Plan and EIR, the noise assessments for CFB Greenwood Relocation for Base Closure and Realignment Study and CFB Trenton Relocation for Base Closure and Realignment Study, and the air quality assessment for the Master Plan Alternatives for EA Analysis for Jackson Hole Airport.

Project Manager for the noise assessments for the Toland Road Landfill Expansion Project, the Lancaster Landfill Expansion Project, and the North Orange County Landfill and Alternative Technologies Study.

Principal in charge for the noise and air assessments for the proposed Freeway Route 125 in San Diego County, Arizona Route 93, the San Joaquin Hills Transportation Corridor in Orange County, and numerous freeway interchange projects.

Project Manager of the noise assessment for the Orange County Sanitation District Groundwater Replenishment System project; Principal in charge of the noise assessments for the Encino Reservoir Water Quality Improvement Project, the Stone Canyon Water Quality Improvement Project, the Hollywood Water Quality Improvement Project for the Los Angeles Department of Water and Power.

Principal in charge of the air quality assessments for the Eastern Transportation Corridor, HOV Lane Additions to the Orange Freeway and the Riverside Freeway.

Principal in charge for the noise assessments for the Culver Drive Realignment and Widening in Irvine, the I-5/I-405 Freeway Confluence Zone in Orange County, the I-405 Freeway Design Alternatives Study, Route 178 in Bakersfield, Foothill Transportation Corridor, widening of Imperial Highway, and the Moulton Parkway Super Street in South Orange County.

Project Manager for many industrial noise projects including the Coyote Canyon Gas to Energy Plant, the Spadra Landfill Gas to Energy Plant, Anaheim Power Generation Plant, the

expansion of the San Clemente Wastewater Treatment Plant, and expansion of the SERRA Treatment Plant in Dana Point.

Project Manager for air quality assessments for regional planning efforts implemented by the City of Irvine and the planned communities of Aliso Viejo and Laguna Niguel. Projects included coordination with local Air Quality Management Plan (AQMP) efforts.

## EDUCATION

M.S., Environmental Engineering, 1975, University of California, Irvine
B.S., Civil and Environmental Engineering, 1973, UCI
B.S., Biological Science, 1973, University of California, Irvine

## PROFESSIONAL REGISTRATION

Registered Professional Engineer, 1981, Civil Engineering, California, No. C 31701
Certified Acoustical Consultant, County of Orange
LEED Green Associate
Member of Air and Water Management Association
Member of Engineers Without Borders
Registered Private Pilot

## PROFESSIONAL BACKGROUND

Entered the profession in 1973; co-founder of Mestre Greve Associates in 1978. His professional affiliations include membership in the Acoustical Society of America, the Air and Waste Management Association, the Air Pollution Control Association, the National Association of Noise Control Officials, and American Society of Civil Engineers. He is a frequent guest lecturer on air quality assessment techniques at the University of California, Irvine.

## PUBLICATIONS

*Air Quality Modeling as a Management Tool for Airports*, presented at the Airports Council International - Pacific Region in Vancouver, Canada, August 1995.

*Comparison of Noise Measurements along Arterial Roadways with the FHWA Highway Traffic Noise Prediction Model,* with Vincent Mestre, presented at the 1982 National Association of Noise Control Officials Conference.

*A Monitoring System for Long Term Aircraft Noise Measurements,* with Vincent Mestre, Sound and Vibration, February 1982.

*Carbon Monoxide Transport from Freeways: Evaluation of Major Models,* with G. S. Samuelsen, UCI Combustion Laboratory Report UCI-ARTR-78-6.

# MATTHEW B. JONES, P.E.

**MESTRE GREVE ASSOCIATES DIVISION OF LANDRUM AND BROWN – PROJECT MANAGER**
**COMMUNITY NOISE & AIR QUALITY SPECIALIST**

## EXPERIENCE

Mr. Jones joined Mestre Greve Associates in 1987. He has experience in all fields of noise assessment and air quality management. Work includes project management, software development, engineering analysis, report preparation, as well as noise and air quality monitoring. Mr. Jones has considerable noise and air quality modeling experience including FHWA's Traffic Noise Model (TNM), EPA's CALINE3, AERMOD and ISC3-ST dispersion models, FAA's Emissions and Dispersion Modeling System (EDMS), and SCAQMDs URBEMIS and CalEEMod. These services include noise and air quality assessments for EIR/EIS, highways, residential and commercial developments and airports. Mr. Jones is involved in the development of most of the in house computer software modeling programs and is well versed in all of the air quality and noise modeling programs used at Mestre Greve Associates. Representative project experience includes:

EIR noise and air quality assessments for many commercial and residential projects including:

Air Quality And Noise Assessments: Planning Areas 18, 33 (Lot 109), 34, and 39 General Plan Amendment and Zone Change, Irvine, CA; Diemer Water Filtration Plant, Yorba Linda, CA; 2000 Avenue of the Stars, Los Angeles, CA; Chandler Ranch Specific Plan, Paso Robles, CA; Santiago Hills II/East Orange General Plan, Orange; CA; Mission Hospital and Medical Center, Mission Viejo, CA; St. Jude's Hospital Expansion, Fullerton, CA;

Air Quality Assessments: Edom Hill Transfer Station Solid Waste Permit Revision Project, Palm Desert, CA.; Saddleback Medical Office Building, Laguna Hills, CA; The Crest, San Bernardino County, CA, Vista School District Family Literacy Center, Vista, CA.

Noise Assessments: Hoag Hospital, Newport Beach, CA; Northern Sphere Specific Plan, Irvine; CA; UCI Medical Center Long Range Development Plan, Orange, CA; Well No. 12, Huntington Beach, CA, SDG&E Moreno Compressor Station, Moreno Valley, CA;

Highway EIR noise and air quality assessments for: Aviation Boulevard Widening, Los Angeles County, CA, Foothill Transportation Corridor/Santa Margarita Parkway Interchange widening, Orange County; CA, San Joaquin Hills Transportation Corridor/ Interchange addition, Orange County; CA; Northwest Arkansas Airport Intermodal Access Road, AR; Eastern Transportation Corridor, Orange County.

Highway Noise Assessments and noise barrier design to satisfy FHWA and Caltrans requirements for: Kahului Airport Access Road, Kahului, Maui, HI, Foothill Transportation Corridor (SR-241) South Extension, South Orange County

# MATTHEW B. JONES, P.E.

**MESTRE GREVE ASSOCIATES DIVISION OF LANDRUM AND BROWN – PROJECT MANAGER**
**COMMUNITY NOISE & AIR QUALITY SPECIALIST**

Transportation Infrastructure Improvement Program (SOCTIIP), Orange County, CA; Antonio Parkway Widening, Rancho Mission Viejo, CA; State Street Extension, San Bernardino, CA; Jeffery Road Grade Separation, Irvine, CA.

Diesel Particulate Matter Health Risk Assessment for Home Depot at Highland & Arden Avenues, San Bernardino, CA; PA18, PA39, PA34, and PA33 Lot109 General Plan Amendments and Zone Change, City of Irvine, Eagle Rock Services Truck Repair Facility, San Bernardino County, CA; Perris Ridge Commerce Center, Riverside County, CA.

Preparation of the Noise Elements for the General Plans of the Cities of Santa Monica, Glendora, Highland, Stanton, and Dana Point.

Air quality modeling using the FAA's Airport Air Quality Modeling Program (EDMS) for Sonoma County Charles M. Schultz Airport Master Plan, the New Orleans International Airport Phase II EIS, New Orleans, Louisiana; Vancouver International Airport Air Quality Assessment, Vancouver, Canada; Boise Airport, Boise, Idaho.

Noise and vibration monitoring, data analysis and modeling in support of expert witness services for Margrave v. MTA claiming inverse condemnation due to operation of Gold Line LRT through South Pasadena, California.

Noise monitoring and data analysis for the Pilot Aircraft Noise Impact Assessment on the Grand Canyon and Volcano National Parks.

## EDUCATION

B.S. Engineering Physics, Acoustics Specialization, June 1994
University of California, San Diego, Summa Cum Laude

A.A. Liberal Arts with a Certificate in Recording Arts, 1992
Golden West College, Huntington Beach, CA

## DONALD HUBBARD, PE, AICP

Senior Planning Manager, Parsons Brinckerhoff, Inc.

**Years of Experience**

33 (6 with PB Americas; 27 years with others)

**Education**

Master of City and Regional Planning, Harvard University, 1985;
B.S., Engineering Science, Northwestern University, 1979

**Professional Affiliations**

American Planning Association; Institute of Transportation Engineers

**Professional Registrations**

Professional Engineer: Traffic, California, 2004 (TR-2260)
American Institute of Certified Planners: 2002 (018133)

**Key Qualifications**

Don Hubbard is a Senior Planning Manager with extensive experience in travel demand forecasting and traffic engineering. He currently heads the Transportation Planning section of Parsons Brinckerhoff's Sacramento office. Don specializes in improving the performance of traffic models to analyze real-world problems. For example, he helped develop the 4D's modeling technique used by the Sacramento Area Council of Governments (SACOG) for their award-winning Blueprint Project. Much of Don's work involves finding practical approaches to complex, high-profile traffic engineering problems.

**Recent Experience**

- Regional Traffic Mitigation Fee Study, Fresno, California. Don was Project Manager for the development of a new county-wide regional traffic mitigation fee for Fresno COG. This included performing the nexus study, providing policy-makers key information to guide them through a series of policy decisions, working through the administrative details including developing forms and an administrative manual, and drafting the necessary resolutions. The study was unusually challenging because of the need to fit the fee within the framework established in an ambiguously-worded ballot measure as well as the Mitigation Fee Act, and because of the political sensitivities inherent in establishing a new development fee during a downturn in the real estate market. PB's approach resulted in a fee that will raise enough funds to support critical projects while still getting the written support of the development community. PB is currently providing on-call support during implementation of the fee.
- Traffic and Revenue Study for the US-101 Corridor, Marin County, California. Don served as Project Manager for a study assessing the potential revenues and traffic impacts from adding HOT lanes to portions of US-101 or adding tolled lanes parallel to the facility. The project included developing scenarios covering various combinations of physical investments and policy choices, preparing traffic and revenue forecasts, preparing estimates of capital and operating costs, performing quality control checks, writing technical reports and training manuals, and managerial duties regarding the client and sub-consultants.
- World Logistics Center, Moreno Valley, California. Don currently heads the team performing the traffic impact assessment of what will be one of the largest logistics centers in the United States. The study includes forecasting the traffic that will be generated by tens of thousands of workers, analyzing the level of service for hundreds of intersections, determining the level of service on freeways affected by car and truck traffic, and preparing the traffic section of the EIR.
- Guam Military Relocation and Guam Road Network Project, Guam Territory, U.S. Don currently heads the team performing a variety of traffic studies related to the relocation of

several military facilities to the island of Guam. The studies include long-term planning to accommodate a large percentage increase in population, medium-term planning for prioritization and phasing, and short-term planning to mitigation traffic impacts during construction.

- MTC HOT Lanes Feasibility Study, Bay Area, California. Don served as Task Manager for conceptual design on this study to develop a region-wide HOV/HOT lanes network on the freeways in the Bay Area. Was responsible for developing several different conceptual designs for HOT/HOV lanes for use depending on the physical constraints of the site in question, for determining where in the network each design would be applied, and for developing the cost estimates used to determine the feasibility of the system. Also advised on phasing of network sections based on revenue potential, relative costs, state of preparation, and other criteria.
- Wine Country Travel Demand Model, California. Don was the Project Manager for the development of a regional travel demand model covering the Napa, Sonoma, Lake, and Mendocino Counties. The model makes use of existing data sources as well as new origin-destination and traffic surveys to help forecast inter-county travel in future study years. Was responsible for all aspects of the project, including devising the work plan for model development, overseeing work of mid-level and junior staff, performing quality control checks, writing technical reports and training manuals, and managerial duties regarding the client and sub-consultants.
- Congestion Pricing Operating Plan, Los Angeles, California. Don served as Task Manager for conceptual design on this study to convert existing HOV facilities on the I-10 and I-110 freeways in Los Angeles County into HOV/HOT lanes. Don was responsible for developing several different conceptual designs for HOT/HOV lanes for use depending on the physical constraints of the site in question and for developing the cost estimates used to determine the feasibility of the system.
- Sacramento State Tram Study, Sacramento, California. Don served as Project Manager for the feasibility study for a BRT system linking the campus of Sacramento State University to the regional light rail system. Don also served as task manager for the development of ridership forecasts. The forecasts utilized the six-county regional travel demand model in combination with smaller-scale models of parking space availability and comparative travel times between walking and the tram/walk combination. This was one of the first applications of SACOG's new activity-based model (SACSIM). He also preformed the analysis of the traffic impacts that the system may have on the portion of the route when the BRT is operating in mixed traffic on city streets.
- I-215 corridor Improvements, Las Vegas, Nevada. Don was responsible for the development of future forecasts along I-215 corridor between Las Vegas Boulevard and Windmill Lane. This work included devising the methodology for preparing forecasts to meet the needs of several different agencies, detecting and correcting errors in the new regional model, performing with- and with-out project model runs for four forecast years, and converting the model outputs into levels of service (LOS) forecasts by freeway section.

**Publications**

- "Planning a Regional Express Lane Network – Lessons from the Bay Area", presented at the TRB Transportation Planning Applications Conference, Reno, Nevada, May 2011
- "Making Travel Demand Models Sensitive to Smart Growth," published and presented at the ITE District 6 Annual Conference, Honolulu, Hawaii, June 2006.

## DEBRA J. MEIER, AICP

Senior Supervising Planner

**Years of Experience**
28

**Education**
B.S., Urban Planning, California State Polytechnic University, 1983; Associate of Science, Construction Trades Drafting, Sierra Community College, 1977
Additional Studies: Management Program, California State University, 1991

**Professional Affiliations**
American Institute of Certified Planners (AICP); American Planning Association (APA); Association of Environmental Professionals (AEP)

**Professional Registrations**
Certified Planner: AICP, 1995

**Key Qualifications**
Debra Meier is a senior urban planner and development industry professional with expertise in project management, land planning, environmental analysis and entitlement processes. As a former planning commissioner for the City of Highland, California, during the 10 years immediately following the city's incorporation, she was involved in the initial development of the city's general plan and development code. As a project manager for one of the nation's largest home builders, her responsibilities included completing the land use entitlement process (including all environmental and regulatory permitting), selecting project design consultants, managing consultant contracts and work products, preparing and managing project-specific budgets and schedules, selecting and managing land development contractors, and monitoring the land development construction schedule and budget. As a public-sector planner with the City of Rancho Cucamonga, Ms. Meier coordinated four concurrent annexation and development applications with the city's Sphere of Influence, each with separate project-sponsored environmental impact reports (EIRs) requiring close coordination with the County of San Bernardino and other local and state agencies. Her agency coordination work has included working with the California Department of Transportation (Caltrans), the California Department of Fish and Game, the U.S. Army Corps of Engineers (USACE), the U.S. Fish and Wildlife Service and the Santa Ana Regional Water Quality Control Board.

**Industrial Development**
- The Highlands Specific Plan, Moreno Valley, California: deputy project manager/EIR task manager. Prepared for the Highland Fairview Corporation, The Highlands Specific Plan is a proposed logistics/warehouse master plan for a building area of up to 40 million square feet (3.7 million square meters) covering over 2,600 acres (1,052 hectares) in the eastern portion of Moreno Valley. Parsons Brinckerhoff was responsible for preparing the draft specific plan and selected DEIR sections as well as an extensive traffic impact analysis.

**Highways**
- Needles Highway, San Bernardino County, California: project manager for the preparation of preliminary roadway design plans and environmental documents for the realignment of 15 miles (24 kilometers) of Needles Highway from I-40 in the city of Needles to the Nevada state line. The project scope includes preliminary roadway design and National Environmental Policy Act/California Environmental Quality Act (NEPA/CEQA) analysis within county, state, federal and tribal entities.

**Previous Experience**

Prior to joining Parsons Brinckerhoff, Ms. Meier participated on the following projects:

- Gresham Savage Nolan & Tilden, San Bernardino, California (2009-2011): entitlements manager for this law firm specializing in environmental, land use, natural resources management and real estate law. In addition to preparing applications and processing use permits, Ms. Meier supported the attorneys in the Land Use and Real Estate Practice Groups by providing land use research, including historical overview of development entitlements, analysis of easements and development agreements, and review of code requirements and entitlement procedures for city and county jurisdictions throughout California.

- Centex Homes – Inland Empire Division, Corona, California (2004-2009): project manager for one of the largest home builders in the nation with communities in 19 states. Ms. Meier's projects included:
  - The Cove, Highland, California: project manager for the entitlement process and land development for this tract of 132 homes in the East Highlands Ranch master planned community. The land development budget exceeded $8 million with $3.3 million allocated for grading to over-excavate and re-compact historic hydraulic fills. The project was completed and sold out in less than 3 years. In addition to completing the land use entitlement process—including all environmental and regulatory permitting—Ms. Meier selected project design consultants, managed consultant contracts and work activities, prepared budgets and schedules, selected and managed land development contractors, and monitored the budget and schedule.

  - Coyote Canyon, Fontana, California: project manager for the preparation of a specific plan. The project included six subdivision maps providing for the development of 650 homes, a 12-acre (4.8-hectare) city park and a 2-acre (0.8-hectare) parcel for the fire station. The $65 million land development budget included substantial storm drain and public infrastructure to support the new community. Construction began in 2005, and by February 2009, nearly 600 homes were occupied and four of the six subdivision maps had received final acceptance from the city and complete bond exoneration. The project required significant coordination with the San Bernardino Flood Control District, including property exchange, easements and developer construction of over $4 million of district infrastructure.

  - Orchard Park, Redlands, California: project manager for the land entitlement process and land development for this in-fill tract of 64 homes with a land development budget of over $7 million. The lots, in excess of 18,000 square feet (1,670 square meters), were developed with executive-style homes and were the first of the company's homes to be sold for more than $1 million. The project was developed and sold out over a period of 2 years.

  - Tuscany Hills, Lake Elsinore, California: project manager for the entitlement process regulatory permitting. The project, with an estimated land development budget exceeding $135 million, received entitlements from the City of Lake Elsinore for 807 lots, including a specific plan, development agreement and subdivision map. These entitlements were followed by permits and authorizations from the California Department of Fish and Game, the U.S. Fish and Wildlife Service and the Riverside County Multiple Species Habitat Conservation Plan. Ms. Meier negotiated with the Santa Ana Regional Water Quality Control Board to obtain the 401/404 certifications. She also held discussions with the city manager and city attorney to renegotiate the terms of the development agreement.

- City of Rancho Cucamonga, California (2002-2004): as associate planner and project manager, Ms. Meier coordinated four concurrent annexation and development applications with the city's Sphere of Influence and worked with the County of San Bernardino to strategically plan and develop a management plan for the expansion of the North Etiwanda Preserve. The annexation applications totaled nearly 1,000 acres (405 hectares) in the area adjacent to the preserve. The annexations entailed concurrent processing of development applications, review and management of all CEQA documents and consultant contracts and

coordination with the Local Agency Formation Commission (LAFCO) and other city/county agencies.

## JAMES J. IMBIORSKI, P.L.S

Senior Vice President/ Inland Empire Manager

**Years of Experience**
45 (<1 with PB; 33 with AE; 12 with others)

**Education**
San Bernardino Valley College, San Bernardino, California, 1964

**Professional Affiliation**
California Land Surveyors Association
California State University, San Bernardino – Science Advisory Committee
Chairman, Observatory Steering Committee
San Bernardino Unified School District, Advisory Committee for Dr. Herb Fisher
San Bernardino County, Sheriff's Reserves Special Bureau

**Professional Registration**
Land Surveyor, CA #4430 (1977); NV #11588; AZ #30356

**Key Qualifications**
Jim Imbiorski has 45 years of land surveying, construction and construction contract administration experience. He began his surveying career at California Department of Highways (Caltrans) and has provided surveys, mapping and Right-or-Way engineering services in support of Project Study Reports, Project Reports, Major Investment Studies, and final design on proposed highway improvement projects. Jim has served as field party chief, head of the survey department, project manager and principal-in charge. He is a licensed professional land surveyor with a broad background in surveying, including design, construction, cadastral and boundary surveys, mapping and records of survey. He has managed survey operations for design and construction on more than a hundred projects involving airports (landside and airside); access roads, state highways, water/sewer projects, buildings and facilities.

Jim has served in various functions supporting FAA funded airport improvement projects. Jim served as a Principal Oversight/ Project Manager for Taxiway "N" Westerly Extension, LAWA Master Plan at LA/ONT, and Perimeter Fence at VNY. As a sub-consultant to HNTB he provided the same services for the South Airfield Center Taxiway, and Southside Taxiway Design at LAX. Additionally, he has been Field Party Chief for design and construction at Palm Springs, Big Bear, Barstow-Daggett, Chino and Ontario International Airport. Since 1983, Jim has been Project Manager on airport improvement projects at Needles, Redlands, Apple Valley, Chino, Cable and San Bernardino International Airports. His knowledge and past working relationships with FAA Western Region staff is an asset to agencies in applying for and receiving grants.

**Relevant Experience**
**Highway/Roadway**

- Tippecanoe Avenue Widening, San Bernardino, California: principal-in-charge responsible for preparing plans, specifications and cost estimates for the construction of Tippecanoe Avenue from Harry Sheppard Boulevard to the Santa Ana River. The project bid in April 2007, has an anticipated budget of $5,000,000. Provided all surveys, mapping, legal description, hydrology and consultation with the FAA for this 6-lane project.
- District 08 "On-Call" Surveying Services, San Bernardino and Riverside County, California (Contract No. 08A0716): project manager and expert witness in support of CALTRANS. Provided various "On-Call" tasks for District 8. On-call task orders included preparation of Right-of-Way Maps, hardcopy and deeds for projects in San Bernardino and Riverside Counties, preparation of Resolutions of Necessity documents for Segments 10 and 11 of SR 30/210 (new freeway) in San Bernardino; preparation of relinquishment maps for SR30 along Highland; and 19th Street within the Cities of Upland, Rancho Cucamonga and Fontana;

preparation of miscellaneous court exhibits for condemnation actions within Segments 3 and 4 of SR 30/210; and preparation of Right-of-Way maps, hardcopy maps and deeds for Segments of SR 62 in Yucca Valley; and for SR 395 in Victorville.

- I-10/ Etiwanda Avenue Interchange, Fontana, California: project manager for design surveys, aerial mapping, Right-of-Way mapping, utility coordination and civil design for drainage, utility relocation and local streets for the reconfiguration of the existing interchange to bring it up to current requirements. All work was performed in metric to Caltrans Standards for PSR, PR & PS&E.
- Needles Highway Project, Needles, California: project manager for preparation of plans, specifications and Environmental Documents for the realignment of 15 miles of Needles Highway from Interstate 40 in the City of Needles to the Nevada State Line. The project scope includes civil design, Right-of-Way engineering, aerial mapping, and design and construction surveys. Provided GPS surveys to control color digital ortho-photo and aerial mapping for preliminary alignment studies and environmental processing. Color image plotting was also provided.
- State Route 60/ Moreno Beach Drive Project, Moreno Valley, California: project manager providing various survey and mapping support required for the re-construction of the State Route 60/ Moreno Beach Drive in Moreno Valley. Responsible for all survey control, design and tie-in surveys, utility location and mapping, Right-of-Way Land Net surveys, Right-of-Way mapping, legal descriptions and plats. Also prepared surveys, mapping, legal descriptions and plats for the lot line adjustment in the northeast quadrant of the interchange, working directly for the City of Moreno Valley.
- State Route 30 (SR-210) Segments 1, 2, 3, 4, 5, 7, 10 & 11, Los Angeles County Line to the City of San Bernardino: project manager and quality control to provide various survey and mapping support. This 26-mile project involves construction of a new six lane freeway from the Los Angeles County Line through the Cities of Upland, Rancho Cucamonga, Fontana and Rialto, to the I-215 in the City of San Bernardino. Responsible for all design, drainage, bridge, utility and soundwall surveys on Segments 1, 2, 3, 4, 5, 7, 10 and 11 used for the Project Study Report, Project Report and Final Plans. Working closely with Caltrans District 08 Right-of-Way and Survey Department, established a metric centerline. This alignment was used as control for all construction plans and Right-of-Way maps along the entire 26-mile route. All work products were delivered in accordance with Caltrans Survey and Drafting Manuals.
- City of Moreno Valley - Fiscal Year 2005/ 2006 Street Improvement Program (SIP) Capital Improvement Program (CIP) Moreno Valley, California: project oversight to provide engineering and surveying services for the City of Moreno Valley's Capital Improvement Program. Scope of work included surveys necessary for the design of improvements, legal description and plats, tie outs for all monuments (street and property), re-establish destroyed monuments and construction staking. Street projects included Maltby Ave. from Redlands Boulevard to Merwin Street; Campbell Avenue from Redlands Boulevard to Merwin Street; Hotchkiss Street from Campbell Avenue to South End; and Bencliff Avenue from Dracaea Avenue to South End.
- State Route 60, HOV Lanes, Riverside County, California: project manager for all design, drainage, utility bridge and sound wall surveys required for preparation of the Project Study Report, Project Report, and Final PS&E for 7.5 miles of HOV lanes, bridge structure replacements and improvements, and soundwalls. Working closely with Caltrans District 08 – Survey Department, established a metric centerline of improvements, converted existing Imperial Right-of-Way maps and photogrammetry to Metric 1:500 design scale hard copy maps and electronic files.

## STEPHANIE S. OSLICK, AICP

Environmental Manager
Professional Associate/Project Manager

**Years of Experience**
15 (6 with PB; 9 with others)

**Education**
M.S., Environmental Studies, California State University Fullerton, Fullerton, California, 1999;
B.S., Biological Sciences, University of Southern California, Los Angeles, California, 1992

**Professional Affiliations**
American Institute of Certified Planners (AICP), Certification Number 020593; American Planning Association (APA); Association of Environmental Professionals (AEP); Women's Transportation Seminar (WTS)

**Professional Registrations**
American Institute of Certified Planners (AICP), 2006

**Key Qualifications**
Stephanie Oslick is a supervising environmental planner with Parsons Brinckerhoff (PB), and has deep experience successfully managing the environmental planning process on a wide array of transportation-related projects. Ms. Oslick has been responsible for preparing environmental documents and reports to comply with National Environmental Policy Act (NEPA), California Environmental Policy Act (CEQA) and other environmental regulations, obtaining environmental permits and coordinating with local, state and federal officials. Her agency coordination work has included personnel from the Federal Highway Administration (FHWA), California Department of Transportation (Caltrans), Alaska Department of Transportation and Public Facilities, Arizona Department of Transportation (DOT), Colorado DOT, Kentucky Transportation Cabinet, Florida DOT, Maine DOT, Maryland State Highway Administration, New Hampshire DOT, New Jersey Department of Environmental Protection, Ohio DOT, Oregon DOT, Pennsylvania DOT, Texas DOT, Vermont Agency of Transportation, Washington DOT, Wisconsin DOT, Wyoming DOT, U.S. Department of the Army Corps of Engineers (usace), U.S. Fish and Wildlife Service, Regional Water Quality Control Board, California Department of Fish and Game and California Coastal Commission (CCC).

Over her seven years of experience while at Caltrans, Ms. Oslick functioned as a general environmental planner, district biologist, and District Liaison to the CCC for the Division of Environmental Planning. As the District Liaison to the CCC, she was the single point contact for all projects within the Coastal Zone to ensure compliance with the California Coastal Act regulations. She worked as environmental reviewer for encroachment permits and intergovernmental review for projects. Ms. Oslick was also a core member of the project development team to ensure the environmental and project milestones were reached with the schedule and budget. She authored, edited and peer-reviewed environmental documents and biological technical reports and prepared presentations and notices for public meetings.

**Project Management**
- National Cooperative Highway Research Program (NCHRP), Nationwide: task manager for NCHRP 25-25 Task Order research contract for the American Association of State Highway and Transportation Officials' (AASHTO) Standing Committee on the Environment. This required research into a host of topics such as environmental stewardship, air quality, and environmental compliance. Stephanie managed four tasks:
  - Task 37, "Effective Organizational Structures and Management Practices for Achieving Environmental Stewardship and Streamlining in Transportation Agencies"
  - Task 42, "Alternative Methods to Calculate PM2.5 and PM10 Emission Factors for Re-Entrained Road Dust on Transportation Projects"

- Task 46, “Compendium of Best Practices for Environmental Compliance and Stewardship at Transportation Maintenance Facilities”
- Task 52, “Informational Requirements for Jurisdictional Determinations to be Issued by the U.S. Army Corps of Engineers (USACE) Under the Clean Water Act (CWA)”

- County of San Diego On-Farm Composting and Manure Management Project, San Diego County, California: project manager responsible for client relationship and oversight of the whole project, including preparation of the Programmatic Negative Declaration, technical studies, the Best Management Practices Handbook, Permit Process Guide and the development of the On-Farm Composting and Manure Management permit program in coordination with the County Manure Management Committee. The County of San Diego, Department of Public Works Recycling Section proposed to amend the zoning ordinance to allow the transport of green waste from municipal landfills to agricultural facilities for composting.
- Center for Environmental Excellence by AASHTO: project manager for a contract requiring research into various environmental topics including center website development and maintenance, Programmatic Agreement Library (PAL) and NEPA Practitioner Guides.
- AASHTO Center for Environmental Excellence: research investigator for this AASHTO Center for Environmental Excellence partnership with PB to create a PAL for a centralized, organized and accessible “one-stop-shop” for programmatic agreements. These agreements have been developed over the years by various states’ departments of transportation and/or the FHWA in partnership with resource agencies to streamline compliance with federal environmental laws (e.g., the National Environmental Policy Act - Categorical Exclusion, the Endangered Species Act and the National Historic Preservation Act). The database provides examples of executed programmatic agreements, summarizes agreement information, links to the full agreement and allows practitioners to research agreements that meet specific requirements. Programmatic agreements have been included from the following five topic areas: NEPA Categorical Exclusions, Section 7 of the Endangered Species Act, Section 106 of the National Historic Preservation Act, Section 4(f) of the Department of Transportation Act and land management-related agreements. Each agreement presented has been surveyed by an agency representative to provide in-depth information on its development and use. This project was honored as a finalist for the PB Project of the Year 2006 and was a co-author with the client, AASHTO, on a poster showcasing the project at the 2007 Women in Transportation Seminar Conference.

**Regulatory/Public Agency Coordination**

- I-15 La Mesa/Nisqualli Interchange, Victorville, California: environmental task manager for a proposed new local interchange on I-15 in the City of Victorville at La Mesa Road and Nisqualli Road. This fully directional interchange includes a new bridge overcrossing, new freeway ramps, and local street realignments. The project involved the preparation of a Project Report, an Initial Study/Environmental Assessment (IS/EA) leading to a Negative Declaration/Finding of No Significant Impact (ND/FONSI), and final design plans, specifications and estimates (PS&E). She also prepared and obtained approval for the Revalidation, per Caltrans standards. She is also managing the permitting process for impacts to the Mohave Ground Squirrel (Incidental Take Permit from the California Department of Fish and Game) and non-wetland Waters of the United States and State (404 Individual Permit from the Army Corps of Engineers, 401 Certification from the Regional Water Quality Control Board, and 1602 Streambed Alteration Agreement from the California Department of Fish and Game). As part of the alternatives analysis associated with the 404 Individual Permit, she worked with the engineers to do minor engineering modifications that resulted in a reduction of impacts to federal jurisdictional areas by 78%. Ms. Oslick was a co-author on the USACE-approved Habitat Mitigation and Monitoring Plan. She is also managing the purchase of mitigation land

associated with impacts to MGS and the enhancement and preservation of land associated with impacts to waters.

- Caltrans District 8 Value Analysis, San Bernardino, California: value analysis team member who provided environmental analysis expertise on multiple major projects exceeding $25 million. She participated in the workshops for value analysis and risk management for projects within San Bernardino and Riverside counties. The scope of the projects ranged from highway widening, bridge replacements and operational improvements to new interchanges.
- SR 60- Nason Street, Moreno Valley, California: environmental task manager for the approval of the environmental document revalidation (per Caltrans requirements), coordination and approval of permits (404 Nationwide Permit, 401 Certification and 1602 Agreement and Amendment) in-lieu fee transfer to satisfy mitigation requirements. She also proposed to create a mitigation bank with Caltrans to satisfy mitigation requirements and create a "win-win" situation for the City of Moreno Valley and Caltrans. The proposed interchange project would impact several drainages in the local area.

**Environmental Planning (Highway and Road)**

- SR 91 Corridor Improvements Project, Riverside and Orange Counties, California: the SR-91 PR/ED involves preliminary engineering for preparation of a Caltrans project report and an environmental document for extension of the existing 91 toll lanes. This project is a major element of Riverside County Transportation Commission's (RCTC) 10-year construction program with an estimated construction cost of $1.3 billion and is a high priority project within the region. The project includes the addition of one general purpose lane and two toll lanes in each direction on SR 91 from SR 241 to Pierce Street for approximately 12 miles (19 kilometers) and widening of existing structures and realignment and reconstruction of nine local interchanges and two system interchanges within the project limits. The project will also study direct connectors to link I-15 to the toll lanes and extend this connection 1 mile (1.6 kilometers) north and 5 miles (8 kilometers) south along I-15. She performed QA/QC on subconsultant-prepared Section 4(f) Evaluation.
- City of Needles Street Widening and Corridor Improvement Project, City of Needles, San Bernardino County California and the City of Mohave Valley, Mohave County, Arizona: environmental task manager for the preparation of preliminary environmental studies (PES) and environmental document (Initial Study/Environmental Assessment). This project includes various street intersection improvements, widening of Harbor Avenue, North K Street, West Broadway, J Street and Needles Highway as well as modifying the Colorado River Bridge deck to accommodate an overhang sidewalk (cantilever) on the west side and to re-stripe the deck to four lanes.
- Fontana Program Management, Fontana, California: PB provided program management services for the Robert W. Weddle Capital Improvement Program Projects to meet the city's most critical infrastructure improvement needs. The program was created to design and construct much needed storm drains and sewer mainline projects, major arterial roadway widening and reconstruction projects, freeway interchange reconstruction and new construction projects and grade separation construction projects. She assisted with coordination and acted as a third-party reviewer of environmental documents and technical studies prepared by environmental consultants, for the I-10/Cypress OC and the I-10/Citrus Interchange projects.
