The Site has various unmarked manholes that are associated with sewer mains associated with the northwest adjacent wastewater treatment facility. Strong sewage odors were detected in the immediate vicinity of these manholes. No records of municipal water/sewer connections were listed for the Site address. The remainder of the Site consists of areas identified by parcel numbers which the City's Municipal Water/Sewer Department was not able to search.

Unidentified Substance Containers

Various old, small, empty containers that may have contained petroleum products, such as motor oil, were observed in trash piles located at the western portion of the property line.

PCB Equipment

Pole-mounted transformers were located around the perimeter of the Site. The transformers were not labeled regarding their PCB content. No staining on the transformers or the ground around the poles was observed.

Stained Soil or Pavement

The pump located in the southwestern portion of the Site is mounted on a cement slab that is stained with oil.

Solid Waste

Solid waste was observed throughout the Site, primarily in the southwest portion of the property. This waste includes agricultural wastes, old tires, used clothing, empty containers, and agricultural waste, including the remnants of old greenhouses.

Wells

The EDR report confirmed the location of a water well on Site located on the southwest portion of the Site in the same location of the well and pump observed during the Site visit..

Septic Systems

According to Phase I ESA reports prepared in 2006, it is possible that two septic tanks associated with the former residence located at the eastern Site boundary may remain. These tanks may be discovered during Site grading and should be removed in accordance with applicable regulations.

Other

According to the City of Redlands Municipal Water and Sewer Department, records indicate that the portion of the Site located at 9092 Alabama Street, Redlands, California contains 2-inch non-potable water lines most likely used for fire department and irrigation use. No records of municipal water or sewer connections were listed for the address.

5.6 INTERIOR OBSERVATIONS

The property is an approximately 55-acre vacant tract with no structures. Therefore, no interior observations were made.

6.0 INTERVIEWS

EI interviewed the following people as part of this assessment.

6.1 INTERVIEW WITH OWNER'S Representative

EI conducted an interview with Mr. Tim Howard, the owner's representative, to obtain information regarding current Site use and history. Mr. Howard confirmed that the owners of the parcels comprising the Site are:

- Parcels 0242-041035, 0292-041-42, 0292-041-46 are owned by Newcastle Associates;
- Parcel 0292-041-45 is owned by Oakmont Palmetto,LLC; and
- Parcel 0292-041043 is owned by Oakmont Alabama, LLC.

He also identified past owners of the parcels as the City of Redlands (Parcel 0242-041-35), Teunissen (Parcels 0292-041-43 and 0292-042-42) and Ramirez (Parcels 0292-041-46 and 0292-041-45).

Mr. Howard said he believed that the Site had always been used for citrus orchards, which were planted in the 1920s, and removed in 2003.

During the tree removal in 2003, Mr. Howard reported that no USTs were found on Site. Mr. Howard mentioned that a significant number of trees were removed with the roots, and opined that these activities would have shown any remaining USTs. He also reported that one UST was removed from the Alabama Teunissen property.

Mr. Howard confirmed that the concrete structures EI observed on Site are remnants of valve boxes used to control the irrigation systems historically used on Site.

Mr. Howard was unaware of bee hivees on the Site. He suspected that they may be operated by the small agricultural operation to the west.

According to Mr. Howard, there is one well located on Palmetto Avenue that may have been associated with testing activities for the adjacent sewage treatment plant. Manholes on the Site are used for servicing the sewer lines.

Mr. Howard was not aware of any releases on the Site or in its vicinity. Historically, pesticides for used in the citrus orchard were stored and mixed on the west side of the Site previously owned by Tuenissen. Mr. Howard reported that soil testing for pesticides was completed on the west side of the Site and findings were negative for all test samples.

6.2 INTERVIEW WITH KEY SITE MANAGER

A Key Site Manager was not identified; therefore, no interview was conducted.

6.3 INTERVIEW WITH OCCUPANTS

The Site is currently vacant; therefore, no occupants were interviewed.

6.4 INTERVIEWS WITH LOCAL AGENCIES

Information from interviews with local agency officials is presented in Section 4.1.1.

6.5 INTERVIEWS WITH OTHERS

At the Client's request, EI did not interview any other persons as part of this assessment.

7.0 FINDINGS AND OPINION

The findings of this assessment, and EI's opinion regarding their potential impact on the Site, are summarized below.

7.1 HISTORICAL OR CURRENT *RECOGNIZED ENVIRONMENTAL CONDITIONS*

No visible or physical evidence of a current or historical release of hazardous substances or petroleum products at the Site was observed during EI's reconnaissance of the Site. The Site is not included on any of the Federal regulatory databases reviewed. However, a portion of the Site previously owned by Teunissen appears on the State underground storage tank (UST) list. A review of prior Phase I ESA reports completed for the Site in 2006 indicate that the UST was removed in 2001 and a "no further action" letter was issued by the San Bernardino County Fire Department, Hazardous Materials Division (HMD) on March 16, 2001. No historic or current *recognized environmental conditions* are associated with the current or former use of the Site.

The City of Redlands historically operated the California Street Landfill at 1950 Nevada Avenue, southwest adjacent and downgradient of the Site. This facility is listed on the State leaking underground storage tank (LUST) database with a case status of "closed". This listing is a *historical recognized environmental condition* in connection with the Site.

Norton Air Force Base, located approximately 0.25 miles north and west of the Site, appears on the Federal National Priorities List (NPL) and is now closed. The listing is due to regional groundwater contamination by volatile organic compounds associated with historical operations at the base. This listing is a *historical recognized environmental condition* in connection with the Site.

7.2 *DE MINIMIS* CONDITIONS

EI observed concrete staining beneath the well pump located on the southwest side of the Site. This staining is a *de minimis* condition and is not expected to affect the environmental integrity of the Site.

7.3 OPINION

Based on the findings of this assessment, it is EI's opinion that no historic or current *recognized environmental conditions* exist on Site. However, the presence of a regional volatile organic compound groundwater plume from Norton Air Force Base has the potential to affect groundwater beneath the Site.

7.4 DATA GAPS

No data gaps were identified during this assessment which would affect the Environmental Professional's ability to identify recognized environmental conditions in connection with the Site.

7.5 DEVIATIONS

There were no deviations from the ASTM standard during this assessment.

7.6 ADDITIONAL SERVICES

No additional services were authorized for this assessment.

8.0 CONCLUSIONS

The EI Group, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05, of the approximately 55-acre vacant tract of land Site at the northwest corner of the intersection of Palmetto Avenue and Alabama Street in Redlands, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in **Section 7.0** of this report.

This assessment has revealed no readily visible or physical evidence of current *recognized environmental conditions* in connection with the Site.

This assessment has identified two *historical recognized environmental conditions* in connection with the Site, as follows.

- The City of Redlands historically operated the California Street Landfill at 1950 Nevada Avenue, southwest adjacent and downgradient of the Site. This facility is listed on the State leaking underground storage tank (LUST) database with a case status of "closed". This listing is a *historical recognized environmental condition* in connection with the Site.

- Norton Air Force Base, located approximately 0.25 miles north and west of the Site, appears on the Federal National Priorities List (NPL) and is now closed. The listing is due to regional groundwater contamination by volatile organic compounds associated with historical operations at the base. This listing is a *historical recognized environmental condition* in connection with the Site.

In addition, EI identified the following *de minimis* condition in connection with the Site.

- EI observed concrete staining beneath the well pump located on the southwest side of the Site. This staining is a *de minimis* condition and is not expected to affect the environmental integrity of the Site.

RESUMES

Larry G. Michel

SENIOR ENVIRONMENTAL SCIENTIST
DIRECTOR, TEXAS OPERATIONS

Professional Summary

Education & Training
B.S., Biology, Southwest Texas State University
M.S., Evolutionary Ecology, Angelo State University

Mr. Michel is EI's Director of Texas Operations and Senior Environmental Scientist for the Dallas, Texas, Branch of The EI Group. His career accomplishments include successful client development of and Senior Consultant to Fortune 100 and 500 Companies with experience on projects driven by CERCLA, RCRA, CWAA and TCEQ regulations. He is a seasoned Environmental Professional with over 30 years professional experience in Texas and the United States on projects related to: ASTM E 1527 Phase I ESAs; Phase II subsurface assessments; Environmental Impact Statements; wetland assessment and permitting; asbestos assessment and abatement; mold assessment and abatement; ASTM E 2018 Property Condition Assessments; underground/aboveground storage tank assessment/remediation; Spill Prevention Control and Countermeasure (SPCC) Plans; and, Third Party project review.

SPECIFIC PROJECT EXPERIENCE

AMERICAN AIRLINES

National Project Manager – Comprehensive Regulatory Compliance

Sole author of the successful proposal and National Program Manager for a comprehensive program of regulatory compliance for American Airlines. This national project involved assessment and remediation of above and underground storage tanks, large fuel depots/systems, SARA Title III reporting and asbestos surveys and abatement oversight at 22 of the nation's largest airports.

AUTONATION, INC., LEGAL DEPARTMENT

National Project Manager – Environmental Assessment, Remediation and Regulatory Compliance

Primary Client Liaison and Senior Project Manager for outside counsel to AutoNation, Inc., and Republic Services, Inc. Phase I Due Diligence Assessments, Phase II Site Investigations, UST removals, hydraulic lift assessments/removals, SPCC Plans, and wetlands assessments at automobile dealerships, waste transfer stations and municipal solid waste landfills.

J.C. PENNEY CORPORATION, INC.

National Project Manager– Underground Storage Tank Compliance

National Coordinator of a program for J.C. Penney Company which involved investigation and remediation of former tire, battery and accessory (TBA) facilities. Areas of environmental concern included USTs, used battery storage, waste oil tanks and hydraulic lifts.

J.C. PENNEY CORPORATION, INC.

National Program Manager – Asbestos Assessment and Abatement

National Program Manager for JC Penney Corporation, Inc.'s national program of asbestos assessment and abatement at over 400 retail stores in 9 States.

HOME DEPOT USA, INC.

National Project Manager – Wetlands Assessment and Permitting

Provided oversight and regulatory agency liaison for Home Depot USA's development of wetlands in Texas.

CARDINAL CAPITAL PARTNERS, INC.

National Program Coordinator – Comprehensive Environmental Due Diligence

Program Coordinator of independent, third party reviews of Phase I and II Environmental Site Assessments for Cardinal Capital Partners' sale-lease back transactions at over 400 sites nationally and internationally. Value of these transactions ranged from less than 1 million to 1.1 billion dollars.

VANGUARD CAR RENTAL USA, INC.

National Client Liaison – Environmental Assessment and Remediation

National Client Liaison for outside counsel to Vanguard Car Rental USA, Inc. (formerly Alamo and National Rent-A-Car) for projects involving: underground storage tank assessment, remediation, removal and closure; mold assessment and remediation; and Phase I Environmental Site Assessments.

STAUBACH RETAIL SERVICES

Client Manager – Environmental Due Diligence

Client Manager for Staubach Retail Services for projects including Phase I Environmental Site Assessments, asbestos surveys and underground storage tank assessment/remediation.

AEROSPACE VEHICLE PARTS MANUFACTURER

Project Manager – Site Assessment and Comprehensive Regulatory Compliance

Coordinated comprehensive program of surface and subsurface site investigation, regulatory agency negotiation, air quality monitoring and permitting and environmental regulatory compliance for an aerospace vehicle parts manufacturing facility in northwest Texas. Primary facility operations were chemical milling with strong acids or bases, chrome plating, anodizing and laser etching. Contaminants of concern included strong acids, metals in solution (e.g., chrome, nickel, etc) and phosgene gas (nerve agent).

CERAMIC TILE PLANT

Project Manager – Site Assessment, Remediation and Closure

Directed the site investigation, remediation and partial on-site closure of a ceramic tile facility in northeast Texas. Primary focus was lead (Pb) contaminated tile glazes in waste tile piles, their impact on a nearby intermittent steam, shallow groundwater and adjacent landowners/properties.

ROCKWELL INTERNATIONAL CORPORATION

National Program Manager – Environmental Assessment and Remediation

Program Manager and Lead Consultant for assessment and/or remediation of Rockwell International Corporation facilities in the United States, Puerto Rico and Mexico.

USEPA REGION VI

Team Leader – Field Investigation Team (FIT)

Team Leader for investigation and reporting of hazardous waste sites in Texas, New Mexico, Oklahoma, and Louisiana under RCRA and CERCLA as contractor to USEPA, Region VI.

PHILLIPS URANIUM CORPORATION

Environmental Analyst – Environmental Assessment and Monitoring

Conducted baseline assessment and monitoring programs for air, surface water, groundwater and radiological parameters in support of applications for State and Federal permits required to operate a deep subsurface uranium mine for the Energy and Minerals Division of Phillips Petroleum Company near Grants,
New Mexico. Authored reclamation plans for surface biota disturbed or destroyed by exploration activities. Prepared SPCC plans for entire mining support facilities.

Project Manager – Environmental Due Diligence
Coordinated the preliminary site assessment of commercial/industrial real estate properties at over 300 sites in Texas and the United States.

Program Manager – Asbestos Assessment
Program Manager for asbestos surveys of 100 Bank of America sites on behalf of a national property management firm.

Susan L. Mazzarella, LEED AP

Regional Sales Manager / Principal Consultant

Summary of Experience

Ms. Mazzarella has over 15 years of experience in the environmental, health, safety and sustainability (EHS&S) field, including sustainable building assessments and planning, compliance auditing and management, EHS management systems implementation, sustainability, on-site support services, regulatory program review, preparation, and implementation, and environmental site assessments. While working at EORM, she has focused on developing and implementing proactive EHS&S programs, analyzing regulatory requirements to achieve compliance in an efficient and cost-effective manner, and utilizing creative methods to promote and institute EHS&S policies and programs.

Professional Certifications and Memberships

Certificate in Environmental Auditing — University of California, Irvine

Paralegal Certificate in Environmental, Real Estate and Corporate Law — University of San Diego

Certificate 44843 — ISO 14001 Lead Auditor Certified (ANSI/RAB)

LEED Accredited Professional

Education

BA Business Administrative Studies — University of California, Riverside

Professional Experience

Environmental and Occupational Risk Management, Inc.

Regional Sales Manager — **October 2008 to Present**

Regional Manager — **January 2007 to December 2008**

Principal Consultant — **April 2005 to January 2007**

Senior EHS Consultant — **December 2000 to April 2005**

Ms. Mazzarella manages and provides outsource and project support to a variety of clients. Selected project experience includes:

- Conducting gap assessments, leading internal audits and developing environmental management systems programs (e.g., aspects identification and ranking procedure), as well as related procedures development (e.g. chemical and waste management) for customers striving for ISO 14001, OHSAS 18001, and RC 14001 certification.
- Leading multi-site, multi-disciplinary EHS compliance assessments and facility inspections to successfully assist clients in prioritization and management of compliance activities.
- Supporting sustainable building initiatives, including Leadership in Energy and Environmental Design (LEED) and High Performance Sustainable Buildings (HPSB).
- Developing strategies for achieving sustainability goals.
- Preparing and reviewing various environmental regulatory documents such as Hazardous Materials Management Plans, Biennial Reports, Hazardous Waste

Source Reduction Programs, DTSC Tiered Permitting Programs, SCAQMD Annual Update Forms and permits, TRI Form R reports, wastewater self-monitoring reports and permits, Storm Water Pollution Prevention Plans, Storm Water Management Plans, Emergency Response/Contingency Plans and Spill Prevention Control and Countermeasures (SPCC) Plans.

- Supporting air quality issues throughout California including:
  - Permitting – preparing new permits and permit modifications
  - Title V – auditing and successfully filing for Title V exemption
  - RECLAIM – preparing quarterly and annual submissions; purchasing/selling offset credits
  - Agency Inspections – supporting clients through SCAQMD inspections
  - Green House Gas Inventories – preparing GHG inventories for submission to The Climate Registry
  - Auditing – evaluating compliance with applicable rules, regulations and permit conditions
- Participating in development and implementation of health and safety programs such as hazard communication, injury and illness prevention, respiratory protection, lockout/tagout, and electrical safety.
- Facilitating strategic EHS planning sessions in which clients evaluate their short- and long-term EHS goals and objectives while establishing a roadmap to achieve desired targets.

Independent Consultant

January 2000 to December 2000

- Conducted a variety of EHS compliance audits for industrial clients including semi-conductor device manufacturers, pharmaceutical research and development facilities, brewing and related packaging operations, food processing plants, and other industrial entities.
- Provided on-site EHS support services for a pharmaceutical research and development company which included establishing and implementing procedures related to hazardous waste management, MSDS management, Chemical Hygiene Plan, Injury and Illness Prevention Plan, respiratory protection, and chemical inventory tracking.
- Authored and reviewed compliance guides describing step-by-step regulatory requirements for various EHS topics.
- Prepared written evaluations of fundamental differences between state and federal regulations for a variety of environmental topics.
- Assessed written programs, procedures, and overall implementation of various OSHA-required programs for a complex semi-conductor manufacturer.
- Researched applicability and potential operational impacts of several proposed SCAQMD rules to industries throughout the South Coast Air Basin.
- Assisted in several SCAQMD permitting projects for new and existing facilities.

Environmental Resources Management, Irvine, CA

Staff - Senior II Scientist **April 1993 to December 1999**

- Managed and conducted EHS due diligence audits for various national and international firms (including semi-conductor, real estate development, property

management, legal, food and beverage, aerospace, electronics, pharmaceutical, and oil and gas industries) throughout the United States and Mexico.

- Managed and conducted numerous ASTM Standard Phase I Environmental Site Assessments throughout the United States and other countries ranging in complexity from vacant lots to large multi-site industrial facilities.
- Oversaw numerous remedial site investigation projects involving staff personnel and various subcontractors.
- Managed team efforts to develop and maintain federal- and state-level environmental and OSHA compliance guides designed for client Internet access.
- Conducted ISO 14001 environmental management systems assessments for several manufacturing plants and provided recommendations for improving environmental management systems integration with standard business practices.
- Interacted extensively on clients' behalf with local, state, and federal agencies regarding permitting and regulatory issues and provided interpretive guidance to clients.
- Assessed current property conditions for major environmental insurance carrier through extensive review of existing reports and other documentation.

Ryan Schalkle

EHS Specialist

Summary of Experience

Mr. Schalkle's experience includes a background in Environmental, Health and Safety compliance as it pertains to federal and state regulations. His experience includes conducting hazardous waste audits and developing Spill Prevention Control and Countermeasure (SPCC) plans for various clients in the industrial and manufacturing industries. Mr. Schalkle's experience and attention to detail make him an ideal candidate for performing GAP assessments on various EH&S programs including fall protection, confined space, LOTO, hazard communication, and health and safety training program requirements. Mr. Schalkle's experience has gained him keen knowledge of standards pertaining to OSHA, EPA, NIOSH and DOSH. He has provided clients with several industrial hygiene projects including but not limited to noise surveys, VOC monitoring, and ventilation surveys. Mr. Schalke has completed a Master's Degree in Public Health with an emphasis in Environmental Health and Occupational Safety from California State University, Fullerton.

Education

MPH Environmental Health & Occupational Safety	California State University, Fullerton
B.A. Human Services	California State University, Fullerton

Professional Experience

Environmental and Occupational Risk Management, Inc., Santa Ana, CA

EHS Technician **November 2008 to Present**

- Researches federal, state, and local regulations for various clients in a broad range of industries in order to develop detailed reports and regulatory recommendations
- Supports and conducts personal and area industrial hygiene monitoring, respiratory fit testing, and Indoor Air Quality Assessments (IAQ)
- Prepares hazardous materials chemical inventories
- Assists with Phase I assessments, Hazardous Material Business Plans, and environmental compliance assessments
- Supports Environmental, Health and Safety programs including, IIPP, ergonomics, hazard communication, job safety analysis, fall protection, confined space, etc.
- Develops control of hazardous energy (lockout/tagout) procedures

Southern California Edison, Volt Contract Employee, Chino, CA

Business Analyst II **August 2007 to October 2008**

- Responsible for two company-wide state regulated inspection and safety rotation programs for rubber good PPE's and safe grounding practices
- Participated in the development of the secondary safety climbing device program regulated by the state for climbing equipment that meet ANSI work load limits and quality standards

- Assisted in auditing vendor locations to inspect the recertification process used on SCE owned rubber good PPE's and grounding equipment
- Assured randomized inspections of linemen grounds and PPE items were conducted per SCE policies an procedures
- Participated in the purchase and distribution of rescue gantry and safety davit systems for confined space underground vault rescues

Southern California Edison, Chino, CA

Environmental Safety Intern **December 2007 to May 2008**

- Assisted in auditing SCE owned properties for hazardous waste storage, labeling, disposal, secondary containment conditions and in organizing subsequent paperwork
- Researched and assisted in updating SPCC plans and relevant Environmental Business Plans

Southern California Edison, Volt Contract Employee, Chino, CA

Construction Coordinator **September 2006 to August 2007**

- Coordinated heavy equipment rentals for substation construction and maintenance projects
- Interfaced with internal and external clients in order to meet rental needs

WILLIAMS TRACT, IN THE CITY. OF REDLANDS, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 8 OF MAPS, PAGE 96, OFFICIAL RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT IN THE CENTERLINE OF ALABAMA STREET, DISTANT SOUTH 1085.98 FEET FROM THE NORTHEAST CORNER OF BLOCK 71, RANCHO SAN

BERNARDINO, AS SHOWN ON RECORDS OF SURVEY RECORDED IN BOOK 60, PAGE 53 OF RECORDS OF SURVEY, OFFICIAL RECORDS OF SAID COUNTY; THENCE NORTH 89° 10' 16" WEST, 71.00 FEET TO THE WEST RIGHT-OF-WAY LINE OF ALABAMA STREET; THENCE ALONG THE NORTH LINE OF SAID LOT 1, BLOCK 1, NORTH 89° 10' 16" WEST, 230.63 FEET TO THE TRUE POINT OF BEGINNING; THENCE SOUTH 00° 49' 44' WEST, 50.00 FEET; THENCE NORTH 89° 10' 16" WEST, 101.54 FEET; THENCE NORTH 56° 40' 16" WEST 292.48 FEET; THENCE NORTH 89° 10' 16" WEST, 227.21 FEET, MORE OR LESS TO A POINT 450.00 FEET EAST OF THE WEST LINE OF SAID LOT 2, BLOCK 1; THENCE PARALLEL WITH THE WEST LINE OF SAID LOT 2, BLOCK 1; NORTH 00° 35' 17" EAST, 234.60 FEET TO THE NORTH LINE OF LOT 2, BLOCK 1; THENCE ALONG THE NORTH LINE OF LOT 2 AND LOT 1, BLOCK 1, SOUTH 56" 40' 16" EAST 636.04 FEET, THENCE SOUTH 89° 10-15- EAST 39.98 FEET TO THE POINT OF BEGINNING.

PARCEL 2

LOT 1 AND A PORTION OF LOT 2 IN BLOCK 1 AND A PART OF LOTS 1 AND 2, IN BLOCK 2 OF BROWN'S SUBDIVISION OF LOTS 1, 2, 3, AND 4, BLOCK 2 AND LOTS 1, 2, 3, AND 4, BLOCK 2 AND LOTS 1, 2, 3, 4, 13, 14, 15 AND 16, BLOCK 1, MAP NO. 1, HENRY T. WILLIAMS TRACT AS PER PLAT RECORDED IN BOOK 8 OF MAPS, PAGE 96, RECORDS OF SAID COUNTY; ALSO A PORTION OF PINE AVENUE (NOW VACATED) AS SHOWN ON SAID MAP, DESCRIBED AS WHOLE AS FOLLOWS:

BEGINNING AT A POINT IN THE WEST LINE OF ALABAMA STREET, DISTANT NORTH 960.11 FEET FROM THE SOUTHEAST CORNER OF LOT 8, BLOCK 2 SAID SUBDIVISION; THENCE WEST 838.9 FEET, MORE OR LESS TO A POINT 450 FEET EAST OF THE WEST LINE OF SAID LOT 2, BLOCK 2; THENCE NORTH PARALLEL WITH THE WEST LINES OF SAID LOT 2, BLOCK 2 AND LOT 2, BLOCK 1, SAID SUBDIVISION, TO A POINT IN THE NORTH LINE OF SAID LOT 2, BLOCK 1; THENCE FOLLOWING THE NORTH LINE OF LOTS 2 AND 1, BLOCK 1, IN A SOUTHEASTERLY AND EASTERLY DIRECTION TO A POINT ON THE WEST LINE OF ALABAMA STREET, SAID POINT BEING THE NORTHEAST CORNER OF SAID LOT 1, BLOCK 1; THENCE SOUTH ALONG THE WEST LINE OF ALABAMA STREET TO THE POINT OF BEGINNING.

EXCEPTING THEREFROM THAT PORTION DESCRIBED IN THE "CERTIFICATE OF COMPLIANCE" RECORDED JANUARY 3, 2006 AS INSTRUMENT NO. 19960001114.

ALSO EXCEPTING THEREFROM THAT PORTION OF SAID LOTS 1 AND 2, BLOCK 1, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT IN THE CENTERLINE OF ALABAMA STREET, DISTANT SOUTH 1085.98 FEET FROM THE NORTHEAST CORNER OF BLOCK 71, RANCHO SAN BERNARDINO, AS SHOWN ON SAID RECORD OF SURVEY RECORDED IN BOOK 60, PAGE 53 OF RECORDS OF SURVEY, THENCE NORTH 89° 10' 16" WEST, 71.00 FEET TO THE WEST RIGHT-OF-WAY LINE OF ALABAMA STREET; THENCE ALONG THE NORTH LINE OF SAID LOT 1, BLOCK 1, NORTH 89° 10' 16" WEST, 230.63 FEET TO THE TRUE POINT OF BEGINNING; THENCE SOUTH 00° 49' 44" WEST, 50.00 FEET; THENCE NORTH 89° 10' 16" WEST, 101.54 FEET; THENCE NORTH 56° 40' 16" WEST, 292.48 FEET; THENCE NORTH 89° 10' 16" WEST, 227.21 FEET, MORE OR LESS, TO A POINT 450,00 FEET EAST OF THE WEST LINE OF SAID LOT 2, BLOCK 1; THENCE PARALLEL WITH THE WEST LINE OF SAID LOT 2, BLOCK 1, NORTH 00° 35' 17" EAST, 234.60 FEET TO THE NORTH LINE OF LOT 2, BLOCK 1; THENCE ALONG THE NORTH LINE OF LOT 2 AND LOT 1, BLOCK 1, SOUTH 56° 40' 16" EAST, 636.04 FEET; THENCE SOUTH 89° 10' 16" EAST, 39.98 FEET TO THE POINT OF BEGINNING.

PARCEL 3

ALL THAT PORTION OF LOT 2, BLOCK 1, AND LOTS 2 AND 7, BLOCK 2, BROWN'S SUBDIVISION, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 8 OF MAPS, PAGE 96, RECORDS OF SAID COUNTY.

TOGETHER WITH A PORTION OF PINE AVENUE (NOW VACATED) AS SHOWN ON SAID MAP, DESCRIBED AS A WHOLE AS FOLLOWS.:

BEGINNING AT THE SOUTHWEST CORNER OF SAID LOT 7; BLOCK 2; THENCE FROM SAID POINT BEGINNING ALONG THE WEST LINE OF SAID LOTS 7 AND 2, OF BLOCK 2, AND THE WEST LINE OF LOT 2, BLOCK 1, OF SAID BROWN'S SUBDIVISION, NORTH OF 0 DEG. 25' WEST (MAGNETIC VARIATION 15 DEG. EAST) 1916;10 FEET TO THE NORTHWESTERLY CORNER OF SAID LOT 2, BLOCK 1, SOUTH 80 DEG. 05' EAST TO AN ANGLE IN SAID NORTHERLY LINE; THENCE SOUTH 57 DEG. 05' EAST 21 FEET TO AN IRON ROD; SAID ROD BEING 450 FEET EAST OF THE WEST LINE OF SAID LOT 2, BLOCK 1, MEASURED AT RIGHT ANGLES THERETO; THENCE SOUTH 0 DEG. 25' EAST, 1825.4 FEET TO A POINT ON THE SOUTH LINE OF SAID LOT 7, BLOCK 2; THENCE ALONG THE SOUTH LINE OF SAID LOT 7, BLOCK 2, SOUTH 89 DEG. 33' WEST TO THE POINT OF BEGINNING.

PARCEL 4

AN UNDIVIDED 7/30THS INTEREST IN AND TO THE FOLLOWING DESCRIBED. PROPERTY;

THAT PORTION OF LOT 8, BLOCK 2, BROWN'S SUBDIVISION, AS PER PLAT RECORDED IN BOOK 8 OF MAPS, PAGE 96; RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT THE SOUTHEAST CORNER OF SAID LOT 8, SAID SOUTHEAST CORNER BEING 25.50 FEET WEST OF THE CENTER LINE OF ALABAMA STREET AND 30.00 FEET NORTH OF THE CENTER LINE OF ALABAMA STREET AND 30.00 FEET NORTH OF THE CENTER LINE OF PALMETTO AVENUE; THENCE WEST ALONG THE SOUTH LINE OF SAID LOT 8, 103.00 FEET TO THE TRUE POINT OF BEGINNING; THENCE NORTH AT RIGHT ANGLES 50 FEET; THENCE WEST AT RIGHT ANGLES PARALLEL WITH THE NORTH LINE OF PALMETTO AVENUE, 60 FEET; THENCE SOUTH AT RIGHT ANGLES 50 FEET TO AFORESAID SOUTH LINE OF LOT 8; THENCE EAST ALONG THE SOUTH LINE OF LOT 8, 60 FEET TO THE POINT OF BEGINNING.

PARCEL 5

THE EAST HALF OF LOT 6 AND THE SOUTH 235 FEET OF THE EAST HALF OF LOT 3, BLOCK 2, BROWN'S SUBDIVISION, AS SHOWN BY MAP RECORDED IN BOOK 8, PAGE 96 OF MAPS, RECORDS OF THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AND AS SHOWN ON RECORD OF SURVEY RECORDED IN BOOK 60, PAGE 53 OF RECORDS OF SURVEY, RECORDS OF SAID COUNTY.

APPENDIX C

USER QUESTIONNAIRE

PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA) USER QUESTIONNAIRE

Facility Name and Address:	
~55-Acre Vacant Tract Redlands, California	
Reason for the Phase I ESA:	Contemplated Acquisition
Type of property:	Former citrus orchard, currently vacant
Type of transaction (sale, purchase, etc.):	Contemplated purchase
Site Owner and Contact Information:	See Below
Site Contact Name Telephone Number	Mark Zorn Principal DAUM Commercial Real Estate 909-652-9040
Property Legal Description (if available)	see attached
Parcel Identification Number (PIN)	
All parties who will rely on the Phase I ESA:	McLane Suncast, Inc. & its affiliates

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user of this Phase I ESA* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

	Yes	No
1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, state, or local law?		X
2. Are you aware of any activity use limitations, such as engineering controls (engineered caps, liners, treatment methods, etc.), land use restrictions, or institutional controls (administrative measures restricting groundwater use, construction, or property use, etc.) that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?		X
3. Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property so that you would have specialized knowledge of the chemicals or processes used by this type of business?		X
4a. Does the purchase price being paid for the subject property reasonably reflects the fair market value of the subject property?	X	
4b. If you conclude that there is a difference in fair market price, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?		
5. Are you aware of any commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as a user,		X
5 (a) Do you know of the past uses of the property? see above citrus Orchard	X	
5 (b) Do you know of any specific chemicals that are present or were once present on the subject property?		X
5 (c) Do you know of spills or other chemical releases that have taken place at the subject property?		X
5 (d) Do you know of any environmental cleanups that have taken place at the subject property?		X
6. As the user of this ESA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?		X

If you answered "yes" to any of the questions (except 4a) above, please provide more detail below, or attach additional information to this document:

Alabama Industrial Park, LLC – Thomas A. Neumainville

Oakmont Redlands Alabama Street, LLC – Tim Howard
Oakmont Redlands Palmetto II, LLC – Tim Howard

Plano, Texas 75093
(972) 612-6900
(972) 758-1902 fax

TELEPHONE CONVERSATION RECORD

Date: 12/6/10

Time: 2:20pm

Contact Name: Tim Howard, Owner Representative

Number Called: 714-272-5318

Recorded By: Ryan Schalkle

Client/Prospect:

Project Number:

Q) Who is/are the current owner(s) of the property?
A) All parcels are owned by the current seller

Q) Who are the past owners of the property?
A) The parcels are owned by the following:
0242-041035, 0292-041-42, 0292-041-46 owned by Newcastle Associates
0292-041-45 owned by Oakmont Palmetto LLC.
0292-041043 owned by Oakmont Alabama LLC.

Q) Past uses of the property, other than orange groves?
A) Property has always been used for agricultural purposes.

Q) When were the orange groves first planted? When were they removed?
A) 1920's and removed around 2003.

Q) How many underground storage tanks are still located on the property? Where are they? What were they used for?
A) None. During the tree excavation on the property, Mr. Howard confirmed that no additional USTs were found on site. Mr. Howard mentioned that a significant amount of trees were removed with the roots and these activities would have shown any other remaining USTs.

Q) How many underground storage tanks have been removed from the property? Where were they? What were they used for? Is any "closure" documentation available?

A) One removed from the Alabama Teunissen property. This was the only known UST. Documentation provided through the HMD of the San Bernardino Fire Department.

Q) What are the concrete structures on the property? Are there any fuel storage tanks associated with these structures?
A) These structures are cement remnants of valve boxes used to control the irrigation systems used onsite. There are no USTs associated with them.

Q) Confirm the presence of the bee boxes. Who is maintaining them, and how are they being used?
A) Mr. Howard was unaware of bee boxes on the Site. He mentioned that they may be operated by the small agricultural operation to the west.

Q) How many wells are present on the property? What are they used for?
A) There is one known well located on Palmetto Avenue that may have been used for the testing activities for the treatment plant. Manholes that were observed on the property are used for servicing the sewer lines.

Q) Any past environmental releases on the property? In the neighborhood?
A) Mr. Howard was not aware of any releases on the property or the neighborhood.

Q) Any known locations where pesticides were mixed/stored in the past?
A) Pesticide use was mixed and stored on the west side of the property, previously owned by Tuenissen. Mr. Howard confirmed that soil testing was completed on the western side of the Site for pesticides and findings were negative for all test samples.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/02/2010 has revealed that there is 1 NPL

site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/8 - 1/4 (0.236 mi.)*	*0*	*8*

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/29/2010 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/8 - 1/4 (0.236 mi.)*	*0*	*8*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/25/2010 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/8 - 1/4 (0.236 mi.)*	*0*	*8*

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/8 - 1/4 (0.236 mi.)*	*0*	*8*

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

HOME DEPOT USA HD5087	9377 ALABAMA ST	S 0 - 1/8 (0.100 mi.)	2	43

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 12/20/2009 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***I-10 US HWY 395***	***NW 1/8 - 1/4 (0.236 mi.)***	***0***	***8***

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 12/20/2009 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***I-10 US HWY 395***	***NW 1/8 - 1/4 (0.236 mi.)***	***0***	***8***

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/23/2010 has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Event: Date For Remedy Selection (CM Imposed)

Event date: 10/07/1994
Event: CMI Workplan Approved

Event date: 10/07/1994
Event: Corrective Measures Design Approved

Event date: 06/01/1995
Event: Certification Of Remedy Completion Or Construction Completion

Event date: 01/01/1996
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

USAF NORTON AFB (Continued) **1000417274**

Event date: 06/18/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 06/18/1998
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 06/18/1998
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 06/18/1998
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 06/18/1998
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Summary Details:

Conditions at proposal October 15, 1984): Norton Air Force Base covers approximately 2,036 acres 58 miles east of Los Angeles near the City of San Bernardino, San Bernardino County, California. It is in a low-lying alluvial plain surroundedon the north and east by the San Bernardino Mountain Range. The base began operations in 1942 and has served as a major overhaul center for jet engines and the general repair of aircraft. Since 1962, the facility has served as a Military Airlift Command Base. In addition, Norton formerly had the responsibility for providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. Past ha ardous waste management practices may have contributed to existingcontamination problems throughout the base. The practices include burial of drums and other unspecified materials; disposal of waste oils, solvents, and paint residues into landfills, unlined pits, ponds, and drying beds; storage in leaking underground tanks; and spills of AVGAS, oils, solvents, PCBs, and acidic plating solutions. Industrial solvents have been used extensively on the base. Unknown quantities of spent solvents were disposed of in several base landfills.A well on the base has been contaminated with trichloroethylene TCE). The well water is currently being used in a blended system and is sampled quarterly to ensure that TCE is below the California State action level. The water is used by approximately ll,000 people who live and/or work on the base. Norton Air Force Base is participating in the Installation Restoration Program IRP), established in l978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Air Force has completed Phase I records search). Phase II remedial investigation) is underway. Status July 22, 1987): In November 1986, the California Regional Water Quality Control Board issued a Cleanup and Abatement Order requiring Norton to clean up one on-base area, the Industrial Waste Water Treatment Plant Sludge Drying Beds. Phase II-Stage 2 of the IRP was completed in December 1986. It focusedon characteri ation of the contamination at 18 on-base areas. More than 22 areas have been identified to date. Additional areas will be studied in Stage 3, scheduled to begin in the fall of 1987. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site isbeing placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 48 FR 40662).

Site Description: The Base Closure team has worked closely with the City of Riverside to ensure that controls are in place to protect the public from exposure to contamination. The Air Force constructed a groundwater extraction and treatment remedy in 1994 and is currently operating two pump and treat systems which have

USAF NORTON AFB (Continued) **1000417274**

treated over 90 million gallons of contaminated groundwater to date. Approximately 325 lbs. of TCE have been removed from the groundwater. Additionally, a soil vapor extraction system is currently operating and 6,247 lbs. of TCE have been removed from the contamination source area. Since 1994, the Air Force has excavated approximately 40,000 cubic yards of contaminated soils from various locations on the base which were then treated and disposed of on-site, or transported to an off site disposal facility. The Air Force also closed numerous underground storage tanks and excavate and treated contaminated soil using bioremediation technology in 1996. An investigation of alleged radiological contamination was conducted and results showed that elevated levels of radionuclides in groundwater were caused by naturally occurring uranium. In 1996, the Air Force removed a waste line contaminated with radium paint residue and another industrial waste line. A JP-4 aircraft fuel system which was not contaminated will be salvaged for future use by the airport.In 1980, DOD issued a policy requiring identification of hazardous waste sites. In 1982, Norton issued the Phase I Records Search. In 1985, the site issued the Phase II Problem Confirmation Study. In June 1989, after various investigations, the Air Force signed the Norton AFB Federal Facility Agreement. In November 1990, Norton AFB began the Central Base Area (CBA) OU Groundwater Investigation to define the extent of the plume. In 1991, through a removal action, TCE-contaminated soil was treated onsite. In early 1993, the Air Force issued a draft RI, FS and proposed plan. In June 1992, the Air Force began a treatability test of the ground water pump and treat system. In 1993, Norton AFB issued the Final FS and Plan.The 2,003-acre Norton AFB is located in San Bernardino County, California (40th Congressional District), approximately 65 miles east of Los Angeles. The site is bounded by the Santa Ana River to the south, and other adjacent areas are used for residential, industrial, and agricultural purposes. Operations at the site began in 1942, and the facility served as a major overhaul center for jet engines and the general repair of aircraft. The site formerly had the responsibility of providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. There are more than 20 areas of contamination on the base including two landfills, six discharge areas, four chemical pits, a fire training area, a fuel spill area, a polychlorinated biphenyl (PCB) spill area, a chemical spill area, two waste storage areas, an underground storage area, and a low-level radioactive waste burial site. Soil contaminants included PCBs, trichloroethylene (TCE), petroleum hydrocarbons, metals such as lead and polycyclic aromatic hydrocarbons. An off-site groundwater plume (TCE) has impacted several municipal drinking water wells. Norton AFB was closed by the Department of Defense in March 1994, based on the legislative requirements in the Base Realignment and Closure Act of 1990. Consistent with the reuse alternatives identified in the Final Environmental Impact Statement, the Base is being redeveloped as an airport with mixed non-aviation, light industrial land use. Norton Air Force Base is located in the city of San Bernardino, San Bernardino County, California, 55 miles east of Los Angeles and 60 miles west of Palm Springs. The main surface water features near the site are City Creek, Warm Creek, the Twin Creek flood control channel, and the Santa Ana River, which flows southwest along the southern base boundary. The aquifer system beneath the site is part of the Bunker Hill hydrologic basin. Drinking water is derived from the middle and lower water-bearing zones. The site is classified as residential and light industrial. Adjacent properties includes area of residences, light and heavy industry, and agriculture. The population of the county is 1,418,380. The site was activated in March 1942 as an engine repair center for Air Force, U. S. Navy, and private industry aircraft. The site became a Military Airlift Command base in 1966. In 1968, the Aerospace Audiovisual Services established its headquarters at the base. The site also provided airlift and sustenance capabilities for air and combat units

USAF NORTON AFB (Continued) **1000417274**

world-wide. Solvents, specifically TCE, were used in servicing aircraft from 1940s to the early 1980s. Former waste disposal, handling, and discharge practices have resulted in the contamination of soil and the upper water-bearing zone of a drinking water aquifer. The base was officially added to the U.S. EPA National Priorities List (NPL) on July 22, 1987. The U.S. EPA, California Department of Toxic Substances Control (DTSC), and the U.S. Air Force signed an interagency agreement, known as the Norton AFB Federal Facility Agreement (FFA) on June 29, 1989, which governs the conduct of environmental investigation and cleanup activities. The Air Force, U.S. EPA, DTSC, and the Regional Water Quality Control Board (RWQCB) Santa Ana Region comprise the Base Realignment and Closure (BRAC) Cleanup Team (BCT), with the Air Force serving as lead agency. The base has been subdivided into six separate areas for purposes of investigation and description of base activities. Since closure and redevelopment of portions of the base, many streets have been renamed. -The Central Base Area (CBA), which reflects the western one-third of the former base, was the most developed portion of the base and included the majority of offices, warehouses, on-base housing, engineering yards, and aircraft repair facilities. -The former Ballistic Missile Organization (BMO) complex is located south of the CBA and across Mill Street. The former BMO complex has been deeded to the Inland Valley Development Agency and a portion is occupied by the Defense Finance and Accounting Service. -The airfield includes the runways, ramps, aircraft parking, and hangars used for aircraft repair. The airfield covers the eastern two-thirds of the former base. -The Northeast Base Area (NBA) is located north of the airfield and represents the portion of the base with the oldest buildings. The original aircraft hangars and repair facilities are located within the NBA, as well as the former base Landfill No. 2. -The Golf Course Area (GCA) is located south of the airfield and is the current site of the Palm Meadows Golf Course. Prior to construction of the golf course, the GCA was used as a landfill (IRP Site 10), liquid waste disposal (IRP Site 1), a quartermaster's salvage yard, and chemical warfare training area, among other activities. -The former industrial waste treatment plant (IWTP) facility is located south of the GCA and was used for the treatment of liquid wastes generated as part of aircraft maintenance and repainting. Several investigations were conducted from 1982 to date. The 1982 to 1988 investigations resulted in identification of 22 Installation Restoration Program (IRP) sites. During closure of the base, additional records investigations resulted in identification of 73 AOCs. Contamination at the Small Arms Range (SAR) and the pipeline excavation at Building 752 was identified during cleanup actions performed at these sites. OU2: Site Specific Information IRP Site 1 - IRP Site 1 is in the GCA and was the location of former unlined lagoons used from 1950 to 1960 for the disposal of liquid waste generated during aircraft repair. During the 1960s, a portion of the golf course was constructed over the site without removing all industrial waste. The Remedial Investigation (RI) identified soils contaminated with paints, solvents, oil, fuels, and solids that had been washed into the industrial waste system. Chlorobenzene, 1,2-dichlorobenzene (DCB), and 1,4-DCB exceeded industrial PRGs. An Engineering Evaluation/Cost Analysis (EE/CA) identified removal of contaminated soil to a depth of approximately 30 feet below ground surface (bgs), backfilling with clean soil, and restoring the site as a portion of a fairway and green. A total of 20,325 tons of contaminated soil was excavated from an area of approximately 25,000 square feet, to the top of the perched-zone groundwater at a depth of approximately 29 feet bgs. The excavation was located next to a berm that supports the airfield perimeter road. Based on confirmation sampling results the contamination extended beneath the perimeter road. For technical and implementability reasons, the deep and lateral contamination was not removed. The area of affected soil left in place covers approximately 3,800 square feet. IRP Site 1 is part of the active

USAF NORTON AFB (Continued) **1000417274**

golf course, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 2 - IRP Site 2 is located in the northeast corner of former Norton AFB and is the location of a former base landfill used between 1958 and 1980. Originally, it covered approximately 31 acres and was used for the disposal of general refuse, office waste, industrial waste, and industrial waste treatment plant (IWTP) sludge. Under CERCLA, the presumptive remedy for landfills is to leave waste in place and to provide an appropriate containment system. Under the presumptive remedy guidelines, various cover systems and associated gas control systems were evaluated in an EE/CA for IRP Site 2, and a natural soil cover was selected with an appropriate surface water control system. Because landfill gas (e.g., methane, PCE, trichloroethene [TCE], and vinyl chloride) was present, a landfill gas control system was also required. The cover, surface water control, and gas control systems were described in an Action Memorandum (AM). The design for the landfill has been implemented with consolidation into a smaller footprint and construction of the landfill cover and gas collection/control systems completed in December 1998 and accepted by the BRAC Cleanup Team (BCT) in February 1999. Site 2 is a closed landfill, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be passive open space. IRP Site 5 - IRP Site 5 served as the training area for fire control and abatement exercises from the late 1950s through the 1970s. Site 5 is in the southern portion of the former base, east of the golf course. Fire training exercises involved floating a layer of oil, fuel, or other combustible material on a layer of water and repeatedly igniting and extinguishing the material. RI results showed the site to contain metals (cadmium, copper, lead, and zinc) and dioxins in near-surface soils (to 10 feet bgs) and fuels (benzene, toluene, ethylbenzene, xylenes [BTEX]), solvents, and PAHs in deeper soils up to 40 feet bgs. The EE/CA and subsequent AM for IRP Site 5 selected soil vapor extraction (SVE) for remediation of fuel contamination, excavation followed by stabilization of the metals/dioxin-contaminated soil, and excavation and disposal of the PAH-contaminated soil. This removal action was completed during 1998 and involved an area of approximately 100,000 square feet. Excavation was performed to a maximum depth of 13 feet bgs, and confirmation samples were taken on the sidewalls and bottom of the excavation. The SAR impact berm adjacent to IRP Site 5 was also removed during the Site 5 removal action. The SVE component of the remedy removed 22,600 pounds of hydrocarbons. The SVE system was operated from January 10, 1996, until July 10, 1997. The effectiveness of the SVE system was assessed through confirmation soil boring samples and vadose zone leaching modeling. The model simulations indicated that the SVE removal adequately addressed the hydrocarbon contamination and was protective of groundwater. The soil excavation was performed in two phases. The first phase consisted of the removal of 21,104 tons of contaminated soil and 4,589 tons of rock and debris. This material was transported to the IRP Site 2 landfill. The lead in the contaminated soil was stabilized using 15 percent (by weight) Portland cement to meet State of California nonhazardous waste criteria. The soil that met nonhazardous criteria was used as foundation material for the landfill cap. The material not meeting the California nonhazardous waste criteria (1,443 tons) met federal nonhazardous waste criteria and was shipped to Browning Ferris Industries (BFI) landfill in La Paz, Arizona, for disposal. The second phase involved excavation of 3,496 tons of contaminated soil, stabilized with 15 percent (by weight) Portland cement, which was shipped to the BFI landfill in Arizona for disposal as an RCRA nonhazardous waste. The excavation area was backfilled with clean soil to the level of the former topographic grade. No groundwater contamination is associated with IRP Site 5. The site is being used for storage of golf

USAF NORTON AFB (Continued) **1000417274**

course landscape waste prior to off-site disposal, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be industrial/commercial-related. Small Arms Range - The SAR was located immediately adjacent to IRP Site 5 and historically included an impact berm. The berm was contaminated by lead projectiles as a result of small arms practice, and a removal action was addressed in a work plan. Because the berm was contiguous with Site 5, portions of the berm were removed during the Site 5 removal action. A total of 11,478 tons of material was removed from the SAR, including 210 tons of bullet fragments and rock, classified as RCRA hazardous waste, and disposed at the Laidlaw Environmental Services landfill in Westmoreland, California. Nonhazardous waste, including 128 tons of rock and debris and 9,124 tons of soil, was placed at the IRP Site 2 landfill. The remaining 2,106 tons of soil were stabilized with 15 percent (by weight) Portland cement. This material did not meet California nonhazardous waste criteria and was shipped to the BFI landfill in Arizona for disposal. Confirmation samples were collected, and lead was detected above the residential PRG at one location. Following completion of the soil removal action, much of the remaining portion of the SAR impact berm was pushed into the Site 5 excavation as fill. The soil from the berm was then covered with soil imported from the adjacent riverbed to bring the Site 5 area back to its original grade. The firing line area of the SAR remains as a ground depression and is not being used. Projected long-term plans for the area are industrial/commercial-related use. The firing line area remains as a ground depression and is not being used. Projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 7 - IRP Site 7 is located in the southeast corner of the former IWTP compound. Although Site 7 is part of this CERCLA ROD, as part of the former IWTP, Site 7 also must be closed as part of the RCRA corrective action termination of the interim status facility (two separate closure processes). The site included 12 concrete-walled, unlined sludge-drying beds, covering approximately 17,280 square feet. The beds were used to dry sludge generated at the IWTP until 1987. During removal of the sludge, it was temporarily stored at the northeast corner of the site. The former waste pile appears to have been located on what is now highly weathered asphalt pavement. Physical removal and disposal of the concrete-walled sludge-drying beds and surface soils were completed in March 2004, and the CERCLA closure report is in review. The site is currently not being used. The property is zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 10 - Site 10 is located along the southern base boundary in the eastern portion of the golf course. Landfill No. 1 was used by the Air Force from 1943 to 1958, primarily for disposal of general refuse, which was apparently burned at the site. The 1984 to 1995 investigations, which included sampling for metals, pesticides, PAHs, and PCBs, indicated the presence of metals in ash (primarily chromium and lead) above the residential soil PRGs in shallow soil (0 to 2 feet bgs). Based on the RI data for metals, an RA for Site 10 was evaluated in an EE/CA. Because contamination was not significantly above industrial soil cleanup goals, the Air Force elected to establish a deed restriction for the site. However, the ecological risk assessment (ERA) determined that the contamination was localized, and concentrations of chromium and lead at the hot spots posed a significant risk to plants and animals. The Air Force responded by developing a hot-spot removal plan for Site 10. A removal action was performed at four hot spot locations that resulted in excavation of 340 cubic yards of contaminated soil. Approximately 224 cubic yards of contaminated soil were disposed at the Site 2 landfill, and 116 cubic yards were disposed off site. Physical removal and disposal of dioxin-contaminated soil were completed

USAF NORTON AFB (Continued) **1000417274**

in 2004, and the closure report is in preparation. The northern portion of the site is used as a golf course fairway, and the property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site north of the base boundary is expected to be industrial-related. The southern portion of the site includes habitat for two endangered species, and is bounded by a man-made flood protection levee. The southern portion is off base and is zoned open space with unrestricted public access. IRP Site 17 - IRP Site 17 is located in the southwestern corner of the former IWTP compound. Although Site 17 is part of the CERCLA ROD, as part of the former IWTP, Site 17 is undergoing RCRA closure as part of the corrective action termination of the RCRA interim status facility (two separate processes). The former IWTP treated industrial wastewater from the repair of military aircraft from 1960 to 1993. Most of the IWTP facility was removed in 1995. IRP Site 17 is comprised of two connected brick-lined sumps that the Air Force constructed during the early 1960s for the purpose of burning waste fuels and solvents. The Air Force initiated burning, but in 1961 permission for continued burning was denied by local air quality authorities. Therefore, the sumps were used for waste destruction for a limited time but were used primarily as holding tanks for the IWTP and as an oil/water separator until 1985. The area immediately south of the sumps was also used for storage of solvent and plating wastes contained in 55-gallon drums. Site 17 was subject to a series of site investigations initiated in 1984. Site investigations have identified a zone of fine-grained soils, 25 to 55 feet bgs, that underlie and overlie two zones of coarser-grained soils. An EE/CA prepared for Site 17 presented a detailed analysis of the subsurface conditions at the site. In summary, there are two water-bearing zones below the Site 17 area. The first zone is a perched groundwater layer that is supported by a layer of finer-grained silts and clays extending from approximately 25 to 55 feet bgs. Collectively, the zone of finer-grained soils starting at 25 feet bgs and the perched groundwater supported by the finergrained soils is termed the "perched zone." Below the zone of finer-grained soil material is the second zone, termed the "upper aquifer." The upper aquifer comprises sands and gravels that extend to at least 500 feet below the site. During the early 1980s, the top of the upper aquifer was in contact with the zone of finer-grained soil material at 50 feet bgs. Between 1984 and 1988, the elevation of the upper aquifer dropped 7 to 10 feet, below the soil layer of the perched zone. Between 1988 and 1993, the water elevation decreased another 15 to 25 feet, resulting in several dry monitoring wells. The depth to groundwater in the upper aquifer now ranges from approximately 75 to 90 feet bgs (depending on seasonal fluctuations) in the area of IRP Site 17. The perched-zone groundwater contamination is assumed to have resulted from the former chemical waste storage at Site 17. The source may have been from the drums of waste solvents once stored at Site 17 or leakage from the Site 17 sumps. Due to the sandy nature of the surface soils, the solvent migrated downward to the perched zone, where further downward migration was retarded by the finer-grained soils. The two sumps, which were part of the IWTP, were removed in 2003, and the CERCLA closure report is in preparation. The site is currently not being used. The property is zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be as industrial/commercial-related options for the property. IRP Site 19 - Site 19, located in the CBA to the south of Building 763, was formerly used as a drum storage area and aircraft washing facility. Drums of fuels, oils, electroplating solutions, TCE and trichloroethane (TCA) sludge, and cyanide waste solutions were stored on an unpaved fenced lot. The area south of Building 763 was the general location of the original aircraft washing facility. This facility was removed in 1966, and the area was resurfaced with 20 inches of concrete to become part of the flight line. Site 19 was investigated during the 1984 to 1986 IRP and the 1991 to 1993 RIs. PCBs

USAF NORTON AFB (Continued) **1000417274**

were detected in excess of residential PRGs, primarily in the upper 6 inches of soil beneath the concrete runway apron. An interim ROD was developed for IRP Site 19 to identify a use restriction documenting the presence of the contamination. This ROD and its decision for IRP Site 19 will supersede the interim ROD. No groundwater contamination is associated with this site. The long-term future land use for Site 19 is to retain the runway apron for use by the San Bernardino International Airport Authority (SBIAA) airfield. AOC 4 - Building 301, located in the NBA near U and 102nd streets, was an equipment and vehicle washing facility. During the 1950s, the building was part of a spray painting facility. At the time of base closure (1994), it was used by civilian auto hobby personnel. AOC 4 consists of the foundation of former Building 301, an adjacent washing slab, and adjacent soil areas. A separator/dosing chamber was removed and its location evaluated as part of the basewide underground storage tank (UST) program. A solids collection pit and two trench drains were identified during the site investigation. The concrete washing slab was heavily stained, particularly near the trench drains. Drums of oil and other materials were stored in sheds along the southern drain line. A 4-foot-by 4-foot-wide area surrounded by a 6-foot-tall chain-link fence is located to the north of the washing slab and may represent the location of a former waste receptacle. The area is capped with a wooden cover, and the material under the cover may be fill. The area of affected soil is approximately 40 feet by 120 feet. No groundwater contamination is associated with this AOC. AOC 4 is on a parcel that was transferred by SBIAA to the San Bernardino County Fire Department under a Federal Aviation Administration (FAA) covenant that allows only industrial, commercial, or aircraft support usage. The Fire Department has refurbished Building 302 for office use and vehicle repair and is using the area west of the building (north of AOC 4) as a household hazardous waste collection point. Remedial alternatives were evaluated in an EE/CA. The Air Force identified ICs as the preferred alternative in the AM. Paved areas south of Building 302 are being used for vehicle and equipment storage. The western half of AOC 4 is covered by grassy weeds, while the eastern half is paved and includes a covered storage area. The Fire Department plans to use the paved area for equipment storage, while there are no plans for use of the grassy area of AOC 4 outside of the fenced storage yard. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property. AOC 18 - Former Buildings 451 and 452 were located in the CBA, east of Tippecanoe Avenue and north of Harry Sheppard Boulevard. Building 451 was a former garage and gas station in operation from 1942 to the late 1960s or early 1970s; Building 452 was the site of USTs. A 1942 site drawing indicates five 12,000-gallon gasoline USTs, a fueling station, and an oil storage house (Buildings 452, 451, and 450, respectively), although a 1967 site drawing indicates only two 12,000-gallon USTs were present. All structures and USTs have been removed. AOC 18 was investigated during the confirmation study (CS) and expanded source investigation (ESI). The soil contamination covers an area of approximately 600 feet. Prior to the initial redevelopment activities, AOC 18 was covered by an asphalt-paved parking lot that served the adjacent base post office. From January 2000 to 2004, the surface of the AOC was bare earth facilitating aeration (volatilization) of the fuel-related chemicals. The site is now paved with asphalt as part of the Mattel warehouse and distribution center. Remedial alternatives were previously evaluated in an EE/CA. The Air Force identified ICs in the AM as the preferred RA. AOC 18 is on property that was transferred to Inland Valley Development Agency (IVDA). IVDA has demolished all structures in the vicinity of AOC 18 and removed all pavement in preparation for redevelopment. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of

USAF NORTON AFB (Continued) **1000417274**

the site is expected to be industrial/commercial-related options for the property. AOC 33 - Building 747, located in the southeastern corner of the CBA, was one of the primary industrial facilities at Norton AFB. Although AOC 33 is part of this CERCLA ROD, as part of the former Industrial Waste Line (IWL), it is also part of the RCRA corrective action termination of the interim status facility (two separate closure processes). The building was constructed in 1942 and renovated in 1944, 1953, and 1955. From 1942 to 1966, the building supported operations for the repair and overhaul of engines and other aircraft parts. Building 747 was converted into a freight terminal facility in 1966, and the building served as offices and storage facilities. Subsurface soil contamination at AOC 33 is associated with sumps (some recently removed) buried beneath an asphalt access road immediately south of Building 747. The sump portion of AOC 33 is part of the IWL that is undergoing RCRA corrective action termination as an interim status facility. AOC 33 was investigated during the CBA OU RI, CS, and the ESI. No groundwater contamination is associated with AOC 33. Remedial alternatives were evaluated in an EE/CA. The Air Force identified a deed restriction in the AM as the preferred RA. The sump and surrounding soil were removed in 2003. The CERCLA closure report is in preparation. AOC 33 is on property that has been leased by the Air Force to SBIAA. Building 747 has been subleased by SBIAA to several entities for commercial use. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property, including aviation support. AOC 39 - AOC 39 is located west of Club House Drive and south of the southern perimeter road, where an underground storm drainpipe empties into a grass-covered fairway drainage ditch. The discharge serves storm drain lines that originate along the southern flight line area. An oil/water separator removes oil prior to discharge into the ditch. The discharge point possibly received waste from the flight line and Buildings 695, 763, and 795. Aerial photographs from the 1950s and later indicate that fluids from aircraft repair and fueling emptied into the storm drain system. A 1982 interview record indicated that flight line oils were occasionally observed in the golf course drain. No groundwater contamination is associated with AOC 39. Remedial alternatives of AOC 39 were previously evaluated in an EE/CA. The Air Force selected deed restrictions in the AM as the preferred RA. AOC 39 was evaluated further in the BWFS. AOC 70 - AOC 70 was a percolation pond used for treated IWTP effluent during the mid-1980s to 1993. Although AOC 70 is part of this CERCLA ROD, as part of the former IWTP, AOC 70 also must be closed as part of the RCRA corrective action termination of the interim status facility (two separate closure processes). On December 31, 2004, DTSC-RCRA acknowledged that AOC 70 was clean closed. The 0.25-acre pond site was constructed upon sandy soils that readily facilitated infiltration of the treated effluent into the subsurface. There was no outflow from the pond. The pond dried out when the IWTP ceased functioning in mid-1993. AOC 70 was investigated under the CS Addendum No. 2. RAs were evaluated in an EE/CA. The Air Force selected a soil removal action in the AM as the preferred remedy. The Air Force completed the removal action in 1997 and backfilled the site with certified clean fill. No groundwater contamination is associated with the AOC. AOC 70 is within a parcel of the base that has been leased to IVDA. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be as industrial/commercial-related options for the property consistent with city of San Bernardino zoning. Building 752 - Building 752 is located in the eastern portion of the CBA adjacent to the airfield. The building was used during the 1940s and 1950s for the repair of aircraft instruments, including painting instrument dials with radio-luminescent paint containing radium-226. The room used for painting dials was sealed in 1955 when painting operations ceased. During the period that painting occurred, paint waste was flushed into

USAF NORTON AFB (Continued) **1000417274**

a sink connected to the sanitary sewer. Investigations of the sink and piping system showed that they were contaminated by radium-226. This included the piping system outside of the building to where it connected with the sanitary sewer. Cleanup of the interior piping system and interior surfaces of Building 752 were handled under separate programs. Cleanup of soils affected by radium-226 waste outside of Building 752 are being addressed in this ROD. To determine whether soils outside of the building had been affected by the discharge of paint waste into the sanitary sewer pipe, the pipe was excavated for visual characterization and soil sampling. The pipe was constructed of 6-inch vitreous clay in 3-foot sections. Two soil samples collected as part of the initial site characterization were found to contain radium-226 at 169 ?10 picoCuries per gram (pCi/g) and 1,940 ?20 pCi/g (background is 1.41 pCi/g). The entire waste line piping was surveyed with a field instrument and found to exhibit gamma radiation above background levels. Excavation of the piping system was conducted July 23 through August 1, 1996. The excavation was approximately 3 feet deep where the waste line exited the southwest corner of the building, and extended to a depth of 9 feet where the waste line entered the sanitary sewer. All excavated soil and piping was disposed off site. Before backfilling the trench, a new waste line was installed between the building and the sanitary sewer. After backfilling the trench, asphalt pavement was placed over the excavation. As part of the overall radium-226 investigation of the Building 752 area, additional radium-226 contamination was discovered in an area immediately west of the building. Building drawings from the 1950s indicate a wooden loading dock attached to the building over the affected area. In February 2001, the loading dock area was sampled for radium-226. The investigators determined that the area of concern is 11 by 55 feet, with depth of contamination between 1 and 4 feet bgs. The estimated volume of affected soil is 1,400 cubic feet. Radium-226 contaminated soil was removed in 2004. The closure report is in preparation. All contaminated soil will be properly disposed. Currently the site is not in use. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the building and surrounding area is expected to be industrial/commercial-related options for the property (airfield support). Northeast Base Area PCE Plume - The NBA has two PCE plumes, one in the eastern portion (east PCE plume) where the former Site 2 landfill is situated, and a smaller plume in the central portion (west PCE plume). Only the west PCE plume has been above the maximum contaminant level (MCL) for PCE since April 2003. The average gradient in the NBA has been observed to fluctuate between a low of 0.004 foot per foot (October 2003) and a high of 0.039 foot per foot (April 1996). Seasonal variation remains relatively constant. The source of the contamination contributing to the NBA west PCE plume is not believed to be associated with IRP Site 2. PCE concentrations are higher in the west plume than those in the east plume, whereas they would be expected to be less due to contaminant dispersal. The groundwater flow direction in the NBA is to the west to west-northwest. Groundwater quality data for the NBA plume wells do not indicate significant movement of the plumes, either horizontally or vertically. The property overlying the NBA plume is zoned industrial/commercial by the city of San Bernardino. The projected long-term use for Site 2, which overlies the east plume, is expected to be passive open space or potentially a long-term, open storage area. The projected long-term use for the property over the west plume is industrial/commercial, possibly warehousing. A Record of Decision (ROD) addressing Operable Unit 2 (OU2) was completed in September of 2005.

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

USAF NORTON AFB (Continued) **1000417274**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
Waste name: MERCURY

Waste code: D016
Waste name: 2,4-D

Waste code: D018
Waste name: BENZENE

Waste code: D035
Waste name: METHYL ETHYL KETONE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/02/2010

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/02/2010

Next Scheduled EDR Contact: 01/24/2011
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/02/2010

Next Scheduled EDR Contact: 01/24/2011
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/29/2010
Date Data Arrived at EDR: 02/09/2010

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/07/2010

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Next Scheduled EDR Contact: 01/24/2011
Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/14/2010
Date Data Arrived at EDR: 04/16/2010
Date Made Active in Reports: 05/27/2010
Number of Days to Update: 41

Source: EPA
Telephone: (415) 947-8000
Last EDR Contact: 09/15/2010
Next Scheduled EDR Contact: 12/27/2010
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Date Data Arrived at EDR: 07/03/1995

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009
Date Made Active in Reports: 09/11/2009

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

VACANT LAND
PALMETTO AVENUE/ALABAMA STREET
REDLANDS, CA 92374

TARGET PROPERTY COORDINATES

Latitude (North):	34.08760 - 34° 5' 15.4"
Longitude (West):	117.2112 - 117° 12' 40.3"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	480515.7
UTM Y (Meters):	3771694.2
Elevation:	1211 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	34117-A2 REDLANDS, CA
Most Recent Revision:	1988

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

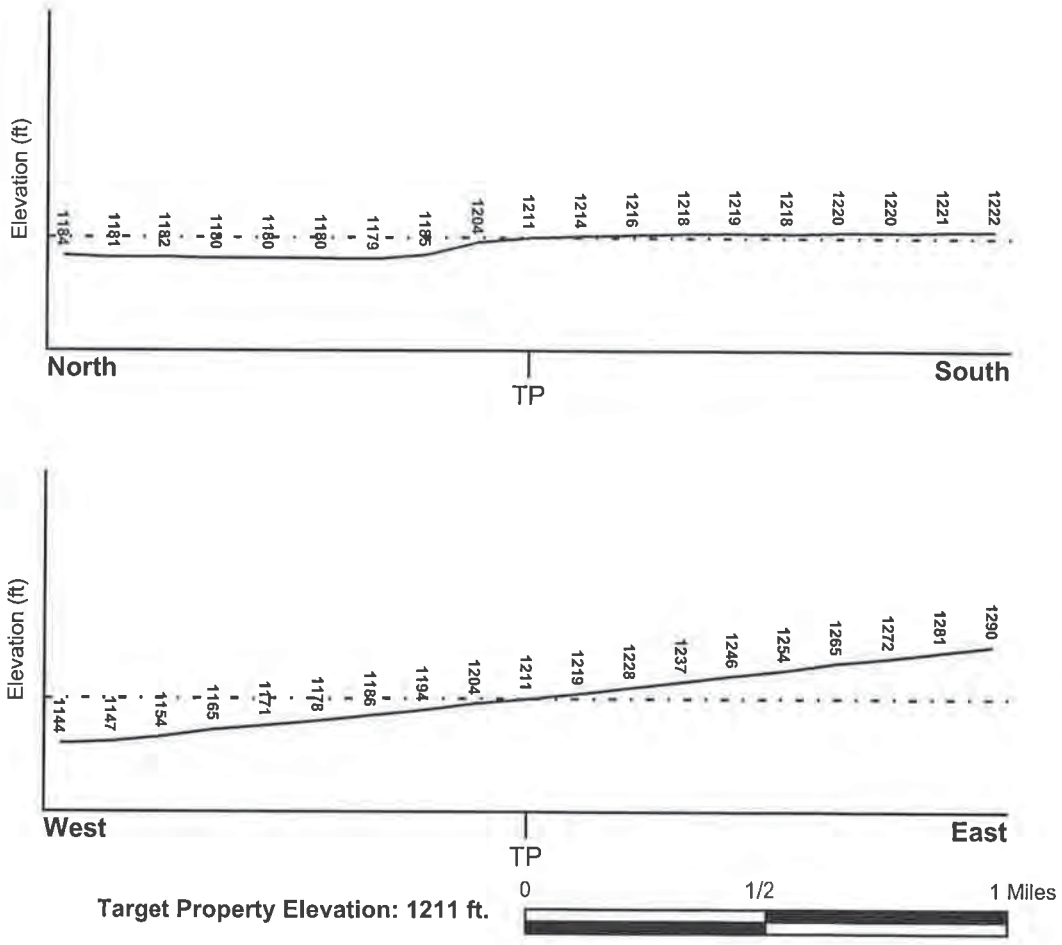
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN BERNARDINO, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06071C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HANFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6
2	11 inches	59 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 3

Soil Component Name: FLUVENTS

Soil Surface Texture: gravelly sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
2	9 inches	29 inches	stratified gravelly sand to gravelly loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
3	29 inches	59 inches	stratified gravelly sand to gravelly loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Site Report™

EDR® Environmental Data Resources Inc

440 Wheelers Farms Road
Milford, CT 06461
Toll Free: 800.352.0050
www.edrnet.com

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . **Page 3**

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . **Page 4**

All available detailed information from databases where sites are identified.

Section 3: Databases and Update Information. . . . . . **Page 7**

Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 CITY OF REDLANDS CALIFORNIA STREET LANDFILI 1950 NEVADA ST REDLANDS, CA 92374 EDR ID #S101301246
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	**YES - p4**
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in a county/local unique database (LOCAL)	**YES - p6**
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	2

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✔ Library of Congress
- ✔ University Publications of America
- ✔ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

EI Group (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
0.77 ACRE VACANT TRACT
0.25 MILES NORTH OF RIVERBLUFF AVENUE AND ALABAMA STREET
REDLANDS, SAN BERNARDINO COUNTY, CALIFORNIA

EXECUTIVE SUMMARY

The EI Group, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of the 0.77 acre vacant tract of land located about 0.25 miles north of the intersection of Riverbluff Avenue and Alabama Street in Redlands, San Bernardino County, California (the Site). Any exceptions to, or deletions from, this practice are described in **Section 7.0** of this report.

This assessment has revealed no evidence of *current or historical recognized environmental conditions* on the Site.

The Site is not included on any of the Federal regulatory databases reviewed.

The City of Redlands historically operated the California Street Landfill at 1950 Nevada Avenue, west and cross/downgradient of the Site. That facility is listed on the State leaking underground storage tank (LUST) database with a case status of "closed". This listing is a *historical recognized environmental condition* in connection with the Site; however, due to its distance and cross-gradient location, it is not considered a current environmental impairment for the Site.

Norton Air Force Base, now San Bernardino International Airport, located approximately 0.5 miles north and west of the Site, appears on the Federal National Priorities List (NPL) and is now closed. The listing is due to regional groundwater contamination by volatile organic compounds associated with historical operations at the Air Force Base. This listing is a *historical recognized environmental condition* in connection with the Site; however, but to its distance and environmental regulatory status, it is not considered a current environmental impairment for the Site.

1.0 INTRODUCTION

The EI Group, Inc. (EI) was retained by the Legal Department of McLane Company, Inc. (Client or User) to complete a Phase I Environmental Site Assessment (ESA) of the 0.77 acre vacant tract of land located about 0.25 miles north of the intersection of Riverbluff Avenue and Alabama Street in Redlands, San Bernardino County, California (the Site). The Phase I ESA was performed in general accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-05 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The scope of services for this Phase I ESA is contained in our September 14, 2011, proposal as authorized by Client on September 16, 2011.

1.1 PURPOSE

The purpose of a Phase I ESA is to identify *recognized environmental conditions*[1] (REC) in connection with a property, and to permit the user to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner or bona fide prospective purchaser* limitations on *Comprehensive Environmental Response, Compensation and Liability Act* (CERCLA) liability (collectively referred to as *landowner liability protections* or *LLPs*).

The Phase I ESA may also be used to qualitatively assess the business environmental risk associated with acquisition of a property; however, such an assessment may necessitate investigation beyond the scope of the ASTM E 1527-05 Standard Practice.

1.2 SCOPE OF SERVICES

The scope of services authorized by Client for this Phase I ESA included:

- A visual and physical reconnaissance of the Site;
- Observation of adjoining properties from publicly accessible areas;
- Interviews with the user, past and present owners, operators and occupants of the Site as available;
- A review of publicly available, practically reviewable ASTM standard environmental record sources;
- A review of available and applicable building inspection, permitting, and other environmental records maintained by county and/or local agencies, and interviews with local agency representatives;

---

[1] **ASTM defines a *recognized environmental condition* as "...the presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.**

- A review of available previous environmental reports if provided by Client, aerial photographs, city directories, fire insurance maps, geologic maps, hydrogeologic maps, and United States Geological Survey (USGS) topographic maps; and

- An evaluation of the information obtained and preparation of this report to document our findings and the resulting conclusions and recommendations.

1.3 Significant Assumptions

For purposes of this assessment, EI assumes that information provided by others, including but not necessarily limited to, the User, past or present Owners, Key Site Manager, occupants, local and/or State government officials and environmental regulatory database providers is true and correct.

1.4 Limitations and Exceptions

The limitations of this Phase I ESA included:

- Preparation and review of a chain-of-title were not included in the scope of services for this project;

- ASTM "Non-Scope Considerations" such as asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high-voltage power lines were not included as part of this assessment.

1.5 Special Terms and Conditions

The services described in this report were performed in a manner consistent with generally accepted professional consulting principles and practices and in accordance with the practices and scope of service elements recommended by ASTM for a Phase I ESA. Our services were performed in accordance with our agreement with our Client. No other warranty, expressed or implied, is made.

1.6 User Reliance

This report has been prepared for, on behalf, and in the name of McLane Company, Inc. and cannot be relied upon by any other party without the prior written consent of EI. This report is an instrument of service prepared for the exclusive use of McLane Company, Inc., and may not be reproduced or distributed without the prior written authorization from The EI Group, Inc. and McLane Company, Inc. This report is solely for the use and information of our Client or as otherwise noted. Any unauthorized use of this report is strictly prohibited and we assume no liability for any such use.

2.0 SITE DESCRIPTION

2.1 LOCATION AND LEGAL DESCRIPTION

The Site is a 0.77 acre vacant tract of land located about 0.25 miles north of the intersection of Riverbluff Avenue and Alabama Street in Redlands, San Bernardino County, California, at latitude 34.089400 north, longitude 117.209700 west (see **Figure 1**). According to our interview with Mr. Donald Teunissen, the Site's owner, the Site consists of the following parcel with the following Assessor's Parcel Number (APN):

APN: 0167-391-06

A Parcel Map and a legal description for the Site provided by Client are contained in **Appendix B**.

2.2 SITE AND VICINITY CHARACTERISTICS

The Site is located in an area of Redlands generally characterized by agricultural, commercial and municipal uses.

2.3 CURRENT SITE USE AND IMPROVEMENTS

The Site is currently vacant, and is littered with old tires, used lumber, agricultural debris and other general trash scattered about the Site (see **Figure 2**). In the center of the Site, EI observed a wooden shed containing dilapidated furniture.

Aside from the shed, no evidence of past permanent structures was visible. Mr. Teunissen also stated that no structure was present when he acquired the land from the city of Redlands in 1995 or 1996.

EI observed a concrete valve box, which Mr. Teunissen said was a groundwater monitoring well used by the City to monitor area groundwater quality in the immediate vicinity of the nearby landfill. Remnants of a former chain link fence were present in random locations around the perimeter of the Site.

2.4 ADJOINING PROPERTY USE

EI observed the following adjacent property uses from the Site and/or publicly accessible rights-of-way.

North
Santa Ana River

West
City of Redlands California Street Landfill. According to EI's 2010 telephone interview with the City of Redlands Public Works Department's Solid Waste Manager Mr. Gary Van Dorst, the landfill has been capped and covered with vegetation since 1970.

East
Prologis distribution facility, treated water retention ponds and a large vacant field

South
Vacant field and Palmetto Avenue

Northwest
City of Redlands Water Reclamation facility as well as the City's Class III Landfill for non hazardous solid wastes.

3.0 USER PROVIDED INFORMATION

A Phase I Environmental Site Assessment User Questionnaire (ESA Questionnaire) was submitted to the Client (User), and was completed by Client and returned to EI (**Appendix C**). The following is a summary of information provided.

3.1 TITLE RECORDS

Review of a chain-of-title for the Site was not requested by Client.

3.2 ENVIRONMENTAL LIENS / ACTIVITY AND USE LIMITATIONS

Review of environmental liens for the Site was not requested by Client. The Client was not aware of any liens or activity and use limitations (AUL) for the Site.

3.3 SPECIALIZED KNOWLEDGE

The Client did not report any specialized knowledge of the Site.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The Client did not report any commonly known or reasonably ascertainable information regarding the Site that would help the Environmental Professional identify conditions indicative of releases or threatened releases of petroleum products or hazardous materials at the Site.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The User of the report indicated that the purchase price for the Site is consistent with the fair market value.

3.6 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

The Client identified Mr. Donald Teunissen as the current owner.

3.7 REASON FOR PERFORMING PHASE I ESA

The Client indicated that the Phase I ESA was requested in support of its environmental due diligence in association with a contemplated real estate transaction.

3.8 PREVIOUS REPORTS

The user provided the following previous environmental reports, pertaining to an adjoining site, for EI's review.

Phase I Environmental Site Assessment Report, Teunissen Property; LFR, Inc., 2006

The LFR report did not identify evidence of *recognized environmental conditions* at the Site. Observations and recommendations presented in the report include the following.

- Numerous 55 gallon and smaller drums were located on the Site at the time of LFR's Site reconnaissance, as were several pieces farm equipment and old

vehicles. LFR recommended that these items be removed from the Site and properly disposed.

- At least two septic systems were located on the Site.
- LFR reported the possible presence of an abandoned fuel UST on Site and recommended proper removal of it in accordance with applicable regulations.
- LFR reported the potential presence of asbestos-containing materials (ACMs) and lead-based paint (LBP) in remaining structures on the Site should be removed in accordance with applicable regulations.
- LFR recommended that development activities on the western half of the Site account for the potential presence of subsurface features such as irrigation lines.

Phase I Environmental Site Assessment Report, Fainbarg and Perricone Parcels; Nova Consultants, Inc.; 2006

Nova Consultants (Nova) did not identify evidence of *recognized environmental conditions* at the Site. Observations and recommendations presented in the report include the following.

- Site grading operations may encounter septic tanks associated with a small farmhouse located along the eastern boundary of parcel 24.
- Historic operations at Norton Air Force Base, located approximately one mile northwest of the Site, have contaminated groundwater beneath the Site with chlorinated solvents. The groundwater contaminant plume extends southwesterly from the Site.
- Regional groundwater contamination is present from agricultural drainage, urban runoff, septic systems, sewer collection systems, etc.
- The Grant Sewage Disposal ponds are located approximately 0.25 miles north of the Site. The presence of the facility could represent a concern for future development of the Site if sensitive receptors are part of the planned development.
- Two 150-gallon above ground storage tanks were observed near the southeastern corner of Parcel 34.
- Pole-mounted transformers located along Palmetto Avenue may contain polychlorinated bi-phenyls (PCBs) due to the age of property.
- Pesticides, fertilizers, and herbicides were probably historically used at the Site.

- Nova recommended proper removal and disposal of demolition debris and household trash located on the Sit

- Nova noted the possibility of small USTs on Site due to diesel powered wind generators, and that the USTs may require removal. Similarly, smudge pots observed at the Site will also require proper removal.

- Nova also noted that Site grading operations may encounter irrigation piping and associated appurtenances.

- Nova recommended that two groundwater wells located near the southeastern corner of Parcel 34 will require proper plugging and abandonment.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

EI obtained information for the Site from the following local, State and Federal sources.

4.1.1 Local Sources

EI contacted the following local agencies for information about the Site. Records of Communication with the following City of Redlands representatives are presented in **Appendix D**.

Engineering Department

According to Mr. John Morales of the City of Redlands Engineering Department, records indicate that a treated water overflow pipe that transmits the water to the retention ponds on the east side of Alabama Street is located beneath the Site. Mr. Morales also reported the potential that a sewer pipe is located beneath the Site.

Joint Lab

According to Ms. Rebecca Schwartz of the City of Redlands Joint Lab, there is no actively monitored well on the Site and she is not aware of any information regarding the "monitoring well" described by the Owner, Mr. Teunissen.

4.1.2 State and Tribal Sources

A review of State and Tribal regulatory files for facilities of environmental concern in the vicinity of the Site was performed by EDR, a private regulatory database research firm. A copy of the EDR report summarizing the results of the database review is presented as **Appendix E**.

SUMMARY OF STATE AND TRIBAL AGENCY DATABASE FINDINGS			
REGULATORY DATABASE	MINIMUM SEARCH DISTANCE	SITE LISTED	TOTAL LISTED
State Hazardous Waste Sites (STATE)	1 mile	No	
Solid Waste Disposal/Landfill Sites (SWL)	½ mile	No	2
Leaking Underground Storage Tank Sites (LUST)	½ mile	No	
Registered Underground/Aboveground Storage Tank Sites (UST/AST)	Property & Adjoining	Yes	1
Spills Cases (OCP)	Property & Adjoining	No	

SUMMARY OF STATE AND TRIBAL AGENCY DATABASE FINDINGS			
REGULATORY DATABASE	MINIMUM SEARCH DISTANCE	SITE LISTED	TOTAL LISTED
Activity or Use Limitations (AUL)	½ mile	No	
Voluntary Cleanup Sites (VCP)	½ mile	No	
Brownfield Sites	½ mile	No	
San Bernardino County Permits	¼-mile	No	5

Site

The State UST database lists one UST registered for the Site as AG-TEUNISSEN AGRICULTURAL 9092 ALABAMA ST. A review of prior Phase I ESA reports completed for the adjacent site in 2006 indicate that the UST was removed in 2001 and a "no further action" letter was issued by the San Bernardino County Fire Department, Hazardous Materials Division (HMD) on March 16, 2001. Site owner representative Mr. Tim Howard reported that during the excavation of citrus trees and their associated root systems on the property, no additional USTs were discovered at the Site.

Surrounding Properties

A review of the State LUST database revealed one LUST registered to the California Street Landfill. The release was remediated and the case "closed" in 1995. The release was gasoline that penetrated the soil only, with no groundwater contact. This location is topographically downgradient from the Site. This location was an "orphan" site on the EDR report, and was therefore not plotted on the radius map. A supplemental report from EDR for this facility is included in **Appendix E**.

A review of the Solid Waste Facility/Landfill Sites (SWF/LF) list indicates that there are two SWF/LF facilities within approximately 0.5 miles of the target Site.

One, HASKELL CO. INDUSTRIAL COMPOST 2130 NEVADA AVENUE W [*sic*], is within 0.5 miles of the Site in a topographically downgradient position. This facility appears to be a proposed location for composting of food waste, green materials, biosolids and wood waste. The listing does not provide any other relevant information.

The second, CALIFORNIA STREET LANDFILL 2151 NEVADA STREET [*sic*], is located within 0.25 miles of the Site in a topographically downgradient position. This facility is listed as an active solid waste landfill that accepts construction/demolition debris, mixed municipal waste, biosolids and other designated wastes. The property comprises approximately 115 acres. Financial assurance status is listed as

"Adequate", with closure planned for the year 2042. The listing does not provide any information that indicates environmental violations associated with this property.

A review of the Waste Management Unit Database System (WMUDS/SWAT) list, revealed one WMUDS/SWAT facility within approximately 0.5 miles of the Site. LANDFILL, CALIFORNIA STREET 2151 NEVADA ST [*sic*] is the same facility mentioned above. This property is listed as an active Solid Waste Class III landfill that accepts non-hazardous solid wastes. Other than a general statement that this class of landfill can cause a major threat to groundwater if violations occur, there is no information indicating any environmental issues related to the property.

4.1.3 Federal Sources

A review of Federal regulatory files for facilities of environmental concern in the vicinity of the Site was performed by EDR, a private regulatory database research firm. A copy of the EDR report summarizing the results of the review is presented as **Appendix F**.

SUMMARY OF FEDERAL AGENCY DATABASE FINDINGS			
REGULATORY DATABASE	MINIMUM SEARCH DISTANCE	SITE LISTED	TOTAL LISTED
National Priorities List (NPL)	1 mile	No	1
Delisted NPL	½ mile	No	
Comprehensive Environmental Response, Cleanup, and Liability Information System (CERCLIS) list	½ mile	No	
No Further Remedial Action Planned sites removed from CERCLIS (CERCLIS NFRAP) list	½ mile	No	
Resource Conservation and Recovery Act (RCRA) Corrective Action (CORRACTS) list	1 mile	No	
RCRA Treatment, Storage and Disposal (TSD) Facility list	½ mile	No	
RCRA Generators List	Property and Adjoining	No	
Institutional Control (IC) and Engineering Control (EC) list	Property	No	
Emergency Response Notification System (ERNS)	Property	No	
Department of Defense (DOD)	1 miles	No	1

SUMMARY OF FEDERAL AGENCY DATABASE FINDINGS			
REGULATORY DATABASE	MINIMUM SEARCH DISTANCE	SITE LISTED	TOTAL LISTED
Record of Decision (ROD)	1 mile	No	1

Site

The Site is not included in any of the Federal regulatory databases reviewed.

Adjoining Properties

No adjoining properties are included in any of the Federal regulatory databases reviewed.

Surrounding Properties

A review of the NPL list has revealed one NPL facility within 0.5 miles of the Site. USAF Norton Air Force Base located at I-10/US HWY 395 is approximately 0.25 miles of the Site in a topographically cross to upgradient position.

The EDR report includes extensive data regarding this facility. A summary of information for the facility includes the following.

"Norton Air Force Base (Norton), now San Bernardino International Airport, covers approximately 2,036 acres 58 miles east of Los Angeles near the City of San Bernardino, San Bernardino County, California. It is in a low-lying alluvial plain surrounded on the north and east by the San Bernardino Mountain Range. The base began operations in 1942 and has served as a major overhaul center for jet engines and the general repair of aircraft. Since 1962, the facility has served as a Military Airlift Command Base. In addition, Norton formerly had the responsibility for providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. Past hazardous waste management practices may have contributed to existing contamination problems throughout the base. The practices include burial of drums and other unspecified materials; disposal of waste oils, solvents and paint residues into landfills, unlined pits, ponds, and drying beds; storage in leaking underground tanks, and spills of AVGAS, oils, solvents, PCBs, and acidic plating solutions. Industrial solvents have been used extensively on the base."

The EPA website was consulted for a summary of the current status of this property, as follows.

"The third 5-Year Review completed in September 2010 revealed no protectiveness issues. As of 2009, primary contaminants trichloroethene and cis-1,2-dichloroethene no longer exceed their maximum contaminant levels (MCLs) in groundwater. Although, due to the long term decline in regional groundwater levels, some

monitoring wells within the central base area went dry while monitoring results indicated levels above MCLs. EPA identified a concern about possible residual vadose zone contamination and the potential for groundwater contamination if groundwater levels return to historical levels. As a result, EPA, the Air Force and the State will work collaboratively to confirm that the performance of the remedy addresses the potential risk associated with this pathway. In late 2009 and early 2010, the Site 2 landfill cap was modified from a vegetative cap to an asphalt cap for use as a vehicle parking and storage area."

Norton Air Force Base is listed on various other databases; a summary of them all is included in the NPL information above. The Department of Defense (i.e., United States Air Force) is well established as the Potentially Responsible Party for the soil and groundwater contamination. As a result of the regional groundwater issues, there may be increased administrative and/or engineering considerations for grading, trenching, or other subsurface work at the Site.

A review of the RCRA-SQG database indicates one RCRA-SQG listing within approximately 0.25 miles of the Site. HOME DEPOT USA HD5087 9377 ALABAMA ST [*sic*] is located 0.100 miles from the Site. No violations are listed for this property.

4.2 PHYSICAL SETTING SOURCES

EI reviewed the following physical setting sources for information related to the Site and surrounding area.

4.2.1 United State Geologic Survey Topographic Map

TOPOGRAPHIC INFORMATION FOR SITE AND SURROUNDING AREA		SOURCE(S)
Site Elevation	1,201 ft. above sea level	*USGS 7.5-minute Redlands, California, Quadrangle, 1967, photorevised 1988*
Surface Runoff/Topographic Gradient	General NW	
Nearest Surface Water	Santa Ana River, <0.25 miles north	

4.2.2 Soils

SOIL CHARACTERISTICS FOR SITE		SOURCE(S)
Soil Type	HANFORD	The EDR Radius Map Report with GeoCheck

Description	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.	
SOIL CHARACTERISTICS FOR SITE		**SOURCE(S)**
Soil Type	TUJUNGA	The EDR Radius Map Report with GeoCheck
Description	Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.	
SOIL CHARACTERISTICS FOR SITE		**SOURCE(S)**
Soil Type	FLUVENTS	The EDR Radius Map Report with GeoCheck
Description	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.	

4.2.3 Geology

According to the information provided in the Phase I Environmental Site Assessments conducted in 2006, the Site is underlain by Holocene Age alluvial deposits from the Santa Ana River.

The general topography of the Site slopes gently to the west.

4.2.4 Hydrogeology

There is no naturally occurring surface water located on the Site. The Bunker Hill Hydrologic Basin aquifer system is located beneath the Site. According to Mr. Teunissen, one groundwater monitoring well is located in the southwest portion of the property. Ms. Rebecca Schwartz of the City of Redlands, however, is not aware of any active groundwater monitoring occurring at the Site. Groundwater in the underlying shallow aquifer is degraded from agricultural use in the area. According to the City of Redlands Department of Public Works, Solid Waste Management Division, water supplied by the City of Redlands is pumped from deep aquifers that are not contaminated.

4.3 SITE AND ADJOINING PROPERTY HISTORICAL USE

4.3.1 Historic Aerial Photographs

EI obtained aerial photography of the Site area dated 1930, 1938, 1953, 1966, 1977, 1989, 1994, 2002, and 2005 from EDR. The results of our review of these photographs are presented below. Copies of the 1930 and 2005 aerial photographs are provided in **Appendix F**.

SUMMARY OF AERIAL PHOTOGRAPH REVIEW
1930 **Scale 1" = 666'**
Site: The Site appears vacant, with likely native/invasive vegetation.
Surrounding Area: To the north are trees, beyond which is the Santa Ana River. The surrounding area to the south, east, and west contains citrus groves, some containing likely housing structures.
1938 **Scale 1" = 555'**
Site: The Site appears unchanged from the 1930 aerial photograph.
Surrounding Area: The surrounding area appears unchanged from the 1930 aerial photograph.
1953 **Scale 1" = 555'**
Site: The Site appears unchanged from the 1938 aerial photograph.
Surrounding Area: The surrounding area appears unchanged from the 1930 aerial photograph.
1966 **Scale 1" = 555'**
Site: The Site appears unchanged from the 1953 aerial photograph.
Surrounding Area: North and west of the Site is a landfill, beyond which is the Santa Ana River. To the west is a sewage treatment plant. The surrounding areas to the south, east, and west contain citrus groves. Property to the south appears to contain barns/greenhouse..
1977 **Scale 1" = 555'**
Site: The Site appears unchanged from the 1966 aerial photograph.

SUMMARY OF AERIAL PHOTOGRAPH REVIEW
Surrounding Area: The surrounding areas appear mostly unchanged from the 1966 aerial photograph.
1989 **Scale 1" = 666'**
Site: The Site appears unchanged from the 1977 aerial photograph.
Surrounding Area: The surrounding areas appear mostly unchanged from the 1977 aerial photograph.
1994 **Scale 1" = 666'**
Site: The Site appears unchanged from the 1989 aerial photograph.
Surrounding Area: The surrounding areas appear mostly unchanged from the 1989 aerial photograph.
2002 **Scale 1" = 666'**
Site: The Site appears unchanged from the 1994 aerial photograph.
Surrounding Area: The surrounding areas appear mostly unchanged from the 1994 aerial photograph.
2005 **Scale 1" = 666'**
Site: The Site appears unchanged from the 2002 aerial photograph.
Surrounding Area: The property immediately south of the Site appears fallow. The rest of the surrounding areas appear mostly unchanged from the 2002 aerial photograph.

4.3.2 Historic Topographic Maps

An historic topographic map was obtained from the U.S. Geological Survey website (see **Figure 1**). The following is a summary of the historical topographic map review.

1988	SUMMARY OF HISTORICAL TOPOGRAPHIC MAPS
USGS 7.5-minute Redlands, California,	**Site:** No distinguishing landmarks are depicted on the Site.

1988	SUMMARY OF HISTORICAL TOPOGRAPHIC MAPS
Quadrangle, 1967, photorevised 1988	**Surrounding Area:** Surrounding areas to the east, west, and south show extensive citrus groves. To the East are the city landfill and the Grant sewage treatment facility To the north is the Santa Ana River. Further northwest is Norton Air Force Base, now San Bernardino International Airport.

4.3.3 City Directories

According to the EDR City Directory search, the Site and the surrounding area were not associated with any business or address that may have had listing in the local telephone directory (see **Appendix I**)

4.3.4 Fire Insurance Maps

Sanborn Fire Insurance Maps were requested from EDR. According to EDR, no Sanborn maps were available for the Site area (see **Appendix G**).

Aerial photographs and interviews confirm the use of the Site for agriculture (i.e., citrus orchards) from at least 1930.

5.0 SITE RECONNAISSANCE

The purpose of EI's Site Reconnaissance was to visually and physically observe uses and conditions that could result in the presence of hazardous materials or petroleum products on or beneath the Site. Mr. T.K. Kim, Associate Consultant, visited the Site on October 18, 2011. EI was accompanied by Mr. Donald Teunissen, the current owner of the Site, during the Site visit. Our observations were documented and pertinent features or areas of environmental concern were photographed and are referenced in the text. Selected Site photographs are included in **Appendix H** and Site features are depicted in **Figure 2**. A description of each area assessed is presented below.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Site reconnaissance was performed by walking and observing accessible portions of the Site.

5.2 GENERAL SITE SETTING

The Site is vacant land located in the northwest part of Redlands in an area characterized by agricultural, commercial and municipal uses.

5.3 PETROLEUM PRODUCTS/HAZARDOUS SUBSTANCES IN CONNECTION WITH IDENTIFIED USES

The Site is currently vacant. According to Mr. Teunissen, the Site was vacant land when he acquired it from the City of Redlands in 1995 or 1996.

5.4 DRAINAGE DISCHARGES

Storm water is discharged from the Site via sheet flow to the north.

5.5 EXTERIOR OBSERVATIONS

The Site is currently vacant and is littered with old tires, used lumber, agricultural debris and other general trash scattered around the Site. Mr. Teunissen also stated that no structures were present when he acquired the land from the City of Redlands in 1995/1996.

EI observed a concrete valve box at the Site, which Mr. Teunissen said was a groundwater monitoring well operated by the city. Remnants of a former chain link fence were present in random locations around the perimeter of the Site.

Item or Feature		Observed
Storage Tanks	Aboveground (AST)	No
	Underground (UST)	No
Oil/Water Separators		No

Item or Feature	Observed
Odors	No
Pools of Liquid	No
Drums/ Hazardous Substance and Petroleum Products Containers	No
Unidentified Substance Containers	No
PCB Equipment	No
Pits, Ponds or Lagoons	No
Stained Soil or Pavement	No
Stressed Vegetation	No
Solid Waste	Yes
Waste Water	No
Wells	Yes
Septic Systems	No
Other	No

PCB Equipment

While no PCB containing equipment was observed on the Site, some pole-mounted transformers were located near the Site, adjacent to the street. The transformers were not labeled regarding their PCB content. No staining on the transformers or the ground around the poles was observed.

Solid Waste

Solid waste was observed throughout the Site, primarily in the southwest portion of the property. This waste includes agricultural wastes, old tires, used clothing, empty containers, and furniture.

Wells

The EDR report makes no mention of a monitoring well on the Site. The current Owner, Mr. Teunissen, indicated a monitor well is located on the center portion of the Site. According Mr. Teunissen, it is in use by the City of Redlands to monitor shallow groundwater in the vicinity of the closed Landfill, located west-northwest of the Site.

5.6 INTERIOR OBSERVATIONS

The property is an approximately 0.77 acre vacant tract with no permanent structures. In the center of the Site, EI observed a wooden shed containing dilapidated furniture. Aside from the shed, no evidence of a permanent structure was visible.

6.0 INTERVIEWS

EI interviewed the following people as part of this assessment.

6.1 INTERVIEW WITH OWNER'S Representative

EI conducted an interview with Mr. Donald Teunissen, the current owner of the Site, to obtain information regarding current Site use and history. Mr. Teunissen confirmed that the APN parcel comprising the Site is 0167-091-06.

Mr. Teunissen said he believed that the Site had always been vacant. Mr. Teunissen stated that he acquired the property in a land swap for the parcel he owned west of the Site in 1995/1996. Mr. Teunissen was not aware of any releases on the Site or in its vicinity.

6.2 INTERVIEW WITH KEY SITE MANAGER

A Key Site Manager was not identified; therefore, no interview was conducted.

6.3 INTERVIEW WITH OCCUPANTS

The Site is currently vacant; therefore, no occupants were interviewed.

6.4 INTERVIEWS WITH LOCAL AGENCIES

Information from interviews with local agency officials is presented in Section 4.1.1.

6.5 INTERVIEWS WITH OTHERS

At the Client's request, EI did not interview any other persons as part of this assessment.

7.0 FINDINGS AND OPINION

The findings of this assessment, and EI's opinion regarding their potential impact on the Site, are summarized below.

7.1 HISTORICAL OR CURRENT *RECOGNIZED ENVIRONMENTAL CONDITIONS*

No visible or physical evidence of a current or historical release of hazardous substances or petroleum products at the Site was observed during EI's reconnaissance of the Site. The Site is not included on any of the Federal regulatory databases reviewed.

The City of Redlands historically operated the California Street Landfill at 1950 Nevada Avenue, west and cross/downgradient of the Site. That facility is listed on the State leaking underground storage tank (LUST) database with a case status of "closed". This listing is a *historical recognized environmental condition* in connection with the Site; however, due to its distance and cross-gradient location, it is not considered an environmental impairment for the Site.

Norton Air Force Base, now San Bernardino International Airport, located approximately 0.5 miles north and west of the Site, appears on the Federal National Priorities List (NPL) and is now closed. The listing is due to regional groundwater contamination by volatile organic compounds associated with historical operations at the base. This listing is a *historical recognized environmental condition* in connection with the Site; however, due to its distance and environmental regulatory status, it is not considered an environmental impairment for the Site.

7.2 *DE MINIMIS* CONDITIONS

EI did not observe any *de minimis* condition associated with the Site.

7.3 OPINION

Based on the findings of this assessment, it is EI's opinion that no historic or current *recognized environmental conditions* exist on Site. However, the presence of a regional volatile organic compound groundwater plume from Norton Air Force Base has the potential to affect groundwater beneath the Site.

7.4 DATA GAPS

No data gaps were identified during this assessment which would affect the Environmental Professional's ability to identify recognized environmental conditions in connection with the Site.

7.5 DEVIATIONS

There were no deviations from the ASTM standard practice during this assessment.

7.6 ADDITIONAL SERVICES

No additional services were authorized for this assessment.

8.0 CONCLUSIONS

The EI Group, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of the approximately one-acre vacant tract located at the northwest corner of the intersection of Palmetto Avenue and Alabama Street in Redlands, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in **Section 7.0** of this report.

This assessment has revealed no readily visible or physical evidence of current *recognized environmental conditions* in connection with the Site.

This assessment has identified two *historical recognized environmental conditions* in connection with the Site, as follows.

- The City of Redlands historically operated the California Street Landfill at 1950 Nevada Avenue, west and cross/downgradient of the Site. That facility is listed on the State leaking underground storage tank (LUST) database with a case status of "closed". This listing is a *historical recognized environmental condition* in connection with the Site.

- Norton Air Force Base, now San Bernardino International Airport, located approximately 0.5 miles north and west of the Site, appears on the Federal National Priorities List (NPL) and is now closed. The listing is due to regional groundwater contamination by volatile organic compounds associated with historical operations at the base. This listing is a *historical recognized environmental condition* in connection with the Site.

EI did not observe any *de minimis* condition associated with the Site.

RESUMES

Larry G. Michel

SENIOR ENVIRONMENTAL SCIENTIST
DIRECTOR, TEXAS OPERATIONS

Professional Summary

Education & Training
B.S., Biology, Southwest Texas State University
M.S., Evolutionary Ecology, Angelo State University

Mr. Michel is EI's Director of Texas Operations and Senior Environmental Scientist for the Dallas, Texas, Branch of The EI Group. His career accomplishments include successful client development of and Senior Consultant to Fortune 100 and 500 Companies with experience on projects driven by CERCLA, RCRA, CWAA and TCEQ regulations. He is a seasoned Environmental Professional with over 30 years professional experience in Texas and the United States on projects related to: ASTM E 1527 Phase I ESAs; Phase II subsurface assessments; Environmental Impact Statements; wetland assessment and permitting; asbestos assessment and abatement; mold assessment and abatement; ASTM E 2018 Property Condition Assessments; underground/aboveground storage tank assessment/remediation; Spill Prevention Control and Countermeasure (SPCC) Plans; and, Third Party project review.

SPECIFIC PROJECT EXPERIENCE

AMERICAN AIRLINES
National Project Manager – Comprehensive Regulatory Compliance
Sole author of the successful proposal and National Program Manager for a comprehensive program of regulatory compliance for American Airlines. This national project involved assessment and remediation of above and underground storage tanks, large fuel depots/systems, SARA Title III reporting and asbestos surveys and abatement oversight at 22 of the nation's largest airports.

AUTONATION, INC., LEGAL DEPARTMENT
National Project Manager – Environmental Assessment, Remediation and Regulatory Compliance
Primary Client Liaison and Senior Project Manager for outside counsel to AutoNation, Inc., and Republic Services, Inc. Phase I Due Diligence Assessments, Phase II Site Investigations, UST removals, hydraulic lift assessments/removals, SPCC Plans, and wetlands assessments at automobile dealerships, waste transfer stations and municipal solid waste landfills.

J.C. PENNEY CORPORATION, INC.
National Project Manager– Underground Storage Tank Compliance
National Coordinator of a program for J.C. Penney Company which involved investigation and remediation of former tire, battery and accessory (TBA) facilities. Areas of environmental concern included USTs, used battery storage, waste oil tanks and hydraulic lifts.

J.C. PENNEY CORPORATION, INC.
National Program Manager – Asbestos Assessment and Abatement
National Program Manager for JC Penney Corporation, Inc.'s national program of asbestos assessment and abatement at over 400 retail stores in 9 States.

HOME DEPOT USA, INC.
National Project Manager – Wetlands Assessment and Permitting
Provided oversight and regulatory agency liaison for Home Depot USA's development of wetlands in Texas.

CARDINAL CAPITAL PARTNERS, INC.

National Program Coordinator – Comprehensive Environmental Due Diligence

Program Coordinator of independent, third party reviews of Phase I and II Environmental Site Assessments for Cardinal Capital Partners' sale-lease back transactions at over 400 sites nationally and internationally. Value of these transactions ranged from less than 1 million to 1.1 billion dollars.

VANGUARD CAR RENTAL USA, INC.

National Client Liaison – Environmental Assessment and Remediation

National Client Liaison for outside counsel to Vanguard Car Rental USA, Inc. (formerly Alamo and National Rent-A-Car) for projects involving: underground storage tank assessment, remediation, removal and closure; mold assessment and remediation; and Phase I Environmental Site Assessments.

STAUBACH RETAIL SERVICES

Client Manager – Environmental Due Diligence

Client Manager for Staubach Retail Services for projects including Phase I Environmental Site Assessments, asbestos surveys and underground storage tank assessment/remediation.

AEROSPACE VEHICLE PARTS MANUFACTURER

Project Manager – Site Assessment and Comprehensive Regulatory Compliance

Coordinated comprehensive program of surface and subsurface site investigation, regulatory agency negotiation, air quality monitoring and permitting and environmental regulatory compliance for an aerospace vehicle parts manufacturing facility in northwest Texas. Primary facility operations were chemical milling with strong acids or bases, chrome plating, anodizing and laser etching. Contaminants of concern included strong acids, metals in solution (e.g., chrome, nickel, etc) and phosgene gas (nerve agent).

CERAMIC TILE PLANT

Project Manager – Site Assessment, Remediation and Closure

Directed the site investigation, remediation and partial on-site closure of a ceramic tile facility in northeast Texas. Primary focus was lead (Pb) contaminated tile glazes in waste tile piles, their impact on a nearby intermittent steam, shallow groundwater and adjacent landowners/properties.

ROCKWELL INTERNATIONAL CORPORATION

National Program Manager – Environmental Assessment and Remediation

Program Manager and Lead Consultant for assessment and/or remediation of Rockwell International Corporation facilities in the United States, Puerto Rico and Mexico.

USEPA REGION VI

Team Leader – Field Investigation Team (FIT)

Team Leader for investigation and reporting of hazardous waste sites in Texas, New Mexico, Oklahoma, and Louisiana under RCRA and CERCLA as contractor to USEPA, Region VI.

PHILLIPS URANIUM CORPORATION

Environmental Analyst – Environmental Assessment and Monitoring

Conducted baseline assessment and monitoring programs for air, surface water, groundwater and radiological parameters in support of applications for State and Federal permits required to operate a deep subsurface uranium mine for the Energy and Minerals Division of Phillips Petroleum Company near Grants,
New Mexico. Authored reclamation plans for surface biota disturbed or destroyed by exploration activities. Prepared SPCC plans for entire mining support facilities.

Project Manager – Environmental Due Diligence
Coordinated the preliminary site assessment of commercial/industrial real estate properties at over 300 sites in Texas and the United States.

Program Manager – Asbestos Assessment
Program Manager for asbestos surveys of 100 Bank of America sites on behalf of a national property management firm.

Susan L. Mazzarella, LEED AP

Regional Sales Manager / Principal Consultant

Summary of Experience

Ms. Mazzarella has over 15 years of experience in the environmental, health, safety and sustainability (EHS&S) field, including sustainable building assessments and planning, compliance auditing and management, EHS management systems implementation, sustainability, on-site support services, regulatory program review, preparation, and implementation, and environmental site assessments. While working at EORM, she has focused on developing and implementing proactive EHS&S programs, analyzing regulatory requirements to achieve compliance in an efficient and cost-effective manner, and utilizing creative methods to promote and institute EHS&S policies and programs.

Professional Certifications and Memberships

Certificate in Environmental Auditing — University of California, Irvine

Paralegal Certificate in Environmental, Real Estate and Corporate Law — University of San Diego

Certificate 44843 — ISO 14001 Lead Auditor Certified (ANSI/RAB)

LEED Accredited Professional

Education

BA Business Administrative Studies — University of California, Riverside

Professional Experience

Environmental and Occupational Risk Management, Inc.

Regional Sales Manager — **October 2008 to Present**

Regional Manager — **January 2007 to December 2008**

Principal Consultant — **April 2005 to January 2007**

Senior EHS Consultant — **December 2000 to April 2005**

Ms. Mazzarella manages and provides outsource and project support to a variety of clients. Selected project experience includes:

- Conducting gap assessments, leading internal audits and developing environmental management systems programs (e.g., aspects identification and ranking procedure), as well as related procedures development (e.g. chemical and waste management) for customers striving for ISO 14001, OHSAS 18001, and RC 14001 certification.
- Leading multi-site, multi-disciplinary EHS compliance assessments and facility inspections to successfully assist clients in prioritization and management of compliance activities.
- Supporting sustainable building initiatives, including Leadership in Energy and Environmental Design (LEED) and High Performance Sustainable Buildings (HPSB).
- Developing strategies for achieving sustainability goals.
- Preparing and reviewing various environmental regulatory documents such as Hazardous Materials Management Plans, Biennial Reports, Hazardous Waste

Source Reduction Programs, DTSC Tiered Permitting Programs, SCAQMD Annual Update Forms and permits, TRI Form R reports, wastewater self-monitoring reports and permits, Storm Water Pollution Prevention Plans, Storm Water Management Plans, Emergency Response/Contingency Plans and Spill Prevention Control and Countermeasures (SPCC) Plans.

- Supporting air quality issues throughout California including:
  - Permitting – preparing new permits and permit modifications
  - Title V – auditing and successfully filing for Title V exemption
  - RECLAIM – preparing quarterly and annual submissions; purchasing/selling offset credits
  - Agency Inspections – supporting clients through SCAQMD inspections
  - Green House Gas Inventories – preparing GHG inventories for submission to The Climate Registry
  - Auditing – evaluating compliance with applicable rules, regulations and permit conditions
- Participating in development and implementation of health and safety programs such as hazard communication, injury and illness prevention, respiratory protection, lockout/tagout, and electrical safety.
- Facilitating strategic EHS planning sessions in which clients evaluate their short- and long-term EHS goals and objectives while establishing a roadmap to achieve desired targets.

Independent Consultant

January 2000 to December 2000

- Conducted a variety of EHS compliance audits for industrial clients including semi-conductor device manufacturers, pharmaceutical research and development facilities, brewing and related packaging operations, food processing plants, and other industrial entities.
- Provided on-site EHS support services for a pharmaceutical research and development company which included establishing and implementing procedures related to hazardous waste management, MSDS management, Chemical Hygiene Plan, Injury and Illness Prevention Plan, respiratory protection, and chemical inventory tracking.
- Authored and reviewed compliance guides describing step-by-step regulatory requirements for various EHS topics.
- Prepared written evaluations of fundamental differences between state and federal regulations for a variety of environmental topics.
- Assessed written programs, procedures, and overall implementation of various OSHA-required programs for a complex semi-conductor manufacturer.
- Researched applicability and potential operational impacts of several proposed SCAQMD rules to industries throughout the South Coast Air Basin.
- Assisted in several SCAQMD permitting projects for new and existing facilities.

Environmental Resources Management, Irvine, CA

Staff - Senior II Scientist **April 1993 to December 1999**

- Managed and conducted EHS due diligence audits for various national and international firms (including semi-conductor, real estate development, property

management, legal, food and beverage, aerospace, electronics, pharmaceutical, and oil and gas industries) throughout the United States and Mexico.

- Managed and conducted numerous ASTM Standard Phase I Environmental Site Assessments throughout the United States and other countries ranging in complexity from vacant lots to large multi-site industrial facilities.
- Oversaw numerous remedial site investigation projects involving staff personnel and various subcontractors.
- Managed team efforts to develop and maintain federal- and state-level environmental and OSHA compliance guides designed for client Internet access.
- Conducted ISO 14001 environmental management systems assessments for several manufacturing plants and provided recommendations for improving environmental management systems integration with standard business practices.
- Interacted extensively on clients' behalf with local, state, and federal agencies regarding permitting and regulatory issues and provided interpretive guidance to clients.
- Assessed current property conditions for major environmental insurance carrier through extensive review of existing reports and other documentation.

USER QUESTIONNAIRE

PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA) USER QUESTIONNAIRE

Facility Name and Address:	
Approximately 1-acre Vacant Tract, City of Redlands, CA	
Reason for the Phase I ESA:	
Type of property:	Vacant Land
Type of transaction (sale, purchase, etc.):	Contemplated Purchase
Site Owner and Contact Information:	Donald Teunissen (909) 709-6214
Site Contact Name Telephone Number	Donald Teunissen (909) 709-6214
Property Legal Description (if available)	The land referred to in this ESA is situated in the City of Redlands, County of San Bernardino, State of California, and is described as follows: THAT PORTION OF LOT 8, BLOCK 71, RANCHO SAN BERNARDINO, LYING NORTH OF THE MEANDERING LINE OF THE BLUFF ON THE SOUTH SIDE OF THE SANTA ANA RIVER, IN THE CITY OF REDLANDS, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 7 OF MAPS, PAGE 2, OFFICIAL RECORDS OF SAID COUNTY DESCRIBED AS FOLLOWS: COMMENCING AT THE NORTHEAST CORNER OF SAID BLOCK 71, THENCE SOUTH 00°34'57" WEST, 1085.98 FEET; THENCE NORTH 89°10'16" WEST, 71.00 FEET TO THE TRUE POINT OF BEGINNING; THENCE NORTH 89°10'16" WEST, 230.63 FEET; THENCE NORTH 00°49'44" EAST, 146.00 FEET; THENCE SOUTH 89°10'16" EAST, 230.00 FEET; THENCE SOUTH 00°34'57" WEST, 146.00 FEET TO THE POINT OF BEGINNING. APN: 0167-391-06
Parcel Identification Number (PIN)	0167-391-06
All parties who will rely on the Phase I ESA:	McLane Suneast, Inc.

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user of this Phase I ESA* must provide the following information (if available) to the *environmental professional.* Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

	Yes	No
1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, state, or local law?		X
2. Are you aware of any activity use limitations, such as engineering controls (engineered caps, liners, treatment methods, etc.), land use restrictions, or institutional controls (administrative measures restricting groundwater use, construction, or property use, etc.) that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?		X
3. Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property so that you would have specialized knowledge of the chemicals or processes used by this type of business?		X
4a. Does the purchase price being paid for the subject property reasonably reflects the fair market value of the subject property?	X	

4b. If you conclude that there is a difference in fair market price, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?		X
5. Are you aware of any commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as a user,		X
5 (a) Do you know of the past uses of the property?		X
5 (b) Do you know of any specific chemicals that are present or were once present on the subject property?		X
5 (c) Do you know of spills or other chemical releases that have taken place at the subject property?		X
5 (d) Do you know of any environmental cleanups that have taken place at the subject property?		X
6. As the user of this ESA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?		X

If you answered "yes" to any of the questions (except 4a) above, please provide more detail below, or attach additional information to this document:

PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA)
OWNER QUESTIONNAIRE

The EI Group, Inc. (EI) has been retained to perform a Phase I Environmental Site Assessment (ESA) of your facility in support of our Client's Environmental Due Diligence prior to a contemplated real estate transaction. The Phase I ESA process will involve a Site visit, interviews with key personnel, a records review and preparation of a Phase I ESA Report. In accordance with the American Society for Testing and Materials Standard Practice E 1527-05 for Phase I ESAs, and in the interest of a thorough assessment, we are required to ask the following questions of the Owner or the Owner's representative. Please complete the following form and return a copy via e-mail (lmichel@ei1.com) or fax (972-758-1902) to Larry Michel, Director, Texas Operations, The EI Group, Inc. On behalf of EI and our Client, thank you for your assistance with, and prompt attention to, this request.

Client/Prospect::

Project Number:

Ms. Schwartz informed me that the only water near the Site that is actively being monitored is any water that may flow under the Site via overflow pipe to the percolating/retention ponds across Alabama Street. She knows of no active ground well being monitored at the Site. Nearest monitoring well to the Site is situated on the former landfill west of the Site, and is mostly being monitored for methane and no contamination originating from the landfill is noted.

TELEPHONE CONVERSATION RECORD

Date: 10/19/11

Time: 10:40am

Contact Name: John Morales, Engineering Department, City of Redlands

Number Called: 909-798-7

Recorded By: T.K. Kim

Client/Prospect:

Project Number:

Mr. Morales informed EI that a treated water discharge pipe, originating from the city waste water treatment center to the west, runs east-west orientation under the Site. He believe there also might be a sewer pipe, but cannot be certain without detailed investigation. Mr. Morales informed EI that there might be a groundwater well at the Site, but is not sure about monitoring activity and analytical results for the Well. He referred EI to Ms. Rebecca Schwartz of the City of Redlands Joint Lab for additional information.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 06/30/2011 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/4 - 1/2 (0.392 mi.)*	*0*	*8*

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/4 - 1/2 (0.392 mi.)*	*0*	*8*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/09/2011 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/4 - 1/2 (0.392 mi.)*	*0*	*8*

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/4 - 1/2 (0.392 mi.)*	*0*	*8*

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 03/16/2011 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/4 - 1/2 (0.392 mi.)*	*0*	*8*

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 03/16/2011 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*I-10 US HWY 395*	*NW 1/4 - 1/2 (0.392 mi.)*	*0*	*8*

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/22/2011 has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CALIFORNIA STREET LANDFILL	*2151 NEVADA STREET*	*WSW 1/4 - 1/2 (0.473 mi.)*	*A2*	*50*
HASKELL CO. INDUSTRIAL COMPOST	2130 NEVADA AVENUE	WSW 1/4 - 1/2 (0.476 mi.)	A4	76

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 08/09/2011 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AG-TEUNISSEN FARMING	9092 ALABAMA ST	SSE 0 - 1/8 (0.112 mi.)	1	49

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT: The Waste Management Unit Database System is used for program tracking and inventory of waste management units. The source is the State Water Resources Control Board.

A review of the WMUDS/SWAT list, as provided by EDR, and dated 04/01/2000 has revealed that there is 1 WMUDS/SWAT site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
LANDFILL,CALIFORNIA STREET	***2151 NEVADA ST***	***WSW 1/4 - 1/2 (0.473 mi.)***	***A3***	***51***

Other Ascertainable Records

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NORTON AIR FORCE BASE (CLOSED)		NNW 1/4 - 1/2 (0.371 mi.)	0	8

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 07/31/2011 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***I-10 US HWY 395***	***NW 1/4 - 1/2 (0.392 mi.)***	***0***	***8***

Event:	Date For Remedy Selection (CM Imposed)
Event date:	10/07/1994
Event:	Corrective Measures Design Approved
Event date:	10/07/1994
Event:	CMI Workplan Approved
Event date:	06/01/1995
Event:	Certification Of Remedy Completion Or Construction Completion
Event date:	01/01/1996
Event:	CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.
Event date:	06/18/1998
Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1-

USAF NORTON AFB (Continued) **1000417274**

it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 06/18/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 06/18/1998
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 06/18/1998
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 06/18/1998
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Summary Details:

Conditions at proposal October 15, 1984): Norton Air Force Base covers approximately 2,036 acres 58 miles east of Los Angeles near the City of San Bernardino, San Bernardino County, California. It is in a low-lying alluvial plain surroundedon the north and east by the San Bernardino Mountain Range. The base began operations in 1942 and has served as a major overhaul center for jet engines and the general repair of aircraft. Since 1962, the facility has served as a Military Airlift Command Base. In addition, Norton formerly had the responsibility for providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. Past ha ardous waste management practices may have contributed to existingcontamination problems throughout the base. The practices include burial of drums and other unspecified materials; disposal of waste oils, solvents, and paint residues into landfills, unlined pits, ponds, and drying beds; storage in leaking underground tanks; and spills of AVGAS, oils, solvents, PCBs, and acidic plating solutions. Industrial solvents have been used extensively on the base. Unknown quantities of spent solvents were disposed of in several base landfills.A well on the base has been contaminated with trichloroethylene TCE). The well water is currently being used in a blended system and is sampled quarterly to ensure that TCE is below the California State action level. The water is used by approximately ll,000 people who live and/or work on the base. Norton Air Force Base is participating in the Installation Restoration Program IRP), established in l978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Air Force has completed Phase I records search). Phase II remedial investigation) is underway. Status July 22, 1987): In November 1986, the California Regional Water Quality Control Board issued a Cleanup and Abatement Order requiring Norton to clean up one on-base area, the Industrial Waste Water Treatment Plant Sludge Drying Beds. Phase II-Stage 2 of the IRP was completed in December 1986. It focusedon characteri ation of the contamination at 18 on-base areas. More than 22 areas have been identified to date. Additional areas will be studied in Stage 3, scheduled to begin in the fall of 1987. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site isbeing placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 48 FR 40662).

Site Description: The Base Closure team has worked closely with the City of Riverside to ensure that controls are in place to protect the public from exposure to contamination. The Air Force constructed a groundwater extraction and treatment remedy in 1994 and is currently operating two pump and treat systems which have treated over 90 million gallons of contaminated groundwater to date. Approximately 325 lbs. of TCE have been removed from the groundwater. Additionally, a soil vapor extraction system is currently operating and 6,247 lbs. of TCE have been removed from the contamination source area. Since 1994, the Air Force has excavated approximately 40,000 cubic yards of contaminated soils from various locations on the base which were then treated and disposed of on-site, or transported to an off site disposal facility. The Air Force also closed numerous underground storage tanks and excavate and treated contaminated soil using bioremediation technology in 1996. An investigation of alleged radiological contamination was conducted and results showed that elevated levels of radionuclides in groundwater were caused by naturally occurring uranium. In 1996, the Air Force removed a waste line contaminated with radium paint residue and another industrial waste line. A JP-4 aircraft fuel system which was not contaminated will be salvaged for future use by the airport.In 1980, DOD issued a policy requiring identification of hazardous waste sites. In 1982, Norton issued the Phase I Records Search. In 1985, the site issued the Phase II Problem Confirmation Study. In June 1989, after various investigations, the Air Force signed the Norton AFB Federal Facility Agreement. In November 1990, Norton AFB began the Central Base Area (CBA) OU Groundwater Investigation to define the extent of the plume. In 1991, through a removal action, TCE-contaminated soil was treated onsite. In early 1993, the Air Force issued a draft RI, FS and proposed plan. In June 1992, the Air Force began a treatability test of the ground water pump and treat system. In 1993, Norton AFB issued the Final FS and Plan.The 2,003-acre Norton AFB is located in San Bernardino County, California (40th Congressional District), approximately 65 miles east of Los Angeles. The site is bounded by the Santa Ana River to the south, and other adjacent areas are used for residential,

USAF NORTON AFB (Continued) **1000417274**

industrial, and agricultural purposes. Operations at the site began in 1942, and the facility served as a major overhaul center for jet engines and the general repair of aircraft. The site formerly had the responsibility of providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. There are more than 20 areas of contamination on the base including two landfills, six discharge areas, four chemical pits, a fire training area, a fuel spill area, a polychlorinated biphenyl (PCB) spill area, a chemical spill area, two waste storage areas, an underground storage area, and a low-level radioactive waste burial site. Soil contaminants included PCBs, trichloroethylene (TCE), petroleum hydrocarbons, metals such as lead and polycyclic aromatic hydrocarbons. An off-site groundwater plume (TCE) has impacted several municipal drinking water wells. Norton AFB was closed by the Department of Defense in March 1994, based on the legislative requirements in the Base Realignment and Closure Act of 1990. Consistent with the reuse alternatives identified in the Final Environmental Impact Statement, the Base is being redeveloped as an airport with mixed non-aviation, light industrial land use. Norton Air Force Base is located in the city of San Bernardino, San Bernardino County, California, 55 miles east of Los Angeles and 60 miles west of Palm Springs. The main surface water features near the site are City Creek, Warm Creek, the Twin Creek flood control channel, and the Santa Ana River, which flows southwest along the southern base boundary. The aquifer system beneath the site is part of the Bunker Hill hydrologic basin. Drinking water is derived from the middle and lower water-bearing zones. The site is classified as residential and light industrial. Adjacent properties includes area of residences, light and heavy industry, and agriculture. The population of the county is 1,418,380. The site was activated in March 1942 as an engine repair center for Air Force, U. S. Navy, and private industry aircraft. The site became a Military Airlift Command base in 1966. In 1968, the Aerospace Audiovisual Services established its headquarters at the base. The site also provided airlift and sustenance capabilities for air and combat units world-wide. Solvents, specifically TCE, were used in servicing aircraft from 1940s to the early 1980s. Former waste disposal, handling, and discharge practices have resulted in the contamination of soil and the upper water-bearing zone of a drinking water aquifer. The base was officially added to the U.S. EPA National Priorities List (NPL) on July 22, 1987. The U.S. EPA, California Department of Toxic Substances Control (DTSC), and the U.S. Air Force signed an interagency agreement, known as the Norton AFB Federal Facility Agreement (FFA) on June 29, 1989, which governs the conduct of environmental investigation and cleanup activities. The Air Force, U.S. EPA, DTSC, and the Regional Water Quality Control Board (RWQCB) Santa Ana Region comprise the Base Realignment and Closure (BRAC) Cleanup Team (BCT), with the Air Force serving as lead agency. The base has been subdivided into six separate areas for purposes of investigation and description of base activities. Since closure and redevelopment of portions of the base, many streets have been renamed. -The Central Base Area (CBA), which reflects the western one-third of the former base, was the most developed portion of the base and included the majority of offices, warehouses, on-base housing, engineering yards, and aircraft repair facilities. -The former Ballistic Missile Organization (BMO) complex is located south of the CBA and across Mill Street. The former BMO complex has been deeded to the Inland Valley Development Agency and a portion is occupied by the Defense Finance and Accounting Service. -The airfield includes the runways, ramps, aircraft parking, and hangars used for aircraft repair. The airfield covers the eastern two-thirds of the former base. -The Northeast Base Area (NBA) is located north of the airfield and represents the portion of the base with the oldest buildings. The original aircraft hangars and repair facilities are located within the NBA, as well as the former base Landfill No. 2. -The Golf Course Area (GCA) is located south of the airfield and is the

USAF NORTON AFB (Continued) **1000417274**

current site of the Palm Meadows Golf Course. Prior to construction of the golf course, the GCA was used as a landfill (IRP Site 10), liquid waste disposal (IRP Site 1), a quartermaster's salvage yard, and chemical warfare training area, among other activities. -The former industrial waste treatment plant (IWTP) facility is located south of the GCA and was used for the treatment of liquid wastes generated as part of aircraft maintenance and repainting. Several investigations were conducted from 1982 to date. The 1982 to 1988 investigations resulted in identification of 22 Installation Restoration Program (IRP) sites. During closure of the base, additional records investigations resulted in identification of 73 AOCs. Contamination at the Small Arms Range (SAR) and the pipeline excavation at Building 752 was identified during cleanup actions performed at these sites. OU2: Site Specific Information IRP Site 1 - IRP Site 1 is in the GCA and was the location of former unlined lagoons used from 1950 to 1960 for the disposal of liquid waste generated during aircraft repair. During the 1960s, a portion of the golf course was constructed over the site without removing all industrial waste. The Remedial Investigation (RI) identified soils contaminated with paints, solvents, oil, fuels, and solids that had been washed into the industrial waste system. Chlorobenzene, 1,2-dichlorobenzene (DCB), and 1,4-DCB exceeded industrial PRGs. An Engineering Evaluation/Cost Analysis (EE/CA) identified removal of contaminated soil to a depth of approximately 30 feet below ground surface (bgs), backfilling with clean soil, and restoring the site as a portion of a fairway and green. A total of 20,325 tons of contaminated soil was excavated from an area of approximately 25,000 square feet, to the top of the perched-zone groundwater at a depth of approximately 29 feet bgs. The excavation was located next to a berm that supports the airfield perimeter road. Based on confirmation sampling results the contamination extended beneath the perimeter road. For technical and implementability reasons, the deep and lateral contamination was not removed. The area of affected soil left in place covers approximately 3,800 square feet. IRP Site 1 is part of the active golf course, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 2 - IRP Site 2 is located in the northeast corner of former Norton AFB and is the location of a former base landfill used between 1958 and 1980. Originally, it covered approximately 31 acres and was used for the disposal of general refuse, office waste, industrial waste, and industrial waste treatment plant (IWTP) sludge. Under CERCLA, the presumptive remedy for landfills is to leave waste in place and to provide an appropriate containment system. Under the presumptive remedy guidelines, various cover systems and associated gas control systems were evaluated in an EE/CA for IRP Site 2, and a natural soil cover was selected with an appropriate surface water control system. Because landfill gas (e.g., methane, PCE, trichloroethene [TCE], and vinyl chloride) was present, a landfill gas control system was also required. The cover, surface water control, and gas control systems were described in an Action Memorandum (AM). The design for the landfill has been implemented with consolidation into a smaller footprint and construction of the landfill cover and gas collection/control systems completed in December 1998 and accepted by the BRAC Cleanup Team (BCT) in February 1999. Site 2 is a closed landfill, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be passive open space. IRP Site 5 - IRP Site 5 served as the training area for fire control and abatement exercises from the late 1950s through the 1970s. Site 5 is in the southern portion of the former base, east of the golf course. Fire training exercises involved floating a layer of oil, fuel, or other combustible material on a layer of water and repeatedly igniting and extinguishing the material. RI results showed the site to contain metals (cadmium, copper, lead,

USAF NORTON AFB (Continued) **1000417274**

and zinc) and dioxins in near-surface soils (to 10 feet bgs) and fuels (benzene, toluene, ethylbenzene, xylenes [BTEX]), solvents, and PAHs in deeper soils up to 40 feet bgs. The EE/CA and subsequent AM for IRP Site 5 selected soil vapor extraction (SVE) for remediation of fuel contamination, excavation followed by stabilization of the metals/dioxin-contaminated soil, and excavation and disposal of the PAH-contaminated soil. This removal action was completed during 1998 and involved an area of approximately 100,000 square feet. Excavation was performed to a maximum depth of 13 feet bgs, and confirmation samples were taken on the sidewalls and bottom of the excavation. The SAR impact berm adjacent to IRP Site 5 was also removed during the Site 5 removal action. The SVE component of the remedy removed 22,600 pounds of hydrocarbons. The SVE system was operated from January 10, 1996, until July 10, 1997. The effectiveness of the SVE system was assessed through confirmation soil boring samples and vadose zone leaching modeling. The model simulations indicated that the SVE removal adequately addressed the hydrocarbon contamination and was protective of groundwater. The soil excavation was performed in two phases. The first phase consisted of the removal of 21,104 tons of contaminated soil and 4,589 tons of rock and debris. This material was transported to the IRP Site 2 landfill. The lead in the contaminated soil was stabilized using 15 percent (by weight) Portland cement to meet State of California nonhazardous waste criteria. The soil that met nonhazardous criteria was used as foundation material for the landfill cap. The material not meeting the California nonhazardous waste criteria (1,443 tons) met federal nonhazardous waste criteria and was shipped to Browning Ferris Industries (BFI) landfill in La Paz, Arizona, for disposal. The second phase involved excavation of 3,496 tons of contaminated soil, stabilized with 15 percent (by weight) Portland cement, which was shipped to the BFI landfill in Arizona for disposal as an RCRA nonhazardous waste. The excavation area was backfilled with clean soil to the level of the former topographic grade. No groundwater contamination is associated with IRP Site 5. The site is being used for storage of golf course landscape waste prior to off-site disposal, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be industrial/commercial-related. Small Arms Range - The SAR was located immediately adjacent to IRP Site 5 and historically included an impact berm. The berm was contaminated by lead projectiles as a result of small arms practice, and a removal action was addressed in a work plan. Because the berm was contiguous with Site 5, portions of the berm were removed during the Site 5 removal action. A total of 11,478 tons of material was removed from the SAR, including 210 tons of bullet fragments and rock, classified as RCRA hazardous waste, and disposed at the Laidlaw Environmental Services landfill in Westmoreland, California. Nonhazardous waste, including 128 tons of rock and debris and 9,124 tons of soil, was placed at the IRP Site 2 landfill. The remaining 2,106 tons of soil were stabilized with 15 percent (by weight) Portland cement. This material did not meet California nonhazardous waste criteria and was shipped to the BFI landfill in Arizona for disposal. Confirmation samples were collected, and lead was detected above the residential PRG at one location. Following completion of the soil removal action, much of the remaining portion of the SAR impact berm was pushed into the Site 5 excavation as fill. The soil from the berm was then covered with soil imported from the adjacent riverbed to bring the Site 5 area back to its original grade. The firing line area of the SAR remains as a ground depression and is not being used. Projected long-term plans for the area are industrial/commercial-related use. The firing line area remains as a ground depression and is not being used. Projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 7 - IRP Site 7 is located in the southeast corner of the former IWTP

USAF NORTON AFB (Continued) **1000417274**

compound. Although Site 7 is part of this CERCLA ROD, as part of the former IWTP, Site 7 also must be closed as part of the RCRA corrective action termination of the interim status facility (two separate closure processes). The site included 12 concrete-walled, unlined sludge-drying beds, covering approximately 17,280 square feet. The beds were used to dry sludge generated at the IWTP until 1987. During removal of the sludge, it was temporarily stored at the northeast corner of the site. The former waste pile appears to have been located on what is now highly weathered asphalt pavement. Physical removal and disposal of the concrete-walled sludge-drying beds and surface soils were completed in March 2004, and the CERCLA closure report is in review. The site is currently not being used. The property is zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 10 - Site 10 is located along the southern base boundary in the eastern portion of the golf course. Landfill No. 1 was used by the Air Force from 1943 to 1958, primarily for disposal of general refuse, which was apparently burned at the site. The 1984 to 1995 investigations, which included sampling for metals, pesticides, PAHs, and PCBs, indicated the presence of metals in ash (primarily chromium and lead) above the residential soil PRGs in shallow soil (0 to 2 feet bgs). Based on the RI data for metals, an RA for Site 10 was evaluated in an EE/CA. Because contamination was not significantly above industrial soil cleanup goals, the Air Force elected to establish a deed restriction for the site. However, the ecological risk assessment (ERA) determined that the contamination was localized, and concentrations of chromium and lead at the hot spots posed a significant risk to plants and animals. The Air Force responded by developing a hot-spot removal plan for Site 10. A removal action was performed at four hot spot locations that resulted in excavation of 340 cubic yards of contaminated soil. Approximately 224 cubic yards of contaminated soil were disposed at the Site 2 landfill, and 116 cubic yards were disposed off site. Physical removal and disposal of dioxin-contaminated soil were completed in 2004, and the closure report is in preparation. The northern portion of the site is used as a golf course fairway, and the property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site north of the base boundary is expected to be industrial-related. The southern portion of the site includes habitat for two endangered species, and is bounded by a man-made flood protection levee. The southern portion is off base and is zoned open space with unrestricted public access. IRP Site 17 - IRP Site 17 is located in the southwestern corner of the former IWTP compound. Although Site 17 is part of the CERCLA ROD, as part of the former IWTP, Site 17 is undergoing RCRA closure as part of the corrective action termination of the RCRA interim status facility (two separate processes). The former IWTP treated industrial wastewater from the repair of military aircraft from 1960 to 1993. Most of the IWTP facility was removed in 1995. IRP Site 17 is comprised of two connected brick-lined sumps that the Air Force constructed during the early 1960s for the purpose of burning waste fuels and solvents. The Air Force initiated burning, but in 1961 permission for continued burning was denied by local air quality authorities. Therefore, the sumps were used for waste destruction for a limited time but were used primarily as holding tanks for the IWTP and as an oil/water separator until 1985. The area immediately south of the sumps was also used for storage of solvent and plating wastes contained in 55-gallon drums. Site 17 was subject to a series of site investigations initiated in 1984. Site investigations have identified a zone of fine-grained soils, 25 to 55 feet bgs, that underlie and overlie two zones of coarser-grained soils. An EE/CA prepared for Site 17 presented a detailed analysis of the subsurface conditions at the site. In summary, there are two water-bearing zones below the Site 17 area. The first zone is a perched groundwater layer that is supported by a layer of finer-grained silts and clays

USAF NORTON AFB (Continued) **1000417274**

extending from approximately 25 to 55 feet bgs. Collectively, the zone of finer-grained soils starting at 25 feet bgs and the perched groundwater supported by the finergrained soils is termed the "perched zone." Below the zone of finer-grained soil material is the second zone, termed the "upper aquifer." The upper aquifer comprises sands and gravels that extend to at least 500 feet below the site. During the early 1980s, the top of the upper aquifer was in contact with the zone of finer-grained soil material at 50 feet bgs. Between 1984 and 1988, the elevation of the upper aquifer dropped 7 to 10 feet, below the soil layer of the perched zone. Between 1988 and 1993, the water elevation decreased another 15 to 25 feet, resulting in several dry monitoring wells. The depth to groundwater in the upper aquifer now ranges from approximately 75 to 90 feet bgs (depending on seasonal fluctuations) in the area of IRP Site 17. The perched-zone groundwater contamination is assumed to have resulted from the former chemical waste storage at Site 17. The source may have been from the drums of waste solvents once stored at Site 17 or leakage from the Site 17 sumps. Due to the sandy nature of the surface soils, the solvent migrated downward to the perched zone, where further downward migration was retarded by the finer-grained soils. The two sumps, which were part of the IWTP, were removed in 2003, and the CERCLA closure report is in preparation. The site is currently not being used. The property is zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be as industrial/commercial-related options for the property. IRP Site 19 - Site 19, located in the CBA to the south of Building 763, was formerly used as a drum storage area and aircraft washing facility. Drums of fuels, oils, electroplating solutions, TCE and trichloroethane (TCA) sludge, and cyanide waste solutions were stored on an unpaved fenced lot. The area south of Building 763 was the general location of the original aircraft washing facility. This facility was removed in 1966, and the area was resurfaced with 20 inches of concrete to become part of the flight line. Site 19 was investigated during the 1984 to 1986 IRP and the 1991 to 1993 RIs. PCBs were detected in excess of residential PRGs, primarily in the upper 6 inches of soil beneath the concrete runway apron. An interim ROD was developed for IRP Site 19 to identify a use restriction documenting the presence of the contamination. This ROD and its decision for IRP Site 19 will supersede the interim ROD. No groundwater contamination is associated with this site. The long-term future land use for Site 19 is to retain the runway apron for use by the San Bernardino International Airport Authority (SBIAA) airfield. AOC 4 - Building 301, located in the NBA near U and 102nd streets, was an equipment and vehicle washing facility. During the 1950s, the building was part of a spray painting facility. At the time of base closure (1994), it was used by civilian auto hobby personnel. AOC 4 consists of the foundation of former Building 301, an adjacent washing slab, and adjacent soil areas. A separator/dosing chamber was removed and its location evaluated as part of the basewide underground storage tank (UST) program. A solids collection pit and two trench drains were identified during the site investigation. The concrete washing slab was heavily stained, particularly near the trench drains. Drums of oil and other materials were stored in sheds along the southern drain line. A 4-foot-by 4-foot-wide area surrounded by a 6-foot-tall chain-link fence is located to the north of the washing slab and may represent the location of a former waste receptacle. The area is capped with a wooden cover, and the material under the cover may be fill. The area of affected soil is approximately 40 feet by 120 feet. No groundwater contamination is associated with this AOC. AOC 4 is on a parcel that was transferred by SBIAA to the San Bernardino County Fire Department under a Federal Aviation Administration (FAA) covenant that allows only industrial, commercial, or aircraft support usage. The Fire Department has refurbished Building 302 for office use and vehicle repair and is using the area west of the building (north of AOC 4) as a household

USAF NORTON AFB (Continued) **1000417274**

hazardous waste collection point. Remedial alternatives were evaluated in an EE/CA. The Air Force identified ICs as the preferred alternative in the AM. Paved areas south of Building 302 are being used for vehicle and equipment storage. The western half of AOC 4 is covered by grassy weeds, while the eastern half is paved and includes a covered storage area. The Fire Department plans to use the paved area for equipment storage, while there are no plans for use of the grassy area of AOC 4 outside of the fenced storage yard. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property. AOC 18 - Former Buildings 451 and 452 were located in the CBA, east of Tippecanoe Avenue and north of Harry Sheppard Boulevard. Building 451 was a former garage and gas station in operation from 1942 to the late 1960s or early 1970s; Building 452 was the site of USTs. A 1942 site drawing indicates five 12,000-gallon gasoline USTs, a fueling station, and an oil storage house (Buildings 452, 451, and 450, respectively), although a 1967 site drawing indicates only two 12,000-gallon USTs were present. All structures and USTs have been removed. AOC 18 was investigated during the confirmation study (CS) and expanded source investigation (ESI). The soil contamination covers an area of approximately 600 feet. Prior to the initial redevelopment activities, AOC 18 was covered by an asphalt-paved parking lot that served the adjacent base post office. From January 2000 to 2004, the surface of the AOC was bare earth facilitating aeration (volatilization) of the fuel-related chemicals. The site is now paved with asphalt as part of the Mattel warehouse and distribution center. Remedial alternatives were previously evaluated in an EE/CA. The Air Force identified ICs in the AM as the preferred RA. AOC 18 is on property that was transferred to Inland Valley Development Agency (IVDA). IVDA has demolished all structures in the vicinity of AOC 18 and removed all pavement in preparation for redevelopment. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property. AOC 33 - Building 747, located in the southeastern corner of the CBA, was one of the primary industrial facilities at Norton AFB. Although AOC 33 is part of this CERCLA ROD, as part of the former Industrial Waste Line (IWL), it is also part of the RCRA corrective action termination of the interim status facility (two separate closure processes). The building was constructed in 1942 and renovated in 1944, 1953, and 1955. From 1942 to 1966, the building supported operations for the repair and overhaul of engines and other aircraft parts. Building 747 was converted into a freight terminal facility in 1966, and the building served as offices and storage facilities. Subsurface soil contamination at AOC 33 is associated with sumps (some recently removed) buried beneath an asphalt access road immediately south of Building 747. The sump portion of AOC 33 is part of the IWL that is undergoing RCRA corrective action termination as an interim status facility. AOC 33 was investigated during the CBA OU RI, CS, and the ESI. No groundwater contamination is associated with AOC 33. Remedial alternatives were evaluated in an EE/CA. The Air Force identified a deed restriction in the AM as the preferred RA. The sump and surrounding soil were removed in 2003. The CERCLA closure report is in preparation. AOC 33 is on property that has been leased by the Air Force to SBIAA. Building 747 has been subleased by SBIAA to several entities for commercial use. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property, including aviation support. AOC 39 - AOC 39 is located west of Club House Drive and south of the southern perimeter road, where an underground storm drainpipe empties into a grass-covered fairway drainage ditch. The discharge serves storm drain lines that originate along the southern flight line area. An oil/water separator removes oil prior to

USAF NORTON AFB (Continued) **1000417274**

discharge into the ditch. The discharge point possibly received waste from the flight line and Buildings 695, 763, and 795. Aerial photographs from the 1950s and later indicate that fluids from aircraft repair and fueling emptied into the storm drain system. A 1982 interview record indicated that flight line oils were occasionally observed in the golf course drain. No groundwater contamination is associated with AOC 39. Remedial alternatives of AOC 39 were previously evaluated in an EE/CA. The Air Force selected deed restrictions in the AM as the preferred RA. AOC 39 was evaluated further in the BWFS. AOC 70 - AOC 70 was a percolation pond used for treated IWTP effluent during the mid-1980s to 1993. Although AOC 70 is part of this CERCLA ROD, as part of the former IWTP, AOC 70 also must be closed as part of the RCRA corrective action termination of the interim status facility (two separate closure processes). On December 31, 2004, DTSC-RCRA acknowledged that AOC 70 was clean closed. The 0.25-acre pond site was constructed upon sandy soils that readily facilitated infiltration of the treated effluent into the subsurface. There was no outflow from the pond. The pond dried out when the IWTP ceased functioning in mid-1993. AOC 70 was investigated under the CS Addendum No. 2. RAs were evaluated in an EE/CA. The Air Force selected a soil removal action in the AM as the preferred remedy. The Air Force completed the removal action in 1997 and backfilled the site with certified clean fill. No groundwater contamination is associated with the AOC. AOC 70 is within a parcel of the base that has been leased to IVDA. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be as industrial/commercial-related options for the property consistent with city of San Bernardino zoning. Building 752 - Building 752 is located in the eastern portion of the CBA adjacent to the airfield. The building was used during the 1940s and 1950s for the repair of aircraft instruments, including painting instrument dials with radio-luminescent paint containing radium-226. The room used for painting dials was sealed in 1955 when painting operations ceased. During the period that painting occurred, paint waste was flushed into a sink connected to the sanitary sewer. Investigations of the sink and piping system showed that they were contaminated by radium-226. This included the piping system outside of the building to where it connected with the sanitary sewer. Cleanup of the interior piping system and interior surfaces of Building 752 were handled under separate programs. Cleanup of soils affected by radium-226 waste outside of Building 752 are being addressed in this ROD. To determine whether soils outside of the building had been affected by the discharge of paint waste into the sanitary sewer pipe, the pipe was excavated for visual characterization and soil sampling. The pipe was constructed of 6-inch vitreous clay in 3-foot sections. Two soil samples collected as part of the initial site characterization were found to contain radium-226 at 169 ?10 picoCuries per gram (pCi/g) and 1,940 ?20 pCi/g (background is 1.41 pCi/g). The entire waste line piping was surveyed with a field instrument and found to exhibit gamma radiation above background levels. Excavation of the piping system was conducted July 23 through August 1, 1996. The excavation was approximately 3 feet deep where the waste line exited the southwest corner of the building, and extended to a depth of 9 feet where the waste line entered the sanitary sewer. All excavated soil and piping was disposed off site. Before backfilling the trench, a new waste line was installed between the building and the sanitary sewer. After backfilling the trench, asphalt pavement was placed over the excavation. As part of the overall radium-226 investigation of the Building 752 area, additional radium-226 contamination was discovered in an area immediately west of the building. Building drawings from the 1950s indicate a wooden loading dock attached to the building over the affected area. In February 2001, the loading dock area was sampled for radium-226. The investigators determined that the area of concern is 11 by 55 feet, with depth of contamination between 1 and 4 feet bgs. The estimated volume of affected

USAF NORTON AFB (Continued) **1000417274**

soil is 1,400 cubic feet. Radium-226 contaminated soil was removed in 2004. The closure report is in preparation. All contaminated soil will be properly disposed. Currently the site is not in use. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the building and surrounding area is expected to be industrial/commercial-related options for the property (airfield support). Northeast Base Area PCE Plume - The NBA has two PCE plumes, one in the eastern portion (east PCE plume) where the former Site 2 landfill is situated, and a smaller plume in the central portion (west PCE plume). Only the west PCE plume has been above the maximum contaminant level (MCL) for PCE since April 2003. The average gradient in the NBA has been observed to fluctuate between a low of 0.004 foot per foot (October 2003) and a high of 0.039 foot per foot (April 1996). Seasonal variation remains relatively constant. The source of the contamination contributing to the NBA west PCE plume is not believed to be associated with IRP Site 2. PCE concentrations are higher in the west plume than those in the east plume, whereas they would be expected to be less due to contaminant dispersal. The groundwater flow direction in the NBA is to the west to west-northwest. Groundwater quality data for the NBA plume wells do not indicate significant movement of the plumes, either horizontally or vertically. The property overlying the NBA plume is zoned industrial/commercial by the city of San Bernardino. The projected long-term use for Site 2, which overlies the east plume, is expected to be passive open space or potentially a long-term, open storage area. The projected long-term use for the property over the west plume is industrial/commercial, possibly warehousing. A Record of Decision (ROD) addressing Operable Unit 2 (OU2) was completed in September of 2005.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/30/2011
Date Data Arrived at EDR: 07/12/2011

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011
Date Data Arrived at EDR: 07/12/2011

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011
Date Data Arrived at EDR: 03/01/2011

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2011

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011
Date Made Active in Reports: 08/08/2011

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/08/2011

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009
Date Made Active in Reports: 09/11/2009

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

CA WELLS **801**

Water System Information:

Prime Station Code:	01S/03W-04N03 S	User ID:	TAN
FRDS Number:	3610064025	County:	San Beernardino
District Number:	13	Station Type:	WELL/AMBNT/MUN/INTAKE/SUPPLY
Water Type:	Well/Groundwater	Well Status:	Inactive Raw
Source Lat/Long:	340600.0 1171200.0	Precision:	Undefined
Source Name:	WELL 040A - INACTIVE		
System Number:	3610064		
System Name:	EAST VALLEY WD		
Organization That Operates System:	PO BOX 3427 SAN BERNARDINO, CA 92413		
Pop Served:	55000	Connections:	18303
Area Served:	SAN BERNARDINO VIC		
Sample Collected:	01/09/2006	Findings:	57.89 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	01/09/2006	Findings:	8.43 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	01/09/2006	Findings:	48.47 PCI/L
Chemical:	URANIUM (PCI/L)		
Sample Collected:	01/09/2006	Findings:	14.65 PCI/L
Chemical:	URANIUM COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	470. US
Chemical:	SPECIFIC CONDUCTANCE		
Sample Collected:	02/10/2007	Findings:	6.7
Chemical:	PH, LABORATORY		
Sample Collected:	02/10/2007	Findings:	180. MG/L
Chemical:	ALKALINITY (TOTAL) AS CACO3		

Sample Collected:	02/10/2007	Findings:	220. MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	02/10/2007	Findings:	200. MG/L
Chemical:	HARDNESS (TOTAL) AS CACO3		
Sample Collected:	02/10/2007	Findings:	62. MG/L
Chemical:	CALCIUM		
Sample Collected:	02/10/2007	Findings:	11. MG/L
Chemical:	MAGNESIUM		
Sample Collected:	02/10/2007	Findings:	25. MG/L
Chemical:	SODIUM		
Sample Collected:	02/10/2007	Findings:	2.6 MG/L
Chemical:	POTASSIUM		
Sample Collected:	02/10/2007	Findings:	16. MG/L
Chemical:	CHLORIDE		
Sample Collected:	02/10/2007	Findings:	0.18 MG/L
Chemical:	FLUORIDE (F) (NATURAL-SOURCE)		
Sample Collected:	02/10/2007	Findings:	120. UG/L
Chemical:	BORON		
Sample Collected:	02/10/2007	Findings:	3900. UG/L
Chemical:	IRON		
Sample Collected:	02/10/2007	Findings:	35. UG/L
Chemical:	MANGANESE		
Sample Collected:	02/10/2007	Findings:	4. UG/L
Chemical:	VANADIUM		
Sample Collected:	02/10/2007	Findings:	180. UG/L
Chemical:	ALUMINUM		
Sample Collected:	02/10/2007	Findings:	30. PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	02/10/2007	Findings:	4.1 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	45. PCI/L
Chemical:	URANIUM (PCI/L)		
Sample Collected:	02/10/2007	Findings:	310. MG/L
Chemical:	TOTAL DISSOLVED SOLIDS		
Sample Collected:	02/10/2007	Findings:	42. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	02/10/2007	Findings:	3. PCI/L
Chemical:	URANIUM COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	8700. UG/L
Chemical:	NITRATE + NITRITE (AS N)		
Sample Collected:	02/10/2007	Findings:	1.2 PCI/L
Chemical:	GROSS ALPHA MDA95		
Sample Collected:	02/10/2007	Findings:	0.87 PCI/L
Chemical:	URANIUM MDA95		

Sample Collected:	02/10/2007	Findings:	0.15 MG/L
Chemical:	FLUORIDE (F) (NATURAL-SOURCE)		
Sample Collected:	02/10/2007	Findings:	37. PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	02/10/2007	Findings:	4.8 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	44. PCI/L
Chemical:	URANIUM (PCI/L)		
Sample Collected:	02/10/2007	Findings:	41. MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	02/10/2007	Findings:	2.9 PCI/L
Chemical:	URANIUM COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	1.1 PCI/L
Chemical:	GROSS ALPHA MDA95		
Sample Collected:	02/10/2007	Findings:	0.87 PCI/L
Chemical:	URANIUM MDA95		
Sample Collected:	02/10/2007	Findings:	31. PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	02/10/2007	Findings:	4.2 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	45. PCI/L
Chemical:	URANIUM (PCI/L)		
Sample Collected:	02/10/2007	Findings:	3. PCI/L
Chemical:	URANIUM COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	1.4 PCI/L
Chemical:	GROSS ALPHA MDA95		
Sample Collected:	02/10/2007	Findings:	0.87 PCI/L
Chemical:	URANIUM MDA95		
Sample Collected:	02/10/2007	Findings:	30. PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	02/10/2007	Findings:	4.3 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	44. PCI/L
Chemical:	URANIUM (PCI/L)		
Sample Collected:	02/10/2007	Findings:	3. PCI/L
Chemical:	URANIUM COUNTING ERROR		
Sample Collected:	02/10/2007	Findings:	1.7 PCI/L
Chemical:	GROSS ALPHA MDA95		
Sample Collected:	02/10/2007	Findings:	0.87 PCI/L
Chemical:	URANIUM MDA95		
Sample Collected:	02/11/2007	Findings:	0.14 MG/L
Chemical:	FLUORIDE (F) (NATURAL-SOURCE)		
Sample Collected:	02/11/2007	Findings:	26. PCI/L
Chemical:	GROSS ALPHA		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

Sample Collected:	02/11/2007	Findings:	3.6 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	02/11/2007	Findings:	40. PCI/L
Chemical:	URANIUM (PCI/L)		
Sample Collected:	02/11/2007	Findings:	43. MG/L
Chemical:	NITRATE (AS NO3)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✔ Library of Congress
- ✔ University Publications of America
- ✔ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

EI Group (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 05/30/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*305 S TIPPECANOE AVE*	*NW 1/8 - 1/4 (0.204 mi.)*	*0*	*13*

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*305 S TIPPECANOE AVE*	*NW 1/8 - 1/4 (0.204 mi.)*	*0*	*13*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	*305 S TIPPECANOE AVE*	*NW 1/8 - 1/4 (0.204 mi.)*	*0*	*13*

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1

RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***305 S TIPPECANOE AVE***	***NW 1/8 - 1/4 (0.204 mi.)***	***0***	***13***

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
HOME DEPOT #HD5087	***27352 RIVER BLUFF AV***	***NE 1/8 - 1/4 (0.219 mi.)***	***C12***	***85***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***305 S TIPPECANOE AVE***	***NW 1/8 - 1/4 (0.204 mi.)***	***0***	***13***
HOME DEPOT USA HD508	9377 ALABAMA ST	SSE 0 - 1/8 (0.100 mi.)	5	52

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 08/10/2017 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***305 S TIPPECANOE AVE***	***NW 1/8 - 1/4 (0.204 mi.)***	***0***	***13***

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 08/10/2017 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***305 S TIPPECANOE AVE***	***NW 1/8 - 1/4 (0.204 mi.)***	***0***	***13***

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
HASKELL CO. INDUSTRI	2130 NEVADA AVENUE	W 1/8 - 1/4 (0.184 mi.)	B6	54

LANDFILL,CALIFORNIA	***2151 NEVADA ST***	***W 1/8 - 1/4 (0.192 mi.)***	***B8***	***55***

Other Ascertainable Records

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NORTON AIR FORCE BAS		NNW 1/8 - 1/4 (0.248 mi.)	0	13

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 09/27/2017 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
USAF NORTON AFB	***305 S TIPPECANOE AVE***	***NW 1/8 - 1/4 (0.204 mi.)***	***0***	***13***

UXO: A listing of unexploded ordnance site locations

A review of the UXO list, as provided by EDR, and dated 10/25/2016 has revealed that there are 2 UXO sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
FORMER SKEET RANGE N		NW 1/2 - 1 (0.697 mi.)	13	92
FORMER SKEET RANGE N		NNW 1/2 - 1 (0.791 mi.)	14	92

MINES: A listing of mine site locations from the Office of Mine Reclamation.

A review of the MINES list, as provided by EDR, and dated 09/11/2017 has revealed that there is 1 MINES site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CALIFORNIA STREET LA	35 CAJON STREET, P.O	WNW 1/8 - 1/4 (0.207 mi.)	10	84

San Bern. Co. Permit: San Bernardino County Fire Department Hazardous Materials Division.

A review of the San Bern. Co. Permit list, as provided by EDR, and dated 08/31/2017 has revealed that there are 6 San Bern. Co. Permit sites within approximately 0.25 miles of the target property.

Summary Details:

Conditions at proposal October 15, 1984): Norton Air Force Base covers approximately 2,036 acres 58 miles east of Los Angeles near the City of San Bernardino, San Bernardino County, California. It is in a low-lying alluvial plain surroundedon the north and east by the San Bernardino Mountain Range. The base began operations in 1942 and has served as a major overhaul center for jet engines and the general repair of aircraft. Since 1962, the facility

USAF NORTON AFB (Continued) **1000417274**

has served as a Military Airlift Command Base. In addition, Norton formerly had the responsibility for providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. Past ha ardous waste management practices may have contributed to existingcontamination problems throughout the base. The practices include burial of drums and other unspecified materials; disposal of waste oils, solvents, and paint residues into landfills, unlined pits, ponds, and drying beds; storage in leaking underground tanks; and spills of AVGAS, oils, solvents, PCBs, and acidic plating solutions. Industrial solvents have been used extensively on the base. Unknown quantities of spent solvents were disposed of in several base landfills.A well on the base has been contaminated with trichloroethylene TCE). The well water is currently being used in a blended system and is sampled quarterly to ensure that TCE is below the California State action level. The water is used by approximately ll,000 people who live and/or work on the base. Norton Air Force Base is participating in the Installation Restoration Program IRP), established in l978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Air Force has completed Phase I records search). Phase II remedial investigation) is underway. Status July 22, 1987): In November 1986, the California Regional Water Quality Control Board issued a Cleanup and Abatement Order requiring Norton to clean up one on-base area, the Industrial Waste Water Treatment Plant Sludge Drying Beds. Phase II-Stage 2 of the IRP was completed in December 1986. It focusedon characteri ation of the contamination at 18 on-base areas. More than 22 areas have been identified to date. Additional areas will be studied in Stage 3, scheduled to begin in the fall of 1987. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site isbeing placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 48 FR 40662).

Site Description: The Base Closure team has worked closely with the City of Riverside to ensure that controls are in place to protect the public from exposure to contamination. The Air Force constructed a groundwater extraction and treatment remedy in 1994 and is currently operating two pump and treat systems which have treated over 90 million gallons of contaminated groundwater to date. Approximately 325 lbs. of TCE have been removed from the groundwater. Additionally, a soil vapor extraction system is currently operating and 6,247 lbs. of TCE have been removed from the contamination source area. Since 1994, the Air Force has excavated approximately 40,000 cubic yards of contaminated soils from various locations on the base which were then treated and disposed of on-site, or transported to an off site disposal facility. The Air Force also closed numerous underground storage tanks and excavate and treated contaminated soil using bioremediation technology in 1996. An investigation of alleged radiological contamination was conducted and results showed that elevated levels of radionuclides in groundwater were caused by naturally occurring uranium. In 1996, the Air Force removed a waste line contaminated with radium paint residue and another industrial waste line. A JP-4 aircraft fuel system which was not contaminated will be salvaged for future use by the airport.In 1980, DOD issued a policy requiring identification of hazardous waste sites. In 1982, Norton issued the Phase I Records Search. In 1985, the site issued the Phase II Problem Confirmation Study. In June 1989, after various investigations, the Air Force signed the Norton AFB Federal Facility Agreement. In November 1990, Norton AFB began the Central Base Area (CBA) OU Groundwater Investigation to define the extent of the plume. In 1991, through a removal action, TCE-contaminated soil was treated onsite. In early 1993, the Air Force issued a draft RI, FS and proposed plan. In June 1992, the Air Force began a treatability test of the ground water pump and treat system. In 1993, Norton AFB issued the Final FS and Plan.The 2,003-acre Norton AFB is located in San Bernardino County, California (40th Congressional District), approximately 65 miles east of Los Angeles. The site is bounded by the Santa Ana River to the south, and other adjacent areas are used for residential, industrial, and agricultural purposes. Operations at the site began in 1942, and the facility served as a major overhaul center for jet engines and the general repair of aircraft. The site formerly had the responsibility of providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. There are more than 20 areas of contamination on the base including two landfills, six discharge areas, four chemical pits, a fire training area, a

USAF NORTON AFB (Continued) **1000417274**

fuel spill area, a polychlorinated biphenyl (PCB) spill area, a chemical spill area, two waste storage areas, an underground storage area, and a low-level radioactive waste burial site. Soil contaminants included PCBs, trichloroethylene (TCE), petroleum hydrocarbons, metals such as lead and polycyclic aromatic hydrocarbons. An off-site groundwater plume (TCE) has impacted several municipal drinking water wells. Norton AFB was closed by the Department of Defense in March 1994, based on the legislative requirements in the Base Realignment and Closure Act of 1990. Consistent with the reuse alternatives identified in the Final Environmental Impact Statement, the Base is being redeveloped as an airport with mixed non-aviation, light industrial land use. Norton Air Force Base is located in the city of San Bernardino, San Bernardino County, California, 55 miles east of Los Angeles and 60 miles west of Palm Springs. The main surface water features near the site are City Creek, Warm Creek, the Twin Creek flood control channel, and the Santa Ana River, which flows southwest along the southern base boundary. The aquifer system beneath the site is part of the Bunker Hill hydrologic basin. Drinking water is derived from the middle and lower water-bearing zones. The site is classified as residential and light industrial. Adjacent properties includes area of residences, light and heavy industry, and agriculture. The population of the county is 1,418,380. The site was activated in March 1942 as an engine repair center for Air Force, U. S. Navy, and private industry aircraft. The site became a Military Airlift Command base in 1966. In 1968, the Aerospace Audiovisual Services established its headquarters at the base. The site also provided airlift and sustenance capabilities for air and combat units world-wide. Solvents, specifically TCE, were used in servicing aircraft from 1940s to the early 1980s. Former waste disposal, handling, and discharge practices have resulted in the contamination of soil and the upper water-bearing zone of a drinking water aquifer. The base was officially added to the U.S. EPA National Priorities List (NPL) on July 22, 1987. The U.S. EPA, California Department of Toxic Substances Control (DTSC), and the U.S. Air Force signed an interagency agreement, known as the Norton AFB Federal Facility Agreement (FFA) on June 29, 1989, which governs the conduct of environmental investigation and cleanup activities. The Air Force, U.S. EPA, DTSC, and the Regional Water Quality Control Board (RWQCB) Santa Ana Region comprise the Base Realignment and Closure (BRAC) Cleanup Team (BCT), with the Air Force serving as lead agency. The base has been subdivided into six separate areas for purposes of investigation and description of base activities. Since closure and redevelopment of portions of the base, many streets have been renamed. -The Central Base Area (CBA), which reflects the western one-third of the former base, was the most developed portion of the base and included the majority of offices, warehouses, on-base housing, engineering yards, and aircraft repair facilities. -The former Ballistic Missile Organization (BMO) complex is located south of the CBA and across Mill Street. The former BMO complex has been deeded to the Inland Valley Development Agency and a portion is occupied by the Defense Finance and Accounting Service. -The airfield includes the runways, ramps, aircraft parking, and hangars used for aircraft repair. The airfield covers the eastern two-thirds of the former base. -The Northeast Base Area (NBA) is located north of the airfield and represents the portion of the base with the oldest buildings. The original aircraft hangars and repair facilities are located within the NBA, as well as the former base Landfill No. 2. -The Golf Course Area (GCA) is located south of the airfield and is the current site of the Palm Meadows Golf Course. Prior to construction of the golf course, the GCA was used as a landfill (IRP Site 10), liquid waste disposal (IRP Site 1), a quartermaster's salvage yard, and chemical warfare training area, among other activities. -The former industrial waste treatment plant (IWTP) facility is located south of the GCA and was used for the treatment of liquid wastes generated as part of aircraft maintenance and

USAF NORTON AFB (Continued) **1000417274**

repainting. Several investigations were conducted from 1982 to date. The 1982 to 1988 investigations resulted in identification of 22 Installation Restoration Program (IRP) sites. During closure of the base, additional records investigations resulted in identification of 73 AOCs. Contamination at the Small Arms Range (SAR) and the pipeline excavation at Building 752 was identified during cleanup actions performed at these sites. OU2: Site Specific Information IRP Site 1 - IRP Site 1 is in the GCA and was the location of former unlined lagoons used from 1950 to 1960 for the disposal of liquid waste generated during aircraft repair. During the 1960s, a portion of the golf course was constructed over the site without removing all industrial waste. The Remedial Investigation (RI) identified soils contaminated with paints, solvents, oil, fuels, and solids that had been washed into the industrial waste system. Chlorobenzene, 1,2-dichlorobenzene (DCB), and 1,4-DCB exceeded industrial PRGs. An Engineering Evaluation/Cost Analysis (EE/CA) identified removal of contaminated soil to a depth of approximately 30 feet below ground surface (bgs), backfilling with clean soil, and restoring the site as a portion of a fairway and green. A total of 20,325 tons of contaminated soil was excavated from an area of approximately 25,000 square feet, to the top of the perched-zone groundwater at a depth of approximately 29 feet bgs. The excavation was located next to a berm that supports the airfield perimeter road. Based on confirmation sampling results the contamination extended beneath the perimeter road. For technical and implementability reasons, the deep and lateral contamination was not removed. The area of affected soil left in place covers approximately 3,800 square feet. IRP Site 1 is part of the active golf course, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 2 - IRP Site 2 is located in the northeast corner of former Norton AFB and is the location of a former base landfill used between 1958 and 1980. Originally, it covered approximately 31 acres and was used for the disposal of general refuse, office waste, industrial waste, and industrial waste treatment plant (IWTP) sludge. Under CERCLA, the presumptive remedy for landfills is to leave waste in place and to provide an appropriate containment system. Under the presumptive remedy guidelines, various cover systems and associated gas control systems were evaluated in an EE/CA for IRP Site 2, and a natural soil cover was selected with an appropriate surface water control system. Because landfill gas (e.g., methane, PCE, trichloroethene [TCE], and vinyl chloride) was present, a landfill gas control system was also required. The cover, surface water control, and gas control systems were described in an Action Memorandum (AM). The design for the landfill has been implemented with consolidation into a smaller footprint and construction of the landfill cover and gas collection/control systems completed in December 1998 and accepted by the BRAC Cleanup Team (BCT) in February 1999. Site 2 is a closed landfill, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be passive open space. IRP Site 5 - IRP Site 5 served as the training area for fire control and abatement exercises from the late 1950s through the 1970s. Site 5 is in the southern portion of the former base, east of the golf course. Fire training exercises involved floating a layer of oil, fuel, or other combustible material on a layer of water and repeatedly igniting and extinguishing the material. RI results showed the site to contain metals (cadmium, copper, lead, and zinc) and dioxins in near-surface soils (to 10 feet bgs) and fuels (benzene, toluene, ethylbenzene, xylenes [BTEX]), solvents, and PAHs in deeper soils up to 40 feet bgs. The EE/CA and subsequent AM for IRP Site 5 selected soil vapor extraction (SVE) for remediation of fuel contamination, excavation followed by stabilization of the metals/dioxin-contaminated soil, and excavation and disposal of the PAH-contaminated soil. This removal action was

USAF NORTON AFB (Continued) **1000417274**

completed during 1998 and involved an area of approximately 100,000 square feet. Excavation was performed to a maximum depth of 13 feet bgs, and confirmation samples were taken on the sidewalls and bottom of the excavation. The SAR impact berm adjacent to IRP Site 5 was also removed during the Site 5 removal action. The SVE component of the remedy removed 22,600 pounds of hydrocarbons. The SVE system was operated from January 10, 1996, until July 10, 1997. The effectiveness of the SVE system was assessed through confirmation soil boring samples and vadose zone leaching modeling. The model simulations indicated that the SVE removal adequately addressed the hydrocarbon contamination and was protective of groundwater. The soil excavation was performed in two phases. The first phase consisted of the removal of 21,104 tons of contaminated soil and 4,589 tons of rock and debris. This material was transported to the IRP Site 2 landfill. The lead in the contaminated soil was stabilized using 15 percent (by weight) Portland cement to meet State of California nonhazardous waste criteria. The soil that met nonhazardous criteria was used as foundation material for the landfill cap. The material not meeting the California nonhazardous waste criteria (1,443 tons) met federal nonhazardous waste criteria and was shipped to Browning Ferris Industries (BFI) landfill in La Paz, Arizona, for disposal. The second phase involved excavation of 3,496 tons of contaminated soil, stabilized with 15 percent (by weight) Portland cement, which was shipped to the BFI landfill in Arizona for disposal as an RCRA nonhazardous waste. The excavation area was backfilled with clean soil to the level of the former topographic grade. No groundwater contamination is associated with IRP Site 5. The site is being used for storage of golf course landscape waste prior to off-site disposal, and the property is currently zoned industrial/commercial by the city of San Bernardino. The projected long-term use of the site is expected to be industrial/commercial-related. Small Arms Range - The SAR was located immediately adjacent to IRP Site 5 and historically included an impact berm. The berm was contaminated by lead projectiles as a result of small arms practice, and a removal action was addressed in a work plan. Because the berm was contiguous with Site 5, portions of the berm were removed during the Site 5 removal action. A total of 11,478 tons of material was removed from the SAR, including 210 tons of bullet fragments and rock, classified as RCRA hazardous waste, and disposed at the Laidlaw Environmental Services landfill in Westmoreland, California. Nonhazardous waste, including 128 tons of rock and debris and 9,124 tons of soil, was placed at the IRP Site 2 landfill. The remaining 2,106 tons of soil were stabilized with 15 percent (by weight) Portland cement. This material did not meet California nonhazardous waste criteria and was shipped to the BFI landfill in Arizona for disposal. Confirmation samples were collected, and lead was detected above the residential PRG at one location. Following completion of the soil removal action, much of the remaining portion of the SAR impact berm was pushed into the Site 5 excavation as fill. The soil from the berm was then covered with soil imported from the adjacent riverbed to bring the Site 5 area back to its original grade. The firing line area of the SAR remains as a ground depression and is not being used. Projected long-term plans for the area are industrial/commercial-related use. The firing line area remains as a ground depression and is not being used. Projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 7 - IRP Site 7 is located in the southeast corner of the former IWTP compound. Although Site 7 is part of this CERCLA ROD, as part of the former IWTP, Site 7 also must be closed as part of the RCRA corrective action termination of the interim status facility (two separate closure processes). The site included 12 concrete-walled, unlined sludge-drying beds, covering approximately 17,280 square feet. The beds were used to dry sludge generated at the IWTP until 1987. During removal of the sludge, it was temporarily stored at

USAF NORTON AFB (Continued) **1000417274**

the northeast corner of the site. The former waste pile appears to have been located on what is now highly weathered asphalt pavement. Physical removal and disposal of the concrete-walled sludge-drying beds and surface soils were completed in March 2004, and the CERCLA closure report is in review. The site is currently not being used. The property is zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be commercial/industrial-related options for the property. IRP Site 10 - Site 10 is located along the southern base boundary in the eastern portion of the golf course. Landfill No. 1 was used by the Air Force from 1943 to 1958, primarily for disposal of general refuse, which was apparently burned at the site. The 1984 to 1995 investigations, which included sampling for metals, pesticides, PAHs, and PCBs, indicated the presence of metals in ash (primarily chromium and lead) above the residential soil PRGs in shallow soil (0 to 2 feet bgs). Based on the RI data for metals, an RA for Site 10 was evaluated in an EE/CA. Because contamination was not significantly above industrial soil cleanup goals, the Air Force elected to establish a deed restriction for the site. However, the ecological risk assessment (ERA) determined that the contamination was localized, and concentrations of chromium and lead at the hot spots posed a significant risk to plants and animals. The Air Force responded by developing a hot-spot removal plan for Site 10. A removal action was performed at four hot spot locations that resulted in excavation of 340 cubic yards of contaminated soil. Approximately 224 cubic yards of contaminated soil were disposed at the Site 2 landfill, and 116 cubic yards were disposed off site. Physical removal and disposal of dioxin-contaminated soil were completed in 2004, and the closure report is in preparation. The northern portion of the site is used as a golf course fairway, and the property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site north of the base boundary is expected to be industrial-related. The southern portion of the site includes habitat for two endangered species, and is bounded by a man-made flood protection levee. The southern portion is off base and is zoned open space with unrestricted public access. IRP Site 17 - IRP Site 17 is located in the southwestern corner of the former IWTP compound. Although Site 17 is part of the CERCLA ROD, as part of the former IWTP, Site 17 is undergoing RCRA closure as part of the corrective action termination of the RCRA interim status facility (two separate processes). The former IWTP treated industrial wastewater from the repair of military aircraft from 1960 to 1993. Most of the IWTP facility was removed in 1995. IRP Site 17 is comprised of two connected brick-lined sumps that the Air Force constructed during the early 1960s for the purpose of burning waste fuels and solvents. The Air Force initiated burning, but in 1961 permission for continued burning was denied by local air quality authorities. Therefore, the sumps were used for waste destruction for a limited time but were used primarily as holding tanks for the IWTP and as an oil/water separator until 1985. The area immediately south of the sumps was also used for storage of solvent and plating wastes contained in 55-gallon drums. Site 17 was subject to a series of site investigations initiated in 1984. Site investigations have identified a zone of fine-grained soils, 25 to 55 feet bgs, that underlie and overlie two zones of coarser-grained soils. An EE/CA prepared for Site 17 presented a detailed analysis of the subsurface conditions at the site. In summary, there are two water-bearing zones below the Site 17 area. The first zone is a perched groundwater layer that is supported by a layer of finer-grained silts and clays extending from approximately 25 to 55 feet bgs. Collectively, the zone of finer-grained soils starting at 25 feet bgs and the perched groundwater supported by the finergrained soils is termed the "perched zone." Below the zone of finer-grained soil material is the second zone, termed the "upper aquifer." The upper aquifer comprises sands and gravels that extend to at least 500 feet below the site. During the early 1980s, the top of the upper aquifer

USAF NORTON AFB (Continued) **1000417274**

was in contact with the zone of finer-grained soil material at 50 feet bgs. Between 1984 and 1988, the elevation of the upper aquifer dropped 7 to 10 feet, below the soil layer of the perched zone. Between 1988 and 1993, the water elevation decreased another 15 to 25 feet, resulting in several dry monitoring wells. The depth to groundwater in the upper aquifer now ranges from approximately 75 to 90 feet bgs (depending on seasonal fluctuations) in the area of IRP Site 17. The perched-zone groundwater contamination is assumed to have resulted from the former chemical waste storage at Site 17. The source may have been from the drums of waste solvents once stored at Site 17 or leakage from the Site 17 sumps. Due to the sandy nature of the surface soils, the solvent migrated downward to the perched zone, where further downward migration was retarded by the finer-grained soils. The two sumps, which were part of the IWTP, were removed in 2003, and the CERCLA closure report is in preparation. The site is currently not being used. The property is zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be as industrial/commercial-related options for the property. IRP Site 19 - Site 19, located in the CBA to the south of Building 763, was formerly used as a drum storage area and aircraft washing facility. Drums of fuels, oils, electroplating solutions, TCE and trichloroethane (TCA) sludge, and cyanide waste solutions were stored on an unpaved fenced lot. The area south of Building 763 was the general location of the original aircraft washing facility. This facility was removed in 1966, and the area was resurfaced with 20 inches of concrete to become part of the flight line. Site 19 was investigated during the 1984 to 1986 IRP and the 1991 to 1993 RIs. PCBs were detected in excess of residential PRGs, primarily in the upper 6 inches of soil beneath the concrete runway apron. An interim ROD was developed for IRP Site 19 to identify a use restriction documenting the presence of the contamination. This ROD and its decision for IRP Site 19 will supersede the interim ROD. No groundwater contamination is associated with this site. The long-term future land use for Site 19 is to retain the runway apron for use by the San Bernardino International Airport Authority (SBIAA) airfield. AOC 4 - Building 301, located in the NBA near U and 102nd streets, was an equipment and vehicle washing facility. During the 1950s, the building was part of a spray painting facility. At the time of base closure (1994), it was used by civilian auto hobby personnel. AOC 4 consists of the foundation of former Building 301, an adjacent washing slab, and adjacent soil areas. A separator/dosing chamber was removed and its location evaluated as part of the basewide underground storage tank (UST) program. A solids collection pit and two trench drains were identified during the site investigation. The concrete washing slab was heavily stained, particularly near the trench drains. Drums of oil and other materials were stored in sheds along the southern drain line. A 4-foot-by 4-foot-wide area surrounded by a 6-foot-tall chain-link fence is located to the north of the washing slab and may represent the location of a former waste receptacle. The area is capped with a wooden cover, and the material under the cover may be fill. The area of affected soil is approximately 40 feet by 120 feet. No groundwater contamination is associated with this AOC. AOC 4 is on a parcel that was transferred by SBIAA to the San Bernardino County Fire Department under a Federal Aviation Administration (FAA) covenant that allows only industrial, commercial, or aircraft support usage. The Fire Department has refurbished Building 302 for office use and vehicle repair and is using the area west of the building (north of AOC 4) as a household hazardous waste collection point. Remedial alternatives were evaluated in an EE/CA. The Air Force identified ICs as the preferred alternative in the AM. Paved areas south of Building 302 are being used for vehicle and equipment storage. The western half of AOC 4 is covered by grassy weeds, while the eastern half is paved and includes a covered storage area. The Fire Department plans to use the paved area for equipment storage, while there are

USAF NORTON AFB (Continued) **1000417274**

no plans for use of the grassy area of AOC 4 outside of the fenced storage yard. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property. AOC 18 - Former Buildings 451 and 452 were located in the CBA, east of Tippecanoe Avenue and north of Harry Sheppard Boulevard. Building 451 was a former garage and gas station in operation from 1942 to the late 1960s or early 1970s; Building 452 was the site of USTs. A 1942 site drawing indicates five 12,000-gallon gasoline USTs, a fueling station, and an oil storage house (Buildings 452, 451, and 450, respectively), although a 1967 site drawing indicates only two 12,000-gallon USTs were present. All structures and USTs have been removed. AOC 18 was investigated during the confirmation study (CS) and expanded source investigation (ESI). The soil contamination covers an area of approximately 600 feet. Prior to the initial redevelopment activities, AOC 18 was covered by an asphalt-paved parking lot that served the adjacent base post office. From January 2000 to 2004, the surface of the AOC was bare earth facilitating aeration (volatilization) of the fuel-related chemicals. The site is now paved with asphalt as part of the Mattel warehouse and distribution center. Remedial alternatives were previously evaluated in an EE/CA. The Air Force identified ICs in the AM as the preferred RA. AOC 18 is on property that was transferred to Inland Valley Development Agency (IVDA). IVDA has demolished all structures in the vicinity of AOC 18 and removed all pavement in preparation for redevelopment. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property. AOC 33 - Building 747, located in the southeastern corner of the CBA, was one of the primary industrial facilities at Norton AFB. Although AOC 33 is part of this CERCLA ROD, as part of the former Industrial Waste Line (IWL), it is also part of the RCRA corrective action termination of the interim status facility (two separate closure processes). The building was constructed in 1942 and renovated in 1944, 1953, and 1955. From 1942 to 1966, the building supported operations for the repair and overhaul of engines and other aircraft parts. Building 747 was converted into a freight terminal facility in 1966, and the building served as offices and storage facilities. Subsurface soil contamination at AOC 33 is associated with sumps (some recently removed) buried beneath an asphalt access road immediately south of Building 747. The sump portion of AOC 33 is part of the IWL that is undergoing RCRA corrective action termination as an interim status facility. AOC 33 was investigated during the CBA OU RI, CS, and the ESI. No groundwater contamination is associated with AOC 33. Remedial alternatives were evaluated in an EE/CA. The Air Force identified a deed restriction in the AM as the preferred RA. The sump and surrounding soil were removed in 2003. The CERCLA closure report is in preparation. AOC 33 is on property that has been leased by the Air Force to SBIAA. Building 747 has been subleased by SBIAA to several entities for commercial use. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be industrial/commercial-related options for the property, including aviation support. AOC 39 - AOC 39 is located west of Club House Drive and south of the southern perimeter road, where an underground storm drainpipe empties into a grass-covered fairway drainage ditch. The discharge serves storm drain lines that originate along the southern flight line area. An oil/water separator removes oil prior to discharge into the ditch. The discharge point possibly received waste from the flight line and Buildings 695, 763, and 795. Aerial photographs from the 1950s and later indicate that fluids from aircraft repair and fueling emptied into the storm drain system. A 1982 interview record indicated that flight line oils were occasionally observed in the golf course drain. No groundwater contamination is associated with AOC 39. Remedial alternatives of AOC 39 were

USAF NORTON AFB (Continued) **1000417274**

previously evaluated in an EE/CA. The Air Force selected deed restrictions in the AM as the preferred RA. AOC 39 was evaluated further in the BWFS. AOC 70 - AOC 70 was a percolation pond used for treated IWTP effluent during the mid-1980s to 1993. Although AOC 70 is part of this CERCLA ROD, as part of the former IWTP, AOC 70 also must be closed as part of the RCRA corrective action termination of the interim status facility (two separate closure processes). On December 31, 2004, DTSC-RCRA acknowledged that AOC 70 was clean closed. The 0.25-acre pond site was constructed upon sandy soils that readily facilitated infiltration of the treated effluent into the subsurface. There was no outflow from the pond. The pond dried out when the IWTP ceased functioning in mid-1993. AOC 70 was investigated under the CS Addendum No. 2. RAs were evaluated in an EE/CA. The Air Force selected a soil removal action in the AM as the preferred remedy. The Air Force completed the removal action in 1997 and backfilled the site with certified clean fill. No groundwater contamination is associated with the AOC. AOC 70 is within a parcel of the base that has been leased to IVDA. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the site is expected to be as industrial/commercial-related options for the property consistent with city of San Bernardino zoning. Building 752 - Building 752 is located in the eastern portion of the CBA adjacent to the airfield. The building was used during the 1940s and 1950s for the repair of aircraft instruments, including painting instrument dials with radio-luminescent paint containing radium-226. The room used for painting dials was sealed in 1955 when painting operations ceased. During the period that painting occurred, paint waste was flushed into a sink connected to the sanitary sewer. Investigations of the sink and piping system showed that they were contaminated by radium-226. This included the piping system outside of the building to where it connected with the sanitary sewer. Cleanup of the interior piping system and interior surfaces of Building 752 were handled under separate programs. Cleanup of soils affected by radium-226 waste outside of Building 752 are being addressed in this ROD. To determine whether soils outside of the building had been affected by the discharge of paint waste into the sanitary sewer pipe, the pipe was excavated for visual characterization and soil sampling. The pipe was constructed of 6-inch vitreous clay in 3-foot sections. Two soil samples collected as part of the initial site characterization were found to contain radium-226 at 169 ?10 picoCuries per gram (pCi/g) and 1,940 ?20 pCi/g (background is 1.41 pCi/g). The entire waste line piping was surveyed with a field instrument and found to exhibit gamma radiation above background levels. Excavation of the piping system was conducted July 23 through August 1, 1996. The excavation was approximately 3 feet deep where the waste line exited the southwest corner of the building, and extended to a depth of 9 feet where the waste line entered the sanitary sewer. All excavated soil and piping was disposed off site. Before backfilling the trench, a new waste line was installed between the building and the sanitary sewer. After backfilling the trench, asphalt pavement was placed over the excavation. As part of the overall radium-226 investigation of the Building 752 area, additional radium-226 contamination was discovered in an area immediately west of the building. Building drawings from the 1950s indicate a wooden loading dock attached to the building over the affected area. In February 2001, the loading dock area was sampled for radium-226. The investigators determined that the area of concern is 11 by 55 feet, with depth of contamination between 1 and 4 feet bgs. The estimated volume of affected soil is 1,400 cubic feet. Radium-226 contaminated soil was removed in 2004. The closure report is in preparation. All contaminated soil will be properly disposed. Currently the site is not in use. The property is currently zoned industrial/commercial by the city of San Bernardino. Projected long-term use of the building and surrounding area is expected to be industrial/commercial-related options for the property (airfield

USAF NORTON AFB (Continued) **1000417274**

support). Northeast Base Area PCE Plume - The NBA has two PCE plumes, one in the eastern portion (east PCE plume) where the former Site 2 landfill is situated, and a smaller plume in the central portion (west PCE plume). Only the west PCE plume has been above the maximum contaminant level (MCL) for PCE since April 2003. The average gradient in the NBA has been observed to fluctuate between a low of 0.004 foot per foot (October 2003) and a high of 0.039 foot per foot (April 1996). Seasonal variation remains relatively constant. The source of the contamination contributing to the NBA west PCE plume is not believed to be associated with IRP Site 2. PCE concentrations are higher in the west plume than those in the east plume, whereas they would be expected to be less due to contaminant dispersal. The groundwater flow direction in the NBA is to the west to west-northwest. Groundwater quality data for the NBA plume wells do not indicate significant movement of the plumes, either horizontally or vertically. The property overlying the NBA plume is zoned industrial/commercial by the city of San Bernardino. The projected long-term use for Site 2, which overlies the east plume, is expected to be passive open space or potentially a long-term, open storage area. The projected long-term use for the property over the west plume is industrial/commercial, possibly warehousing. A Record of Decision (ROD) addressing Operable Unit 2 (OU2) was completed in September of 2005.

Site History:	SITE HISTORY The City of Redlands is conducting Detection Monitoring Program for groundwater monitoring at the site. The California Street Landfill is an approximately 115-acre, active Class III landfill owned and operated by the City of Redlands, and includes the original 63-acre unlined portion and the approximately 52-acre lined expansion area. The facility is located in the northeastern portion of the San Bernardino Valley, along a reach of the southern bank of the Santa Ana River channel approximately 3.5 miles northwest of the City of Redlands in southeastern San Bernardino County. The landfill is located at 2151 Nevada Street, Redlands, California, 92373, in the northern half of the northeast portion of Section 17, Township I South, Range 3 West, San Bernardino Baseline and Meridian. From 1963 until present, the CSL has accepted municipal solid wastes generated within the City of Redlands consisting primarily of residential, commercial, and industrial waste, with a minor fraction of dried sewage sludge from the Citys wastewater treatment plant located adjacent to the CSL. No designated or hazardous wastes were knowingly accepted for on-site disposal. Groundwater beneath the CSL is impacted by perchlorate, tetrachloroethene (PCE), trichloroethene

LANDFILL,CALIFORNIA STREET (Continued) **S103442703**

(TCE), and 1,2-dibromo-3-chloropropane (DBCP). On March 8, 2004, the City submitted a report, as required under Contingency Response D.6.a.ii of Order No. 98-99, which demonstrated that all groundwater impacts originated from sources other than the landfill (3D GeoServices, 2004). GEOLOGIC SETTING The CSL is located within the eastern portion of the Transverse Ranges Geomorphic Province of California within the structurally down-dropped San Bernardino Valley structural block. This structural block is bounded to the north and south by the San Andreas and San Jacinto faults, respectively, and consists of over 1,000 feet of alluvium derived from the adjacent San Bernardino and San Gabriel Mountains delivered to the valley floor by coalescing streams flowing from the upland areas. The maximum thickness of alluvium in the area is estimated to be greater than 1,200 feet approximately one mile northwest of the landfill. The maximum thickness of alluvium beneath the landfill is greater than 700 feet (RWQCB, 2008). Ground surface elevations range from 955 feet above mean sea level (amsl) on the western end of the site to 1,040 feet amsl on the eastern end. SITE HYDROGEOLOGIC SETTING The CSL is situated along the southern bank of Reach 5 of the Santa Ana River channel, within the Upper Santa Ana River Hydrologic Area, in the Mill Creek Hydrologic Sub-Area of the Santa Ana River Watershed (Santa Ana Hydrologic Basin). No natural lakes or other bodies of standing water, ephemeral seeps, or springs occur at the site. Groundwater beneath the CSL occurs at approximately 166 to 203 feet below ground surface (bgs) within alluvial deposits. Historical groundwater elevation measurements indicate that groundwater flows to the west at an average hydraulic gradient of approximately 0.01 foot per foot (ft/ft).

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 21977

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 7658

Waste code: D005

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/13/2017

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Elevation:	1217 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630631 REDLANDS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

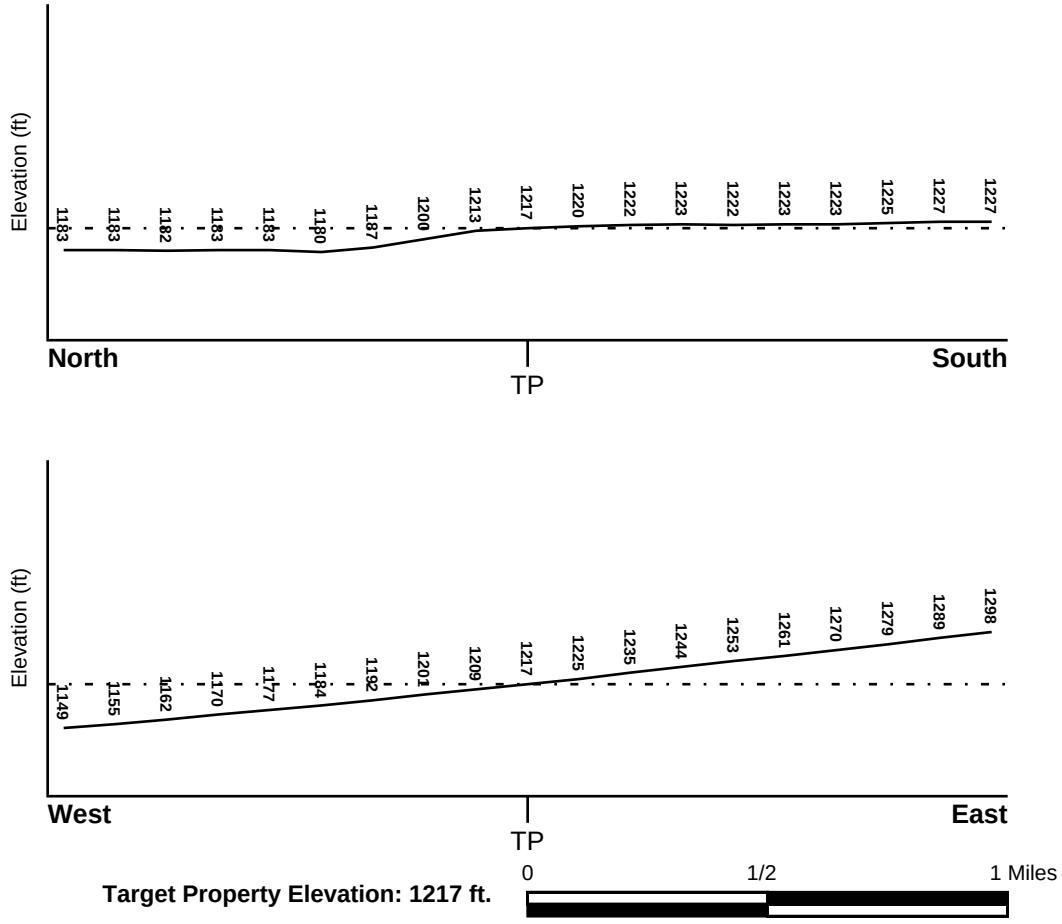
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

06071C8703H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HANFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	11 inches	59 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

Soil Map ID: 2

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 3

Soil Component Name: FLUVENTS

Soil Surface Texture: gravelly sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6
2	9 inches	29 inches	stratified gravelly sand to gravelly loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
3	29 inches	59 inches	stratified gravelly sand to gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Subject: Phase II Subsurface Investigation Report
NWC Palmetto Avenue and Alabama Street
Redlands, California 92374
Partner Project Number: 17-203002.2
Client Reference No. DUKEAJ-501

Dear Mr. Schmid:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the assessment performed on the above-referenced property. The following report describes the field activities, methods, and findings of the Phase II Subsurface Investigation conducted at the above-referenced property.

This assessment was performed utilizing methods and procedures consistent with good commercial or customary practices designed to conform to acceptable industry standards. The independent conclusions represent Partner's best professional judgment based upon existing conditions and the information and data available to us during the course of this assignment.

We appreciate the opportunity to provide these services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact Bob Geiger at (310) 615-4500.

Sincerely,

Partner Engineering and Science, Inc.

1.0 INTRODUCTION

1.1 Purpose

The purpose of the investigation was to evaluate the potential impact of volatile organic compounds (VOCs), organochlorine pesticides (OCPs), and/or arsenic as a consequence of a release or releases from the former on-site agricultural and service/repair activities. Duke Realty provided project authorization of a Partner Proposal scope email dated November 29, 2017.

1.2 Limitations

This report presents a summary of work conducted by Partner. The work includes observations of site conditions encountered and the analytical results provided by an independent third party laboratory of samples collected during the course of the project. The number and location of samples were selected to provide the required information. However, it cannot be assumed that the limited available data are representative of subsurface conditions in areas not sampled.

Conclusions and/or recommendations are based on the observations, laboratory analyses, and the governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Partner warrants that the environmental consulting services contained herein were accomplished in accordance with generally-accepted practices in the environmental engineering, geology, and hydrogeology fields that existed at the time and location of work. No other warranties are implied or expressed.

1.3 User Reliance

Partner was engaged by Duke Realty Limited Partnership (the Addressee), or their authorized representative, to perform this investigation. The engagement agreement specifically states the scope and purpose of the investigation, as well as the contractual obligations and limitations of both parties. This report and the information therein, are for the exclusive use of the Addressee. This report has no other purpose and may not be relied upon, or used, by any other person or entity without the written consent of Partner. Third parties that obtain this report, or the information therein, shall have no rights of recourse or recovery against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, the Addressee and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of, and commitment to, these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed.

2.0 SITE BACKGROUND

2.1 Site Description

The subject property consists of five parcels of land comprising approximately 55.94 acres located on the northwest corner of the Palmetto Avenue and Alabama Street intersection within a mixed agricultural, commercial, and industrial area of San Bernardino County, California. The subject property is currently occupied by primarily vacant/fallow agricultural land; as well as a small portion of active agricultural fields and temporary residence for agricultural and residential use. On-site operations consist of undeveloped, vacant land use, cultivation, and apiaristry (beekeeping) agriculture. In addition to the current utility poles, irrigation piping, and fencing structures, the subject property is also improved with unpaved roads, and sewer access manholes and confined spaces.

The subject property is bound by a fallow agricultural field, The Redlands Wastewater Treatment Facility and undeveloped woodland and grassland to the north; Palmetto Avenue to the south, followed by citrus orchards and agricultural land; Alabama Street to the east followed by a vacant field/fallow agricultural land, an industrial warehouse building occupied by Prologis, and Home Depot; and a fallow agricultural field and an industrial warehouse building occupied by Performance Team Freight to the west. Refer to Figure 1 for a site plan showing site features and surrounding properties.

2.2 Site History

Partner is concurrently conducting a *Phase I Environmental Site Assessment Report* (Phase I) on behalf of Duke Realty Limited Partnership. According to the reviewed historical sources, the subject property was formerly developed with a rural single-family residence and agricultural fields (citrus orchards)/farms as early as 1899; developed with three rural single-family residential structures, farm storage buildings and agricultural fields (citrus orchards)/farms between 1930 and circa 1994; developed with three rural single-family residential structures, farm storage buildings, fallow/unused agricultural fields and active agricultural fields (citrus orchards)/farms between 2002 and circa 2006; developed with one rural single-family residential structure, farm storage buildings, fallow/unused agricultural fields and active agricultural fields between 2009 and circa 2015; and developed with fallow/unused agricultural fields and active agricultural fields the current access roads in 2016.

Preliminary information acquired during the Phase I indicated the following suspect environmental conditions :

- The subject property was historically used for agricultural purposes. There is a potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used, stored, mixed, and applied on-site. The subject property is either unpaved dirt, grass-covered or currently used as an agricultural field and is proposed for development – change in land-use from agricultural to commercial.

As such and concurrent with the Phase I ESA, a Phase II Subsurface Investigation was warranted to further evaluate soil quality conditions with respect to former agricultural use and the proposed change in land-use.

2.3 Geology and Hydrogeology

Based on a review of the United States Geological Survey (USGS) *Redlands, California* Quadrangle topographic map, the subject property is situated at an elevation approximately 1,200 feet above mean sea level, and the local topography is sloping gently to the west-northwest. Refer to Figure 2 for a topographic map of the site vicinity.

According to the California Geological Survey, the subject property is located within the Transverse Ranges province. The Transverse Ranges are an east-west trending series of steep mountain ranges and valleys. The east-west structure of the Transverse Ranges is oblique to the normal northwest trend of coastal California, hence the name "Transverse." The province extends offshore to include San Miguel, Santa Rosa, and Santa Cruz islands. Its eastern extension, the San Bernardino Mountains, has been displaced to the south along the San Andreas Fault. Intense north-south compression is squeezing the Transverse Ranges. As a result, this is one of the most rapidly rising regions on earth. Great thicknesses of Cenozoic petroleum-rich sedimentary rocks have been folded and faulted, making this one of the important oil producing areas in the United States

Based on borings advanced during this investigation, the underlying subsurface consists predominantly of sandy silt (SM) from the ground surface to approximately five feet below ground surface (bgs). Refer to Appendix A for boring logs from this investigation.

Groundwater was not encountered during this investigation and was not a part of the scope of work. According to the State Water Resources Control Board (SWRCB) GeoTracker website, a nearby closed Leaking Underground Storage Tank (LUST) site is California Shell at 941 California Street in the City of Redlands, which is approximately 1.58 mile southwest of the subject property and is overseen by the San Bernardino County Fire Department as Case Number 2003019. The site maintained four groundwater monitoring wells in the area. With depth to groundwater ranging from 90 to 95 feet bgs and a direction of flow to the east.

3.0 FIELD ACTIVITIES

The scope of the Phase II Subsurface Investigation included the advancement of 11 borings (B1 through B1) for the collection of representative soil samples and the collection of 26 shallow soil samples (S1 through S26). Refer to Table 1 for a summary of the borings, sampling schedule and laboratory analyses for this investigation.

3.1 Preparatory Activities

Prior to the initiation of fieldwork, Partner completed the following activities.

3.1.1 Utility Clearance

Partner delineated the work area with white spray paint and notified Underground Service Alert (USA) to clear public utility lines as required by law at least two business days prior to drilling activities. USA issued ticket number A173311463-00A for the project.

In addition, Partner subcontracted with Ground Penetrating Radar Systems (GPRS) on December 11, 2017 to clear boring locations of utilities. GPRS systematically free-traversed each proposed boring location with a Radiodetection model RD7000 electromagnetic induction (EM) equipment unit with line-tracing capabilities, and a GSSI model SIR-3000 ground penetrating radar (GPR) unit. The equipment readouts were interpreted in real time for evidence of utility lines and/or other subsurface features of potential concern. Based on the findings of the GPR survey, no subsurface utilities were identified within the proposed boring locations.

3.1.2 Health and Safety Plan

Partner reviewed the site-specific Health and Safety Plan with on-site personnel involved in the project prior to the commencement of drilling activities.

3.2 Drilling Equipment

On December 11, 2017, Partner subcontracted with Minute Man Drilling (MMD) to provide and operate drilling equipment. MMD, under the direction of Partner, advanced borings B1 through B11 with a truck-mounted Geoprobe Model 5410 direct push rig. Partner manually collected soil samples from each shallow soil sample location (S1 through S26) using a shovel and hand trowel. Sampling equipment was decontaminated between sample locations to prevent cross-contamination.

3.3 Boring Locations

Boring B1 was advanced in the northeast corner of the subject property. Borings B2 through B6 were advanced in the northwest, northeast, central, west, and south portions of the former agricultural building, respectively. Borings B7 through B9 were advanced in the northeast, north, and northwest corner of the field, respectively. Borings B9 and B10 were advanced to the east and south exterior of the existing farm shack, respectively.

For shallow soil samples S1 through S26, the subject property was divided into 26 evenly-sized sections and a sample was collected in each section.

Refer to Figure 3 for a map indicating sample locations.

3.4 Soil Sampling

Borings B1 through B11 were unpaved. Borings B1 through B11 were advanced to a terminal depth of five feet bgs.

Soil samples were collected using a two-foot long by 1.5-inch diameter sampler with a two-foot long acetate liner and sampling point. The sampler was advanced by the direct-push drill rig using four-foot long for the truck-mounted rig by 1.25-inch diameter hollow rods with the inner rods in place. At approximately one foot above the desired sampling depth, an inner rod was removed and the sampler was advanced to the desired sampling depth to allow undisturbed soil to enter the sampling liner. The sampler was retrieved from the subsurface and the soil-filled liner was removed.

Each acetate liner was cut using a pipe-cutter. Samples were collected from the lower half of the liner using a disposable plastic syringe and retained in two sodium bisulfate-preserved and one methanol-preserved volatile organics analysis (VOA) vials in accordance with United States Environmental Protection Agency (EPA) Method 5035 sampling protocol. The remainder of the lower half of the liner was capped on either end with Teflon tape and plastic caps. The capped liners and VOA vials were labeled for identification and stored in an iced cooler. The soil in the upper half of the liner was visually inspected for discoloration, monitored for odors, classified in accordance with the Unified Soil Classification System, placed in a sealable plastic bag, and field-screened with a photoionization detector (PID). None of the samples exhibited discoloration or an odor and none of the PID readings suggested the presence of elevated volatile organics concentrations.

For the shallow soil samples, at the desired sampling depth, soil was transferred into a laboratory-supplied, four-ounce, wide-mouth, unpreserved glass jar, which was filled to capacity to minimize headspace and the potential for volatilization; sealed with a threaded, Teflon-lined lid; labeled for identification; and stored in an iced cooler.

Soil samples were collected from borings B1 through B11 at two and five feet bgs. Shallow soil samples were collected at S1 through S26 from approximately six inches bgs.

3.5 Post-Sampling Activities

The boreholes were backfilled with hydrated bentonite chips following sampling activities. No significant amounts of derived wastes were generated during this investigation.

4.0 LABORATORY ANALYSIS

4.1 Laboratory Analysis

Partner collected 22 soil samples and 26 surficial soil samples on December 11, 2017, which were transported in an iced cooler under proper chain-of-custody protocol to Jones Environmental, Inc. (JEI), a state-certified laboratory [California Department of Public Health (CDPH) Environmental Laboratory Accreditation Program (ELAP) certificate number 6C73103] in the City of Santa Fe Springs, for analysis on December 12, 2017. Based on field-screening results, visual observations, and/or olfactory observations, one soil sample per five-foot boring (11 soil samples total) was analyzed for VOCs in accordance with EPA Method 8260B. Samples from S1 through S26 and from two feet bgs from borings B1 through B11 were composited into 18 composite samples (C1 through C18) with each composite consisting of two or three discrete samples collected from proximal borings at the same depths. The 18 composite samples were analyzed for OCPs in accordance with EPA Method 8081A. Eighteen discrete soil samples (one from each composite sample) were analyzed for arsenic in accordance with EPA Method 6010B. The remaining soil samples were placed on hold at the laboratory. Refer to Table 2 for a summary of the composite samples.

4.2 Laboratory Analytical Results

Laboratory analytical results are included in Appendix B and discussed below.

4.2.1 Soil Sample Analytical Results

One of the analyzed soil samples (B3-5) contained a detectable concentration of toluene exceeding the laboratory Practical Quantitation Limits (PQLs). The remaining VOCs were not detected in any of the analyzed soil samples at concentrations exceeding the laboratory PQLs.

Fourteen of the analyzed composite soil samples (C1, C3, C5, C7 through C16, and C18) contained 4,4-dichlorodiphenyldichloroethylene (DDE) above the laboratory PQL. Ten of the analyzed composite soil samples (C1, C3, C5 C9, C11, C12, C13, C15, C16, and C18) contained 4,4-dichlorodiphenyltrichloroethane (DDT) above the laboratory PQL. Five of the analyzed composite soil samples (C11, C12, C13, C15, and C18) contained 4,4-dichlorodiphenyldichloroethane (DDD) above the laboratory PQL. One of the analyzed composite soil samples (C9) contained dieldrin and endrin aldehyde above the laboratory PQLs. Two of the analyzed composite soil samples (C12 and C18) contained endrin above the laboratory PQL. No other OCPs were detected in the analyzed composite soil samples.

None of the analyzed discrete soil samples contained detectable concentrations of arsenic above the laboratory PQL.

Refer to Tables 3 and 4 for a summary of the soil sample VOCs and OCPs laboratory analysis results, respectively.

5.0 DISCUSSION AND CONCLUSIONS

5.1 Regulatory Agency Guidance

Department of Toxic Substances Control Regional Screening Levels

Regional Screening Levels (RSLs) [formerly Preliminary Remediation Goals (PRGs)] are generic, risk-based chemical concentrations developed by the EPA for use in initial screening-level evaluations. RSLs combine human health toxicity values with standard exposure factors to estimate contaminant concentrations that are considered to be health protective of human exposures over a lifetime through direct-contact exposure pathways (e.g., via inhalation and/or ingestion of and/or dermal contact with impacted soil and/or indoor air). RSLs are not legally enforceable standards, but rather are considered guidelines to evaluate if potential risks associated with encountered chemical impacts may warrant further evaluation.

The Department of Toxic Substances Control (DTSC) Office of Human and Ecological Risk (HERO) developed California-Modified RSLs based on a review of 1) the differences in methodology between PRGs and RSLs 2) RSL concentrations, and 3) recent toxicity values.

5.2 Discussion

None of the detected concentrations of OCPs exceeded residential and commercial/industrial RSLs. Arsenic and VOCs were not detected in the analyzed soil samples at concentrations exceeding laboratory PQLs and the PQLs were below applicable regulatory guidelines. The concentrations of OCPs detected during this investigation are not expected to represent a concern to human health or the environment at this time.

There does not appear to be evidence of a release to soil beyond *de minimis* levels as a result of the former on-site agricultural and repair/service use at this time.

5.3 Summary and Conclusions

Partner conducted a Phase II Subsurface Investigation at the subject property to investigate the potential impact of VOCs, OCPs, and/or arsenic to soil as a consequence of a release or releases from the former on-site agricultural and service/repair activities. The scope of the Phase II Subsurface Investigation included 11 soil borings and 26 shallow soil samples. Eleven soil samples were analyzed for VOCs, 18 composite soil samples were analyzed for OCPs, and 18 discrete soil samples were analyzed for arsenic.

Subsurface lithology encountered in the upper five feet bgs consisted of silty sand. Groundwater was not encountered during this investigation.

Soil samples did not contain detectable concentrations of OCPs in excess of applicable RSLs. Arsenic and VOCs were not detected in the analyzed soil samples at concentrations exceeding laboratory PQLs and the PQLs were below applicable regulatory guidelines.

Based on the Subsurface Investigation, there is evidence of a *de minimis* release of hazardous materials from the subject property which does not represent a concern to human health or the environment at this time. Partner recommends no further investigation with respect to the former on-site agricultural and service/repair activities.

JONES ENVIRONMENTAL
LABORATORY RESULTS

Client:	Partner Engineering & Science, Inc.	**Report date:**	12/13/2017
Client Address:	2154 Torrance Blvd., Suite 200 Torrance, CA 90501	**JEL Ref. No.:** **Client Ref. No:**	ST-11554 17-203002.2
Attn:	Samantha Fujita	**Date Sampled:** **Date Received:**	12/11/2017 12/12/2017
Project:	Redlands	**Date Analyzed:**	12/12/2017
Project Address:	Alabama & Palmetto Redlands, CA 92374	**Physical State:**	Soil

ANALYSES REQUESTED

1. EPA 8260B by 5035 – Volatile Organics by GC/MS + Oxygenates
2. EPA 6010B by 3050B – Arsenic by ICP-OES
3. EPA 8081A by 3546 – Chlorinated Pesticides by GC/ECD

Approval:

Carolyn Carroll
Stationary Lab Manager

SAMPLE RECEIPT FORM

Jones ID: ST-11554

CLIENT: Partner
PROJECT: Redlands
DATE/TIME: 12-12-17 / 1200
RECEIVED BY: JC

Delivered by: ☐ Client ☑ Jones Courier ☐ UPS / FedEx / USPS ☐ Other

TEMPERATURE: Temp Criteria = 6°C > Temp > 0°C (NO frozen containers)

Temperature Cooler #1 5.7 °C ± 0.1°C Blank Sample (Sample)
Temperature Cooler #2 ____.____ °C ± 0.1°C Blank Sample

☐ Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling.
☐ Sample(s) outside temperature criteria. *
☐ Samples not received on ice.*

Ambient Temperature: 26.0 °C Checked by: JC

SAMPLE CONDITION:	YES	NO*	N/A
Chain of Custody (COC) document(s) received complete with samples	☑	☐	☐
☐ Collection date, collection time, matrix, and/or # of containers logged in based on sample labels missing. (circle) ☐ No analysis requested. ☐ Not relinquished. ☐ No date/time relinquished.			
Sample container label(s) consistent with COC	☑	☐	☐
Total number of containers received match COC	☑	☐	☐
Sample container(s) intact and in good condition	☑	☐	☐
Proper containers and sufficient volume for analyses requested	☑	☐	☐
Volatile analysis container(s) free of headspace	☐	☐	☑
Proper preservation for analyses requested	☑	☐	☐
Custody Seals Intact on Cooler/Sample	☐	☐	☑

CONTAINER TYPE:

Solid: glass jar / Acetate sleeve / VOAs Aqueous: ____

*Complete Non-Conformance if checked Checked by: JC

SAMPLE RECEIPT FORM

Jones ID: ST-11554

CLIENT: Partner
PROJECT: Redlands
DATE/TIME: 12-12-17 / 1200
RECEIVED BY: JC

Delivered by: ☐ Client ☑ Jones Courier ☐ UPS / FedEx / USPS ☐ Other

TEMPERATURE: Temp Criteria = 6°C > Temp > 0°C (NO frozen containers)

Temperature Cooler #1 5.7 °C ± 0.1°C Blank Sample (Sample)
Temperature Cooler #2 ____.____ °C ± 0.1°C Blank Sample

☐ Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling.
☐ Sample(s) outside temperature criteria. *
☐ Samples not received on ice.*

Ambient Temperature: 26.0 °C Checked by: JC

SAMPLE CONDITION:	YES	NO*	N/A
Chain of Custody (COC) document(s) received complete with samples	☑	☐	☐
☐ Collection date, collection time, matrix, and/or # of containers logged in based on sample labels missing. (circle) ☐ No analysis requested. ☐ Not relinquished. ☐ No date/time relinquished.			
Sample container label(s) consistent with COC	☑	☐	☐
Total number of containers received match COC	☑	☐	☐
Sample container(s) intact and in good condition	☑	☐	☐
Proper containers and sufficient volume for analyses requested	☑	☐	☐
Volatile analysis container(s) free of headspace	☐	☐	☑
Proper preservation for analyses requested	☑	☐	☐
Custody Seals Intact on Cooler/Sample	☐	☐	☑

CONTAINER TYPE:

Solid: glass jar / Acetate sleeve / VOAs Aqueous: ____

*Complete Non-Conformance if checked Checked by: JC

APPENDIX E: QUALIFICATIONS

PARTNER

Burke Walker, REA
Partner Associate

Education
B.S. Biology: Emphasis in Ecology and Environmental Biology, California State University, Long Beach

Registrations
State of California Registered Environmental Assessor - REA I, #30207
HAZWOPER 40-Hour General On-Site Certified, since October 25, 2008
EPA Certified lead-based construction inspector, #NV-I-15309-1
California Department of Public Health Lead-Related Construction Inspector/Assessor, #15243
California Division of Occupational Safety and Health, Certified Asbestos Consultant, #10-4669
Radio Frequency Site Safety Awareness Certification, United States OSHA
Association of Environmental Professionals, CEQA Workshop, November 2009
Desert Tortoise Council Workshop, November 2010, USFWS/CDFG Approved

Summary of Professional Experience
Mr. Walker has eight years of experience in the environmental industry. He has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Mr. Walker has performed Phase I Environmental Site Assessments, Environmental Transaction Screens, Regulatory Compliance Assessments, Asbestos Surveys and Lead-based Paint Surveys.

Mr. Walker served as a senior scientist on projects performed primarily for telecommunications carriers, lenders, developers, government agencies, and property management firms. Locations include a wide range of properties that include, but are not limited to, the following: office buildings, hotels, shopping malls, business parks, high tech industries, manufacturing facilities, retirement homes, large retail outlets, strip malls, auto dealers, gas stations, fast food facilities, warehouses, vineyards, housing developments, golf courses, personal storage unit facilities, government buildings, dry cleaners, apartment house complexes, former sludge ponds, an oil production field, trucking facilities, a ski resort and associated building complex, agricultural fields, fire stations, and residential homes.

Finally, Mr. Walker's diversity across residential, industrial, municipal, and commercial environments is a major contribution to Partner Engineering and Science's Associate team in the West, and Southwest regions of the United States.

Education

B.A., Environmental Studies, New England College, Henniker, New Hampshire

Registrations

Accredited AHERA Asbestos Building Inspector

Training

Asbestos Hazard and Emergency Response Act (AHERA) Building Inspection for Asbestos
Hazardous Waste Operations and Emergency Response (HAZWOPER), 40-hour (with First Aid, CPR)

Highlights

27+ years in the environmental service industry (environmental investigation/cleanup and environmental real estate due diligence)
Performed more than 1,500 ESAs throughout 37 US states and the District of Columbia
Reviewed and managed ESA projects/portfolios throughout all 50 states, and several countries abroad
Completed over 2,000 peer desk reviews and database search reviews
25+ years Fannie Mae DUS
21+ years Freddie Mac
21+ years HUD/HUD MAP

Experience Summary

Mr. Kidd currently serves as an environmental project manager and technical reviewer with Partner Engineering and Science, Inc.'s (Partner) senior review team for a variety of Clients. He is proficient in numerous scopes of work, such as, ASTM AAI, Standard & Poor's, Wells Fargo Bank, PNC Bank, Bank of America, JP Morgan/Chase Bank, Brach Banking & Trust, FDIC, SBA, CMBS Lenders.

As a Rhode Island native who collaged in New Hampshire with a semester abroad in England, Mr. Kidd began in the environmental service industry in Florida as a staff professional performing risk-based toxicological assessments to support investigation and cleanup activities for leaking petroleum station sites and industrial properties. Some of his field work supported monitoring well sampling and remedial cleanup system maintenance prior to performing transactional environmental assessments, as well as ASTM and other scopes of work that followed. Early scopes of work included North Carolina National Bank and Fannie Mae DUS. Mr. Kidd is also educated in leaking petroleum station investigations/remedial cleanup and performing Phase II subsurface investigations [drilling (hollow-stem, air hammer, hydraulic-push probe), soil/groundwater sampling, geophysical surveys, underground storage tank closure/removal field work, environmental sampling (asbestos, lead-based paint, drinking water, radon gas), and regulatory compliance auditing]. Mr. Kidd was a site manager for a state-awarded contract for investigating and remedying home sites which were identified with contaminated potable wells from inactive, closed, and/or abandoned petroleum stations, and properties with leaking USTs.

Mr. Kidd has worked for two specialized environmental due diligence assessment firms in Maryland where his responsibilities included performing ESAs, project management, portfolio management, client

management, report reviews, desktop services, historical source reviews, consulting services, indoor air quality assessments, mold/moisture surveys, and other related services.

Project Experience

Mr. Kidd is proficient in performing, reviewing and managing Phase I Environmental Site Assessments, Transaction Screens, Phase II subsurface investigations, Regulatory File Reviews, Compliance Auditing, Environmental Sampling, Indoor Air Quality testing, Mold Inspections, Third Party Desktop/Peer Reviews, Historical/Regulatory Database reviews, Petroleum Station Investigation and Remedial Cleanup Assessments.

Mill Property, Southern Pines, North Carolina. Mr. Kidd performed a Phase I ESA and a Phase II ESA at a knitting mill facility that specialized in the manufacturing of fabric for office cubicles. The site was adjoining to one of the five Aberdeen Pesticide Dumps Superfund site locations. The Phase II activities included soil borings and groundwater monitoring wells with sampling activities performed using U.S. EPA Superfund site protocol. The mill property site was identified with low levels of groundwater contamination.

Home Site, Roxboro, North Carolina. Mr. Kidd was involved with environmental investigations and cleanup under a contract with the state environmental regulatory agency to investigate petroleum hydrocarbon contamination that was identified in a home owner's private potable well. The investigation included historical research, a ground-penetrating radar/electromagnetic survey, field work for the removal of one UST, and contaminated soil removal. The source of the contamination was identified as a historical rural family general store. Notably the no wells or potable water were associated with the past operation of the general store.

Park 100, Indianapolis, Indiana. Mr. Kidd lead a small team of environmental professionals to perform the site reconnaissance at the 4.1 million square foot Park 100 industrial park located in Indianapolis, Indiana. The assessment was performed as part of the real estate due diligence associated with the merger of two major REIT firms. The assessment paid particular attention to onsite tenant uses that included light industrial, manufacturing, assembly, open-wheel racing car teams, and other activities involving the use, generation, storage, treatment or disposal of oils and hazardous substances.

Gasoline Station Portfolio, Getty Petroleum Marketing. Mr. Kidd Provided environmental analysis and review to identify and quantify the environmental liability associated with the potential sale of more than 1,000 branded, owned and leased, retail petroleum filling stations located in 21 states. Services included facility cataloging and review/consultation with the third party consultant overseeing investigation and cleanup activities for sites with subsurface petroleum impacts.

244 independent living facilities, Goldman Sachs. Mr. Kidd performed third-party oversight/review of Phase I ESAs conducted at 244 independent living facilities located across 40 states. Reports were reviewed for technical issues, Client Scope of Work, with findings and opinions provided for resolution of various issues identified including asbestos, radon gas, mold, USTs, contamination from historic land uses, and onsite regulatory listings.

Contact

bkidd@partneresi.com

Robert S. Geiger
Principal, National Client Manager

Education

MBA, University of Southern California
B.S., Civil Engineering, Marquette University

Highlights

20 years of experience focused on engineering and environmental consulting services.
Manages equity and lending scope due diligence services for a diverse set of clients.
Manages the execution of assessments on portfolios with the largest exceeding 150 sites nationwide.
Manages the execution of property owner services including capital budgeting and planning, design, energy efficiency and environmental compliance solutions.

Experience Summary

Mr. Geiger manages equity-level due diligence services to a variety of real estate investor clients including REITs, private equity, developers, attorneys, Fortune 500 corporate owners, and independent investors. He also serves an array of lender clients including institutional, portfolio, insurance company, CMBS, construction, agency, FHA/HUD, and SBA. Mr. Geiger draws on the resources of Partner staff located in over 30 offices throughout the U.S., Canada, and the UK to evaluate the condition and concerns associated with any property type, large or small. He and his team have concentrated experience in evaluating healthcare, office, industrial, hospitality, retail and multi-family properties.

Assessments

Mr. Geiger manages the execution of property condition, environmental, and seismic risk assessments in support of the physical due diligence of real estate assets for thousands of transactions, as well as managing construction document and draw reviews for development projects throughout the U.S. He and his team apply levels of expertise and reporting commensurate with the client's intended purpose, expectation, and risk exposure in the transaction. The Property Condition Assessment (PCA) scopes are approached with a generalist or with multiple specialty evaluations such as roof, MEP, envelope, and vertical transportation that exceed to varying degrees the ASTM 2018 guidelines. Also in evaluation of the physical aspects of buildings, Seismic Risk Assessments and Probable Maximum Loss reports are performed where applicable per ASTM 2026.

Phase I ESAs per ASTM E1527-13, EPA's All Appropriate Inquiry (AAI), and customized client formats are regularly conducted, and if necessary, followed-up with Phase II subsurface investigations and Remedial Cost Estimates. Moisture intrusion assessments have been performed when needed with moisture meters or intrusive cuts to verify and quantify any damages, and find and address the point source. Asbestos screenings and pre-demolition surveys, and radon and lead-based paint surveys are added to the environmental scope when requested or required. ALTA surveys and Zoning Reports are part of the engagements for his team. For development projects,

Mr. Geiger and his team provide Document and Cost Reviews, Draw Inspections, Funds Control and Disbursement services, and Completion Commitments to lender and owner clients to manage construction cost, quality, and schedule risks. He and his team routinely deliver these due diligence services on three and two week turnarounds, or on more expedited schedules when necessary to support a client with their transaction.

Solutions

For real estate owner clients, Mr. Geiger and his team provide programmatic and facility-specific services to reduce costs, manage liabilities, and develop assets and land. Many of the solutions provided to his real estate owner clients are a follow-up to services provided during our acquisition due diligence support. For example, his team has identified low and no cost energy efficiency opportunities with mechanical equipment in the process of performing PCAs, and then taken advantage of utility sponsored programs to fund the implementation and verification of energy conservation measures that attain 5 to 10% in bottom-line cost savings. For recently acquired, aged assets with planned rehabilitation, Mr. Geiger and his team support clients in reducing costs and liabilities associated with the management of asbestos containing materials.

For facility managers, Mr. Geiger and his team provide Facilities Condition Assessment (FCA) services for capital budgeting and planning purposes. The FCA services include the integration of FCA cost data into facilities management software applications for ongoing tracking and management of costs. For entire nationwide portfolios, he and his team have benchmarked all facilities; prioritized high usage facilities for field audits; identified no cost, low-cost, and capital intensive measures; supported the implementation of low cost measures with an return on investment of 18 months or less; evaluated utility rebates and incentives available to apply to the capital intensive measures; and tracked and reported on the facility and portfolio-wide energy consumption and cost savings. For facilities with flooding concerns, Mr. Geiger and his team have provided civil engineering consulting services focused on the evaluation of drainage issues, and the design of enhanced storm-water management capacities to mitigate the risk of loss.

Project Experience

Third-Party Lender Due Diligence Projects. Mr. Geiger and his team execute Phase I ESA, PCA, and PML scopes on a daily basis for institutional, portfolio, CMBS, and SBA lenders. Mr. Geiger is involved in the up-front pricing and project setup phases for single and multi-site portfolio transactions, tracks project progress and schedules, coordinates preliminary updates and notifications of concern for the client, participates in addressing identified concerns, and coordinates the involvement of internal resources to quickly address or quantify those concerns. Mr. Geiger and his team have supported thousands of transactions and he is responsible and accountable for the overall quality of service provided by his team.

Equity-scope, Acquisition Due Diligence Projects. For a variety of equity investor clients, Mr. Geiger and his team provide acquisition due diligence support for healthcare, office, industrial, hospitality, retail, and multi-family properties with scopes of work that exceed the reporting requirements of ASTM standards. For two 53-story and 30-story tower multi-family properties located in Chicago's South Loop, he managed a multi-disciplinary team of PCA specialists in compiling immediate repair and 20-year reserve costs for the Sponsor with the support of building envelope; roof; vertical transportation; structural; and mechanical, electrical and plumbing (MEP) specialists. For a private equity client involved in the acquisition of a New Orleans hotel, he coordinated a Phase I Environmental Site Assessment involving a Moisture Intrusion and Asbestos Containing Materials (ACM) Survey due to known concerns. The scope allowed for quantification of ACMs in the hotel and continued with ACM awareness training, abatement oversight, and negative exposure assessments that enabled the new ownership to realize six figure savings going forward by self-managing their ACM liabilities.

Asset and Facilities Management Projects. For capital budgeting and planning purposes, Mr. Geiger and his team perform PCA and FCA services to define necessary and recommended expenditures on building equipment and systems. For an S&P 500 company and leading seniors housing and healthcare REIT, Mr. Geiger and his team perform PCAs annually on over 150+ properties for the purpose of planning and managing cost expenditures on senior housing, medical office, skilled nursing, and hospital properties with known physical or leasing related concerns. For an electronic measurement equipment manufacturer, Mr. Geiger and his team performed FCAs on over 2 million square feet of manufacturing and R&D facilities in Santa Rosa, California; Colorado Springs, Colorado; and Penang, Malaysia. The FCA services provided a much needed benchmark for the condition of building shell and core, MEP-FP systems, handicap accessibility; and a basis for Board of Director level decisions on planned capital expenditures for the next five and ten year periods. Mr. Geiger and his team integrate their cost data into capital budgeting and planning software systems to provide clients with easy access to facility specific cost data, a tool for the ongoing tracking and updating of maintenance costs, and a dashboard of portfolio-wide data and metrics to facilitate enterprise-wide facilities management.

SECTION 1 - SUMMARY

PURPOSE

The purpose of this report is to document the hydrologic and hydraulic analyses performed in support of the Duke – Alabama and Palmetto project located in the City of Redlands, County of San Bernardino, California. The project site is located at the northwest corner of Alabama Street and Palmetto Avenue. The project proposes to build a warehouse facility on approximately 55 acres. This report will summarize the hydrologic and hydraulic analyses that were conducted in order to determine the necessary drainage improvements required to provide flood protection for the proposed building and safely convey the runoff through the site.

The scope of this report will include the following:

- Determine the peak 100-year and 10-year flow rates for the developed condition using the San Bernardino County Hydrology Rational Method.
- Determine the required storm drain facilities, alignment, and sizes required to flood protect the project site.
- Determine the necessary basin area and volume required for water quality treatment and to mitigate for increases in runoff.
- Preparation of a preliminary report summarizing the hydrology and hydraulic results.

DESCRIPTION OF WATERSHED

As previously described, the project is proposing a warehouse facility (approximately 1,116,930 square feet) on approximately 55 acres of vacant land. Existing elevations across the site vary from 1202 at the northwest corner to 1224 at the southeast corner (NAVD88 datum). The site currently slopes down at approximately 1.4% grade to the southeast. The existing drainage pattern for the site and the general area is characterized by sheet flows that follow the slope to the northwest. The runoff in this area is collected by an existing inlet located near the northwest corner. The inlet continues to convey runoff to the northwest and towards the Santa Ana River.

PROPOSED CONDITIONS

The project site is not impacted by off-site flows as there are existing streets around the perimeter of the project that convey any offsite flow away from the site. On-site flows generated by the proposed project will surface flow through the site utilizing ribbon gutters, curb and gutters, and grate inlets. There will be two subsurface storm drain lines that will be used to convey flow into the proposed infiltration basin. The basin is located along the northwesterly corner of the site. The basin will all ultimately discharge into the existing Line A storm drain.

Line A is an existing 96 inch diameter storm drain facility located along the frontage of Alabama Street. The As-Built plans for Line A show a hydraulic jump at approximately station 74+00. At this station, it also appears to be at a natural low point. In order to prevent the hydraulic jump from shooting out of the natural ground, the project intends to mitigate for increase runoff. Refer to Section 3 for more information on the hydraulic analysis and Appendix C to view the As-Built plans for Line A.

As previously mentioned, the lack of downstream facilities will require mitigation of increased flow. In order to mitigate the increase in runoff and not adversely affect the downstream facilities, the project proposes to discharge 64.8 cfs. Emergency escapes will be provided in the basin in case of a failure or improper maintenance of the infiltration basin. Emergency escapes will allow flow to escape into Alabama Street where flow will continue to drain north towards the Santa Ana River as has been the case historically.

METHODOLOGY

HYDROLOGY

Hydrologic calculations were performed in accordance with the San Bernardino County Hydrology Manual, dated August 1986. The rational method and synthetic unit hydrograph methods were utilized in hydrologic analyses.

The rainfall values were derived from National Oceanic and Atmospheric Administration (NOAA) Atlas 14 that are available on the NOAA website. Soil types were derived from the United States Department of Agriculture (USDA) National Resources Conservation Service (NRCS) web site.

Hydrology calculations were performed using a computer program developed by CivilDesign Corporation and Joseph E. Bonadiman and Associates Inc. The computer program is commonly referred to as CivilD which performs hydrologic calculations as outlined in the hydrology manual.

The Rational Method was used to determine the peak flow rates used to size and design the subsurface storm drain systems to convey on-site flows to the proposed basin. The flow rates were computed by generating a hydrologic "link-node" model in which the overall area is divided into separate drainage sub-areas, each tributary to a concentration point (node) determined by the proposed layout and grading.

The Synthetic Unit Hydrograph Method was utilized to determine the flow rates and volumes needed to evaluate and size the proposed infiltration basin in order to mitigate peak flow rates from the project site.

HYDRAULICS

Based on the results from the Rational Method Hydrology, a steady state hydraulic analysis of the storm drain system was performed to size/analyze on-site subsurface storm drain systems. The facilities were analyzed under the established 100-year flow rates. The computer program, Water Surface and Pressure Gradient (WSPG) from CivilDesign, Corp. Version 14.06 (originally Los Angeles County Flood Control District Program F0515P) was used to analyze the system. For additional information and results, see Appendix A.

Normal depth calculations and inlet calculations were performed using the Hydraulic Toolbox 4.1 Software developed by Federal Highway Administration (FHWA) in cooperation with Aquaveo. For results, see Appendix B.

Water quality basin calculations were performed using worksheets from the Santa Ana watershed region. Preliminary calculations and additional details can be found in the Preliminary WQMP (P-WQMP).

SECTION 2 - HYDROLOGY ANALYSIS

HYDROLOGY PARAMETERS

The San Bernardino County Hydrology Manual was used to determine several of the hydrological parameters. The following rainfall depths were utilized in the hydrology analyses. The rainfall values were obtained from the NOAA Atlas 14 website:

Table 1 – Precipitation Values

	Duration
Storm Event	1-Hour (inches)
2-Year	0.49
100-Year	1.25

The value for slope of intensity was determined to be 0.60. The NOAA Atlas 14 rainfall point precipitation table and the isohyetal maps from the San Bernardino County Hydrology manual have also been included in Appendix A.

Based on the Figure C-11 in the San Bernardino County Hydrology Manual, the project site is classified as soil type A. An NRCS Soils Survey Report was also created to compare soil types. The NRCS Soils Report also classified the project site as soil type A. The NRCS soils map and Figure C-11 is included in Appendix A.

The cover type was determined based on the existing land cover and proposed land use of the site. Hydrological computations for the existing condition were done using 'Undeveloped – Poor Cover'. The commercial landscaping cover type was used to represent the developed condition. The table below summarizes the runoff index values and the recommended values for percentage of impervious cover for each category:

Table 2 – Cover Type

Cover Type	Soil Group A	Soil Group B	Soil Group C	Soil Group D	Percentage of Impervious Cover
Undeveloped Poor Cover	67	78	86	89	0%
Commercial Landscaping	32	56	69	75	90%

ON-SITE RATIONAL METHOD HYDROLOGY

The rational method was used to determine peak flow rates in order to adequately size the proposed subsurface storm drains and associated inlets used to convey on-site flows to the proposed infiltration basin. The project site was hydrologically modeled as one watershed, and broken down into subareas. All of the subareas are tributary to Basin-1. The project is comprised of approximately 15% pervious cover (landscaping and basin area). The project was modeled as commercial land use, which assumes a 10% pervious cover and is slightly more conservative than what is proposed. As previously described, the basin will utilize an outlet structure to dewater the basin and discharge flows into the Line-A storm drain within Alabama Street.

Area-12 was infeasible to drain into the infiltration basin due to connecting to existing grading on Palmetto and providing a balanced site for earthwork quantities. Area-12 will drain into an infiltration trench using curb cuts and once the water quality volume is retained, the higher flows will spill out through the same curb cuts and drain down Palmetto Avenue.

The following table summarizes the rational method results at key points:

Table 3 – Rational Method Results

Point of Interest	10-Year Peak Flow Rate (cfs)	100-Year Peak Flow Rate (cfs)
Node 102– Initial Flow from Area-1	7.8	12.8
Add Area at Node 103 – Subarea Flow from Area-2	19.1	11.3
Node 103 – Total Flow tributary to Line 1 and Basin -1	19.1	31.8
Add Area at Node 104 – Subarea Flow from Area-3	6.0	10.5
Node 104 – Total Flow tributary to Line 1 and Basin -1	25.1	42.4
Add Area at Node 105 – Subarea Flow from Area-4	5.6	9.9
Node 105 – Total Flow tributary to Line 1 and Basin -1	30.7	52.3
Add Area at Node 106 – Subarea Flow from Area-5	10.9	19.2
Node 106– Total Flow tributary to Line 1 and Basin -1	41.6	71.5
Node 109 – Initial Flow from Area-6	10.8	17.7
Add Area at Node 110– Subarea Flow from Area-7	10.1	17.2
Node 110 – Total Flow tributary to Basin -1	20.8	34.9
Add Area at Node 111 – Subarea Flow from Area-8	6.0	10.8
Node 111 – Total Flow tributary to Basin -1	26.9	45.7
Add Area at Node 112 – Subarea Flow from Area-9	4.8	8.7
Node 112 – Total Flow tributary to Basin -1	31.7	54.4
Node 114– Initial Flow from Area-10 tributary to Line-2	4.9	8.0
Add Area at Node 107 – Subarea Flow from Area-11	1.4	4.8
Node 107 – Total Flow tributary to Basin-1	77.4	134.9
Node 202 – Total flow tributary to infiltration trench	1.2	1.9

The rational method output files and hydrology map have been included in Appendix A.

ON-SITE UNIT HYDROGRAPH METHOD HYDROLOGY

The unit hydrograph method was used to determine the peak flow rates and volumes in order to adequately size the proposed basin to address increased runoff mitigation. A unit hydrograph was performed for the entire project site (54.7 acres). Unit hydrographs were performed for both the existing condition and developed condition. The existing condition is used to establish a baseline for comparative purposes. The developed condition is used for design purposes, it was utilized in the basin routing analysis in order to size and analyze the proposed basin. The following table summarizes the results of the unit hydrograph analysis:

Table 4 – Unit Hydrograph Results

	Existing Condition		Proposed Condition	
Storm Event	Volume (Ac-ft.)	Peak Flow (cfs)	Volume (Ac-ft.)	Peak Flow (cfs)
100-Year, 24-Hour	16.352	114.6	19.706	137.6

The unit hydrograph output files and hydrology map have been included in Appendix A.

SECTION 3 - HYDRAULIC ANALYSIS

ON-SITE STORM DRAIN FACILITIES

The project proposes minimal subsurface storm drain for on-site conveyance. All onsite flows will rely on surface flow to convey on-site flows to the proposed infiltration basin. All on-site flows will be directed into the water quality infiltration basin for treatment. An outlet structure will control outflow for flows in excess of the water quality volume. The basin outflow will be discharged into the proposed Lateral-A1 storm drain. The outlet structure will mitigate the 100-year flow rate to 64.8 cfs before discharging into Line-A.

Line-1

Line-1 is a proposed 48" HDPE storm drain that will convey a total of 71.5 cfs from the proposed grate inlet located in the north eastern area of the truck court. A hydraulic model for this storm drain system will be created during final engineering. The initial hydraulic grade line (HGL) will be determined from the 100-year 24-hour basin routing model. Hydraulic Toolbox was used to preliminarily size Line-1.

Line-2

Line-2 is a proposed 24" HDPE storm drain that will convey a total of 8.0 cfs from the proposed grate inlet located in the south western parking area. A hydraulic model for this storm drain system will be created during final engineering. The initial hydraulic grade line (HGL) will be determined from the 100-year 24-hour basin routing model. Hydraulic Toolbox was used to preliminarily size Line-2.

Lateral-A1 (On-site/Off-site)

Lateral-A1 is a proposed 60" HDPE storm drain that will convey a total of 64.8 cfs from the proposed outlet structure located in the basin. A hydraulic model for this storm drain system was created to determine the stage-storage-discharge table through an iterative process. (See Basin Routing Analysis in this Section) The initial hydraulic grade line (HGL) was determined to be 1200.31 from the 100-year proposed condition WSPG model of Line-A.

Inlet Capacities

Line-1 and Line-2 use ADS grates grate inlets to convey onsite flows into the infiltration basin. The grates are sized to handle the 100-year peak flow rates. A table that includes the grates associated with their respective Node number and peak flowrate will be included during final engineering.

Drawdown

Basin-1 is an infiltration basin that has a natural infiltration rate of 3.0 inches per hour. The basin bottom area is 81,206 square feet. The basin is required by the County of San Bernardino to drain within 48 hours. The basin will drain the water quality volume and the increase in runoff in approximately 31.3 hours. Refer to the PWQMP Report for more information.

OFF-SITE STORM DRAIN FACILITIES

The project proposes to improve Alabama Street and Palmetto Avenue by widening the current edge of pavement and constructing curb and gutter along the project frontage. Natural low points along the project frontage on Alabama Street or Palmetto Avenue do not exist, so there are no further proposed storm drain connections to Line-A. A peak flow rate of 64.8 cfs is expected per the routing analysis (See Section 3 and Appendix B for more detail) to discharge into Line-A.

As previously mentioned, the project proposes to discharge its onsite flows into Line-A. Line-A is an existing storm drain facility with an upstream terminus at the corner of Alabama Street and Almond Avenue. This facility extends along Alabama Street and discharges into the Santa Ana River. Line-A will not be negatively impacted. Refer to section below and Routing Section for further information.

Line-A

Line-A is a varied sized reinforced concrete pipe (RCP) storm drain that currently conveys a total of 694.1 cfs. A hydraulic model for the existing condition of this storm drain system was created for comparative purposes. The existing stationing of Line A begins upstream at 10+00 and ends downstream at 84+00. The stationing had to be reversed in order for the hydraulic model to properly function. The WSPG model for the existing condition shows there is a hydraulic jump that occurs at station 73+33.60 (per As-built stationing) and 18+72.97 (per revised stationing). The hydraulic jump is located at a natural low point. This hydraulic jump controls the amount of runoff the project site may discharge into Line-A. Refer to Appendix C for Line-A As-Built plans and Appendix B for the hydraulic models.

A WSPG hydraulic model for the proposed condition of Line-A was created to determine how much runoff can be added to the storm drain system without causing the existing HGL at the low point to increase more than 2 feet above the existing natural ground. According to the As-Built plans for Line-A, the low point has an elevation of 1183.7. This means that the increase in runoff cannot cause the HGL to increase more than approximately 2 feet, which results in an elevation of roughly 1185.7'. Through an iterative process, it was determined that the project cannot outlet more than 80 cfs into Line-A. However, the project proposes to discharge only 64.8 cfs into Line-A due to the inlet control condition. Below is a table of some of the iterative results.

Table 5 – Iterations of mitigated flowrate at junction

Q (cfs)	HGL @ Hydraulic Jump (Elev.)	HGL @ Proposed Junction (Elev.)
50	1184.5	1200.31
70	1184.4	1200.31
80	1185.7	1200.31
100	1186.2	1200.31
129.8	1187.3	1200.31

BASIN ROUTING ANALYSIS

A routing analysis was completed to demonstrate that the basin contains substantial volume needed to mitigate to regulate outflow to maximum of 80 cfs for the all events up to the 100-year storm event.

A stage-storage-discharge table was determined through an iterative process of the proposed Lateral A-1. A hydraulic model was created based on the assumption of an initial HGL of 1200.31 (results from the proposed condition of Line-A), a slope of 0.003 ft/ft and a diameter size of 60". The hydraulic model was ran using different peak flowrates, which gave the water surface elevation in the basin for that particular run. For example, a flowrate of 80 cfs was used and it resulted in an HGL of 1203.4. From the basin stage-storage table, the volume at 1203.4 was used in acre-feet. This allowed us to create the stage-storage-discharge table using an iterative process. Refer to Appendix B for the stage-storage-discharge table.

The storage volume takes into account that the basin is connected to a single discharge point. In addition, it was assumed that there would not be any infiltration outflow as the basin is filling up for water quality volumes to remain conservative.

The following table displays the result of the routing analysis for the 100-year 24-hour storm event to demonstrate that the basin provides the necessary storage volume needed to restrict the outflow to maximum flowrate of 80 cfs.

The results achieve a flowrate to be 64.8 cfs, which is less than the maximum allowed flowrate of 80 cfs. This concludes that the project will not negatively impact the existing hydraulic jump or the overall hydraulics in Line-A.

Table 6 – Basin Routing Results

	Existing Condition		Proposed Condition		Basin Routing Results		
Storm Event	Volume (AC-ft.)	Peak Flow (cfs)	Volume (AC-ft.)	Peak Flow (cfs)	Peak Flow (cfs)	Maximum Basin Depth (feet)	Water Surface Elevation
100-Year, 24-Hour	16.352	114.6	19.706	137.6	64.8	3.4	1202.9

The basin routing calculations and other hydraulic calculations have been provided in Appendix B.

SECTION 4 - CONCLUSION

Based on the analyses and results of this report, the following conclusions were derived from the hydrology and hydraulic results:

- The proposed drainage improvements will adequately convey flows to the basin and provide flood protection for the 100-year storm event.
- The proposed basin will provide adequate water quality treatment and drawdown within 48 hours.
- The proposed project will not impact flooding condition to upstream or downstream properties.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

	Good	67	78	85	89
Small grain (Wheat, oats, barley, etc.)	Poor	65	76	84	88
	Good	63	75	83	87

Notes:

1. All curve numbers are for Antecedent Moisture Condition (AMC) II.
2. Quality of cover definitions:

   Poor-Heavily grazed, regularly burned areas, or areas of high burn potential. Less than 50 percent of the ground surface is protected by plant cover or brush and tree canopy.

   Fair-Moderate cover with 50 percent to 75 percent of the ground surface protected.

   Good-Heavy or dense cover with more than 75 percent of the ground surface protected.
3. See Figure C-2 for definition of cover types.

SAN BERNARDINO COUNTY
HYDROLOGY MANUAL

CURVE NUMBERS FOR PERVIOUS AREAS

Figure C-3 (2 of 2)

ACTUAL IMPERVIOUS COVER

Land Use (1)	Range-Percent	Recommended Value For Average Conditions-Percent (2)
Natural or Agriculture	0 - 0	0
Public Park	10 - 25	15
School	30 - 50	40
Single Family Residential: (3)		
2.5 acre lots	5 - 15	10
1 acre lots	10 - 25	20
2 dwellings/acre	20 - 40	30
3-4 dwellings/acre	30 - 50	40
5-7 dwellings/acre	35 - 55	50
8-10 dwellings/acre	50 - 70	60
More than 10 dwellings/acre	65 - 90	80
Multiple Family Residential:		
Condominiums	45 - 70	65
Apartments	65 - 90	80
Mobile Home Park	60 - 85	75
Commercial, Downtown Business or Industrial	80 - 100	90

Notes:

1. Land use should be based on ultimate development of the watershed. Long range master plans for the County and incorporated cities should be reviewed to insure reasonable land use assumptions.

2. Recommended values are based on average conditions which may not apply to a particular study area. The percentage impervious may vary greatly even on comparable sized lots due to differences in dwelling size, improvements, etc. Landscape practices should also be considered as it is common in some areas to use ornamental gravels underlain by impervious plastic materials in place of lawns and shrubs. A field investigation of a study area shall always be made, and a review of aerial photos, where available, may assist in estimating the percentage of impervious cover in developed areas.

3. For typical equestrian subdivisions increase impervious area 5 percent over the values recommended in the table above.

United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for San Bernardino County Southwestern Part, California

April 4, 2018

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or

landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

San Bernardino County Southwestern Part, California

HbA—Hanford sandy loam, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: hck5
Elevation: 150 to 900 feet
Mean annual precipitation: 10 to 20 inches
Mean annual air temperature: 63 degrees F
Frost-free period: 250 to 280 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Hanford and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Hanford

Setting

Landform: Alluvial fans
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from granite

Typical profile

H1 - 0 to 12 inches: sandy loam
H2 - 12 to 60 inches: fine sandy loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Available water storage in profile: Moderate (about 7.8 inches)

Interpretive groups

Land capability classification (irrigated): 1
Land capability classification (nonirrigated): 3c
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Greenfield, sandy loam

Percent of map unit: 5 percent
Hydric soil rating: No

Hanford, steeper slopes
Percent of map unit: 5 percent
Hydric soil rating: No

Unnamed
Percent of map unit: 5 percent
Hydric soil rating: No

Ps—Psamments, Fluvents and Frequently flooded soils

Map Unit Setting
National map unit symbol: hckh
Elevation: 10 to 1,500 feet
Mean annual precipitation: 10 to 25 inches
Mean annual air temperature: 59 to 64 degrees F
Frost-free period: 250 to 350 days
Farmland classification: Not prime farmland

Map Unit Composition
Psamments and similar soils: 50 percent
Fluvents and similar soils: 50 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Psamments

Setting
Landform: Drainageways
Landform position (three-dimensional): Riser
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Sandy alluvium

Typical profile
A - 0 to 12 inches: sand
C1 - 12 to 48 inches: fine sand
C2 - 48 to 60 inches: stratified gravelly sand to gravelly loamy sand

Properties and qualities
Slope: 0 to 5 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat excessively drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Available water storage in profile: Low (about 4.1 inches)

Interpretive groups
Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: A
Hydric soil rating: No

Description of Fluvents

Setting
Landform: Drainageways
Landform position (three-dimensional): Riser
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Typical profile
A - 0 to 10 inches: gravelly sand
C1 - 10 to 30 inches: stratified gravelly sand to gravelly loam
C2 - 30 to 60 inches: stratified gravelly sand to gravelly loam

Properties and qualities
Slope: 0 to 5 percent
Depth to restrictive feature: More than 80 inches
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Moderate (about 6.1 inches)

Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: A
Hydric soil rating: Yes

TuB—Tujunga loamy sand, 0 to 5 percent slopes

Map Unit Setting
National map unit symbol: 2sx6y
Elevation: 650 to 3,110 feet
Mean annual precipitation: 10 to 25 inches
Mean annual air temperature: 62 to 65 degrees F
Frost-free period: 325 to 365 days
Farmland classification: Farmland of statewide importance

Map Unit Composition
Tujunga, loamy sand, and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Tujunga, Loamy Sand

Setting

Landform: Alluvial fans
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from granite

Typical profile

A - 0 to 6 inches: loamy sand
C1 - 6 to 18 inches: loamy sand
C2 - 18 to 60 inches: loamy sand

Properties and qualities

Slope: 0 to 5 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat excessively drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Available water storage in profile: Low (about 4.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: A
Hydric soil rating: No

Minor Components

Tujunga, gravelly loamy sand

Percent of map unit: 10 percent
Landform: Alluvial fans
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Hanford, sandy loam

Percent of map unit: 5 percent
Landform: Alluvial fans
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Soil Information for All Uses

Soil Properties and Qualities

The Soil Properties and Qualities section includes various soil properties and qualities displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each property or quality.

Soil Qualities and Features

Soil qualities are behavior and performance attributes that are not directly measured, but are inferred from observations of dynamic conditions and from soil properties. Example soil qualities include natural drainage, and frost action. Soil features are attributes that are not directly part of the soil. Example soil features include slope and depth to restrictive layer. These features can greatly impact the use and management of the soil.

Hydrologic Soil Group

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

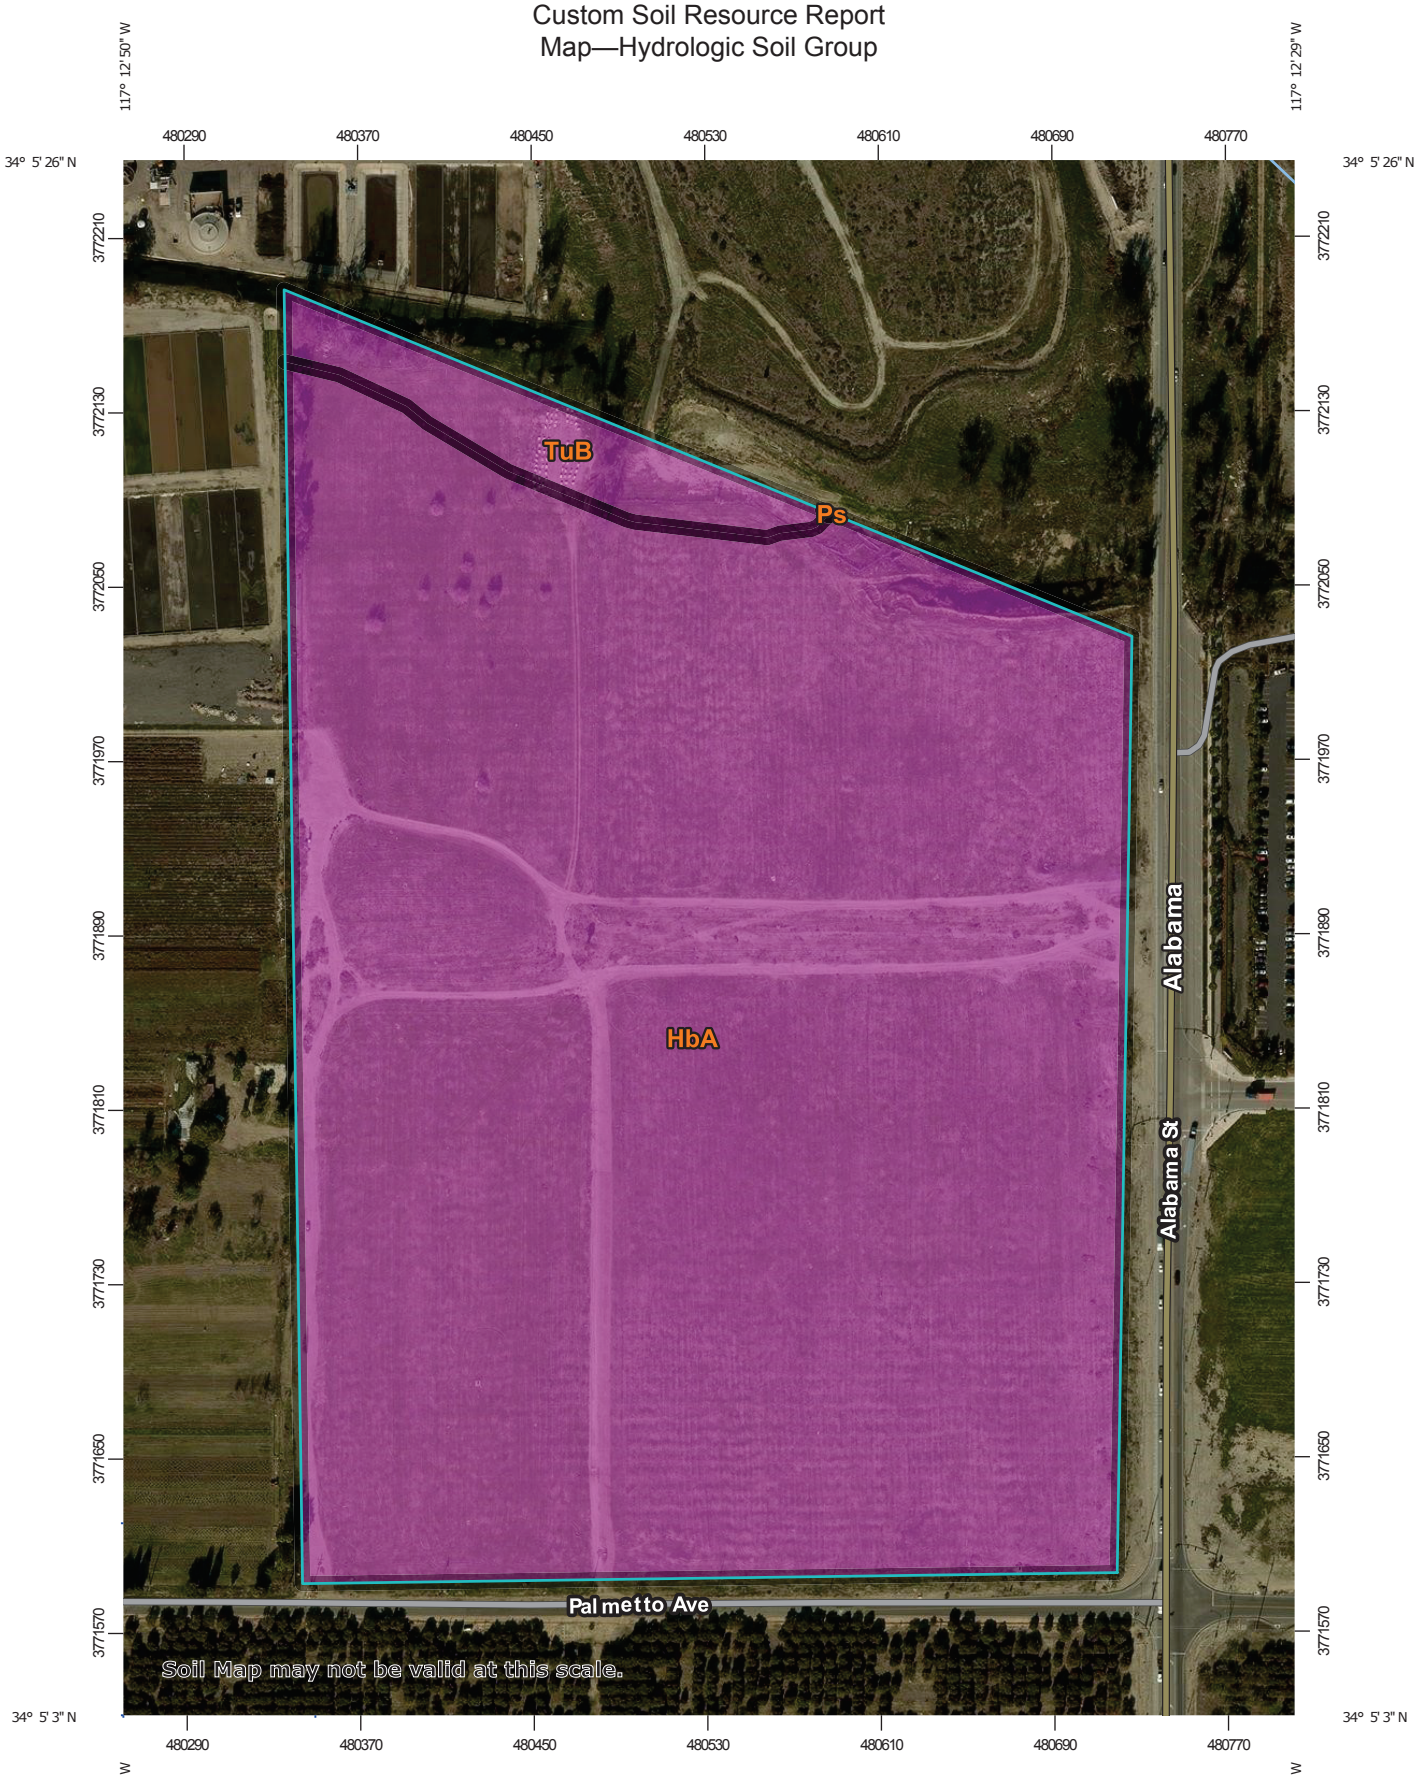
Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.



Map Scale: 1:3,480 if printed on A portrait (8.5" x 11") sheet.

Average low loss rate fraction (Yb) = 0.165 (decimal)
VALLEY DEVELOPED S-Graph Selected
Computed peak 5-minute rainfall = 0.463(In)
Computed peak 30-minute rainfall = 0.947(In)
Specified peak 1-hour rainfall = 1.250(In)
Computed peak 3-hour rainfall = 2.027(In)
Specified peak 6-hour rainfall = 2.750(In)

Specified peak 24-hour rainfall = 5.100(In)

Rainfall depth area reduction factors:
Using a total area of 54.30(Ac.) (Ref: fig. E-4)

5-minute factor = 0.997 Adjusted rainfall = 0.461(In)
30-minute factor = 0.997 Adjusted rainfall = 0.945(In)
1-hour factor = 0.997 Adjusted rainfall = 1.247(In)
3-hour factor = 1.000 Adjusted rainfall = 2.026(In)
6-hour factor = 1.000 Adjusted rainfall = 2.750(In)
24-hour factor = 1.000 Adjusted rainfall = 5.100(In)

APPENDIX B – HYDRAULICS

LINE-1 WSPG MODEL

*To be included during final engineering

Hydraulic Analysis Report

Project Data

Project Title: LINE 1

Designer:

Project Date: Friday, April 06, 2018

Project Units: U.S. Customary Units

Notes:

Channel Analysis: NODE 106 TO NODE 107

Notes:

Input Parameters

Channel Type: Circular

Pipe Diameter: 4.0000 ft

Longitudinal Slope: 0.0030 ft/ft

Manning's n: 0.0120

Flow: 71.5000 cfs

Result Parameters

Depth: 2.8042 ft

Area of Flow: 9.4111 ft^2

Wetted Perimeter: 7.9384 ft

Hydraulic Radius: 1.1855 ft

Average Velocity: 7.5974 ft/s

Top Width: 3.6624 ft

Froude Number: 0.8352

Critical Depth: 2.5566 ft

Critical Velocity: 8.4309 ft/s

Critical Slope: 0.0039 ft/ft

Critical Top Width: 3.84 ft

Calculated Max Shear Stress: 0.5249 lb/ft^2

Calculated Avg Shear Stress: 0.2219 lb/ft^2

LINE-2 WSPG MODEL

*To be included during final engineering

DRAWDOWN CALCULATION

Underground Storage System Drawdown Calculation

ALBERT A WEBB ASSOCIATES ENGINEERING CONSULTANTS

Designer: MJS
Date: 4/11/2018
Project: Duke - Alabama & Palmetto
Location: Southeast corner of Alabama Street and Palmetto Avenue
Area: DMA 1

(1)	VBMP =	186684	ft^3
(2)	Basin Bottom Area=	81206	ft^2
(3)	Infiltration Rate =	3	in/hr
(4)	Factor of Safety=	3.4	
(5)	Design Infiltration Rate =	0.9	in/hr

$$Drawdown = \frac{V_{BMP}\ (ft^3)}{Design\ Infiltration\ Rate\left(\frac{in}{hr}\right) \times \left(\frac{1ft}{12in}\right) \times Bottom\ Area\ (ft^2)}$$

Water Quality Drawdown Time=	31.3	hr

Volume at 1202.9'=	296143	ft^3
Basin Bottom Area=	81206	ft^2
Infiltration Rate =	0.9	in/hr

Drawdown Time for Enitre Volume=	48.0	hr

*The Geotechnical Infiltration Test Report shows recommend a design infiltration rates of 3 inches per hour at the expected depth. A factor of safety of 3.4 was determined by the PWQMP Report. The entire 100-year 24-hour volume will drain within the 48-hour mark.

**** RETARDING BASIN ROUTING ****

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 296
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)

APPENDIX C – REFERENCES

LINE A AS-BUILT PLANS

OFFSITE STORM DRAIN PLANS

CITRUS PLAZA PHASE II

PM 14742, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA

GENERAL NOTES

1. All work shall be done in accordance with approved grading plan, the County of San Bernardino Std. Plans & Specifications, Chapter 70 of the Uniform building code, latest edition, preliminary soils report dated 3-12-2002 and done under the direction and supervision of the licensed soils engineer. Any deviation to the approved grading plan must be approved prior to the start of construction.

2. All survey Monuments shall be protected and perpetuated in place. Any disturbed or covered monuments shall by reset by a registered Civil Engineer or a licensed Land Surveyor.

3. Hours of operation shall be from 7:00 a.m. to 8:00 p.m., Monday through Saturday.

4. County inspector shall be given 48 hours notice to schedule a site pre-grade meeting prior to start of grading. 48 hours notice shall be given for all required inspections during the course of grading.

5. Repair or replace all existing damaged or altered public improvements as required by the County inspector in the field.

6. No fill shall be placed until preparation of original ground is approved by the Soils Engineer. Inspection and certification of fill placement shall be provided by the Soils Engineer during the process of grading. No rock or similar material greater than six (6) inches in diameter shall be placed unless recommendations for such placement have been approved by the Soils Engineer.

7. Maximum fill or cut slope shall be 2:1, unless otherwise approved by the Soils Engineer. Fill slopes shall not have less than 90% relative compaction as determined by ASTM D 1557-70 and certified by the Soils Engineer. No fill shall be placed on existing terrain which slopes greater than 2:1.

8. If any unknown sub-surface structures are encountered during grading, they shall be immediately brought to the attention of the Soils Engineer and the Design Engineer prior to proceeding with grading operations.

9. It shall be the contractor's responsibility to verify the location of all utilities or structures above or below ground, shown or not shown on these plans. He will be held responsible for all damage to any utilities or structures caused by his operation. The Design Engineer must by notified of any conflicts and grading must be terminated and streets restored until corrective measures have been approved by the County inspector.

10. Transportation Department permit is required for any construction, temporary or permanent, on County right-of-way or for use of County maintained roads by overload equipment.

11. Adjacent streets are to be cleaned daily of all dirt and debris that is the result of this operation.

12. Engineer must set grade stakes for all drainage devices. The contractor shall obtain all necessary inspections before pouring.

13. Strict adherence to dust control requirements shall be enforced.

14. The undersigned Civil Engineer accepts the responsibility for professional inspections in accordance with Section 7014 of the Uniform Building Code.

STEVEN D. LEVSEE R.C.E. 45926 — DATE 7/27/05

15. An As-Built Grading Plan shall be submitted by the Civil Engineer upon completion of construction.

16. The grading contractor shall submit a statement of compliance to the As-Built plan.

NOTICE TO CONTRACTOR

Contractor agrees that he shall assume sole and complete responsibility for job site conditions during the course of construction of this project including safety of all persons and property; that these requirements shall apply continuously and not be limited to normal working hours; and that the contractor shall defend, indemnify, and hold the owner and engineer harmless from any and all liability, real or alleged, in connection with the performance of work on this project, excepting for liability arising from the sole negligence of the owner or the engineer.

The existence and location of any underground utility pipes or structures shown on these plans were obtained by a search of available records. These locations are approximate and shall be confirmed in the field by the contractor, so that any necessary adjustment can be made in alignment and/or grade of the proposed improvement. The contractor is required to take due precautionary measures to protect any utility lines shown and any other lines not of record or not shown on these plans.

CITY OF REDLANDS GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE "STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (GREENBOOK)", 2003 EDITION (INCLUDING THE LATEST SUPPLEMENTAL AMENDMENTS THERETO), THE "STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION", 1997 EDITION (INCLUDING THE LATEST SUPPLEMENTAL AMENDMENTS THERETO), AND THESE CITY OF REDLANDS STANDARD SPECIFICATIONS. ALL WORK SHALL BE COMPLETED TO THE SATISFACTION OF THE PUBLIC WORKS DIRECTOR OR APPOINTED REPRESENTATIVE.
2. THE APPROXIMATE LOCATIONS OF KNOWN EXISTING UNDERGROUND UTILITIES ARE SHOWN ON THIS PLAN. THE UTILITIES ARE PLOTTED FROM RECORD AND FIELD DATA. THE ENGINEER ASSUMES NO LIABILITY AS TO THE EXACT LOCATION OF SAID LINES WHETHER SHOWN OR NOT SHOWN ON THE PLANS. THE CONTRACTOR IS TO NOTIFY ALL UTILITY COMPANIES PRIOR TO WORK OR EXCAVATION TO DETERMINE THE EXACT LOCATIONS OF UNDERGROUND LINES.
3. STREETS MAY BE REQUIRED TO HAVE A SEAL COAT APPLIED AT THE OPTION OF THE PUBLIC WORKS DIRECTOR OR APPOINTED REPRESENTATIVE. TYPE OF SEAL COAT IS TO BE DETERMINED BY THE PUBLIC WORKS DIRECTOR OR APPOINTED REPRESENTATIVE.
4. RESURFACE EXISTING ROADWAY, AS DIRECTED BY THE PUBLIC WORKS DIRECTOR OR APPOINTED REPRESENTATIVE, DUE TO UTILITY INSTALLATIONS AND CONSTRUCTION DAMAGE.
5. EXISTING STRIPING SHALL BE REMOVED AND REPLACED AS NECESSARY. NEW STRIPING AND PAVEMENT MARKINGS SHALL BE INSTALLED IN ACCORDANCE WITH THE STRIPING PLAN APPROVED BY THE PUBLIC WORKS DIRECTOR OR APPOINTED REPRESENTATIVE.
6. SECTION 4216/4217 OF THE GOVERNMENT CODE REQUIRES A DIG ALERT IDENTIFICATION NUMBER BE ISSUED BEFORE THE "ENCROACHMENT PERMIT" WILL BE VALID. FOR YOUR DIG ALERT ID NUMBER, CALL UNDERGROUND SERVICE ALERT (TOLL FREE) AT 1-800-227-2600, TWO WORKING DAYS BEFORE YOU DIG.
7. SOILS REPORT WITH LABORATORY TESTS OF THE "R" VALUE AND SOILS ENGINEER'S STREET STRUCTURAL SECTION RECOMMENDATION SHALL BE REVIEWED AND APPROVED BY THE CITY PRIOR TO ISSUANCE OF THE ENCROACHMENT PERMIT.
8. ASPHALT CONCRETE PAVEMENT SECTIONS ON NEW STREETS GREATER THAN 75 MM (3 IN.) THICK SHALL BE PLACED IN A MINIMUM OF TWO LIFTS WITH THE LAST LIFT BEING DELAYED UNTIL 95% OF ALL DEVELOPER CONSTRUCTION HAS BEEN COMPLETED.
9. THE FINAL PAVEMENT OR SURFACE LAYER OF ASPHALTIC CONCRETE ROADWAY PAVEMENT SHALL NOT BE PLACED UNTIL ALL UTILITIES AND UTILITY LATERALS WITHIN THE ROADWAY HAVE BEEN INSTALLED, COMPACTED, TESTED AND ACCEPTED BY THE CITY. ALL ON-SITE IMPROVEMENTS INCLUDING ALL GRADING HAVE BEEN COMPLETED AND ALL UNACCEPTABLE PARKWAY AND ROADWAY IMPROVEMENTS ARE REMOVED AND REPLACED TO THE SATISFACTION OF THE CITY.
10. PRIOR TO ROAD CONSTRUCTION, SURVEY MONUMENTS SHALL BE REFERENCED OUT AND COMER RECORDS FILED WITH THE COUNTY SURVEYOR. SURVEY POINTS DESTROYED DURING CONSTRUCTION SHALL BE RESET, AND A SECOND COMER RECORD FILED FOR THOSE POINTS PRIOR TO COMPLETION AND ACCEPTANCE OF THE PROJECT.

STORM DRAIN NOTES

1. ALL CONCRETE USED IN THE DISTRICT RIGHT OF WAY MUST MEET THE DISTRICT'S MINIMUM REQUIREMENTS OF THE REQUIRED CONCRETE DESIGN MIX. ALL CONCRETE SHALL CONFORM TO SECTION 201-1 OF THE STRUCTURAL SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, LATEST EDITION, EXCEPT AS FOLLOWS:
   A) ALL STRUCTURAL CONCRETE SHALL BE 4,000 psi WITH "A" GRADATION IN ALL INVERTS AND 4,000 psi WITH "B" GRADATION FOR ALL WALLS.
   B) CONCRETE FOR ROCK INLET AND OUTLET STRUCTURES, BOTTOM CONTROLS, SPLASH PAD AND OTHER PROPOSED STRUCTURES SHALL BE 560-B OR C-3250.
2. ALL PIPE LENGTHS ARE HORIZONTAL PROJECTIONS. UNLESS OTHERWISE SHOWN.
3. FOR TRENCH EXCAVATIONS IN NATIVE SOIL, SHORING SHALL BE PROVIDED TO SATISFY STATE OF CALIFORNIA SAFETY REQUIREMENTS.
4. PIPE CONSTRUCTION IN FILL AREA MUST BE COORDINATED WITH THE GRADING TO INSURE THAT WHEN THE FILL OPERATION HAS BEEN COMPLETED AT GRADE A MINIMUM OF ONE FOOT ABOVE THE TOP OF PIPE OR TO FIVE FEET (MAXIMUM) ABOVE THE PROPOSED SUBGRADE OF THE PIPE, THE STORM DRAIN TRENCH SHALL BE EXCAVATED AND THE PIPE INSTALLED.
5. ALL WORK MUST BE IN CONFORMANCE WITH THE SAN BERNARDINO COUNTY STANDARD SPECIFICATIONS WHICH MAY BE PURCHASED FROM THE COUNTY AND KEPT IN THE JOB SITE AT ALL TIMES.
6. THE CONTRACTOR MUST NOTIFY THE COUNTY OF SAN BERNARDINO INSPECTOR AT LEAST (2) WORKING DAYS PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION.
7. ALL FILLS MUST BE COMPACTED TO 90% RELATIVE COMPACTION AS DETERMINED BY THE CALIFORNIA TEST METHOD NO. 216-F, 1963 "FIVE LAYER METHOD". ALL BACKFILL MATERIAL MUST BE FREE OF VEGETABLE MATTER.
8. ALL SURVEYING REQUIRED FOR VERTICAL AND HORIZONTAL ALIGNMENT MUST BE PROVIDED BY THE CONTRACTOR OR DEVELOPER AND SUFFICIENT REFERENCE STAKING MUST BE IN ACCORDANCE WITH THE REQUEST OF THE COUNTY OF SAN BERNARDINO INSPECTOR.
9. ALL STORM DRAIN PIPE MUST BE BEDDED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.
10. PRIOR TO THE PLACEMENT OF STORM DRAIN IMPROVEMENTS, THE DEVELOPER'S SOILS ENGINEER SHALL CERTIFY IN WRITING TO THE COUNTY INSPECTOR THAT THE STORM DRAINS' SUBGRADE IS OF ADEQUATE STRENGTH TO SUPPORT THE STRUCTURES AND ANY ANTICIPATED LOADS.
11. PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, THE DEVELOPER'S CONTRACTOR SHALL OBTAIN A PERMIT FROM THE STATE DIVISION OF INDUSTRIAL SAFETY. A COPY OF THE PERMIT SHALL BE KEPT ON THE JOB SITE AT ALL TIMES.
12. WHENEVER APPLICABLE, THE DEVELOPER SHALL OBTAIN A PERMIT FROM THE STATE DEPT. OF FISH AND GAME IN ACCORDANCE WITH SECTION 1602 OF THE CALIFORNIA FISH AND GAME CODE PRIOR TO COMMENCEMENT OF CONSTRUCTION.
13. ALL STEEL THAT IS TO BE CONTINUOUS SHALL BE LAPPED A MINIMUM OF 45 BAR DIAMETERS.
14. ALL MATERIALS TESTING FOR THE DRAINAGE FACILITIES SHALL BE PROVIDED BY THE CONTRACTOR OR DEVELOPER IN ACCORDANCE WITH THE NUMBER, LOCATION AND FREQUENCY REQUESTED BY THE COUNTY INSPECTOR.
15. CHAMFER ALL EXPOSED EDGES OF CONCRETE 3/4" MIN.
16. A PERMIT FOR WORK WITHIN EXISTING STREET RIGHT-OF-WAY IS REQUIRED FROM THE COUNTY OF SAN BERNARDINO FOR ANY ENCROACHMENT NECESSARY FOR CONSTRUCTION IN THE STREET RIGHT-OF-WAY.
17. LENGTH OF MANHOLE STRUCTURES MAY BE INCREASED TO MEET PIPE ENDS AT OPTION OF CONTRACTOR AS LONG AS REINFORCING STEEL IS CONTINUED AS REQUIRED. ANY CHANGE IN SPUR LOCATION MUST BE APPROVED BY THE ENGINEER.
18. FLOOR OF MANHOLE STRUCTURE SHALL BE STEEL TROWELED TO SPRING LINE.
19. BODY OF MANHOLE STRUCTURE, INCLUDING SPUR, MUST BE POURED IN ONE CONTINUOUS OPERATION, EXCEPT THAT CONSTRUCTION JOINT AT THE SPRING LINE WITH A LONGITUDINAL KEYWAY IS PERMITTED.
20. ALL REINFORCING BARS MUST BE SECURELY HELD IN PLACE IN THE FORMS. TWO WAY MATS OF STEEL MUST BE WIRED TOGETHER BOTH WAYS AT ALTERNATE INTERSECTIONS.
21. STORM DRAIN BACKFILL FOR ALL FACILITIES WITHIN STREET RIGHT-OF-WAY IS TO BE PLACED AND COMPACTED UNDER COUNTY OF SAN BERNARDINO INSPECTION AND MEET OF EXCEED COUNTY OF SAN BERNARDINO MINIMUM STANDARDS.
22. ALL PIPE TO BE GROUTED.
23. AREA DRAIN PIPE SHALL BE:
   a) ACRYLONITRILE BUTADIENE STYRENE (A.B.S.) SOLID WALL PIPE CONFORMING TO A.S.T.M. D 2751, DR 35. -OR-
   b) POLYVINYL CHLORIDE PLASTIC (P.V.C.) PIPE CONFORMING TO A.S.T.M. D 3034, SDR 35 -OR-
   c) ASBESTOS CEMENT PIPE (A.C.P.) CONFORMING TO A.S.T.M. C-663 -OR-
   d) APPROVED EQUAL
24. R.C.P. SHALL COMPLY WITH ALL A.S.T.M. APPLICABLE STANDARDS.

Project Owner's Certification

This Water Quality Management Plan (WQMP) has been prepared for Duke Realty Corporation by Albert A. Webb Associates. The WQMP is intended to comply with the requirements of the County of San Bernardino and the NPDES Area wide Stormwater Program requiring the preparation of a WQMP. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with San Bernardino County's Municipal Storm Water Management Program and the intent of the NPDES Permit for San Bernardino County and the incorporated cities of San Bernardino County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors in interest and the city/county shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity.

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and funding) of the WQMP have been accepted and that the plan will be transferred to future successors."

Section 1 Discretionary Permit(s)

Form 1-1 Project Information					
Project Name	Duke – Alabama & Palmetto				
Project Owner Contact Name:	Adam Schmid				
Mailing Address:	200 Spectrum Center Drive, Suite 1600	E-mail Address:	adam.schmid@dukerealty.com	Telephone:	(949) 797-7050
Permit/Application Number(s):		Tract/Parcel Map Number(s):	Parcel Map No. 17279		
Additional Information/ Comments:	None				
Description of Project:	The project is proposing an industrial warehouse (approximately 1,116,930 ft^2) on approximately 54.7 acres. The project is located near the City of Redlands in an area referred to as the "Donut Hole" in the County of San Bernardino, California. The project site is bounded by Palmetto Avenue to the south, Alabama Street to the east, and a warehouse, vacant land and a treatment plant to the west. The project is located just south of the Santa Ana River. The project proposes to treat 54.3 acres of the project runoff with an infiltration basin. The remainder 0.4 acres will be treated using a series of curb cuts that will convey flows into an infiltration trench. (Please see WQMP Site Map in Appendix A)				
Provide summary of Conceptual WQMP conditions (if previously submitted and approved). Attach complete copy.	None				

Section 2 Project Description

2.1 Project Information

This section of the WQMP should provide the information listed below. The information provided for Conceptual/ Preliminary WQMP should give sufficient detail to identify the major proposed site design and LID BMPs and other anticipated water quality features that impact site planning. Final Project WQMP must specifically identify all BMP incorporated into the final site design and provide other detailed information as described herein.

The purpose of this information is to help determine the applicable development category, pollutants of concern, watershed description, and long term maintenance responsibilities for the project, and any applicable water quality credits. This information will be used in conjunction with the information in Section 3, Site Description, to establish the performance criteria and to select the LID BMP or other BMP for the project or other alternative programs that the project will participate in, which are described in Section 4.

Form 2.1-1 Description of Proposed Project

1 Development Category (Select all that apply):

☐ Significant re-development involving the addition or replacement of 5,000 ft² or more of impervious surface on an already developed site	☒ New development involving the creation of 10,000 ft² or more of impervious surface collectively over entire site	☐ Automotive repair shops with standard industrial classification (SIC) codes 5013, 5014, 5541, 7532- 7534, 7536-7539	☐ Restaurants (with SIC code 5812) where the land area of development is 5,000 ft² or more
☐ Hillside developments of 5,000 ft² or more which are located on areas with known erosive soil conditions or where the natural slope is 25 percent or more	☐ Developments of 2,500 ft² of impervious surface or more adjacent to (within 200 ft) or discharging directly into environmentally sensitive areas or waterbodies listed on the CWA Section 303(d) list of impaired waters.	☒ Parking lots of 5,000 ft² or more exposed to storm water	☐ Retail gasoline outlets that are either 5,000 ft² or more, or have a projected average daily traffic of 100 or more vehicles per day

☐ Non-Priority / Non-Category Project *May require source control LID BMPs and other LIP requirements. Please consult with local jurisdiction on specific requirements*.

2 Project Area (ft2):	2,382,640	**3** Number of Dwelling Units:	N/A	**4** SIC Code:	4226

5 Is Project going to be phased? Yes ☐ No ☒ *If yes, ensure that the WQMP evaluates each phase as a distinct DA, requiring LID BMPs to address runoff at time of completion.*

6 Does Project include roads? Yes ☐ No ☒ *If yes, ensure that applicable requirements for transportation projects are addressed (see Appendix A of TGD for WQMP)*

2.2 Property Ownership/Management

Describe the ownership/management of all portions of the project and site. State whether any infrastructure will transfer to public agencies (City, County, Caltrans, etc.) after project completion. State if a homeowners or property owners association will be formed and be responsible for the long-term maintenance of project stormwater facilities. Describe any lot-level stormwater features that will be the responsibility of individual property owners.

Form 2.2-1 Property Ownership/Management

Describe property ownership/management responsible for long-term maintenance of WQMP stormwater facilities:

Several water quality features requiring ongoing maintenance are implemented into this project, all of which will be the responsibility of the property owner. Should the property be sold to a third party at a later date, maintenance will then would be the responsibility of the new property owner. A Stormwater Best Management Practices Transfer, Access and Maintenance Agreement (Maintenance Agreement) will be signed during final approval to ensure ongoing maintenance.

2.3 Potential Stormwater Pollutants

Determine and describe expected stormwater pollutants of concern based on land uses and site activities (refer to Table 3-3 in the TGD for WQMP).

Form 2.3-1 Pollutants of Concern			
Pollutant	Please check: E=Expected, N=Not Expected		Additional Information and Comments
Pathogens (Bacterial / Virus)	E ☒	N ☐	Runoff from landscaped areas can bring with it nutrients including phosphorous. (Receiving water bodies: Prado Park Lake, Santa Ana River Reach -4, and -5)
Nutrients - Phosphorous	E ☒	N ☐	Runoff from landscaped areas can bring with it nutrients including phosphorous.
Nutrients - Nitrogen	E ☒	N ☐	Runoff from landscaped areas can bring with it nutrients including nitrogen.
Noxious Aquatic Plants	E ☒	N ☐	Aquatic plants are not highly expected with this project but may come from runoff from landscaped areas.
Sediment	E ☒	N ☐	Runoff along areas can erode slopes and carry sediment.
Metals	E ☒	N ☐	The primary source of metals would come from vehicular traffic. (Receiving water bodies: Santa Ana River Reach-3)
Oil and Grease	E ☒	N ☐	The primary source of oil and grease would come from vehicular traffic.
Trash/Debris	E ☒	N ☐	The primary source of oil and grease would come from parking lot area.
Pesticides / Herbicides	E ☒	N ☐	Runoff from landscaped areas can bring with it pesticides/herbicides.
Organic Compounds	E ☒	N ☐	Organic compounds can be introduced due to improper storage and disposal procedures.
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	

2.4 Water Quality Credits

A water quality credit program is applicable for certain types of development projects if it is not feasible to meet the requirements for on-site LID. Proponents for eligible projects, as described below, can apply for water quality credits that would reduce project obligations for selecting and sizing other treatment BMP or participating in other alternative compliance programs. Refer to Section 6.2 in the TGD for WQMP to determine if water quality credits are applicable for the project.

Form 2.4-1 Water Quality Credits

1 Project Types that Qualify for Water Quality Credits: *Select all that apply*

☐ Redevelopment projects that reduce the overall impervious footprint of the project site. [Credit = % impervious reduced]	Higher density development projects ☐ Vertical density [20%] ☐ 7 units/ acre [5%]	☐ Mixed use development, (combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that demonstrate environmental benefits not realized through single use projects) [20%]	☐ Brownfield redevelopment (redevelop real property complicated by presence or potential of hazardous contaminants) [25%]
☐ Redevelopment projects in established historic district, historic preservation area, or similar significant core city center areas [10%]	☐ Transit-oriented developments (mixed use residential or commercial area designed to maximize access to public transportation) [20%]	☐ In-fill projects (conversion of empty lots & other underused spaces < 5 acres, substantially surrounded by urban land uses, into more beneficially used spaces, such as residential or commercial areas) [10%]	☐ Live-Work developments (variety of developments designed to support residential and vocational needs) [20%]

2 Total Credit % *(Total all credit percentages up to a maximum allowable credit of 50 percent)*

Description of Water Quality Credit Eligibility (if applicable)	N/A - No water quality credit

Section 3 Site and Watershed Description

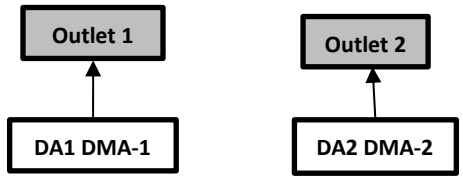
Describe the project site conditions that will facilitate the selection of BMP through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed DMAs) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. The form below is provided as an example. Then complete Forms 3.2 and 3.3 for each DA on the project site. ***If the project has more than one drainage area for stormwater management, then complete additional versions of these forms for each DA / outlet.***

Form 3-1 Site Location and Hydrologic Features

Site coordinates *take GPS measurement at approximate center of site*	Latitude 34° 5'15.0"N	Longitude117°12'38.7"W	Thomas Bros Map page Page 607, Grid G3 & H3

1 San Bernardino County climatic region: ☒ Valley ☐ Mountain

2 Does the site have more than one drainage area (DA): Yes☒ No☐ *If no, proceed to Form 3-2. If yes, then use this form to show a conceptual schematic describing DMAs and hydrologic feature connecting DMAs to the site outlet(s). An example is provided below that can be modified for proposed project or a drawing clearly showing DMA and flow routing may be attached*



Example only – modify for project specific WQMP using additional form

Conveyance DA1 DMA 1 flows to **Outlet 1**	Inlets and sub-surface storm drain pipes will be used to collect and convey runoff generated by 54.3 acres of the project site to a proposed infiltration basin for water quality treatment. Once the water quality volume is detained it will spill into Outlet 1. Outlet 1 will allow higher flows to bypass the basin and conveyed to the single project discharge point which is the existing Line A, Alabama Street storm drain. Outlet 1 will be a headwall with a concrete wall barrier to allow the DCV to be retained onsite.
DA2 DMA 2 flows to **Outlet 2**	The remainder 0.4 acres of the project could not be graded to drain into the infiltration basin due to existing grading conditions. Trying to change the grades in the drive aisle would cause the earthwork not to balance and would not be cost effective. The runoff from the drive aisle will instead be collected to into an infiltration trench using a series of curb cuts. Once the water quality volume is detained, the higher flows will spill out of the curb cuts and continue to flow out into Palmetto Avenue.
DA3 to Outlet 3	N/A

Form 3-2 Existing Hydrologic Characteristics for Drainage Area 1

For Drainage Area 1's sub-watershed DMA, provide the following characteristics	DMA 1	DMA B	DMA C	DMA D
1 DMA drainage area (ft^2)	2,366,150			
2 Existing site impervious area (ft^2)	0			
3 Antecedent moisture condition *For desert areas, use* *http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	III			
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	A			
5 Longest flowpath length (ft)	2,270			
6 Longest flowpath slope (ft/ft)	0.01			
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*	Barren			
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% Attach photos of site to support rating*	Poor			

Form 3-2 Existing Hydrologic Characteristics for Drainage Area 1 (use only as needed for additional DMA w/in DA 1)				
For Drainage Area 1's sub-watershed DMA, provide the following characteristics	DMA E	DMA F	DMA G	DMA H
1 DMA drainage area (ft^2)				
2 Existing site impervious area (ft^2)				
3 Antecedent moisture condition *For desert areas, use http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*				
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*				
5 Longest flowpath length (ft)				
6 Longest flowpath slope (ft/ft)				
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*				
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% Attach photos of site to support rating*				

Form 3-2 Existing Hydrologic Characteristics for Drainage Area 2

For Drainage Area 2's sub-watershed DMA, provide the following characteristics	DMA 2	DMA B	DMA C	DMA D
1 DMA drainage area (ft^2)	16,490			
2 Existing site impervious area (ft^2)	0			
3 Antecedent moisture condition *For desert areas, use http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	III			
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	A			
5 Longest flowpath length (ft)	70			
6 Longest flowpath slope (ft/ft)	0.007			
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*	Barren			
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% Attach photos of site to support rating*	Poor			

Form 3-2 Existing Hydrologic Characteristics for Drainage Area 2 (use only as needed for additional DMA w/in DA 2)				
For Drainage Area 2's sub-watershed DMA, provide the following characteristics	DMA E	DMA F	DMA G	DMA H
1 DMA drainage area (ft^2)				
2 Existing site impervious area (ft^2)				
3 Antecedent moisture condition *For desert areas, use http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*				
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*				
5 Longest flowpath length (ft)				
6 Longest flowpath slope (ft/ft)				
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*				
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% Attach photos of site to support rating*				

Form 3-3 Watershed Description for Drainage Area (DA1 & DA2)

Receiving waters *Refer to Watershed Mapping Tool - http://permitrack.sbcounty.gov/wap/ See 'Drainage Facilities" link at this website*	Prado Park Lake and Santa Ana River - Reaches 3, 4, and 5
Applicable TMDLs *Refer to Local Implementation Plan*	Middle Santa Ana River Baterial Indicator TMDL Watershed-wide Compliance Site Monitoring Prado Park Lake – Nutrients and Pathogens Santa Ana River Reach 3 – Pathogens, Lead, and Copper Santa Ana River Reach 4 – Pathogens Santa Ana River Reach 5- Nutrients and Pathogens
303(d) listed impairments *Refer to Local Implementation Plan and Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/ and State Water Resources Control Board website – http://www.waterboards.ca.gov/santaana/water_issues/programs/tmdl/index.shtml*	Metals, Nutirents, Pathogens
Environmentally Sensitive Areas (ESA) *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	No
Unlined Downstream Water Bodies *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	Yes, the Santa Ana River is unlined
Hydrologic Conditions of Concern	☐ Yes *Complete Hydrologic Conditions of Concern (HCOC) Assessment. Include Forms 4.2-2 through Form 4.2-5 and Hydromodification BMP Form 4.3-10 in submittal* ☒ No
Watershed–based BMP included in a RWQCB approved WAP	☐ Yes *Attach verification of regional BMP evaluation criteria in WAP* • *More Effective than On-site LID* • *Remaining Capacity for Project DCV* • *Upstream of any Water of the US* • *Operational at Project Completion* • *Long-Term Maintenance Plan* ☒ No

Section 4 Best Management Practices (BMP)

4.1 Source Control BMP

4.1.1 Pollution Prevention

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs	☒	☐	The property owner(s), tenant(s), operator(s), and/or occupant(s) should receive training on the importance of water quality treatment. The training should incude reading the educational materials on Appendix C. The property owner should bring awareness to all employees of the impacts of littering and improper water disposal.
N2	Activity Restrictions	☒	☐	Restrictions will include requiring dumpster lids to be closed at all times and prohibiting the blowing, sweeping , or hosing of debris into streets, storm drain inlets, and other conveyances. In particular, pesticide application in areas must be performed by an applicator certified by the California Department of Pesticide Regulation. No activity shall be allowed for which a specific BMP has not been included.
N3	Landscape Management BMPs	☒	☐	Landscape planning shall employ strategies to maximize water storage and conservation and minimize runoff, promote infiltration, and protect slopes from erosion. Such strategies include extensive mulching, low water use shrubs, and grouping of plants with similar water requirements. Maintenance personnel will regularly mow, remove all sediment, inspect and keep any equipment in good repair, i.e. broken sprinkler heads, etc. Any repairs will be done promtly.. In addition, fertilizer and pesticide use will be consistent with instructions contained on product labels and with the regulations administered by the State Department of Pesticide Regulation
N4	BMP Maintenance	☒	☐	Create regularly scheduled times for inspection and maintenance of infiltration basin. The frequency shall meet the current minimum County standard but shall be at a minimum once a month. A time in the late summer or early fall, prior to the storm season (October 1 to May 1), shall also be part of this schedule to reduce the amount of sediment, garden waste, and trash entering the storm drain system.
N5	Title 22 CCR Compliance (How development will comply)	☒	☐	Hazardous waste materials and wastes shall be collected and stored in covered containers in designated areas. In addition, signs shall be placed to ensure all hazardous waste is collected, removed and disposed of only at authorized disposal areas. Inspections shall be conducted regularly to check all containers and other equipment, used in handling hazardous waste, to minimize potential leaks and spills. Regular maintenance of all equipment will be conducted and repairs will be carried out promtly

Form 4.1-1 Non-Structural Source Control BMPs				
				after identification. Owner shall ensure all operations are in conformance with Title 22 Division 4.5 - Environmental Health Standards for the Management of Hazardous Materials.
N6	Local Water Quality Ordinances	☒	☐	This WQMP meets or exceeds local water quality ordinances.
N7	Spill Contingency Plan	☒	☐	Spill Contingency Plan to be determined by building owner prior to occucpancy. See SC-11 “Spill Prevention, Control, and Cleanup”, sample Spill Contingency Template, and SC-10 “Non-Storm water Discharges” in “BMP Fact Sheets”) for guidance and recommended procedures.
N8	Underground Storage Tank Compliance	☐	☒	There are no propossed underground storage tanks
N9	Hazardous Materials Disclosure Compliance	☒	☐	Compliance through the Phase 1 Site Assessments.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N10	Uniform Fire Code Implementation	☒	☐	Hazardous waste materials and wastes shall be collected and stored in covered containers in designated areas. In addition, signs shall be placed to ensure all hazardous waste is collected, removed and disposed of only at authorized disposal areas. Inspections shall be conducted regularly to check all containers and other equipment, used in handling hazardous waste, to minimize potential leaks and spills. Regular maintenance of all equipment will be conducted and repairs will be carried out promtly after identification. Owner shall ensure all operations are in conformance with the Uniform Fire Code Article 80.
N11	Litter/Debris Control Program	☒	☐	Litter control and trash management will be provided by a contracted maintenance company.
N12	Employee Training	☒	☐	Training will be required within 6 months of hire dates for new employees, and then annually thereafter. Educational and training materials are included in Appendix E of this WQMP report.
N13	Housekeeping of Loading Docks	☒	☐	Employees shall be trained in loading/unloading procedures as well as proper spill containment and cleanup per the recommendations in CASQA BMP Handbook SD-31. Maintenance records shall be kept to ensure regular maintenance and inspection of loading dock areas.
N14	Catch Basin Inspection Program	☒	☐	Drainage facilities such as on-site inlets as well as the proposed treatment control BMPs shall be inspected annually, in the late summer or early fall, and cleaned as needed, or if accumulated sediment/debris fills 25% or more of the sediment /debris storage capacity of the facility. All portions of the drainage facilities will be evaluated annually to determine the adequacy of the inspection and maintenance frequency.
N15	Vacuum Sweeping of Private Streets and Parking Lots	☒	☐	Create regularly scheduled times for the sweeping of drive isles and parking lot areas. The frequency should meet the current minimum County standard but shall be at a minimum once a month. A time in the late summer or early fall, prior to the storm season (October 1 to May 1), shall also be part of this schedule to reduce the amount of sediment, garden waste, and trash entering the storm drain system

N16	Other Non-structural Measures for Public Agency Projects	☐	☒	N/A. Not a Public Agency Project.
N17	Comply with all other applicable NPDES permits	☒	☐	Construction general permit compliance will be accomplished via filing an NOI with SMARTS and preparing a project specific SWPPP document.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S1	Provide storm drain system stencilling and signage (CASQA New Development BMP Handbook SD-13)	☒	☐	Storm drain signage shall be employed along with previously mentioned owner environmental awareness education prohibiting dumping, littering, or discharges into storm drain inlets. The stenciling or signage shall employ the phrase "NO DUMPING FLOWS TO OCEAN" or an equally effective and approved phrase that will be stenciled on all catch basins and inlets to alert employees and the public to the destination of pollutants discharged in the storm drains. Legibility will be checked and repainted annually. Owner will be responsible for maintaining this signage.
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)	☐	☒	Outdoor Storage is prohibited on-site.
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	☒	☐	Three trash container are proposed to be serve the proejct site. The locations will be shown on the WQMP Exhibit. Litter control and trash management will be provided by a contracted maintenance company. All trash enclosures shall be covered per County standards.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	☒	☐	Landscape planning shall employ strategies to maximize water storage and conservation and minimize runoff, promote infiltration, and protect slopes from erosion. Such strategies include extensive mulching, low water use shrubs, and grouping of plants with similar water requirements. Maintenance personnel will regularly inspect and keep in good repair, i.e. broken sprinkler heads, etc. will be repaired promptly. In addition, fertilizer and pesticide use will be consistent with instructions contained on product labels and with the regulations administered by the State Department of Pesticide Regulation.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement	☒	☐	Depressed landscape has been proposed in areas that are less than 10% in grade. The landscaped areas that cannot be depressed are located either immediately adjacent to the proposed building or on slopes greater than 10%.
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)	☒	☐	All side slopes (varying between 4:1 to 2:1) will be protected from erosion with landscaping in accordance with the recommendations CASQA SD-10. There are no channels proposed within this project site.

S7	Covered dock areas (CASQA New Development BMP Handbook SD-31)	☐	☒	There are no covered loading dock areas proposed.
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)	☐	☒	There are no outoor maintenance bays proposed.
S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	Vehicle washing prohibited on-site.
S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)	☐	☒	There is no outdoor processing proposed for this development.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	Equipment washing is prohibited on-site.
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)	☐	☒	Fueling areas prohibited on-site.
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)	☐	☒	No hillsides on this site.
S14	Wash water control for food preparation areas	☐	☒	Project is not a food establishment
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)	☐	☒	Vehicle and equipmenet washing is prohibited on-site.

4.1.2 Preventative LID Site Design Practices

Site design practices associated with new LID requirements in the MS4 Permit should be considered in the earliest phases of a project. Preventative site design practices can result in smaller DCV for LID BMP and hydromodification control BMP by reducing runoff generation. Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Preventative LID Site Design Practices Checklist

Site Design Practices *If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets*
Minimize impervious areas: Yes ☒ No ☐ Explanation: This project has maximized the open landscaped areas to the maximum extent practicable and per County minimum landscape area requirements. The landscaping area is approximately 15% of the overall development area.
Maximize natural infiltration capacity: Yes ☒ No ☐ Explanation: An infiltratin basin and infiltration trench is proposed.
Preserve existing drainage patterns and time of concentration: Yes ☒ No ☐ Explanation: Existing westerly drainage pattern is maintained, and changes to times of concentration are preserved through the use of an infiltration basin.
Disconnect impervious areas: Yes ☒ No ☐ Explanation: Impervious areas have been disconnected to the maximum extent practical given the proejct type. Runoff from the eintre site will be directd into the proposed infiltartion basin.
Protect existing vegetation and sensitive areas: Yes ☐ No ☒ Explanation: The site has been used as a citrus orchard and is highly disturbed. Currently, adjacent areas are either agricultural or industrial/commercial. No environmentally sensitive or natural, undisturbed areas exist.
Re-vegetate disturbed areas: Yes ☒ No ☐ Explanation: The site will be completely developed and will be paved with with asphalt and will also include landscaping. There will be no undevelped disturbed areas.
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: Yes ☒ No ☐ Explanation: Provisions will be in place that will prevent unnecessary heavy equipement from driving over the proposed underground basin area. The area will be roped off to keep vehicles from driving within the area.This shall be noted on plans.
Utilize vegetated drainage swales in place of underground piping or imperviously lined swales: Yes ☐ No ☒ Explanation: The site layout and size does not allow for surface drainage swales but the projet minimize the use of underground piping.
Stake off areas that will be used for landscaping to minimize compaction during construction : Yes ☒ No ☐ Explanation: All landscaped areas shall be roped off to keep unwanted equipment from driving over these areas. This shall also be noted on construction drawings

4.2 Project Performance Criteria

The purpose of this section of the Project WQMP is to establish targets for post-development hydrology based on performance criteria specified in the MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection of any downstream waterbody segments with a HCOC. ***If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.***

Methods applied in the following forms include:

- For LID BMP Design Capture Volume (DCV), the San Bernardino County Stormwater Program requires use of the P_6 method (MS4 Permit Section XI.D.6a.ii) – Form 4.2-1
- For HCOC pre- and post-development hydrologic calculation, the San Bernardino County Stormwater Program requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi²), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for HCOC performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 1)

1 Project area DA 1 (ft²): 2,361,832	**2** Imperviousness after applying preventative site design practices (Imp%): 85	**3** Runoff Coefficient (Rc): _0.661 *$R_c = 0.858(Imp\%)^3-0.78(Imp\%)^2+0.774(Imp\%)+0.04$*
4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr-1hr}$ (in): 0.494 *http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html*		
5 Compute P_6, Mean 6-hr Precipitation (inches): 0.731 *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
7 Compute design capture volume, DCV (ft³): 186,684 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 2)

1 Project area DA 1 (ft^2): 16,490	**2** Imperviousness after applying preventative site design practices (Imp%): 70	**3** Runoff Coefficient (Rc): _0.494 *$R_c = 0.858(Imp\%)^{\wedge 3} - 0.78(Imp\%)^{\wedge 2} + 0.774(Imp\%) + 0.04$*
4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.494 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html		
5 Compute P_6, Mean 6-hr Precipitation (inches): 0.731 *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
7 Compute design capture volume, DCV (ft^3): 975 *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

Form 4.2-2 Summary of HCOC Assessment (DA 1 & DA2)

Does project have the potential to cause or contribute to an HCOC in a downstream channel: Yes ☐ No ☒

Go to: *http://permitrack.sbcounty.gov/wap/*

If "Yes", then complete HCOC assessment of site hydrology for 2yr storm event using Forms 4.2-3 through 4.2-5 and insert results below

(Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual)

If "No," then proceed to Section 4.3 Project Conformance Analysis

Condition	Runoff Volume (ft^3)	Time of Concentration (min)	Peak Runoff (cfs)

15 Peak runoff reduction needed to meet HCOC Requirement (cfs): *$Q_{p\text{-}HCOC}$ = (Item 14 * 0.95) – Item 10*		

4.3 Project Conformance Analysis

Complete the following forms for each project site DA to document that the proposed LID BMPs conform to the project DCV developed to meet performance criteria specified in the MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the MS4 Permit (see Section 5.3.1 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design and Hydrologic Source Controls (Form 4.3-2)
- Retention and Infiltration (Form 4.3-3)
- Harvested and Use (Form 4.3-4) or
- Biotreatment (Form 4.3-5).

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2.1 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Forms 4.3-2 and 4.3-4 to determine the feasibility of applicable HSC and harvest and use BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable HSC BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of LID HSC, retention and infiltration, and harvest and use BMPs are unable to mitigate the entire DCV, then biotreatment BMPs may be implemented by the project proponent. If biotreatment BMPs are used, then they must be sized to provide sufficient capacity for effective treatment of the remainder of the volume-based performance criteria that cannot be achieved with LID BMPs (TGD for WQMP Section 5.4.4.2). **Under no circumstances shall any portion of the DCV be released from the site without effective mitigation and/or treatment**.

Form 4.3-1 Infiltration BMP Feasibility (DA 1)

Feasibility Criterion – Complete evaluation for each DA on the Project Site

[1] Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒
Refer to Section 5.3.2.1 of the TGD for WQMP

If Yes, Provide basis: (attach)

[2] Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒
(Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):

- The location is less than 50 feet away from slopes steeper than 15 percent
- The location is less than eight feet from building foundations or an alternative setback.
- A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.

If Yes, Provide basis: (attach)

[3] Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[4] Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[5] Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[6] Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? Yes ☐ No ☒
See Section 3.5 of the TGD for WQMP and WAP

If Yes, Provide basis: (attach)

[7] Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☒
If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 8 below.

[8] Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☒
If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP. If no, then proceed to Item 9, below.

[9] All answers to Item 1 through Item 6 are "No":
Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP. Proceed to Form 4.3-2, Hydrologic Source Control BMP.

4.3.1 Site Design Hydrologic Source Control BMP

Section XI.E. of the Permit emphasizes the use of LID preventative measures; and the use of LID HSC BMPs reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable HSC shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of HSC, if a project cannot feasibly meet BMP sizing requirements or cannot fully address HCOCs, feasibility of all applicable HSC must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design HSC BMP. Refer to Section 5.4.1 in the TGD for more detailed guidance.

Form 4.3-2 Site Design Hydrologic Source Control BMPs (DA 1&DA2)

1 Implementation of Impervious Area Dispersion BMP (i.e. routing runoff from impervious to pervious areas), excluding impervious areas planned for routing to on-lot infiltration BMP: Yes ☐ No ☒ *If yes, complete Items 2-5; If no, proceed to Item 6*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Total impervious area draining to pervious area (ft^2)	N/A

30 Total Retention Volume from Site Design Hydrologic Source Control BMPs: N/A *Sum of Items 5, 13, 20, 25 and 29*			

4.3.2 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix D of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5.1 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

.

16 Total Retention Volume from LID Infiltration BMPs: 1,882 *(Sum of Items 14 and 15 for all infiltration BMP included in plan)*

17 Fraction of DCV achieved with infiltration BMP: 193% *Retention% = Item 16 / Form 4.2-1 Item 7*

18 Is full LID DCV retained onsite with combination of hydrologic source control and LID retention/infiltration BMPs? Yes ☒ No ☐

If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.

4.3.3 Harvest and Use BMP

Harvest and use BMP may be considered if the full LID DCV cannot be met by maximizing infiltration BMPs. Use Form 4.3-4 to compute on-site retention of runoff from proposed harvest and use BMPs.

Volume retention estimates for harvest and use BMPs are sensitive to the on-site demand for captured stormwater. Since irrigation water demand is low in the wet season, when most rainfall events occur in San Bernardino County, the volume of water that can be used within a specified drawdown period is relatively low. The bottom portion of Form 4.3-4 facilitates the necessary computations to show infeasibility if a minimum incremental benefit of 40 percent of the LID DCV would not be achievable with MEP implementation of on-site harvest and use of stormwater (Section 5.5.4 of the TGD for WQMP).

Form 4.3-4 Harvest and Use BMPs (DA 1& DA2)

1 Remaining LID DCV not met by site design HSC or infiltration BMP (ft^3): N/A *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16*			
BMP Type(s) *Compute runoff volume retention from proposed harvest and use BMP (Select BMPs from Table 5-4 of the TGD for WQMP) - Use additional forms for more BMPs*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Describe cistern or runoff detention facility			
3 Storage volume for proposed detention type (ft^3) *Volume of cistern*			
4 Landscaped area planned for use of harvested stormwater (ft^2)			
5 Average wet season daily irrigation demand (in/day) Use local values, typical ~ 0.1 in/day			
6 Daily water demand (ft^3/day) *Item 4 * (Item 5 / 12)*			
7 Drawdown time (hrs) *Copy Item 6 from Form 4.2-1*			
8 Retention Volume (ft^3) *$V_{retention}$ = Minimum of (Item 3) or (Item 6 * (Item 7 / 24))*			
9 Total Retention Volume (ft^3) from Harvest and Use BMP *Sum of Item 8 for all harvest and use BMP included in plan*			
10 Is the full DCV retained with a combination of LID HSC, retention and infiltration, and harvest & use BMPs? Yes ☐ No ☐ *If yes, demonstrate conformance using Form 4.3-10. If no, then re-evaluate combinations of all LID BMP and optimize their implementation such that the maximum portion of the DCV is retained on-site (using a single BMP type or combination of BMP types). If the full DCV cannot be mitigated after this optimization process, proceed to Section 4.3.4.*			

4.3.4 Biotreatment BMP

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration, and harvest and use BMPs. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-5 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV w. Biotreatment computations are included as follows:

- Use Form 4.3-6 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-7 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-8 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

Form 4.3-5 Selection and Evaluation of Biotreatment BMP (DA 1&DA2)

1 Remaining LID DCV not met by site design HSC, infiltration, or harvest and use BMP for potential biotreatment (ft^3): N/A *Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16- Form 4.3-4 Item 9*	List pollutants of concern *Copy from Form 2.3-1.*	
2 Biotreatment BMP Selected *(Select biotreatment BMP(s) necessary to ensure all pollutants of concern are addressed through Unit Operations and Processes, described in Table 5-5 of the TGD for WQMP)*	Volume-based biotreatment *Use Forms 4.3-6 and 4.3-7 to compute treated volume*	Flow-based biotreatment *Use Form 4.3-8 to compute treated volume*
	☐ Bioretention with underdrain ☐ Planter box with underdrain ☐ Constructed wetlands ☐ Wet extended detention ☐ Dry extended detention	☐ Vegetated swale ☐ Vegetated filter strip ☐ Proprietary biotreatment
3 Volume biotreated in volume based biotreatment BMP (ft^3): *Form 4.3-6 Item 15 + Form 4.3-7 Item 13*	**4** Compute remaining LID DCV with implementation of volume based biotreatment BMP (ft^3): *Item 1 – Item 3*	**5** Remaining fraction of LID DCV for sizing flow based biotreatment BMP: % *Item 4 / Item 1*
6 Flow-based biotreatment BMP capacity provided (cfs): *Use Figure 5-2 of the TGD for WQMP to determine flow capacity required to provide biotreatment of remaining percentage of unmet LID DCV (Item 5), for the project's precipitation zone (Form 3-1 Item 1)*		
7 Metrics for MEP determination: • Provided a WQMP with the portion of site area used for suite of LID BMP equal to minimum thresholds in Table 5-7 of the TGD for WQMP for the proposed category of development: ☐ *If maximized on-site retention BMPs is feasible for partial capture, then LID BMP implementation must be optimized to retain and infiltrate the maximum portion of the DCV possible within the prescribed minimum effective area. The remaining portion of the DCV shall then be mitigated using biotreatment BMP.*		

Form 4.3-6 Volume Based Biotreatment (DA 1&DA2) – Bioretention and Planter Boxes with Underdrains

Biotreatment BMP Type *(Bioretention w/underdrain, planter box w/underdrain, other comparable BMP)*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
1 Pollutants addressed with BMP *List all pollutant of concern that will be effectively reduced through specific Unit Operations and Processes described in Table 5-5 of the TGD for WQMP*

4.3.5 Conformance Summary

Complete Form 4.3-9 to demonstrate how on-site LID DCV is met with proposed site design hydrologic source control, infiltration, harvest and use, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 1)

1 Total LID DCV for the Project DA-1 (ft^3): 186,684 *Copy Item 7 in Form 4.2-1*

2 On-site retention with site design hydrologic source control LID BMP (ft^3): N/A *Copy Item 30 in Form 4.3-2*

3 On-site retention with LID infiltration BMP (ft^3): 310,613 *Copy Item 16 in Form 4.3-3*

4 On-site retention with LID harvest and use BMP (ft^3): N/A *Copy Item 9 in Form 4.3-4*

5 On-site biotreatment with volume based biotreatment BMP (ft^3): N/A *Copy Item 3 in Form 4.3-5*

6 Flow capacity provided by flow based biotreatment BMP (cfs): N/A *Copy Item 6 in Form 4.3-5*

7 LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP: Yes ☒ No ☐
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV: Yes ☐ No ☐
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV: Yes ☐ No ☐
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

8 If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

- Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture: ☐
  Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*
- An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility: ☐
  Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 2)

1 Total LID DCV for the Project DA-1 (ft^3): 975 *Copy Item 7 in Form 4.2-1*

2 On-site retention with site design hydrologic source control LID BMP (ft^3): N/A *Copy Item 30 in Form 4.3-2*

3 On-site retention with LID infiltration BMP (ft^3): 1,882 *Copy Item 16 in Form 4.3-3*

4 On-site retention with LID harvest and use BMP (ft^3): N/A *Copy Item 9 in Form 4.3-4*

5 On-site biotreatment with volume based biotreatment BMP (ft^3): N/A *Copy Item 3 in Form 4.3-5*

6 Flow capacity provided by flow based biotreatment BMP (cfs): N/A *Copy Item 6 in Form 4.3-5*

7 LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP: Yes ☒ No ☐
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV: Yes ☐ No ☐
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV: Yes ☐ No ☐
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

8 If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

- Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture: ☐
  *Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} = (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*
- An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility: ☐
  Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

4.3.6 Hydromodification Control BMP

Use Form 4.3-10 to compute the remaining runoff volume retention, after LID BMP are implemented, needed to address HCOC, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential HCOC. Describe hydromodification control BMP that address HCOC, which may include off-site BMP and/or in-stream controls. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-10 Hydromodification Control BMPs (DA 1&DA2)

1 Volume reduction needed for HCOC performance criteria (ft^3): N/A *(Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item 1*	**2** On-site retention with site design hydrologic source control, infiltration, and harvest and use LID BMP (ft^3): *Sum of Form 4.3-9 Items 2, 3, and 4 Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving HCOC volume reduction*
3 Remaining volume for HCOC volume capture (ft^3): *Item 1 – Item 2*	**4** Volume capture provided by incorporating additional on-site or off-site retention BMPs (ft^3): *Existing downstream BMP may be used to demonstrate additional volume capture (if so, attach to this WQMP a hydrologic analysis showing how the additional volume would be retained during a 2-yr storm event for the regional watershed)*

5 If Item 4 is less than Item 3, incorporate in-stream controls on downstream waterbody segment to prevent impacts due to hydromodification ☐ *Attach in-stream control BMP selection and evaluation to this WQMP*

6 Is Form 4.2-2 Item 11 less than or equal to 5%: Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate increase in time of concentration achieved by proposed LID site design, LID BMP, and additional on-site or off-site retention BMP ☐
  BMP upstream of a waterbody segment with a potential HCOC may be used to demonstrate increased time of concentration through hydrograph attenuation (if so, show that the hydraulic residence time provided in BMP for a 2-year storm event is equal or greater than the addition time of concentration requirement in Form 4.2-4 Item 15)
- Increase time of concentration by preserving pre-developed flow path and/or increase travel time by reducing slope and increasing cross-sectional area and roughness for proposed on-site conveyance facilities ☐
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

7 Form 4.2-2 Item 12 less than or equal to 5%: Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate reduction in peak runoff achieved by proposed LID site design, LID BMPs, and additional on-site or off-site retention BMPs ☐
  BMPs upstream of a waterbody segment with a potential HCOC may be used to demonstrate additional peak runoff reduction through hydrograph attenuation (if so, attach to this WQMP, a hydrograph analysis showing how the peak runoff would be reduced during a 2-yr storm event)
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, harvest and use, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance. Alternative compliance plans may include one or more of the following elements:

- On-site structural treatment control BMP - All treatment control BMP should be located as close to possible to the pollutant sources and should not be located within receiving waters;
- Off-site structural treatment control BMP - Pollutant removal should occur prior to discharge of runoff to receiving waters;
- Urban runoff fund or In-lieu program, if available

Depending upon the proposed alternative compliance plan, approval by the executive officer may or may not be required (see Section 6 of the TGD for WQMP).

Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMP included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and may require a Maintenance Agreement (consult the jurisdiction's LIP). If a Maintenance Agreement is required, it must also be attached to the WQMP.

Form 5-1 BMP Inspection and Maintenance (use additional forms as necessary)

BMP	Reponsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities
Education for Property Owners and Employees	Property Owner	Distribute educational materials and conduct annual awareness training	Upon first occupancy and yearly thereafter
Activity Restrictions	Property Owner	The owner will restrict activities which may have a negative impact on storm water quality. Restrictions shall include prohibiting the storage of outdoor material, vehicle and equipment washing, outdoor processing, fueling up and wash water control for food preparation.	Continuous
Street Sweeping of Private Street & Parking Lots	Property Owner	Inspect parking lots for trash and accumulation of dust and debris. Street sweeping shall be conducted monthly.	Inspections -Monthly. Maintenance - Monthly.
Drainage Facility Inspection and Maintenance	Property Owner	Inspect twice annually in the early fall before the rainy season and in the late Spring after the rainy season. Remove debris/sediment build-up.	Inspect twice annually, once before and after the rainy season and after extreme storm events. Maintenance as needed.
Landscape Planning & maintenance . See below.	Property Owner	Mow, weed, & trim vegetation. Inspect inlet & outlet structures. Re-vegetate bare areas. See below for further details.	Inspect weekly. Maintenance as needed.
Efficient Irrigation	Property Owner	Repair and maintain leaky/broken sprinkler heads. See below for further details.	Inspect weekly and maintain as needed

Litter Control	Property Owner	Inspect areas for accumulation of trash and debris and haul trash off-site to City refuse.	Check Daily and empty as needed.
Water Quality Basin	Property Owner	Monthly inspections should occur for debris and litter removal and signs of ponding issues such as odors, insects, and overgrowth. Prior to October 1, conduct annual inspections and maintenance for erosion, clogging of outlets, standing water issues, and adequacy of infiltration. Visually inspect infiltration basin on a monthly basis because of their importance for water quality management and post-construction storm water pollution prevention. One of these inspections should be before October 1 and one should be after May 1. Remove litter, debris, and dead vegetation. Re-vegetate as needed. Check for signs of ponding issues such as odors, clogging of outlets, standing water, erosion, and adequacy of infiltration. Remove accumulated sediment and re-grade when the accumulated sediment volume is greater than 10% of the basin volume.	Inspect twice annually, once before and after the rainy season and after extreme storm events. Maintenance as needed.

Section 6 WQMP Attachments

6.1. Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (as described in their Local Implementation Plan), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.

6.3 Post Construction

Attach all O&M Plans and Maintenance Agreements for BMP to the WQMP.

6.4 Other Supporting Documentation

- BMP Educational Materials
- Activity Restriction – C, C&R's & Lease Agreements

SOURCE CONTROL NOTES

1. ALL INLETS SHALL BE MARK WITH THE WORDS "NO DUMPING DRAINS TO OCEAN" OR SIMILAR.
2. INTERIOR FLOOR DRAINS AND ELEVATOR SHAFT SUMP PUMPS WILL BE PLUMBED TO SANITARY SEWER.
3. MAINTAIN LANDSCAPING USING MINIMUM OR NO PESTICIDES.
4. ALL SLOPES GREATER THAN 4:1 SHOULD BE PROTECTED FROM EROSION USING CASQA SD-10 LANDSCAPE RECOMMENDATIONS
5. TRASH ENCLOSURE AREA SHALL BE COVERED PER COUNTY STANDARDS AND SHALL HAVE A SIGN THAT STATES "DO NOT DUMP HAZARDOUS MATERIALS HERE".
6. ALL INDUSTRIAL PROCESS ACTIVITIES ARE TO BE PERFORMED INDOORS. NO PROCESSES SHALL DRAIN TO EXTERIOR STORM DRAIN SYSTEM.
7. ROOF DOWNSPOUTS SHALL BE POSITIONED TO DIRECT STORMWATER AWAY FROM LOADING AREA. PROVIDE ROOF OVERHANG OVER THE LOADING AREA OR INSTALL DOOR SKIRTS AT EACH BAY THAT ENCLOSE THE END OF THE TRAILER.
8. PROVIDE A MEANS TO DRAIN FIRE SPRINKLER WATER TO SANITARY SEWER SYSTEM.
9. BOILER DRAIN LINES AND CONDENSATE DRAIN LINES SHALL BE DIRECTLY OR INDIRECTLY CONNECTED TO THE SANITARY SEWER SYSTEM AND MAY NOT DISCHARGE TO THE STORM DRAIN SYSTEM.
10. ROOFTOP EQUIPMENT WITH POTENTIAL TO PRODUCE POLLUTANTS SHALL BE ROOFED OR HAVE A SECONDARY CONTAINMENT.
11. ANY DRAINAGE SUMPS ON-SITE SHALL FEATURE SEDIMENT SUMP TO REDUCE THE QUANTITY OF SEDIMENT IN PUMPED WATER.

SITE PLAN RESTRICTION

1. THE USE OF OUTDOOR STORAGE OF EQUIPMENT AND MATERIALS ARE NOT PERMITTED.
2. VEHICLE AND EQUIPMENT CLEANING ARE NOT PERMITTED ON-SITE.
3. NO VEHICLE/EQUIPMENT REPAIR OR MAINTENANCE WILL BE DONE OUTDOORS.
4. NO TANKS, CONTAINERS, OR SINKS ARE TO BE USED FOR PARTS CLEANING OR RINSING.
5. NO FUELING AREAS ARE PERMITTED ON-SITE.
6. OWNER MUST IMPLEMENT THESE ACTIVITY RESTRICTIONS.

$$Drawdown = \frac{V_{BMP}\ (ft^3)}{Design\ Infiltration\ Rate\left(\frac{in}{hr}\right) \times \left(\frac{1ft}{12in}\right) \times Bottom\ Area\ (ft^2)}$$

Water Quality Drawdown Time=	31.3	hr

Volume at 1202.9'=	296143	ft^3
Basin Bottom Area=	81206	ft^2
Infiltration Rate =	0.9	in/hr

Drawdown Time for Enitre Volume=	48.0	hr

*The Geotechnical Infiltration Test Report shows recommend a design infiltration rates of 3 inches per hour at the expected depth. A factor of safety of 3.4 was determined by the PWQMP Report. The entire 100-year 24-hour volume will drain within the 48-hour mark.

APPENDIX C – EDUCATIONAL MATERIALS

(TO BE PROVIDED DURING FINAL-WQMP)

APPENDIX D – SOILS REPORT

Worksheet H: Factor of Safety and Design Infiltration Rate and Worksheet

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	2	0.5
		Site soil variability	0.25	2	0.5
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.5
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	2	0.5
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.5
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					3.4
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					3.0
Design Infiltration Rate, in/hr, $K_{DESIGN} = S_{TOT} \times K_M$					0.9

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A copy of the report that was completed for the infiltration tests has been provided in Appendix D.

There will need to be additional infiltration testing during final engineering. There needs to be a total of 7 more tests at the infiltration basin and 2 tests at the infiltration trench area.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

April 10, 2018

SOUTHERN CALIFORNIA GEOTECHNICAL
A California Corporation

Attention: Mr. Adam Schmid
Development Services Manager

Project No.: **17G218-2**

Subject: **Results of Infiltration Testing**
Proposed Commercial/Industrial Building
NWC Alabama Street and Palmetto Avenue
San Bernardino County, California

Reference: Geotechnical Investigation, Proposed Commercial/Industrial Building, NWC Alabama Street and Palmetto Avenue, San Bernardino, California, prepared by Southern California Geotechnical, Inc. (SCG) for Duke Realty, SCG Project No. 17G218-1, dated December 15, 2017.

Dear Mr. Schmid:

In accordance with your request, we have conducted infiltration testing at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations.

Scope of Services

The scope of services performed for this project was in general accordance with our Change Order 17G218-CO, dated March 9, 2018. The scope of services included site reconnaissance, subsurface exploration, field testing, and engineering analysis to determine the infiltration rates of the onsite soils. The infiltration testing was performed in general accordance with ASTM Test Method D-3385-03, Standard Test Method for Infiltration Rate of Soils in Field Using Double Ring Infiltrometer.

Site and Project Description

The subject site is located at the northwest corner of Palmetto Avenue and Alabama Street in an unincorporated portion of San Bernardino County near Redlands, California. The site is bounded to the north by a vacant lot, to the west by vacant land and a commercial/industrial building, to the south by Palmetto Avenue, and to the east by Alabama Street. The general location of the site is illustrated on the Site Location Map, included as Plate 1 of this report.

The site consists of several parcels, which total 56± acres in size. The majority of the site is vacant and undeveloped. The ground surface cover generally consists of exposed soil with moderate to dense native grass and weed growth, with several large trees located throughout the site. The northern region of the western parcel is developed with a small farm house. The majority of this parcel is currently being utilized for agricultural purposes. Ground surface cover

in this area and surrounding the farm house consists of exposed soil with moderate to dense native grass, weed growth, and planted crops. Multiple small to large trees are located throughout this parcel. A natural drainage course is present in the northeast corner of the overall site that is 20± feet lower in elevation than the adjacent site grades.

Detailed topographic information was provided by Albert A. Webb Associates (Webb). The site topography generally ranges from 1199± feet mean sea level (msl) in northwestern corner of the site to 1226± feet msl in the southeastern corner of the site. However, the bottom of the existing drainage course, located at the northeast corner of the site is at an elevation of 1186± feet msl. With the exception of the drainage course, the site topography slopes gently downward to the northwest at a gradient of 1± percent. In the northeast corner of the site, the site grades slope downward into the drainage course at an approximate inclination of ½h:1v (horizontal to vertical).

Proposed Development

A conceptual site plan, prepared by Albert A. Webb Associates (Webb), was provided to our office by the client. The plan indicates that the subject site will be developed with one (1) new commercial/industrial building. The proposed building will be 1,192,671± ft^2 in size, located in the central area of the site. The building will be constructed in a cross-dock configuration with loading docks along both the east and west sides of the building. The building will be surrounded by asphaltic concrete pavements for automobile parking and drive lanes and Portland cement concrete pavements for the loading dock areas. Several landscape planters and concrete flatwork are expected to be included throughout the site. The site plan does not indicate any proposed development within the existing drainage course located at the northeast corner of the site.

We understand that the proposed development will include on-site infiltration to dispose of storm water. Based on an Infiltration Test Exhibit, prepared by Webb, the project civil engineer, the proposed infiltration system will consist of two (2) detention/infiltration basins. The basins will be located in the northwest corner and in the southwest region of the site. The bottoms of the basins will extend to depths ranging from 4 to 7± feet below the existing site grades.

Previous Study

Southern California Geotechnical, Inc. (SCG) previously performed a geotechnical investigation at the subject site, referenced above. As a part of this study, ten (10) borings were advanced to depths of 5 to 30± feet below existing site grades. Artificial fill soils were encountered at the ground surface at one of the boring locations, extending to a depth of 6½± feet below the existing site grades. The fill soils generally consisted of very loose to loose fine to medium sands with varying amounts of coarse sand, silt, and fine gravel content. Native alluvial soils were encountered beneath the fill soils and at the ground surface at the remaining boring locations. The near-surface alluvium possessed a disturbed appearance and was identified as disturbed alluvium. These soils generally consisted of very loose to loose silty fine sands to fine sandy silts with trace amounts of fine root fibers. Undisturbed native alluvial soils were encountered at all of the boring locations, beneath the disturbed alluvium or fill soils, extending to the maximum depth explored of 30± feet below existing site grades. The native alluvium generally consisted of very loose to medium dense silty fine sands, fine sandy silts, and fine to medium sands. Free

water was not encountered during the drilling of any of the borings. Based on the lack of any water within the borings and the moisture contents of the recovered soil samples, the static groundwater is considered to have existed at a depth in excess of 30± feet at the time of the subsurface exploration. The approximate locations of the ten (10) borings from the previous study are indicated on the Infiltration Test Location Plan, included as Plate 2 of this report.

Subsurface Exploration

Scope of Exploration

The subsurface exploration consisted of five (5) backhoe excavated trenches, extending to depths of 4 to 7± feet below existing site grades. The trenches were logged during excavation by a member of our staff. The approximate locations of the infiltration trenches (identified as I-1 through I-5) are indicated on the Infiltration Test Location Plan, enclosed as Plate 2 of this report.

Geotechnical Conditions

Native alluvium was encountered at the ground surface at all of the infiltration trench locations, extending to at least the maximum depth explored of 7± feet below existing site grades. The alluvial soils generally consist of very loose to medium dense silty fine sands and fine sandy silts with varying amounts of medium to coarse sands. The Trench Logs, which illustrate the conditions encountered at the infiltration trench locations, are included with this report.

Groundwater

As part of our research, we reviewed available groundwater data in order to determine the historic high groundwater level for the site. Recent water level data was obtained from the California Department of Water Resources website, http://www.water.ca.gov/waterdatalibrary/. The nearest monitoring well is located in the southeastern region of the subject site. Water level readings within this monitoring well indicates high groundwater levels of 130± feet (April 2005) below the ground surface.

Infiltration Testing

We understand that the results of the testing will be used to prepare a preliminary design for the storm water infiltration system that will be used at the subject site. As previously mentioned, the infiltration testing was performed in general accordance with ASTM Test Method D-3385-03, Standard Test Method for Infiltration Rate of Soils in Field Using Double Ring Infiltrometer.

Two stainless steel infiltration rings were used for the infiltration testing. The outer infiltration ring is 2 feet in diameter and 20 inches in height. The inner infiltration ring is 1 foot in diameter and 20 inches in height. At the test locations, the outer ring was driven 3± inches into the soil at the base of each trench. The inner ring was centered inside the outer ring and subsequently driven 3± inches into the soil at the base of the trench. The rings were driven into the soil using a ten-pound sledge hammer. The soil surrounding the wall of the infiltration rings was only slightly disturbed during the driving process.

Infiltration Testing Procedure

Infiltration testing was performed at all five (5) of the test locations. The infiltration testing consisted of filling the inner ring and the annular space (the space between the inner and outer rings) with water, approximately 3 to 4 inches above the soil. To prevent the flow of water from one ring to the other, the water level in both the inner ring and the annular space between the rings was maintained using constant-head float valves. The volume of water that was added to maintain a constant head in the inner ring and the annular space during each time interval was determined and recorded. A cap was placed over the rings to minimize the evaporation of water during the tests.

The schedule for readings was determined based on the observed soil type at the base of each backhoe-excavated trench. Based on the existing soils at each infiltration test location, the volumetric measurements were made at increments of 10 minutes. The water volume measurements are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on these spreadsheets.

The infiltration rates for the infiltration tests are calculated in centimeters per hour and then converted to inches per hour. The rates are summarized below:

Infiltration Test No.	Test Elevation (msl)	Soil Description	Infiltration Rate (inches/hour)
I-1	1198.5	Silty fine Sand	3.6
I-2	1198	Silty fine Sand, trace medium Sand	3.1
I-3	1198.5	Silty fine Sand	3.2
I-4	1195	Silty fine Sand	3.7
I-5	1197	Silty fine Sand, little medium Sand	2.5

Laboratory Testing

In-situ Moisture Content

The moisture contents for selected soil samples collected from the trenches were determined in accordance with ASTM D-2216 and are expressed as a percentage of the dry weight. These test results are presented on the Trench Logs.

Grain Size Analysis

The grain size distribution of selected soils collected from the base of each infiltration test trench has been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the

sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these tests are presented at the end of this report.

Design Recommendations

A total of five (5) infiltration tests were performed at the subject site. As noted above, the calculated infiltration rates at the infiltration test locations range from 2.5 to 3.7 inches per hour. The primary factors affecting the infiltration rates are the varying relative densities and silt content of the encountered soils, which vary at different depths and locations at the subject site.

Based on the infiltration test results, we recommend a design infiltration rate of 3 inches per hour be used for the proposed detention/infiltration basin located in the northwest corner of the site and a design rate of 2.5 inches per hour for the basin located in the southwest region of the subject site.

The design of the proposed storm water infiltration systems should be performed by the project civil engineer, in accordance with the County of San Bernardino guidelines. However, it is recommended that the system be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the system. The presence of such materials would decrease the effective infiltration rate. **It is recommended that the project civil engineer apply an appropriate factor of safety. The infiltration rates recommended above is based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rates.** It should be noted that the recommended infiltration rates are based on infiltration testing at five (5) discrete locations and the overall infiltration rates of the storm water infiltration systems could vary considerably.

Infiltration versus Permeability

Infiltration rates are based on unsaturated flow. As water is introduced into soils by infiltration, the soils become saturated and the wetting front advances from the unsaturated zone to the saturated zone. Once the soils become saturated, infiltration rates become zero, and water can only move through soils by hydraulic conductivity at a rate determined by pressure head and soil permeability. The infiltration rates presented herein were determined in accordance with the ASTM Test Method D-3385-03 standard and are considered valid for the time and place of the actual test. Changes in soil moisture content will affect these infiltration rates. Infiltration rates should be expected to decrease until the soils become saturated. Soil permeability values will then govern groundwater movement. Permeability values may be on the order of 10 to 20 times less than infiltration rates. The system designer should incorporate adequate factors of safety and allow for overflow design into appropriate traditional storm drain systems, which would transport storm water off-site.

Location of Infiltration Systems

The use of on-site storm water infiltration systems carries a risk of creating adverse geotechnical conditions. Increasing the moisture content of the soil can cause the soil to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Overlying structures and pavements in the infiltration areas could potentially be

damaged due to saturation of subgrade soils. **The proposed infiltration systems for this site should be located at least 25 feet away from any structures, including retaining walls.** Even with this provision of locating the infiltration system at least 25 feet from the building, it is possible that infiltrating water into the subsurface soils could have an adverse effect on the proposed or existing structures. It should also be noted that utility trenches which happen to collect storm water can also serve as conduits to transmit storm water toward the structure, depending on the slope of the utility trench. Therefore, consideration should also be given to the proposed locations of underground utilities which may pass near the proposed infiltration system.

General Comments

This report has been prepared as an instrument of service for use by the client in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, structural engineer, and/or civil engineer. The design of the infiltration system is the responsibility of the civil engineer. The role of the geotechnical engineer is limited to determination of infiltration rate only. By using the design infiltration rates contained herein, the civil engineer agrees to indemnify, defend, and hold harmless the geotechnical engineer for all aspects of the design and performance of the infiltration system. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between trench locations and testing depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted. The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

Closure

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

SOUTHERN CALIFORNIA GEOTECHNICAL, INC.

RE: Final Traffic Impact Analysis Report for the proposed Duke Realty Warehouse in the County of San Bernardino, CA.

Dear Adam,

We are pleased to submit herewith our Final Traffic Impact Analysis Report for the proposed Duke Realty Warehouse Project, which we have prepared at your request.

If you have any questions regarding this report, please call the undersigned for clarification.

Sincerely yours,

ALBERT A. WEBB ASSOCIATES

Nicholas Lowe, M.S., P.E.
Associate Engineer

LIST OF DEFINITIONS & ACRONYMS

Access		Any entrance or exit point to a primary highway
Annual Average Daily Traffic	AADT	The total annual volume of traffic passing a point or segment of a highway in both directions divided by the number of days in the year
Capacity		The maximum hourly rate at which vehicles can reasonably be expected to traverse a point or uniform section of a lane or roadway during a given time period under prevailing roadway, traffic, and control conditions
Decision sight distance		The distance required for a driver to detect an unexpected or otherwise difficult-to-perceive information source or hazard in a roadway environment that may be visually cluttered, recognize the hazard or its threat potential, select an appropriate speed and path, and initiate and complete the required maneuver safely and efficiently
Design year		20 years following the opening year or year the project is open to traffic
Development traffic		Traffic volumes that are generated by the development
Directional distribution		The directional split of traffic during the peak or design hour, commonly expressed as a percentage in the peak and off-peak flow directions
Highway Capacity Manual	HCM	A manual published by the Transportation Research Board as a means of standardizing the techniques used to evaluate the quality of service provided by various transportation facilities
Institute of Transportation Engineers	ITE	An international educational and scientific association of transportation professionals. ITE facilitates the application of technology and scientific principles to research, planning, functional design, implementation, operation, policy development, and management for all transportation modes
Intersection sight distance		The distance at which a motorist attempting to enter or cross a highway should be able to observe traffic in order to make his desired movement. The required distance varies with the speed of the traffic on the main highway
Level of Service	LOS	A qualitative measure describing operational conditions within a traffic stream based on service measures such as speed and travel time, freedom to maneuver, traffic interruptions, comfort, and convenience
Opening year		The year the project is scheduled to be open to traffic
Pass-by trips		Trips that would have traveled on a street adjacent to a retail land use even if the retail land use was not present

Peak hour		That hour during which the maximum amount of travel occurs. It may be specified as the morning peak hour or the afternoon or evening peak hour
Queuing		A stacking of vehicles waiting to be serviced and/or processed
Sight distance		The distance visible to the driver of a passenger vehicle measured along the normal travel path of a roadway from a designated location and to a specified height above the roadway when the view is unobstructed by traffic
Stopping sight distance		The distance required by a driver of a vehicle, traveling at a given speed, to bring the vehicle to a stop after an object on the roadway becomes visible. It includes the distance traveled during driver perception and reaction times and the vehicle braking distance
Study area		The portion(s) of the transportation system, which is directly affected by the planned development, to be included within the scope of the TIA analysis
Traffic impact		The effect of site traffic on highway operations and safety
Traffic Impact Analysis	TIA	A traffic engineering study, which determines the potential traffic impacts of a proposed traffic generator. A complete analysis includes an estimation of future traffic with and without the proposed generator, analysis to traffic impacts, and recommended roadway improvements, which may be necessary to accommodate the expected traffic
Traffic Impact Study	TIS	A TIA that requires more comprehensive analysis and documentation based on forecasted traffic that is above a defined traffic threshold
Trip distribution		The allocation of the site-generated traffic among all possible approach and departure routes
Trip generation		The estimation of the number of origins from and destinations to a site resulting from the land-use activity on that site

1.0 EXECUTIVE SUMMARY

1.1 Introduction

The proposed Project is located on the northwest corner of the intersection of Alabama Street and Palmetto Avenue in San Bernardino County. It is located in the "Donut Hole" region of unincorporated San Bernardino County. The Project proposes to construct a transload and short-term storage warehouse at the site and construct required improvements to its frontage and any necessary measures to nearby intersections to maintain acceptable traffic operations.

1.2 Purpose of Report and Study Objectives

The purpose of this study is to evaluate the effects on traffic circulation produced from the proposed development of the Alabama Street and Palmetto Avenue High-Cube Transload and Short-Term Storage Warehouse (Project) in the County of San Bernardino.

The objectives of this study include the following:

- Document Existing (2018) traffic conditions in the vicinity of the proposed development;
- Determine the traffic generated from the proposed development;
- Evaluate Existing Plus Project (2018) traffic conditions;
- Evaluate Existing Plus Ambient Growth Plus Project (2020) traffic conditions;
- Evaluate Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) traffic conditions;
- Evaluate Build-Out Year Plus Cumulative Projects (2040) traffic conditions;
- Evaluate Build-Out year Plus Cumulative Projects Plus Project (2040) traffic conditions;
- Determine if the level of service (LOS) required by the County of San Bernardino, City of Redlands City of Highland, and/or California Department of Transportation (Caltrans) will be maintained within the study area, and if not, determine the mitigation measures that will be necessary in order to maintain the required LOS;
- Determine if peak hour traffic signal warrants are met for any of the unsignalized study area intersections;
- Evaluate the adequacy of on-site circulation for the proposed development;
- Determine if safety and/or operational improvements are necessary due to the proposed development;
- Determine queue lengths at selected intersections.

1.3 Traffic and Transportation Mitigation Measures

This traffic impact analysis demonstrates that the direct traffic impacts generated by the Project can be mitigated to meet the required level of service if the following recommended mitigation measures are adopted.

1.3.1 Project Design Features - Roadway & Safety Improvements

- Construct partial width improvements on the northerly side of Palmetto Avenue at its ultimate cross-section as a collector street adjacent to Project boundary line.
- Construct partial width improvements on the westerly side of Alabama Street at its ultimate cross-section as a major arterial adjacent to Project boundary line.

- Modify the existing traffic signal at intersection of Alabama Street and River Bluff Avenue / Driveway 5 to provide full access for all movements at the intersection.
- Signing/striping should be implemented in conjunction with detailed construction plans for the Project site.
- Sight distance at the Project entrance roadway will be reviewed with respect to standard County of San Bernardino sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.

1.3.2 Project Design Features - Intersection Improvements

- Construct the intersection of West Driveway 1 and Palmetto Avenue (Int. 15) to include the following geometrics.
  Northbound: No proposed improvements.
  Southbound: Shared left-right turn lane.
  Eastbound: Convert through lane to shared through-left turn lane.
  Westbound: Convert through lane to shared through-right turn lane.

- Construct the intersection of West Driveway 2 and Palmetto Avenue (Int. 16) to include the following geometrics.
  Northbound: No proposed improvements.
  Southbound: Shared left-right turn lane.
  Eastbound: Convert through lane to shared through-left turn lane.
  Westbound: Convert through lane to shared through-right turn lane.

- Construct the intersection of East Driveway 3 and Palmetto Avenue (Int. 17) to include the following geometrics.
  Northbound: No proposed improvements.
  Southbound: Shared left-right turn lane.
  Eastbound: Convert through lane to shared through-left turn lane.
  Westbound: Convert through lane to shared through-right turn lane.

- Construct the intersection of Alabama Street and North Driveway 4 (Int. 18) to restrict the movements for right in right out only.
  Northbound: One through lane.
  Southbound: Convert through lane to shared through-right turn lane. Add two through lanes.
  Eastbound: Add a right turn lane.
  Westbound: Does not exist.

- Modify traffic signal and construct the intersection of River-Bluff Avenue / Driveway 5 and Alabama Street to include the following geometries.
  Northbound: One left turn lane. One through lane. One right turn lane.
  Southbound: One left turn lane. Two through lanes. One through-right turn lane.
  Eastbound: One left turn lane. One lane shared by through-right turn movements.
  Westbound: One left turn lane. One lane shared by through-right turn movements.

- Construct the intersection of Alabama Street and South Driveway 6 (Int. 19) to restrict the movements for right in right out only.
  Northbound: Two through lanes.
  Southbound: Convert through lane to shared through-right turn lane.
  Eastbound: Add a right turn lane.
  Westbound: Does not exist.

1.3.3 Project Fair Share Mitigation Summary

Table 1-1 summarizes the proposed mitigation measure and associated funding mechanism for the Project as a result of the traffic study. The Project will participate in the cost of off-site improvements through the payment of "fair share" mitigation fees, including the following:

- San Bernardino Associated Governments (SANBAG) Congestion Management Program

Program improvements: SANBAG congestion management program provides funding for the 2040 improvements mentioned in the Table 1-1. The fee of $0.73 per square foot is charged for every high –cube warehouse Project developed in the Redlands Donut Hole under the SANBAG congestion management program. These fees will be collected and utilized as needed by the County of San Bernardino to construct the improvements necessary to assist in maintaining the required level of service.

Non Program Improvements: The non-program improvements are the improvements which are not funded by any program in County of San Bernardino or Caltrans. The Project has one non-program improvement. As the impact is generated in 2040 Cumulative Plus Project Condition the fair share towards the improvement is calculated based on the number of Project trips and total number of cumulative trips.

The estimated fair share amount provided in the table is a rough estimate for informational purposes only and should not be considered final or binding. A thorough analysis of the necessary improvements and existing constraints should be completed in an engineering cost estimate.

Table 1-1 – Project Fair Share Mitigation Summary

No.	Intersection	Jurisidiction	Recommended Improvement	EP & EAP Improvements	EAPC (2020) Improvements		Build-Out Year (2040) Cumulative Plus Projects Improvements		Payment System	Fair Share Percentage	Estimated Fair Share Amount
				Project Improvements	Program [1] Improvements	Non Program Improvements	Program [1] Improvements	Non Program Improvements			
1	California Street (NS) / I-10 WB Ramps (EW)	Caltrans	1. One NBL Turn Lane		1. One NBL Turn Lane		1. One NBL Turn Lane		City of Redlands	2.87%	$287,000
2	California Street (NS) / I-10 EB Ramps (EW)	Caltrans	1. One SBL Turn Lane 2. One EBL Turn Lane		1. One SBL Turn Lane 2. One EBL Turn Lane		1. One SBL Turn Lane		City of Redlands	3.00%	$318,000
3	Alabama Street (NS) /5th Street (EW)	City of Highland	1. One Overlapping NBR Turn Lane	1. One Overlapping NBR Turn Lane					Project Improvement**		
5	Alabama Street (NS)/Dwy-5-Riverbluff Ave)EW)	Unincorporated/ Donut Hole	1. One EB Left Turn Lane and Shared Through- Right Turn Lane. 2. One NBLTurn Lane. 3. Add One SB Left Turn Lane, Add Two Through Lane and Restripe SB Through to Shared SB Through- Right Lane			1. One WBT Lane 2. One EBT Lane		Project Improvement/Program Improvement*		
8	Alabama Street (NS) / Lugonia Avenue (EW)	Unincorporated / Donut Hole / City of Redlands	1. One NBR Turn Lane 2. One WBL Turn Lane 3. One EBR Turn Lane 4. One WBR Turn Lane	1. One NBR Turn Lane			2. One WBL Turn Lane	3. One EBR Turn Lane 4. One WBR Turn Lane	Fair Share/Project Improvement**/ Program Improvement	13.29%	$106,320
9	Alabama Street (NS) / I-10 WB Ramps (EW)	Caltrans	1. One NBL Turn Lane 2. One SBR Turn Lane				1. One NBL Turn Lane 2. One SBR Turn Lane		Program Improvement*	6.00%	$49,500
10	Alabama Street (NS) / I-10 EB Ramps (EW)	Caltrans	1. One NBT Lane				1. One NBT Lane		Program Improvement*	4.52%	$13,108
14	SR 210 NB Ramps (NS) / San Bernardino Avenue (EW)	Caltrans	1. One WBT Lane 2.Restripe EB Lanes				1. One WBT Lane 2.Restripe EB Lanes		County of San Bernardino	10.00%	$82,500

[1]Per Section 9 of the County of San Bernardino Regional Transportation Development Mitigation Fee Plan - Program improvements constructed by project may be eligible for fee credit. In lieu fee payment is at discretion of County.

***Improvements already planned in San Bernardino Congestion Management Program. Fair share percentage and estimated cost for informational purposes only.**

****Project improvements are located outside of County of San Bernardino.**

Fair Share at an Intersection: Project Volume / (EACP Volume - Existing Volume)

2.0 INTRODUCTION

2.1 Purpose of Report and Study Objectives

The purpose of this study is to evaluate the effects on traffic circulation produced from the proposed development of the Project

The objectives of this study include the following:

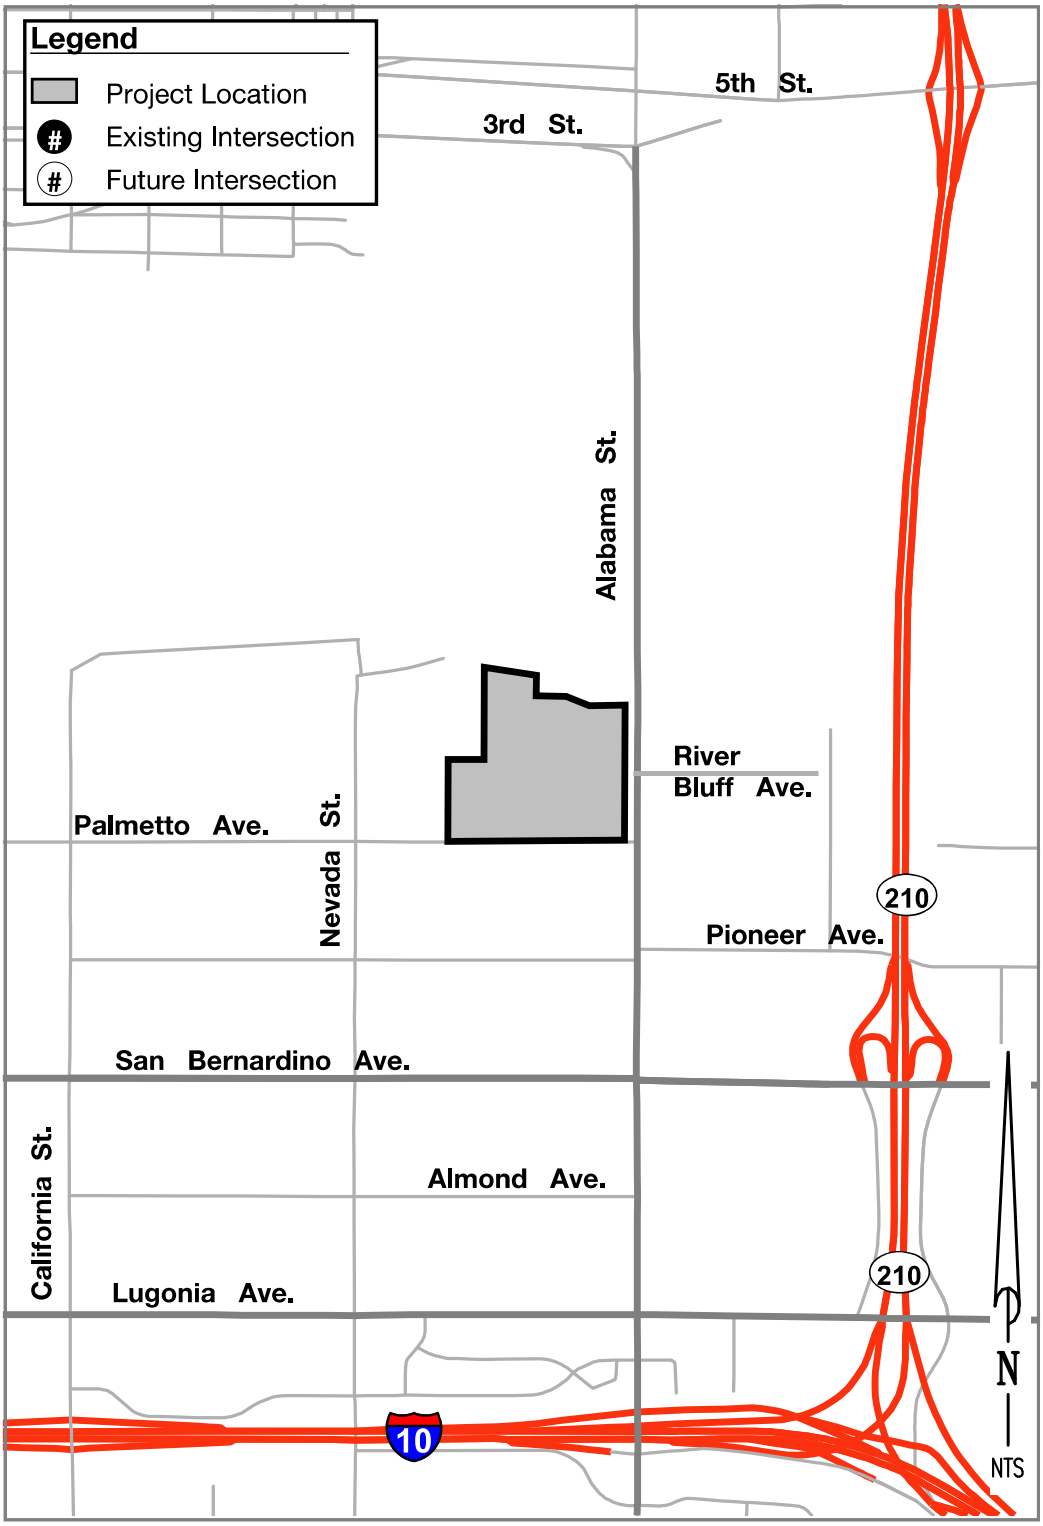
- Document Existing (2018) traffic conditions in the vicinity of the proposed development;
- Determine the traffic generated from the proposed development;
- Evaluate Existing Plus Project (2018) traffic conditions;
- Evaluate Existing Plus Ambient Growth Plus Project (2020) traffic conditions;
- Evaluate Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) traffic conditions;
- Evaluate Build-Out Year Plus Cumulative Projects (2040) traffic conditions;
- Evaluate Build-Out year Plus Cumulative Projects Plus Project (2040) traffic conditions;
- Determine if the level of service (LOS) required by the County of San Bernardino, City of Redlands, City of Highland, and/or California Department of Transportation (Caltrans) will be maintained within the study area, and if not, determine the mitigation measures that will be necessary in order to maintain the required LOS;
- Determine if peak hour traffic signal warrants are met for any of the unsignalized study area intersections;
- Evaluate the adequacy of on-site circulation for the proposed development;
- Determine if safety and/or operational improvements are necessary due to the proposed development; and
- Determine queue lengths at selected intersections.

2.2 Site Location and Study Area

The proposed Project is located in the County of San Bernardino. The Project is located on the northwest corner of Alabama Street and Palmetto Avenue. The study area is located within the East Valley Specific Plan area.

The Project site location is presented on **Figure 1**.

Figure 1 Project Site Location Map



2.3 Development Project Description

2.3.1 Project Size and Description

The Project site encompasses approximately 54.76 acres. The Project is currently proposed for development of a 1,192,671 square feet gross floor area high-cube warehouse.

2.3.2 Existing Land Use and Zoning

Existing land use and zoning designations are as follows:

- Existing Zoning: IR (Regional Industrial)
- Existing Land Use: Vacant

2.3.3 Proposed Land Use and Zoning

Proposed land use and zoning designations are as follows:

- Proposed Zoning: IR (Regional Industrial)
- Proposed Land Use: Industrial

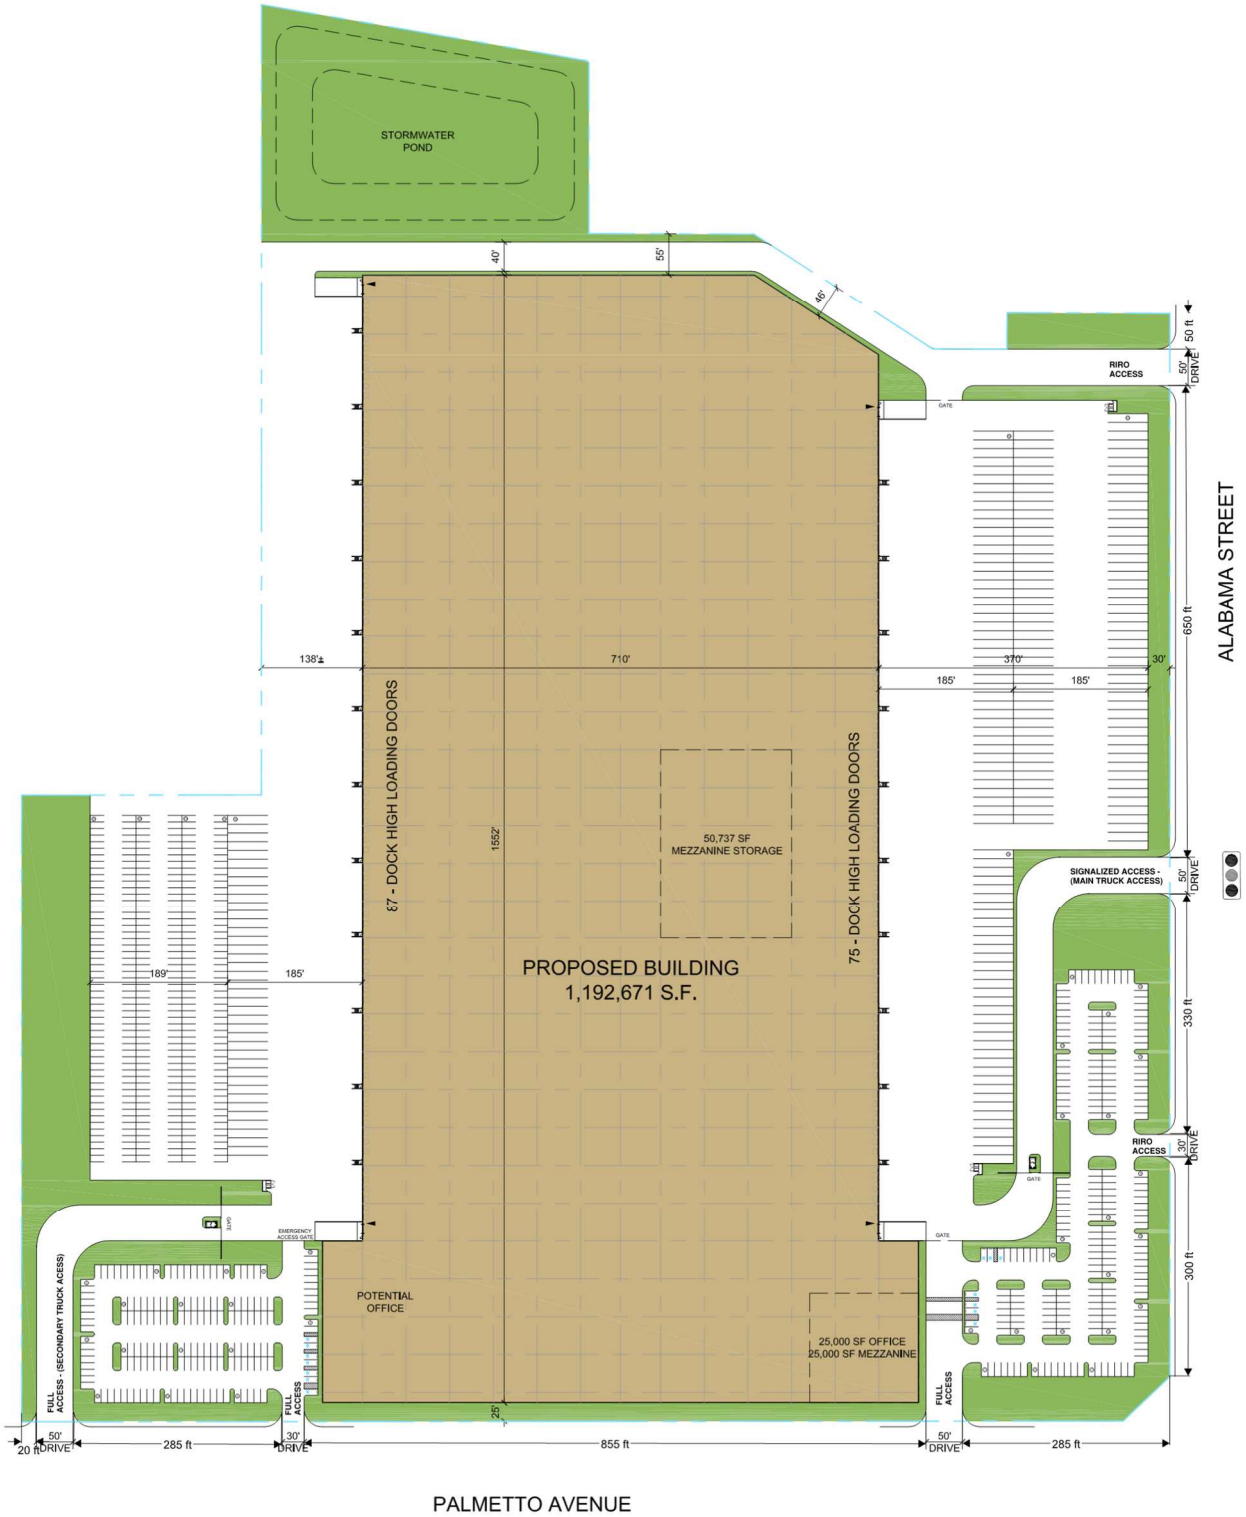
2.3.4 Site Plan of Proposed Project

The current proposed Project layout is shown on **Figure 2** which includes the proposed Project site access points. As indicated below, the Project will have access to Alabama Street east of the Project and Palmetto Avenue south of the Project.

The Project access points/driveways include the following:

1. N/S full-access driveway with one-way stop control on Palmetto Avenue (Int. 15);
2. N/S full-access driveway with one-way stop control on Palmetto Avenue (Int. 16);
3. N/S full-access driveway with one-way stop control on Palmetto Avenue (Int. 17);
4. E/W right-in/right-out driveway with one-way stop control on Alabama Street (Int. 18);
5. E/W full-access driveway with signalized control on Alabama Street (Int. 5);
6. E/W right-in/right-out driveway with one-way stop control on Alabama Street (Int. 19).

Figure 2 – Project Site Plan



2.3.5 Proposed Project Opening Year and Proposed Project Phasing

For analysis purposes, it is assumed that the Project will be developed in a single phase and full development is anticipated by 2020.

2.3.6 Sphere of Influence

The Project is within the sphere of influence or within one mile of the border of the City of San Bernardino, the City of Redlands, and the City of Highland.

2.3.7 Committed Roadway Improvements

Several intersection and roadway improvement Projects are planned to be constructed by the county and city in the future within the study area.

Intersection Improvements:

1. Alabama Street (NS) and Lugonia Avenue (EW)
    a. Add northbound right-turn lane and second westbound left-turn lane.
2. Alabama Street (NS) and San Bernardino Avenue (EW)
    a. Reconfigure eastbound approach for three through lanes and one right-turn lane. Reconfigure westbound approach to include two left-turn lanes.

The County also plans to improve following interchanges under the SANBAG Congestion Management Program:

1. I-10 (EW) and California Street (NS)
2. I-10 (EW) and Alabama Street (NS)

Roadway Improvements:

1. Alabama Street from Pioneer Avenue to Santa Ana River
    a. Widen the roadway from one lane in each direction to three lanes in each direction.
2. Alabama Street from I-10 WB Ramps to I-10 EB Ramps
    a. Widen overcrossing to two to three lanes in each direction. Re-configure ramps.
3. San Bernardino Avenue
    a. Widen the roadway from one lane in each direction to three lanes in each direction.

3.0 AREA CONDITIONS

3.1 Existing Roadway Descriptions

3.1.1 Primary Arterial

- 5th Street is a divided 4-lane east-west arterial in the project area with a painted median. It is classified as a primary arterial east of Palm Avenue/Alabama Street and is classified as a Major Highway west of Palm Avenue/Alabama Street in the City of Highlands General Plan Circulation Element and provides connectivity to the State Route-210 freeway. Its ultimate cross section includes six through lanes and a raised median. East of the freeway interchange, it continues as Greenspot Road. Street parking is not allowed. There are existing sidewalks on both sides of the street, and designated bike lanes in most areas within the study area.

3.1.2 Major Arterial

- Alabama Street is a divided 2-lane north-south arterial with a raised median in the frontage area of the project. Alabama Street is a divided 6-lane north-south arterial with a raised median south of the project. It is classified as a major arterial in the County of San Bernardino East Valley Area Plan and provides connectivity to the I-10 and SR-210 freeways. North of the City of Highland border, it continues as Palm Avenue and is classified as a Major Highway. Its ultimate cross section includes six through lanes and a raised median. Street parking is not allowed. There are existing sidewalks on both sides of the street and designated bike lanes where improvements have been constructed within the study area.
- San Bernardino Avenue is a divided 6-lane east-west arterial with a raised median in the project area. It is classified as a major arterial in the County of San Bernardino East Valley Area Plan and provides connectivity to the SR-210 freeway. Its ultimate cross section includes six through lanes and a raised median. Street parking is not allowed. There are existing sidewalks on both sides of the street where improvements have been constructed, but designated bike lanes do not exist within the study area.
- California Street is a divided 6-lane north-south arterial with a raised median in the project area. It is classified as a major arterial in the City of Redlands General Plan Circulation Element and provides connectivity to the I-10 freeway. Its ultimate cross section includes six through lanes and a raised median. Street parking is not allowed. There are existing sidewalks on both sides of the street where improvements have been constructed, but designated bike lanes do not exist within the study area.

3.1.3 Major Highway

- 3rd Street is a divided 4-lane east-west roadway in the project area with a painted median. It is classified as a major highway in the City of Highlands General Plan Circulation Element. Its ultimate cross section includes four through lanes and a raised median. Street parking is allowed. There are existing sidewalks on both sides of the street where improvements have been construction, but designated bike lanes do not exist within the study area.
- Lugonia Avenue is a divided 4-lane east-west roadway with a painted median in the project area. It is classified as a major highway in the County of San Bernardino East Valley Area Plan and provides connectivity to the SR-210 freeway. Its ultimate cross section includes four through lanes and a raised or

painted median. Street parking is not allowed. There are existing sidewalks on both sides of the street where improvements have been constructed, but designated bike lanes do not exist within the study area.

3.1.4 Collector

- Palmetto Avenue is an undivided 2-lane east-west roadway in the project area. It is classified as a collector in the County of San Bernardino East Valley Area Plan. Its ultimate cross section includes four through lanes and no median. Street parking is not allowed. There are existing sidewalks where improvements have been constructed, but designated bike lanes do not exist within the study area.

3.1.5 Local

- River Bluff Avenue is a divided 2-lane east-west roadway in the project area. It is not classified in the County of Riverside General Plan Circulation Element, but acts as a local roadway. It provides connectivity to one warehouse property. Street parking is not allowed. There are existing sidewalks on the north side of the street, but designated bike lanes do not exist within the study area.

3.2 Study Area Intersections and Roadways

Key study intersections and roadway segments are typically selected based on their location in relation to the vicinity of the project and whether potential significant project-related traffic will pass through them. The key intersections and roadway segments were identified in coordination with the County of San Bernardino staff and are shown on **Figure 3**. The study area includes the following intersections:

1. California Street (NS) / I-10 WB Ramps (EW)
2. California Street (NS) / I-10 EB Ramps (EW)
3. Alabama Street (NS) / 5th Street (EW)
4. Alabama Street (NS) / 3rd Street (EW)
5. Alabama Street (NS) / Project Driveway 5-River Bluff Avenue (EW)
6. Alabama Street (NS) / Palmetto Avenue (EW)
7. Alabama Street (NS) / San Bernardino Avenue (EW)
8. Alabama Street (NS) / Lugonia Avenue (EW)
9. Alabama Street (NS) / I-10 WB Ramps (EW)
10. Alabama Street (NS) / I-10 EB Ramps (EW)
11. SR-210 SB Ramps (NS) / 5th Street (EW)
12. SR-210 NB Ramps (NS) / 5th Street (EW)
13. SR-210 SB Ramps (NS) / San Bernardino Avenue (EW)
14. SR-210 NB Ramps (NS) / San Bernardino Avenue (EW)
15. Project Driveway 1 (NS) / Palmetto Avenue (EW)
16. Project Driveway 2 (NS) / Palmetto Avenue (EW)
17. Project Driveway 3 (NS) / Palmetto Avenue (EW)
18. Alabama Street (NS) / Project Driveway 4 (EW)
19. Alabama Street (NS) / Project Driveway 6 (EW)

3.3 Existing Traffic Controls and Intersection Geometrics

The existing roadway system is shown on **Figure 3**. It identifies the existing intersection traffic controls (i.e. signals and signage), intersection geometrics, and the number of vehicle lanes for each intersection within the study area.

3.4 Existing Traffic Volumes

Ninteen key study intersections have been identified as the locations at which to evaluate existing and future traffic operating conditions. Some portion of potential project-related traffic will pass through each of these locations, and their analysis will reveal the expected relative impacts of the project. These key study intersections noted in Section 3.2 were selected for evaluation based on discussions with the County of San Bernardino staff.

The existing AM peak period and PM peak period intersection turning movement counts at the 19 study intersections were conducted by Counts Unlimited, Inc. on February 21, 2018. Because of the high number of heavy vehicles in the area and the truck-intensive land use of the project, raw turning movement counts were converted into passenger car equivalent (PCE). PCE is defined as the number of passenger cars that will result in the same operational conditions as a single heavy vehicle of a particular type. The traffic count worksheets are provided in Appendix C. The AM and PM peak hour intersection turning movement volumes are presented on **Figure 4** and **Figure 5**, respectively.

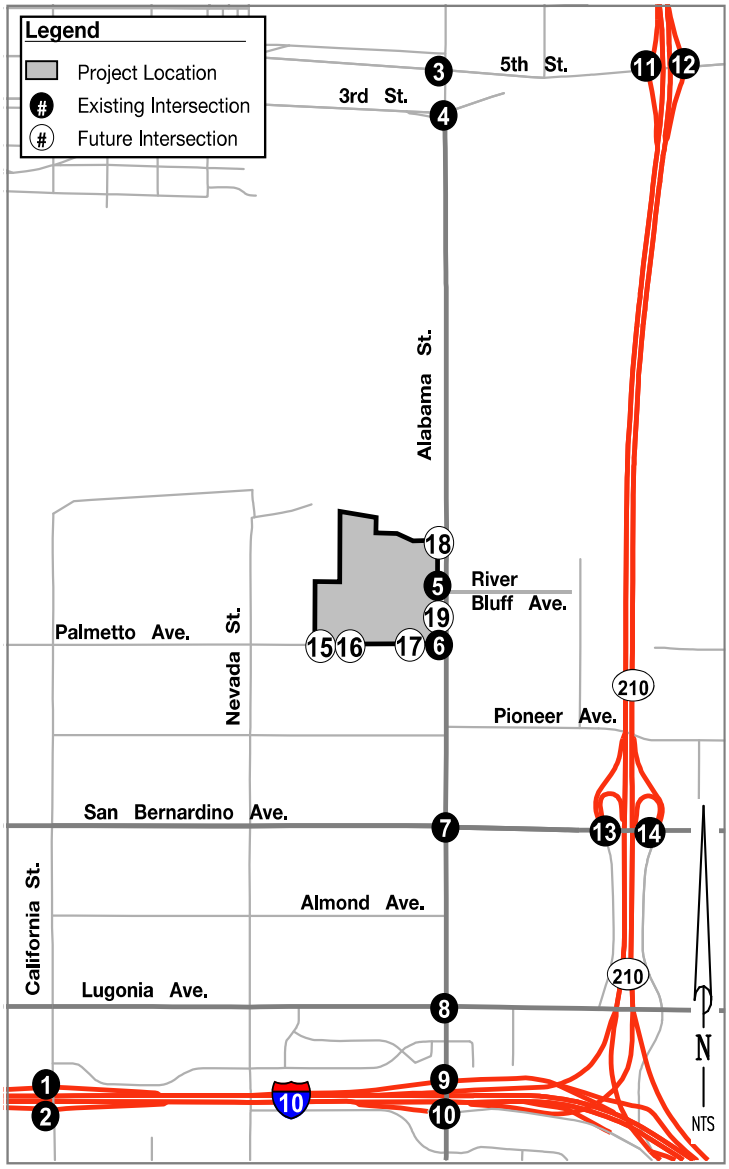

Figure 5 - Existing (2018) PM Peak Hour Intersection Volumes

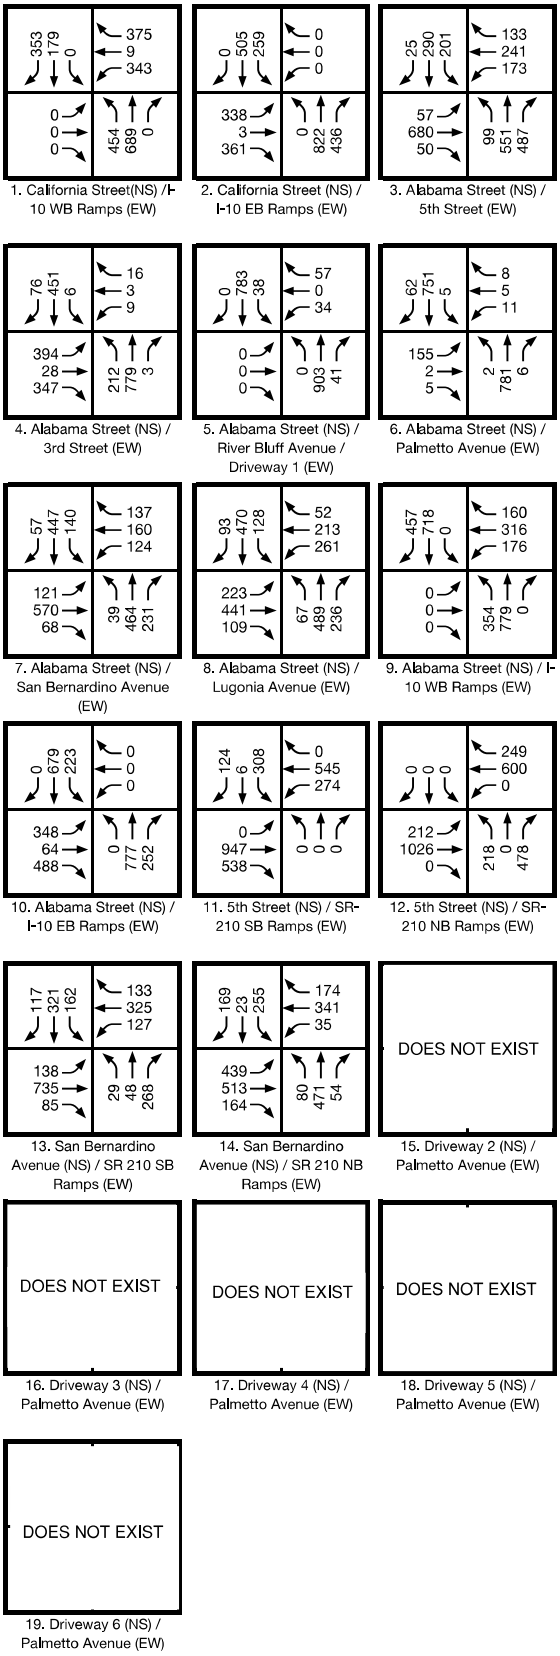

3.5 Levels of Service – Existing (2018) Conditions

The intersection levels of service for existing (2018) conditions shown on **Table 3-1** are based upon the existing roadway system shown on **Figure 4** and the existing AM and PM peak hour intersection volumes shown on **Figure 5** and **Figure 6**, respectively. The level of service calculation worksheets are provided in Appendix E. The following study intersections are expected to operate at an unacceptable level of service:

1. California Street (NS)/ I-10 WB Ramps
2. California Street (NS) / I-10 EB Ramps

Table 3-1 – Intersection Levels of Service – Existing (2018) Conditions

3.6 General Plan Circulation

The current County of San Bernardino General Plan circulation element for the East Valley Area Plan is shown on **Figure 6,** City of Redlands General Plan circulation element is shown in **Figure 7**, City of Highland General Plan circulation element is shown in **Figure 8**.

3.7 Bicycle Facilities

The East Valley Area Plan includes a planned trail system that includes Class I, Class II, and Class IV bikeways. Class III bikeways are not currently within the plan area. While planned, no bicycle lanes exist in the project area within San Bernardino County. The East Valley Plan Trail System is shown on **Figure 9**.

3.8 Transit Facilities

The project area is served by OmniTrans route 15. A map of OmniTrans route 15 is shown on **Figure 10**. The nearest bus stop is located at the intersection of Alabama Street and San Bernardino Avenue.

3.9 Pedestrian Facilities

Pedestrian facilities only exist within the study area where developments have made frontage improvements. There are many sidewalk gaps in close proximity of the project site. Pedestrian facilities are nearly complete in other areas of the East Valley Area Plan that are closer to build-out conditions.

4.0 PROJECTED FUTURE TRAFFIC

4.1 Method of Projection

In order to estimate the traffic impact characteristics of the Project, a multi-step process has been utilized. The first step is traffic generation which estimates the total arriving and departing traffic during a peak hour and on a daily basis. The traffic generation potential is forecast by applying the appropriate vehicle trip generation rates to the Project development tabulation. The second step of the forecasting process is traffic distribution, which identifies the origins and destinations of inbound and outbound Project traffic based on existing/expected future travel patterns in the study area. The third step is traffic assignment, which involves the allocation of Project traffic to study area street segments and intersections. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway segments and intersection turning movements throughout the study area. The impact of the Project is isolated by comparing operation level of service conditions at selected key study intersections using expected future traffic volumes with and without forecasted Project traffic.

The method of traffic Projection is based on the following criteria:

- Existing traffic conditions (2018);
- Ambient growth Projections;
- Project generated traffic; and
- Cumulative Project generated traffic.
- Build-out (2040) year traffic

This report uses a Project opening year of 2020 for analysis purposes.

4.2 Project Generated Traffic

4.2.1 Project Trip Generation

Trip Generation Rates

Trip generation represents the amount of traffic traveling to and from the proposed Project, which are defined as inbound and outbound trips. An inbound and outbound trip by the same vehicle is considered two separate trips or trip ends. **Table 4-1** shows the peak hour and daily trip generation rates for the proposed Project by the associated land use. The trip generation volumes used in this study are based upon the development of a 1,192,671 square feet gross floor area warehouse.

The trip generation rates for this warehousing land use are based on the fitted curve equation for trip generation provided in the *Trip Generation Manual (10th Edition)* by the Institute of Transportation Engineers (ITE), 2017. The inbound and outbound peak hour trip generation rates are calculated by multiplying the total peak hour generation rate by the directional distribution provided in the *Trip Generation Manual*.

The County of San Bernardino utilizes Passenger Car Equivalent (PCE) factors that are recommended by the San Bernardino County Congestion Management Program (CMP), 2016 Update. PCE factors have been used to convert heavy truck trips (large 2-axles, 3-axles and 4+-axles) to passenger equivalent trips. A factor of 1.5

was applied to large 2-axle trucks, a factor of 2.0 was applied to 3-axle trucks and a factor of 3.0 was applied to 4+-axle trucks.

Table 4-1 – Trip Generation Rates

[4] Passenger car / 2 axle / 3 axle / 4+ axle truck split from Truck Trip Generation Study by the City of Fontana, 2003.
[5] PCE Factor per San Bernardino County CMP, 2016 Update are used.

Project Trip Generation

The trip generation potential for the proposed warehouse was forecast using ITE Land Use Code 154: High-Cube Transload and Short-Term Storage Warehouse equations. The trip generation volumes are developed by multiplying the trip generation rates from the previous section by the square footage of the proposed Project. **Table 4-2** presents the daily and peak hour trip generation for the proposed Project. As shown, the proposed Project is anticipated to generate approximately 2,202 daily PCE trip-ends, including 127 PCE trip-ends during the AM peak hour and 158 PCE trip-ends during the PM peak hour.

Table 4-2 – Project Trip Generation (in PCE)

Land Use	Qty	Unit	AM Peak Hour			PM Peak Hour			Daily
			Total	In	Out	Total	In	Out	
High-Cube Transload and Short-Term Storage Warehouse	1200	TSF							
Passenger Cars (PCE = 1.0)			*77*	*59*	*18*	*96*	*28*	*68*	*1,337*
Trucks (2 Axle, PCE = 1.5)			*5*	*4*	*1*	*6*	*2*	*4*	*87*
Trucks (3 Axle, PCE = 2.0)			*9*	*7*	*2*	*11*	*3*	*8*	*156*
Trucks (4+ Axle, PCE = 3.0)			*36*	*27*	*8*	*45*	*13*	*32*	*621*
PROJECT TOTAL (IN PCE)			127	97	29	158	46	112	2,202

TSF = 1,000 Square Feet Gross Floor Area.

4.2.2 Project Trip Distribution

Trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is influenced by the geographical location of the site, type of land use in the study area, such as shopping centers and recreational sites, and proximity to the regional freeway system.

The trip directional orientation of traffic for the proposed Project was determined based upon the existing roadway system, existing traffic patterns, and existing and future land uses. The directional distribution for the proposed Project traffic for passenger vehicles and trucks assumed in this study are shown on **Figure 11** and **Figure 12**, respectively. This shows the direction that vehicles will travel from the Project site to their next destination.

4.2.3 Project Modal Split

The traffic reducing potential of public transit has not been considered in this study. Therefore, the traffic Projections provided in this report are considered conservative since public transit could reduce traffic volumes in the Project area.

4.2.4 Project Trip Assignment

Trip assignment is the result of assigning the previously-discussed trip generation numbers to the City's circulation system using the aforementioned trip distribution.

The Project related AM peak hour and PM peak hour intersection turning movement volumes for passenger cars and trucks plus passenger cars are shown on **Figure 13** and **Figure 14**, respectively. These figures show the number of turning movements at each intersection in the study area for the AM and PM hours.

Figure 11– Directional Distribution of Project Traffic (Passenger Cars)

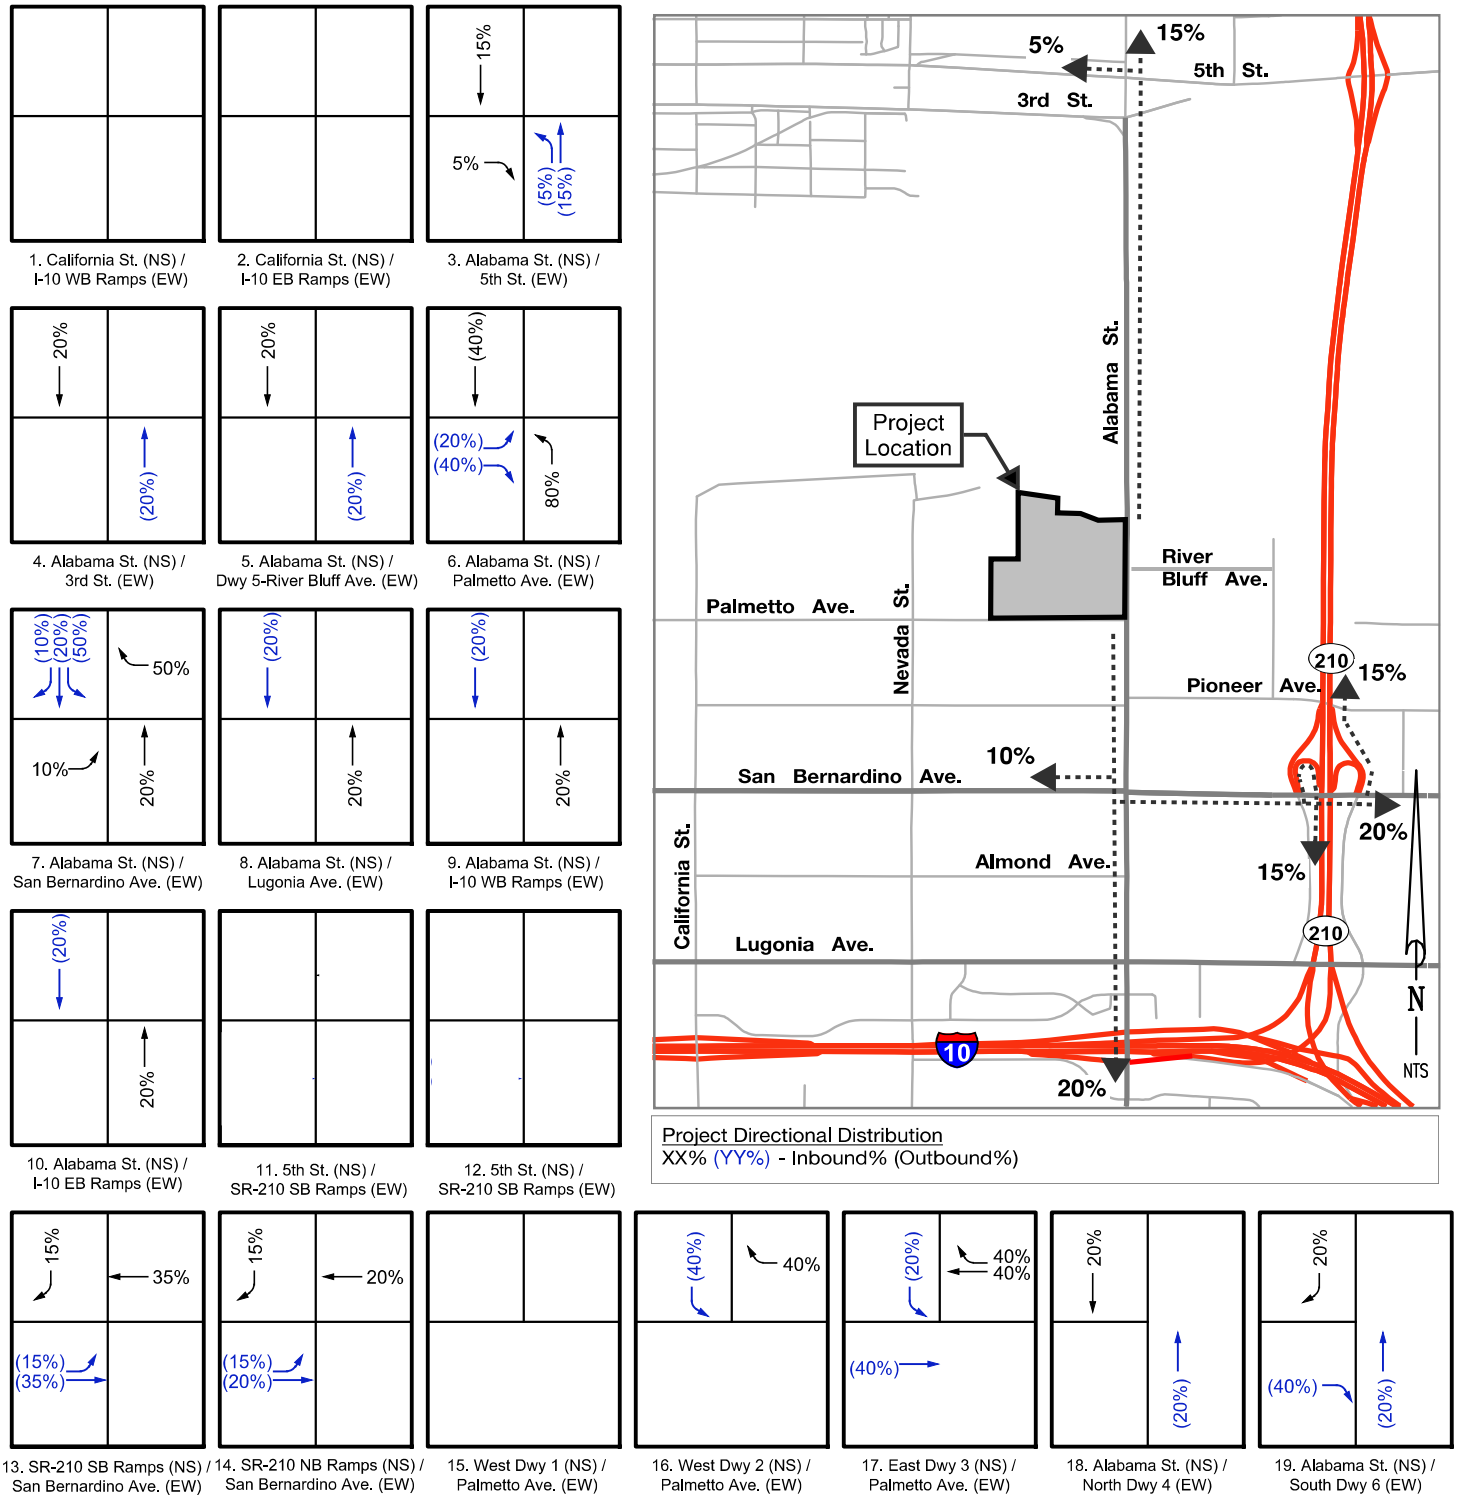

Figure 12 – Directional Distribution of Project Traffic (Trucks)

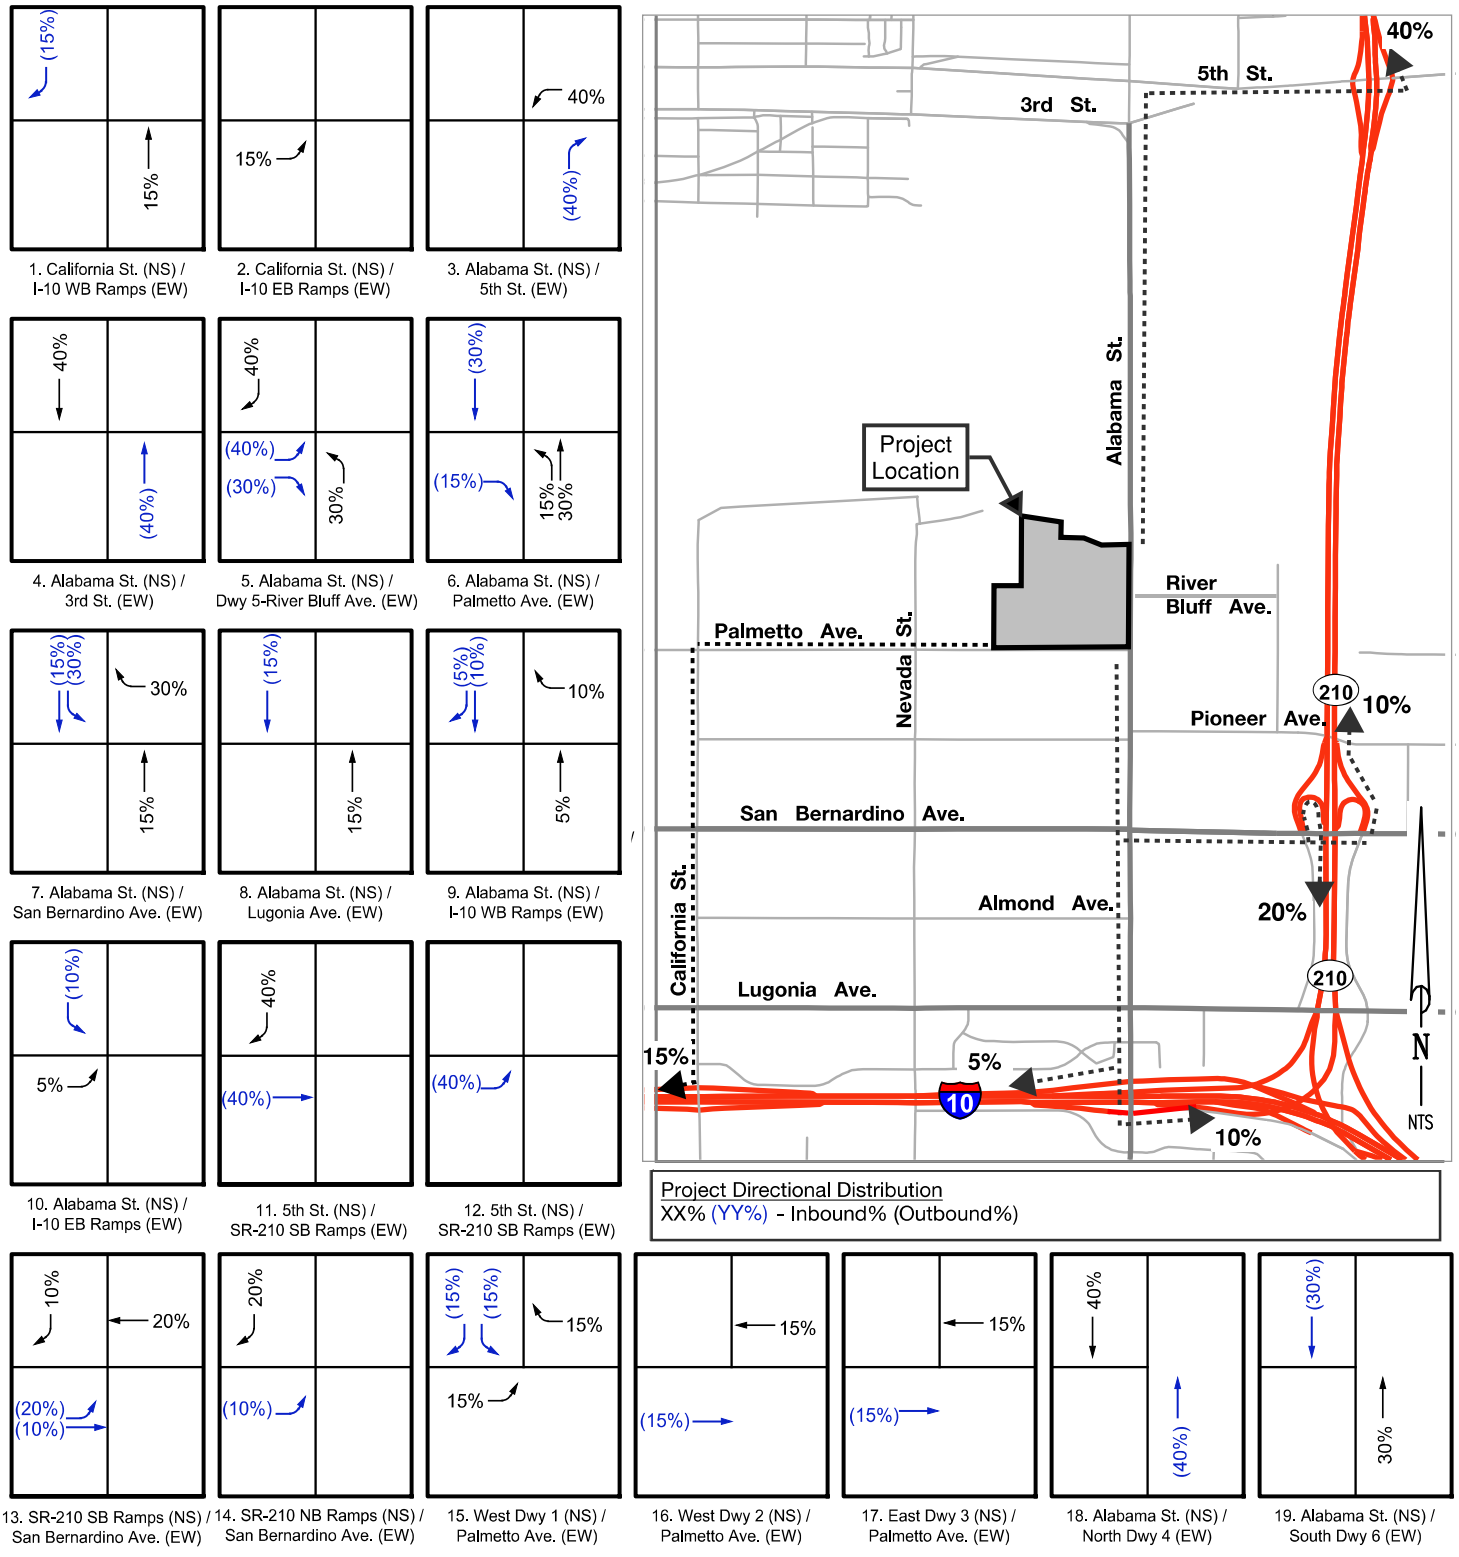

Figure 13– Project Only AM/PM Peak Hour Intersection Volumes (Passenger Cars Only)

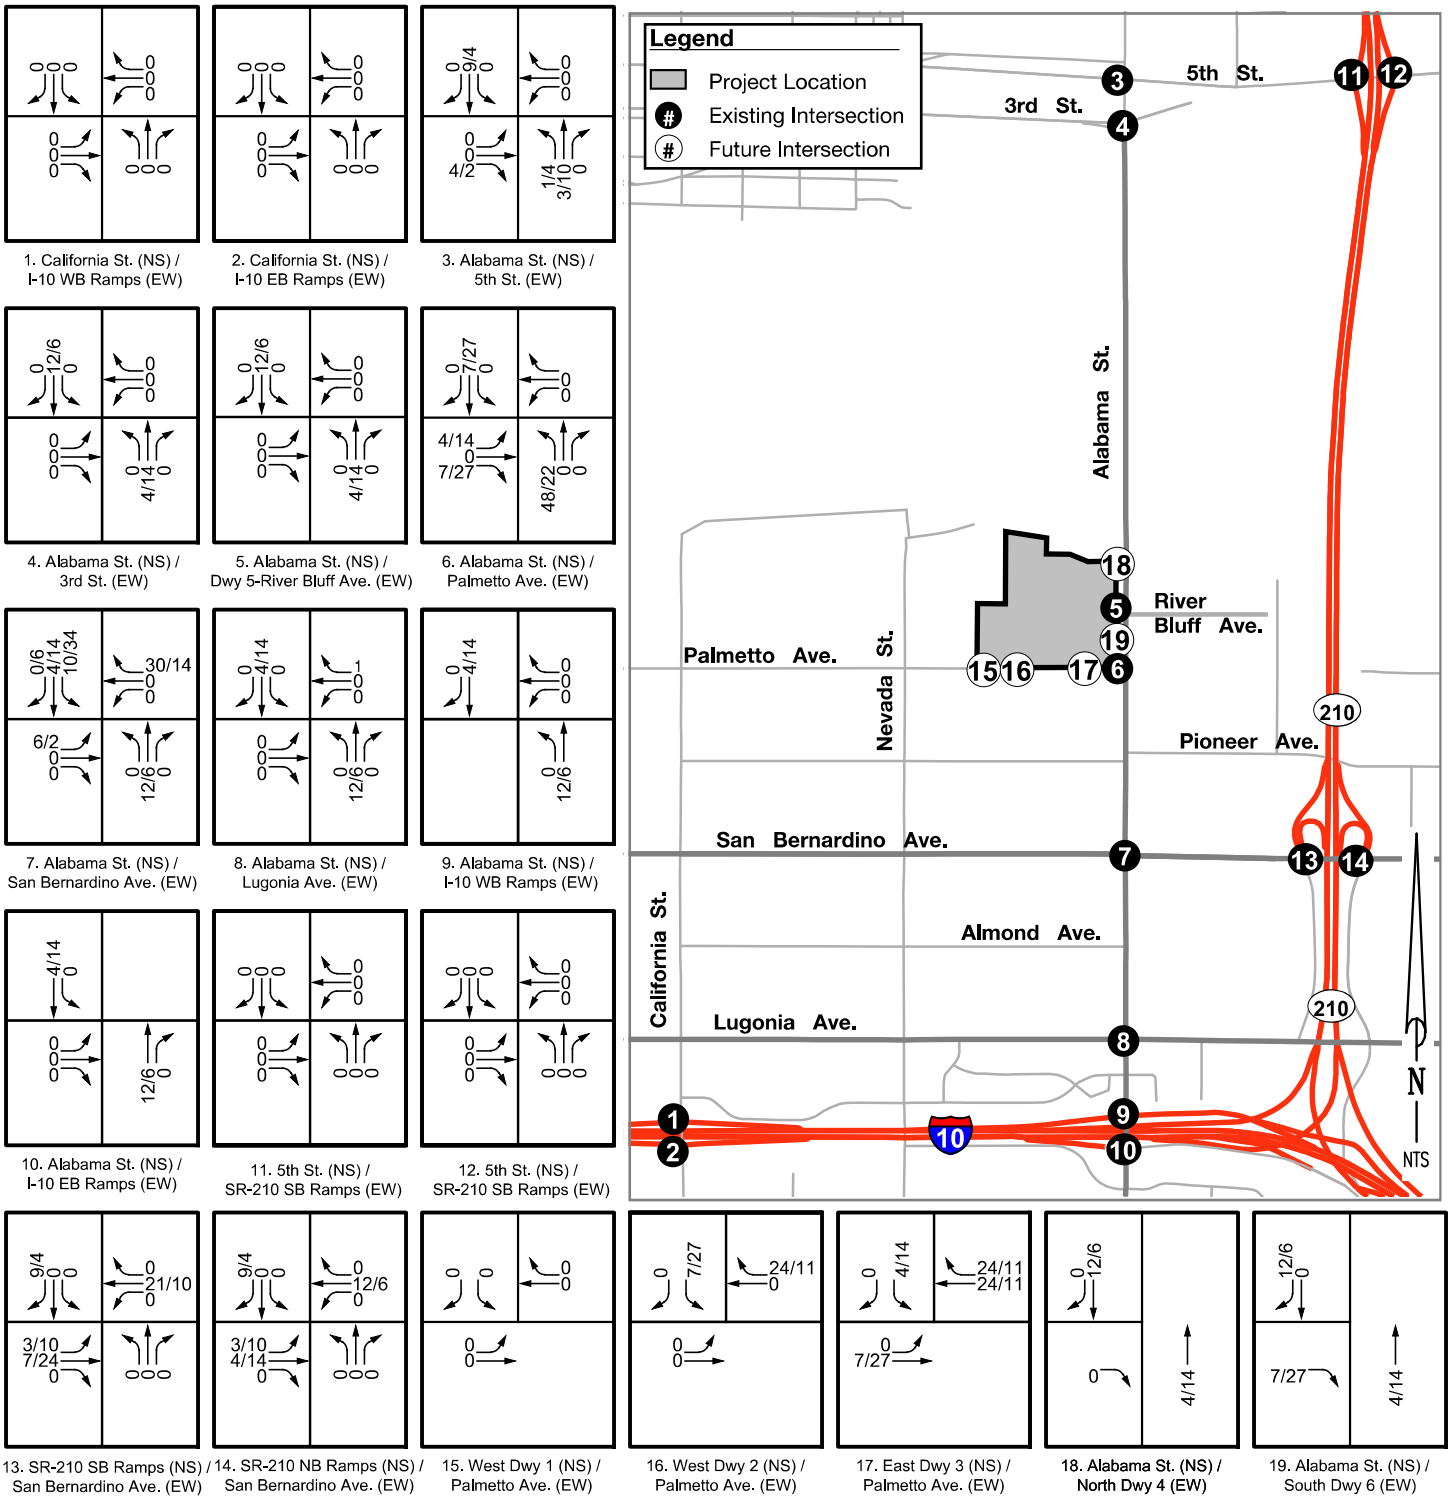

Figure 14– Project Only AM/PM Peak Hour Intersection Volumes (Passenger Cars + Trucks)

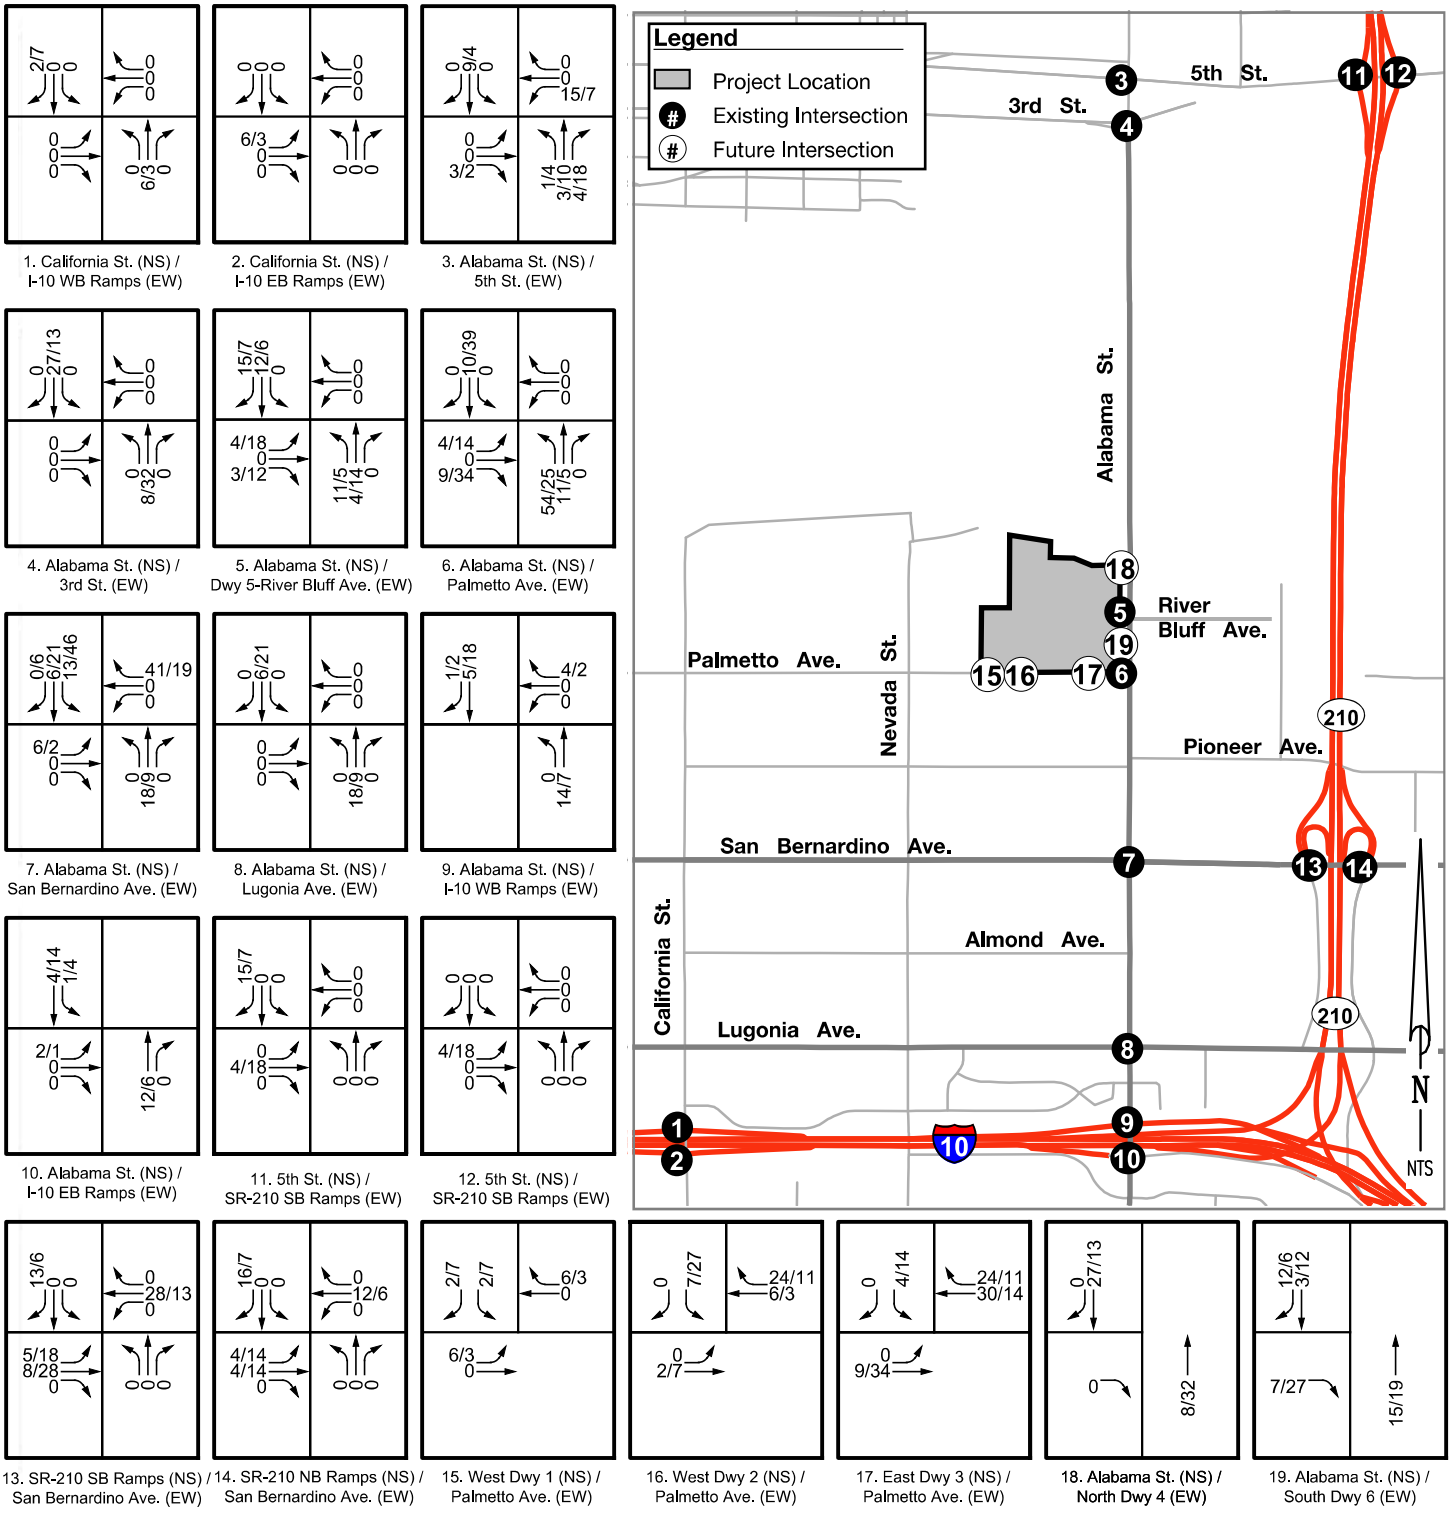

4.3 Cumulative Project Generated Traffic

Cumulative projects are those projects identified by the Counties and Cities within the study area that are anticipated to be completed and contribute vehicle trips to the roadway network by the project's opening year (2020). The County of San Bernardino, City of Highland, and City of Redlands provided Webb a list of projects that are in development within the study area of this project. Traffic from these cumulative projects is expected to have an impact on levels of service. The cumulative projects within the study area are listed in **Table 4-3** and the locations are provided in **Figure 15.** The AM and PM peak hour intersection turning movement volumes for cumulative projects are shown on **Figure 16** and **Figure 17**, respectively.

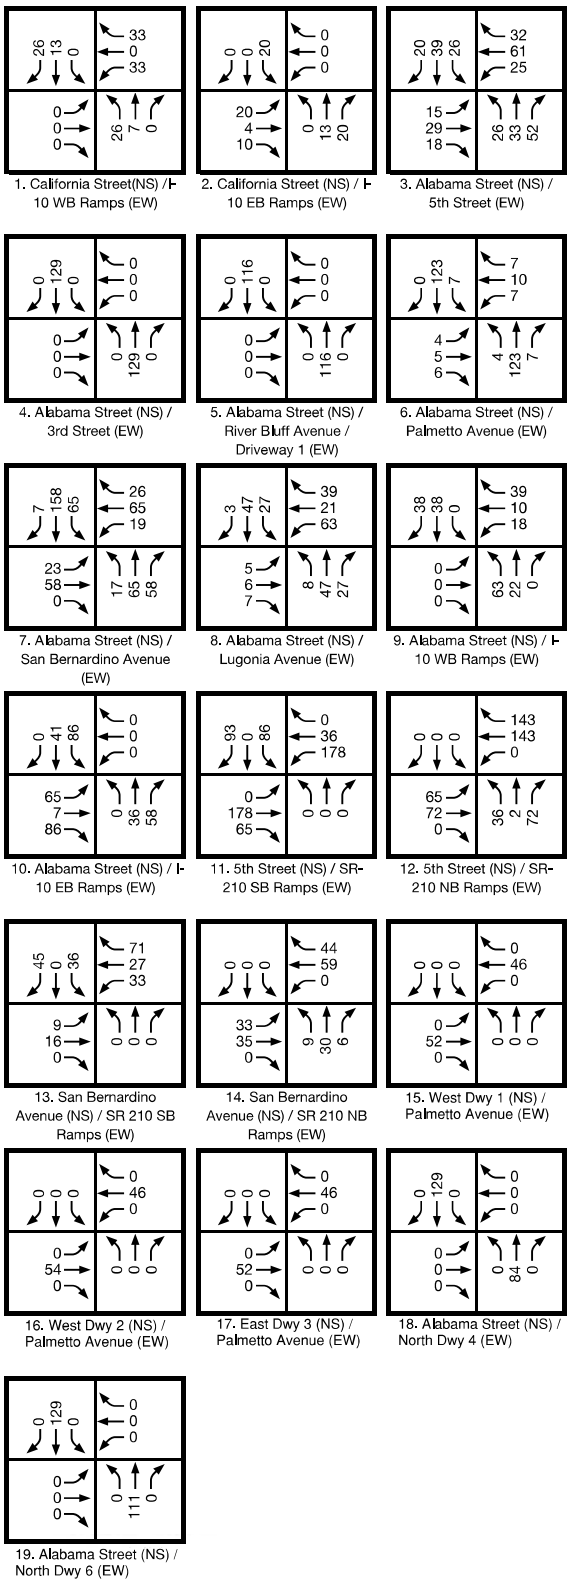
Figure 16 – Cumulative Projects Only AM Peak Hour Intersection Volumes



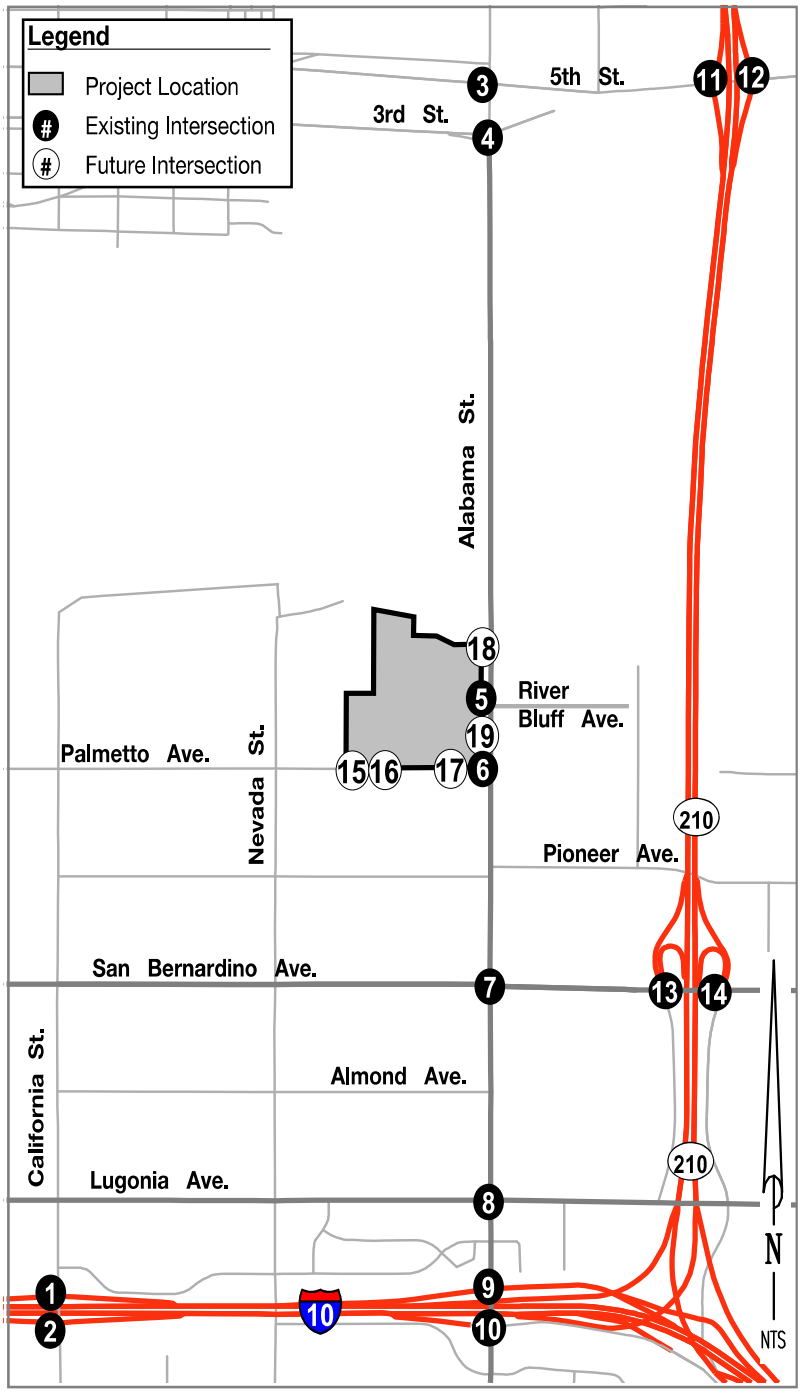


Figure 17 – Cumulative Projects Only PM Peak Hour Intersection Volumes

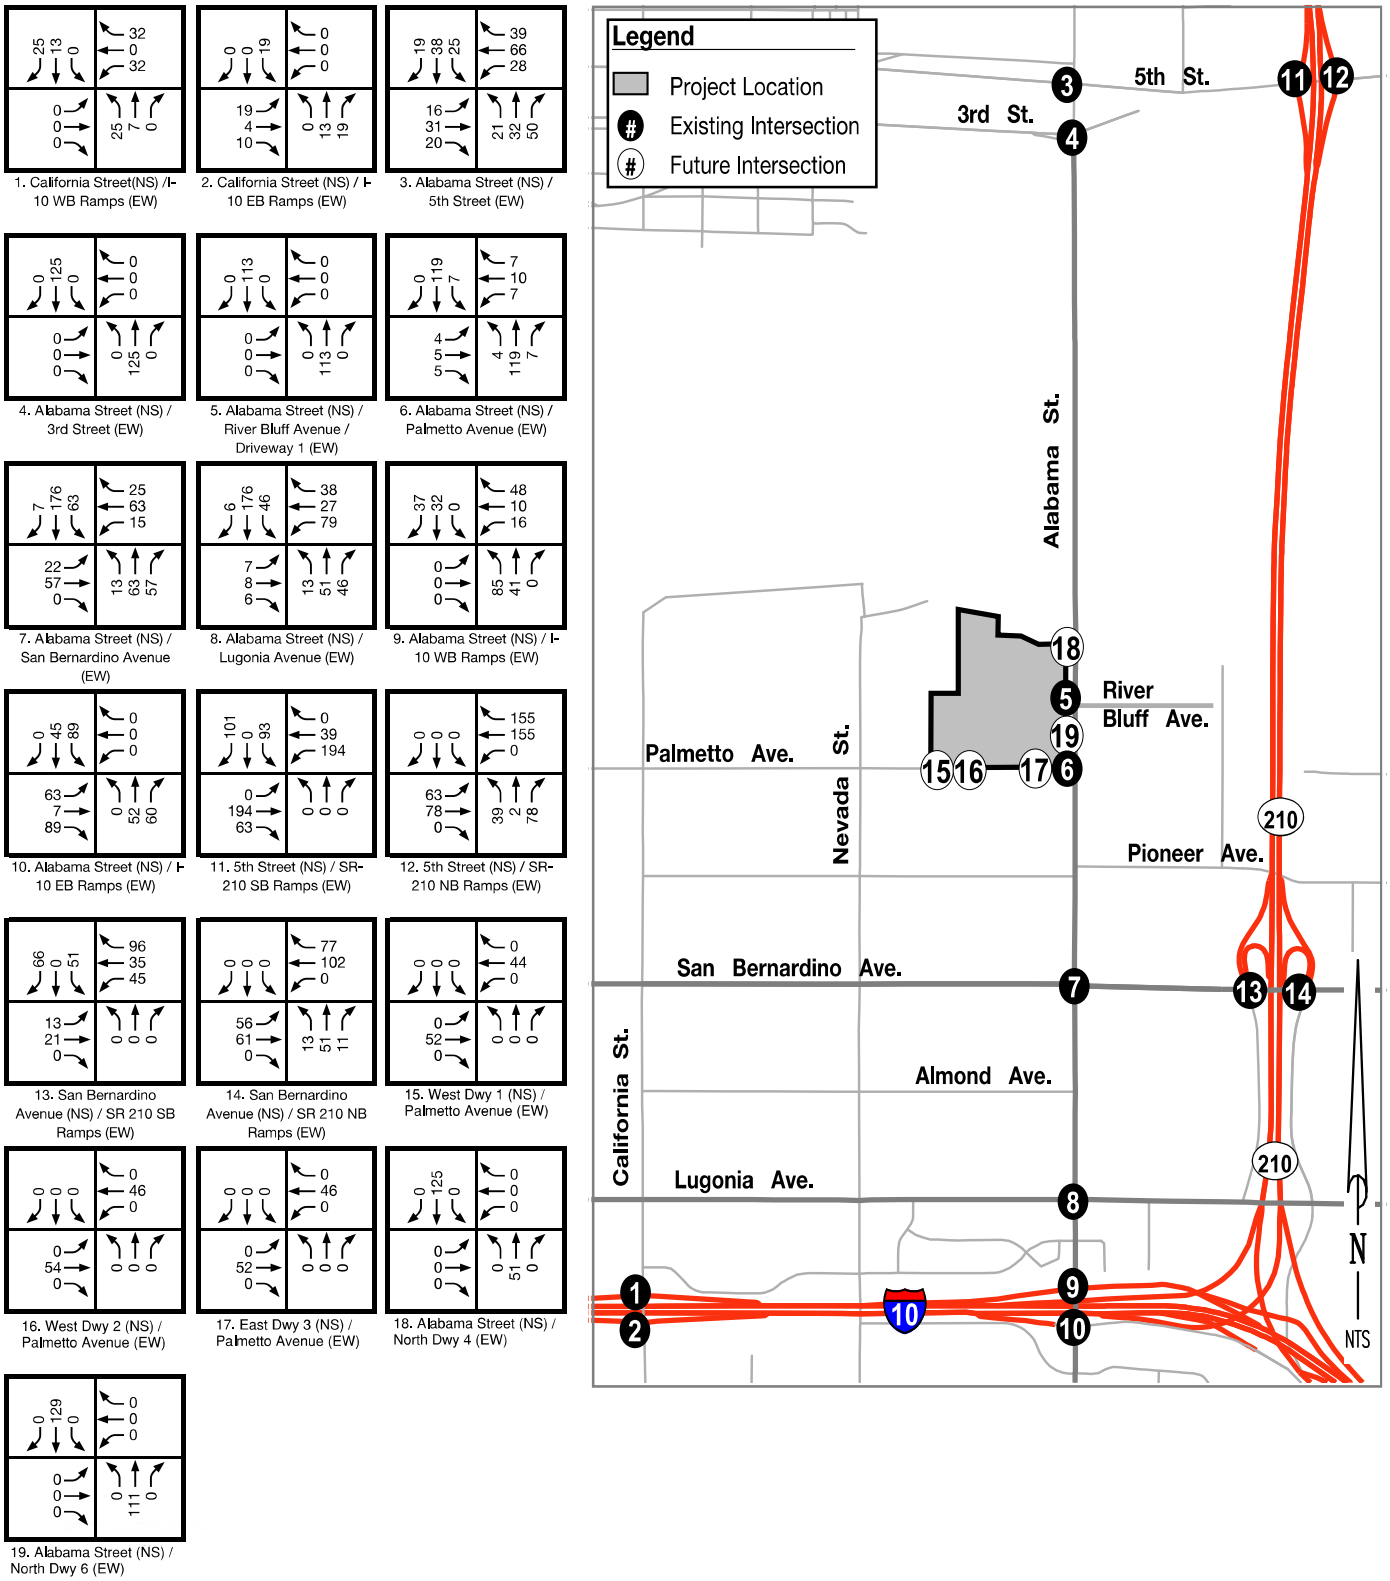

4.4 Ambient Growth

In order to evaluate traffic conditions for the opening year, area wide growth on existing roadways must be projected. The majority of the anticipated growth within the study area is accounted for with other cumulative project traffic. The ambient traffic growth factor is intended to include unknown and future cumulative projects in the study area, as well as account for regular growth in traffic volumes due to the development of projects outside the study area. Per discussion with San Bernardino County Traffic Division staff, this study will utilize a 2 percent per year growth rate. The AM and PM peak hour intersection turning movement volumes for ambient growth only are shown on **Figure 18** and **Figure 19**, respectively.

The AM and PM peak hour intersection turning movement volumes for ambient growth plus cumulative project trips are shown on **Figure 20** and **Figure 21**, respectively

Figure 18 – Ambient Growth Only AM Peak Hour Intersection Volumes

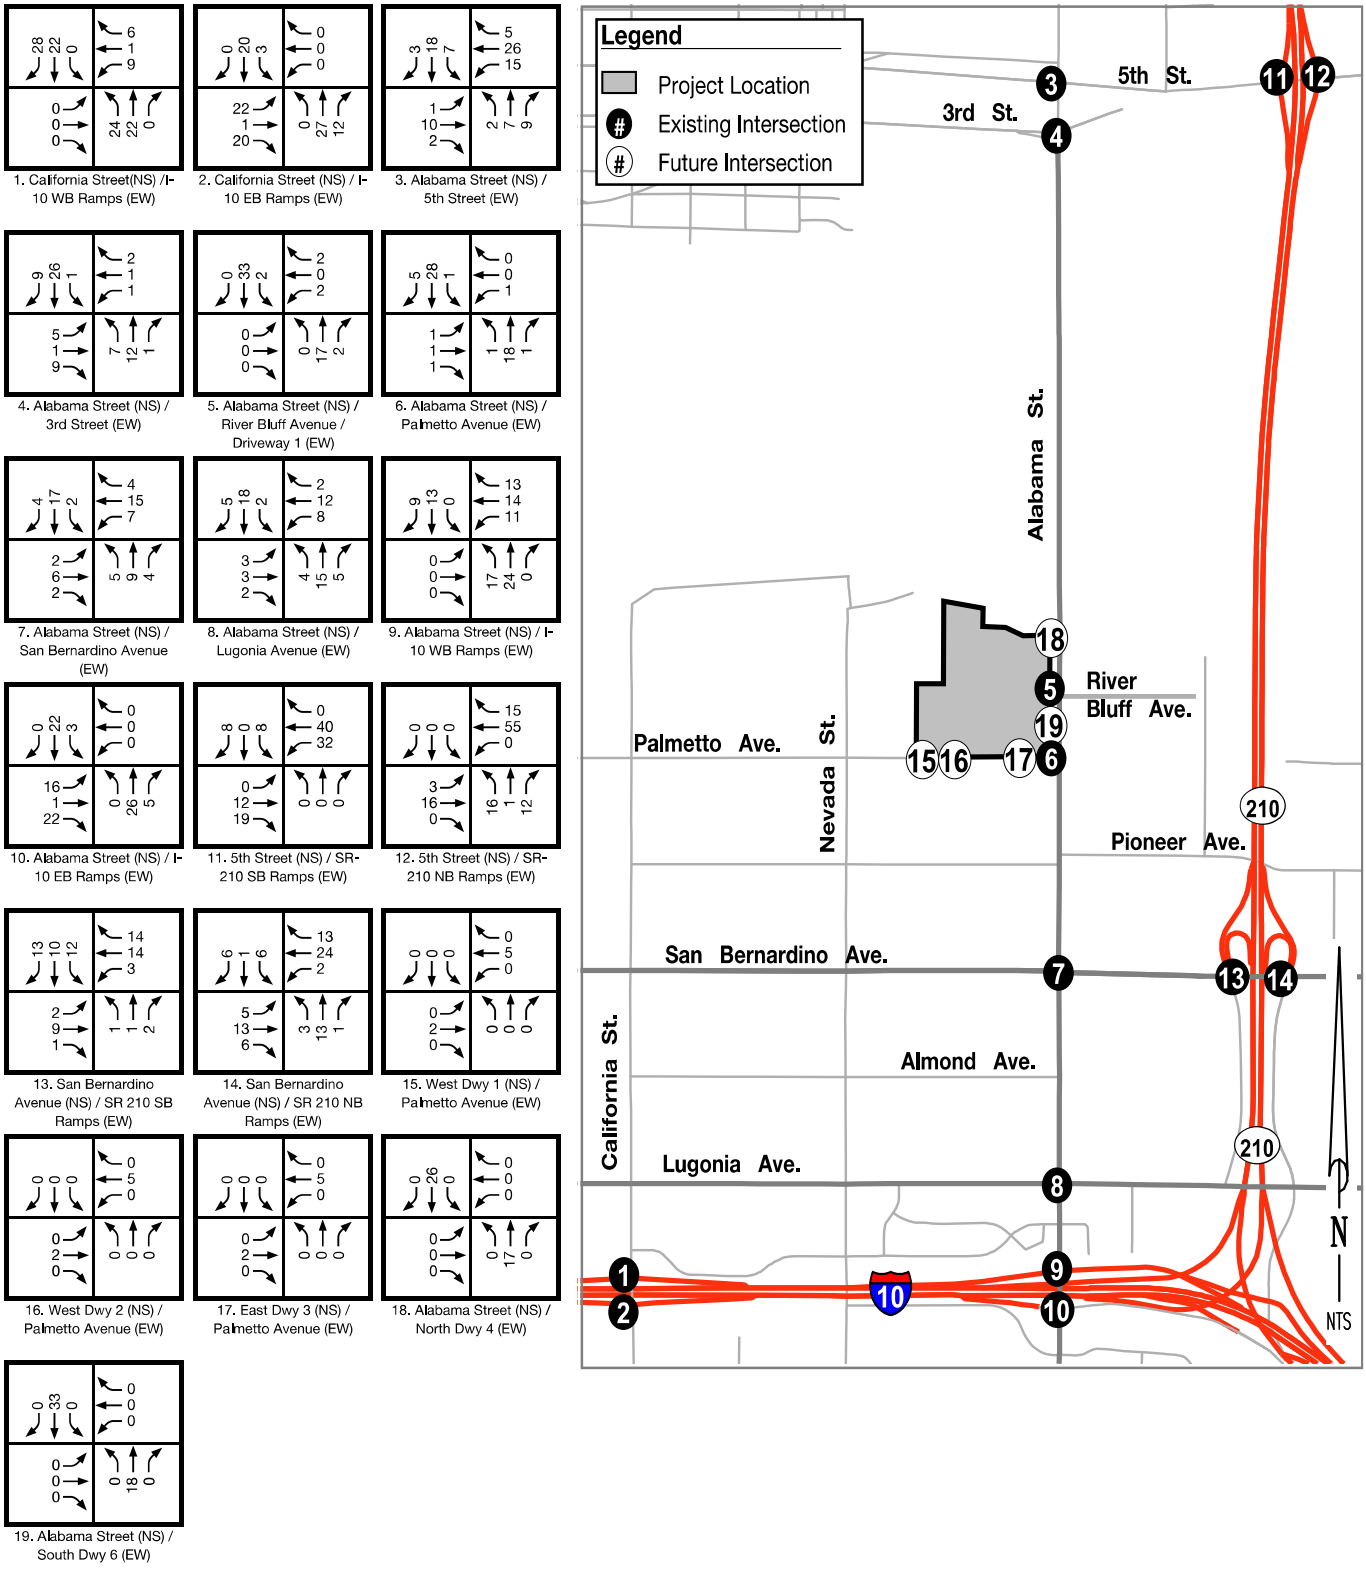

Figure 19– Ambient Growth Only PM Peak Hour Intersection Volumes

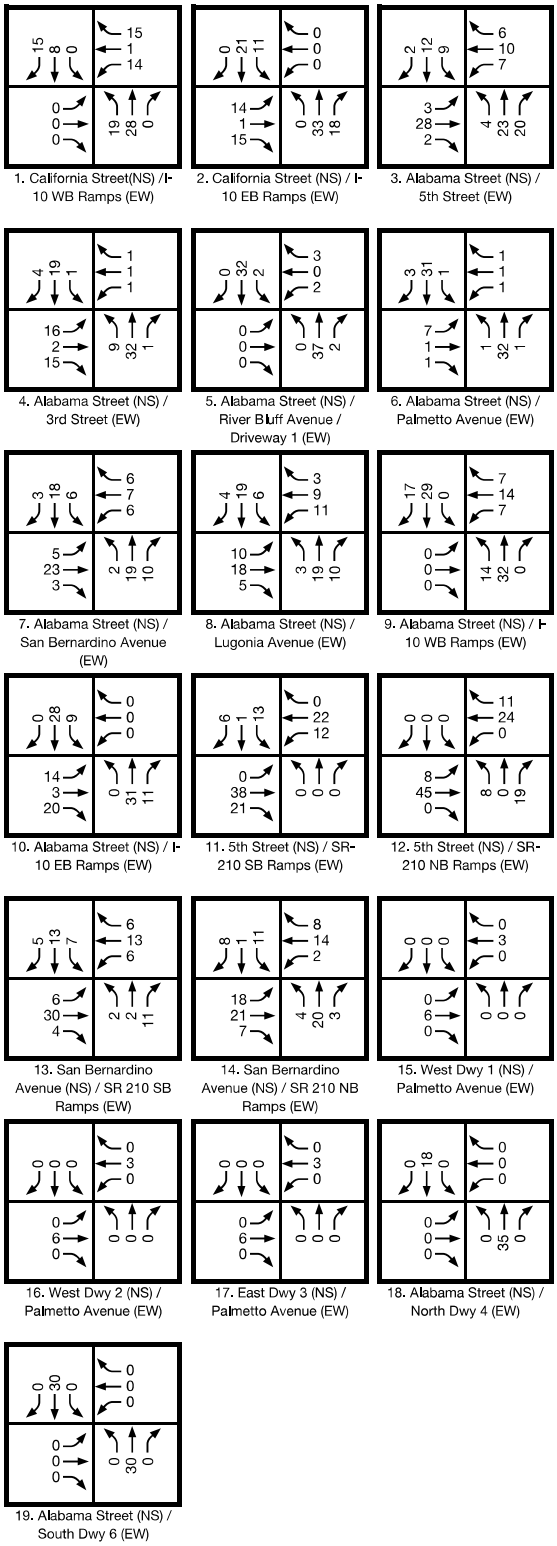

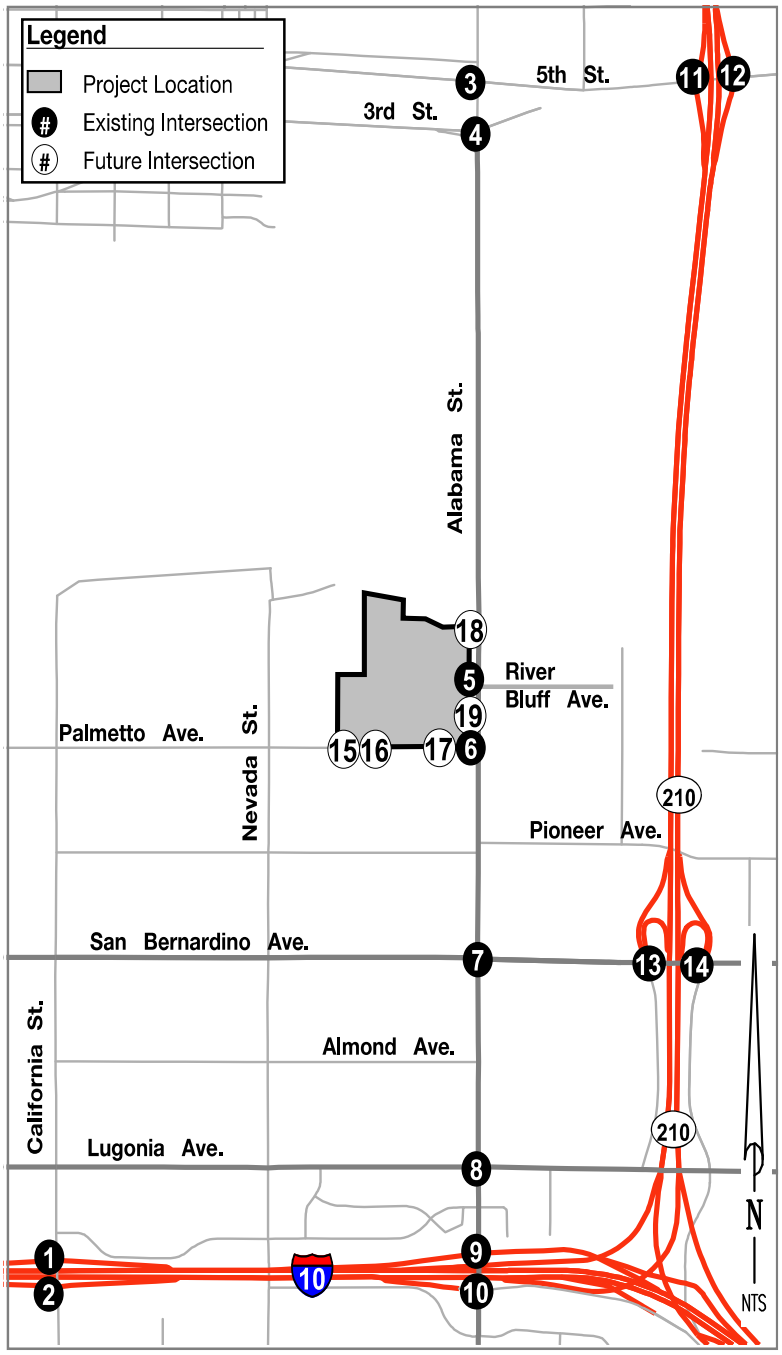

Figure 20 – Ambient Growth Plus Cumulative Projects AM Peak Hour Intersection Volumes

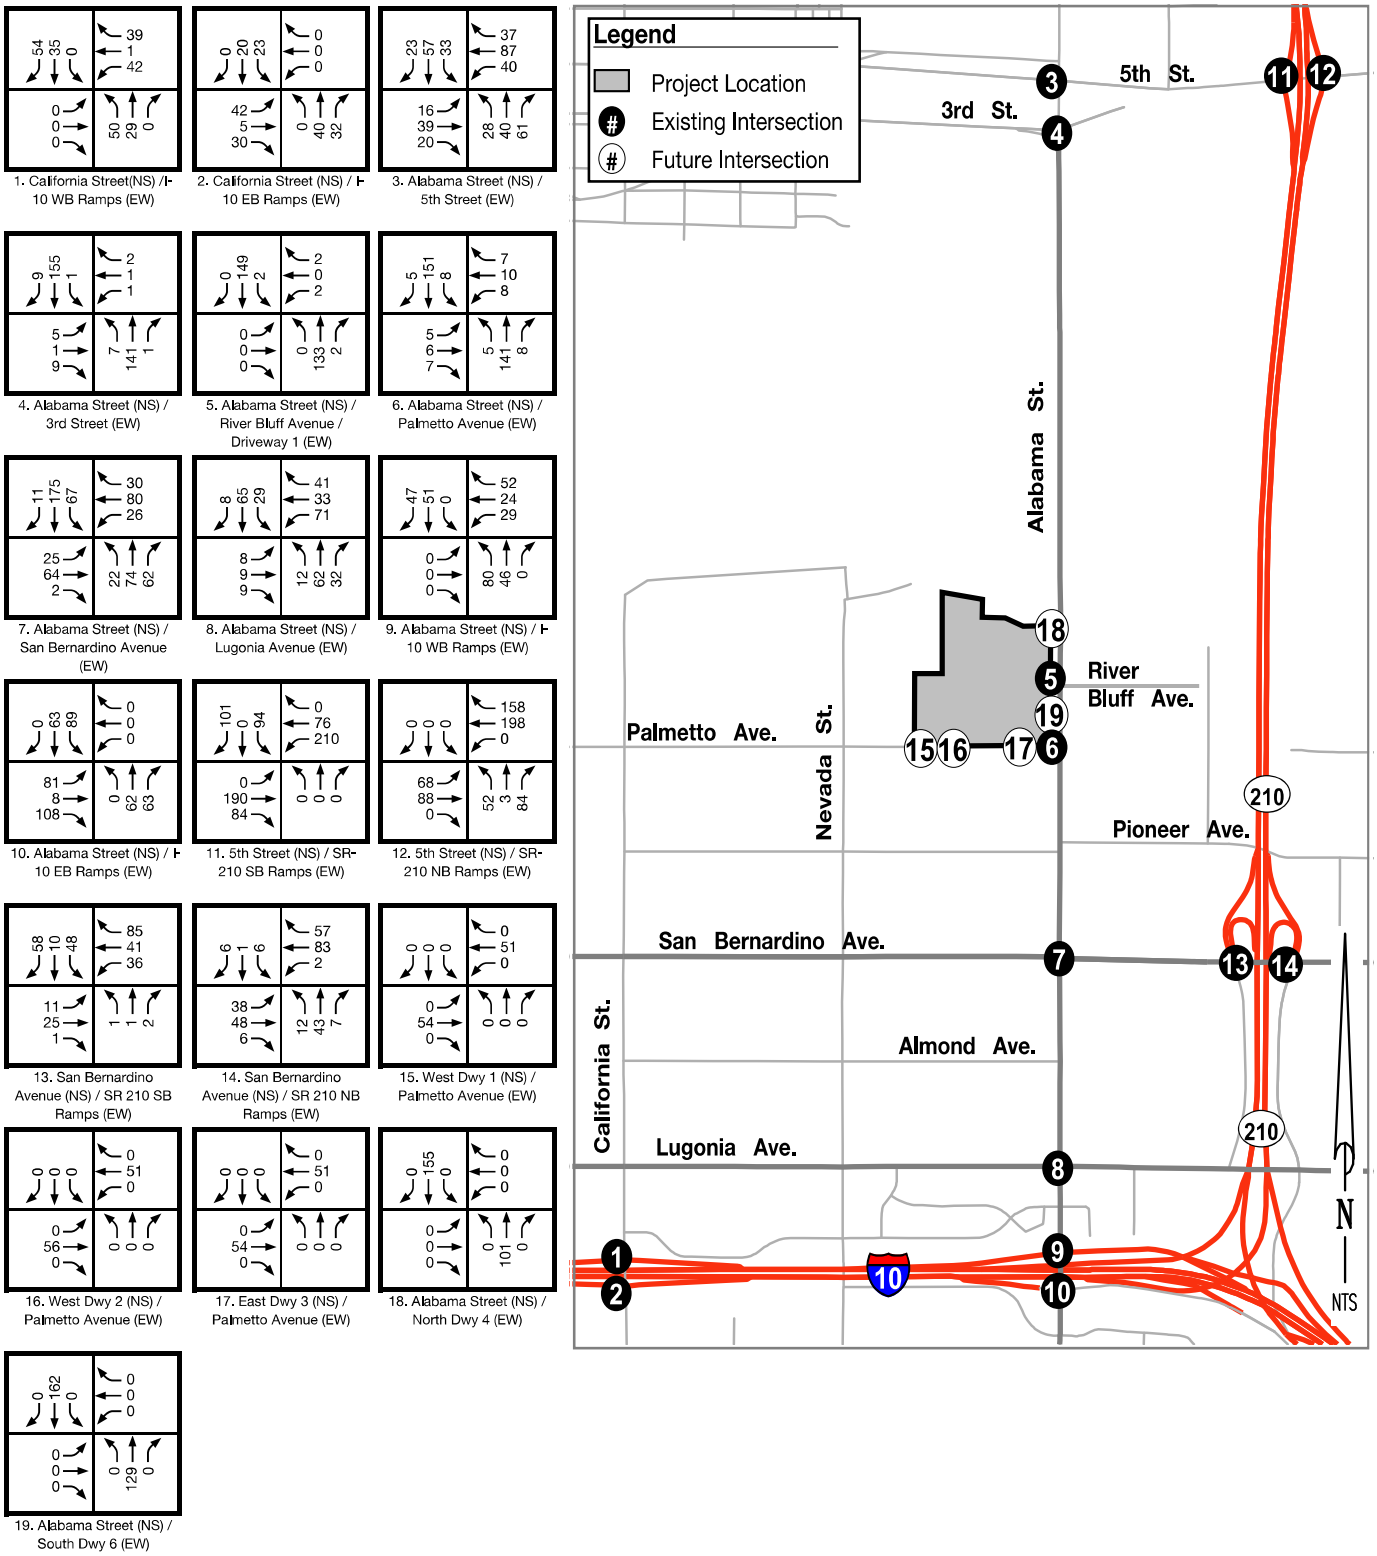

Figure 21 – Ambient Growth Plus Cumulative Projects PM Peak Hour Intersection Volumes

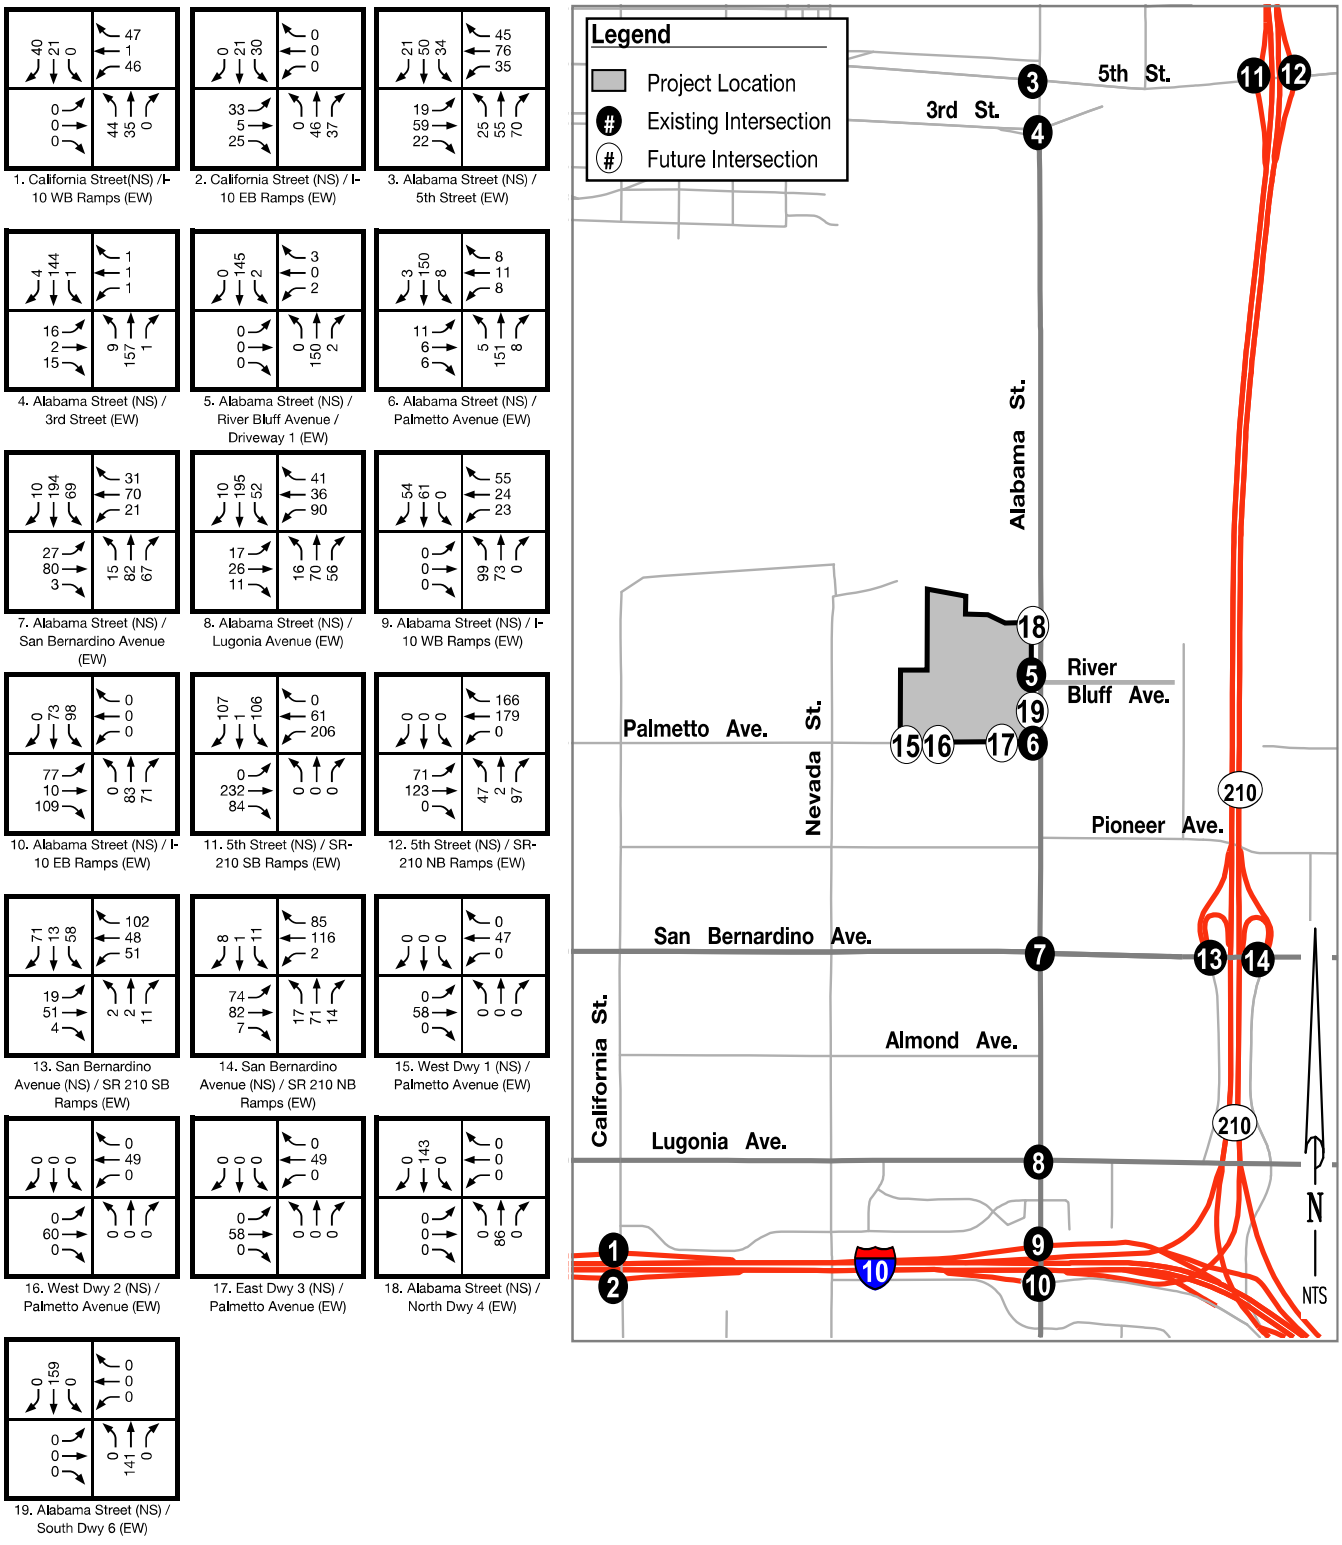

4.5 Total Traffic (2020)

Traffic conditions for the opening year include existing traffic, ambient growth, cumulative project trips, and the proposed Project trips. All of the types of trips are included in the analysis to result in forecasted intersection LOS for the opening year (2020). The AM and PM peak hour intersection turning movement volumes for existing plus ambient plus cumulative plus Project are shown on **Figure 22** and **Figure 23**, respectively.

4.6 Build Out Year (2040) Trip Generation

The San Bernardino County Guidelines require examination of traffic impacts under build-out year 2040 conditions. The San Bernardino County TIA procedures require that an analysis be conducted utilizing year 2040 traffic data from an approved local or regional traffic model provided by San Bernardino County Transportation Authority (SBCTA). SBCTA developed year 2040 traffic volumes using future traffic Projections from the East Valley Traffic Model (EVTM), maintained by the City of San Bernardino.

The following describes in detail the methodology employed for passenger vehicles to determine the a.m. and p.m. peak hour intersection turn movements for year 2040 conditions. Volume development sheets are included in Appendix G. The methodology used is consistent with San Bernardino Associated Governments (SANBAG) procedures for post-processing of modeled traffic volumes. The base year for the passenger vehicle model is 2000 and the forecast year is 2040.

1. The modeled build out (year 2040) peak period directional arterial traffic volumes include the traffic volumes from the traffic analysis zones (TAZs) containing the proposed Project. Build out peak period directional traffic volumes were subtracted from the modeled year 2040 peak period traffic volumes to obtain the adjusted year 2040 modeled peak period volumes.
2. The difference between the modeled base year and adjusted year 2040 peak period directional arterial traffic volumes (for each intersection approach and departure) was identified from loaded network model plots. This difference defines the growth in traffic from current conditions to year 2040 conditions.
3. The incremental growth in peak period approach and departure volumes was factored to develop the incremental change in peak hour volumes. The EVTM uses a three-hour a.m. peak period and a four-hour p.m. peak period. The Southern California Association of Governments (SCAG) has established that the a.m. peak hour comprises 38 percent of the peak period and that the p.m. peak hour comprises 28 percent of the peak period. Therefore, the incremental changes in peak period volumes were multiplied by the appropriate factors to develop incremental changes in peak hour volumes.
4. The incremental growth in approach and departure volumes between 2012 and 2040 was factored to reflect the forecast growth between the year of the collected counts (2018) and 2040. For this purpose, linear growth between the 2012 base condition and the forecast 2040 condition was assumed. Since the increment between 2018 and 2040 is 22 years of the 28-year time span, a factor of 0.79 (i.e., 22/28) was used.
5. The forecast growth in approach and departure volumes through year 2040 conditions was added to the 2010 collected counts, resulting in “post-processed” forecast year 2040 link volumes.
6. Forecast year 2040 turn volumes were developed using existing turn volumes and the future approach and departure volumes, based on the methodologies contained in the National Cooperative Highway Research Program Report (NCHRP) 255: Highway Traffic Data for Urbanized Area Project Planning and Design (Transportation Research Board, December 1982).
7. The Project only traffic forecasts have been generated by applying the trip generation, distribution and traffic assignment calculations. Project traffic volumes were then subtracted from the refined future year EVTM traffic model volumes to determine build-out Year (2040) without Project traffic conditions. The initial estimate of the build-out year (2040) peak hour turning movements was then reviewed by Webb for reasonableness at intersections where model results showed unreasonable turning movements. The initial raw model estimates were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes.

The post-processing worksheets for the build-out year (2040) trip generation and model plots are provided in the Appendix G.

5.0 TRAFFIC ANALYSIS

5.1 Level of Service Methodology

The San Bernardino County Transportation Division requires that the most recent release of the Transportation Research Board Highway Capacity Manual (HCM) be used to analyze Level of Service (LOS). The Highway Capacity Manual 6th Edition (HCM6) was used for the analysis.

Quality of service describes how well a transportation facility or service operates from the traveler's perspective. Level of service (LOS) is a quantitative stratification of a performance measure or measures that represent quality of service. LOS is measured on a familiar A to F scale where LOS A represents the best conditions from a traveler's perspective and LOS F the worst. A simple LOS letter system is used to hide much of the complexity of transportation facility performance in order to simplify decision making on whether facility performance is generally acceptable and whether a future change in performance is likely to be perceived as significant by the general public. One reason for the widespread adoption of the LOS concept by agencies is the concept's ability to communicate roadway performance to nontechnical decision makers.

The HCM6 evaluates the LOS of intersections based upon the control delay per vehicle. Control delay is defined as the delay associated with vehicles slowing in advance of an intersection, the time spent stopped on an intersection approach, the time spent as vehicles move up in the queue, and the time needed for vehicles to accelerate to their desired speed. The methodology used to evaluate the intersection level of service differs on whether the intersection is signalized or unsignalized. Levels of service at signalized and unsignalized intersections have been evaluated using Synchro Version 10, which is based upon HCM6 methodologies.

Delays and queue lengths were analyzed using Synchro Version 10.0. Synchro is a computerized micro-simulation modeling software program that analyzes traffic models by simulating the behavior of individual vehicles within the traffic circulation network.

5.1.1 Signalized Intersections

Signalized intersections have been evaluated using the Operational Method as described in Chapter 16, Section II of the HCM6. According to this methodology, the level of service for signalized intersections is based upon the weighted average control delay, in seconds per vehicle, of all vehicles passing through the intersection. **Table 5-1** shows the criteria used to determine the level of service for signalized intersections.

Table 5-1 – Level of Service for Signalized Intersections

Level of Service	Control Delay (sec/vehicle)	Description
A	≤ 10	Minimal delay and primarily free-flow operation. Most vehicles do not stop because they arrive during the green indication or only stop for a brief amount of time as the signal changes.
B	> 10 – 20	Short delay and reasonably unimpeded operation. Many vehicles do not stop because they arrive during the green indication or only stop for a short amount of time as the signal changes. More vehicles stop than with LOS A.
C	> 20 – 35	Moderate delay and stable operation. Individual cycle failures (i.e. when queued vehicles do not clear the signal during the next green indication) may begin to appear. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
D	> 35 – 55	Less stable operation in which small increases in vehicles may cause substantial increases in delay. Many vehicles stop and individual cycle failures are noticeable.
E	> 55 – 80	Significant delay and unstable operation. Most vehicles stop and individual cycle failures are frequent.
F	> 80	Considerable delay and extensive queuing. Almost all vehicles stop and most cycles fail to clear the queue.

Source: Transportation Research Board Highway Capacity Manual 6

5.1.2 Unsignalized Intersections

Unsignalized intersections were evaluated using Chapter 19-20 of the HCM 6. According to this methodology, the level of service for all-way stop intersections is based upon the weighted average control delay, in seconds per vehicle, of all vehicles passing through the intersection. For two-way stop controlled intersections, the level of service is based on the highest control delay of all controlled movements for the intersection. **Table 5-2** shows the criteria used to determine the level of service for unsignalized intersections.

Table 5-2 – Level of Service for Unsignalized Intersections

Level of Service	Control Delay (sec/vehicle)	Description
A	≤ 10	Minimal delay. Usually no conflicting traffic.
B	> 10 – 15	Short delay. Occasionally some conflicting traffic.
C	> 15 – 25	Noticeable delay, but not inconveniencing. Usually some conflicting traffic.
D	> 25 – 35	Noticeable delay and irritating. A significant amount of conflicting traffic. Increased likelihood of risk taking.
E	> 35 – 50	Significant delay approaching tolerance level. Lots of conflicting traffic, but with some gaps of suitable size. Risk taking behavior likely.
F	> 50	Considerable delay exceeding tolerance level. Lots of conflicting traffic, with not enough gaps of suitable size. High likelihood of risk taking.

5.2 Acceptable Level of Service

5.2.1 County of San Bernardino

The acceptable Level of Service (LOS) for the unincorporated County of San Bernardino is LOS D and it should be maintained during the peak commute hours.

5.2.2 City of Highland

The acceptable LOS for the City of Highland is based on the City of Highland General Plan, Chapter 3:

> *The Circulation Element establishes that the LOS should be LOS D or better for major intersections in the City. For peak operating periods LOS D is considered acceptable. Therefore, any City of Highland intersection operating at LOS "E" or "F" is considered deficient.*

5.2.3 City of Redlands

The acceptable LOS for the City of Redlands is based on the City of Redlands General Plan, Policy 5.20c:

> *Where the current level of service at a location within the City of Redlands is below the Level of Service (LOS) C standard, no development project shall be approved that cannot be mitigated so that it does not reduce the existing level of service at that location except as provided in Section 5.20b.*

5.2.4 Caltrans

The acceptable LOS for Caltrans facilities is based on the Caltrans' *Guide for the Preparation of Traffic Impact Studies* Section II:

> *Caltrans endeavors to maintain a target LOS at the transition between LOS "C" and LOS "D" on State highway facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the*

appropriate target LOS. If an existing State highway facility is operating at less than the appropriate target LOS, the existing measures of effectiveness (MOE) should be maintained.

Per discussion with Mark Roberts, Caltrans District 8 Office Chief, Intergovernmental Review, Community and Regional Planning, the region-wide goal for acceptable LOS on all freeways, roadway segments, and intersections is LOS D.

5.3 Determination of Significant Impact

The determination of significant impacts used in this study is based on the County of San Bernardino Traffic Impact Analysis Guidelines, Sections 10.8.1 and 10.8.2, with modifications to accommodate the varying acceptable LOS standards in different jurisdictions:

5.3.1 Signalized intersections

Any study intersection that is operating at a LOS 'A', 'B', 'C' or 'D' for any study scenario without project traffic in which the addition of project traffic causes the intersection to degrade to a LOS 'E' or 'F' shall mitigate the impact to bring the intersection back to at least LOS 'D'.

Any study intersection that is operating at a LOS 'E' or 'F' for any study scenario without project traffic shall mitigate any impacts so as to bring the intersection back to the overall level of delay established prior to project traffic being added.

For scenarios which include the addition of Cumulative Project Traffic (i.e. shared impacts), study intersections shall be mitigated to LOS 'D' or better in the Valley and Mountain regions and LOS 'C' or better in the Desert regions of the County.

5.3.2 Unsignalized intersections

An impact is considered significant if the study determines that either section a) or both sections b) and c) occur.

a) The addition of project related traffic causes the intersection to move from a LOS 'D' or better to a LOS 'E' or worse

OR

b) The project contributes additional traffic to an intersection that is already projected to operate at an LOS 'E' or 'F' with background traffic (per Section 10.5.2b)

AND

c) One or both of the following conditions are met:
1) The project adds ten (10) or more trips to any approach
2) The intersection meets the peak hour traffic signal warrant after the addition of project traffic (per Section 10.5.2 c)).

Once a significant impact has been identified, mitigation shall be provided as follows:
1. For scenarios involving project traffic but not Cumulative Project Traffic, the LOS shall be mitigated to either LOS 'D' or better for case a) above or to pre-project LOS and delay for case b) above.
2. For scenarios that include Cumulative Project Traffic study intersections shall be mitigated to LOS 'D' or better in the Valley and Mountain regions and LOS 'C' or better in the Desert regions of the County.

5.4 Capacity and Level of Service and Improvement Analysis

5.4.1 Levels of Service – Existing Plus Project (2018) Conditions

The Existing Plus Project (2018) scenario includes existing traffic and project traffic. **Table 5-3** provides the projected delay and levels of service at the study intersections under Existing Plus Project conditions without off-site improvements. These levels of service vary from LOS A to E. The Existing Plus Project AM and PM peak hour intersection turning movement volumes are shown on **Figure 24** and **Figure 25**, respectively. The levels of service are based upon the existing geometrics for the study area intersections. The level of service calculation worksheets are provided in Appendix E. The following study intersections are expected to operate at an unacceptable level of service:

1. California Street (NS)/ I-10 WB Ramps
2. California Street (NS) / I-10 EB Ramps

5.4.4 Levels of Service – Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) with Improvements

Table 5-6 provides the projected delay and levels of service at the study intersections under Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) conditions with off-site improvements. With the recommended off-site improvements, the study area intersections would operate at an acceptable LOS C/D or better. The level of service calculation worksheets are provided in Appendix E.

Table 5-6 – Intersection Levels of Service – Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) with Improvements

5.4.5 Levels of Service – Build-Out Year Plus Cumulative Projects (2040) Conditions

The Build-Out Year Plus Cumulative Projects (2040) scenario includes forecasted traffic volumes at expected area build-out and other projects in the project area provided by the County of San Bernardino, City of Highland, and City of Redlands. **Table 5-7** provides the projected delay and levels of service at the study intersections under Build-Out Year Plus Cumulative Projects conditions without off-site improvements. These levels of service vary from LOS A to F. The Build-Out Year Plus Cumulative Projects AM and PM peak hour intersection turning movement volumes are shown on **Figure 30** and **Figure 31**, respectively. The levels of service are based upon the existing geometrics for the study intersections. The level of service calculation worksheets are provided in Appendix E. The following study intersections are expected to operate at an unacceptable level of service:

1. California Street (NS) / I-10 WB Ramps (EW)
2. California Street (NS) / I-10 EB Ramps (EW)
3. Alabama Street (NS) / 5th Street (EW)
4. Alabama Street (NS)/ 3rd Street (EW)

6.0 MITIGATIONS AND RECOMMENDATIONS

6.1 Traffic Impacts and Level of Service Analysis

6.3.1 Proposed Improvements and Mitigation Measures – Existing Plus Project (2018) Conditions

Table 6-1 and **Figure 34** present the proposed improvement and mitigation measures in order to achieve a satisfactory level of service at the study intersections in Existing Plus Project (2018) conditions. The proposed improvement and mitigation measures are as follows:

Improvements

5. **Alabama Street (NS) / Dwy-5-River-Bluff Avenue (EW):** Add one left turn lane for northbound approach, one shared right turn lane for southbound approach and eastbound left turn lane and one through-right turn lane.
15. **West Dwy 1 (NS) / Palmetto Avenue (EW):** Add one shared left-right turn lane for southbound approach, one shared left turn lane for eastbound approach and add a shared right turn lane to the westbound approach.
16. **West Dwy 2 (NS) / Palmetto Avenue (EW):** Add one shared left-right turn lane for southbound approach, one shared left turn lane for eastbound approach and add one shared right turn lane for westbound approach.
17. **East Dwy 3 (NS) / Palmetto Avenue (EW):** Add one shared left-right turn lane for southbound approach, one shared left turn lane for eastbound approach and add one shared right turn lane for westbound approach.
18. **Alabama Street (NS) / North Dwy 4 (EW):** Add one shared through-right turn lane for southbound approach and add one right turn lane for westbound approach.
19. **Alabama Street (EW) / South Dwy 6 (EW):** Add one shared right turn lane for southbound approach and a right turn lane for westbound approach.

Mitigations

1. **California Street (NS) / I-10 Westbound Ramps (EW):** Add one left turn lane for northbound approach. There is an LOS deficiency in the existing without Project condition, so this improvement should be borne through payment of fees or fair-share contribution.

2. **California Street (NS) / I-10 Eastbound Ramps (EW)**: Add one left turn lane for southbound approach. Restripe eastbound approach to include 1 left turn lane, one shared through-right turn lane. There is an LOS deficiency in the existing without Project condition, so this improvement should be borne through payment of fees or fair-share contribution.

The Project will construct half-width improvements along its frontage on Alabama Street and Palmetto Avenue prior to opening. However, due to restrictive existing roadway geometrics on Alabama Street to the north and south of the Project, striping of additional through travel lanes along the Project frontage is not possible until the adjacent non-Project segments are completed. It is assumed that the adjacent non-Project roadway

segments will not be constructed by Project completion, so the roadway geometries analyzed in this scenario are assumed to be less than ultimate conditions.

6.3.2 Proposed Improvements and Mitigation Measures – Existing Plus Ambient Growth Plus Project (2020) Conditions

Table 6-2 and **Figure 35** present the proposed improvement and mitigation measures in order to achieve a satisfactory level of service at the study intersections in Existing Plus Ambient Growth Plus Project (2020) conditions. Following improvements and mitigations are proposed for existing plus ambient growth plus Project conditions.

Improvements

5. **Alabama Street (NS) / Dwy-5-River-Bluff Avenue (EW):** Add two through lanes for southbound approach.
6. **Alabama Street (NS) / Palmetto Avenue (EW):** Add one right turn lane for northbound approach.

18. Alabama Street (NS) / North Dwy 4 (EW): Add two through lanes for southbound approach.

19. Alabama Street (NS) / South Dwy 6 (EW): Add two through lanes for southbound approach.

Mitigations

3. Alabama Street (NS) / 5th Street (EW): Add one overlapping northbound right turn lane.

8. Alabama Street (NS) / Lugonia Avenue (EW): Add one northbound right turn lane.

The Project will construct half-width improvements along its frontage on Alabama Street and Palmetto Avenue prior to opening. However, due to restrictive existing roadway geometrics on Alabama Street to the north and south of the Project, striping of additional through travel lanes along the Project frontage is not possible until the adjacent non-Project segments are completed. It is assumed that the adjacent non-Project roadway segments will not be constructed by Project completion, so the roadway geometries analyzed in this scenario are assumed to be less than ultimate conditions.

6.3.3 Proposed Improvement and Mitigation Measures – Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) Conditions

Table 6-3 and **Figure 36** present the proposed improvement and mitigation measures in order to achieve a satisfactory level of service at the study intersections in Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) conditions. In addition to existing plus Project improvements, no improvement and mitigation measures are proposed,

The Project will construct half-width improvements along its frontage on Alabama Street and Palmetto Avenue prior to opening. However, due to restrictive existing roadway geometrics on Alabama Street to the north and south of the Project, striping of additional through travel lanes along the Project frontage is not possible until the adjacent non-Project segments are completed. It is assumed that the adjacent non-Project roadway segments will not be constructed by Project completion, so the roadway geometries analyzed in this scenario are assumed to be less than ultimate conditions.

6.3.4 Proposed Improvement and Mitigation Measures – Build-Out Year Plus Cumulative Projects (2040) Conditions

Table 6-4 and **Figure 37** present the proposed improvement and mitigation measures in order to achieve a satisfactory level of service at the study intersections in Build-Out Year Plus Cumulative Projects (2040) conditions. The proposed improvement and mitigation measures are as follows:

Improvements

1. **California Street (NS) / I-10 WB Ramps (EW**): Add one left turn lane for northbound approach.
2. **California Street (NS) / I-10 EB Ramps (EW)**: Add one left lane for southbound approach.
3. **Alabama Street (NS) / River-Bluff Avenue (EW)**: Add two through lanes for northbound approach.
6. **Alabama Street (NS) / Palmetto Avenue (EW)**: Add one through lane for eastbound approach and one through lane for westbound approach. Add one through lane for northbound approach and southbound approach.
7. **Alabama Street (NS) / San Bernardino Avenue (EW)**: Add one through lane and one right turn lane for eastbound approach and one left turn lane for westbound approach.
8. **Alabama Street (NS) / Lugonia Avenue (EW)**: Add one northbound right turn lane and one westbound left turn lane.

Mitigations

4. **Alabama Street (NS) / 5th Street (EW)**: Add one overlapping northbound right turn lane.
5. **Alabama Street (NS) / 3rd Street (EW)**: Add one westbound left turn lane and one westbound right-turn lane.
6. **Alabama Street (NS) /Lugonia Avenue (EW)**: Add one eastbound right turn lane and westbound right turn lane.
9. **Alabama Street (NS) / I-10 WB Ramps (EW**): Add one left turn lane for northbound approach and one right turn lane for southbound approach.
10. **Alabama Street (NS)/ I-10 EB Ramps (EW):** Add one through lane for northbound approach.
14. **SR-210 NB Ramps (NS) / San Bernardino Avenue (EW**): Convert geometry of eastbound right turn lane to eastbound through-right lane. Add one through lane for the westbound approach.

Note*: Intersection mitigations from existing conditions included in the General Plan are shown as improvements in for Build-Out Year 2040 conditions. Additional improvements beyond General Plan improvements are shown as Mitigations.

6.3.5 Proposed Improvement and Mitigation Measures – Build-Out Year Plus Cumulative Plus Project (2040) Conditions

Table 6-5 and **Figure 38** present the proposed improvement and mitigation measures in order to achieve a satisfactory level of service at the study intersections in Build-Out Year Plus Cumulative Plus Project (2040) conditions. In addition to 2040 cumulative project improvements and mitigations, following improvement and mitigation measures are proposed,

Improvements

5. **Alabama Street (NS) / Dwy-5-River-Bluff Avenue (EW):** Add one left turn lane for northbound approach, one shared through-right turn lane for southbound approach and eastbound left and through-right turn lane.
15. **West Dwy 1 (NS) / Palmetto Avenue (EW):** Add one shared left-right turn lane for southbound approach, one shared left turn lane for eastbound approach and add a shared right turn lane to the westbound approach.
16. **West Dwy 2 (NS) / Palmetto Avenue (EW):** Add one shared left-right turn lane for southbound approach, one shared left turn lane for eastbound approach and add one shared right turn lane for westbound approach.
17. **West Dwy 3 (NS) / Palmetto Avenue (EW):** Add one shared left-right turn lane for southbound approach, one shared left turn lane for eastbound approach and add one shared right turn lane for westbound approach.
18. **Alabama Street (NS) / North Dwy 4 (EW):** Add one shared right turn lane for southbound approach and add one right turn lane for westbound approach.
19. **Alabama Street (EW) / South Dwy 6 (EW):** Add one shared right turn lane for southbound approach and a right turn lane for westbound approach.

6.2 Traffic Signal Warrants

Conducting traffic signal warrants is a method of determining whether or not an unsignalized intersection needs to install a traffic signal. Traffic conditions that satisfy a traffic signal warrant are more likely to require the installation of a traffic signal. However, the California Manual on Uniform Traffic Control Devices (MUTCD) states that the satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal. Peak hour traffic signal warrant analysis should only be considered as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal. Intersections that exceed the peak hour warrant are more likely to meet one or more of the other volume based signal warrants. The MUTCD also advises that a traffic control signal should not be installed unless:

- One or more of the traffic signal warrants is satisfied;
- An engineering study indicates that installing a traffic control signal will improve the overall safety and/or operation of the intersection; and
- It will not seriously disrupt progressive traffic flow.

For Existing (2018) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

For Existing Plus Project (2018) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

For Existing Plus Ambient Growth Plus Project (2020) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

For Existing Plus Ambient Growth Plus Cumulative Plus Project (2020) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

For Buildout Year Plus Cumulative Projects (2040) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

For Buildout Year Plus Cumulative Projects Plus Project (2040) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

6.3 Circulation Recommendations

This traffic impact analysis demonstrates that the direct traffic impacts generated by the project can be mitigated to meet the required level of service if the following recommended improvements are adopted.

6.3.1 Roadway and Safety Improvements

- Construct full width improvements on all internal roadways.

- Construct partial width improvements on the northerly side of Palmetto Avenue at its ultimate cross-section as a collector street adjacent to Project boundary line.
- Construct partial width improvements on the westerly side of Alabama Street at its ultimate cross-section as a major arterial adjacent to Project boundary line.
- Modify the existing traffic signal at intersection of Alabama Street and River Bluff Avenue / Driveway 5 to provide full access for all movements at the intersection.
- Signing/striping should be implemented in conjunction with detailed construction plans for The Project site.
- Sight distance at The Project entrance roadway will be reviewed with respect to standard County of San Bernardino sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.

6.3.2 Project Design Features – Intersection Improvements

- Construct the intersection of West Driveway 1 and Palmetto Avenue (Int. 15) to include the following geometrics.
  Northbound: Does not exist.
  Southbound: Shared left-right turn lane.
  Eastbound: Convert through lane to shared left-through lane.
  Westbound: Convert through lane to shared through-right turn lane.

- Construct the intersection of West Driveway 2 and Palmetto Avenue (Int. 16) to include the following geometrics.
  Northbound: Does not exist.
  Southbound: Shared left-right turn lane.
  Eastbound: Convert through lane to shared left-through lane.
  Westbound: Convert through lane to shared through-right turn lane.

- Construct the intersection of East Driveway 3 and Palmetto Avenue (Int. 17) to include the following geometrics.
  Northbound: Does not exist.
  Southbound: Shared left-right turn lane.
  Eastbound: Convert through lane to shared left-through lane.
  Westbound: Convert through lane to shared through-right turn lane.

- Construct the intersection of Alabama Street and North Driveway 4 (Int. 18) to restrict the movements for right in right out only.
  Northbound: One through lane.
  Southbound: Convert through lane to shared through-right turn lane. Add two through lanes.
  Eastbound: Add a right turn lane.
  Westbound: Does not exist.

- Modify traffic signal and construct the intersection of River-Bluff Avenue / Driveway 5 and Alabama Street to include the following geometries.

Northbound: One left turn lane. One through lane. One right turn lane.
Southbound: One left turn lane. Two through lanes. One through-right turn lane.
Eastbound: One left turn lane. One lane shared by through-right turn movements.
Westbound: One left turn lane. One lane shared by through-right turn movements.

- Construct the intersection of Alabama Street and South Driveway 6 (Int. 19) to restrict the movements for right in right out only.
  Northbound: Two through lanes.
  Southbound: Convert through lane to shared through-right turn lane.
  Eastbound: Add a right turn lane.
  Westbound: Does not exist.

The I-10 Alabama Street Interchange Project (EA IH160) will widen the I-10 Eastbound on-ramp and I-10 Westbound off-ramp at Alabama Street. Completion of the Project is expected to improve traffic operations at the I-10 Alabama Street Interchange. Timeline for construction is not known at time of report preparation, so the existing lane geometrics were used in this analysis.

6.4 Queuing Analysis

Queuing analysis was performed on Caltrans ramp intersections for 2040 Build-Out Year without Project and 2040 Build-Out Year with Project AM peak hour and PM peak hour scenarios to evaluate the lengths of vehicle queues due to Project traffic. 95th percentile queue lengths were output from Synchro and used for analysis. Intersection movements with queues that exceed the existing storage are the same for both analysis scenarios with the exception of two movements (Intersections 11 and 13). These two movements had acceptable queueing in the 2040 Build-Out Year with Project condition due to improvements in signal optimization for that scenario. The results are provided in **Table 6-6** and **Table 6-7.**

Table 6-6 – 2040 Build-Out Year Without Project Queuing Analysis

Intersection	Peak Hour	Traffic Control	NBL	NBR	SBL	SBR	WBL	WBR	EBL	EBR
1. California Street (NS) / I-10 WB Ramps (EW)	Storage Length	Signal	400 (2x 200')			600 (2x 300')	600

Queuing results are obtained for 2040 Build-Out Year With Project Scenario

XX 95th percentile queue exceeds the capacity of storage lane.

**XX Volume for 95th percentile queue is metered by upstream signal*

6.5 Regional Funding Mechanisms

Table 6-8 summarizes the proposed mitigation measure and associated funding mechanism for the Project as a result of the traffic study. The Project will participate in the cost of off-site improvements through the payment of "fair share" mitigation fees, including the following:

- San Bernardino Associated Governments (SANBAG) Congestion Management Program

Program improvements: SANBAG congestion management program provides funding for the 2040 improvements mentioned in the Table 1-1. The fee of $0.73 per square foot is charged for every high –cube warehouse Project developed in the Redlands Donut Hole under the SANBAG congestion management program. These fees will be collected and utilized as needed by the County of San Bernardino to construct the improvements necessary to assist in maintaining the required level of service.

Non Program Improvements: The non-program improvements are the improvements which are not funded by any program in County of San Bernardino or Caltrans. The Project has one non-program improvement. As the impact is generated in 2040 Cumulative Plus Project Condition the fair share towards the improvement is calculated based on the number of Project trips and total number of cumulative trips.

The estimated fair share amount provided in the table is a rough estimate for informational purposes only and should not be considered final or binding. A thorough analysis of the necessary improvements and existing constraints should be completed in an engineering cost estimate.

Table 6-8– Project Improvements and Mitigation Summary

No.	Intersection	Jurisidiction	Recommended Improvement	EP & EAP Improvements	EAPC (2020) Improvements		Build-Out Year (2040) Cumulative Plus Projects Improvements		Payment System	Fair Share Percentage	Estimated Fair Share Amount
				Project Improvements	Program [1] Improvements	Non Program Improvements	Program[1] Improvements	Non Program Improvements			
1	California Street (NS) / I-10 WB Ramps (EW)	Caltrans	1. One NBL Turn Lane		1. One NBL Turn Lane		1. One NBL Turn Lane		City of Redlands	2.87%	$287,000

[1]Per Section 9 of the County of San Bernardino Regional Transportation Development Mitigation Fee Plan - Program improvements constructed by project may be eligible for fee credit. In lieu fee payment is at discretion of County.

***Improvements already planned in San Bernardino Congestion Management Program. Fair share percentage and estimated cost for informational purposes only.**

****Project improvements are located outside of County of San Bernardino.**

Fair Share at an Intersection: Project Volume / (EACP Volume - Existing Volume)

APPENDIX A:
APPROVED SCOPE FOR TRAFFIC STUDY

SCOPE FOR TRAFFIC STUDY

Project Name:	Duke Realty – Alabama St and Palmetto Ave High-Cube Transload and Short-Term Storage Warehouse

This Scope for Traffic Study acknowledges San Bernardino County Department of Public Works, Traffic Division requirements of traffic impact analysis for the project and is subject to change:

Project Address:	Northwest corner of Alabama Street and Palmetto Avenue		
Project Description:	1,200,000 Square Feet of High-Cube Transload and Short-Term Storage Warehouse		
City:	Unincorporated San Bernardino County, within the Donut Hole		
Project Buildout Year:	2020	**Ambient Growth Rate per Year:**	2%
Closest Intersection (Xtn) to the Project			
Xtn N/S Street Name:	Alabama Street		
Xtn E/W Street Name:	Palmetto Avenue		
Thomas Guide Pg+Grid:		**County Supervisorial District:**	

	Engineer	**Developer**
Company:	Albert A. Webb Associates	Duke Realty Corporation

Consultant/Developer's Representative	**Date**	**Traffic Divsion Representative**	**Date**

SCOPE FOR TRAFFIC STUDY

Project Name:	Duke Realty – Alabama St and Palmetto Ave High-Cube Transload and Short-Term Storage Warehouse

1. Traffic Distribution: Please insert or attach Figure(s) illustrating project trip distribution in percentages and volumes at the study intersections analyzed. See Attached Figure 1 – Figure 5.

2. Trip Credit: Exact amount of credit subject to approval by Traffic Division.

Transportation Demand Management (TDM)	No	
Existing Active Land Use	No	
Previous Land Use	No	
Internal Trip Reduction	No	
Pass-by Trip Reduction	No	

3. Related Projects: Consultant should check with Planning in the San Bernardino County Department of Land Use Services and planning departments of adjoining Cities. Documentation of the consultation from these agencies shall be included in the traffic study. Related projects list shall be submitted to Traffic Division for our review and approval before being incorporated in the study.

4. Freeway Analysis: The potential traffic impact on the following Freeway(s) must be considered.

_____

_____

_____

The applicant shall consult with the State of California Department of Transportation (Caltrans) to determine the California Environmental Quality Act levels of significance with regard to traffic impacts on Caltrans' freeway facilities. This consultation shall also include a determination of Caltrans requirements for the study of traffic impacts to its facilities and the mitigation of any such impacts. This analysis must follow the most current Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002) and can be obtained from http://www.dot.ca.gov/hq/traffops/developserv/operationalsystems/reports/tiguide.pdf. If Caltrans finds that the project has a significant impact on the freeway, Caltrans shall be requested to include the basis for this finding in their response. If fees are proposed to mitigate the freeway impact, Caltrans shall be requested to identify the specific project to which the fees will apply. These written comments from Caltrans shall be included with the traffic study and submitted to Public Works for review and approval. If a documented good faith effort is made to consult with Caltrans and written comments cannot be obtained from within a reasonable amount of time, an analysis of the freeway impact shall be made using HCM procedures. Appendix A of the SANBAG CMP outlines allowable modifications to these procedures. The SANBAG CMP can be viewed online at:
http://www.sanbag.ca.gov/planning/subr_congestion.html

SCOPE FOR TRAFFIC STUDY

Project Name:	Duke Realty – Alabama St and Palmetto Ave High-Cube Transload and Short-Term Storage Warehouse

5. Trip Generation - See attached Table 1-A, Table 1-B and Table 1-C

Trip Generation Rate(s) Source: ITE Trip Generation	**I – Institute of Transportation Engineers; S – San Diego Traffic Generators; C – County; O – Other: Passenger car / 2 axle / 3 axle / 4+ axle truck split from Truck Trip Generation Study by the City of Fontana, 2003.**	**Edition:**	10th

Cities/Agencies to be consulted: City of Redlands and City of Highland and Caltrans

7. Other:

Traffic counts may be conducted immediately per the following:
• Must be taken on Tuesdays, Wednesdays or Thursdays.
• Must exclude holidays, and the first weekdays before and after the holiday.
• Must be taken on days when local schools or colleges are in session.
• Must be taken on days of good weather, and avoid atypical conditions (e.g., road construction, detours, or major traffic incidents).
• Traffic counts used for other traffic studies in the area shall **NOT** be reused again, unless 25% of the counts conducted for that particular traffic study are validated with new counts. The difference in volumes between the old and new counts at each corresponding movement should not be more than 10%.
• New traffic counts shall be checked to ensure the difference in volumes at corresponding approaches, if applicable, between two adjacent intersections is no more than 10% unless the difference can be justified.
• For all proposed mitigation measures, a conceptual plan for the improvements shall be submitted to our Traffic Studies section for review and approval prior to the approval of the Traffic Impact Analysis. All proposed improvements shall be within the right-of-way.
• For all cumulative mitigation measures, a cost estimate for the improvement shall be submitted.

This analysis must follow the most current Traffic Impact Study Guidelines for the County as stated in the County's Road Planning and Design Standards.

8. Fees

The County charges on an actual cost basis for review of traffic studies. An initial deposit of $3400 is required at the time that a land use application is filed with the Department of Land Use Services If the review costs exceed the initial deposit, the applicant will be expected to provide additional funds and the review will be suspended until the additional funds are deposited.

9. Contact Information:

Please submit a signed copy of this scope for approval by the Traffic Division. Draft scopes may be sent electronically. Final scope with signature should be submitted in person or by US Mail to:

Nancy,

I spoke with Nancy at HKA. We have a consensus that 40% is acceptable at SR-210/5th St, 40% is acceptable at San Bernardino and SR-210; 15% is acceptable at California (to honor City of Redlands request), and the remaining 5% allocated to Alabama at I-10.

Does this help?

Nancy

My only comment is in regards to trip distribution

I believe a good portion of the west bound I-10 traffic exiting the site will use Palmetto, Almond, and /or San Bernardino to access the 10 freeway at California in order to avoid the I-10/Alabama interchange (potentially 15%??)

Please send a copy of the traffic study and proposed mitigations/recommendations when you have completed the writeup.

Nancy,

Thank you for letting us know that 2040 LOS analyses will be completed on the intersections.

While we were on the phone, I recommended more truck trips be distributed north to SR-210 / 5th Street – Greenspot Road Interchange. You said that truck trips were being moved from Alabama / I-10 to California / I-10.

As half of the HKA staff lives east of the City of San Bernardino, we regularly see both of those interchanges backed up, even during non-peak hours. We do not think that most drivers will use either Alabama / I-10 or California / I-10.

We recommend that 60% of the truck traffic be distributed north to the SR-210 / 5th Street – Greenspot Road Interchange and that the intersections to be studied be changed accordingly as you will probably need to add Palm / 3rd, and the intersections at the SR-210 / 5th Street – Greenspot Road Interchange.

Please call if you have any questions.

Subject: Duke Realty High Cube Warehouse!

Hi,
Thank you for providing the California Department of Transportation (Caltrans) the opportunity to review and comment on the Scoping Agreement for Traffic Impact Analysis (TIA) for the Duke Realty High Cube Warehouse (Project), located at the northwest corner of Alabama Street and Palmetto Avenue in the County of San Bernardino. The project proposes a 1,200,000 square feet of high-cube transload and short-term storage warehouse. The presented scope appears to be appropriate and adequate, however the following comments to be considered:

1) The analysis should consider HCM 6 methodology.
2) The forecast data used in the TIA shall be based on the Southern California Association of Governments 2016 Regional Transportation Plan Model.
3) Fair share calculation methodology should be included in the TIA.
4) Include 5th Street/SR-210 for the intersection study.
5) Trip distribution is inconsistent with intersection bubbles. Please verify and revise.
6) Other special issues such as Truck Turns and Site Access Evaluation (if needed) should be addressed as part of the TIA.

If you have any questions regarding this email, please do not hesitate to contact us.
